| | | 5.4 | Report persistent die support related faults after adjustment and recommend redesign or stiffening as appropriate |

- 6 Maintain die records
 - 6.1 Record details of all die corrections, including trial extrusions
 - 6.2 Recommend any simple die design changes that increase productivity and recovery

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- shortening of bearings through milling, grinding, hand or machine polishing as appropriate to speed up flow or increase feed
- techniques to choke bearings to achieve slowing of flow, including:
 - opening of angle of bearing on inner web
 - hand filing
- machining and dressing of bearings to remove roughness and rags
- peening of bearings
- surface grinding of die face
- chiselling ends of blunt bridges in hollow dies
- undercutting of mandrels to relieve blockages
- increasing pocket clearances
- performing precision measurement
- adjusting bolster and die support, including:
 - selection of different size backers
 - polishing of surfaces to overcome dishing
- identifying simple die design changes (e.g. layout, orientation, number of holes, and so on) to increase productivity and recovery
- recording corrections on die history cards and providing feedback to die designers

Required knowledge

Required knowledge includes:

- die technology:
 - construction:
 - solid dies
 - hollow dies
 - die support components
 - composition and characteristics of various die steels
 - die manufacturing process
 - nitriding process and purpose
 - extrusion design process and behaviour of typical shapes during extrusion
 - bearings:
 - shape and definition

- bearing deflections
- bearing wash
- bearing choke where entrance to die aperture is wider than the exit angle
- negative bearing (entrance is narrower than the exit angle) increases speed of flow
- die support technology and common faults:
 - bolsters:
 - matching of dies to bolsters
 - typical faults in extrusions related to poor bolster selection or fit
 - backers:
 - softening
 - dishing
 - feeder plates:
 - tolerances too close can cause heat related surface defects on extrusions
 - tolerances not matched to bearings in die can cause shape loss
- extrusion process:
 - shape behaviour of typical extrusion products
 - channel shapes and tongue movement faults and typical distortions and corrections
 - runout length variations and possible causes:
 - recycled and unevenly cooled billets
 - out of alignment die slides
 - bearings worn or polished unevenly
 - operator variables:
 - incorrect heat settings
 - incorrect selection of bolster for die
 - poor breakthrough management
 - principles of flow:
 - variation of flow speed through local details and thicknesses
 - variation across container diameter
 - variation due to length of bearing
 - speed of metal through die along with temperature determines how metal flow fills die
 - source and purpose of heating of:
 - billet
 - die
 - extrusion and extrusion created heat
 - surface defects and their causes:
 - die lines caused by roughness at surface edges, damaged bearing edges, bearing wash or flaking or nitriding
 - pick up (surface tearing)
 - streaking

- blisters
- inclusions in billets
- nitriding flaking off die face
- effects of incorrect heat:
 - collapsing of thin walled sections due to over heating
 - blocking of the die
- surface breakdown and faults:
 - roughness
 - streaking
 - tearing
- dangers of welding extrusion dies
- die efficiency considerations:
 - monitor die performance over time using examine die and extrusion records
 - balance die correction against tonnage, speed and recovery rates
 - recommend new die or major re-work by die manufacturer where required

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to take a systematic approach to correcting solid and hollow dies and their die support systems, including conducting trial extrusions to verify corrections. Proper use of hand and power tools and workshop machines is required in undertaking corrections.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- comply with WHS, regulatory requirements and risk management associated with extruder operation and die handling
- relate intended changes to bearings, apertures, other die components, and toolstack components to particular extrusion faults
- adjust metal flow using workshop machines, hand tools and handheld power tools to correct bearings
- maintain bearings and other die components to specification
- identify situations where die or other components must be either scrapped or returned to die manufacturer
- supervise or conduct trial extrusions to verify corrections
- report and document results of corrections.

Context of and specific resources for assessment

- This unit must be assessed on the job with access to the extruder for which the die has been designed and relevant die and extrusion records. Access to hand and machine tools, including a milling machine, surface grinder and relevant hand and power tools, are also required.
- The competencies covered by this unit would usually be demonstrated by an individual working in a team environment that includes extruder operators, die designers and die makers. The assessment environment should not disadvantage the candidate.
- This unit may be assessed in conjunction with any other units addressing the safety, quality, communication, hand tools, machine operation,

recording and reporting associated with die correcting.

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessment may be in conjunction with assessment of other units of competency where required.

Guidance information for assessment

Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Die support	Die support is the specified toolstack dimensions that will support dies, according to the force the extruder can exert.
Container	The container is the part of the extruder that holds the billet and billet support components.

Support tooling	Support tooling is the name given to the various pieces of tooling (e.g. bolsters that provide stiffness to the die during extrusion).
Die holder	Die holders accommodate the diesets (feeder plate, die plate and backer). Die holders are the first components in toolstacks.
Bolster	Bolsters are deep discs of steel that provide stiffness in the toolstack to allow the die to remain flat and thus do its work properly. The term bolster includes any inserts designed to cut the cost of support tooling.
Die slide	The die slide is the part of the extruder that accommodates the dies and other tooling that makes up the toolstack.
Toolstack	The toolstack is the assembly of die, feeder plate and backer, holder and support tooling that fits into the die slide.
Die	The die is the part of the tooling that creates the extrusion shape as the metal is pressed through it.
Bearing	The die contains bearings of various lengths. Bearings are lands that act as frictional controls on metal flow. The bearing is an outline of the extrusion shape cut through the die to the highest precision possible.
Feeder plate	The feeder plate precedes the die and provides an additional degree of flow control. It is also described as a control plate. It is bolted to the die and backer, forming the dieset.
Backer	The die must be given support against the force needed to make metal flow. The first item of this support is the backer. Backer profiles are usually slightly larger than die apertures (precision cut) and are not high precision items.
Platen plate	The platen plate or pressure ring is set into the front wall of the press as a replaceable feature. Platen plates take up the forces applied to the toolstack and transmit them to the extruder structure.
Primary and secondary bolsters	Some larger press operate with a combination of single, one piece bolsters for special shapes and a split system of primary and secondary bolsters.

	<p>The primary bolster is usually deeper than the secondary and provides the main support. It is cut closer to the die aperture than the secondary bolster which closely follows the primary aperture so as to back it up.</p> <p>Secondary bolsters are likely to be shared by several primary bolsters.</p>

MEM07043A Identify causes of faulty aluminium extrusions

Modification History

New unit - Release 1

Unit Descriptor

This unit of competency covers the skills and knowledge needed to systematically examine aluminium extrusions for faults and to trace the reasons for the faults. This unit includes determining the most appropriate corrective action for the fault and, where appropriate, providing recommendations to extruder operators, die designers and die manufacturers.

Application of the Unit

This unit applies to die correctors working in an aluminium extrusion workplace who are required to investigate product fault reports, including determining the root cause of the fault, and recommending the most appropriate action. The unit applies to extrusions produced on solid and hollow dies and to faults that are both die and non-die related.

Band: A

Unit Weight: 6

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM09002B	Interpret technical drawing
MEM12023A	Perform engineering measurements
MEM12024A	Perform computations
MEM15002A	Apply quality systems
MEM15024A	Apply quality procedures
MEM16006A	Organise and communicate information
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Collect information on faulty extrusion	1.1	Liaise with extruder operator on die service or fault correction requests
		1.2	Access and examine die following all relevant work health and safety (WHS) procedures
		1.3	Examine extruder records and identify any previous die corrections
		1.4	Consult with die designer on faults, where required

- 1.5 Examine extruder maintenance records and liaise with maintenance department, where required
- 2 Interpret die drawing and specifications
 - 2.1 Identify layout and pre-forming of die apertures
 - 2.2 Identify bearing and pocket design/specification
 - 2.3 Identify measurements and tolerances for bearings, die components and die support system
 - 2.4 Identify bolster and spacer specification for die
 - 2.6 Identify press specifications
 - 2.7 Identify speed estimate for die
 - 2.8 Identify ports and bridges for hollow dies
- 3 Examine faulty extrusions
 - 3.1 Check extrusions for shape distortion
 - 3.2 Check extrusion measurements are to specification
 - 3.3 Inspect surface finish of extrusions for defects
 - 3.4 Identify whether faults apply from the start to the end of extrusion runouts
 - 3.5 Make a preliminary assessment as to whether faults are related to die or die support system or other factors
- 4 Check for faults not related to die or die support system
 - 4.1 Examine die and billet heating and temperature records and confirm heating and temperature was to specification
 - 4.2 Confirm extruder was run at correct speed and other settings were to specification
 - 4.3 Examine billet history and determine if billet was recycled or faulty
 - 4.4 Confirm with maintenance department that extruder is free of mechanical, electrical, control or structural faults

- | | | | |
|---|---|-----|---|
| 5 | Identify die and die support related faults | 5.1 | Safely access die and die support system |
| | | 5.2 | Inspect die for overall wear, dishing, damage and other defects |
| | | 5.3 | Inspect bearings for shortening, surface defects, loss of specified angle and clearances |
| | | 5.4 | Determine if die can be corrected, scrapped or returned to manufacturer |
| | | 5.5 | Inspect die support system and components for defects and die slide misalignment |
| 6 | Record cause of fault and communicate as required | 6.1 | Prepare recommendations for die correction and obtain any required approvals |
| | | 6.2 | Prepare recommendations for any changes to process or temperature settings and distribute, as appropriate |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting die maintenance requests for information on likely fault causes
- liaising with extruder operators, die designers and die makers, and maintenance department
- interpreting die drawings
- interpreting production records and die maintenance records
- evaluating solid die extrusion faults, including:
 - loss of shape
 - incorrect extrusion length, width or thickness
 - surface faults
- evaluating hollow die extrusion faults, including:
 - loss of shape
 - incorrect extrusion length, width or thickness
 - surface defects
 - unbalanced flow through ports
 - speed differences through die
 - collapse of extrusion or extrusion features
- evaluation of die support system for:
 - slide alignment
 - coining (impression) of bolster
 - faults and incorrect tolerances and alignment of backers, feeder plates and bolsters

Required knowledge

Required knowledge includes:

- aluminium extrusion process, including:
 - die heating
 - billet heating
 - loading of dies and billets
 - breakthrough control
 - flow speed
 - rolling
 - quenching
 - stretching

- aluminium extrusion alloys and their extrusion performance
- extruder components and controls
- requirements of AS/NZS 1866:1997 Aluminium and aluminium alloys – Extruded rod, bar, solid and hollow shapes for extruded products
- causes of die deformation, including:
 - damaged or die
 - poor or incorrect die support due to:
 - poor manufacture
 - wear
 - incorrect component placement/selection
- die and die support design and die manufacturing related faults, such as
 - tolerances and clearances too tight and beyond range of realistic correction by die corrector
 - tolerances and clearances too great causing components to move out of position during extrusion leading to flow blockage
- reasons for die blockage, including:
 - die damage
 - over polishing or incorrect die polishing
 - tongue bending
 - bearing clearances too tight
 - overheating of billet
- indicators of die support faults, including:
 - deflecting mandrels
 - die dishing
 - die movement during extrusion
 - check for metal extruding inwards or outwards
- effects of nitriding and re-nitriding on die performance
- billet composition and billet heating procedures
- changes in billet composition caused by reheating
- process related faults:
 - incorrect temperature settings for pre-heating of billet
 - bad breakthrough control by operator (setting too fast or too high a pressure):
 - poor extruder settings
 - speed through die too fast/slow
 - fouling of section on relief
 - unsuitable support of extrusion after exiting die
 - poor/incorrect quenching
 - faults not subject to action by die corrector
 - poor quality billet
 - mechanical/electrical fault with extruder
- types of extrusion faults and their relationship to die correction techniques and die

correction limitations, including:

- shape distortion:
 - during extrusion
 - on exit from die
 - loss during quenching
- length overruns
- section collapse
- surface faults, such as:
 - breakdown
 - pickup
 - tearing
 - streaking
 - die lines

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to take a systematic approach to the identification of the cause of faults in aluminium extrusions and to determine the appropriate action to remedy the fault.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- comply with WHS, regulatory requirements and risk management procedures
- correctly identify bearings, apertures, components, and critical measurements and tolerances on die drawing
- liaise with extruder operators, die designers and die makers to obtain information to assist in the identification of causes of faults
- identify root cause of faults in both hollow and solid die extrusions
- identify die, die support, process and temperature-related shape and surface faults
- identify appropriate action to take to remedy extrusion faults
- access, analyse and add to die history records.

Context of and specific resources for assessment

- This unit may be assessed on the job or a combination of both on and off the job. Access to the extruder and die producing the faulty extrusions and to die and extrusion records must be possible.
- Assessment must cover extrusions produced by both solid and hollow dies and across a range of extrusion shapes and faults.
- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.
- This unit may be assessed in conjunction with any other units addressing the safety, quality, communication, hand tools, machine operation, recording and reporting associated with die correcting.

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessment may be in conjunction with assessment of other units of competency where required.

Guidance information for assessment

Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Die support	Die support is the specified toolstack dimensions that will support dies, according to the force the extruder can exert.
Container	The container is the part of the extruder that holds the billet and billet support components.

MEM07044A Test a new aluminium extrusion die

Modification History

New unit - Release 1

Unit Descriptor

This unit of competency covers the skills needed by die correctors working in an aluminium extrusion workplace who are required to undertake the initial testing of a new extrusion die. The unit includes liaison with die designers and makers on the performance of the new die and making corrections to the die to ensure optimal performance.

Application of the Unit

This unit applies to die correctors who have received a new die for installation and testing in an aluminium extrusion machine. This unit applies to testing of the new die's performance against design and product specifications. The unit requires testing of both solid and hollow dies, and includes evaluation of extruded product for any faults, determining the root cause of faults, and adjusting the die support system or correcting the new die as required.

Band: A

Unit Weight: 4

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--|-----|---|
| 1 | Interpret die drawing and die specifications relevant to die trial | 1.1 | Identify work health and safety (WHS), regulatory requirements and risk management requirements associated with extruder operation and die handling |
| | | 1.2 | Identify layout and pre-forming of die apertures |
| | | 1.2 | Identify bearing and pocket design/specification |
| | | 1.3 | Identify measurements and tolerances for bearings, die components and die support system |
| | | 1.4 | Identify bolster and spacer specification for die |
| | | 1.5 | Identify press specifications |
| | | 1.6 | Identify speed estimate for die |
| | | 1.7 | Identify ports and bridges for hollow dies |
| 2 | Liaise with die designer | 2.1 | Clarify die drawing and die specifications with die designer where design information is not clear |
| | | 2.2 | Determine if die requires finishing off and clarify final design measurements, tolerances and speed specifications |
| | | 2.3 | Obtain any special instructions from die designer for conduct of test extrusions |

- 3 Finish off die, if required
 - 3.1 Finish lands and bearings to specified tolerances
 - 3.2 Finish ports, bridges and mandrels of hollow dies, if required
 - 3.3 Undertake any final polishing
 - 3.4 Confirm all measurements are to design specification after finishing off

- 4 Analyse trial extrusions
 - 4.1 Check extruder and surrounds for compliance with operation safety requirements
 - 4.2 Operate or supervise operation of extrusion press to produce trial extrusions
 - 4.3 Check hot extrusions for shape distortion
 - 4.4 Check thickness of extrusions are to specification
 - 4.5 Check surface finish of extrusions
 - 4.6 Identify whether faults apply from the start to the end of the runout of the extrusions
 - 4.7 Conduct additional trial extrusions to confirm extrusion faults occur consistently
 - 4.8 Record extruder settings for each trial extrusion

- 5 Identify appropriate remedy for out of specification results
 - 5.1 Examine faulty extrusions and determine if fault relates to die design, incorrect process or temperature settings, or faulty die support system
 - 5.2 Determine fault is die related and able to be eliminated through correction of die
 - 5.3 Determine if fault can be corrected through adjustments to die supports
 - 5.4 Determine if fault can be eliminated through adjusted process control or billet heating
 - 5.5 Recommend either return of die for re-design or manufacture of a new die where faults are unable to be corrected

- 6 Re-test die after correction
 - 6.1 Conduct trial extrusions after correction of die, die support adjustment or process or temperature adjustment
 - 6.2 Return die to die manufacturer if faulty extrusions persist
 - 6.3 Record adjustments to die on die design drawings ensuring correct feedback codes are used
 - 6.4 Record adjustments made to die support system, process and temperature settings

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting of die design drawings
- supervising trial extrusions to ensure trial is conducted to die design specifications
- diagnosing faults on solid and hollow dies
- diagnosing faults on aluminium extrusions, including:
 - shape distortions
 - out of specification wall thickness
 - serrations or castellations on flanges
 - surface faults
 - shape changing from start to end of runout
- liaising with die designers, die makers and extruder operators on performance of new die

Required knowledge

Required knowledge includes:

- aluminium extrusion die construction
- aluminium extrusion process
- the effects of nitriding and re-nitriding on tool performance
- requirements of AS/NZS 1866:1997 Aluminium and aluminium alloys - Extruded rod, bar, solid and hollow shapes
- techniques for correcting solid and hollow dies
- die support system, including role and types of feeder plates, bakers, bolsters and spacers
- extruder components, including:
 - container
 - container liner
 - billet
 - die slide
 - pressure rings
 - platen
- hollow die components, including:
 - weld chamber
 - mandrel
 - die holder

- weld feeds
- bridges
- ports
- die and extruder performance and adjustment records

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to take a systematic approach to testing a new aluminium extrusion die, including carrying out any required finishing off, conducting trial extrusions, identifying reasons for any faults in the trial extrusions and determining the appropriate action to remedy the fault.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- comply with relevant WHS, regulatory requirements and risk management
- correctly identify bearings, apertures, and critical measurements and tolerances on die drawing
- supervise and conduct trial extrusions
- use workshop machines and hand tools to finish off a die to design specifications
- identify cause of extrusion faults from both hollow and solid die extrusions
- identify appropriate action to take to remedy extrusion faults
- report and document results.

Context of and specific resources for assessment

- This unit must be assessed on the job with access to the extruder for which a new die has been designed.
- Assessment must cover the testing of both solid and hollow dies across a range of extrusion shapes.
- Assessment should cover sufficient trial extrusions to ensure that both shape and surface faults related to die performance are observed.
- The competencies covered by this unit would usually be demonstrated by an individual working in a team environment that includes extruder operators and die designers and die makers. The assessment environment should not disadvantage the candidate.
- This unit may be assessed in conjunction with any other units addressing the safety, quality, communication, hand tools, machine operation,

Method of assessment

- recording and reporting associated with testing a new aluminium die.
- Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package.
 - Assessment methods must confirm consistency and accuracy of performance (over a number of extrusions and at least one new solid and one new hollow die) together with application of underpinning knowledge.
 - Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.
 - Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
 - Assessment may be in conjunction with assessment of other units of competency where required.

Guidance information for assessment

Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Load barrels etc., for mass finishing processes	1.1.Machinery is correctly loaded regarding load mass. 1.2.Machine access openings are safely secured.
2. Undertake jig work for non-electrolytic processes	2.1.Components are appropriately secured using standard operating procedures.
3. Undertake wire jig and rack work for electrolytic processes	3.1.Correct type and size of wire or rack is selected and inspected for conformance to specification. Damaged racks are identified for repair or replacement. 3.2.Components are secured presenting appropriate faces according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- correctly loading into the surface finishing machinery
- securing and positioning components to minimise damage
- securing machine access openings
- unloading and stacking components to minimise damage
- selecting the correct type and size of wire or rack
- planning and sequencing operations
- checking and clarifying task related information
- checking for conformance to specifications
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings
- following oral instructions
- performing calculations using formulae

Required knowledge

Look for evidence that confirms knowledge of:

- the procedures for loading machinery for mass finishing processes

REQUIRED SKILLS AND KNOWLEDGE

- the distribution of the components within the machinery
- reasons for distributing the components in a particular manner
- the procedures for securing machine access openings
- the consequences of not securing machine access openings
- the procedures for jiggling work for non-electrolytic processes
- the precautions to be taken when jiggling work for non-electrolytic finishing processes
- the appropriate types and sizes of wire or racks used in conjunction with surface finishing using electrolytic processes
- different faces to be surface finished/coated
- procedures for securing the components to be surface finished using electrolytic processes
- procedures for unloading and stacking surface finished components
- the damage that can be caused by inappropriate handling and storing of surface finished components
- hazard and control measures associated with wiring, jiggling and barrel load/unloading work
- safe workplace practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to perform wire, jig and barrel load/unload work related to non-electrolytic processes.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing wire, jig and barrel load/unload work related to non-electrolytic processes or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

EVIDENCE GUIDE

Guidance information for assessment	
--	--

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Non-electrolytic processes

Pre-treatment and finishing processes typical of which are degreasing, de-scaling, surface blasting, flame cleaning, wet blasting, grinding, polishing, wet coating, powder coating, electroplating, anodising, electroless plating, electrophoretic coating and hot dip metallising

Components

Refer to components supplied by the customer

Damaged racks

- Damage to plastic coating or contact points
- Ensuring good electrical contact
- Positioning to facilitate optimum thickness on significant surfaces
- Avoidance of gas entrapment
- The position of contact marks

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify job material	1.1.Common metals, alloys and non-metals can be identified.
2. Identify job surface condition	2.1.Common surface soils and conditions can be identified.
3. Perform pre-treatment processes in correct sequence	3.1.Pre-treatment processes are carried out to standard operating procedures. 3.2.Pre-treatment process parameters are monitored to ensure they remain within specified limits.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and following routine and familiar information on standard operating procedures
- recognising common surface soils and conditions from given samples
- carrying out appropriate pre-treatment processes
- monitoring and maintaining the pre-treatment process parameters within specified limits
- following verbal instructions
- orally reporting routine information

Required knowledge

Look for evidence that confirms knowledge of:

- characteristics of common metals, alloys and non-metals and procedures and techniques for identifying them
- common surface soils and conditions
- procedures for identifying the type(s) of soil on surfaces to be finished
- simple tests that can be used to assist in identifying surface soils and conditions
- pre-treatment processes applicable to a range of materials, surface soils and conditions
- procedures for carrying out pre-treatment processes

REQUIRED SKILLS AND KNOWLEDGE

- parameters and procedures for monitoring pre-treatment processes
- hazards and control measures associated with pre-treatment
- use and application of personal protective equipment
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify electroplating requirements	1.1. Electroplating requirements are identified. 1.2. Untreated materials and required electroplating treatment are identified.
2. Prepare for electroplating process	2.1. Materials and racking arrangement are checked for non-conformance to specifications/job requirements. 2.2. All plant and equipment relevant to process are checked for compliance with safety and operational requirements. 2.3. Instrumentation/gauges are checked for operation. 2.4. Condition of solution is checked.
3. Perform electroplating operations	3.1. Operation steps are carried out in correct sequence according to standard operating procedures or work instructions. 3.2. Safety precautions are observed.
4. Recognise and rectify process deviations	4.1. Compliance with operating parameters is ensured. 4.2. Uncontrollable variances are reported to appropriate persons. 4.3. Adjustments are made to rectify process deviation. 4.4. Finished products are visually inspected for compliance to specification.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- recognising deviations and faults in product/equipment/process
- identifying machine process requirements, untreated materials and process sequences
- identifying incorrectly loaded work
- inspecting job surface conditions
- checking plant and equipment for conformance to safety and operational requirements

REQUIRED SKILLS AND KNOWLEDGE

- checking solution levels and identifying visible contamination such as solution clarity, oil, surface contamination
- maintaining required contacts and immersions while moving materials
- monitoring operating parameters, identifying deviations and making required adjustments
- adjusting settings such as voltage, current and temperature within permissible limits
- correcting deviations within scope operator's control
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings
- following oral instructions
- performing calculations using formulae

Required knowledge

Look for evidence that confirms knowledge of:

- basic knowledge of electroplating process, machine components, treatment solutions, process parameters
- a basic knowledge of electroplating solutions and handling procedures
- treatment stages
- information relevant to plating products, treatment baths, settings
- characteristics of a variety of base materials that can be plated
- pre-treatment s, treatments and post treatments in relation to task requirements
- required equipment checks
- hazards and control measures associated with electroplating processes
- operational requirements of all plant and equipment associated with the relevant process
- the purpose and typical settings of different instruments/gauges
- sequences and requirements involved in moving materials
- the range of adjustments permissible for given operating parameters including voltage, current and temperature
- variances outside the control of the operator
- common faults and imperfections/deviations
- adjustments to suit specific process deviations
- effects of rust, corrosion and other contaminants
- the reasons for rejecting incorrectly loaded work
- safe operating procedures, safety and personal protective equipment, hazards of specific solutions

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess and prepare components for required coating process	1.1.Coating specifications are identified from operation sheets/work procedures. 1.2.Suitability of pre-treated components for finishing process is checked according to enterprise procedures. 1.3.Components are prepared as required for finishing application. 1.4.Components are positioned/located for finishing according to enterprise procedures.
2. Perform simple mixing and estimating operations	2.1.Mixing ratios are calculated and a range of wet coatings are mixed and thinned as required to standard operating procedures. 2.2.Required coating quantities are estimated using simple surface area calculations.
3. Perform coating operation	3.1.Equipment is set up to specification using standard operating procedures. 3.2.Coating and applied curing technique are monitored to standard operating procedures. 3.3.Coating application, thickness and colour are checked and maintained for compliance with specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining all relevant drawings, specifications and/or instructions in accordance with work place procedures
- racking the components to be coated correctly in accordance with standard operating procedures
- calculating the correct mixing ratios for given wet coatings accurately
- where appropriate, mixing and thinning the given wet coatings
- calculating the surface area to be coated correctly

REQUIRED SKILLS AND KNOWLEDGE

- where appropriate, estimating the quantities of wet coating materials correctly
- setting up the appropriate coating equipment
- applying the coating correctly using the appropriate technique
- curing the coating correctly using the appropriate technique
- maintaining the coating thickness and colour in accordance with specifications throughout the coating operation
- checking the coating thickness and colour
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task-related information
- checking for conformance to specifications
- performing numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- work to be undertaken
- coating process to be used
- coating specifications
- appropriate type of racking for the coating process
- reasons for selecting the chosen rack type
- procedures for racking components to be coated
- source of data on mixing ratios for wet coatings
- mixing ratio for the given task(s)
- function of thinners as applied to the application of wet coatings
- procedures to be followed when mixing wet coatings
- surface area to be coated
- coverage rate of the coating material to be applied
- procedures for estimating quantities of coating materials
- types of equipment used for a variety of coating processes
- appropriate coating equipment for the given task(s)
- reasons for selecting the chosen equipment
- operating procedures applicable to the selected coating equipment
- a range of coating techniques
- a range of curing techniques
- appropriate coating and curing technique for the given task(s)
- reasons for selecting the chosen coating and curing techniques
- monitoring procedures to be followed

REQUIRED SKILLS AND KNOWLEDGE

- examples of coating defects
- the causes of coating defects
- where appropriate, procedures for rectifying coating defects
- where appropriate, procedures for reporting coating defects
- coating thickness and colour to be achieved
- the means of checking coating thickness and colour
- frequency at which checks are undertaken
- hazards and control measures associated with finishing work using wet, dry and vapour deposition methods, including housekeeping
- safe work practices and procedures
- use of personal protective equipment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Undertake mask and jig work	1.1. Jigs are secured and masking is adherent and stable. 1.2. Necessary auxiliary electrodes and shields are incorporated effectively. 1.3. Necessary jigs and shields are manufactured.
2. Determine operating parameters	2.1. Plating knowledge and/or specifications are applied in correctly computing operating times, currents and/or voltages.
3. Pre-treat and treat work	3.1. Work is treated in accordance with specifications using standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- securing the electroplating jigs
- correctly masking
- setting up auxiliary electrodes and shields
- manufacturing jigs and shields in accordance with specifications
- correctly calculating the operating parameters
- treating the work
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings
- following oral instructions
- performing calculations using formulae

Required knowledge

Look for evidence that confirms knowledge of:

- the reasons for masking work being electroplated
- the range of materials that are used for masking purposes
- the procedures for securing the masking
- the reasons for using auxiliary electrodes and shields
- the procedures for mounting/setting up auxiliary electrodes and shields

REQUIRED SKILLS AND KNOWLEDGE

- the specifications of the jigs and shields to be manufactured
- the procedures for manufacturing jigs and shields
- the procedures and formulae for calculating operating times, currents and voltages
- the specifications of the surface finish to be achieved
- the procedures for pre-treating the work
- the procedure for treating the work after electroplating
- the pre-electroplating and post electroplating treatment specifications
- the reasons for pre-electroplating and post electroplating treatment of surfaces
- hazards and control measures associated with preparing and producing specialised coatings electrolytically
- safe workplace practices and procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to prepare and produce specialised industrial films on a variety of work pieces, often on a one-off basis. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with preparing and producing specialised industrial films on a variety of work pieces, often on a one-off basis or other units requiring the exercise of the skills and knowledge covered by this unit.

Method of assessment

Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes,

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Perform a series of anodising steps	1.1. All steps are carried out in the correct sequence to standard operating procedures. 1.2. Masking techniques are correctly applied, where required. 1.3. Contact marks and shielding are minimised.
2. Assess preparation of work for correct jiggging/loading	2.1. Work is correctly connected for the required current flow and minimum contact marks and shielding. 2.2. All incorrectly loaded work is rejected.
3. Anodise work by a series of treatment steps	3.1. All steps are carried out in the correct sequence to standard operating procedures.
4. Seal or dye and seal anodised work	4.1. All steps on work are carried out in the correct sequence to standard operating procedures.
5. Monitor and control operating parameters	5.1. Process parameters are maintained within specified limits.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and following routine and familiar information on standard operating procedures
- following all steps in the anodising process
- applying the correct masking materials and techniques
- minimising contact marks and shielding
- correctly connecting the work to the required electrical current
- identifying incorrectly loaded work
- maintaining process parameters within specified limits
- following verbal instructions
- orally reporting routine information

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms knowledge of:

- process for anodising aluminium
- materials, techniques and procedures for masking materials during anodising
- causes of contact marks and shielding during the anodising process
- procedures for minimising contact marks and shielding
- procedures for connecting the work to the required electrical current
- the electrical current required for the anodising process
- methods for correctly loading work
- examples of incorrectly loaded work
- reasons for rejecting incorrectly loaded work
- steps to be carried out in the seal/dye and seal process
- procedures and reasons for monitoring and maintaining the process parameters within the specified limits
- hazards and control measures associated with anodising operations, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to produce clear and coloured and sealed anodised films on aluminium and its alloys for decorative, mechanical and architectural purposes. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, i.e. the candidate is not in productive work, an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with anodising aluminium or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply principles of quality assurance	1.1. Quality assurance standards are applied to enterprise specifications.
2. Apply research or quality data to production process	2.1. Liaison is undertaken with in-house/external control laboratories. 2.2. Data is correctly interpreted and process changes are recommended. 2.3. Process changes are effectively implemented. 2.4. Laboratory/research data is used to determine and make changes/corrections to processes.
3. Perform quality tests to industry standards	3.1. Quality testing is performed as required to standard operating procedures and industry standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and interpreting quality assurance standards, test data other applicable reference documents
- liaising between the production section and the control laboratory
- checking and clarifying information
- using effective communication skills and terminology for conveying and discussing task-related information
- determining and recommending process changes
- using tests to calculate process parameters on the basis of test and production data collected
- using appropriate tests, testing equipment and techniques to test the surface coating for conformance with specification

Required knowledge

Look for evidence that confirms knowledge of:

- enterprise and industry quality assurance standards that apply to surface finish production and product quality
- the role of the control laboratory and procedures for liaising with internal/external

REQUIRED SKILLS AND KNOWLEDGE

control laboratories

- surface finish specifications
- characteristics of deviations of test/production data and their causes
- the procedures, calculations and formulae for determining process parameters
- the effect of varying process parameters on the specification of the surface finish
- surface coating tests and the procedures, equipment and techniques necessary to carry out those tests
- hazards and control measures within the scope of this unit
- use and application of personal protective equipment
- safe work practices and procedures
- manual handling techniques

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Load waste product	1.1.Waste from production process is obtained via established procedures. 1.2.Waste is loaded in accordance with standard operating procedures for waste/effluent.
2. Monitor plant for waste by-products	2.1.All process parameters are accurately monitored and recorded to identify waste/effluent. 2.2.Recording devices are checked for correct/continuous operation.
3. Adjust process	3.1.Knowledge of waste treatment processes is applied in determining appropriate adjustments. 3.2.Process parameters are checked to ensure they remain within specified limits. 3.3.All adjustments are made to accord with authority requirements with regard to waste. 3.4.In the event of mechanical failure, appropriate corrective action is undertaken.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- performing safe loading of waste
- monitoring process parameters
- recording process parameters
- checking recording devices for correct/continuous operation
- making adjustments to the waste treatment process
- checking process parameters for conformance to specification
- maintaining the condition of the waste in accordance with the requirements of the relevant authority
- taking corrective action in response to a mechanical failure
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings
- following oral instructions

REQUIRED SKILLS AND KNOWLEDGE

- performing calculations using formulae

Required knowledge

Look for evidence that confirms knowledge of:

- the hazards and control measures associated with handling waste products
- the safety precautions to be taken when handling/loading the waste/effluent
- the process parameters to be monitored
- the procedures for monitoring process parameters and identifying waste/effluent
- the procedures for recording process parameters
- the procedures for checking process parameter recording devices
- the adjustments that can be made to the waste treatment process and their effect on the condition of the waste
- the procedures for adjusting process parameters
- the specified limits for each process parameter
- the legislative and regulatory requirements relating to waste management
- the corrective actions that can be taken and the reasons for taking proposed corrective actions
- the possible effects of surface finishing waste on the environment

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare solution	1.1.Appropriate solutions for application requirements or specifications are identified. 1.2.Volumes, density and solution concentration are calculated for effective operation. 1.3.Suitable volume of solution is made up from supplier's instructions and/or manual in accordance with standard operating procedures. 1.4.Spent solutions are referred to waste treatment processing in accordance with standard operating procedures.
2. Maintain process specific equipment	2.1.Inspection of probes and electrodes is carried out and meter probes are recalibrated as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing operational plan
- calculating volumes and determining quantities required
- preparing appropriate solutions
- inspecting probes and electrodes
- calibrating meter probes
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings
- following oral instructions
- undertaking calculations using formulae
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- reasons for selecting chosen sequence of operations
- solution concentrations

REQUIRED SKILLS AND KNOWLEDGE

- procedures for making up solution
- procedures for inspecting probes and electrodes
- procedures for recalibrating meter probes
- the equipment and techniques necessary to recalibrate meter probes
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select appropriate finishing/polishing procedure	<p>1.1. Surface finish specifications are understood and appropriate finishing/polishing method/technique is selected for the work requirements.</p> <p>1.2. Appropriate finishing/polishing equipment/media is selected for the work material and work requirements.</p>
2. Install and set up grinding and polishing devices	<p>2.1. Endless belt finishers are fitted according to standard operating procedures.</p> <p>2.2. Grinding wheels and mops are fitted and dressed according to standard operating procedures.</p> <p>2.3. Polishing mops are installed and set up according to standard operating procedures.</p>
3. Identify job materials	3.1. Common metals, alloys and non-metals are identified.
4. Identify job surface condition	4.1. Common surface imperfections are identified.
5. Assess processing hazards associated with work piece size and shape	<p>5.1. Hazards are correctly identified.</p> <p>5.2. Correct safe working procedures are followed.</p>
6. Grind, finish, brush and/or polish job	6.1. Job surface is finished to specification according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
<p>Look for evidence that confirms skills in:</p> <ul style="list-style-type: none"> • reading and following information on standard operating procedures • checking and clarifying task-related information • selecting appropriate polishing/finishing method to suit work requirements • fitting and adjusting endless belts on finishing machines • fitting and dressing grinding wheels and mops on pedestal grinders

REQUIRED SKILLS AND KNOWLEDGE

- installing and setting up polishing mops in polishing machines
- producing surface finishes to specification
- identifying surface imperfections
- assessing processing hazards

Required knowledge

Look for evidence that confirms knowledge of:

- typical surface finish specifications within the scope of this unit
- procedures, tools and techniques for fitting and adjusting endless belts on finishing machines
- procedures, tools and techniques required to fit and dress grinding wheels and mops
- procedures tools and techniques for installing and setting up polishing mops
- characteristics of common metals, alloys and non-metals
- appropriate polishing media to be used in finishing/polishing for different types of materials
- effect of different types and grades of polishing media on the surface finish
- finishing and polishing methods/techniques
- reasons for selecting a specific method/technique
- common surface imperfections/defects
- surface imperfections/defects that can be removed/repaired by manual finishing/polishing procedures
- procedures for handling components with surface imperfections/defects that cannot be removed/repaired
- methods and techniques to check for conformance to specifications
- hazards associated with the manual finishing/polishing process
- personal protective clothing and equipment
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to manually finish/polish materials. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with manually finishing/polishing materials or other units requiring the exercise of the skills and knowledge covered by this unit.

