Low-altitude Counter UAV jammer jamming all drones/quadcopters with hidden bands

Introducing the drone defender model D-US-03, this built-in high-gain directional antenna UAV jammer is capable of crash landing all drones/quadcopters within the coverage area. Its uniqueness lies in its compact design and hidden antenna design. Compared with other drone blockers, it is smaller and lighter, suitable for low-altitude drone defense, especially suitable for counter-drones or anti-spying solutions in privacy places such as private clubs and high-end mansions.

WDP08 Cheap portable 8 bands anti drone Jammer

One of the most notable features of WDP08 anti drone jamming device is its ability to jam signals across eight different frequency bands. This broad coverage ensures that drones operating on different frequencies can be effectively neutralized.

~~1,985.62\$~~ 1,099.56\$

Handheld Civilian Counter Drone Jammers Gun D-US-01-1

The D-US-01-1 gun-shaped anti uav blocking equipment can cover both 2.4GHz and 5.8GHz WiFi bands, and can interfere with GPS L1 and Glonass L1 signals, effectively blocking drone radio frequencies up to 2000 meters away in a short period of time, thereby quickly preventing aerial operations.

3,569.19\$

Lightweight and Efficient Drone Blocker – Advanced UAVs Hunter

Safeguard your airspace with the top-edge D-US-02 handheld Drone Blocker! This compact yet potent Anti Drone jammer ensure your privacy and security by keeping unwanted drones and quadcopters at bay within a wide range of 100 to 500 meters, .

Fixed Vehicle-mounted 8-channel drone Detection and Jamming Device

The PUS-DF01 drone Detection System is a fixed, wide-range monitoring platform capable of detecting drones within a 3km radius. While it lacks identification and precise location capabilities, it comes integrated with a jamming system that effectively blocks drone signals within a 2km range, providing comprehensive coverage as a unified solution.

45,888.26\$

New!

Box-type Low-altitude Four-channel 100W UAV Jamming device

This low altitude high power UAV blocker covers an ultra-wide frequency range of 300MHz to 6GHz, and can handle multiple drone targets at the same time. When started, it can be activates within 5 seconds of booting. And it can accurately lock the target direction with an interference beam angle greater than 15 degrees, achieving 0° to 360° all-round interference, directly hitting drones.

New!

Full-band Handheld Hawkeye Drone Alarm UAV Detector

The PB-H1 UAV alarm , which looks like a hidden walkie-talkie, is equipped with an external ultra-wideband 90° bendable antenna,

covering the full frequency band from 300MHz to 6GHz, suitable for detecting various civilian drones (such as quad-rotors, fixed-wings, DIY, FPV, etc.).

1,280.36\$

New!

Wall-mounted Dual Antenna High Power Drone Jammer

The high-power 2.4 ghz 5.8 ghz jammer for UAV scrambler uses dual-band jamming technology, with an output power of up to 50W per frequency band, which can shield surveillance drones and commercial drones within a range of 500 to 1000 meters. It is equipped with a mounting bracket (including four wall-mounting holes) and accessories, suitable for fixed deployment in different locations such as walls and poles.

1,780.69\$

Unique Drone Signal Blocker D-US-04-1 Unpacking the Power of UAVs Scramblers

Discover the unique solution in drone management with the D-US-04-1, a anti drone frequency jamming device that offers extensive control over drones, GPS, Lojack, and mobile frequencies. Offering robust features across four distinct options, this quadcopter blocking device ensures comprehensive control and safety in various operational environments.

725.32\$

Strengthened Anti-drone Jammer 1.5GHZ 2.4GHZ 5.8GHZ Blockers Jamming Unapproved Flight Paths

By using this drone blocking devices, drones can either be repelled from secure areas or forced to land. This capability is crucial for maintaining privacy and security, ensuring that no unauthorized recordings or surveillance occurs over sensitive or private areas. Built with a strong flashlight, this quadcopter disruptor is perfect for personnel working in low-light conditions, providing visibility and functionality in one tool.

D-US-05 Portable DJI UAV jammers for sale

D-US-05 is not just any ordinary jamming generator. It's specifically designed to jamming DJI UAVs. It can effectively jam Wifi 2.4g and 5.8g, Glonass and GPS signals, with an **effective range of up to 800 meters**. But that's not all. The D-US-05 Portable Drone Jammer also comes with a long-lasting battery that lasts for **up to 80 minutes**, giving you plenty of time to block unwanted Quadcopters without worrying about running out of power.

2,249.99\$

P-US-08-9 Portable Drone Frequency Blocker Jamming Wireless video Transmission

This is a drone frequency blockers designed for commercial, military and civilian drones/quadcopters, covering 8 key control, navigation and video transmission channels with an effective range of 200-600 meters. It weighs 3KG, comes with a shoulder strap, and has a battery life of up to 60 minutes.

1,300.19\$

Excellent Performance Anti Drone Radio Jammer with 6 Antennas P-US-06-10

The P-US-06-10 anti-uav jamming devices can quickly clear all quadcopters within a 600-meter space. The Dron disruptor is specifically designed to jam GPS L1 L2, RC (Remote Control), FPV (First Person View), and 2.4GHz and 5.8GHz signals. Therefore, you can still maintain normal communication with your mobile phone while using this P-US-06-10, and yes, it will not affect the operation of the mobile phone base station.

Dive into our exclusive Drone Jammers collection, where you'll discover state-of-the-art Anti UAV jamming devices and modules designed to safeguard your airspace, restricted areas, or sensitive locations from intrusive drone incursions. Equip yourself with the ultimate defense against unwanted quadcopters and drones at TheJammerBlocker. Don't compromise on security—explore our top-notch selection today!

How do drone jammers operate?

At present, the most common device that blocks drone quadcopters operating on GPS L1 (1570-1620MHz) , Wifi 2.4G (2400-2500MHz) and Wifi 5.8GHz (5700~5800MHz) frequencies is the drone signal jammer. Some people also call it drone jammer gun gun or anti-drone jamming module. Usually these Anti UAS Blocking devices suppress the normal operation of the UAV by emitting the same frequency as the UAV (power greater than or equal to the target aircraft), thereby interrupting the communication between the UAVs and the pilot, thereby achieving the goal of The purpose of the drone's emergency landing or return.

Drone jammers function similarly to other jamming devices, differing primarily in range, power, and model specifications. There are portable jammers, powered by built-in batteries, and stationary jammers, which cover a larger area and are used to protect extensive regions.

It is essential to consider that using drone jammers can affect all devices operating within the targeted frequency range, causing them to stop functioning or malfunction.

Types of drone jammers

There are several types of anti-drone jammers:

- **Devices that block all signals:** In this scenario, the drone loses its signal and attempts to return to its original location. However, without GPS coordinates, its behavior can become unpredictable.
- **Systems that interfere with specific GPS signals:** These systems can cause drones to lose satellite connections, enter a non-hold mode, or turn off spontaneously.
- **Jammers that spoof GPS coordinates:** These jammers replace the real GPS coordinates with fake ones, such as those of an airport, causing confusion for the drone.
- **Electromagnetic pulse generators:** These devices emit short pulses that disrupt a drone's compass settings.