Method of assessment

Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Surface preparation requirements are determined from job sheet, instructions or other predetermined specifications in accordance with standard operating procedures. 1.2. Where required, appropriate solvent and solvent application are selected to meet job specification. 1.3. Where required, appropriate mechanical equipment is selected to meet job specification. 1.4. Work site is prepared for surface cleaning activities.
2. Set up equipment	2.1. Appropriate equipment and any required consumables are assembled, set up and prepared correctly and safely in accordance with manufactures' specifications and standard operating procedures.
3. Prepare surfaces using solvents as required	3.1. Safe working environment for solvent use is established according to regulatory requirements and standard operating procedures. 3.2. Solvents are applied correctly. 3.3. Treated surface is neutralised and made safe to handle.
4. Prepare surfaces using mechanical means as required	4.1. Safe working environment for mechanical surface preparation is established according to regulatory requirements and standard operating procedures. 4.2. Surfaces are prepared using mechanical means. 4.3. Mechanical equipment is cleaned and checked for damage and operational faults, in accordance with standard operating procedures. 4.4. Equipment faults are recorded and reported in accordance with standard operating procedures.
5. Inspect prepared surface	5.1. Surface preparation is checked for cleanliness and conformance to specifications. 5.2. Faults or defects are rectified where required and recorded/reported in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- planning and sequencing operations
- preparing surfaces using solvents as required
- preparing surfaces using mechanical means
- setting up equipment and consumables
- meeting all safety requirements
- using solvents correctly
- neutralising solvents
- using mechanical equipment to prepare surface
- maintaining mechanical equipment
- recording and reporting of faults
- inspecting prepared surface
- rectifying work performed
- checking for conformance to specifications
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures
- following oral instructions
- applying measurement skills needed to meet the requirements of this unit
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- common surface contaminants, conditions
- reasons for selecting solvents
- mechanical equipment required
- procedure for setting up equipment
- specifications applying to the surface to be prepared
- methods for neutralising solvents
- tools, equipment, abrasives and other materials
- procedures for maintaining/storing mechanical equipment
- procedures for recording/reporting faulty equipment
- procedures checking prepared surfaces
- rectification techniques
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to select the appropriate preparation process, select and set up the equipment, undertake mechanical preparation or application of solvents as required and inspect the finished surface. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with surface preparation using solvents and/or mechanical means, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures,</p>

EVIDENCE GUIDE

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Surface preparation	New surfaces and restoration work
Solvents	A range of cleaning chemicals including acids, chlorinated solvents and hydrocarbons
Solvent application methods	Spraying, wiping, brushing, vapour degreasing etc.
Mechanical equipment	Linishers, grinders, polishers, sanders, blast device, enclosures, air grinders etc.
Consumables	Emery cloth/belts, grinding/sanding disks, grinding accessories etc.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Work requirements are determined from job sheet, instructions or other predetermined specifications in accordance with standard operating procedures. 1.2. Appropriate abrasive blasting process, equipment and blasting media are identified to meet job specification. 1.3. Work site is prepared for surface cleaning activities.
2. Set up equipment	2.1. Appropriate equipment and any required consumables are assembled, set up and prepared correctly and safely in accordance with manufactures' specifications and standard operating procedures. 2.2. Correct rust inhibitor for use in wet abrasive blast methods is selected where required. 2.3. Pre-operational checks are carried out on equipment and faults and are rectified or reported for further action.
3. Prepare surfaces using abrasive blasting	3.1. Blasting equipment is operated in accordance with standard operating procedures. 3.2. Emergency shut-down procedures can be undertaken. 3.3. Work procedures are undertaken to appropriate environmental requirements. 3.4. Abrasive media disposal is carried out in accordance with standard operating procedures. 3.5. Blasting equipment is cleaned and disassembled and inspected in accordance with manufacturers' specifications and standard operating procedures. 3.6. Equipment faults are recorded and reported in accordance with standard operating procedures.
4. Inspect prepared surface	4.1. Surface preparation is assessed for cleanliness and conformance with specifications. 4.2. Faults or defects are rectified where required and inspection results are recorded and reported in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- planning and sequencing operations
- undertaking numerical operations within the scope of this unit
- selecting blasting equipment and media
- setting up equipment and consumables
- selecting rust inhibitor
- conducting pre-operational checks
- preparing surfaces using abrasive blasting
- disposing of abrasive media
- maintaining blasting equipment
- identifying, recording and reporting of faults
- inspecting prepared surface
- performing rectification work
- checking for conformance to specifications

Required knowledge

Look for evidence that confirms knowledge of:

- reason for selecting the chosen sequence of operations
- blasting equipment and media required
- equipment, consumables for various methods
- importance of using an appropriate rust inhibitor
- process for undertaking pre-operational checks
- procedures for using abrasive blasting equipment
- procedures for abrasive media disposal
- procedures for maintaining and storing blasting equipment
- recording/reporting procedures; faulty equipment
- checking prepared surfaces
- rectification techniques
- safe work practices and procedures
- hazards and control measures related to abrasive blasting

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Blasting processes

Surface preparation using propelled abrasives including water, air steam, grits and blasting mediums

Blasting media

Abrasives, shot, glass beads, sand, steel shot, garnet, and other mediums accepted by industry and all regulatory bodies

Rust inhibitor

A substance which, when added to a corrosive liquid in small amounts, reduces the rate of corrosion

Blasting equipment

Electric and diesel compressors, blast pots, blast rooms, centrifugal blast machines, water pressure washers to 35,000 kpa, air hoses and nozzles, and specified hand and power tools, etc.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Work requirements are determined from job sheet, instructions or other specifications in accordance with standard operating procedures. 1.2. Appropriate abrasive blasting process and equipment are selected to meet job specification. 1.3. Appropriate abrasive blasting media and equipment are selected to meet job specification. 1.4. Work site is prepared for surface cleaning activities.
2. Set up equipment	2.1. Appropriate equipment and any required consumables are assembled, set up and prepared correctly and safely in accordance with manufacturers' specifications and standard operating procedures. 2.2. Correct rust inhibitor for use in wet abrasive blast methods is selected where required. 2.3. Pre-operational checks are carried out on equipment and faults are rectified or reported for further action.
3. Inspect surface prior to cleaning	3.1. Work piece is inspected prior to cleaning in accordance with standard operating procedures. 3.2. Identified faults/defects requiring remedial or pre-treatment action are reported as required.
4. Prepare surfaces using abrasive blasting	4.1. Blasting equipment is operated in accordance with standard operating procedures. 4.2. Emergency shut-down procedures can be carried out. 4.3. Work procedures are undertaken to appropriate environmental requirements. 4.4. Abrasive media disposal is carried out in accordance with standard operating procedures. 4.5. Blasting equipment is cleaned and disassembled and inspected in accordance with manufacturers' specifications and standard operating procedures. 4.6. Equipment faults are recorded and reported in accordance with standard operating procedures.
5. Inspect prepared surface	5.1. Surface preparation is assessed for cleanliness and conformance with specifications. 5.2. Faults or defects are rectified where required and inspection results are recorded and reported in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing and sequencing operational work plan
- selecting blasting process and equipment
- selecting appropriate blasting media
- setting up equipment
- undertaking surface inspection prior to cleaning
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures.
- following verbal instructions
- orally reporting routine information
- identifying faults and defects
- checking and clarifying task-related information
- checking for conformance to specifications

Required knowledge

Look for evidence that confirms knowledge of:

- calculations and numerical operations within the scope of this unit
- blasting media features
- equipment for the selected method
- inspection procedures
- procedures for using abrasive blasting equipment
- procedures for abrasive media disposal
- safe work practices and procedures
- hazards and control measures associated with preparing surfaces by abrasive blasting, including housekeeping

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Work requirements are determined from job sheet, instructions, drawings or visual inspection. 1.2. Required protective coating materials are identified according to job specification. 1.3. Required protective coating application equipment is identified according to job requirements. 1.4. Work site is prepared for application of protective coating.
2. Work piece prepared for application of protective coating	2.1. Surface condition is inspected for readiness for application of protective coating according to specification. 2.2. Unsuitable work pieces/surfaces and fabrication defects are identified and appropriate remedial action or reporting is undertaken in accordance with standard operating procedures. 2.3. Components are masked where protective coating application is not specified. 2.4. Conditions for overspray are identified.
3. Equipment prepared for application of surface coating materials	3.1. Required plant and equipment basic operations are understood. 3.2. Routine maintenance is undertaken on plant and equipment in accordance with standard operating procedures. 3.3. Status/reports are recorded by proforma or orally in accordance with standard operating procedures. 3.4. Conventional coating application equipment is assembled in accordance with equipment requirements and standard operating procedures.
4. Apply single pack coatings	4.1. Coating product type, solvent, uses, mixing procedure, clean-up and safety requirements are identified as appropriate. 4.2. Correct method of determining wet film thickness in accordance with specified dry film is demonstrated. 4.3. Coating material is thinned to suit the application method and to achieve required film thickness. 4.4. Coating is applied using specified application method and standard operating procedures. 4.5. Coating schedules can be outlined for metal and non-metal materials. 4.6. Coating application and curing technique are

ELEMENT	PERFORMANCE CRITERIA
	monitored according to standard operating procedures.
5. Clean and store equipment	5.1. Conventional coating application equipment is cleaned, disassembled and inspected for damage. 5.2. Faulty equipment is recorded and reported to appropriate personnel in accordance with standard operating procedures. 5.3. Coating application equipment is stored in accordance with standard operating procedures.
6. Inspect finish surface	6.1. Surface finish is assessed for profile size differences and uses. 6.2. Coating thickness is determined using appropriate instruments and results are compared with job specifications. 6.3. Total surface is inspected for conformance to specification in accordance with standard operating procedures. 6.4. Inspection results are recorded and reported in accordance with standard operating procedures.
7. Select and maintain personal protective equipment (PPE)	7.1. Appropriate personal protective equipment for coating application is selected according to job requirements and standard operating procedures. 7.2. Personal protective equipment is used appropriately in accordance with manufacturers' specifications and standard operating procedures. 7.3. Ancillary support attachments are identified and used. 7.4. Personal protective equipment is maintained in accordance with manufacturers' specification and standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

REQUIRED SKILLS AND KNOWLEDGE

- obtaining all relevant drawings, job sheets, specifications and instructions in accordance with workplace procedures
- considering all relevant information and job requirements
- preparing site with due regard to OH&S requirements including site safety, clear working space, other materials/structures/personnel in the vicinity, isolation of work site where required
- undertaking comprehensive inspection and considering specifications during inspection
- using standard workplace procedures to identify, select and apply the appropriate treatment or actions to rectify items with surface or fabrication defects
- identifying surface required as 'no paint areas' and protecting these using standard masking procedures and techniques
- undertaking precautions to prevent overspray in the workplace using standard procedures
- undertaking routine maintenance on plant and equipment in accordance with standard operating procedures
- preparing all required maintenance records/reports and details communicated
- assembling equipment in accordance with manufacturers' specifications and standard operating procedures
- identifying coating type and appropriate solvents and standard workplace procedures required for mixing processes, clean-up and safe handling
- using workplace procedures for determining the wet film thicknesses of a coating from the specified dry film thickness
- calculating required thickness in accordance with product volume solids
- applying standard operating procedures for thinning coating materials and applying the specified film thickness coating to a substrate
- applying protective coating to comply with an established standard using specified methods and standard operating procedures
- controlling coating application and curing techniques using standard operating procedures
- undertaking disassembly, cleaning and checking for functionality of spraying equipment and associated items in accordance with standard operating procedures
- using standard operating procedures to report on any damage or faulty parts and communicating with appropriate personnel
- following procedure for storage including any hazard reduction and/or protection of equipment and components
- checking surface condition of the work piece, including profile size properties and problems according to standard operating procedures and other acceptable standards
- determining thickness using mechanical, electronic or other appropriate instruments and testing results compared with job specifications, drawings etc.
- undertaking comprehensive inspection as required by standard operating procedures

REQUIRED SKILLS AND KNOWLEDGE

- preparing all required inspection records/reports and details communicated
- selecting personal protective equipment suitable for applying protective coatings
- using appropriate personal protective equipment in workplace operations in accordance with standard procedures
- selecting the appropriate supports to use with personal protective equipment in standard operational practices
- checking personal protective equipment items for serviceability in accordance with manufacturers' specifications
- recording and reporting faulty items to appropriate personnel using standard workplace procedures

Required knowledge

Look for evidence that confirms knowledge of:

- work to be undertaken and specifications applying to the work
- correct interpretation of all relevant information
- safety issues, adequate precautions, awareness of other site factors that could be affected by the work
- deviation from specified surface finish/condition
- standard workplace procedures for identifying unsuitable work items
- method of locating areas to be protected from coating process and masked
- the areas subject to overspray and requiring protection
- operation of plant and equipment using standard operating procedures
- standard operating procedures for plant and equipment maintenance
- the requirements for completion and processing of maintenance reports
- assembly specifications and procedures
- workplace procedures for identifying coating types and processing solvents, mixing and safe handling practices
- the workplace procedures for determining the wet film thickness of a coating from the specified dry film thickness
- calculations using a specified formulation
- standard operating procedure for thinning coating materials for use in applying the specified film thickness coating to a substrate
- standard operating procedures to apply protective coatings to comply with an established standard
- procedures for controlling coating application and curing techniques
- standard operating procedure for disassembly, cleaning and checking
- standard operating procedures for recording and reporting defective parts
- standard operating procedures for storage and protection of equipment
- standard operating procedures and other relevant standards for assessing the profile of the surface finish
- dry film thickness testing instruments

REQUIRED SKILLS AND KNOWLEDGE

- standard operating procedures for surface inspection, including the extent and detail of inspection as required
- requirements for completion and processing of inspection reports
- standard procedure for identifying and selecting the required personal protective equipment
- the workplace standard procedure for the use of personal protective equipment
- the use and selection of appropriate supports to use with personal protective equipment in standard operational practices
- standard procedures and manufacturers' specifications for inspecting and maintaining personal protective equipment in the workplace
- hazard and control measures associated with applying protective coatings (basic) including housekeeping
- safe work practices and procedures

Routine maintenance is undertaken on plant and equipment in accordance with standard operating procedures. 3.3. Status/reports are recorded by proforma or orally in accordance with standard operating procedures. 3.4. Coating application equipment is assembled in accordance with equipment requirements and standard operating procedures. 3.5. Personal protective equipment is selected and maintained in accordance with manufacturers' specifications and standard operating procedures.
4. Apply coatings using conventional, airless and plural component equipment	4.1. Coating product type, solvent, uses, mixing procedure, clean-up and safety requirements are identified as appropriate. 4.2. Correct method of determining wet film thickness in accordance with specified dry film is demonstrated. 4.3. Coating material is thinned to suit the application method and to achieve required film thickness. 4.4. Coating is applied using specified application method and standard operating procedures.

ELEMENT	PERFORMANCE CRITERIA
	4.5.Coating application and curing technique is monitored according to standard operating procedures.
5. Clean and store equipment	5.1.Coating application equipment is cleaned, disassembled and inspected for damage. 5.2.Faulty equipment is recorded and reported to appropriate personnel in accordance with standard operating procedures. 5.3.Coating application equipment is stored in accordance with standard operating procedures.
6. Inspect finished surface	6.1.Surface finish is assessed for profile size differences and uses. 6.2.Coating thickness is determined using appropriate instruments and results are compared with job specifications. 6.3.Total surface is inspected for conformance to specification in accordance with standard operating procedures. 6.4.Inspection results are recorded and reported in accordance with standard operating procedures.
7. Calculate, estimate and cost application of protective coating	7.1.Surface area of work piece, materials, labour and equipment are assessed. 7.2.Cost of materials, labour, handling and equipment are determined. 7.3.Results are recorded and reported as an estimate for the application of a protective coating system.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining all relevant drawings, job sheets, specifications and instructions in accordance with work place procedures
- where appropriate, inspecting the surface(s) to be coated by the individual
- selecting correct coating system and material for the job surface and use

REQUIRED SKILLS AND KNOWLEDGE

- selecting correct coating process and equipment for applying the selected coating material
- preparing site with due regard to OH&S requirements including site safety, clear working space, other materials/structures/personnel in the vicinity, isolation of work site where required
- using standard workplace procedures to identify, select and apply the appropriate treatment or actions to rectify items with surface or fabrication defects
- identifying surfaces required as 'no paint areas' and protecting these using standard masking procedures and techniques
- undertaking precautions to prevent overspray in the workplace using standard procedures
- undertaking routine maintenance on plant and equipment in accordance with standard operating procedures
- preparing all required maintenance records/reports and communicating details
- assembling equipment in accordance with manufacturers' specifications and standard operating procedures
- selecting appropriate personal protective equipment and maintaining this in accordance with job requirements, manufacturers' specifications, OH&S requirements and standard operating procedures
- inspecting work piece and identifying any faults in accordance with standard operating procedures
- using workplace procedures for determining the wet film thickness of a coating from the specified dry film thickness
- calculating required thickness in accordance with product volume solids
- applying standard operating procedures for thinning coating materials and applying the specified film thickness coating to a substrate
- applying protective coating to comply with an established standard using specified methods and standard operating procedures
- controlling coating application and curing techniques using standard operating procedures
- undertaking disassembly, cleaning and checking for functionality of spraying equipment and associated items in accordance with standard operating procedures
- using standard operating procedures to report on any damage or faulty parts and communicating with appropriate personnel
- following procedure for storage including any hazard reduction and/or protection of equipment and components
- checking surface condition of the work piece, including profile size properties and problems according to standard operating procedures and other acceptable standards
- determining thickness using mechanical, electronic or other appropriate instruments
- comparing test results with job specifications, drawings etc.
- undertaking inspection comprehensively as required by standard operating

REQUIRED SKILLS AND KNOWLEDGE

procedures

- preparing all required inspection records/reports and communicating details
- using appropriate inspection and assessment methods
- undertaking calculations in accordance with standard operating procedures and specifications
- recording and reporting calculated costs in accordance with standard operating procedures

Required knowledge

Look for evidence that confirms knowledge of:

- work to be undertaken
- specifications applying to the work
- appropriate coating system and material required to meet job specification
- features of the various types of coating materials, including drying and curing requirements
- selection procedures for coating material
- appropriate coating process and equipment required for surface coating to meet job specification
- application features of the various types of coating materials and methods
- selection procedures for coating process and equipment, including conventional, airless and plural component
- awareness of other site factors that could be affected by the work
- deviation from specified surface finish/condition
- standard workplace procedures for identifying unsuitable work items
- method of locating areas to be protected from coating process and masked
- the areas subject to overspray and requiring protection
- operation of plant and equipment using standard operating procedures
- standard operating procedures for routine maintenance of plant end equipment
- requirements for completion and processing maintenance reports
- procedure for selecting and maintaining personal protective equipment
- inspection procedure
- unsuitable work pieces in consideration of job specifications
- the workplace procedures for determining wet film thickness of a coating from the specified dry film thickness
- calculations using a specified formulation
- standard operating procedures for thinning coating materials for use in applying the specified film thickness coating to a substrate
- standard operating procedures to apply protective coatings to comply with an established standard
- the procedures for controlling coating application and curing techniques
- standard operating procedure for disassembly, cleaning and checking

REQUIRED SKILLS AND KNOWLEDGE

- standard operating procedures for recording and reporting defective parts
- standard operating procedures for storage and protection of equipment
- standard operating procedures and other relevant standards for assessing the profile of the surface finish
- dry film thickness testing instruments
- standard operating procedures for surface inspection, including the extent and detail of inspection as required
- the requirements for completion and processing of inspection reports
- the standard methods and procedures for determining surface area of various shapes of materials
- standard procedures for calculating costs
- the standard operating procedures for recording and reporting calculated costs
- hazard and control measures associated with applying protective coatings (advanced), including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply protective coatings (advanced). Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying protective coatings (advanced) or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply specific health and safety considerations to surface preparation	1.1. Products, hazardous materials and processes used in blaster cleaning and coating operations are identified. 1.2. Safety procedures appropriate to the work requirements are applied. 1.3. Unsafe working conditions are identified and reported to appropriate personnel.
2. Control by-products, materials and emissions	2.1. By-products, materials and emissions are contained using established procedures. 2.2. By-products, materials and emissions are monitored and directed to appropriate treatment or storage area. 2.3. Monitoring devices are checked for correct/continuous operation. 2.4. Status/reports are recorded and reported.
3. Dispose of by-product, materials and emissions	3.1. Waste treatment processes are applied in accordance with standard operating procedures. 3.2. Treatment processes are carried out in accordance with standard operating procedures and to meet relevant authority waste requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- collecting, storing and removing samples of by-products
- monitoring and transferring by-product and emissions
- checking monitoring devices
- implementing waste treatment process
- recording and reporting of all results
- collecting, storing, removing and sampling by-products

Required knowledge

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

- Look for evidence that confirms knowledge of:
- products, hazardous materials and processes within the scope of this unit
- regulatory and legislative requirements relating to control of blast coating by-products, materials and emissions
- procedures for collecting samples
- by-product collection equipment operation methods
- waste control monitoring equipment and procedures
- waste treatment processes
- requirements and procedures for recording and reporting process status reports
- hazards and control measures associated with controlling blast coating by-products, materials and emissions
- use and application of personal protective equipment
- safe work practices and procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select treatments and processes/equipment for producing engineering finishes	1.1. Appropriate treatment processes are selected according to base metal type, surface condition and relevant job specifications. 1.2. Operating/process parameters are selected to achieve required coating. 1.3. Appropriate equipment is selected.
2. Prepare work for engineering finishes	2.1. Products are correctly masked (stopped off) for selective plating. 2.2. Where applicable, conforming anodes are constructed and fitted correctly. 2.3. Where applicable, shields and robbers are constructed and fitted. 2.4. Pre-treatment processes are carried out, where applicable.
3. Monitor and control operating conditions and processes for engineering coatings	3.1. Operating/process parameters are set to produce required surface conditions/specifications. 3.2. Surface conditions of finished components are monitored and confirmed and abnormalities are identified. 3.3. Corrective actions are taken to rectify non-conforming conditions.
4. Maintain solutions for engineering finishes	4.1. Solution compositions are checked and confirmed to specification/operating range. 4.2. Adjustment requirements/additions are determined. 4.3. Additions are made to adjust solution composition to correct operating range.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- selecting treatments and processes/equipment for producing engineering finishes

REQUIRED SKILLS AND KNOWLEDGE

- preparing work for engineering finishes
- calculating process parameters
- determining current densities
- assessing material condition for suitability for plating
- selecting equipment, masking, materials
- correctly sizing positioning and securing anodes
- sizing, positioning and securing shields and robbers
- carrying out mechanical/chemical pre-treatment
- setting times voltages/currents and temperature
- monitoring and controlling operating conditions and processes for engineering coatings
- maintaining solutions for engineering finishes

Required knowledge

Look for evidence that confirms knowledge of:

- effects of plating process on different materials
- conditions affecting engineering finishes
- base metal types
- surface finish of untreated material
- mechanical/chemical and specialised pre-treatment processes
- process parameters for achieving different coatings
- characteristics of different surface finishes
- masking materials and masking techniques
- safe operation of equipment to produce engineering finishes
- current distribution principles
- methods of constructing/fabricating, fitting anodes
- current-capacity of conforming/auxiliary anodes
- the role, construction, properties, applications, and positioning of shields and robbers
- finish requirements, permissible tolerances
- the causes of abnormalities and their related corrective actions
- purpose and application of simple tests including pH, titration, density
- calculations related to additions/adjustments to solution and of product surface area
- safe work practices and procedures, including handling chemicals

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Treatment processes	Electroplating, electroforming, electroless plating
Operating/process parameters	Treatment times and currents, bath pH temperatures and densities, anode conditions, addition agent content, cleanliness of contacts etc., make-up, maintenance of solution levels and purity
Coating	Hard chroming, heavy nickel, electroless nickel, nickel composites, heavy deposits of nickel, copper, bronze up to 10 mm
Equipment	Wire racks, handling equipment, barrels, jigs, shields, robbers, etc.
Products	Base materials such as cast iron, brass, steels with machine welded sections, etc.
Masking materials	Wax, lacquers, tapes, foils
Anodes	Soluble, insoluble auxiliary anodes, etc.
Solution compositions	Cleaning, pickling, electroplating, chromate, acid dips
Checks	Density, titration, pH
Adjustment	Strength of solutions, temperature range

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select treatments and processes/equipment for producing protective finishes	1.1.Treatment processes are selected appropriate to the work requirements. 1.2.Process parameters are selected to achieve required finish. 1.3.Appropriate equipment is selected to achieve specified finish.
2. Monitor and control protective finish processes and operating conditions	2.1.Operating/process parameters are set to produce required protective finish/specifications. 2.2.Surface condition of finished components is monitored and confirmed and abnormalities are identified. 2.3.Corrective actions are taken to rectify non-conforming conditions. 2.4.Pre-treatment processes are carried out, where applicable.
3. Maintain solutions for protective finishes	3.1.Solution compositions are checked and confirmed to specification/operating range. 3.2.Adjustment requirements/additions are identified. 3.3.Additions are made to adjust solution composition to correct operating range. 3.4.Purification procedures are carried out as necessary. 3.5.Anodes are maintained to ensure correct operation.
4. Maintain equipment for protective finishes	4.1.Performance of ancillary equipment is checked and remedial actions are taken as necessary. 4.2.Electrical contacts are maintained. 4.3.Process transfer equipment is maintained.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

REQUIRED SKILLS AND KNOWLEDGE

- monitoring and maintaining:
 - conformance to thickness specifications
 - anode/cathode ratio
 - impurities/contamination
 - performance of various ancillary equipment
 - condition of electrical contacts
 - condition of racks, jigs and barrels
 - condition of rack coating
 - cathode contacts
- assessing material condition for suitability for plating
- calculating/measuring:
 - current and processing time
 - concentration and pH of solutions
 - required chemical/solution additions
- making selections of:
 - correct treatment processes
 - correct process parameters
 - correct equipment
- taking corrective action
- adjusting solutions/times/reprocessing or additional processing
- carrying out appropriate mechanical/chemical pre-treatment
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings
- following oral instructions
- performing calculations using formulae

Required knowledge

Look for evidence that confirms knowledge of:

- effects of plating process on different materials
- basic principles of chemistry, electro chemistry and metallurgy related to the process including:
 - importance of maintaining satisfactory electrical contact
 - methods for detecting unsatisfactory contact
 - effects of build-up on cathode contacts
 - properties of different base materials
 - different pre-treatment processes and their application
 - process parameters and their relation to each other
 - differences between chromate conversion coatings
- types of defects, their causes and related corrective actions

REQUIRED SKILLS AND KNOWLEDGE

- mechanical/chemical pre-treatment processes
- the purpose and application of simple tests including pH and concentration
- operating parameters of solutions including temperature, agitation rate and similar parameters
- acceptable appearances for each stage of operation and common abnormalities
- application of different equipment to the type of work processed and correct operation and cleaning requirements (e.g. of cleaning filters)
- solutions, solution compositions and operating ranges for processes relative to protective finishes, including cleaning/pre-treatment, electroplating and post treatment
- procedures for testing plate thickness
- safe working procedures for handling chemicals relative to protective finishes and for safely adding to baths
- procedures for measuring out materials eg use of scales, volumetric measurement devices
- level of impurities and permissible limits, effects of impurities and purification procedures for protective finish solutions
- different anode arrangements including use of baskets and bags, conforming anodes
- correct operation of anodes and appropriate remedial action
- effect of maintenance schedules on plant performance and performance requirements and basic maintenance checks for rectifier, bus bars, agitation, heating/cooling, extraction and tank linings etc.
- use and application of personal protective equipment
- relevant hazards and control measures related to the competency

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to electroplate protective finishes. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Treatment processes	Zinc, zinc alloys and tin
Process parameters	Dwell time, current density, current temperature
Equipment	Wire racks, handling equipment, barrels, jigs, shields, robbers, etc.
Operating process parameters	Calculation and setting of treatment times and currents, bath pH, temperatures and densities, solution levels and compositions, purification procedures
Maintain solutions	Typical tests for pH and concentration, calculation of adjustments to relevant solutions
Adjustment	Strength of solutions, temperature range
Anodes	Soluble, insoluble auxiliary anodes, etc.
Maintain equipment	Anode condition, electrical contacts etc.

MEM08020B Electroplate decorative finishes

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers applying decorative finishes to a range of ferrous and non-ferrous materials.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to electroplating decorative finishes to household fittings, hardware, artefacts and accessories. Processing may apply to manual, semi or fully automatic still or barrel plating environments and may include volume production and 'one-off' components.</p> <p>Use of plating techniques, solutions and compositions for decorative finishes, recognition and assessment of impurities and imperfections and associated corrective actions are integral to all applications.</p> <p>Work is undertaken autonomously or in a team environment using predetermined standards of quality, safety.</p> <p>All work is undertaken to accepted industry OH&S practices and to legislative requirements where applicable.</p> <p>For pre-treatment operations Unit MEM08011B (Prepare surfaces using solvents and/or mechanical means) and/or Unit MEM08012B (Prepare surfaces by abrasive blasting [basic]) should be selected. For basic inspection of completed or partly completed products produced by others Unit MEM15004B (Perform inspection) should be selected. Where dogging/lifting is undertaken, the appropriate materials handling units should be selected. For construction of anodes, shields/robbars etc., the appropriate fabrication units should be selected.</p> <p>For straightforward operation/monitoring of electroplating processes, Unit MEM08003C (Perform electroplating operations) should be selected.</p> <p>Band: A</p> <p>Unit Weight: 6</p>
--------------------------------	--

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units		
Path 1	MEM07001B	Perform operational maintenance of machines/equipment
	MEM08001B	Wire, jig and barrel load/unload work
	MEM08003C	Perform electroplating operations
	MEM13003B	Work safely with industrial chemicals and materials
	MEM18001C	Use hand tools

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select treatments and processes/equipment for producing decorative finishes	1.1. Appropriate treatment processes are selected according to base metal type, surface condition and relevant job specifications. 1.2. Mass treatment processes are selected and carried out, where applicable. 1.3. Pre-plating treatments are identified. 1.4. Process parameters are selected to achieve required coating. 1.5. Appropriate equipment is selected.
2. Monitor and control decorative finish processes and operating conditions	2.1. Operating parameters are set to produce required decorative finish/specifications. 2.2. Plate appearance and final finish are monitored and confirmed and abnormalities are identified. 2.3. Corrective actions are taken to rectify non-conforming conditions. 2.4. Pre-treatment processes are carried out, where applicable. 2.5. Racks, jigs and barrels are checked for correct loading.
3. Maintain solutions for decorative finishes	3.1. Solution compositions are checked and confirmed to specification/operating range. 3.2. Adjustment requirements/additions are identified. 3.3. Additions are made to adjust solution composition to correct operating range. 3.4. Purification procedures are carried out as appropriate. 3.5. Anodes are maintained to ensure correct operation.
4. Maintain equipment for decorative finishes	4.1. Performance of ancillary equipment is checked and remedial actions are taken as necessary. 4.2. Electrical contacts are maintained. 4.3. Process transfer equipment is maintained.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE**Required skills**

Look for evidence that confirms skills in:

- maintaining equipment
- maintaining satisfactory electrical contact
- planning and sequencing work operation
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings
- following oral instructions
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- specific pre-treatment processes - common base metals/soils, chemical/mechanical
- effect of decorative treatment on different metals
- functions of strikes/activation treatment
- process parameters, including current computations
- effects of parameters on performance
- post treatment processes
- Australian standards
- application of different equipment to the type of work processed
- acceptable appearances including final specification/quality
- abnormalities
- requirements for post treatments
- types of defects
- factors affecting plate distribution
- purpose and application of simple control tests
- calculations for additions/adjustments to solutions
- effects of adding chemicals too quickly
- purification procedures/treatments
- operation of anodes, arrangements, remedial action
- effects of build-up on cathode contacts, damage to rack coatings
- any applicable industry standards, national/Australian standards, NOHSC guides, state/territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to electroplate decorative finishes. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with electroplating decorative finishes or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

EVIDENCE GUIDE

Guidance information for assessment

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Decorative finishes

Decorative finishes would include nickel, chrome, copper, silver, gold and rhodium

Treatment processes

Pre-treatment, electroplating, electroforming, electroless plating, electrophoretic coating, post treatment plating out, carbon and chemical treatments for decorative finish solutions

Pre-plating treatments

Pre-treatments for common base metals and soils can be given, including degreasing, soak/cleaning, electrolytic cleaning, activating dips

Equipment

Wire racks, handling equipment, barrels, jigs, shields, robbers, etc. Performance requirements and basic maintenance checks for rectifier, bus bars, agitation, heating/cooling, extraction and tank linings

Operating parameters

Calculation and setting of treatment times and currents, bath pH, temperatures and densities, agitation rate, process (deposition) time, solution levels and compositions, purification procedures

Abnormalities

Abnormalities associated with decorative plating and their causes, including poor/uneven brightness/texture, inadequate levelling, roughness, pitting, poor adhesion, blistering, burning, poor plate coverage (particularly chromium), incorrect colour (particularly flash

RANGE STATEMENT	
	brass, gold)
Maintain solutions	Typical tests for pH density and titration, calculation of adjustments to relevant solutions
Solution compositions	Cleaning, pickling, electroplating, chromate solutions and acid dips
Anodes	Soluble, insoluble auxiliary anodes, etc.
Maintain equipment	Anode condition, electrical contacts etc.
Process transfer equipment	Baskets, spreader bars, racks, hooks etc.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select correct technical drawing	1.1. Drawing is checked and validated against job requirements or equipment. 1.2. Drawing version is checked and validated.
2. Interpret technical drawing	2.1. Components, assemblies or objects are recognised as required. 2.2. Dimensions are identified as appropriate to field of employment. 2.3. Instructions are identified and followed as required. 2.4. Material requirements are identified as required. 2.5. Symbols are recognised in the drawing as appropriate.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- checking the drawing against job requirements/related equipment in accordance with standard operating procedures
- confirming the drawing version as being current in accordance with standard operating procedures
- where appropriate, obtaining the current version of the drawing in accordance with standard operating procedures
- reading, interpreting information on the drawing, written job instructions, specifications, standard operating procedures, charts, lists and other applicable reference documents
- checking and clarifying task related information
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- application of AS1100.101 in accordance with standard operating procedures
- relationship between the views contained in the drawing

REQUIRED SKILLS AND KNOWLEDGE

- objects represented in the drawing
- units of measurement used in the preparation of the drawing
- dimensions of the key features of the objects depicted in the drawing
- understanding of the instructions contained in the drawing
- the actions to be undertaken in response to those instructions
- the materials from which the object(s) are made
- any symbols used in the drawing as described in range statement
- hazard and control measures associated with interpreting technical drawings, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to interpret technical drawings as described.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with interpreting technical drawings or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify drawing requirements	1.1. Requirements and purpose of drawing are determined from customer and/or work specification and associated documents. 1.2. All data necessary to produce the drawing is identified and collected. 1.3. Drawing requirements are confirmed with relevant personnel and timeframes for completion are established.
2. Prepare or make changes to engineering drawing	2.1. Drafting equipment is selected appropriate to the drawing method chosen. 2.2. Drafting principles are applied to produce a drawing that is consistent with standard operating procedures within the enterprise. 2.3. All work is undertaken safely and to prescribed procedure. 2.4. Completed drawing is approved in accordance with standard operating procedures.
3. Prepare engineering parts list	3.1. Components parts are identified and organised by component type and/or in accordance with organisation/customer requirements.
4. Issue drawing	4.1. Drawings and or parts lists records are completed in accordance with standard operating procedures. 4.2. Approved drawings and or parts lists are copied and issued to relevant personnel in accordance with standard operating procedures. 4.3. Approved drawings and or parts lists are stored and catalogued in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

REQUIRED SKILLS AND KNOWLEDGE

- obtaining all relevant job requirements, data/information and specifications necessary to produce the drawing in accordance with workplace procedures
- using drafting equipment appropriate to the drawing method chosen
- producing/changing the drawing to conform with the relevant standard
- undertaking all work safely and in accordance with workplace procedures
- checking the completed drawing in accordance with standard operating procedures
- producing the component parts list with part name, description of part, material specification or part number, quantities and all other details specified by the customer and/or organisational procedures
- recording completed drawings and or parts lists in accordance with standard operating procedures
- where appropriate, copying and issuing approved drawings and or parts lists in accordance with standard operating procedures
- handling and storing the approved drawings and or parts lists in accordance with standard operating procedures
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- requirements and purpose of the drawing to be produced
- requirements and purpose of the engineering parts list
- sources of relevant data/ information
- timeframe for completion of the drawing(s)
- person(s) who can confirm drawing requirements
- method of drawing preparation
- the reasons for selecting the chosen drawing method
- procedures for producing an initial drawing
- procedures for changing an existing drawing
- drafting principles to be applied to the production/changing of a drawing
- standards to which the drawing is to be produced
- procedures for checking drawings
- the persons responsible for checking and approving drawings
- consequences of inappropriate/incomplete components parts lists
- procedures and reasons for recording completed drawings and or parts lists
- procedures for copying approved drawings and or parts lists

REQUIRED SKILLS AND KNOWLEDGE

- procedures for issuing approved drawings and or parts lists
- the personnel to whom copies of approved drawings and or parts lists can be issued
- procedures for filing approved drawings and or parts lists
- procedures for safe handling and storage of drawings and or parts lists
- consequences of inappropriate handling and storage of approved drawings and or parts lists
- safe work practices and procedures

Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant personnel

Technical personnel, supervisors, manufacturers, suppliers, contractors, customers

Drafting equipment

Drafting and drawing equipment includes the use of Computer Aided Drafting systems

Drafting principles

Drawings are prepared in accordance with Australian Standard 1100.101, or equivalent, as required

Interpretation of AS1100.101 or other problems are resolved in consultation with a supervisor

Records

Drawing records may include cataloguing, issuing security classifications, filing, preparing distribution lists

Issued

In hard copy, photographic, slide or transparency form including presentation as a single drawing and/or with other drawings, support documentation as a package

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare/make changes to electrical/electronic schematics and drawings	1.1.Schematic is drawn to indicate the relative positioning of electrical/electronic components. 1.2.Electrical/electronic drawings are produced to include all relevant specifications. 1.3.Schematic/drawing is completed to Australian Standard 1102 or equivalent.
2. Determine component and/or material requirement	2.1.Components and/or materials are selected from supplier/manufacturers' catalogues using design specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- drawing electrical/electronic schematics correctly and indicating the relative position of the components
- producing electrical/electronic drawings with all relevant specifications
- producing electrical/electronic schematics/drawings in conformance with AS1102 or equivalent
- obtaining the circuit/component specifications
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable documents
- planning and sequencing operations
- checking and clarifying task related information
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- relative position of electrical/electronic components
- symbols used in electrical/electronic schematics and drawings
- specifications of all components

REQUIRED SKILLS AND KNOWLEDGE

- circuit specifications
- requirements of AS1102 or equivalent with respect to electrical/electronic schematics/drawings
- design specifications of the circuit/components
- appropriate components and materials from supplier/manufacturers' catalogues
- reasons for selecting the chosen components and/or materials
- hazards and control measure associated with performing electrical/electronic detail drafting, including housekeeping
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare assembly, layout and detail drafting	1.1. Drawings are prepared in plane orthogonal, isometric projection or equivalent including auxiliary views and sections to Australian Standard 1100. 1.2. Layout, assembly and component drawings are prepared from specification. 1.3. Drawings are dimensioned and labelled using supplied tolerances in accordance with Australian Standard 1100. 1.4. Drawings are produced to specification in accordance with standard operating procedures. 1.5. Standard symbols to Australian Standard 1100 or equivalent are used to specify requirements.
2. Determine component and/or material requirement	2.1. Components and/or materials are selected from supplier/manufacturers' catalogues using design specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing drawings using appropriate projections and views in accordance with AS1100 or equivalent, see above note in the range statement
- producing layout, assembly and component drawings in conformance with specification
- inserting all relevant dimensions, tolerances and instructions in the drawing
- producing drawings to specification
- appropriately using standard symbols in accordance with AS1100 or equivalent in the drawings produced
- obtaining component specifications in accordance with work place procedures
- reading, interpreting and following information written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information

REQUIRED SKILLS AND KNOWLEDGE

- checking for conformance to specifications
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- appropriate projection for the drawing purpose
- reasons for selecting the chosen projection
- reasons for including auxiliary views in drawings
- requirements of AS1100 or equivalent with respect to dimensions, tolerances and labels
- procedures for producing component, layout and/or assembly drawings
- drawing specifications
- common symbols used in drawings to AS1100 or equivalent
- design specifications of the component
- appropriate components and materials from supplier/manufacturers' catalogues
- reasons for selecting the chosen components and/or materials
- safe work practices and procedures

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to perform basic engineering detail drafting. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with basic engineering detail drafting or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

EVIDENCE GUIDE

Guidance information for assessment

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Australian Standard 1100

AS1100.100 is an extensive work and its application would usually be in line with standard operating procedures; interpretation would be under guidance particularly in respect to any geometric tolerancing

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare assembly, layout and detail drawing	1.1. Specification requirements are determined. 1.2. Engineering calculations are undertaken to determine all dimensions including limits and fits, surface texture, datum references and geometric tolerances where appropriate to ensure functional operation and suitability. 1.3. All drawings are produced to Australian Standard 1100 or equivalent.
2. Interpret specifications and select material, components and/or assemblies	2.1. Components, material and/or assemblies are selected from data sheets or manufacturers' catalogues to meet specifications.
3. Check drawings	3.1. Drawings are checked to ensure compliance with specifications. 3.2. Drawings are checked to ensure that assembly/fabrication is possible.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining all relevant work instructions and requirements
- producing all drawings in accordance with AS1100 or equivalent
- obtaining all relevant data sheets, catalogues, etc.
- checking drawings for conformance to specification
- checking drawings to ensure that assembly/fabrication is possible
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- undertaking numerical operations, geometry and calculations/formulae within the

REQUIRED SKILLS AND KNOWLEDGE

scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- specifications and/or requirements of the component, assembly or layout to be drawn
- functional operation of the component/assembly to be drawn
- surfaces which are to be in contact or separated
- appropriate type of fit for contacting surfaces
- reasons for selecting the chosen type of fit
- effect of surface finish on the performance/operation of surfaces
- appropriate datum points
- all appropriate lineal, diametric and geometric tolerances
- procedures for determining tolerances
- requirements of AS1100 or equivalent for the drawing(s) to be produced
- specifications of the components, materials and/or assemblies
- appropriate components and materials from supplier/manufacturers' catalogues
- reasons for selecting the chosen components and/or materials
- procedures for checking and approving drawings
- reasons for checking the drawings to ensure that manufacturing/assembly is possible, efficient and cost effective
- drawing specifications
- methods of manufacture/assembly/fabrication from the drawing(s)
- unnecessary or inappropriate tolerances
- hazards and control measures associated with performing advanced engineering detail drafting, including housekeeping
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare CAD environment	1.1. System variables are customised to suit standard operating procedures. 1.2. Menus are customised to suit standard operating procedures. 1.3. Drawing defaults are customised to standard operating procedures. 1.4. Macros are developed to standard operating procedures.
2. Create 2D drawings	2.1. Drawings are created using the full capability of the available software system. 2.2. Drawing entities are linked to database attributes to suit job requirements. 2.3. Detailed views are created using various scales to meet job requirements.
3. Produce output	3.1. Files are saved in various formats to standard operating procedures. 3.2. Linked entities are listed in a bill of materials format to meet job requirements. 3.3. Supplementary data is extracted from drawing to meet job requirements and may include area, lengths, angles and perimeters.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining all relevant manuals, instructions and operation procedures for the CAD software and hardware being used
- where appropriate, customising the relevant system variables to suit the applicable drafting standards/procedures
- where appropriate, customising menus to suit the applicable drafting standards/procedures
- where appropriate, customising the system defaults to suit the applicable drafting

REQUIRED SKILLS AND KNOWLEDGE

standards/procedures

- where appropriate, developing macros
- creating drawings using the appropriate drawing features of the software system
- where appropriate, linking drawing entities to database attributes
- producing detailed views of the object being drawn
- printing drawing files at the appropriate scale
- saving drawing files in the appropriate format
- producing bills of material from the drawing files/database
- extracting supplementary data from the drawing file to meet job requirements
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- checking for conformance to specifications
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- CAD software system
- system variables that can be customised
- procedures for customising identified system variables
- reasons for customising the system variables
- applicable drafting standards/procedures
- procedures for customising menus
- reasons for customising menus
- procedures for customising system defaults
- reasons for customising system defaults
- procedures for developing macros
- reasons for developing macros
- drawing features of the CAD software system
- reasons for using specialised software features
- procedures for linking drawing entities to database attributes
- appropriate drawing scales
- procedures for printing drawing files
- procedures for creating additional views of the object being drawn
- procedures for saving drawing files
- various formats in which drawing files can be saved
- reasons for using different formats when saving drawing files

REQUIRED SKILLS AND KNOWLEDGE

- procedures to produce bills of material
- procedures to extract data with respect to drawn shapes/features
- properties of shapes/sections/ features that can be extracted from the drawing file
- hazards and control measures associated with using computer aided design system, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to create 2D drawings using computer aided design system. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare 3D environment	1.1.Coordinate system is established to job requirement. 1.2.Orientation is established to job requirement. 1.3.Views are established to job requirement.
2. Create and modify 3D model	2.1.Entities are created in 3D space to job requirement. 2.2.Entities are manipulated in 3D space to job requirement. 2.3.Surfaces are created in 3D space to job requirement including ruled and revolved. 2.4.Existing 3D model is modified to job requirement.
3. Produce output from 3D model	3.1.File is saved in various formats for retrieval as per standard operating procedures. 3.2.Physical properties are extracted to job requirement including volume, mass and centre of gravity.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining relevant job instructions, specifications, etc.
- creating the appropriate entities in 3D space
- manipulating the entities in 3D space
- creating ruled and revolved surfaces in 3D space
- modifying, where appropriate, existing 3D models
- saving drawing files in the appropriate format
- extracting the physical properties of shapes created in 3D space from the drawing file to meet job requirements
- reading, interpreting and following information on written job instructions, specification, standard operating procedures, charts, lists, drawings and other applicable reference documents
- checking and clarifying task related information
- checking for conformance to specifications
- undertaking numerical operations, geometry and calculations/formulae within the

REQUIRED SKILLS AND KNOWLEDGE

scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- purpose for which the 3D model is to be developed
- appropriate coordinate system for the job
- reasons for selecting the chosen coordinate system
- orientation of the model with respect to the coordinate system
- number of views required to establish the model
- procedures for creating entities in 3D space
- the entities that can be created/manipulated in 3D space
- procedures for manipulating entities in 3D space
- procedures for creating ruled and revolved surfaces in 3D space
- applications of ruled and revolved surfaces
- procedures for modifying existing 3D models
- procedures for saving drawing files
- the various formats in which drawing files can be saved
- reasons for using different formats when saving drawing files
- procedures for extracting data with respect to the physical properties of shapes created in 3D space
- the physical properties of shapes created in 3D space that can be extracted from the drawing file
- hazard and control measures associated with using computer aided design system, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to create 3D models using computer aided design systems. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with creating 3D models using computer aided design systems or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine design requirements	1.1.Design requirement is established from job sheets, instructions or in consultation with appropriate people. 1.2.Design concepts are established and may include consideration of process, material, quantity, cost and outcome. 1.3.Where appropriate, codes, regulations and technical documentation are consulted to establish design limitations in accordance with standard operating procedures. 1.4.Sources of expert assistance are identified and used as required.
2. Create design	2.1.Design meets end use requirement. 2.2.Design meets all legislative and regulatory requirements. 2.3.Design concept is verified in accordance with standard operating procedures. 2.4.Design outcome is produced as per job requirements and may include sketch, drawing, prototype, document, model or finished product.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining all relevant drawings, job sheets, instructions and specifications
- consulting, where appropriate, relevant personnel as to the design requirements
- inspecting, where appropriate, the object, plant or equipment to which engineering design concepts are to be applied
- determining, where appropriate, design limitations imposed by relevant codes, standards and regulations
- where appropriate, seeking assistance from relevant sources
- verifying the design concept.

REQUIRED SKILLS AND KNOWLEDGE

- presenting the design object in a form appropriate to the job requirements
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- checking and clarifying task related information
- planning and sequencing operations
- checking for conformance to specifications
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- design requirements
- functional requirements of the design
- the material(s) appropriate to the environment in which the object(s) to be designed is to operate
- processes to be used in the manufacture of the object(s)
- where appropriate, the costs associated with the manufacture of the object(s)
- reasons for selecting the chosen design concept
- all relevant codes, standards and regulations applying to the object to be designed
- the impact of the applicable codes, standards and regulations on the design requirements of the object
- sources of expert assistance in the design process
- the end use requirements of the design
- checks to ensure the design complies with the relevant codes, standards, legislative and regulatory requirements
- the procedures for verifying design concepts
- the means by which the design concept is to be presented
- safe work practices and procedures

MEM09021B Interpret and produce curved 3-dimensional shapes

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers producing and interpreting lines plan drawings manually or using CAD equipment.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to drawing and lofting principles relevant to procedures used to produce lines plan drawings and loftings. Common applications of this unit are in marine vessel construction.</p> <p>In a marine setting, tasks may be related to a variety of hull designs, section development such as curved and raking transom, conical development and camber development methods. General arrangement plans may also be addressed to provide a greater drawing diversity.</p> <p>All drawings/data should comply with industry requirements.</p> <p>Straightforward take-offs from lofted drawings is covered by MEM12007D (Mark off/out structural fabrications and shapes). Also, where transfer of lines to lofting floor or other surface is carried out, Unit MEM12007D (Mark off/out structural fabrications and shapes) should be selected in addition to this unit.</p> <p>Where a CAD system is used for basic drawing, Unit MEM09003B (Prepare basic engineering drawing) should also be selected. Where more extensive CAD system is used for design then Unit MEM09009C (Create 2D drawings using computer aided design system) should also be considered.</p> <p>Band: A</p> <p>Unit Weight: 4</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify drawing/lofting requirements	1.1. Requirements of lines drawing/lofting are determined. 1.2. Data necessary to produce drawing/lofting is identified.
2. Determine drawing/lofting procedure and equipment	2.1. Lines drawing/lofting procedures are outlined and understood. 2.2. Appropriate drawing equipment/accessories are outlined.
3. Apply drawing/lofting procedures	3.1. Appropriate drawing equipment/accessories are set up to suit requirements. 3.2. Drafting/lofting procedures to suit specified drawing are applied. 3.3. Where applicable, any alterations to offset measurements are recorded. 3.4. Drawings/loftings are consistent with operation procedures and industry requirements.
4. Submit lines plan drawings	4.1. Completed drawings are submitted in accordance with industry standards. 4.2. Where applicable, altered offset measurements and relevant information related to drawing are supplied.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, client briefings, standard operating procedures, charts, lists, drawings and other applicable reference documents
- analysing and organising information and planning and sequencing operations
- checking and clarifying task-related information
- checking for conformance to specifications
- performing computations including geometric and numerical calculations/formulae within the scope of this unit

REQUIRED SKILLS AND KNOWLEDGE

- measuring
- drawing and sketching skills

Required knowledge

Look for evidence that confirms knowledge of:

- hazards and control measures associated with interpreting and producing curved 3-dimensional shapes, including housekeeping
- safe work practices and procedures
- vessel design characteristics, including performance, stability, construction methods, etc.
- spatial concepts

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for computer aided manufacture	1.1. System variables are customised to suit standard operating procedures. 1.2. User interface is customised to suit standard operating procedures. 1.3. Software defaults are customised to suit standard operating procedures. 1.4. Manufacturing data is developed to standard operating procedures.
2. Manipulate 2D models	2.1. Models are imported using various file formats. 2.2. Models are oriented and manipulated using the full capability of the software system. 2.3. Model entities are linked to database attributes to suit job requirements. 2.4. Manufacturing data is applied to detailed models to suit various applications and job requirements
3. Produce output from 2D model	3.1. Files are saved in various formats to standard operating procedures. 3.2. CAM model is verified for logical sequencing and correct manufacturing procedures. 3.3. Code is produced from the 2D CAM model.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting relevant manuals, instructions and operating procedures
- customising relevant system variables
- customising menus and system defaults
- developing macros
- manipulating models
- linking model entities to database attributes
- creating manufacturing data for various operations and processes

REQUIRED SKILLS AND KNOWLEDGE

- importing CAD files
- saving and managing CAM files

Required knowledge

Look for evidence that confirms knowledge of:

- model features of the CAM software system
- operation of the CAM software system
- the system variables and procedures for customising
- procedures for customising user interface
- procedures for customising system defaults
- procedures for developing macros
- procedures for linking model entities to database attributes
- CAD file conversion
- CAM file formats
- procedures for saving and managing CAM files

Drawing, drafting and design

MEM09143A Represent aeronautical engineering designs

Modification History

Not applicable.

Unit Descriptor

This unit of competency covers the skills and knowledge required to represent the design of aeronautical engineering products, processes, systems or services using appropriate graphical techniques, specifications and documentation. Work would typically be carried out as part of a design or engineering support team.

Application of the Unit

Competency in this unit includes contribution to the full design process by the creation of documentation, graphics and specifications representing products, processes, systems or services in support of the planning and design processes within aeronautical engineering. Graphics may be produced using manual or computer-aided design (CAD) software and techniques.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM16008A	Interact with computing technology
MEM30007A	Select common engineering materials
MEM30012A	Apply mathematical techniques in manufacturing, engineering or related situations

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

1	Clarify product, process, system or service design requirements	1.1	Discuss and clarify the design specification of the required product, process, system or service with the client and design team
2	Apply graphical techniques to produce the initial product, process, system or service design representation	2.1	Ensure the initial graphical representation satisfies the design specification, manufacturing and operational requirements, safety and related standards
		2.2	Perform engineering calculations and use engineering references, standards and codes appropriately to determine dimensions, limits and fits, surface textures, datum references and geometric tolerances
		2.3	Identify materials, manufacturing methods and processes for initial design representation
		2.4	Prepare initial production graphics, specifications, and operating and maintenance instructions/manuals in accordance with the agreed design concept and organisational requirements using chosen graphical techniques
3	Validate the product, process, system or service representation	3.1	Confirm suitability of the product, process, system or service design graphical representation with the client, other team members and organisational requirements
4	Develop, validate, implement and file design graphics and specifications and procedural documentation	4.1	Prepare design graphics, specifications and instructions for the product, process, system or service in accordance with the agreed design concept and organisational requirements, and incorporate feedback on initial design graphics and documents
		4.2	Check production graphics, specifications and instructions for the product, process, system or service with the client, design team and other affected persons for suitability prior to implementation
		4.3	Respond to implementation installation and commissioning feedback in accordance with organisational requirements
		4.4	Maintain validated production graphics, specifications

		and instructions for the product process, system or service throughout the implementation, installation and commissioning processes, and process and file in accordance with organisational requirements
--	--	--

Required Skills and Knowledge

Required knowledge includes:

- the procedures for collaborating with the client and other staff in the selection of the preferred option
- significance of graphical representations of designs in terms of procedural requirements, design objectives and client or contractual requirements
- relevant manufacturing and operational requirements, safety and related standards
- the functional operation of the component/assembly to be drawn
- surfaces that are to be in contact or separated
- the appropriate type of fit for contacting surfaces, and reasons for selecting the chosen type of fit
- the effect of surface finish on the performance/operation of surfaces
- appropriate datum points
- procedures for determining tolerances
- design functional specification
- choice of components, materials, methods and processes in terms of the range of options available and the manner in which the design specification is satisfied
- options for graphical methods of representation
- scientific principles and mathematical techniques underpinning design element choices and decisions
- required graphical representation procedures for the preparation of production drawings, specifications and operating and maintenance instructions/manuals
- clients and other people affected by the design
- organisational procedures and required communication techniques
- organisational requirements for the preparation of production drawings, specifications and operating and maintenance instructions/manuals for products and systems
- persons to be consulted and procedures for verifying and implementing production graphics, technical specifications and operational and maintenance instructions/manuals
- worksite procedures for acting on implementation, installation and commissioning feedback
- worksite procedures for the processing and filing of production graphics, specifications and operating and maintenance instructions/manuals
- file storage and archiving procedures

Required skills include:

- using appropriate communication skills for contacting and confirming specifications with the client
- discussing the alternative options and their relative strengths and weaknesses with the client and selecting the most acceptable option chosen
- applying graphical techniques correctly
- addressing design specifications, manufacturing and operational requirements, safety and related standards appropriately in the initial graphical representations
- presenting graphical representations the dimensions, limits and fits, tolerances and surface

Evidence Guide

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to represent the design of aeronautical engineering products, processes, systems or services for a range of general engineering applications. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples</p>

	and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Method of assessment	This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with represent the design of aeronautical engineering products, processes, systems or services or other units requiring the exercise of the skills and knowledge covered by this unit.
Guidance information for assessment

MEM09144A Represent avionic engineering designs

Modification History

Not applicable.

Unit Descriptor

This unit of competency covers the skills and knowledge required to represent the design of avionic engineering products, processes, systems or services using appropriate graphical techniques, specifications and documentation. Work would typically be carried out as part of a design or engineering support team.

Application of the Unit

Competency in this unit includes contribution to the full design process by the creation of documentation, graphics and specifications representing products, processes, systems or services in support of the planning and design processes within avionic engineering. Graphics may be produced using manual or computer-aided design (CAD) software and techniques.

Licensing/Regulatory Information

Pre-Requisites

MEM16008A	Interact with computing technology
MEM30007A	Select common engineering materials
MEM30012A	Apply mathematical techniques in manufacturing, engineering or related situations

Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

- | | |
|---|--|
| 1 Clarify product, process, system or service design requirements | 1.1 Discuss and clarify design specification of the required product, process, system or service is discussed with the client and design team |
| 2 Apply graphical techniques to produce the initial product, process, system or service design representation | 2.1 Confirm initial graphical representation satisfies the design specification, manufacturing and operational requirements, safety and related standards
2.2 Perform engineering calculations using engineering references, standards and codes appropriately to determine dimensions, limits and fits, surface textures, datum references and geometric tolerances
2.3 Identify materials, manufacturing methods and processes of initial design representation
2.4 Prepare initial production graphics, specifications and operating and maintenance instructions/manuals in accordance with the agreed design concept and organisational requirements using chosen graphical techniques |
| 3 Validate the product, process, system or service representation | 3.1 Confirm suitability of the product, process, system or service design graphical representation with the client, other team members and organisational requirements |
| 4 Develop, validate, implement and file design graphics and specifications and procedural documentation | 4.1 Prepare design graphics, specifications and instructions for the product, process, system or service in accordance with the agreed design concept and organisational requirements and incorporate feedback on initial design graphics and documents
4.2 Check production graphics, specifications and instructions for the product, process, system or service with the client, design team and other affected persons |

for suitability prior to implementation

- 4.3 Respond to implementation installation and commissioning feedback in accordance with organisational requirements
- 4.4 Maintain validated production graphics, specifications instructions for the product process, system or service are throughout the implementation, installation and commissioning processes, and process and file in accordance with organisational requirements

Required Skills and Knowledge

Required knowledge includes:

- the procedures for collaborating with the client and other staff in the selection of the preferred option
- significance of graphical representations of designs in terms of procedural requirements, design objectives and client or contractual requirements
- relevant manufacturing and operational requirements, safety and related standards
- the functional operation of the component/assembly to be drawn
- surfaces that are to be in contact or separated
- the appropriate type of fit for contacting surfaces
- the reasons for selecting the chosen type of fit
- the effect of surface finish on the performance/operation of surfaces
- appropriate datum points
- procedures for determining tolerances
- design functional specification
- choice of components, materials, methods and processes in terms of the range of options available and the manner in which the design specification is satisfied
- options for graphical methods of representation
- scientific principles and mathematical techniques underpinning design element choices and decisions
- required graphical representation procedures for the preparation of production drawings, specifications and operating and maintenance instructions/manuals
- clients and other people affected by the design
- organisational procedures and required communication techniques
- organisational requirements for the preparation of production drawings, specifications and operating and maintenance instructions/manuals for products and systems
- persons to be consulted and procedures for verifying and implementing production graphics, technical specifications, and operational and maintenance instructions/manuals
- worksite procedures for acting on implementation, installation and commissioning feedback
- worksite procedures for the processing and filing of production graphics, specifications and operating and maintenance instructions/manuals
- file storage and archiving procedures

Required skills include:

- using appropriate communication skills for contacting and confirming specifications with the client
- discussing the alternative options and their relative strengths and weaknesses with the client and selecting the most acceptable option chosen
- applying graphical techniques correctly
- addressing design specifications, manufacturing and operational requirements, safety and related standards appropriately in the initial graphical representations
- presenting the graphical representations the dimensions, limits and fits, tolerances and

- surface textures, datum references and geometry tolerances as determined by design calculations and in accordance with engineering references, standards and codes
- producing initial graphical representation and documentation materials, manufacturing methods and processes and design functional specification sufficient for client, design team and interested party consultation and validation
 - producing initial graphical representations to organisational requirements using suitable graphical techniques
 - producing initial production graphics, technical specifications and operational and maintenance instructions/manuals in accordance with worksite procedures and client needs
 - using appropriate communication skills in confirming that the design graphical representation meets the needs of the client and the expectations of other team members and interested parties
 - completing organisational procedures and sign-off documentation
 - preparing production graphics, specifications and instructions in accordance with the agreed design concept and organisational requirements and incorporating feedback on initial design graphics
 - contacting the client, design team and other affected persons and the production graphics, technical specifications and verifying operational and maintenance instructions/manuals prior to implementation
 - incorporating feedback from the implementation, installation and commissioning phases into final graphics, specifications
 - processing, filing and saving all graphics, specifications, instructions and related documentation in correct format and location in accordance with worksite procedures

- design functional specification
- components, materials, methods and processes in terms of the range of options available and the manner in which the design specification is satisfied
- options for graphical methods of representation
- scientific principles and mathematical techniques underpinning design element choices and decisions
- graphical representation procedures for the preparation of production drawings, specifications and operating and maintenance instructions/manuals related to the original design brief
- procedures for setting/customising CAD system
- use of standard library files
- management systems for CAD data including access privileges and protocols in terms of organisational procedures, contractual or agreed client requirements, and project requirements for concurrent access to data
- clients and other people affected by the design
- organisational procedures and required communication techniques
- organisational requirements for the preparation of production drawings, specifications and operating and maintenance instructions/manuals for products and systems
- persons to be consulted and procedures for verifying and implementing production graphics, technical specifications and operational and maintenance instructions/manuals
- worksite procedures for acting on implementation, installation and commissioning feedback
- worksite procedures for the processing and filing of production graphics, specifications and operating and maintenance instructions/manuals
- file storage and archiving procedures

Required skills include:

- using appropriate communication skills in contacting and confirming specifications with the client
- discussing the alternative options and their relative strengths and weaknesses with the

client and selecting the most acceptable option

- addressing design specifications, manufacturing and operational requirements, safety and related standards appropriately in the initial model, documents and multimedia presentations
- presenting the graphical representations appropriately in terms of the dimensions, limits and fits, tolerances and surface textures, datum references and geometry tolerances as determined by design calculations and in accordance with engineering references, standards and codes
- addressing materials, manufacturing methods, processes and design functional specifications in initial model and documentation sufficient for client, design team and interested party consultation and validation
- producing initial model, technical specifications and operational and maintenance instructions/manuals in accordance with design concept, worksite procedures and client needs
- setting up the CAD system and data management system appropriately, and customising according to organisational standards, contractual or agreed client requirements
- using library files
- setting up the CAD data management system with appropriate protocols and access privileges
- confirming that the design graphical representation meets the needs of the client and the expectations of other team members and interested parties
- completing organisational procedures and sign-off documentation
- preparing production graphics, specifications and instructions in accordance with the agreed design concept and organisational requirements and incorporating feedback on initial design graphics
- verifying production graphics, technical specifications and operational and maintenance instructions/manuals prior to implementation
- incorporating feedback from the implementation, installation and commissioning phases into final graphics and specifications
- processing, filing and saving all graphics, specifications, instructions and related documentation in correct format and location in accordance with worksite procedures

MEM09155A Prepare mechanical models for computer-aided engineering (CAE)

Modification History

Release 1 - New unit. Replaces MEM09151A but not equivalent

Unit Descriptor

This unit of competency covers the application of mechanical modelling techniques for computer-aided engineering (CAE) purposes. It includes model creation for purposes such as computer-aided manufacturing (CAM) and computer numerical control (CNC) applications, rapid prototyping and stress analysis, and as a basis for generating orthogonal drawings.

Application of the Unit

This unit applies to modelling of mechanical, maintenance and manufacturing engineering products, plant and system for CAE applications. It is suitable for people working in design drafting and those pursuing technical qualifications and careers at engineering technician level.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A Apply technical mathematics

MEM23109A Apply engineering mechanics principles

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

- | | | | |
|---|---------------------------|-----|--|
| 1 | Identify model parameters | 1.1 | Identify the engineering context of computer modelling |
| | | 1.2 | Identify sustainability issues related to required models |
| | | 1.3 | Identify work health and safety (WHS) and regulatory requirements related to modelling processes and materials |
| | | 1.4 | Identify the virtual or physical model parameters, form, function and features |
| | | 1.5 | Identify required model generation processes, including any required graphics generation, post-processing and physical modelling |
| | | 1.6 | Identify licensed technical and professional assistance for advice, as required |
| 2 | Develop model | 2.1 | Generate initial graphical model |
| | | 2.2 | Undertake initial consultation on model with stakeholders and adjust, as required |
| | | 2.3 | Prepare model for intended purpose |
| | | 2.4 | Trial model for purpose and complete investigative analysis or produce physical model |
| | | 2.5 | Evaluate model against design criteria with stakeholders and make adjustments, as required |
| | | 2.6 | Engage appropriate licensed technical and professional assistance for advice, as required |

- 3 Finalise modelling
 - 3.1 Prepare final model
 - 3.2 Report and demonstrate results
 - 3.3 Provide documentation, instructions, models and files, as required
 - 3.4 Obtain sign-off

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- reviewing features, functions and context of engineering modelling, including imminent future developments
- comparing available software, functions and features
- communicating, participating and negotiating with:
 - stakeholders, team, cross-function support groups and experts
 - appropriate licensed technicians and professionals
- modelling using a comprehensive range of techniques, such as:
 - creating and manipulating 3-D entities
 - using library files and adaptations
 - accessing supplier catalogues and databases
- creating dimensioned orthographic projections from model
- extracting dimensional properties from model:
 - post-processing model for analysis or physical modelling
- finalising modelling by:
 - completing work
 - gaining approval and commissioning work
 - providing documentation and reports, as required
 - obtaining sign-off

Required knowledge

Required knowledge includes:

- advantages and disadvantages of CAM using modelling compared to traditional manufacturing methods
- implications to be taken into account when modelling (e.g. efficiency of production, generation of waste and life cycle considerations)
- typical mechanical components, assemblies and layouts suitable for modelling
- software functions and features
- model creation techniques, including:
 - using and manipulating coordinate systems
 - creating 3-D entities, ruled and revolved surfaces

- creating solids, editing and combining solids
- manipulating entities and solids
- library files
- manipulations of solids and library files
- 3-D graphics from models, including rotated views and sections
- dimensioned orthographic representations from models
- typical modelling processes, including:
 - computer modelling
 - post-processing
 - prototyping and model manufacture
- mathematical model analysis options, such as:
 - finite analysis of heat flows
 - finite analysis of stresses and deflections
- physical modelling options
- traditional, current and emerging modelling methods
- WHS and regulatory requirements, codes of practice, risk assessment and registration requirements relevant to modelling task
- job requirements that may create a need for licensed technical and professional services assistance
- modelling compared to traditional representation methods, including:
 - pen and pencil graphics compared to wire frame, surface and solid models
 - computer animations compared to transparent overlay mobiles to test clearances and motions
 - solid models compared to isometric representations
 - computer library files compared to the use of reference charts and catalogue information

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to produce a variety of mechanical, manufacturing and maintenance-related models that are consistent with design information and relevant standards and conventions.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • review features, functions and context of engineering modelling • compare available software, functions and features • communicate, participate and negotiate with stakeholders, team, cross-function support groups and experts, appropriate licensed technicians and professionals • model using a comprehensive range of techniques • create dimensioned orthographic projections from model • extract dimensional properties from model • post-process model for analysis or physical modelling • complete work, commission and gain approval, document and report, and obtain sign-off • identify future developments in modelling.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • Assessment may occur on the job or in an appropriately simulated environment. Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and WHS practices. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package.

	<ul style="list-style-type: none"> • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Models	<p>Models may be:</p> <ul style="list-style-type: none"> • virtual, such as computer generated solids models • physical models developed from the virtual model data
Model purpose	<p>Models covered by this unit include mechanical, maintenance and manufacturing engineering products, plant and system models. Examples of models include:</p> <ul style="list-style-type: none"> • computer model of a cavity mould for finite analysis of heat flows

	<ul style="list-style-type: none"> • computer model of a container, vehicle or frame for finite analysis of stresses and deflections • physical models of components produced for form, fit or aesthetic purposes • physical models, such as a once-off vehicle body panel, produced ready and fit for purpose • physical models, such as a sintered metal moulds or die capable of producing a limited run of production components
Features, functions and context of engineering modelling	<p>Features, functions and context of mechanical modelling include:</p> <ul style="list-style-type: none"> • techniques used for mechanical modelling • sustainability implications of modelling • WHS and regulatory requirements related to modelling processes and materials • model parameters, form, function and features, virtual or physical • processes required which may include those for generating graphics, post-processing and physical modelling • required licensed technical and professional assistance
Post-processor	A post-processor or code generator converts programmed instructions generated by CAM software or CAD package into CNC program code to control a machine tool
Post-processing model for analysis or physical modelling	<p>Examples of post-processing model for analysis or physical modelling include:</p> <ul style="list-style-type: none"> • setting up model with physical properties, mesh and nodes for finite element analysis (FEA) • processing dimensional data to create 3-D code for CAM operations • post-processing to create CNC data files to control CNC devices, including mills, lathes, machining centres, lasers, ultrasonic cutters and routers • modelling for rapid prototyping
Rapid prototyping	<p>A variety of rapid prototyping processes are available, including:</p> <ul style="list-style-type: none"> • selective laser sintering (SLS) which uses thermoplastics

	<p>and metal powders</p> <ul style="list-style-type: none"> • fused deposition modelling (FDM) which uses thermoplastics and eutectic metals • stereolithography (SLS) which uses a photopolymer • laminated paper manufacturing (LPM) which uses paper • electron beam melting (EBM) which uses titanium alloys • 3-D printing (3-DP) which uses a variety of materials
Criteria for mechanical designs	<p>Criteria for mechanical designs may include:</p> <ul style="list-style-type: none"> • function • aesthetics • manufacturability and maintainability • marketability • sustainability • cost constraints • ergonomics, anthropometrics and physiology • facilities, plant and skills available • safety and risk
Mechanical components, assemblies and layouts	<p>Mechanical assemblies may include:</p> <ul style="list-style-type: none"> • chain drives, gear sets, pulley and belt drives • threads, fasteners and springs • shafts, keyways and splines • structural sections • machines, drives and transmissions • materials handling equipment, including belt conveyors, augers and pneumatic conveyors • guards, handrails and platforms • structures, vessels and tanks • fan, ventilation, air conditioning service and ducting • production process layouts
Appropriate licensed technical and professional assistance	<p>Appropriate licensed technical and professional assistance may include:</p> <ul style="list-style-type: none"> • technical support and advice relating to elements which have intrinsic dangers, such as: <ul style="list-style-type: none"> • high pressure • energised fluid vessels • high temperatures and heat energy capacity

	<ul style="list-style-type: none"> wiring with high current control voltages above extra low voltage professional support for technologies, such as: <ul style="list-style-type: none"> specialist electric motor drives and controllers specialist materials, plastics, metal alloys and nano materials special processes, foundry, alloy welding, heat treatment, sealing and fastening
WHS, regulatory requirements and enterprise procedures	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> WHS Acts and regulations other relevant regulations and standards industry codes of practice risk assessments registration requirements safe work practices
Standards and codes	<p>Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular design task</p>
Modelling and related software	<p>Modelling and related software may include:</p> <ul style="list-style-type: none"> lumped parameter model empirical, random data tested model FEA software model-based design

Custom Content Section

Not applicable.

MEM09156A Prepare mechatronic models for computer-aided engineering (CAE)

Modification History

Release 1 - New unit. Replaces MEM09152A, but not equivalent.

Unit Descriptor

This unit of competency covers the application of techniques for mechatronic modelling for computer-aided engineering (CAE) purposes. It includes consideration of the CAE purposes for which the model is required, such as automated mechanisms, robots or system control and data acquisition (SCADA) environments, printed circuit board manufacture and assembly, and as a basis for generating orthogonal drawings.

Application of the Unit

This unit applies to modelling of mechatronic or automation systems and devices for CAE applications. It is suitable for people working in design drafting and those pursuing careers and qualifications in mechatronics, automated systems or systems maintenance at engineering technician level.

Prior or concurrently developed competence in graphics, workshop, electrical and electronic fundamentals, engineering science, mathematics and mechanical components, and manufacturing plant is required.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23109A	Apply engineering mechanics principles
MEM23111A	Select electrical equipment and components for engineering applications
MEM23112A	Investigate electrical and electronic controllers in engineering applications

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

- | | | | |
|---|-------------------------------|-----|---|
| 1 | Identify the model parameters | 1.1 | Investigate applications for modelling in mechatronics |
| | | 1.2 | Identify work health and safety (WHS) and regulatory requirements related to modelling processes and materials |
| | | 1.3 | Identify the virtual parameters, form, function and features |
| | | 1.4 | Identify required model generation processes required, including graphics generation and post-processing |
| | | 1.5 | Identify licensed technical and professional assistance for advice, as required |
| 2 | Develop model | 2.1 | Generate initial graphical model |
| | | 2.2 | Undertake initial consultation on model with stakeholders and adjust, as required |
| | | 2.3 | Prepare and trial model for intended purpose |
| | | 2.4 | Evaluate model against design criteria in consultation with stakeholders and make adjustments to model, as required |
| | | 2.5 | Engage appropriate licensed technical and professional assistance for advice, as required |

- 3 Finalise model
 - 3.1 Prepare final model
 - 3.2 Report and demonstrate results
 - 3.3 Provide documentation, instructions, models and files, as required
 - 3.4 Obtain sign-off

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- investigating the uses of mechatronic models
- reviewing features, functions and context of mechatronic modelling, including imminent future developments
- comparing available software, functions and features
- communicating, participating and negotiating with:
 - stakeholders, team, cross-function support groups and experts
 - appropriate licensed technicians and professionals
- modelling using a comprehensive range of techniques, such as:
 - creating and manipulating 3-D entities
 - using library files and adaptations
 - accessing supplier catalogues and databases
- creating dimensioned orthographic projections from model
- extracting dimensional properties from model
- post-processing model for analysis or physical modelling
- finalising modelling by:
 - completing work
 - gaining approval and commissioning work
 - providing documentation and reports, as required
 - obtaining sign-off

Required knowledge

Required knowledge includes:

- advantages and disadvantages of computer-aided manufacturing (CAM) using modelling compared to traditional manufacturing methods
- implications to be taken into account when modelling (e.g. efficiency of production, generation of waste, life cycle considerations, and accessing supplier catalogues and databases)
- typical mechatronic components, assemblies and layouts suitable for modelling
- software functions and features
- model creation techniques, including:
 - using and manipulating coordinate systems

- creating 3-D entities, ruled and revolved surfaces
- creating solids, editing and combining solids
- manipulating entities and solids
- library files
- manipulations of solids and library files
- 3-D graphics from models, including rotated views and sections
- dimensioned orthographic representations from models
- typical modelling processes, including:
 - computer modelling
 - post-processing
- virtual model options, including automated systems simulation of motions:
 - post-processing to create numeric control (NC) data files to computer numeric control (CNC) circuit board assembly or gantry robot assembly of boards
 - rapid prototyping options
 - finite element analysis (FEA) using software
- WHS and regulatory requirements, codes of practice, risk assessment and registration requirements, relevant to modelling task
- job requirements that may create a need for licensed technical and professional services
- modelling compared to traditional representation methods, including:
 - pen and pencil graphics compared to wire frame, surface and solid models
 - computer animations compared to transparent overlay mobiles to test clearances and motions
 - solid models compared to isometric representations
 - computer library files compared to the use of reference charts and catalogue information

MEM09157A Perform mechanical engineering design drafting

Modification History

Release 1 New unit. Replaces MEM09141A but not equivalent.

Unit Descriptor

This unit of competency covers the preparation of design drawings or graphics used in the mechanical engineering, manufacturing engineering and related industry sectors. The unit includes working with a design brief or concept prepared by an engineer or other designer as well as the specification of items, functions, limits, fits, tolerances, and other engineering information required for the eventual production of fully detailed drawings. The unit requires the design drawing to be performed using appropriate computer-aided design (CAD) and other drafting techniques that include sketching, computer graphics and the application of drawing standards.

Application of the Unit

This unit applies to the undertaking of designated design tasks and the specification in design drawings and graphics of mechanical plant, products, projects, system changes or improvements in domestic, commercial, industrial, agricultural, medical, military or entertainment industries. For ease of reference the term 'drawing' is used in this unit.

The design drawing is normally undertaken at the direction of an engineer, scientist or other designer who will pass on a concept brief to the design draftsman. The concept brief may be a sketch, hard copy plan or document, or a CAD generated file. The unit requires design drawings to be produced using appropriate CAD software. Depending on the task or project, production or supervision of hard copy drawings may also be required.

The unit also includes supervision of detailed drawing production and managing of requests for further information from detailed draftsmen.

This may require completion of appropriate engineering design or evaluation units from the MEM05 Metal and Engineering Training Package depending on the design drawing task and previous industrial experience.

This unit does not cover the production of detailed drawings (often known as shop drawings). Where detailed drawing skills are required the relevant MEM detailed drawing units should be selected.

Licensing/Regulatory Information

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Clarify the design drawing task	1.1	Receive design drawing brief and check completeness of information
		1.2	Confirm software and file formats to be used for design drawings with designer and detail draftspersons
		1.3	Determine stakeholders to be consulted in design drawing process
		1.4	Assess work health and safety (WHS), regulatory, sustainability or environmental issues relevant to design task
		1.5	Confirm design drawing brief and provide preliminary advice on feasibility
2	Produce mechanical or maintenance engineering-related drawings	2.1	Determine range of engineering drawings required
		2.2	Produce orthogonal drawings of mechanical components and assemblies to relevant standards using appropriate computer graphical techniques
		2.3	Produce 3-D images of mechanical components and assemblies to relevant standards using computer graphical techniques
		2.4	Determine and apply required dimensioning, tolerancing for limits and fits, surface finish and weld symbols, and

- other required graphical convention information appropriate to mechanical or maintenance engineering applications
- 2.5 Seek technical and professional assistance or clarification of design information, as required.
 - 2.6 Confirm final range of design drawings to be produced with designer, detail draftspersons and other stakeholders
- 3 Provide final drawings files and documents
- 3.1 Submit final design drawings for sign-off by designer or specified authority
 - 3.2 Prepare CAD files for export to detailer
 - 3.3 Provide documentation, drawings, data files and clearances according to job requirements and enterprise drawing management system and procedures

- | | | | |
|---|---|-----|---|
| 4 | Supervise
production of
detail drawings | 4.1 | Supervise production of detail drawings |
|---|---|-----|---|

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- reviewing mechanical or maintenance engineering applications for required features, functions and context of engineering design drawings
- determining the range of design drawings required, including:
 - design drawings specified by designer and other requests (e.g. from clients and regulators)
 - models, views and sections required to indicate assembly, function, dimensions and materials
 - design drawings required to clearly indicate engineering design specifications to detailer
- using CAD systems, comparing and selecting available software, functions and features appropriate to the design drawing task
- developing orthographic, isometric and other 3-D graphical representations
- representing mechanical components and assemblies using sketching and computer graphics
- representing mechanical components and features using a comprehensive range of standard conventions and graphical techniques
- representing a range of mechanical assemblies using standard graphical representations
- selecting and applying design criteria to meet requirements of the design brief
- engaging appropriate licensed technical and professional assistance for advice, as required, and reporting results of review and the application of graphics techniques
- providing documentation, images and files according to job and enterprise procedures

Required knowledge

Required knowledge includes:

- application of the role of engineering design, design drawing and detail drawing in mechanical and maintenance engineering tasks and projects, such as:
 - design specifications
 - mechanical and maintenance procedures
 - technical specifications and descriptions
- availability and features of standards related to mechanical plant and devices, design,

maintenance and alteration

- AS 1100 Technical drawing, and means of locating and referencing other relevant standards
- availability and features of standards related to mechanical plant and devices, design, maintenance and alteration
- application of relevant standard for mechanical designs
- methods of representing mechanical components and assemblies using sketching and computer graphics, including all relevant symbols, conventions, abbreviations, and so on
- current and traditional methods of documentation generation and control:
 - computer library files
 - reference charts and catalogue information
 - manual drawing
 - generation of orthogonal images from models
- worksite procedures for the processing and filing of graphics, specifications and operating and maintenance instructions/manuals
- WHS and regulatory requirements, codes of practice, risk assessment and registration requirements relevant to mechanical and maintenance applications

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to produce a variety of graphical representations of mechanical and maintenance-related assemblies and components that are consistent with design information and relevant standards and conventions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • select and apply design criteria to meet requirements of the design brief • review features, functions and context of engineering drawings • develop orthographic, isometric and other 3-D graphical representations • represent mechanical components and assemblies using sketching and computer graphics • represent mechanical components and features using a comprehensive range of standard conventions and graphical techniques • represent a range of mechanical assemblies using standard graphical representations • recognise when to engage appropriate licensed technical and professional assistance for advice • provide documentation, images and files.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. • The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Designer	A designer is usually a professional engineer but may also be a scientist, engineering technologist, architect or other person with appropriate skills and knowledge for the design task. The term may also refer to situations where a team of designers are used to produce a design
Design drawing brief	<p>The design drawing brief will be communicated to the design draftsman and will include:</p> <ul style="list-style-type: none"> • major and critical engineering specifications (e.g. dimensions, limits, fits, tolerances and materials) • required features and performance of equipment (e.g. volume, temperature and flow)

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

- | | | | |
|---|--------------------------------------|-----|--|
| 1 | Clarify the design drawing task | 1.1 | Receive design drafting brief and check completeness of information |
| | | 1.2 | Confirm software and file formats to be used for design drafting with designer and detail draftspersons |
| | | 1.3 | Determine stakeholders to be consulted in design drafting process |
| | | 1.4 | Assess work health and safety (WHS), regulatory, sustainability or environmental issues relevant to design task |
| | | 1.5 | Confirm design drawing brief and provide preliminary advice on feasibility |
| 2 | Produce mechatronic related drawings | 2.1 | Determine range of engineering drawings required |
| | | 2.2 | Produce orthogonal drafting of mechatronic components and assemblies to relevant standards using appropriate computer graphical techniques |
| | | 2.3 | Produce 3-D images of mechatronic components and assemblies to relevant standards using computer graphical techniques |
| | | 2.4 | Determine and apply required dimensioning, tolerancing for limits and fits, surface finish and weld symbols, and other required graphical convention information appropriate to mechatronic engineering applications |
| | | 2.5 | Produce graphical representations and circuit diagrams for fluid, electrical and electronic control systems in |

- accordance with the design brief
- 2.6 Seek technical and professional assistance or clarification of design information, as required.
 - 2.7 Confirm final graphical representations with professional engineering staff and other stakeholders
- 3 Provide final drafting, files and documents
 - 3.1 Submit final design drawings for sign-off by designer or specified authority
 - 3.2 Prepare CAD files for export to detailer
 - 3.3 Provide documentation, drawings, data files and clearances according to job requirements and enterprise drawing management system and procedures

4	Supervise production of detail drafting	4.1	Supervise production of detail drafting
---	---	-----	---

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- reviewing mechatronic engineering applications for required features, functions and context of mechatronic engineering design drawings
- determining the range of design drafting required, including:
 - design drafting specified by designer and other requests (e.g. from clients and regulators)
 - models, views and sections required to indicate assembly, function, dimensions and materials
 - design drafting required to clearly indicate engineering design specifications to detailer
- using CAD systems, comparing and selecting available software, functions and features appropriate to the design task
- developing orthographic, isometric and other 3-D graphical representations
- representing mechatronic components and assemblies using sketching and computer graphics
- representing mechatronic components and features using a comprehensive range of standard conventions and graphical techniques
- representing a range of mechatronic assemblies using standard graphical representations
- selecting and applying design criteria to meet requirements of the design brief
- engaging appropriate licensed technical and professional assistance for advice, as required
- providing documentation, images and files according to job and enterprise procedures

Required knowledge

Required knowledge includes:

- application of the role of engineering design, design drafting and detail drafting in mechatronic tasks and projects, such as:
 - design specifications
 - mechatronic manufacture and maintenance procedures
 - technical specifications and descriptions
 - physical arrangement of mechanical, fluid, electrical and control elements
 - diagrammatic layouts of control circuits

- actuator sequence and logical signal diagrams
- graphical representation techniques
- WHS and regulatory requirements, codes of practice, risk assessment and registration requirements relevant to mechatronic applications
- application of relevant standards for mechatronic design
- worksite procedures for the processing and filing of drafting, specifications and operating and maintenance instructions/manuals
- methods of representing mechatronic components and assemblies using sketching and computer graphics, including all relevant symbols, conventions, abbreviations, and so on
- current and traditional methods of documentation generation and control:
 - computer library files
 - reference charts and catalogue information
 - generation of orthogonal images from models
- manual drawing

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to produce a variety of graphical representations of mechatronic-related assemblies and components that are consistent with design information and relevant standards and conventions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • select and apply design criteria to meet requirements of the design brief • review features, functions and context of mechatronic engineering drafting • develop orthographic, isometric and other 3-D graphical representations • represent mechatronic components and assemblies using sketching and computer graphics • represent mechatronic components and features using a comprehensive range of standard conventions and graphical techniques • represent a range of mechatronic assemblies using standard graphical representations • recognise when to engage appropriate licensed technical and professional assistance for advice • provide documentation, images and files.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. • The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Designer	A designer is usually a professional engineer but may also be a scientist, engineering technologist, architect or other person with appropriate skills and knowledge for the design task. The term may also refer to situations where a team of designers are used to produce a design
Design drawing brief	<p>The design drawing brief will be communicated to the design drafts person and will include:</p> <ul style="list-style-type: none"> • major and critical engineering specifications (e.g. dimensions, limits, fits, tolerances and materials) • required features and performance of equipment (e.g. volume, temperature and flow)

	<ul style="list-style-type: none"> • control requirements and control methods • electrical and fluid power specifications • standards that must be adhered to • client requests • budget and project schedule • procedures to be followed for further clarifications
Design drawings	Design drawings is used in this unit to include all 3-D and 2-D files and hard copies produced as part of the design drawing process
Design criteria for mechatronic designs	<p>Criteria for mechatronic designs may include:</p> <ul style="list-style-type: none"> • function • aesthetics • manufacturability and maintainability • marketability • sustainability: <ul style="list-style-type: none"> • social, economic and environmental • material and energy resources • cost constraints • ergonomics, anthropometrics and physiology • facilities, plant and skills available • automation safety and risk
Appropriate licensed technical and professional assistance	<p>Appropriate licensed technical and professional assistance may include:</p> <ul style="list-style-type: none"> • technical support and advice relating to elements which have intrinsic dangers, such as: <ul style="list-style-type: none"> • high pressure • energised fluid vessels • high temperatures and heat energy capacity • wiring with high current control voltages above extra low voltage • professional support for technologies, such as: <ul style="list-style-type: none"> • specialist electric motor drives and controllers • specialist materials, plastics, metal alloys and nano materials • special processes, foundry, alloy welding, heat treatment, sealing and fastening
Features, functions and context of engineering design drafting	<p>Features, functions and context of engineering design drafting includes:</p> <ul style="list-style-type: none"> • uses of design drafting for purposes, such as:

	<ul style="list-style-type: none"> • design specifications • production specifications • maintenance procedures • technical specifications and descriptions • graphical representation techniques, including orthogonal, 2-D and 3-D modelling, isometric and mechanical perspective, dimensioning, limits and fits, welding and other standard symbols • role of WHS and regulatory requirements, codes of practice, ministerial directives, risk assessment and registration requirements • availability and features of a range of standards related to mechanical plant and devices, design, maintenance and alteration • typical criteria for mechatronic designs • software developments • emerging developments in graphics and related engineering software
<p>Mechatronic components and features represented by standard conventions and graphical techniques</p>	<p>Mechatronic components and features represented by standard conventions and graphical techniques may include:</p> <ul style="list-style-type: none"> • hole basis, shaft basis and keyway tolerances and fits • dimensioning, tolerancing for limits and fits • materials and surface finish • weld symbols • webs, cross-sections and cutting planes • chain drives, gear sets, pulley and belt drives • threads, fasteners and springs • shafts, keyways and splines • structural sections • surface finishes and welds • electric motors and fluid power actuators • electrical, electronic, electro fluid controls • electrical and electronic circuit components
<p>Mechatronic assemblies</p>	<p>Mechatronic assemblies may include:</p> <ul style="list-style-type: none"> • robots • automated mechanisms and machines • materials handling equipment (e.g. belt conveyors, augers and pneumatic conveyors) • fan, ventilation, air conditioning service and ducting • manufacturing plant and process layouts • manufactured product with embedded controller • automated machines, drives and transmissions

	<ul style="list-style-type: none"> • automated materials handling equipment (e.g. belt conveyors, augers and pneumatic conveyors) • guards, handrails and platforms for automated systems • automated fan, ventilation and air conditioning systems • automated manufacturing plant and process layouts • mechatronic devices and products
WHS, regulatory requirements and enterprise procedures	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> • WHS Acts and regulations • relevant standards • industry codes of practice • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements applying to electrical work
Standards and codes	<p>This refers to all relevant Australian and international standards and codes applicable to a particular design task</p>

MEM09201A Work effectively in an engineering drafting workplace

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers the skills and knowledge required to provide drafting services according to the systems and standards expected in industry. It includes understanding work contexts, stakeholder needs, employment conditions and expectations, and the way drafting is used across different engineering disciplines.

Application of the Unit

This unit is suitable for those working within a computer-aided design (CAD) or drafting work environment. It includes the acceptance of responsibility for own work, working in a team and working to meet established industry standards.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | |
|---|---------------------------------------|---|
| 1 | Identify the work context and setting | 1.1 Identify the scope and nature of the organisation and describe key products and services |
| | | 1.2 Identify legislation, enterprise procedures and industry standards relevant to the workplace |
| | | 1.3 Describe the work flow in the organisation |
| | | 1.4 Identify key personnel and describe their role and relationship to own work |
| | | 1.5 Evaluate impact of trends, such as technology change, work processes and environmental issues, on work practices |
| 2 | Examine role of drafting | 2.1 Describe roles and key responsibilities in drafting work, including processes involved in detail and design drafting work |
| | | 2.2 Identify organisation stakeholders of drafting projects and their information and service needs |
| | | 2.3 Interpret and use industry terminology |
| | | 2.4 Determine the needs and features of drafting work undertaken for different engineering disciplines |
| | | 2.5 Describe the role of computer programs in 2-D and 3-D design and detail drafting work |
| 3 | Accept responsibility for own work | 3.1 Identify own work responsibilities, obligations, employment conditions and role within work group or area |
| | | 3.2 Determine work priorities and deadlines and plan work activity accordingly |
| | | 3.3 Apply enterprise work and safety procedures when conducting work and ensure quality standards are met |
| | | 3.4 Access and use work information, technology and resources to complete work |
| | | 3.5 Apply time-management skills to ensure work deadlines are met and communicate with appropriate personnel if |

- timelines are compromised
- 3.6 Identify skill development needs and seek assistance with supervisor or other appropriate personnel
 - 3.7 Minimise impact of work on the environment and conduct housekeeping to maintain workplace
- 4 Work with others
- 4.1 Identify roles of team members
 - 4.2 Participate in the development and review of team goals and activities and contribute to continuous improvements
 - 4.3 Contribute to team meetings using effective communication skills and with respect to varying opinions and differences
 - 4.4 Address work conflicts professionally using effective communication skills, and refer to appropriate personnel if necessary
- 5 Apply safe and sustainable work practices
- 5.1 Apply safety procedures and practices at all times
 - 5.2 Collaborate with others and contribute to positive work environment
 - 5.3 Identify and minimise resource use in own work, and contribute to efficiency improvements
 - 5.4 Comply with enterprise environmental regulations and report breaches and environmental hazards to designated personnel

Required Skills and Knowledge

Required skills

Required skills include:

- sourcing and disseminating information
- communicating verbally and in writing with team members, site/project managers and suppliers
- meeting skills
- organising skills to manage own workload and individual career planning activities
- interpersonal skills in dealing with team members and others

Required knowledge

Required knowledge includes:

- relevant legislation
- occupational health and safety (OHS) requirements for the engineering industry
- relevant statutory/regulatory authorities
- relevant codes of practice
- quality assurance procedures

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to perform work within a drafting context, according to industry standards and work expectations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Specifically the candidate must be able to:</p> <ul style="list-style-type: none"> • work within typical site/teamwork structure and methods • apply worksite communication procedures • comply with organisational policies and procedures including quality requirements • participate in work meetings • comply with quality requirements • use industry terminology • apply appropriate safety procedures • demonstrate industry knowledge, including: <ul style="list-style-type: none"> • industry size, scope of work and economic issues • industry standards and codes relevant to organisation work • relevant legislative and regulatory provisions covering drafting work, including discrimination and equal employment opportunity • types of drafting in industry and work flow.
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as</p>

	<p>part of a team.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with drafting or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement

Standards and codes	Standards and codes include, but are not limited to: <ul style="list-style-type: none"> • Australian drawing standards • third-party manufacturing and installation standards • company standards • project and industry guidelines • manufacturer catalogues and specifications
Stakeholders	Stakeholders may include: <ul style="list-style-type: none"> • clients • engineers • builders • architects • tradespeople • designers • management • team members
Engineering disciplines	Depending on the project and brief there may not be a clear discipline for any one task with many drawing tasks covering more than one discipline. The common engineering disciplines that may be covered by this unit include: <ul style="list-style-type: none"> • mechanical • air conditioning and mechanical services • mechatronics • electrical • manufacturing • fabrication • naval architecture • structural • civil • mining • materials handling
Responsibilities, obligations and employment conditions	Responsibilities, obligations and employment conditions will vary according to the organisation and project and may include: <ul style="list-style-type: none"> • job description and employment arrangements • organisation's policy relevant to work role • team structures • supervision and accountability requirements,

	<p>including OHS</p> <ul style="list-style-type: none"> • environmentally sustainable work practices • industrial awards • enterprise agreements • industry/workplace codes of practice • skills, training and competencies • codes of conduct
Communication skills	<p>Communication skills may include:</p> <ul style="list-style-type: none"> • active listening • numeracy skills to the level required to interpret workplace documents • verbal skills to convey meaning and add to discussion • reading and writing skills to the level required to interpret and contribute to work information • use of templates, conventions and communication protocols appropriate to the organisation, project and type of drawing
Efficiency improvements	<p>Efficiency improvements are changes to work practices which result in:</p> <ul style="list-style-type: none"> • reduction in resource consumption, including water, electricity or materials • waste minimisation or improved management • pollution controls • equipment maintenance and longevity • improved workplace layout • reduced transportation or movement • cost savings • increased re-use or recycling and use of renewable resources • greater education and understanding of sustainable work practices • greater measurement of resource use • selection of more environmentally friendly materials, resources or practices • prevention or minimisation of risks
Environmental hazards	<p>Environmental hazards may include:</p> <ul style="list-style-type: none"> • substances (e.g. resources, waste and by-products) that are dangerous to living things in the environment, such as humans, animals, plants and water, including storage, handling and disposal of the following substances:

	<ul style="list-style-type: none">• toxic• corrosive• flammable• explosive• other infectious or dangerous substances
--	--

Unit Sector(s)

Drawing, drafting and design

Custom Content Section

Not applicable.

MEM09202A Produce freehand sketches

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers the skills and knowledge required to complete freehand sketches to illustrate or communicate information to be used in engineering drafting applications. It covers standard drawing conventions and techniques to represent the subject in appropriate proportion and view.

Application of the Unit

This unit is suitable for those working within a computer-aided design (CAD) or drafting work environment. Sketches may be used as part of the drafting process to illustrate or communicate information about design, worksite, layout plan or construction features. The unit includes the ability to apply standard drawing conventions to sketching 2-D orthogonal and pictorial freehand drawings and sectional views.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | |
|---|---|---|
| 1 | Determine sketch requirements | 1.1 Determine purpose, scope and presentation context for sketch, and the information needs of the audience |
| | | 1.2 Identify key features, dimensions and orientation, structures, services and features for inclusion |
| | | 1.3 Obtain any additional information required |
| | | 1.4 Determine suitable sketching techniques and select and prepare materials |
| | | 1.5 Access, interpret and apply compliance or safety procedures relevant to the work activity |
| 2 | Create simple sketches of pictorial, orthographic and sectional views | 2.1 Prepare simple freehand sketches using standard orthogonal and pictorial conventions |
| | | 2.2 Prepare sectional details of simple structural or mechanical elements and elevations using standard orthogonal drawing practice |
| | | 2.3 Examine and apply principles of descriptive geometry to ensure correct perspective is achieved |
| | | 2.4 Apply industry specific terminology and symbols, and include specifications, as required, to convey required information |
| | | 2.5 Identify and label sketch to confirm currency and purpose |
| | | 2.6 Confirm sketch is an accurate representation of subject and applies standard drawing conventions |
| 3 | Produce sketches of geometric shaped objects | 3.1 Sketch geometric shapes using correct construction techniques |
| | | 3.2 Obtain tangent points using correct drawing techniques |
| | | 3.3 Confirm sketch is an accurate representation of subject and applies standard drawing conventions |

- | | | | |
|---|--|-----|---|
| 4 | Produce pictorial sketches of engineering components | 4.1 | Select principal axes and angles |
| | | 4.2 | Sketch isometric and non-isometric lines |
| | | 4.3 | Construct pictorial circles and arcs |
| | | 4.4 | Sketch isometric, oblique and perspective views |
| | | 4.5 | Conduct calculations, as required, to ensure correct dimensions and proportions and construct and use scales for sketch |
| | | 4.6 | Complete border and title blocks and confirm sketch is an accurate representation of subject and applies standard drawing conventions |

Required Skills and Knowledge

Required skills

Required skills include:

- literacy skills sufficient to read product safety labels and instructions and to prepare sketches for presentation
- numeracy skills sufficient to determine layout issues and to deal with scaling
- applying spatial principles to achieve scale and proportion
- selecting correct media and graded pencils to produce a freehand sketch of components
- applying freehand drawing techniques and conventions in the production of sketches in pictorial, orthographic and sectional views

Required knowledge

Required knowledge includes:

- general knowledge of the elements and principles of design and their specific application to drawing
- general knowledge of different approaches to drawing
- techniques, methods and principles of technical drawing used in descriptive geometry
- awareness of copyright and intellectual property issues and legislation in relation to drawing
- environmental and occupational health and safety (OHS) issues associated with the tools and materials used for drawing
- quality assurance procedures
- principles of plane geometry:
 - geometric shapes
 - plane geometry
 - geometric construction
 - line types during construction
- sketch construction:
 - pictorial axes
 - pictorial angles
 - pictorial lines
 - non-pictorial lines
 - pictorial circles and arcs
- four centre method
- ordinate method:
 - sectioning pictorial shapes
- pictorial drawing:
 - isometric

- oblique (cabinet and cavalier)
- perspective
- dimensioning requirements and techniques

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to produce freehand sketches to communicate or illustrate subject for further drafting work.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Specifically the candidate must be able to:</p> <ul style="list-style-type: none"> • work within typical site/teamwork structures and methods • apply worksite communication procedures • comply with organisational policies and procedures, including quality requirements • comply with quality requirements • use industry terminology • apply appropriate safety procedures • produce freehand orthogonal sketches and sectional views with information required to inform drawing work.
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include</p>

	<p>equipment modified for people with disabilities.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with drafting or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement

Key features	<p>Key features may include:</p> <ul style="list-style-type: none"> • shape • proposed subject • existing structures • services • dimensions • types of structure • shape of structure • type of construction • types of fasteners • layout • service requirements • location of plant and machinery • vertical and horizontal measurements
Orientation	<p>Orientation may include:</p> <ul style="list-style-type: none"> • relationship to the north compass point • location of other subjects • relationship to other subjects
Services	<p>Services may include:</p> <ul style="list-style-type: none"> • drainage • sewerage • gas • telephone and cable • water • electricity • air conditioning and ventilation • heating and cooling
Additional information	<p>Additional information may include:</p> <ul style="list-style-type: none"> • measurements and dimensions • design specifications • material
Drawing materials	<p>Drawing materials may include:</p> <ul style="list-style-type: none"> • pen and ink • graphite pencils • graph paper • cartridge paper • tracing paper

<p>Standard drawing conventions</p>	<p>Standard drawing conventions may include:</p> <ul style="list-style-type: none"> • use of correct sectioning technique • identification of cutting plane • accurate line types • appropriate view positions to the recognised drawing convention • use of correct symbols • use of correct dimensioning technique • provision of suitable number of views • use of correct proportions • neat presentation
<p>Construction techniques</p>	<p>Construction techniques may include:</p> <ul style="list-style-type: none"> • use of parallel lines • bisection of lines, angles and arcs • equal division of lines • construction of angles at 90, 45, 30, 60, 75 and 15 degrees • construction of a hexagon • sketching arcs tangential to two lines • sketching arcs tangential to two other arcs, internally and externally • sketching an arc tangential to a straight line and another arc • determining and indicating tangent points
<p>Drawing techniques</p>	<p>Drawing techniques may include:</p> <ul style="list-style-type: none"> • orthogonal projection: <ul style="list-style-type: none"> • first angle projection • third angle projection • projection symbol • preferred system of projection in Australia • number of views • relationship of views • sheet format: <ul style="list-style-type: none"> • borders and title blocks • application of projection symbol • drawing sheets and sizes • lettering styles • Australian standards • dimensioning: <ul style="list-style-type: none"> • unidirectional dimensioning

	<ul style="list-style-type: none">• aligned dimensioning• projection and dimension lines• arrow heads• dimension placement• sectioning:<ul style="list-style-type: none">• types of sections• required section views• placement of views• cutting planes• labelling of cutting planes and section views

MEM09203A Measure and sketch site information

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers the skills and knowledge required to take measurements and collect and record all relevant information from a site for the purpose of directing drafting work.

Application of the Unit

This unit is suitable for those working within a computer-aided design (CAD) or drafting work environment. It includes preparation of a freehand sketch that details a range of relevant information to be used in detailed drawings or design work. It also covers taking accurate measurements using compass and straight edge and applying geometric construction methods. If work requires entering a construction worksite, then the unit CPCOHS1001A Work safely in the construction industry should also be completed beforehand.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---------------------------------|-----|--|
| 1 | Prepare for site visit | 1.1 | Verify and comply with applicable occupational health and safety (OHS), legislative and organisational requirements relevant to conducting site visits |
| | | 1.2 | Confirm project brief and visit objectives, and review any available drawings and information on the project |
| | | 1.3 | Arrange site visit and prepare required materials |
| | | 1.4 | Check all measuring equipment and materials for sketching are available |
| 2 | Assess and record site features | 2.1 | Visually assess and record details on physical position, layout, access and location, and establish site references |
| | | 2.2 | Visually assess and record details on site structure and materials |
| | | 2.3 | Visually assess and record details on services |
| | | 2.4 | Observe and record other details that may impact on project |
| | | 2.5 | Obtain any relevant site information or documentation |
| 3 | Take site measurements | 3.1 | Take accurate measurements of site features as required by project brief |
| | | 3.2 | Conduct calculations, as required, to ensure all required measurements are obtained and verified |
| | | 3.3 | Access and use work information, technology and resources to complete work |
| | | 3.4 | Minimise impact of work on the environment and ensure safety procedures are followed at all times |
| | | 3.5 | Obtain or note missing measurements accordingly |
| 4 | Produce sketch of site | 4.1 | Produce sketch to proportion |
| | | 4.2 | Apply correct sketching techniques and line construction to the sketch |

- 4.3 Apply all dimensions and notations
- 5 Apply geometric construction methods
 - 5.1 Sketch geometric shapes using correct construction techniques
 - 5.2 Obtain tangent points using correct techniques
 - 5.3 Apply line work using a range of different line types and media in accordance with standard industry drawing practice
- 6 Document site details
 - 6.1 Complete isometric sketches that illustrate site details
 - 6.2 Ensure all additional information gathered is documented appropriately to inform further work
 - 6.3 Ensure correct symbols and standard drawing conventions are adhered to
 - 6.4 Apply enterprise work procedures when conducting work and ensure quality standards are met

Required Skills and Knowledge

Required skills

Required skills include:

- sourcing and interpreting work-related information
- communicating verbally and in writing with team members and site/project managers
- interpreting diagrams and drawings
- taking accurate measurements
- using mathematical ideas and techniques to correctly complete measurements, calculate area, perimeter, volume, mass, scales and ratios
- using pre-checking techniques to anticipate measurement and drawing problems and avoid reworking
- using workplace technology related to measurement and drawing, including tools, equipment, calculators and measuring devices
- accurately calculating angles
- selecting principal axes and angles
- establishing positions of clear panels
- reading, interpreting and following information on work specifications, standard operating procedures, work instructions and other reference material
- maintaining accurate records
- carrying out work according to OHS practices
- completing industry standard freehand drawings and sketches

Required knowledge

Required knowledge includes:

- relevant legislation
- OHS requirements for the engineering industry
- quality assurance procedures
- the theory and practice of calculations (addition, subtraction, multiplication and division)
- conventional signs and markings for plans and drawings
- the principles of plane geometry
- measurement techniques and equipment/tools

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to conduct an onsite visit and complete industry standard drawings, sketches and other documentation that includes measurements and all relevant site information to inform drafting work.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Specifically the candidate must be able to:</p> <ul style="list-style-type: none"> • work within typical site/teamwork structures and methods • apply worksite communication procedures • comply with organisational policies and procedures, including quality requirements • participate in work meetings • comply with quality requirements • use industry terminology • apply appropriate safety procedures • take accurate site measurements and produce detailed sketch to inform detail drafting work.
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required. Where</p>

	<p>applicable, physical resources should include equipment modified for people with disabilities.</p> <p>This unit could be assessed in conjunction with any other relevant units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement

Required materials	<p>Required materials may include:</p> <ul style="list-style-type: none"> • measuring equipment • camera • drawing paper, pencils and eraser • compass • straight edge • chalk • string
Calculations	<p>Calculations may include:</p> <ul style="list-style-type: none"> • area • perimeter • volume • mass • scales and ratios (ingredients/elements and triangulation) and addition • subtraction • multiplication and division processes
Other details	<p>Other details may include:</p> <ul style="list-style-type: none"> • vegetation • surrounding objects or structures • access for vehicles • any other conditions which may impact on the project
Standard drawing conventions	<p>Standard drawing conventions may include:</p> <ul style="list-style-type: none"> • use of correct sectioning technique • identification of cutting plane • accurate line types • appropriate view positions • use of correct symbols • use of correct dimensioning technique • provision of suitable number of views • use of correct scales • neat presentation
Drawing techniques	<p>Drawing techniques may include:</p> <ul style="list-style-type: none"> • orthogonal projection: <ul style="list-style-type: none"> • first angle projection • third angle projection

	<ul style="list-style-type: none"> • projection symbol • preferred system of projection in Australia • number of views • relationship of views • pictorial sketching: <ul style="list-style-type: none"> • isometric • orthogonal (cabinet and cavalier) • pictorial • sheet format: <ul style="list-style-type: none"> • borders and title blocks • application of projection symbol • drawing sheets and sizes • lettering styles • Australian Standards • dimensioning: <ul style="list-style-type: none"> • unidirectional dimensioning • aligned dimensioning • projection and dimension lines • arrow heads • dimension placement • sectioning: <ul style="list-style-type: none"> • types of sections • required section views • placement of views • cutting planes • labelling of cutting planes and section views
Drawing constructions	<p>Drawing constructions may include:</p> <ul style="list-style-type: none"> • isometric axes • isometric angles • isometric lines • non-isometric lines • isometric circles: <ul style="list-style-type: none"> • four centre method • ordinate method • sectioning isometric shapes

MEM09204A Produce basic engineering detail drawings

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers the skills and knowledge required to identify drawing requirements, preparing engineering drawings and an engineering parts list, and issuing the drawings. Drawings include 2-D drawings to Australian Standard (AS) 1100.101–1992 Technical drawing – General principles.

Application of the Unit

This unit is suitable for those working within a drafting work environment where most specifications required for the drawing are already determined. Specifications may be obtained from design information, customer requirements, sketches and preliminary layouts. Drawings will usually be carried out with the use of computer-aided design (CAD) systems but may also be done manually. Drawings are produced to AS 1100.101–1992 Technical drawing – General principles, from predetermined critical dimensions and specifications. If a CAD system is used, the unit MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements, should also be selected. This unit applies to all engineering and manufacturing environments.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM09002B Interpret technical drawing

Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Determine drawing requirements	1.1	Check purpose, scope and information requirements for drawing
		1.2	Interpret available information relevant to project and work requirements, and identify and address further information needs
		1.3	Identify and prepare equipment required to complete work
		1.4	Examine requirements for presentation of drawings
		1.5	Confirm communication requirements during project
2	Produce detail drawing	2.1	Prepare drawings in plane orthogonal, or equivalent
		2.2	Apply standard drawing conventions, including dimensions, required method of projection, and full notation
		2.3	Use drawing techniques according to work requirements
		2.4	Apply industry symbols and ensure presentation meets industry standard
3	Prepare engineering parts list	3.1	Identify components or parts and organise by component type and/or in accordance with organisation/customer requirements
		3.2	Prepare parts list in accordance with organisation/customer requirements

- 4 Complete drawing task
 - 4.1 Check and confirm dimensions, angles and proportions
 - 4.2 Ensure drawing is presented according to organisational requirements and contains all relevant and accurate information
 - 4.3 Issue and file drawing according to workplace procedure
 - 4.4 Evaluate work and identify areas for improvement
 - 4.5 Plot or print the final drawing to a standard scale

Required Skills and Knowledge

Required skills

Required skills include:

- literacy skills sufficient to read and interpret instructions and specifications for drawing work
- obtaining all relevant job requirements, data/information and specifications necessary to produce the drawing in accordance with workplace procedures
- planning and sequencing operations
- checking and clarifying task-related information
- using computer technologies and navigating software
- numeracy skills sufficient to interpret technical information and conduct mathematical problem solving as required in the scope of this unit
- applying spatial principles to achieve scale and proportion
- using drafting equipment appropriate to the drawing method chosen
- recording completed drawings and/or parts lists in accordance with standard operating procedures
- handling and storing the approved drawings and/or parts lists in accordance with standard operating procedures

Required knowledge

Required knowledge includes:

- general knowledge of different approaches to drawing
- awareness of copyright and intellectual property issues and legislation in relation to drawing
- environmental and occupational health and safety (OHS) issues associated with the tools and materials used for drawing
- quality assurance procedures
- principles of plane geometry:
 - geometric shapes
 - plane geometry
 - geometric construction
 - line types during construction
- drawing construction:
 - four centre method
 - ordinate method
 - sectioning isometric shapes
 - dimensions and notations
- requirements and purpose of the drawing to be produced
- requirements and purpose of the engineering parts list

- sources of relevant data/information
- timeframe for completion of drawings
- persons who can confirm drawing requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to use interpret and apply drawing specifications, and produce a complete drawing to AS 1100.101–1992 Technical drawing – General principles, using manual or CAD tools.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Specifically the candidate must be able to:</p> <ul style="list-style-type: none"> • work within typical site/teamwork structures and methods • apply worksite communication procedures • comply with organisational policies and procedures, including quality requirements • participate in work meetings • comply with quality requirements • use industry terminology • apply appropriate safety procedures • interpret work and design specifications and use reference material to obtain required information for drawing work • produce a detailed engineering drawing to AS 1100.101–1992 Technical drawing – General principles, and according to work requirements.
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to</p>

	<p>accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with drafting or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

MEM09205A Produce electrical schematic drawings

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers the skills and knowledge required to produce electrical schematic drawings to comply with Australian Standard (AS) 1102.101–1989 Graphical symbols for electrotechnical documentation – General information and general index, or equivalent, using predetermined design specifications. The unit also covers the production of layout or block diagrams to show the physical arrangement of components.

Application of the Unit

This unit is suitable for those working within a drafting work environment. The unit applies to the production of schematic drawings to show electrical circuits and connections between devices, including power and signal connections. It includes the use of appropriate symbols and production of a matching reference list of circuit components. Types of electrical drawings or diagrams may include block, single line, interconnecting, wiring, circuit, telephonic and telegraphic or cable form diagrams, and notations.

Drawings may be carried out with or without the use of computer-aided design (CAD) systems and are completed to AS 1102.101–1989 Graphical symbols for electrotechnical documentation – General information and general index, or equivalent.

If CAD systems are to be used, the unit MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements, should also be selected.

Drawings are completed under supervision.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Determine schematic drawing requirements	1.1	Check purpose, scope and information requirements for drawing
		1.2	Interpret available information relevant to project and work requirements, and identify and address further information needs
		1.3	Identify and prepare equipment required to complete work
		1.4	Identify and access organisational files, templates and symbols as required for work
2	Identify system requirements	2.1	Identify and apply relevant codes, standards and symbols used for electrical diagrams and drawings
		2.2	Identify function and purpose of circuit and its components and assemblies
		2.3	Identify environmental implications of inefficient systems and strategies for minimising impact
3	Prepare electrical drawings and diagrams	3.1	Lay out drawing in accordance with the sketches and specifications
		3.2	Prepare an electrical block diagram in accordance with Australian Standards
		3.3	Draw cable run and riser diagrams from schedules

- 3.4 Produce switchboard layout drawings
 - 3.5 Prepare single line and interconnecting electrical diagrams in accordance with Australian Standards
 - 3.6 Prepare wiring and circuit diagrams in accordance with Australian Standards
 - 3.7 Ensure drawing accurately reflects specifications, is presented according to organisational requirements and contains all relevant information, including correct line work, scales, notation and dimensioning
 - 3.8 Apply workplace occupational health and safety (OHS) and environmental procedures
- 4 Prepare materials list
 - 4.1 Where required, select components and/or materials from supplier/manufacturer catalogues using predetermined specifications
 - 4.2 Produce a parts list in accordance with workplace procedures
 - 4.3 Store drawings and/or materials list according to workplace procedures
- 5 Consult appropriately with other disciplines
 - 5.1 Verify the parameters of the brief and clarify specifications with appropriate personnel
 - 5.2 Identify and consult with support services
 - 5.3 Present and explain drawings at appropriate stages of the project

Required Skills and Knowledge

Required skills

Required skills include:

- literacy skills sufficient to read and interpret instructions, relevant codes of practice and specifications for drawings work
- using computer technologies and navigating software
- numeracy skills sufficient to interpret technical information and conduct mathematical problem solving as required in the scope of this unit
- using and maintaining drawing equipment
- applying spatial principles to achieve scale and proportion
- interpersonal skills to consult with other disciplines
- drafting skills
- applying symbols, schedules and legends to the drawing
- arranging the views in a logical manner and in accordance with AS 1102.101–1989 Graphical symbols for electrotechnical documentation – General information and general index, or equivalent
- correctly using line thickness and construction to identify parts
- using engineering and manufacturer catalogues, tables, standards and specifications
- drawing electrical/electronic schematics correctly and indicating the relative position of the components
- producing electrical/electronic drawings with all relevant specifications
- obtaining the circuit/component specifications
- planning and sequencing operations
- checking and clarifying task related information
- filing drawings according to workplace procedures

Required knowledge

Required knowledge includes:

- general knowledge of different approaches to drawing
- awareness of copyright and intellectual property issues and legislation in relation to drawing
- requirements of AS 1102.101–1989 Graphical symbols for electrotechnical documentation – General information and general index, or equivalent with respect to electrical/electronic schematics/drawings
- environmental and OHS issues associated with the tools and materials used for drawing
- quality assurance procedures
- company standards for CAD
- order of drawing process
- company checking procedures for drawings
- layout and presentation

- the standards applicable to the work to be undertaken
- the process of checking the completed drawing
- the process of storing paper drawings and electronic drawing files
- the International System of Units (SI)
- terminology associated with the preparation of electrical diagrams and drawings
- basic components used in electrical installations
- wiring types used in electrical installations
- functions of components, such as:
 - resistors
 - capacitors

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to interpret and apply drawing specifications in the production of electrical diagrams and drawings to Australian Standard AS1102.101–1989 Graphical symbols for electrotechnical documentation – General information and general index, or equivalent.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Specifically the candidate must be able to:</p> <ul style="list-style-type: none"> • work within typical site/teamwork structures and methods • apply worksite communication procedures • comply with organisational policies and procedures, including quality requirements • participate in work meetings • comply with quality requirements • use industry terminology • apply appropriate safety procedures • obtain required information for work and produce detailed electrical/electronic schematic drawings in accordance with AS1102.101–1989 Graphical symbols for electrotechnical documentation – General information and general index, or similar.

MEM09206A Produce drawings for mechanical services

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers the skills and knowledge required to produce detailed engineering drawings for the installation of heating, ventilation, air conditioning and refrigeration (HVAC/R) systems within the mechanical services industry.

Application of the Unit

This unit is suitable for those working within a drafting work environment in the mechanical services industry. Drawings will usually be carried out with the use of computer-aided design (CAD) systems but may also be done manually. Drawings are produced to Australian Standard (AS) 1100.101–1992 Technical drawing – General principles, from predetermined critical dimensions and specifications. If CAD systems are to be used, the unit MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements, should also be selected.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM09002B	Interpret technical drawing
MEM09204A	Produce basic engineering detail drawings

Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Determine drawing requirements	1.1	Check purpose, scope and information requirements for drawing
		1.2	Interpret available information relevant to project and work requirements, and identify and address further information needs
		1.3	Identify and prepare equipment required to complete work
		1.4	Identify and apply relevant codes, standards and symbols used in the mechanical services industry for installation drawings
		1.5	Identify and access organisational files, templates and symbols as required for work
		1.6	Identify environmental implications of inefficient systems and strategies for minimising impact
2	Identify HVAC/R measuring and control devices	2.1	Identify features and uses of temperature and pressure measurement devices
		2.2	Identify features and uses of air and fluid measurement instruments
		2.3	Identify features and uses of standard control devices and measurement devices
		2.4	Identify location of control and measurement devices on drawings

- | | | | |
|---|---|-----|--|
| 3 | Produce drawings for installation of heating and cooling systems | 3.1 | Apply operating principles and specifications of heating and cooling systems and equipment to drawing work |
| | | 3.2 | Complete drawing according to mechanical services industry standard for heating and cooling systems |
| | | 3.3 | Ensure drawing accurately reflects specifications, is presented according to organisational requirements and contains all relevant information |
| | | 3.4 | Apply workplace occupational health and safety (OHS) and environmental procedures |
| 4 | Produce drawings for installation of air conditioning and exhaust systems | 4.1 | Apply operating principles and specifications of a range of air conditioning systems and equipment to drawing work |
| | | 4.2 | Apply operating principles and specifications of a range of exhaust systems to drawing work |
| | | 4.3 | Complete drawing according to mechanical services industry standard for air conditioning systems |
| | | 4.4 | Ensure drawing accurately reflects specifications, is presented according to organisational requirements and contains all relevant information |
| | | 4.5 | Evaluate drawing for system efficiency and make or report potential improvements |
| 5 | Produce drawings for installation of refrigeration systems | 5.1 | Apply operating principles and specifications of a range of refrigeration systems and equipment to drawing work |
| | | 5.2 | Complete drawing according to mechanical services industry standard for refrigeration systems |
| | | 5.3 | Ensure drawing is presented according to organisational requirements and contains all relevant information |
| | | 5.4 | Evaluate drawing for system efficiency and make or report potential improvements |

- 6 Consult appropriately with other disciplines
 - 6.1 Verify the parameters of the brief and clarify specifications with appropriate personnel
 - 6.2 Identify and consult with support services
 - 6.3 Present and explain drawings at appropriate stages of the project

Required Skills and Knowledge

Required skills

Required skills include:

- literacy skills sufficient to read and interpret instructions, relevant codes of practice and specifications for drawing work
- numeracy skills sufficient to interpret technical information and conduct mathematical problem solving as required in the scope of this unit
- using and maintaining drawing equipment
- interpersonal skills to consult with other disciplines
- applying drafting skills, drawing techniques and conventions
- applying codes, symbols and drawing protocols for mechanical services drawings
- applying spatial principles to achieve scale and proportion
- determining and applying operating principles of system equipment to drawing work
- solving problems in order to meet requirements of given specifications
- using drafting equipment appropriate to the drawing method chosen
- recording completed drawings in accordance with industry standards and practices
- handling and storing the approved drawings in accordance with standard operating procedures
- preparing drawing presentation in a manner that makes information accessible and complete
- filing drawings according to workplace procedures
- evaluating work and identifying areas for improvement

Required knowledge

Required knowledge includes:

- general knowledge of different approaches to drawing
- awareness of copyright and intellectual property issues and legislation in relation to drawing
- environmental and OHS issues associated with the tools and materials used for drawing
- quality assurance procedures
- company standards for CAD, duct and pipe
- order of drawing process
- company checking procedures for drawings
- layout and presentation
- operating principles of pressure and temperature measurement devices
- operating principles of heating and cooling system equipment
- operating principles of air conditioning equipment
- operating principles of exhaust systems
- operating principles of refrigeration equipment

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to interpret and apply drawing specifications and industry standards in the production of installation drawings for the mechanical services industry.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Specifically the candidate must be able to:</p> <ul style="list-style-type: none"> • work within typical site/teamwork structures and methods • apply worksite communication procedures • comply with organisational policies and procedures, including quality requirements • participate in work meetings • comply with quality requirements • use industry terminology • apply appropriate safety procedures • demonstrate industry knowledge, including: <ul style="list-style-type: none"> • industry size, scope of work and economic issues • relevant industrial awards and enterprise agreements • relevant legislative provisions covering discrimination and equal employment opportunity • identify features and uses of componentry and system elements for mechanical services and requirements for documenting on detail drawings • produce industry standard detail drawings for mechanical services industry.
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate</p>

MEM09207A Produce drawings for reticulated services

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers the skills and knowledge required to produce detailed engineering drawings for the installation of reticulated services such as water, gas, refrigeration, steam, compressed air and other services requiring reticulated pipework, flues or ducts in commercial and industrial buildings. Drawings are completed to relevant Australian Standards.

Application of the Unit

This unit is suitable for those working within a drafting work environment in the air conditioning and mechanical services industry.

Drawings will usually be carried out with the use of computer-aided design (CAD) systems but may also be done manually. Drawings are produced to Australian Standard (AS) 1100.101–1992 Technical drawing – General principles, from predetermined critical dimensions and specifications. If CAD systems are to be used, the unit MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements, should also be selected.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM09002B	Interpret technical drawing
MEM09204A	Produce basic engineering detail drawings

Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Determine drawing requirements	1.1	Check purpose, scope and information requirements for drawing
		1.2	Interpret available information relevant to project and work requirements, and identify and address further information needs
		1.3	Identify and prepare equipment required to complete work
		1.4	Identify and access organisational files, templates and symbols as required for work
2	Identify working principles for reticulated systems	2.1	Identify principles of reticulation and application in service system
		2.2	Identify the operational features of hot and cold water systems and suitability for specific applications
		2.3	Distinguish between the operation of a condenser, chilled, heating, compressed air systems and water systems, and confirm suitability for specific applications
		2.4	Identify operational features and ventilation requirements for different gas systems
		2.5	Identify safety and environmental implications of reticulated system
3	Produce drawings for reticulated systems	3.1	Lay out drawing in accordance with the sketches and supplied specifications
		3.2	Identify different parts of services on drawings

- 3.3 Size the system in accordance with relevant standards, regulations and workplace requirements
- 3.4 Apply knowledge of working principles of reticulated system to drawing
- 3.5 Ensure drawing accurately reflects specifications, is presented according to organisational requirements and contains all relevant information, including full notation and dimensioning
- 3.6 Apply workplace occupational health and safety (OHS) and environmental procedures
- 3.7 Identify and apply relevant codes, standards and symbols used for reticulated services installation drawings

Required Skills and Knowledge

Required skills

Required skills include:

- literacy skills sufficient to read and interpret instructions, relevant codes of practice and specifications for drawing work
- using computer technologies and navigating software
- numeracy skills sufficient to interpret technical information and conduct mathematical problem solving as required in the scope of this unit
- using and maintaining drawing equipment
- applying spatial principles to achieve scale and proportion
- interpersonal skills to consult with others, as required, to gain information required
- drafting skills
- applying the correct line thicknesses and construction types to distinguish between building's elements and systems
- applying symbols, schedules and legends used in the mechanical services industry to the drawing
- confirming selection of components with design specifications
- applying operational principles of reticulated services to drawing work
- arranging the views in a logical manner and in accordance with AS 1100.101–1992 Technical drawing – General principles
- correctly using line thickness and construction to identify parts
- using engineering and manufacturer catalogues, tables, standards and specifications
- filing drawings according to workplace procedures

Required knowledge

Required knowledge includes:

- general knowledge of different approaches to drawing
- awareness of copyright and intellectual property issues and legislation in relation to drawing
- environmental and OHS issues associated with the tools and materials used for drawing
- quality assurance procedures
- company standards for CAD
- order of drawing process
- company checking procedures for drawings
- layout and presentation
- the relevant statutory and authority requirements related to reticulation systems
- terminology associated with drawings
- the process of checking the completed drawing
- the process of storing paper drawings and electronic drawing files

- principles of steam reticulation
- principles of reticulation
- features and operating principles of a reticulation systems and components
- flue requirements in an liquefied petroleum gas (LPG) system
- issues and hazards of fuel storage
- expansion and contraction factors
- support systems/anchors used in reticulated systems

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to interpret and apply drawing specifications and industry standards in the production of drawings for the installation of reticulated services.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Specifically the candidate must be able to:</p> <ul style="list-style-type: none"> • work within typical site/teamwork structures and methods • apply worksite communication procedures • comply with organisational policies and procedures, including quality requirements • participate in work meetings • comply with quality requirements • use industry terminology • apply appropriate safety procedures • produce drawings for reticulated services to industry standard.
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required. Where</p>

	<p>applicable, physical resources should include equipment modified for people with disabilities.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with drafting or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement

<p>Available information</p>	<p>Available information may include:</p> <ul style="list-style-type: none"> • construction documents • building and coordination information • work specifications • information for plant services equipment • industry codes, standards and regulations • design brief
<p>Reticulated systems</p>	<p>Reticulated systems may include:</p> <ul style="list-style-type: none"> • hot and cold water systems • steam and condensate systems • heating/chilled and condenser water systems • compressed air systems • natural and LPG systems • pipe work insulation • flues and insulation
<p>Operational features and working principles of reticulated system components</p>	<p>Operational features and working principles of reticulated system components include:</p> <ul style="list-style-type: none"> • variable refrigerant volume (VRV) systems • refrigeration systems • slab heating/cooling • hydronic heating • chilled beams • medical gases • fittings/valve types: <ul style="list-style-type: none"> • strainer • balancing • isolating • non-return • pumps • air side: <ul style="list-style-type: none"> • fans • dampers • registers • filters • air handling units • vav units • domestic hot and cold water systems • steam and condensate systems

	<ul style="list-style-type: none"> • heating/chilled and condenser water systems • compressed air systems • gas systems • insulation
Codes, standards and industry regulations	<p>Safety standards include:</p> <ul style="list-style-type: none"> • AS/NZS 1668 Set:2005 The use of ventilation and air conditioning in building Set • AS 1682.1–1990 Fire dampers – Specification • AS 4254–2002 Ductwork for air-handling systems in buildings • building codes • OHS codes of practice • Gas Regulations overview
Industry standards	<p>Industry standards may include, but are not limited to:</p> <ul style="list-style-type: none"> • Building Codes of Australia (BSA) • Australian Standards (AS) • legislation requirements from Building Practitioner's Board (RBP) • Australian Gas Codes (AGC) • Sheet Metal and Air Conditioning Contractors National Association (SMACNA) • third-party manufacturing and installation standards • company standards • guidelines • general practices

MEM09208A Detail fasteners and locking devices in mechanical drawings

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers the skills and knowledge required to produce detailed engineering drawings containing fastening and locking devices.

Application of the Unit

This unit is suitable for those working within a drafting work environment and can be applied across all engineering disciplines. Drawings will usually be carried out with the use of computer-aided design (CAD) systems but may also be done manually. Drawings are produced to Australian Standard (AS) 1100.101–1992 Technical drawing – General principles, from predetermined critical dimensions and specifications.

If CAD systems are to be used, the unit MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements, should also be selected.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM09002B Interpret technical drawing

MEM09204A Produce basic engineering detail drawings

Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Determine drawing requirements	1.1	Check purpose, scope and information requirements for drawing
		1.2	Interpret available information relevant to project and work requirements, and identify and address further information needs
		1.3	Identify and prepare equipment required to complete work
		1.4	Identify and access organisational files, templates and symbols as required for work
2	Identify system requirements	2.1	Access catalogues, tables, standards and specifications to determine required components
		2.2	Identify types of fasteners, their features, uses and thread types
		2.3	Identify mechanical location and locking devices, their features, uses and thread types
		2.4	Identify and apply relevant codes, standards and symbols used for components and methods used to locate on drawings
3	Prepare detail drawing	3.1	Lay out drawing in accordance with the sketches and specifications
		3.2	Apply line work using a range of different line types and media in accordance with standard industry drawing practice
		3.3	Produce detail and assembly drawings containing engineering fasteners and location devices

- 3.4 Ensure drawing accurately reflects specifications, is presented according to organisational requirements and contains all relevant information, including full notation and dimensioning
 - 3.5 Apply workplace occupational health and safety (OHS) and environmental procedures
- 4 Document and store drawings
 - 4.1 Document drawings and associated technical information in accordance with project requirements and organisational procedures
 - 4.2 Store drawings according to organisational procedures

Required Skills and Knowledge

Required skills

Required skills include:

- literacy skills sufficient to read and interpret instructions, relevant codes of practice and specifications for drawing work
- using computer technologies and navigating software
- numeracy skills sufficient to interpret technical information and conduct mathematical problem solving as required in the scope of this unit
- using and maintaining drawing equipment
- applying spatial principles to achieve scale and proportion
- interpersonal skills to consult with other disciplines
- drafting skills
- applying symbols, schedules and legends to the drawing
- arranging the views in a logical manner and in accordance with AS 1100.101–1992 Technical drawing – General principles
- correctly using line thickness and construction to identify parts
- using correct method for identifying thread forms on detail and assembly drawings
- using engineering and manufacturer catalogues, tables, standards and specifications
- filing drawings according to workplace procedures

Required knowledge

Required knowledge includes:

- general knowledge of different approaches to drawing
- awareness of copyright and intellectual property issues and legislation in relation to drawing
- environmental and OHS issues associated with the tools and materials used for drawing
- quality assurance procedures
- company standards for CAD
- order of drawing process
- company checking procedures for drawings
- layout and presentation
- the standards applicable to the work to be undertaken
- the process of checking the completed drawing
- the process of storing paper drawings and electronic drawing files
- the International System of Units (SI)
- the different types of fasteners used in the manufacture of an engineering project
- lubrication components and systems and lubricants
- terminology associated with the preparation of mechanical drawings
- different types of thread forms, types and sizes
- types of nuts and uses for locking purposes
- manufacturing processes required to create a drilled and tapped hole and a threaded

feature

- grades of bolts and their applications

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to interpret and apply drawing specifications and industry standards in the production of mechanical drawings which detail fasteners and locking devices.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Specifically the candidate must be able to:</p> <ul style="list-style-type: none"> • work within typical site/teamwork structures and methods • apply worksite communication procedures • comply with organisational policies and procedures, including quality requirements • participate in work meetings • comply with quality requirements • use industry terminology • apply appropriate safety procedures • produce drawings to AS 1100.101–1992 Technical drawing – General principles, detailing fasteners and locking devices.
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. MEM09209A Detail bearings, seals and other componentry in mechanical drawings

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers the skills and knowledge required to produce detailed engineering drawings containing bearings and mechanical seals, engineering keys and keyways, holes and shafts to provide specific clearances by applying general tolerances, and confirming the geometric shape of components by applying geometric tolerances.

Application of the Unit

This unit is suitable for those working within a drafting work environment and can be applied across all engineering disciplines. Drawings may be carried out with or without the use of computer-aided design (CAD) systems and are completed to Australian Standard (AS) 1100.1–1992 Technical drawing – General principles.

If CAD systems are to be used, the unit MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements, should also be selected.

Drawings are completed under supervision.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM09002B	Interpret technical drawing
MEM09204A	Prepare basic engineering detail drawings

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--------------------------------|-----|---|
| 1 | Determine drawing requirements | 1.1 | Check purpose, scope and information requirements for drawing |
| | | 1.2 | Interpret available information relevant to project and work requirements and identify and address further information needs |
| | | 1.3 | Identify and prepare equipment required to complete work |
| | | 1.4 | Identify and access organisational files, templates and symbols as required for work |
| 2 | Identify system requirements | 2.1 | Access catalogues, tables, standards and specifications to determine required components |
| | | 2.2 | Identify types of bearings, their features and uses |
| | | 2.3 | Identify types of mechanical seals, their features and uses |
| | | 2.4 | Determine method of general tolerancing, classes of fit and forms of geometric shapes from engineer, sketches or specifications |
| | | 2.4 | Determine other componentry and type of lubricants to be used |
| | | 2.6 | Identify and apply relevant codes, standards and symbols used for components and methods used to locate on drawings |

- 3 Prepare detail drawing
 - 3.1 Lay out drawing in accordance with the sketches and specifications
 - 3.2 Apply line work using a range of different line types and media in accordance with standard industry drawing practice
 - 3.3 Produce detail and assembly drawings containing engineering bearings and mechanical seals, applying general tolerances, where required
 - 3.4 Produce detail drawings requiring sizing and tolerancing of keys and keyways
 - 3.5 Produce detail drawings containing shafts and holes and fully tolerance to suit a particular Class of Fit
 - 3.6 Produce detail drawings of engineering components applying geometric tolerances to the shape
 - 3.7 Apply surface texture finishes to detail drawings
 - 3.8 Ensure drawing accurately reflects specifications, is presented according to organisational requirements and contains all relevant information, including full notation and dimensioning
 - 3.5 Apply workplace occupational health and safety (OHS) and environmental procedures

- 4 Document and store drawings
 - 4.1 Document drawings and associated technical information in accordance with project requirements and organisational procedures
 - 4.2 Store drawings according to organisational procedures

Required Skills and Knowledge

Required skills

Required skills include:

- literacy skills sufficient to read and interpret instructions, relevant codes of practice and specifications for drawings work
- using computer technologies and navigating software
- numeracy skills sufficient to interpret technical information and conduct mathematical problem solving as required in the scope of this unit
- using and maintaining drawing equipment
- applying spatial principles to achieve scale and proportion
- interpersonal skills to consult with other disciplines
- drafting skills
- applying symbols, schedules and legends to the drawing
- arranging the views in a logical manner and in accordance with AS 1100.1–1992 Technical drawing – General principles
- correctly using line thickness and construction to identify parts
- using engineering and manufacturer catalogues, tables, standards and specifications
- applying surface texture symbols to comply to engineer's requirements
- applying toleranced dimensions to a detail drawing
- reading and selecting the correct key, keyway and keyseat sizes given a specified condition using the appropriate tables
- reading and selecting correct toleranced dimensions to meet the required Class of Fit as selected by the engineer or from the specifications
- selecting a bearing or seal from engineering and manufacturer catalogues, tables, standards and specifications to fit into housings and over shafts
- converting between unilateral, bilateral and limit of size or direct tolerances
- applying tolerances to meet the individual fit classifications between a shaft and hole (clearance, interference and transition)
- filing drawings according to workplace procedures

Required knowledge

Required knowledge includes:

- general knowledge of different approaches to drawing
- awareness of copyright and intellectual property issues and legislation in relation to drawing
- environmental and OHS issues associated with the tools and materials used for drawing
- quality assurance procedures
- company standards for CAD
- order of drawing process
- company checking procedures for drawings

- layout and presentation
- the standards applicable to the work to be undertaken
- the process of checking the completed drawing
- the process of storing paper drawings and electronic drawing files
- the International System of Units (SI)
- the different types of bearings used in the manufacture of an engineering project
- the different types of seals used in the manufacture of an engineering project
- surface texture finishes and machining processes
- geometric tolerances with regard to the roundness, straightness, flatness, concentricity, and so on, of an engineering component
- terminology associated with the preparation of mechanical drawings

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to interpret and apply drawing specifications and industry standards in the production of mechanical drawings which detail bearings seals and other componentry.</p>

MEM09210A Create 3-D solid models using computer-aided design (CAD) system

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit covers preparing the 3-D computer-aided drafting (CAD) environment, creating and modifying 3-D solid models, and producing output from the 3-D model.

Application of the Unit

This unit is suitable for those working within a drafting work environment and may be applied across a range of engineering disciplines. This unit applies to the production of 3-D solid models using CAD modelling software. Operations at this level include, but are not limited to, the creation and manipulation of entities, such as arcs, lines and primitives, such as spheres, cones, cylinders and boxes. It includes the use of region and solid modelling techniques, section views, and pre-drawn library files. Work also includes extraction of properties and application of basic rendering techniques.

This unit includes applications in CAD, computer graphics and animation, rapid prototyping, medical testing and visualisation of scientific research.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM09002B Interpret technical drawing

MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | |
|---|--|--|
| 1 | Determine solid modelling requirements | <ul style="list-style-type: none"> 1.1 Check purpose, scope and information requirements for modelling task 1.2 Interpret available information relevant to project and work requirements, and identify and address further information needs 1.3 Identify and prepare equipment required to complete work 1.4 Identify and apply relevant codes, standards and symbols relevant to work 1.5 Consult appropriate personnel to ensure the work is coordinated effectively with others involved in the project 1.6 Obtain and apply workplace occupational health and safety (OHS) and environmental procedures for work |
| 2 | Prepare 3-D environment | <ul style="list-style-type: none"> 2.1 Apply workplace procedures to retrieve and manipulate required information and navigate computing technology 2.2 Set up a 3-D environment on the screen to allow multiple viewing 2.3 Create 3-D views on the screen by manipulating drawing planes and inserting 3-D geometric shapes 2.4 Establish coordinate system and orientation according to job requirements 2.5 Determine and exploit key features of solid modelling software package |

- 3 Produce output from 3-D model
 - 3.1 Perform drawing for solid modelling
 - 3.2 Exploit features of modelling software to optimise productivity
 - 3.3 Extract physical properties to job requirement, including volume, mass and centre of gravity
 - 3.4 Apply rendering techniques
 - 3.5 Produce 3-D drawings incorporating section views with all necessary annotation

- 4 Complete CAD operations
 - 4.1 Confirm model accurately reflects specifications, is presented according to work requirements and contains all relevant information
 - 4.2 Save and file drawing elements according to organisational procedure
 - 4.3 Evaluate work and identify areas for improvement
 - 4.4 Close applications, perform CAD housekeeping and maintain organisational filing system

Required Skills and Knowledge

Required skills

Required skills include:

- using computing technologies and navigating software
- obtaining relevant job instructions and specifications
- creating the appropriate entities in 3-D space
- manipulating the entities in 3-D space
- creating swept, extruded and revolved solids in 3-D space
- modifying, where appropriate, existing 3-D models
- saving drawing files in the appropriate format
- extracting the physical properties of shapes created in 3-D space from the drawing file to meet job requirements
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- checking and clarifying task-related information
- checking for conformance to specifications
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit
- creating intelligent models using parametric modelling
- producing composite models (composite regions and composite solids)
- producing sectioned models (cutting planes and cross hatching)
- using pre-drawn library files and primitives to produce a 3-D model
- extracting mass and area properties from solid model
- applying rendering techniques to a 3D model (rendering types and preferences, render lighting techniques, and views and scenes)
- using various materials and surface finish options
- producing hard copies of 3-D solid models
- saving 3-D models in various file formats for retrieval into other CAD application software
- producing orthogonal detail drawings of components on standard drawing sheets to a recognised drafting scale

Required knowledge

Required knowledge includes:

- purpose for which the 3-D model is to be developed
- appropriate coordinate system for the job
- reasons for selecting the chosen coordinate system
- orientation of the model with respect to the coordinate system
- number of views required to establish the model
- procedures for creating entities in 3-D space

- the entities that can be created/manipulated in 3-D space
- procedures for manipulating entities in 3-D space
- procedures for creating swept, extruded and revolved solids in 3-D space
- applications of swept, extruded and revolved solids
- procedures for modifying existing 3-D models
- rendering types and preferences, render lighting techniques, views and scenes
- procedures for saving drawing files
- the various formats in which drawing files can be saved
- reasons for using different formats when saving drawing files
- procedures for extracting data with respect to the physical properties of shapes created in 3-D space
- the physical properties of shapes created in 3-D space that can be extracted from the drawing file
- hazard and control measures associated with using CAD system, including housekeeping
- safe work practices and procedures
- terminology associated with solid modelling (region modelling, solid modelling, and wire frame, as opposed to solids)
- region modelling techniques (creating a region primitive and editing regions)
- solid modelling techniques (creating solid primitives, editing solid primitives, and conversion from region to solid models)

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to create 3-D models using CAD systems.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Specifically the candidate must be able to:</p> <ul style="list-style-type: none"> • work within typical site/teamwork structures and methods • apply worksite communication procedures • comply with organisational policies and procedures, including quality requirements • participate in work meetings • comply with quality requirements • use industry terminology • apply appropriate safety procedures • select and use 3-D CAD software to create solid models that meet design specifications.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with creating 3-D models using CAD systems or other units requiring the exercise of the skills and knowledge covered by this unit</p>

Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
-----------------------------	--

Range Statement

<p>Solid modelling task</p>	<p>Solid modelling task may include:</p> <ul style="list-style-type: none"> • terminology • region modelling • solid modelling • parametric modelling • composite models • section models • library files and 3-D primitives • other relevant software packages for the production of 3-D models • mass and area properties • rendering techniques • material finishes • production of hard copies • saving and retrieval of files of varying formats • consolidation (e.g. project work)
<p>Rendering techniques</p>	<p>Rendering techniques may include:</p> <ul style="list-style-type: none"> • rendering types and preferences • render lighting techniques • views and scenes
<p>Appropriate personnel</p>	<p>Appropriate personnel may include:</p> <ul style="list-style-type: none"> • supervisor • leading hand • foreman • manager • site engineer • trainer • mentor • teacher • team member
<p>OHS requirements</p>	<p>OHS requirements may include:</p> <ul style="list-style-type: none"> • legislation • personal protective equipment • material safety management systems • hazardous substances and dangerous goods code • awards provisions • safe work practices

Environmental requirements	Environmental requirements may refer to: <ul style="list-style-type: none">• liquid waste• solid waste• gas, fume, vapour, and smoke emissions, including fugitive emissions• excessive energy and water use• excessive noise
Resource requirements	Resource requirements may include: <ul style="list-style-type: none">• computer software• stationary• software reference documentation• reference texts• consumables• computer• printing equipment

MEM09211A Produce drawings or models for industrial piping

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers the skills and knowledge required to produce detailed, isometric and assembly drawings or models for the installation of industrial piping. Drawings/models are fully dimensioned and notated.

Application of the Unit

This unit is suitable for those working within a drafting work environment. It includes the use of piping and instrumentation and process flow diagrams to inform work. Piping may be used in commercial or industrial contexts for materials, such as hot and cold water, air, gas, chemicals and oil.

Drawings/models will usually be carried out with the use of computer-aided design (CAD) systems but may also be done manually. Drawings are produced to Australian Standard (AS) 1100.101–1992 Technical drawing – General principles, from predetermined critical dimensions and specifications. If CAD systems are to be used, the unit MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements, should also be selected.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM09002B Interpret technical drawing

MEM09204A Produce basic engineering detail drawings

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | |
|---|----------------------------------|--|
| 1 | Determine work requirements | <ul style="list-style-type: none"> 1.1 Check purpose, scope and information requirements for drawing/model 1.2 Interpret available information relevant to project and work requirements, and identify and address further information needs 1.3 Identify and prepare equipment required to complete work 1.4 Identify and apply relevant codes, standards and symbols used for pipe installation drawings/models 1.5 Identify and access organisational files, templates and symbols as required for work 1.6 Identify environmental implications of inefficient systems and strategies for minimising impact |
| 2 | Analyse piping system components | <ul style="list-style-type: none"> 2.1 Interpret piping and instrumentation diagrams and specifications 2.2 Identify various pipe fittings and flanges and specify their application 2.3 Describe the function and application of valves and auxiliary equipment 2.4 Identify components used in piping project 2.5 Identify occupational health and safety (OHS) factors applying to piping system |

- | | | |
|---|---|--|
| 3 | Produce drawings/models for installation of industrial piping systems | 3.1 Apply operating principles and specifications of piping systems and equipment to drawing/model |
| | | 3.2 Detail pipes, valves and auxiliary equipment |
| | | 3.3 Indicate vertical and horizontal offsets and hand wheel orientation |
| | | 3.4 Apply OHS and environmental factors to drawing detail |
| | | 3.5 Ensure drawing/model accurately reflects specifications, is presented according to organisational requirements and contains all relevant information |
| | | 3.6 Produce process flow, piping and instrumentation (P&ID) diagrams and isometric and spool drawings |
| | | 3.7 Produce orthogonal single and double line arrangement drawings of pipe installation systems in accordance with engineer's sketches |
| | | 3.8 Prepare cutting lists from the arrangement and detail drawings |
| 4 | Complete drawing/model task | 4.1 Check and confirm drawing/model accuracy and compliance with industry standard |
| | | 4.2 Ensure drawing/model is presented according to organisational requirements and contains all relevant information |
| | | 4.3 File drawing according to workplace procedure |

Required Skills and Knowledge

Required skills

Required skills include:

- literacy skills sufficient to read and interpret instructions, relevant codes of practice and specifications for drawing work
- using computer technologies and navigating software
- numeracy skills sufficient to interpret technical information and conduct mathematical problem solving as required in the scope of this unit
- using and maintaining drawing equipment
- applying spatial principles to achieve scale and proportion
- interpersonal skills to consult with other disciplines
- using and interpreting process flow and P&ID diagrams
- classifying valves in terms of the duties they perform (i.e. shutoff throttling and non-return)
- compiling cutting lists
- identifying pipe fittings and components
- identifying connections for valves (i.e. screwed, flanged or socket welded)
- applying symbols to identify pipe fittings
- correctly using line thickness material and construction to identify parts and pipe lines
- dimensioning the drawings

Required knowledge

Required knowledge includes:

- general knowledge of different approaches to drawing
- awareness of copyright and intellectual property issues and legislation in relation to drawing
- environmental and OHS issues associated with the tools and materials used for drawing
- quality assurance procedures
- Australian standard specification of pipes, fittings and flanges
- standard valves and auxiliary equipment
- auxiliary equipment used in industrial piping
- principles of producing orthogonal and isometric piping drawings
- types of pipe fittings and components
- different types of industrial pipe systems
- terminology associated with industrial piping systems

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to interpret and apply drawing specifications and industry standards in the production of installation drawings for industrial piping systems.</p>

MEM09212A Produce detailed drawings of steel to non-steel connections

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers the skills and knowledge required to produce detailed engineering drawings for connections of non-steel to steel components. Drawings are completed to relevant Australian Standards (AS).

Application of the Unit

This unit is suitable for those working within a drafting work environment. Drawings will usually be carried out with the use of computer-aided design (CAD) systems but may also be done manually. Drawings are produced to AS 1100.101–1992 Technical drawing General principles, from predetermined critical dimensions and specifications. If CAD systems are to be used, the unit MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements, should also be selected.

This unit applies to detail drafting work for drawings where steel components are connected to non-steel components that may include items made from wood, concrete, glass, and so on.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM09002B	Interpret technical drawing
MEM09204A	Produce basic engineering detail drawings

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---|-----|---|
| 1 | Determine drawing requirements | 1.1 | Check purpose, scope and information requirements for drawing |
| | | 1.2 | Interpret available information relevant to project and work requirements, and identify and address further information needs |
| | | 1.3 | Identify and prepare equipment required to complete work |
| | | 1.4 | Identify and access organisational files, templates and symbols as required for work |
| 2 | Identify features of components and connections | 2.1 | Identify type and features of components to be detailed and determine detailing requirements |
| | | 2.2 | Identify impact of component material on detailing work and determine appropriate standards and drawing symbols |
| | | 2.3 | Identify type and features of connections to be detailed from design information and determine detailing requirements |
| | | 2.4 | Identify any non-standard connections and determine detailing requirements |
| | | 2.5 | Determine method of general dimensioning of the connection, including datum points and geometric shapes from engineer, sketches or specifications |
| | | 2.5 | Determine edge and other clearances for concrete and other non-steel members or components from designer |
| | | 2.6 | Determine if surface finish or other information is required to be detailed |

- 2.7 Identify materials to prevent electrolysis of dissimilar metals
- 3 Detail steel to non-steel connections
 - 3.1 Identify connection types from design information
 - 3.2 Identify reinforcement locations and avoid clashes with other connections
 - 3.3 Avoid interference with post-tensioning cables and holding down bolts for upper floor connections
 - 3.5 Detail steel to non-steel connections according to design information
 - 3.6 Identify and apply relevant codes, standards and symbols used for installation drawings
 - 3.7 Apply workplace occupational health and safety (OHS) and environmental procedures
 - 3.8 Provide measures to counter electrolytic action from dissimilar materials
- 4 Complete drawing
 - 4.1 Check final drawing to ensure all required specifications, symbols, dimensions, and components are included according to standards and the design specification
 - 4.2 Present and store drawing according to organisational procedures

Required Skills and Knowledge

Required skills

Required skills include:

- literacy skills sufficient to read and interpret instructions, relevant codes of practice and specifications for drawing work
- numeracy skills sufficient to interpret technical information and conduct mathematical problem solving as required in the scope of this unit
- using and maintaining drawing equipment
- determining drawing implications of materials used and applying industry standard codes, symbols and notation
- using engineering and manufacturer catalogues, tables, standards and specifications
- applying surface texture symbols to comply to engineer's requirements
- applying toleranced dimensions to a detail drawing
- identifying material clashes
- applying spatial principles to achieve scale and proportion
- interpersonal skills to consult with others, as required, to gain information required
- applying symbols, schedules and legends to the drawing using appropriate standards, codes and conventions
- applying surface texture symbols to comply with engineer's requirements
- applying dimension to a detail drawing using appropriate standards, codes and conventions
- arranging the views in a logical manner and in accordance with AS 1100.101–1992 Technical drawing – General principles
- correctly using line thickness and construction to identify parts

Required knowledge

Required knowledge includes:

- effects of electrolytic action from dissimilar materials
- general knowledge of different approaches to drawing
- awareness of copyright and intellectual property issues and legislation in relation to drawing
- environmental and OHS issues associated with the tools and materials used for drawing
- quality assurance procedures
- company standards for CAD
- order of drawing process
- features of components and connections
- geometric tolerances with regard to the roundness, straightness, flatness and concentricity of an engineering component
- company checking procedures for drawings
- layout and presentation of drawings
- the relevant statutory and authority requirements

- terminology associated with drawings
- the process of checking the completed drawing
- the process of storing paper drawings and electronic drawing files
- Australian standard bolting category identification system

MEM09213A Produce schematic drawings for hydraulic and pneumatic fluid power systems

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers the skills and knowledge required to produce detailed engineering drawings for hydraulic and pneumatic fluid power systems. The systems may be installed on individual stationary or mobile equipment or be part of a distributed system powered from a source separate from the equipment or machine where the hydraulic or pneumatic power is applied.

Application of the Unit

This unit is suitable for individuals undertaking drafting in manufacturing and other industries that use fluid power equipment. The unit can apply to preparing drawings of whole or part of the fluid power system. Drawings will usually be carried out with the use of computer-aided design (CAD) systems but may also be done manually. Drawings are produced to Australian Standard (AS) 1100.101–1992 Technical drawing – General principles, from predetermined critical dimensions and specifications. If CAD systems are to be used, the unit MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements, should also be selected.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM09002B	Interpret technical drawing
MEM09204A	Produce basic engineering detail drawings

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--|-----|---|
| 1 | Determine schematic drawing requirements | 1.1 | Check purpose, scope and information requirements for drawing |
| | | 1.2 | Interpret available information relevant to project and work requirements, and identify and address further information needs |
| | | 1.3 | Identify and prepare equipment required to complete work |
| | | 1.4 | Identify and apply relevant codes, standards and symbols used in the mechanical services industry for installation drawings |
| | | 1.5 | Identify and access organisational files, templates and symbols as required for work |
| | | 1.6 | Identify the features and operational function of basic pneumatic and hydraulic systems |
| 2 | Identify system components | 2.1 | Identify gas or fluid used in the fluid power system |
| | | 2.2 | Identify typical hydraulic system components and their function |
| | | 2.3 | Identify typical pneumatic system components and their function |
| | | 2.4 | Identify environmental implications of inefficient fluid power systems and strategies for minimising impact |
| | | 2.5 | Read and interpret the applicable sections of manufacturer's tables, charts, catalogues and specifications |

- | | | |
|---|--|--|
| 3 | Produce hydraulic system schematic drawing | 3.1 Apply operating principles and specifications of hydraulic system and components to drawing work |
| | | 3.2 Complete schematic drawing according to industry standard for hydraulic fluid power systems, including use of accurate symbols and notations |
| | | 3.3 Complete circuit diagram according to industry standard for hydraulic fluid power systems, including use of accurate symbols and notations |
| | | 3.4 Ensure schematic drawing is presented according to organisational requirements and contains all relevant information |
| | | 3.5 Store schematic drawings according to organisational filing system |
| | | 3.6 Apply workplace occupational health and safety (OHS) and environmental procedures |
| | | |
| 4 | Produce pneumatic system schematic drawing | 4.1 Apply operating principles and specifications of pneumatic system and components to drawing work |
| | | 4.2 Complete drawing according to industry standard for pneumatic fluid power systems, including use of accurate symbols and notations |
| | | 4.3 Complete circuit diagram according to industry standard for pneumatic fluid power systems, including use of accurate symbols and notations |
| | | 4.4 Ensure drawing is presented according to organisational requirements and contains all relevant information |
| | | 4.5 Store schematic drawings according to organisational filing system |
| | | 4.6 Apply workplace OHS and environmental procedures |
| | | |
| 5 | Consult appropriately with other | 5.1 Verify the parameters of the brief and clarify specifications with appropriate personnel |
| | | 5.2 Identify and consult with support services, as required |

disciplines 5.3 Present and explain drawings and diagrams at appropriate stages of the project

Required Skills and Knowledge

Required skills

Required skills include:

- literacy skills sufficient to read and interpret instructions, relevant codes of practice and specifications for drawing work
- numeracy skills sufficient to interpret technical information and conduct mathematical problem solving as required in the scope of this unit
- numeracy skills, including four basic functions, fractions, and simple algebra and formulae sufficient to calculate flow, volume, area, pressure and other necessary parameters relevant to a fluid power system
- using and maintaining drawing equipment
- applying relevant codes, standards and symbols used for hydraulic and pneumatic systems
- drafting skills, including:
 - applying spatial principles to achieve scale and proportion
 - using appropriate lines and symbols
 - dimensioning and tolerancing
 - production of title block, material lists and other appropriate symbols

Required knowledge

Required knowledge includes:

- general knowledge of different approaches to drawing schematics
- awareness of copyright and intellectual property issues and legislation in relation to drawing
- environmental and OHS issues associated with the tools and materials used for drawing
- quality assurance procedures
- order of drawing process
- company checking procedures for drawings
- operating principles of pneumatic systems and components
- operating principles of hydraulic systems and components

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to interpret and apply drawing specifications and industry standards in the production of drawings and schematics for the pneumatic and hydraulic fluid power systems.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Specifically the candidate must be able to:</p> <ul style="list-style-type: none"> • work within typical site/teamwork structures and methods • apply worksite communication procedures • comply with organisational policies and procedures, including quality requirements • participate in work meetings • comply with quality requirements • use industry terminology • apply appropriate safety procedures • produce schematic drawings of hydraulic and pneumatic power systems according to industry standard and client requirements.
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning</p>

	<p>and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with drafting or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

MEM09214A Perform advanced engineering detail drafting

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers producing assembly, sectioned drawings and specialised dimensioning and auxiliary views to Australian Standard (AS) 1100.101–1992 Technical drawing – General principles, or equivalent. It includes determining and applying tolerances and dimensions, as required, to complete engineering detail drawing.

Application of the Unit

Skills covered by this unit are applied individually or in a team environment where comprehensive responsibility for the production of the drawing is exercised, and critical dimensions and associated tolerances are determined, where required.

This may include tolerancing and dimensioning for location, form, orientation, profile and runout and includes geometric tolerancing and use of modifiers. Drawings and all tolerances and dimensions are to AS 1100.101–1992 Technical drawing – General principles.

Drawings will usually be carried out with the use of computer-aided design (CAD) systems but may also be done manually. If CAD systems are to be used, the unit MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements, should also be selected.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM09002B Interpret technical drawing

MEM09204A Prepare basic engineering detail drawings

MEM30012A Apply mathematical techniques in a manufacturing, engineering or related environment

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Prepare for drawing work	1.1	Check purpose, scope and presentation requirements for drawing task
		1.2	Determine the information requirements for the finished part or item and its interaction with the next level of assembly or process
		1.3	Undertake requests for further information (RFI) to designer where information cannot be obtained or calculated
		1.4	Identify relevant standards and terminology, symbols and notation required to comply with standard and design
		1.5	Prepare equipment and set up software for drawing work
2	Identify and apply dimensions and tolerances for drawing	2.1	Determine methods of general dimensioning and tolerancing, classes of fit and forms of geometric shapes from engineer, sketches or specifications
		2.2	Select dimensioning and tolerancing scheme and symbols consistent with standards and design requirements
		2.3	Identify and confirm datum points
		2.4	Apply the principles of general dimensioning to engineering drawing

- 2.5 Apply the principles of general tolerancing engineering drawing
 - 2.6 Check that each dimension and tolerance symbol can be clearly interpreted for application
 - 2.7 If required, re-dimension toleranced drawing with new datum positions
 - 2.8 Extract information from dimensioned drawing
 - 3 Prepare assembly, layout and detail drawings
 - 3.1 Produce sectioned third angle orthogonal assembly drawings
 - 3.2 Project a primary auxiliary view
 - 3.3 Produce finished assembly drawings complete with material/part/cutting lists, cross-referencing and any required dimensions (overall and centre-to-centre)
 - 3.4 Produce all drawings to AS 1100.101–1992 Technical drawing – General principles, or equivalent and enterprise presentation standards
 - 3.5 Check that all required tolerances and dimensions are on the drawing
 - 3.6 Apply workplace occupational health and safety (OHS) and environmental procedures
- 4 Select material, components and/or assemblies
 - 4.1 Interpret specifications to determine material requirements
 - 4.2 Select components, material and/or assemblies from data sheets or manufacturer catalogues to meet specifications
 - 4.3 Produce bill of materials
- 5 Complete drawing work
 - 5.1 Verify drawing compliance with specifications
 - 5.2 Check drawings to ensure that assembly/fabrication is possible
 - 5.3 Document and save drawings according to enterprise filing system

Required Skills and Knowledge

Required skills

Required skills include:

- obtaining all relevant work instructions and requirements
- producing all drawings in accordance with AS 1100.101–1992 Technical drawing – General principles, or equivalent
- obtaining all relevant data sheets and catalogues
- calculating required limits, fits, datum references and geometric tolerances where they are not supplied from designer or reference material
- checking drawings for conformance to specification
- checking drawings to ensure that assembly/fabrication is possible
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task-related information
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit
- reading and selecting correct toleranced dimensions to meet the required class of limit or fit as selected by the engineer or other designer from the specifications
- applying symbols for:
 - dimensions
 - dimension origin
 - reference values
- applying tolerance symbols for:
 - datum identification
 - form
 - location
 - profile
 - runout
 - modifiers
- inserting or calculating geometric tolerances with regard to the roundness, straightness, flatness, concentricity, and so on, of an engineering component
- applying schedules and legends to the drawing
- converting between unilateral, bilateral and limit of size or direct tolerances
- applying tolerances to meet the individual fit classifications between a shaft and hole (clearance, interference and transition)
- determining part quantities and material lengths for inclusion in the parts/material/cutting list

Required knowledge

Required knowledge includes:

- specifications and/or requirements of the component, assembly or layout to be drawn
- functional operation of the component/assembly to be drawn
- surfaces which are to be in contact or separated
- appropriate type of fit for contacting surfaces
- reasons for selecting the chosen type of fit
- calculation methods for determining limits, fits, datum references and geometric tolerances
- effect of surface finish on the performance/operation of surfaces
- all appropriate lineal, diametric and geometric tolerances
- procedures for determining tolerances
- requirements of AS 1100.101–1992 Technical drawing – General principles, or equivalent for drawings to be produced
- specifications of the components, materials and/or assemblies
- appropriate components and materials from supplier/manufacturer catalogues
- reasons for selecting the chosen components and/or materials
- procedures for checking and approving drawings
- reasons for checking the drawings to ensure that manufacturing/assembly is possible, efficient and cost-effective
- drawing specifications
- methods of manufacture/assembly/fabrication from drawings
- unnecessary or inappropriate tolerances
- hazards and control measures associated with performing advanced engineering detail drafting, including housekeeping
- safe work practices and procedures
- engineering features, terminology and abbreviations
- hatching techniques such as large sections, small sections, thin sections and designation of materials
- sectioning systems, such as revolved section, removed section, local or part section, offset section, aligned section and interposed section
- types of bearings
- sectioning conventions, such as screw threads, shafts and rods, webs and thin sections
- awareness of copyright and intellectual property issues and legislation in relation to drawing
- role of datum points in dimensioning and tolerancing a detail engineering drawing
- RFI process for project or enterprise
- symbols used for dimensioning
- symbols used for tolerancing

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to perform advanced engineering detail drafting techniques to produce assembly, sectioned drawings and specialised dimensioning and auxiliary views to AS 1100.101–1992 Technical drawing – General principles, or equivalent.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Specifically the candidate must be able to:</p> <ul style="list-style-type: none"> • work within typical site/teamwork structures and methods • apply worksite communication procedures • comply with organisational policies and procedures, including quality requirements • participate in work meetings • comply with quality requirements • use industry terminology • apply appropriate safety procedures • perform required calculations to determine tolerances and fits required to meet design requirements • produce drawings to AS 1100.101–1992 Technical drawing – General principles, with all components identified.
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p>

	<p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing advanced engineering detail drafting or other units requiring the exercise of the skills and knowledge covered by this unit.</p>

MEM09215A Supervise detail drafting projects

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers the skills and knowledge required to supervise work of other detail draftspersons to confirm drafting projects are accurate and comply with Australian Standards and project briefs from clients and designers.

Application of the Unit

This unit is suitable for those working within a drafting work environment and can be applied across all areas of drafting. It covers skills required by those responsible for confirming that detail drafting project outcomes are achieved. This can include identifying the computer-aided design (CAD) platform for a project from available options if this is not specified in the brief, and assisting with aspects of other draftspersons' work, including those related to complying with the detail drafting brief in relation to budget, timeline and quality.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM09002B	Interpret technical drawing
MEM09204A	Produce basic engineering detail drawings
MEM09214A	Perform advanced engineering detail drafting
MEM30012A	Apply mathematical techniques in a manufacturing, engineering or related environment
MEM30031A	Operate computer-aided design (CAD) system to produce basic drawing elements

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---|-----|---|
| 1 | Confirm client or designer detail drafting briefs | 1.1 | Interpret and verify objectives, scope, parameters and drawing requirements |
| | | 1.2 | Identify and address further information needs |
| | | 1.3 | Identify any regulatory and commercial requirements |
| | | 1.4 | Identify whether project brief requires additional expertise, or resource requirements |
| | | 1.5 | Identify any additional skill or training needs to deliver detail drafting outcomes |
| | | 1.6 | Identify file and software requirements, including requirements to transfer to other file formats, and any required customisation |
| 2 | Lead detail drafting project | 2.1 | Confirm work plan, including timelines, roles and responsibilities |
| | | 2.2 | Identify CAD software platform to be used and conduct customisation, as required |
| | | 2.3 | Select organisational files, library, templates and symbols as required for work |
| | | 2.4 | Check information accuracy and generate requests for further information (RFIs), as required |
| | | 2.5 | Confirm other detail draft persons understand work |

- requirements clearly
- 2.6 Clarify that documentation requirements for detail drafting work are understood by detail draftspersons
 - 2.7 Liaise with engineers, design draftspersons and/or clients, as required, to provide progress updates, confirm detail design requirements and other details
- 3 Monitor detail drafting outcomes
- 3.1 Monitor progress of drafting work against timelines and brief
 - 3.2 Provide support to detail drafting personnel, as required
 - 3.3 Check that design variations are documented
 - 3.4 Review consistency of 3-D models and detail drawings where multiple models or drawings are required
 - 3.5 Check final models and drawings against Australian Standards and specifications
 - 3.6 Monitor compliance with workplace occupational health and safety (OHS) and environmental procedures
 - 3.7 Check that required sign-off for drawings is obtained
 - 3.8 Check that project documents are stored and filed according to organisational procedures
 - 3.9 Provide detail draftspersons with feedback on project outcomes
- 4 Monitor presentation of drawings
- 4.1 Check that drawings are presented according to industry standard and that outcomes comply with the project brief
 - 4.2 Check that all required documentation is completed and presented to engineers, designers and/or clients as required

Required Skills and Knowledge

Required skills

Required skills include:

- literacy skills sufficient to read and interpret instructions, relevant codes of practice and specifications for drawing work and to compile project plans and documentation
- numeracy skills sufficient to interpret technical information and conduct mathematical problem solving as required in the scope of this unit
- interpersonal skills necessary to carry out face-to-face and telephone discussions
- using and maintaining drawing equipment and software programs
- teamwork and communication skills
- interpreting and applying AS 1100.101–1992 Technical drawing – General principles, and other relevant standards
- applying RFI procedures
- customising the relevant CAD program variables to suit the applicable drafting standards/procedures
- customising menus to suit the applicable drafting standards/procedures
- customising the system defaults to suit the applicable drafting standards/procedures
- developing macros
- storing drawing files according to workplace procedures
- evaluating detail drafting work progress and quality and identifying areas for improvement

Required knowledge

Required knowledge includes:

- general knowledge of different approaches to detail drawing
- awareness of copyright and intellectual property issues and legislation in relation to drawing
- environmental and OHS issues associated with detail drawings
- quality assurance procedures
- company standards and procedures for CAD and detail drafting work
- information needs associated with engineering detail drawings
- OHS and environmental standards and procedures
- sources and range of reference material
- requirements of AS 1100.101–1992 Technical drawing – General principles, or equivalent for drawings to be produced
- specifications of the components, materials and/or assemblies
- procedures for checking and approving detail drawings
- procedures for customising identified system variables
- reasons for customising the system variables
- range of file types and their features and uses
- CAD file types, their uses and transfer requirements

MEM09216A Interpret and produce curved 3-D shapes and patterns

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers producing and interpreting lines and plan drawings using manual or computer-aided design (CAD) or drafting techniques.

Application of the Unit

This unit applies to drawing and lofting principles relevant to procedures used to produce lines, plan drawings and loftings. Common applications of this unit are in marine vessel construction.

In a marine setting, tasks may be related to a variety of hull designs; section development, such as curved and raking transom; conical development and camber development methods. General arrangement plans may also be addressed to provide a greater drawing diversity.

All drawings/data should comply with industry requirements.

Straightforward take-offs from lofted drawings is covered by MEM12007D Mark off/out structural fabrications and shapes. Also, where transfer of lines to lofting floor or other surface is carried out, MEM12007D Mark off/out structural fabrications and shapes, should be selected in addition to this unit.

If a CAD system is used, the unit MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements, should also be selected.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Determine drawing/lofting requirements	1.1	Check purpose, scope and information requirements for task
		1.2	Interpret available information relevant to project and work requirements, and identify and address further information needs
		1.3	Identify and prepare equipment required to complete work
		1.4	Identify and apply relevant codes, standards and symbols relevant to work
		1.5	Consult appropriate personnel to ensure the work is coordinated effectively with others involved in the project
		1.6	Obtain and apply workplace occupational health and safety (OHS) and environmental procedures for work
2	Apply drawing/lofting procedures	2.1	Apply workplace procedures to retrieve and apply required information
		2.2	Set up drawing equipment and accessories to suit job requirements
		2.3	Identify and apply drafting/lofting procedures to suit specified drawing requirements
		2.4	Record alterations required to offset measurements, as applicable
		2.5	Produce drawings/loftings that are consistent with work and industry requirements

- 3 Submit lines and plan drawings
 - 3.1 Ensure work meets specifications and submit drawings according to workplace procedures
 - 3.2 Where applicable, supply altered offset measurements and relevant information related to drawing

Required Skills and Knowledge

Required skills

Required skills include:

- reading, interpreting and following information on written job instructions, specifications, client briefings, standard operating procedures, charts, lists, drawings and other applicable reference documents
- analysing and organising information, and planning and sequencing operations
- checking and clarifying task-related information
- checking for conformance to specifications
- measuring and performing computations, including geometric and numerical calculations/formulae within the scope of this unit
- drawing and sketching skills to create 3-D drawings
- applying spatial principles to achieve scale and proportion
- using and maintaining drawing equipment
- applying symbols, schedules and legends to the drawing
- presenting drawing according to industry standard, complete with all required information
- handling and storing drawings according to workplace practice

Required knowledge

Required knowledge includes:

- hazards and control measures associated with interpreting and producing curved 3-D shapes, including housekeeping
- safe work practices and procedures
- vessel design characteristics, including performance, stability and construction methods
- spatial concepts
- procedures used to produce lines, plan drawings and loftings
- drawing principles and conventions
- section development, such as curved and raking transom, conical development and camber development methods
- presentation requirements for completed work

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to interpret and produce curved 3-D shapes.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Specifically the candidate must be able to:

- work within typical site/teamwork structures and methods
- apply worksite communication procedures
- comply with organisational policies and procedures, including quality requirements
- participate in and supervise work meetings
- monitor and supervise progress of detail drafting work and provide support to team members as required
- comply with quality requirements
- use industry terminology
- apply appropriate safety procedures
- interpret and produce curved 3-D shapes and patterns.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with interpreting and producing

curved 3-D shapes or other units requiring the exercise of the skills and knowledge covered by this unit.

Method of assessment

Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers the skills and knowledge required to prepare installation plans and drawings for pipe and duct fabrication. It entails identifying and documenting methods most suitable for joining, cutting and supporting pipe and duct used in air conditioning systems.

Application of the Unit

This unit would be applied by draftspersons operating within the air conditioning industry. Application of this unit includes identifying suitable methods of joining and supporting duct and pipes for copper, mild steel, stainless steel and plastic; identifying the correct methods for joining and cutting in plans; and correctly aligning the methods with material types. Work is conducted to meet predetermined project specifications and requires access to and interpretation of organisational and industry catalogues and product specifications. Drawings/models will usually be carried out with the use of computer-aided design (CAD) systems but may also be done manually. Drawings are produced to Australian Standard (AS) 1100.101–1992 Technical drawing – General principles, from predetermined critical dimensions and specifications. If CAD systems are to be used, the unit MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements, should also be selected.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM09002B Interpret technical drawing

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Access and interpret specifications	1.1	Interpret project specifications and requirements for pipework, including layout, sizing and type of pipe and duct required
		1.2	Determine implications and requirements for pipe fabrication and support
		1.3	Access and interpret organisational and industry standards, information and catalogues to obtain required product specifications
2	Document pipe fabrication	2.1	Select methods of joining and cutting pipe that are appropriate for the materials being used
		2.2	Document pipe fabrication requirements on plans
		2.3	Include instructions for electrolysis of dissimilar materials on plans where required
3	Document support for pipework	3.1	Select methods for supporting pipework that are appropriate for the materials being used
		3.2	Document pipe support requirements on plans
		3.3	Include instructions for electrolysis of dissimilar materials on plans where required
4	Document duct fabrication	4.1	Select methods of joining and cutting duct that are appropriate for the materials being used
		4.2	Document duct fabrication requirements on plans

- 4.3 Include instructions for electrolysis of dissimilar materials on plans where required
- 5 Document duct support
 - 5.1 Select methods for supporting duct work that are appropriate to the materials being used
 - 5.2 Document duct support requirements on plans
 - 5.3 Include instructions for electrolysis of dissimilar materials on plans where required
- 6 Complete and store drawings
 - 6.1 Complete drawings and associated technical information in accordance with project requirements and company procedures
 - 6.2 Process drawings and associated documentation for approval in accordance with organisational requirements
 - 6.3 Store drawings and associated documentation in accordance with organisational procedures

Required Skills and Knowledge

Required skills

Required skills include:

- literacy skills sufficient to read and interpret instructions, relevant codes of practice and specifications for drawing work
- using computer technologies and navigating software
- numeracy skills sufficient to interpret technical information and conduct mathematical problem solving as required in the scope of this unit
- using and maintaining drawing equipment
- applying spatial principles to achieve scale and proportion
- interpersonal skills to consult with other disciplines
- selecting methods of joining, cutting and supporting pipe appropriate to work requirements
- selecting methods of joining, cutting and supporting duct appropriate to work requirements
- completing sketches and drawings with required information for fabrication
- presenting drawings and documentation according to industry standard

Required knowledge

Required knowledge includes:

- relevant codes of practice
- industry standards
- occupational health and safety (OHS) requirements
- duct construction
- types of duct:
 - supply air (S/A)
 - return air (R/A)
 - toilet exhaust
 - kitchen exhaust
 - smoke spill
 - fire rated
 - textile duct
 - sub-ducts
 - filter plenums
- types of duct insulation (materials and facings):
 - foil face
 - perf face
 - black matt
 - melinex lining
 - galvabond

- polyester
- fibreglass
- jointing
- flanges
- seams
- pipe construction:
 - materials
 - copper
 - steel
 - Acrylonitrile – Butadiene – Styrene (ABS)
 - polyvinyl chloride (PVC)
 - stainless steel
- pipework insulation:
 - fibreglass
 - polystyrene
 - facings
 - nitrile rubber
- methods for supporting:
 - clamping
 - hanging
 - fixings
- sketching pipe and duct fabrication joining methods for pipe and duct work (steel, copper, stainless steel, aluminium and plastic)
- brackets and supports

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to interpret specifications to select appropriate methods of pipe and duct fabrication for a range of materials.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Specifically the candidate must be able to:</p> <ul style="list-style-type: none"> • work within typical site/teamwork structures and methods • apply worksite communication procedures • comply with organisational policies and procedures, including quality requirements • participate in work meetings • comply with quality requirements • use industry terminology • apply appropriate safety procedures • determine and document appropriate pipe and duct work fabrication and support requirements to meet project specifications and industry standards.
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required. Where</p>

	<p>applicable, physical resources should include equipment modified for people with disabilities.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with drafting or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement

Methods of joining	<p>Methods of joining may include:</p> <ul style="list-style-type: none"> • spigots • flanges • mild steel angles • weld • braze • solder • seal • bolt
Materials	<p>Materials must include:</p> <ul style="list-style-type: none"> • copper • mild steel • stainless steel • plastic
Methods for supporting	<p>Methods for supporting may include:</p> <ul style="list-style-type: none"> • clamping • hanging • steel profile types

MEM09218A Participate in drafting projects for building services

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers the skills and knowledge required to participate in the coordination of services within buildings sites. This entails interpreting plans and specifications of other services, negotiating with other services and participating in project meetings. It also necessitates the sequencing of plans to meet the requirements of other services in a multi-service site.

Application of the Unit

This unit would be applied by draftspersons providing detailed engineering drawings that must be integrated with other building services. It requires interpretation of drawings and specifications from a variety of services and application of knowledge of building construction components and types to drawings development.

If work requires entering construction worksite, then the unit CPCCOHS1001A Work safely in the construction industry, should also be selected.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM09002B Interpret technical drawing

MEM09204A Produce basic engineering detail drawings

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Examine site information	1.1	Identify building features and types of building services from drawings and project information
		1.2	Identify functions of building services, requirements for installation of components and implications for drawing work
		1.3	Extract all required information from services and project documentation
2	Integrate information from other services	2.1	Prepare drawings that incorporate protocols for a multi-service site
		2.2	Facilitate sequencing and coordination with other services
		2.3	Integrate the functions of other building services into drafting work practices
		2.4	Ensure installation plans are appropriate for building types and components
3	Participate in site and coordination meetings	3.1	Identify and apply meeting procedures and objectives
		3.2	Present points of view and comments, including agreement and dissent, in a logical, persuasive and orderly manner
		3.3	Obtain and consider points of view of other members
		3.4	Submit drawings to project supervisor
		3.5	Integrate feedback into drawings and prepare final draft

- 4 Complete drawing
- 4.1 Check final drawing and documentation to ensure all required specifications, symbols, dimensions and components are included according to standards and the design specification
- 4.2 Present and store drawing and documentation according to organisational procedures

Required Skills and Knowledge

Required skills

Required skills include:

- drafting skills and interpreting drawings from full range of building services
- interpersonal skills to work with others and negotiate final plans
- applying various codes of practice, specifications and standards
- producing plans according to industry standard
- numeracy skills sufficient to interpret technical information and conduct mathematical problem solving as required in the scope of this unit
- literacy skills sufficient to read and interpret instructions, relevant codes of practice and specifications for drawing work
- applying knowledge of building construction components and types to drawings

Required knowledge

Required knowledge includes:

- general knowledge of different approaches to drawing
- awareness of copyright and intellectual property issues and legislation in relation to drawing
- types and functions of building services and building construction components and requirements for installation
- location of building services on drawings
- protocols for coordination of building services
- strategies for cooperative practices
- a range of building types (concrete, timber, block work, steel-framed, and so on)
- a range of construction types (slabs, walls, ceilings and roofs)
- a range of architectural/structural features

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to interpret and apply drawing specifications and industry standards in the production of drawings that integrate with other building services.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Specifically the candidate must be able to:</p> <ul style="list-style-type: none"> • work within typical site/teamwork structures and methods • apply worksite communication procedures • comply with organisational policies and procedures, including quality requirements • participate in work meetings • comply with quality requirements • use industry terminology • apply appropriate safety procedures • consult with other services in a multi-service worksite to interpret functions, protocols and negotiate processes and timelines • modify drafting plans and sequences to integrate information from other services • modify plans and sequences in response to delays • participate in site and coordination meetings • correlate processes, timelines with drawings and specifications.
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as</p>

	<p>part of a team.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with drafting or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement

MEM09219A Prepare drawings for fabricated sheet metal products

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers the skills and knowledge required to prepare detail drawings for fabrication of sheet metal products.

Application of the Unit

This unit would be applied by draftspersons operating within the manufacturing and engineering industry. Application of this unit includes documenting product features and fabrication methods. Output may be required in 2-D or 3-D models. Work is conducted to meet predetermined project specifications and requires access to and interpretation of organisational and industry catalogues and product specifications. Drawings/models will usually be carried out with the use of computer-aided design (CAD) systems but may also be done manually. Drawings are produced to Australian Standard (AS) 1100.101–1992 Technical drawing – General principles, from predetermined critical dimensions and specifications. If CAD systems are to be used, the unit MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements, should also be selected.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM09002B Interpret technical drawing

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Access and interpret specifications	1.1	Identify design process for fabricated sheet metal products
		1.2	Interpret specifications and requirements for product and determine implications and requirements for fabrication
		1.3	Access and interpret organisational and industry standards, information and catalogues to obtain required product specifications
2	Identify fabrication techniques	2.1	Identify features of sheet metal products and techniques used in fabrication
		2.2	Identify characteristics of metal materials used in fabricated products and implications for fabrication techniques
		2.3	Identify terminology, symbols and standards used in drawings for fabricated products and required inclusions for fabrication drawings
3	Prepare detail drawing	3.1	Perform calculations required to complete drawings to specifications
		3.2	Lay out the drawing in accordance with specifications and industry conventions
		3.3	Ensure drawing accurately reflects specifications, is presented according to organisational requirements and contains all relevant information, including full notation and dimensioning
		3.4	Apply workplace occupational health and safety (OHS)

and environmental procedures

- | | | | |
|---|-----------------------------|-----|--|
| 4 | Document and store drawings | 4.1 | Document drawings and associated technical information in accordance with project requirements and organisational procedures |
| | | 4.2 | Store drawings according to organisational procedures |

Required Skills and Knowledge

Required skills

Required skills include:

- literacy skills sufficient to read and interpret instructions, relevant codes of practice and specifications for drawing work
- using computer technologies and navigating software
- numeracy skills sufficient to interpret technical information and conduct mathematical problem solving as required in the scope of this unit
- using and maintaining drawing equipment
- applying spatial principles to achieve scale and proportion
- interpersonal skills to consult with other disciplines
- applying drawing techniques and conventions to inform fabrication
- applying symbols, schedules and legends to the drawing
- arranging the views in a logical manner and in accordance with AS 1100.101–1992 Technical drawing – General principles
- correctly using line thickness and construction to identify parts
- using engineering and manufacturer catalogues, tables, standards and specifications
- applying surface texture symbols to comply to engineer's requirements

Required knowledge

Required knowledge includes:

- relevant codes of practice
- industry standards, drawing symbols and conventions
- OHS requirements
- general knowledge of different approaches to drawing
- features and uses of materials and components used in sheet metal fabricated products
- characteristics of sheet metal and implications for drawing
- techniques used to fabricate sheet metal products

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to interpret specifications and apply in detail drawings for fabricated sheet metal products.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Specifically the candidate must be able to:</p> <ul style="list-style-type: none"> • work within typical site/teamwork structures and methods • apply worksite communication procedures • comply with organisational policies and procedures, including quality requirements • participate in work meetings • comply with quality requirements • use industry terminology • apply appropriate safety procedures • interpret and apply specifications for fabricated products, and produce detail drawings according to industry standards and conventions.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. MEM09220A Apply surface modelling techniques to 3-D drawings

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers preparing the 3-D computer-aided design (CAD) environment and application of surface modelling techniques to 3-D drawings.

Application of the Unit

This unit is suitable for those working within a drafting work environment and may be applied across a range of engineering disciplines. This unit applies to the application of surface modelling techniques using CAD modelling software for computer processing and presentation purposes.

This unit includes applications in CAD, computer graphics and part geometric design, finite element mesh generation, rapid prototyping, medical testing and visualisation of scientific research.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM09002B Interpret technical drawing

MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--|-----|---|
| 1 | Determine surface modelling requirements | 1.1 | Check purpose, scope and information requirements for surface modelling task |
| | | 1.2 | Interpret available information relevant to project and work requirements, and identify and address further information needs |
| | | 1.3 | Identify and prepare equipment required to complete work |
| | | 1.4 | Identify and apply relevant codes, standards and symbols relevant to work |
| | | 1.5 | Consult appropriate personnel to ensure the work is coordinated effectively with others involved in the project |
| | | 1.6 | Obtain and apply workplace occupational health and safety (OHS) and environmental procedures for work |
| 2 | Perform surface modelling | 2.1 | Prepare 3-D environment for drawing work |
| | | 2.2 | Identify surface types, analyse surface data and prepare drawing for surface modelling |
| | | 2.3 | Determine key features of surface modelling software package and select methodology appropriate for task |
| | | 2.4 | Set up and apply wire frame modelling techniques |
| | | 2.5 | Set up and apply surface modelling techniques |
| | | 2.6 | Edit and manipulate surfaces and apply rendering techniques |

- 2.7 Exploit surface modelling software to optimise productivity
- 3 Prepare views and annotations
 - 3.1 Display isometric and orthographic perspectives
 - 3.2 Extract properties from the surface model
 - 3.3 Annotate drawing and complete required documentation
- 4 Complete CAD operations
 - 4.1 Confirm drawing accurately reflects specifications, is presented according to work requirements and contains all relevant information
 - 4.2 Save and file drawing elements according to organisational procedures
 - 4.3 Prepare drawings for presentation
 - 4.4 Evaluate work and identify areas for improvement
 - 4.5 Close applications, perform CAD housekeeping and maintain organisational filing system

Required Skills and Knowledge

Required skills

Required skills include:

- obtaining relevant job instructions and specifications
- creating and manipulating surfaces in 3-D space
- saving drawing files in the appropriate format
- extracting the physical properties of shapes and surfaces created in 3-D space
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- checking and clarifying task-related information
- checking for conformance to specifications
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit
- applying rendering techniques to a 3-D model
- using various materials and surface finish options

Required knowledge

Required knowledge includes:

- purpose for which the model is to be used
- principle tools used in the creation and manipulation of model surfaces
- terminology associated with surface modelling
- features and uses of geometric, freeform and derived surfaces
- features and uses of wire frame and surface modelling techniques
- surface types
- features and uses of rendering techniques
- features and uses of materials and surface finishing options
- number of views required
- CAD software features
- procedures for creating ruled and revolved surfaces in 3-D space
- applications of ruled and revolved surfaces
- rendering types and preferences, render lighting techniques, views and scenes
- procedures for saving drawing files
- the various formats in which drawing files can be saved
- reasons for using different formats when saving drawing files
- procedures for extracting data with respect to the physical properties of shapes and surfaces created in 3-D space
- hazard and control measures associated with using CAD system, including housekeeping
- safe work practices and procedures
- terminology associated with surface modelling

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to apply surface modelling techniques to 3-D models using CAD systems.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Specifically the candidate must be able to:</p> <ul style="list-style-type: none"> • work within typical site/teamwork structures and methods • apply worksite communication procedures • comply with organisational policies and procedures, including quality requirements • participate in work meetings • comply with quality requirements • use industry terminology • apply appropriate safety procedures • select and use 3-D CAD software to apply surface modelling techniques that meet design specifications.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with creating 3-D models using CAD systems or other units requiring the exercise of the skills and knowledge covered by this unit.</p>

Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
-----------------------------	--

Range Statement

Wire frame modelling techniques	Wire frame modelling techniques may include: <ul style="list-style-type: none"> • setting and using work planes • shifting and working with coordinate system • moving through 3-D space • changing 'Z' depth • construction techniques • wire frame editing
Surface modelling techniques	Surface modelling techniques may include: <ul style="list-style-type: none"> • definition and use of surface primitives • box, cylinder, cone, torus, wedge and editing surface primitives
Surface types	Surface types may include: <ul style="list-style-type: none"> • geometric, freeform and derived surfaces • draft, revolved, ruled, lofted, swept, coons, offset trimmed, fillet, blend, parametric and Non-Uniform Rational B-Spline (NURBS) surfaces • surface normals and reversing
Rendering techniques	Rendering techniques may include: <ul style="list-style-type: none"> • rendering types and preferences • render lighting techniques • views and scenes
Appropriate personnel	Appropriate personnel may include: <ul style="list-style-type: none"> • supervisor • leading hand • foreman • manager • site engineer • trainer • mentor • teacher • team member
OHS requirements	OHS requirements may include: <ul style="list-style-type: none"> • legislation • personal protective equipment • material safety management systems • hazardous substances and dangerous goods code

	<ul style="list-style-type: none"> • awards provisions • safe work practices
Environmental requirements	<p>Environmental requirements may refer to:</p> <ul style="list-style-type: none"> • liquid waste • solid waste • gas, fume, vapour, and smoke emissions, including fugitive emissions • excessive energy and water use • excessive noise
Resource requirements	<p>Resource requirements may include:</p> <ul style="list-style-type: none"> • computer software • stationary • software reference documentation • reference texts • consumables • computer • printing equipment

MEM09221A Create 3-D model assemblies using computer-aided design (CAD) system

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers preparing the 3-D computer-aided design/drafting (CAD) environment, creating and modifying 3-D model assemblies and producing output to inform manufacture or assembly.

Application of the Unit

This unit is suitable for those working within a drafting work environment and may be applied across a range of engineering disciplines. This unit applies to the production of 3-D assemblies using CAD modelling software. Operations at this level include, but are not limited to the use of library items; modelling techniques to represent engineering components and standard parts, such as bearings, seals, gears and fasteners; editing and production of 2-D manufacturing drawings with section views. Work also includes extraction of properties and application of basic rendering techniques.

This unit includes applications in CAD, computer graphics and animation, rapid prototyping, medical testing and visualisation of scientific research.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM09002B Interpret technical drawing

MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---|-----|---|
| 1 | Determine assembly modelling requirements | 1.1 | Check purpose, scope and information requirements for assembly modelling task |
| | | 1.2 | Interpret available information relevant to project and work requirements, and identify and address further information needs |
| | | 1.3 | Identify and prepare equipment required to complete work |
| | | 1.4 | Identify and apply relevant codes, standards and symbols relevant to work |
| | | 1.5 | Consult appropriate personnel to ensure the work is coordinated effectively with others involved in the project |
| | | 1.6 | Obtain and apply workplace occupational health and safety (OHS) and environmental procedures for work |
| 2 | Prepare 3-D environment | 2.1 | Set up a 3-D environment on the screen to allow multiple viewing |
| | | 2.2 | Create 3-D views on the screen by manipulating drawing planes and inserting 3-D geometric shapes |
| | | 2.3 | Establish coordinate system and orientation according to job requirements |
| | | 2.4 | Determine key features of assembly modelling software package and select methodology appropriate for assembly task |
| | | 2.5 | Create individual components within the assembly using adaptive technology |

- 2.6 Access library items, as required, to create assemblies

- 3 Produce output from 3-D assembly model
 - 3.1 Perform drawing for assembly modelling
 - 3.2 Exploit features of assembly modelling software to optimise productivity
 - 3.3 Extract physical properties to job requirement, including volume, mass and centre of gravity
 - 3.4 Edit solid models of components and assemblies
 - 3.5 Apply rendering techniques

- 4 Complete CAD operations
 - 4.1 Confirm model accurately reflects specifications, is presented according to work requirements and contains all relevant information
 - 4.2 Save and file drawing elements according to organisational procedures
 - 4.3 Produce 2-D manufacturing drawings from the assembly models incorporating section views with all necessary annotation
 - 4.4 Evaluate work and identify areas for improvement
 - 4.5 Close applications, perform CAD housekeeping and maintain organisational filing system

Required Skills and Knowledge

Required skills

Required skills include:

- obtaining relevant job instructions and specifications
- creating the appropriate entities in 3-D space
- manipulating the entities in 3-D space
- modifying, where appropriate, existing 3-D models
- saving drawing files in the appropriate format
- extracting the physical properties of shapes created in 3-D space from the drawing file to meet job requirements
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- checking and clarifying task-related information
- checking for conformance to specifications
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit
- creating intelligent models using parametric modelling
- using pre-drawn library files to produce assemblies
- extracting mass and area properties from solid model
- applying rendering techniques to a 3-D model
- using various materials and surface finish options.
- producing hard copies of 3-D solid models
- saving 3-D models in various file formats for retrieval into other CAD application software

Required knowledge

Required knowledge includes:

- purpose for which the 3-D assembly model is to be developed
- principle tools used in the creation and manipulation of assembly models
- appropriate coordinate system for the job
- reasons for selecting the chosen coordinate system
- orientation of the model with respect to the coordinate system
- number of views required to establish the model
- top down and bottom up modelling techniques
- procedures for creating entities and components in 3-D space
- the entities that can be created/manipulated in 3-D space
- procedures for manipulating entities in 3-D space
- rendering types and preferences, render lighting techniques, views and scenes
- procedures for modifying existing 3-D assembly models
- procedures for saving drawing files

- the various formats in which drawing files can be saved
- reasons for using different formats when saving drawing files
- procedures for extracting data with respect to the physical properties of shapes created in 3-D space
- the physical properties of shapes created in 3-D space that can be extracted from the drawing file
- hazard and control measures associated with using CAD system, including housekeeping
- safe work practices and procedures
- terminology associated with solid assembly modelling

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to create 3-D model assemblies using CAD systems.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Specifically the candidate must be able to:</p> <ul style="list-style-type: none"> • work within typical site/teamwork structures and methods • apply worksite communication procedures • comply with organisational policies and procedures, including quality requirements • participate in work meetings • comply with quality requirements • use industry terminology • apply appropriate safety procedures • select and use 3-D CAD software to create solid model assemblies that meet design specifications.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with creating 3-D models using computer aided design systems or other units requiring the exercise of the skills and knowledge covered by this unit.</p>

Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
-----------------------------	---

Range Statement

<p>Solid modelling assembly task</p>	<p>Solid modelling assembly task may include:</p> <ul style="list-style-type: none"> • economic impact of design upon manufacturing • principles of design • engineering components and standard parts • edit solid models and assemblies • 2-D manufacturing drawings and annotation • 3-D printing of components and assemblies • rendering and use of colour on 3-D models and assemblies • production of hard copies of drawings for solid models, assemblies and orthogonal drawings • saving files for later retrieval • consolidation (e.g. project work) • parametric modelling • composite models • section models • library files and 3-D primitives • other relevant software packages for the production of 3-D models • 3-D printing of components and assemblies
<p>Rendering techniques</p>	<p>Rendering techniques may include:</p> <ul style="list-style-type: none"> • rendering types and preferences • render lighting techniques • views and scenes
<p>Appropriate personnel</p>	<p>Appropriate personnel may include:</p> <ul style="list-style-type: none"> • supervisor • leading hand • foreman • manager • site engineer • trainer • mentor • teacher • team member
<p>OHS requirements</p>	<p>OHS requirements may include:</p> <ul style="list-style-type: none"> • legislation • personal protective equipment • material safety management systems

	<ul style="list-style-type: none"> • hazardous substances and dangerous goods code • awards provisions • safe work practices
Environmental requirements	<p>Environmental requirements may refer to:</p> <ul style="list-style-type: none"> • liquid waste • solid waste • gas, fume, vapour, and smoke emissions, including fugitive emissions • excessive energy and water use • excessive noise
Resource requirements	<p>Resource requirements may include:</p> <ul style="list-style-type: none"> • computer software • stationary • software reference documentation • reference texts • consumables • computer • printing equipment

Unit Sector(s)

Drawing, drafting and design

Custom Content Section

Not applicable.

MEM09222A Interpret and maintain or restore original drawings

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers the skills and knowledge required to identify and interpret original drawings that contain historical information and/or dated presentation protocols, maintain or restore documents and convert information to contemporary formats, including to computer-aided design (CAD) files.

Application of the Unit

This unit is suitable for those working within a drafting work environment. Drawings include blueprints and other hard copy originals that may be used to inform current assembly, detail or design information, or hold other historical value.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM30032A Produce basic engineering drawings

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---|-----|--|
| 1 | Analyse document components | 1.1 | Identify the purpose and scope of drawing and application for current work needs |
| | | 1.2 | Examine and interpret drawing protocols applied, symbols, version, origin and completeness of information provided, and identify and address further information needs |
| | | 1.3 | Examine condition of document and determine requirements for presentation, maintenance or restoration |
| | | 1.4 | Identify and prepare equipment required to complete work |
| 2 | Maintain or restore document | 2.1 | Apply treatment or preservation techniques, as required, to restore or maintain document |
| | | 2.2 | Ensure document details are updated and required storage and filing conditions are prepared |
| 3 | Transfer data to CAD format, where required | 3.1 | Determine and verify dimensions and notations |
| | | 3.2 | Select and prepare CAD software and work environment |
| | | 3.3 | Apply standard drawing conventions and techniques according to work requirements |
| | | 3.4 | Produce drawings using CAD that reflect detail provided in original drawing |
| 4 | Complete drawing task | 4.1 | Check and confirm dimensions, angles and proportions |
| | | 4.2 | Ensure drawing is presented according to organisational requirements and contains all relevant and accurate information |
| | | 4.3 | Issue and file drawing according to workplace procedure |
| | | 4.4 | Evaluate work and identify areas for improvement |
| | | 4.5 | Plot or print the final drawing to a standard scale |

Required Skills and Knowledge

Required skills

Required skills include:

- literacy skills sufficient to read and interpret instructions and specifications for drawings work
- obtaining all relevant job requirements, data/information and specifications necessary to produce the drawing in accordance with workplace procedures
- planning and sequencing operations
- checking and clarifying task-related information
- using computer technologies and navigating software
- numeracy skills sufficient to interpret technical information and conduct mathematical problem solving as required in the scope of this unit
- applying spatial principles to achieve scale and proportion
- applying manual drawing and sketching techniques including correct use of lines, angles and curves, symbols and drawing conventions
- using manual drafting equipment appropriate to the drawing and chosen restoration method, including:
 - t-square
 - drafting board
 - instruments
 - appropriate pens, inks, paper and pencils
- recording completed drawings in accordance with standard operating procedures
- treating, handling and storing the approved drawings in accordance with standard operating procedures

Required knowledge

Required knowledge includes:

- general knowledge of different approaches to drawing and historical methods used, including:
 - symbols and drawing presentation
 - measurement and tolerancing conventions
 - drawing conventions and construction techniques
 - use of drawing materials
- awareness of copyright and intellectual property issues and legislation in relation to drawing
- environmental and occupational health and safety (OHS) issues associated with the tools and materials used for drawing
- quality assurance procedures
- principles of plane geometry:
 - geometric shapes

- plane geometry
- geometric construction
- drawing construction:
 - four centre method
 - ordinate method
 - sectioning isometric shapes
 - dimensions and notations
 - line types
- requirements and purpose of the drawing to be produced
- sources of relevant data/information
- timeframe for completion of drawings
- persons who can confirm drawing requirements
- treatment, preservation and storage requirements for old blueprints and drawings

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to use interpret historical detail drawings and blueprints, restore or maintain, as required, and complete drawing to Australian Standard (AS) 1100.101–1992 Technical drawing – General principles, using CAD tools.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Specifically the candidate must be able to:</p> <ul style="list-style-type: none"> • work within typical site/teamwork structures and methods • apply worksite communication procedures • comply with organisational policies and procedures, including quality requirements • participate in work meetings • comply with quality requirements • use industry terminology • apply appropriate safety procedures • interpret work and specifications and use reference material to obtain required information for drawing work • produce a detailed engineering drawing to AS 1100.101–1992 Technical drawing – General principles, and according to work requirements • use CAD software.
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</p>

	<p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with drafting or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement

<p>Standard drawing conventions</p>	<p>Standard drawing conventions may include:</p> <ul style="list-style-type: none"> • use of correct sectioning technique • identification of cutting plane • accurate line types • appropriate view positions • use of correct symbols • use of correct dimensioning technique • provision of suitable number of views • use of correct scales • neat presentation
<p>Drawing techniques</p>	<p>Drawing techniques may include:</p> <ul style="list-style-type: none"> • orthogonal projection: <ul style="list-style-type: none"> • first angle projection • third angle projection • projection symbol • preferred system of projection in Australia • number of views • relationship of views • sheet format: <ul style="list-style-type: none"> • borders and title blocks • application of projection symbol • drawing sheets and sizes • lettering styles • Australian Standards • dimensioning: <ul style="list-style-type: none"> • unidirectional dimensioning • aligned dimensioning • projection and dimension lines • arrow heads • dimension placement • scale drawing: <ul style="list-style-type: none"> • recommended scales • reduction scales • enlargement scales • multiple scales • dimensioning techniques of scale drawings • sectioning: <ul style="list-style-type: none"> • types of sections

	<ul style="list-style-type: none">• required section views• placement of views• cutting planes• labelling of cutting planes and section views• general notes

Unit Descriptor

Unit descriptor	This unit covers inspecting and preparing the erection site and erecting structures.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to structures that are predominantly steel and/or other metals. Structures covered by this unit are exclusively/predominantly metal structures and are load-bearing structures of substantial size.</p> <p>Where workshop assembly techniques are required, see Unit MEM05011D (Assemble fabricated components). Specifications for the structure would be supplied via engineering drawings or the like and would include site location information.</p> <p>Where lifting or rigging skills are required, appropriate units should be accessed. Where design skills are required, refer to Unit MEM09011B (Apply basic engineering design concepts).</p> <p>Where welds are required to meet legislative or regulating requirements, then appropriate welding units should also be selected.</p> <p>Band: A</p> <p>Unit Weight: 4</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Inspect and prepare erection site	1.1.Site is checked for correct location, dimensions and levels. 1.2.Non-compliance with specifications is reported to appropriate authority. 1.3.Minor alterations, corrections or adjustments are undertaken with approval of appropriate authority. 1.4.All surfaces and materials/components are prepared for use. 1.5.Structure components are identified and checked against specifications.
2. Erect structures	2.1.All work is carried out safely and in accordance with defined procedures. 2.2.Structure components are prepared for correct sequential erection. 2.3.Components are erected and fixed according to specifications. 2.4.Structures are adjusted to specifications. 2.5.All reports and documentation are completed correctly to required specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- inspecting sites
- using measurement equipment within the scope of this unit
- undertaking numerical operations and calculations within the scope of this unit
- using tools and equipment associated with erecting structures
- checking and clarifying task-related information
- communicating and liaising with appropriate authorities
- planning job and site preparation
- preparing site
- handling materials

REQUIRED SKILLS AND KNOWLEDGE

- inspecting materials/structure
- interpreting drawings, plans and specifications
- making authorised alterations, corrections or adjustments to the site and/or structure
- completing reports and documentation

Required knowledge

Look for evidence that confirms knowledge of:

- site management requirements
- site preparation and levelling requirements
- range of technique/equipment which can be used to check the site levels
- procedures to be followed if the location, dimensions and/or levels of the site do not comply with specifications
- procedures for making alterations/corrections
- methods/techniques for a range of alterations/corrections
- legislative and regulatory guidelines
- materials applications, properties and characteristics
- materials specifications
- the procedures for checking the components of the structure
- correct erection sequence
- methods and selection of fixing/fastening the components of the structure
- methods and selection of lifting/moving the components of the structure
- methods and selection of locating/holding the components
- procedures for checking the structure for conformance
- procedures to be followed if the structure does not comply
- adjustments which can be made to bring the structure into specification
- approval process for final alterations
- required documentation
- reporting procedures
- hazards and control measures associated with erecting structures
- use and application of personal protective equipment
- safe work practices and procedures

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Site	Onsite or offsite locations not covered by Unit 5.11A (Assemble fabricated components)
Levels	Straightforward levelling and alignment using plumb bob/lines, levels etc.
Appropriate authority	Site supervisor, building inspector, contractor, etc.
Materials/components	Ferrous and non-ferrous materials of a: <ul style="list-style-type: none"> • variety of material sizes • variety of borne loads • variety of joining systems • variety of component profiles
Prepared	<ul style="list-style-type: none"> • Cleaning • Assembly sequencing • Surface finishing
Structures	Metal frameworks, portals, stairways, walkways, vessels, tanks, platforms, conveyors and moving lines etc., including associated railings
Reports and documentation	<ul style="list-style-type: none"> • Contract documents • Building inspection documentation • Compliance reports

MEM10002B Terminate and connect electrical wiring

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers terminating, disconnecting or reconnecting electrical wiring and circuits.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to the connection of wiring and includes termination and connection of all types of cords and cables, excluding specialist cables.</p> <p>All testing is undertaken on completed circuits where these are not connected to main supply, using appropriate methods such as continuity and resistance checks.</p> <p>Specifications are obtained from electrical/electronic circuit drawings and data sheets.</p> <p>Soldering/desoldering of electrical/electronic components may also require the selection of Unit MEM05001B (Perform manual soldering/desoldering - electrical/electronic components) or Unit MEM05002B (Perform high reliability soldering and desoldering) as applicable.</p> <p>This unit does not cover the competencies required for energising and testing of the circuit. If these skills are required, the competencies covered in Unit MEM10003B (Install and test electrical wiring and circuits up to 1000 volts a.c. and 1500 volts d.c.) must be satisfied.</p> <p>Termination and connection of specialist cables such as mineral insulated, steel wire, armoured cables etc., is covered in Unit MEM10011B (Terminate and connect specialist cables).</p> <p>Band: A</p> <p>Unit Weight: 3</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for electrical wiring termination and connection	1.1. All work is undertaken safely and to workplace procedures and State/Territory regulations and legislative requirements. 1.2. Materials are checked for correct specifications. 1.3. Preparation of work is undertaken or checked/inspected for correct location and specifications.
2. Connect electrical wiring	2.1. Terminations/connections are made to specifications, manufacturers' requirements and to safety and State/Territory regulations and legislative requirements. 2.2. All brackets, clamps, holders etc. are adjusted and fixed to specifications. 2.3. All cables, wires, conductors and connections etc. are marked/tagged and labelled to specification. 2.4. All completed wiring and connections are tested for compliance with specifications. 2.5. All reports and documentation are completed correctly to required specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- checking materials for conformance to specifications
- checking existing and new installation site for correct location and specification
- making terminations/connections to specification, manufacturer and regulatory requirements
- adjusting and fixing wiring supports
- marking, tagging and labelling cables, wires, conductors and connections to specification
- undertaking testing of wiring and connections for conformance to specification
- using language and literacy skills to complete short reports and required

REQUIRED SKILLS AND KNOWLEDGE

documentation

- reading and interpreting routine information on written job instructions, specifications and standard operating procedures May include drawings
- using measurements for checking connections and components

Required knowledge

Look for evidence that confirms knowledge of:

- safety hazards associated with the termination and connection of electrical wiring
- statutory and regulatory requirements associated with the termination and connection of electrical wiring
- wiring support and/or protection requirements and specifications
- relevant manufacturer requirements
- specifications and methods for terminating different materials
- wiring support techniques and alternatives
- marking, tagging and labelling requirements for cables, wires, conductors and connections
- tests for wiring and connections
- data to be recorded/reported and the frequency of recording/reporting
- requirements for approval to work
- use and application of personal protective equipment for terminating and connecting electrical wiring

MEM10003B Install and test electrical wiring and circuits up to 1000 volts a.c. and 1500 volts d.c.

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers installing and testing electrical wiring and circuits up to 1000 volts a.c. and 1500 volts d.c.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to installation of electrical wiring/systems and/or enclosures, including specialist cables, using the full range of installation materials and techniques to any wiring circuits which are directly or indirectly connected to a power supply system. The scope of work includes electrical installation work and electrical equipment work.</p> <p>Specifications/regulations and drawings can refer to legislative acts, SAA Wiring Rules Standards specifications, and electrical and architectural drawings.</p> <p>Where precision electrical/electronic measurement is required, see Unit MEM12004B (Perform precision electrical/electronic measurement).</p> <p>For specialist cables, Unit MEM10011B (Terminate and connect specialist cables) should be included.</p> <p>Band: A</p> <p>Unit Weight: 12</p>
--------------------------------	---

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units		
Path 1	MEM09002B	Interpret technical drawing
	MEM10002B	Terminate and connect electrical wiring
	MEM12002B	Perform electrical/electronic measurement
	MEM12023A	Perform engineering measurements
	MEM18001C	Use hand tools
	MEM18002B	Use power tools/hand held operations
	MEM18049C	Disconnect/reconnect fixed wired equipment (up to 1000 volts a.c. and 1500 volts d.c.)

Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan the installation	1.1.Special work, hazard and safety requirements are determined and incorporated in plan. 1.2.Work plan/strategy is devised and confirmed in accordance with legislative and regulatory requirements and standard operating procedures.
2. Prepare for electrical installation	2.1.All work is undertaken safely and to workplace procedures, State/Territory regulations and legislative requirements. 2.2.Materials are checked for correct specifications.
3. Install the wiring/enclosures and/or support systems	3.1.All cables/conductors/conduit/enclosures and support systems are installed to specifications using correct appropriate techniques, tools and equipment. 3.2.Cabling is marked or labelled for identification and to specification.
4. Commission and test the installed wiring system	4.1.All completed wiring/systems and enclosures are tested for compliance with specifications, regulations, and legislative requirements, utilising appropriate test procedures and equipment. 4.2.Where appropriate, the installation may be energised and tested for compliance with specifications. 4.3.Faults are rectified to specification. 4.4.Documentation is completed correctly to required specifications.
5. Perform emergency first aid	5.1.Situation is assessed to identify points of danger to the injured person and potential rescuer, including the assessment of electrical hazards. 5.2.Electrical hazards are isolated in accordance with established procedures for electrical rescue. 5.3.Rescue/recovery of injured person, or assistance to injured person, is undertaken in accordance with recognised standards/procedures. Contact is made with appropriate medical and rescue authorities. 5.4.Details of first aid given are recorded.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting circuits, drawings, specifications and instructions
- preparing work plans in accordance with legislative and regulatory requirements and standard operating procedures and hazard and safety requirements
- following relevant legislative and regulatory requirements and standard operating procedures to work practices
- using measurement for installing and testing electrical wiring and circuits
- checking materials for conformance to specification
- selecting cables
- installing cables/wires/conduit/enclosures and support systems
- marking and labelling cabling for identification
- testing wiring/systems and enclosures for compliance with specifications, relevant regulatory and legislative requirements
- energising and testing installation
- identifying and rectifying faults
- completing reports and documentation using short descriptions, comments and relevant terminology
- considering potential points of danger when planning a rescue or provision of assistance
- isolating electrical hazards in accordance with safety procedures
- applying procedures for the movement/treatment of injured, including:
 - clearing of airways
 - CPR (cardio-pulmonary resuscitation)
 - care of spinal injuries
 - treatment of cuts/lesions etc.
 - treatment of burns/scalds
 - treatment of shock
 - rescue from a live situation
- reading/interpreting specifications, test procedures, labelling, reference documentation and emergency first aid documents

Required knowledge

Look for evidence that confirms knowledge of:

- hazard control measures and safety requirements applicable to the work undertaken
- work permit requirements
- safe work practices and procedures

REQUIRED SKILLS AND KNOWLEDGE

- cable selection/support fit for purpose
- the legislative and regulatory requirements appropriate to the work to be done
- work planning procedures
- procedures to be followed if materials and or supports do not conform to specification
- techniques, tools and equipment required to install cables, wires, conduit, enclosures and support systems
- the marking and/or labelling requirements for cabling
- the reasons for marking and/or labelling cables
- the procedures and equipment to test before and after energising wiring and systems
- reasons for carrying out all tests
- common wiring system faults
- method(s) for rectifying faults
- the documentation to be completed
- dangers present in electrical rescue
- appropriate standards and procedures for first aid recording procedures
- recognised procedures for the movement and treatment of injured persons
- local medical and rescue services
- the reasons for recording first aid
- requirements for approval to work

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit will be able to install and test electrical wiring and circuits up to 1000 volts a.c. and 1500 volts d.c. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with installing and testing electrical wiring and circuits up to 1000 volts a.c. and 1500 volts d.c. or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes,</p>

EVIDENCE GUIDE	
	standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Installation	Applies to electrical installation work and electrical equipment work. Involves utilisation of a range of methods, tools and equipment appropriate to the work
Cables/conductors	Single insulated, thermoplastic insulated and sheathed, flat and circular, MIMS, steel wire armoured, flexible cords and cables, copper and aluminium, catenary systems, shielded
Conduit/enclosures	Metallic and non-metallic
Support systems	Trunking, ducting, cable tray/ladder, catenaries
Documentation	Forms, short reports requiring comments etc., according to regulatory requirements

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Install program	1.1. Software is downloaded as required. 1.2. Appropriate checks are undertaken during and after downloading to ensure data transfer is accurate and complete.
2. Verify machine/system/ process operation	2.1. Appropriate checks are undertaken after downloading to ensure machine operation or process output is accurate to specification. 2.2. Specific problems in machine operation or process output being controlled by the programmable controller are identified in accordance with standard operating procedures. 2.3. Specific changes required to operating parameters within the software program are derived in accordance with standard operating procedures. 2.4. Adjustments/changes are made to operating parameters in accordance with standard operating procedures. 2.5. Final check of machine operation and/or process output are taken to ensure that they are in accordance with specifications.
3. Report on changes	3.1. Changes and adjustments are reported in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • selecting appropriate data transfer device(s)/procedure(s) and transferring the software accurately • verifying machine operation or process output • obtaining specific changes required to operating parameters within the software program • adjusting/changing operational parameters

REQUIRED SKILLS AND KNOWLEDGE

- checking machine operation or process output
- reporting
- identifying problems
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- checking for conformance to specifications
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- appropriate and correct program loading techniques and reasons for selecting the chosen program loading technique
- checks to be undertaken during and after downloading
- reasons for checking that the data transfer is accurate and complete
- action to be taken if data transfer is inaccurate and/or incomplete
- specifications relating to the transferred data
- correct operation of the machine or process
- specific machine operations or process outputs being controlled by the programmable controller
- specific problems in accordance with standard operating procedures
- operating parameters within the software program
- standard operating procedures
- specification to be met and functions to be controlled and machine operation or process output
- reporting process
- procedures to change parameters and their implications
- hazard and control measures associated with entering and changing programmable controller operational parameters, including housekeeping
- safe work practices and procedures

Evidence Guide

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Verify

Verification of machine/process/system operation includes interpreting the program, excluding multi-loop and control sequencing programs.

Standard operating procedures

Industry standards, production schedules, material safety data sheets, work notes and plans, product labels, manufacturers' specifications, operator manuals, enterprise policies and procedures, supervisors' oral and written instructions, current State/Territory occupational health and safety legislation, standards and codes of practice.

Operating parameters

Includes timer, counter and set point settings. All specifications and procedures gained from a range of circuit drawings, engineering data sheets, step print out, manufacturers' procedure and data books

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Commission programmable controller program	1.1. Program format and operational intent are determined and understood. 1.2. Program instructions are checked for compliance with specifications using appropriate techniques. 1.3. Software timers and counters are set to specifications where required. 1.4. Program is stepped through manually and outputs are checked and measured for compliance with specifications. 1.5. Where applicable, program is edited to meet specifications. 1.6. External inputs are checked for compliance with specifications utilising correct and appropriate techniques. 1.7. Where applicable, program is run and total operation is checked for compliance with specifications. 1.8. Where applicable, final adjustments are undertaken to meet operational specifications using standard operational procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining all relevant circuit drawings, ladder diagrams, engineering data sheets, manufacturers' procedures and data sheets
- complying with specifications and adjusting programs
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- checking external inputs for conformance to specification using appropriate

REQUIRED SKILLS AND KNOWLEDGE

techniques/equipment

- checking process operation, and editing and adjusting as required to ensure conformance to specification
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- format of the program
- program specifications
- procedures and techniques for checking that program instructions comply with specifications
- procedures for dealing with any non-conformances with specifications
- procedures for setting software timers and counters
- function of software timers and counters
- procedures for manually stepping through the program
- checks that can be made of program outputs
- techniques to be used in checking program outputs
- measurements to be taken during the checking of program outputs
- instruments to be used to take measurements
- procedures for editing programs
- checks to be made to ensure that the external inputs comply with specifications
- techniques and equipment to be used in checking external inputs
- procedures for running the program
- specifications and operational processes controlled by the programmable logic controller
- techniques and equipment to be used to check the operational process
- adjustments that can be made to the program
- effects of adjustments on the operational processes controlled by the program
- procedures to be followed when adjusting programs
- hazards and control measures associated with commissioning programmable controller programs, including housekeeping
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Inspect and prepare installation site	1.1.Site is checked for correct location, dimension and levels etc. utilising appropriate measuring equipment. 1.2.Non-compliance with specification is reported to appropriate authority. 1.3.Alteration/correction is undertaken with approval of appropriate authority. 1.4.All surfaces, materials and components are prepared for use.
2. Install machine/plant	2.1.All work is carried out safely and in accordance with site procedures and to Australian standards. 2.2.Machine components are prepared for correct sequential installation. 2.3.Machine/plant is installed in accordance with manufacturers' and site specifications. 2.4.Routine modifications/alterations are undertaken to standard operating procedures where required. 2.5.Machine/plant is levelled, aligned, coupled and connected (excluding electrical connections) in accordance with specifications. 2.6.Site is cleaned and cleared of all debris and left in safe state. 2.7.All reports and documentation are completed correctly to required specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting and following information on written job instructions, manufacturer specifications, standard operating procedures, charts, lists, reports and other applicable reference documents
- interpreting layout drawings and specifications
- checking and clarifying information

REQUIRED SKILLS AND KNOWLEDGE

- orally reporting routine information
- planning and sequencing tasks
- locating and verifying site and levels for installation
- identifying non-compliances
- preparing surfaces prior to commencing the installation
- completing proformas, standard workplace forms, workplace reports and other applicable documents
- checking for conformance to specifications
- measuring to specified tolerances
- performing numerical operations, geometry and engineering calculations/formulae within unit's scope

Required knowledge

Look for evidence that confirms knowledge of:

- installation specification of the machine/plant
- procedures to follow if the location, dimensions and/or levels of the site do not comply with the specifications
- procedures for checking whether the installed machine/plant conforms to specifications
- materials and components to be used in the installation of the machine/plant
- applicable codes and standards
- installation sequence
- methods to locate, fix/fasten machine/plant
- methods of lifting/moving machine/plant and components
- techniques, tools and equipment to measure site and machine/plant installation
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with installing machine/plant, including housekeeping

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to install machine/plant requiring substantial modification to the existing site and/or connecting equipment; excluding minor modifications. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with installing machine/plant or other units requiring the exercise of the skills and knowledge covered by this unit.

Method of assessment

Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Pre-Requisites

Prerequisite units		
Path 1	MEM09002B	Interpret technical drawing
	MEM10002B	Terminate and connect electrical wiring

Prerequisite units		
	MEM10003B	Install and test electrical wiring and circuits up to 1000 volts a.c./1500 volts d.c.
	MEM12002B	Perform electrical/electronic measurement
	MEM12004B	Perform precision electrical/electronic measurement
	MEM12023A	Perform engineering measurements
	MEM18001C	Use hand tools
	MEM18002B	Use power tools/hand held operations
	MEM18048B	Fault find and repair/rectify basic electrical circuits
	MEM18049C	Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.
	MEM18051B	Fault find repair/rectify complex electrical circuits
Path 2	MEM09002B	Interpret technical drawing
	MEM14005A	Plan a complete activity
	MEM12002B	Perform electrical/electronic measurement
	MEM12003B	Perform precision mechanical measurement
	MEM12023A	Perform engineering measurements
	MEM12024A	Perform computations
	MEM12025A	Use graphical techniques and perform simple statistical computations
	MEM16006A	Organise and communicate

Prerequisite units		
		information
	MEM16010B	Write reports
	MEM18001C	Use hand tools
	MEM18002B	Use power tools/hand held operations
	MEM18003C	Use tools for precision work
	MEM18006C	Repair and fit engineering components
	MEM18010C	Perform equipment condition monitoring and recording
	MEM18016B	Analyse plant and equipment condition monitoring results
	MEM18018B	Maintain pneumatic system components
	MEM18019B	Maintain pneumatic systems
	MEM18020B	Maintain hydraulic system components
	MEM18021B	Maintain hydraulic systems
	MEM18022B	Maintain fluid power controls
	MEM18023B	Modify fluid power system operation
	MEM18053B	Modify fluid power control systems
	MEM18055B	Dismantle, replace and assemble engineering components
Path 3	MEM05001B	Perform manual soldering/desoldering - electrical/electronic components
	MEM09002B	Interpret technical drawing
	MEM12004B	Perform precision

Prerequisite units		
		electrical/electronic measurement
	MEM12023A	Perform engineering measurements
	MEM18001C	Use hand tools
	MEM18002B	Use power tools/hand held operations
	MEM18054B	Fault find, test, calibrate instrumentation systems, equipment
	MEM18055B	Dismantle, replace and assemble engineering components
	MEM18057B	Maintain/service analog/digital electronic equipment
	MEM18060B	Maintain, repair control instrumentation - single and multiple loop control systems
	MEM18062B	Install, maintain and calibrate instrumentation sensors, transmitters and final control elements
	MEM18067B	Tune control loops - multi controller or multi element systems
Path 4	MEM05001B	Manual soldering/desoldering - electrical/electronic components
	MEM05002B	Perform high reliability soldering and desoldering
	MEM09002B	Interpret technical drawing
	MEM12004B	Perform precision electrical/electronic measurement
	MEM12023A	Perform engineering measurements
	MEM18001C	Use hand tools
	MEM18002B	Use power tools/hand held operations

Prerequisite units		
	MEM18056B	Diagnose and repair analog equipment and components
	MEM18057B	Maintain/service analog/digital electronic equipment
	MEM18058C	Modify electronic equipment
	MEM18059B	Modify electronic systems
	MEM18065B	Diagnose and repair digital equipment and components
Path 5	MEM09002B	Interpret technical drawing
	MEM12002B	Perform electrical/electronic measurement
	MEM12023A	Perform engineering measurements
	MEM18001C	Use hand tools
	MEM18002B	Use power tools/hand held operations
	MEM18055B	Dismantle, replace and assemble engineering components
	MEM18086B	Test, recover, evacuate and charge refrigeration systems
	MEM18088B	Maintain and repair commercial air conditioning systems and components
	MEM18092B	Maintain and repair commercial and/or industrial refrigeration and/or air conditioning controls
Path 6	MEM09002B	Interpret technical drawing
	MEM12002B	Perform electrical/electronic measurement
	MEM12023A	Perform engineering measurements
	MEM18001C	Use hand tools

Prerequisite units		
	MEM18002B	Use power tools/hand held operations
	MEM18055B	Dismantle, replace and assemble engineering components
	MEM18086B	Test, recover, evacuate and charge refrigeration systems
	MEM18090B	Maintain and repair industrial refrigeration systems and components
	MEM18092B	Maintain and repair commercial and/or industrial refrigeration and/or air conditioning controls
Path 7	MEM09002B	Interpret technical drawing
	MEM12002B	Perform electrical/electronic measurement
	MEM12023A	Perform engineering measurements
	MEM18001C	Use hand tools
	MEM18002B	Use power tools/hand held operations
	MEM18055B	Dismantle, replace and assemble engineering components
	MEM18086B	Test, recover, evacuate and charge refrigeration systems
	MEM18089B	Maintain and repair central air handling systems
	MEM18090B	Maintain and repair industrial refrigeration systems and components
	MEM18093B	Maintain and repair integrated industrial refrigeration and/or large air handling system controls

Prerequisite units		
Path 8	MEM09002B	Interpret technical drawing
	MEM12002B	Perform electrical/electronic measurement
	MEM12023A	Perform engineering measurements
	MEM18001C	Use hand tools
	MEM18002B	Use power tools/hand held operations
	MEM18054B	Fault find, test, calibrate instrumentation systems, equipment
	MEM18055B	Dismantle, replace and assemble engineering components
	MEM18060B	Maintain, repair control instrumentation - single and multiple loop control systems
	MEM18062B	Install, maintain and calibrate instrumentation sensors, transmitters and final control elements
	MEM18064B	Maintain instrumentation system components
	MEM18067B	Tune control loops - multi controller or multi element systems

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan commissioning procedure	1.1. Control system format and operational intent is determined and understood. 1.2. Commissioning procedures are effectively sequenced to meet requirement of components and control application.
2. Check control system installation	2.1. Correct installation of system components is verified against specifications. 2.2. Appropriate test equipment is functional and calibrated before use. 2.3. Components or control loop/system is powered up and checked for correct supply in accordance with specifications. 2.4. All readings/measurements are correctly obtained, interpreted and recorded.
3. Adjust control system and assess performance	3.1. Control loop/system components are adjusted to meet control characteristics, application and process specifications utilising appropriate techniques. 3.2. Final verifications including any operational adjustments are made to ensure required performance.
4. Commission modifications	4.1. Necessary modifications to change performance in order to meet manufacturers' or operational specifications or safety and legislative requirements are undertaken or actioned. 4.2. Reports on system/process characteristics are provided for warranty, handover, legislative, etc. purposes. 4.3. All modifications are documented and result is recorded to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms skills in:

- obtaining, reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- obtaining necessary approvals
- checking system components against specification
- calibrating and checking test equipment to be used
- energising and checking the components and/or the control loop/system for correct supply
- checking and clarifying task-related information
- adjusting control loop/system components
- conducting appropriate measurements/tests
- carrying out authorised modifications to the control system and/or process components
- checking for conformance to specifications
- completing reports and documentation on commissioning activity
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- work to be undertaken
- control system format
- operational intent of the processes being controlled by the control system
- specifications of the control system and the processes being controlled
- regulatory and legislative requirements associated with the commissioning procedure
- procedures for commissioning the control system
- procedures to ensure that control characteristics, application and process specifications are achieved
- components of the operational processes
- installation specifications for each component of the operational processes
- measuring techniques and equipment appropriate to the measurements to be taken
- test equipment and techniques appropriate to the commissioning of the control
- calibration procedures for the selected test equipment
- procedures for energising components and/or the control loop/system
- supply requirements of components and the control loop/system
- recording requirements for readings/measurements taken
- adjustments that can be made to the control loop/system components
- effects of adjustments on the control characteristics and operational processes

REQUIRED SKILLS AND KNOWLEDGE

- measurements/tests to be undertaken to verify control system and process operation
- reasons for selecting the chosen measurements/tests
- procedures to be followed if the operational specifications of the control system and/or process cannot be achieved
- effect of changes to control system components on system performance
- appropriate authority to approve any modifications
- reporting requirements associated with the commissioning of control systems
- requirements for recording modifications
- reasons for recording modifications
- hazard and control measures associated with modifying control systems, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to modify control systems. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with modification of control systems or other units requiring the exercise of the skills and knowledge covered by this unit.

Method of assessment

Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

EVIDENCE GUIDE

Guidance information for assessment	
--	--

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Commissioning

Commissioning involves the development of a commissioning procedure, testing of operation and adjustment to conform to specification

Control system

Control systems can mean closed or open loop on continuous or step process control systems. Loop/system control can incorporate the use of pneumatics, electrical, electronics, hydraulics or a combination

System components

Control loop/system components incorporate all instruments and devices which make up or control a loop/system, including sensing devices, control devices, actuators and transducers

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan commissioning procedure	1.1.Commissioning procedure is undertaken and approvals are obtained in accordance with standard operating procedures.
2. Assess system performance	2.1.Correct measuring/test devices are used. 2.2.All necessary measurements/readings are taken at appropriate points. 2.3.All variances from specifications are recorded to standard operating procedures.
3. Adjust plant	3.1.Plant/system performance is adjusted to design and operational specifications utilising appropriate and correct techniques. 3.2.Technical difficulties are resolved in consultation with appropriate technical advisers.
4. Make reports	4.1.Report/logs are produced on completed system/plant/machinery/status/performance as required in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining work approvals and permits
- selecting measuring/testing devices
- safely taking measurements/readings
- recording variations in machine/plant performance from specification
- making appropriate adjustments to machine/plant
- completing short reports using relevant technical terminology
- reading, interpreting and following information on written job instructions, specifications, manufacturer documents, commissioning procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information

REQUIRED SKILLS AND KNOWLEDGE

- entering information onto standard workplace forms and reports
- checking for conformance to specifications
- using precision measurement equipment
- undertaking numerical operations and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- the sequence of events in the commissioning of the machine/plant
- performance tests appropriate to the machine/plant to be commissioned
- measurements required to ensure conformance to specifications and correct points at which measurements are to be taken
- appropriate adjustments to bring the machine/plant into line with operational specifications based on engineering principles or appropriate technical advice
- reporting requirements relevant to the machine/plant being commissioned
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Inspect and prepare installation site	1.1.Site is checked for correct location, dimension and levels, etc. using appropriate measuring equipment and standard refrigeration/air conditioning practices. 1.2.Non-compliance with specification is reported to appropriate authority. 1.3.Alteration/correction is undertaken with approval of appropriate authority. 1.4.All surfaces, materials and components are prepared for use.
2. Install refrigeration/air conditioning plant and equipment	2.1.All work is carried out safely and in accordance with site procedures and to relevant standards. 2.2.Refrigeration/air conditioning plant and equipment/components are organised for correct sequential installation. 2.3.Refrigeration/air conditioning plant and equipment/components are installed in conformance with manufacturers' and site specifications. 2.4.Routine modifications/alterations of the refrigeration/air conditioning plant and equipment are undertaken to standard operating procedures where required. 2.5.Refrigeration/air conditioning plant and equipment are levelled, aligned, coupled and connected in accordance with specifications. 2.6.The refrigeration system is charged with refrigerant and lubricant in accordance with standard operating procedures. 2.7.The site is cleaned and cleared of all debris and left in a safe state.
3. Start up refrigeration/air conditioning plant and equipment and check operation	3.1.Start-up procedure is developed for the refrigeration/air conditioning plant and equipment. 3.2.The refrigeration/air conditioning plant and equipment is operated and assessed for conformance to specification. 3.3.Non-conformances and system faults are identified, and appropriate action/adjustments are taken to specification. 3.4.All reports and documentation are completed correctly to required specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking task-related information
- checking the site for correct location, dimensions and levels
- detecting and reporting non-conformance to specifications
- preparing surfaces for installation
- checking for conformance to specifications
- preparing plant for start-up
- adjusting refrigeration plant and equipment
- using appropriate tools, techniques and equipment

Required knowledge

Look for evidence that confirms knowledge of:

- procedures for non-compliances
- procedures for checking the refrigeration/air conditioning plant and associated equipment
- procedures for making alterations, corrections or adjustments to the refrigeration/air conditioning plant and associated equipment
- correct sequential installation of all components
- methods of fixing/fastening and locating/holding the components
- procedures for checking refrigeration systems for leaks
- procedures for checking refrigeration/air conditioning plant and associated equipment prior to start-up
- procedures for adjusting the refrigeration/air conditioning plant and associated equipment to specification
- codes and regulations relevant to the refrigeration/air conditioning industry including environmental and ozone and greenhouse substance legislation
- hazards and control measures associated with installing refrigeration and/or air conditioning plant and associated equipment, including housekeeping
- safe work practices and procedures

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Measuring equipment

Lasers, dumpy levels etc.

Relevant standards

- Australian standards
- Building codes
- Air conditioning/refrigeration standards
- Local authority standards
- Environmental standards
- Greenhouse emission regulations

Refrigeration/air conditioning plant and equipment/components

Compressors, evaporators, condensers, valves, controllers, fans, solenoids, sensors, thermostats, switches, recorders, etc.

Appropriate action

In accordance with urgency requirements to address equipment failure and/or personnel danger

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan the installation of pipework and pipework assemblies	1.1. Quantity and type of pipework and pipework assemblies are selected according to specifications. 1.2. The appropriate sequence for the installation of pipework and pipework assemblies is determined according to the installation type and specifications and other applicable factors. 1.3. The work area is prepared for installation of pipework and pipework assemblies.
2. Prepare pipework and pipework assemblies for assembly	2.1. Pipework is cleaned to standard operating procedures. 2.2. Pipework and assemblies are purged to standard operating procedures. 2.3. Pipework and assemblies are capped/sealed.
3. Install pipework and assemblies	3.1. Enclosures/hangers/support systems are installed without damage or distortion to the surrounding environment or other services. 3.2. Pipework and assemblies are installed without damage or distortion to pipework, assemblies or surrounding environment or other services. 3.3. Pipework is leak tested to standard operating procedures. 3.4. All ancillary devices and materials are installed to specification according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting and following information on specifications, standard operating procedures and other applicable reference documents
- planning and sequencing installation
- preparing the site
- preparing joining surfaces

REQUIRED SKILLS AND KNOWLEDGE

- purging pipework and assembly
- capping and sealing pipework and assembly
- installing enclosure/hanging /supporting assemblies
- assembling and installing pipework and ancillaries
- testing installed pipework and rectifying leaks

Required knowledge

Look for evidence that confirms knowledge of:

- installation techniques
- site and safety requirements
- cleaning procedures and the applications and precautions for using solvents/cleaning material
- purging techniques, applications and precautions
- capping/sealing pipework and assembly methods
- identification of location/layout of pipework and assemblies and application and characteristics of enclosure/hanging/supporting systems
- pipework, ancillary installation and joining procedures
- leak testing applications and uses
- regulations and legislative requirements
- hazards and control measures
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to install pipework and pipework assemblies in accordance with standard operating procedures. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with installing pipework and pipework assemblies or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

EVIDENCE GUIDE

Guidance information for assessment

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Pipework and pipework assemblies	<ul style="list-style-type: none"> • Ferrous, non-ferrous, plastic, etc. • Variety of sizes and or wall thickness • Variety of joining systems such as collars, unions, flanges, etc.
Enclosures	Metal and PVC
Hangers and support systems	Pipe/tube bundle support, ties, unistrut, trays, ladder racks, ducts etc.
Leak test	Soapy water, water immersion, compressed air
Ancillary devices and materials	Insulation materials, valve control systems, etc.
Legislation and regulations	Building regulations, gas/fluid pipeline regulations

Unit Descriptor

Unit descriptor	This unit covers preparing for the termination and connection of specialist cables.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to the connection of specialist cables including, but not confined to:</p> <ul style="list-style-type: none"> • mineral insulate cables (MIMS) • steel wire armoured cables (SWA) • other sheathed cables such as piloted cables, composite screened cables, braided cables • cable installations requiring specialised glands, fittings and enclosures <p>Termination and connection requires particular techniques, and, in some cases testing.</p> <p>All testing is undertaken on completed circuits where not connected to main supply using appropriate methods e.g. continuity and resistance checks.</p> <p>Special fittings must be used for each type of specialist cable. Cables may require the use of bending tools and techniques which do not cause damage. Compounds such as resins may be required for sealing purposes.</p> <p>Most types of specialist cables are designed to either exclude or minimise the ingress of gas or liquids, or to minimise the danger of flash.</p> <p>For termination and connection of signal and data cables, Unit MEM18063B (Terminate signal and data cables) should be selected.</p> <p>For termination and connection of standard electrical wiring/cable, refer to Unit MEM10002B (Terminate and connect electrical wiring)</p> <p>Band: A</p> <p>Unit Weight: 3</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for termination and connection of specialist cables	1.1.All work is undertaken safely and to workplace procedures, applicable regulations and legislative requirements. 1.2.Correct cables and materials are selected in accordance with job requirements. 1.3.Certification documentation is obtained where appropriate. 1.4.Preparation of work is undertaken or checked/inspected for correct locations and specifications.
2. Connect specialist cables	2.1.Terminations/connections are made to specifications, manufacturers' requirements and to safety and State/Territory regulations and legislative requirements. 2.2.Equipment and wiring are installed in a manner that does not reduce the type of protection afforded by the equipment design. 2.3.All cabling, connections and terminations are tested for compliance with specifications. 2.4.All cables, wires, conductors and connections are marked/tagged and labelled to specifications. 2.5.Documentation is completed correctly in accordance with relevant specifications and regulatory requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- checking cables and materials for condition and conformance to specifications
- obtaining and interpreting appropriate documentation
- making terminations/connections to specification, manufacturer and regulatory requirements
- testing cabling, connections and terminations

REQUIRED SKILLS AND KNOWLEDGE

- marking, tagging and labelling cables, wires, conductors and connections
- entering information onto documentation related to termination and connection of specialist cables
- applying measurement skills needed to meet the requirements of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- work site procedures and relevant statutory requirements
- safety hazards associated with the termination and connection of cables, and the work environment
- statutory requirements associated with the termination and connection of specialist cables
- specifications for specialist cables and materials
- requirements for approval to work
- wiring support and/or protection requirements
- specifications of wiring support and/or protection requirements
- applicable statutory requirements
- reading and interpreting relevant drawings, instructions and reference documents
- manufacturer requirements
- testing methods for specialist cables including continuity and resistance testing
- marking, tagging and labelling requirements for cables, wires, conductors and connections
- data to be recorded/reported and the frequency of recording/reporting.
- the impact of the site and location variables may have on termination and connection
- use and application of personal protective equipment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Locate split air conditioning components	<p>1.1. Required split air conditioning unit, piping and other components are identified from job and manufacturer specifications and diagrams.</p> <p>1.2. The location of unit components, piping and drains is determined in consultation with customer and other site considerations.</p> <p>1.3. Industry and local authority requirements, standards and codes and manufacturer requirements are identified including the appropriate capacity rating of the equipment and any impacts on the installation are identified.</p>
2. Inspect and prepare installation sites	<p>2.1. All work is carried out safely to Australian Standards, state and local codes and regulations.</p> <p>2.2. The installation site is prepared as appropriate to industry codes of practice and manufacturer installation instructions.</p> <p>2.3. The work is carried out without damage to the system, components and the surrounding environment or services.</p>
3. Prepare split system equipment and materials for installation	<p>3.1. Safety hazards are identified and noted and established risk control measures are implemented.</p> <p>3.2. Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.</p> <p>3.3. All components, piping and fittings are properly checked for conformance to manufacturer specification, job requirements and applicable standards. The layout of the pipe work is determined from job specifications and diagrams.</p> <p>3.4. Materials needed to carry out the work are obtained in accordance with established procedures and checked against job requirements.</p> <p>3.5. Tools, equipment and testing devices needed to conduct the work are obtained in accordance with established procedures and checked for correct operation and safety.</p> <p>3.6. Preparatory work is checked to ensure no damage has occurred and that it complies with work requirements.</p>
4. Prepare and install refrigerant pipework	<p>4.1. Safe work practices/risk control measures are applied as required.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>4.2. Tools and equipment are used safely and in accordance with manufacturer instructions.</p> <p>4.3. Pipework is prepared and joined to required specification with minimal wastage and damage/contamination to environment.</p> <p>4.4. Pipework and fittings are joined using appropriate pipe joining methods.</p> <p>4.5. Pipes are run separately and insulated according to manufacturer instructions and to relevant standards codes and regulations.</p> <p>4.6. Pipework and joins are checked for compliance and integrity using appropriate testing methods.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, confirming and following information on written job instructions, manufacturer specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- identifying hazards and applying safe work practices and risk control measures
- planning the installation, sequencing and coordinating work activities
- applying skills and knowledge to solve problems, deal with contingencies and unexpected events
- communicating with appropriate persons such as customer, supplier, electrical contractor
- adapting to the demands and considerations of the work environment
- sourcing components using relevant catalogues/lists
- positioning components for installation
- preparing the installation site
- checking and using applicable tools and equipment
- identifying split system air conditioning components, piping, fittings and consumables
- fabricating and joining pipework
- assembling and fixing system components

REQUIRED SKILLS AND KNOWLEDGE

- checking pipework and units for compliance to specification
- documenting the installation and work activities

Required knowledge

Look for evidence that confirms knowledge of:

- basic vapour compression cycle operating principles
- basic reverse cycle operating principles
- layouts, siting and set-ups of split air conditioning systems
- typical work environment, demands and considerations
- effective communication with appropriate persons
- typical problems, contingencies and solutions
- components, accessories and fixtures for split air conditioning systems
- considerations for siting units and components
- techniques and processes for site preparation
- fixing methods tools and equipment for system components and pipework
- applicable legislative requirements, standards, codes and licensing requirements for installing system components, interconnecting wiring and connection to power supply
- applicable procedures for storage, handling and treatment of ozone depleting and synthetic greenhouse gas refrigerant
- sustainable energy practices for the efficient use of materials and for minimising damage/contamination to environment
- hazards and control measures associated with installing split air conditioning systems, including housekeeping
- tools and equipment used for fabricating pipework
- pipe preparation and joining techniques including cutting, flaring, swaging, bending
- brazing/silver soldering techniques, equipment and consumables
- dry nitrogen is used during all brazing/silver soldering work
- procedures and equipment for checking pipework integrity and compliance to specification
- procedures for reporting non-conformances
- required documentation and procedures to complete and process

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to fabricate pipework for split air conditioning systems and install units and components to manufacturer specifications and relevant Australian Standards, codes and regulations.</p> <p>Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge; and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Split air conditioning systems	Single head split systems up to 18kW cooling capacity
Unit components	Outdoor unit, indoor unit, fittings and fixtures
Site considerations	Inside wall, drains, pipe runs, exposure, access, air circulation, environment, power supply
Prepared	Clearing and levelling, foundations, wall fixtures, roof mounting
Prepared and joined	Cutting to length, flaring, swaging, bending
Pipe joining methods	Silver brazing/soldering
Equipment and testing devices	Refrigeration gauge manifold, Schraeder access valves; quick connect couplings, thermometer/thermocouple temperature measuring devices; analogue and digital vacuum measuring gauges; digital scales; refrigerant recovery unit; vacuum pump; electronic leak detectors, refrigerant containers/cylinders
Industry best practice	Pipe preparation and joining techniques and industry best practice for pipe brazing.
Commonwealth, State and	The Ozone Protection and Synthetic Greenhouse

RANGE STATEMENT	
Territory legislation, regulations, standards and codes of practice, industry guidelines	Gas Legislation Amendment Bill 2003; air conditioning residential best practice guidelines (AIRAH); State and local building regulations; Codes of Practice for domestic refrigeration and air-conditioning. (HB40)
Appropriate testing methods	Dimensional checks, leak tests

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to erect scaffold/equipment	<p>1.1.Site plans, scaffolding/equipment designs and drawings to industry practices are interpreted as necessary.</p> <p>1.2.Work area is inspected to identify hazards and appropriate prevention/control measures are implemented to avoid hazard.</p> <p>1.3.All work is undertaken safely and to prescribed procedures.</p>
2. Erect scaffold/equipment	<p>2.1.Erection site is prepared to meet job requirements.</p> <p>2.2.Necessary signage and barriers and third party protection measures are placed in appropriate position.</p> <p>2.3.Appropriate scaffolding/equipment components are selected and inspected and damaged components are labelled and rejected.</p> <p>2.4.Rejected components are repaired or sent for repair.</p> <p>2.5.Scaffolding/equipment is erected to plan and in accordance with safe work practices, Australian standards, State and Territory legislative requirements and equipment manufacturers' requirements.</p> <p>2.6.The completed scaffolding/equipment is checked for safety and operational requirements.</p> <p>2.7.Site is left clear of all surplus components, equipment, tools and debris.</p>
3. Inspect, repair and alter scaffold/equipment	<p>3.1.The scaffolding/equipment is inspected for damage, corrosion and wear.</p> <p>3.2.Any alteration or repair is carried out in accordance with safe work practices and legislative requirements.</p> <p>3.3.Any inspection log is completed as required.</p>
4. Dismantle scaffold/equipment	<p>4.1.Work is undertaken safely and to prescribed procedure.</p> <p>4.2.Scaffolding/equipment is inspected for damage, corrosion or wear and is noted for consideration in planning for dismantling.</p> <p>4.3.Scaffolding/equipment is dismantled in accordance with site procedures, State and Territory legislative requirements and critical structural and safety requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.4.Site is cleaned and cleared of all tools, excess material and debris and left in a safe state.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and interpreting routine information on written job instructions, specifications and standard procedures. May include drawings for erecting scaffolding
- undertaking basic levelling and alignment
- interpreting instructions and legislative requirements
- using relevant hand tools and manual handling techniques
- assessing risk
- following oral instructions
- working safely and confidently at heights

Required knowledge

Look for evidence that confirms knowledge of:

- erection and dismantling procedures as set out in relevant Australian standards
- codes of practice, for example the Scaffolder's Guide, relevant acts and regulations
- site specific requirements
- safety procedures, safe work practices and procedures
- use and application of personal protective equipment
- hazards and control measures associated with erecting/dismantling scaffolding and equipment, including housekeeping
- scaffolding techniques and equipment
- limitations of equipment
- materials handling, storage and environmentally friendly waste management

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to erect and dismantle scaffolding/equipment safely subject to legislative requirements. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scaffolding/equipment

- Prefabricated tower scaffolds, fall protection devices, catch platforms and bracket scaffolds (tank and formwork), mobile scaffolds, gin wheels, cantilevered hoist with a load limit not exceeding 500 kilograms (material only), safety nets and static lines
- The major difference between basic and complex scaffolding is the height of the working platform and certain types of scaffolding and configurations

Hazards

- Chemicals, dangerous or hazardous substances/materials
- Movement of equipment, goods, materials, vehicular traffic
- Uneven/unstable terrain, overhead service lines, trees, underground services, obstructions, structures, surrounding buildings, facilities, bridges/walkways, lifting equipment

Prescribed procedures

- Clarification of instructions and/or plans either written or from authorised personnel
- Site safety policy and procedures
- Standard operating procedures
- Correct use of equipment
- Industry standards and requirements
- Manufacturers' specifications

RANGE STATEMENT	
Signage and barriers and third party protection measures	<ul style="list-style-type: none"> • Physical barriers (parawebbing, bollards, timber or metal barriers) • Warning/direction signs • Personnel to restrict unauthorised access (spotters) • Permits to work
Safe work practices	Hazard identification, risk assessment, risk reduction measures, house keeping and personal protective equipment
State and Territory legislative requirements	<ul style="list-style-type: none"> • Appropriate OHS and Scaffolding acts and regulations • Australian standards, codes of practice and NOHSC:1006

Prepare to erect scaffold/equipment	<p>1.1.Site plans, scaffolding/equipment designs and drawings to industry practices are interpreted as necessary.</p> <p>1.2.Work area is inspected to identify hazards and appropriate prevention/control measures are implemented to avoid hazard.</p> <p>1.3.All work is undertaken safely and to prescribed procedures.</p>
2. Erect scaffold/equipment	<p>2.1.Erection site is prepared to meet job requirements.</p> <p>2.2.Necessary signage and barriers and third party protection measures are placed in appropriate position.</p> <p>2.3.Appropriate scaffolding/equipment components are selected and inspected and damaged components are labelled and rejected.</p> <p>2.4.Rejected components are repaired or sent for repair.</p> <p>2.5.Scaffolding/equipment is erected to plan and in accordance with acceptable safe work practices, Australian standards, State or Territory legislative requirements and equipment manufacturers' requirements.</p> <p>2.6.Scaffolding/equipment is checked for safety and operational requirements and faults are identified in accordance with legislative requirements.</p>
3. Inspect, alter and/or repair scaffold/equipment	<p>3.1.Alterations/repairs are confirmed in accordance with safety work practices, Australian standards and equipment manufacturers' requirements.</p> <p>3.2.Alterations/repairs are inspected for safety and operational requirements.</p> <p>3.3.Scope of alteration/repair is confirmed and understood.</p> <p>3.4.Existing scaffold/equipment is inspected for suitability of alterations/repair requirements.</p> <p>3.5.Materials, equipment and tools required for alteration are determined.</p> <p>3.6.Work completion is recorded/reported to appropriate authority.</p>
4. Dismantle scaffold/equipment	<p>4.1.Work is undertaken safely and to prescribed procedure.</p> <p>4.2.Scaffolding/equipment is inspected for damage,</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>corrosion or wear and is noted for consideration in planning for dismantling.</p> <p>4.3.Scaffolding/equipment is dismantled in accordance with site procedures, State and Territory legislative requirements and critical structural and safety requirements.</p> <p>4.4.Site is cleaned and cleared of all tools, excess material and debris and left in a safe state.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- levelling and aligning scaffolding
- interpreting instructions and legislative requirements
- using basic hand tools
- assessing risk in relation to complex scaffolding erection
- using manual handling techniques
- undertaking site clean up and remediation
- working safely and confidently at heights

Required knowledge

Look for evidence that confirms knowledge of:

- erection and dismantling procedures as set in relevant Australian standards
- codes of practice, for example the Scaffolder's Guide, relevant acts and regulations
- site specific requirements
- safety procedures, safe work practices and procedures
- sequence of operations in erecting the scaffolding
- types of scaffolding systems
- hazards and control measures; electrical, stability, mobile plant issues/requirements; falls protection measures; minimum gap requirements; safe access and egress
- deck loadings
- use and application of personal protective equipment

REQUIRED SKILLS AND KNOWLEDGE

| <ul style="list-style-type: none">• scaffolding techniques and equipment• limitations of equipment• materials handling, storage and environmentally friendly waste management |
|---|

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to erect, maintain and dismantle complex scaffolding/equipment safely and subject to legislative requirements. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with erection, maintenance and dismantling of complex scaffolding or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

EVIDENCE GUIDE

Guidance information for assessment	
--	--

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scaffolding/equipment

- Prefabricated tower scaffolds, tube and fitting scaffolds as limited by legislative requirements, tube and coupler scaffolds including tube and coupler covered ways and gantries, fall protection devices, catch platforms, bracket scaffolds (tank and formwork), mobile scaffolds, ropes, cantilevered hoists, cantilevered and spurred scaffolds, cantilever crane loading platforms and course-ways, fall protection devices, platforms
- Complex scaffolding means Intermediate Scaffolding and above as set out in the legislative requirements in each State and Territory. The major difference between complex and basic scaffolding is the height of the working platform and certain types of scaffolding and configurations
- Maintaining scaffolding means ensuring that the scaffolding remains in a safe condition according to manufacturers' specifications and legislative requirements

Hazards

- Chemicals, dangerous or hazardous substances/materials
- Movement of equipment, goods, materials, vehicular traffic
- Uneven/unstable terrain, overhead service lines, trees, underground services,

RANGE STATEMENT	
	obstructions, structures, surrounding buildings, facilities, bridges/walk ways, lifting equipment
Prescribed procedures may include	<ul style="list-style-type: none"> • Clarification of instructions either written or from authorised personnel • Site safety policy and procedures • Standard operating procedures • Correct use of equipment • Industry standards and requirements • Manufacturers' specifications
Signage, barriers and third party protection measures may include	<ul style="list-style-type: none"> • Physical barriers (parawebbing, bollards, timber or metal) • Warning/direction signs • Personnel to restrict unauthorised access (spotters) • Permits to work
Safe work practices may include	Hazard identification, risk assessment, standard operating procedures, house keeping and personal protective equipment.
State or Territory legislative requirements	<ul style="list-style-type: none"> • Appropriate OH&S and Scaffolding acts and regulations. • Australian standards and codes of practice and • NOHSC:1006

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and coordinate erection of scaffold/equipment	<p>1.1.Site plans, scaffolding/equipment designs and drawings to industry practices are interpreted as necessary.</p> <p>1.2.Work area is inspected to identify hazards and appropriate prevention/control measures are implemented to avoid hazard.</p> <p>1.3.All work is undertaken safely and to prescribed procedures.</p> <p>1.4.Erection site is prepared to meet job and safety requirements.</p> <p>1.5.Necessary signage and barriers are placed in appropriate position.</p> <p>1.6.Scaffolding/equipment erection is coordinated in accordance with acceptable safe work practices, Australian standards, State or Territory legislative requirements and equipment manufacturers' requirements.</p> <p>1.7.Completed scaffolding/equipment is inspected for safety and compliance with design, operational and statutory requirements.</p>
2. Coordinate alterations and repairs of scaffold/equipment	<p>2.1.Scope of alteration/repair is confirmed and understood.</p> <p>2.2.Existing scaffolding/equipment is inspected and alterations/repairs determined.</p> <p>2.3.Materials, equipment and tools required for alterations are determined.</p> <p>2.4.Existing or new load requirements are determined using load tables.</p> <p>2.5.Alteration/repairs are coordinated in accordance with safety work practices, Australian standards and equipment manufacturers' requirements.</p> <p>2.6.Alterations/repairs are inspected for safety and operational requirements.</p> <p>2.7.Work completion is reported to appropriate personnel and recorded.</p>
3. Inspect completed scaffold/equipment	<p>3.1.The critical structural and safety areas of the scaffolding/equipment are inspected for damage, corrosion and wear.</p> <p>3.2.Scaffolding/equipment and structure is checked against the type of scaffolding/equipment and</p>

ELEMENT	PERFORMANCE CRITERIA
	structure specified in the plan. 3.3. Inspection log is completed. 3.4. Potential safety and design/structural hazards are reported for rectification.
4. Coordinate dismantling of scaffold/equipment	4.1. Work is coordinated safely and to standard operating procedure. 4.2. Scaffolding/equipment is removed from site in accordance with standard operating procedures and critical structural and safety requirements. 4.3. Site clearance is coordinated, and surplus material, equipment, tools and debris are removed and site left in safe and operational state. 4.4. Work completion is reported to appropriate authority.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- levelling and alignment of scaffolding
- interpreting instructions and legislative requirements
- using basic hand tools
- assessing risk
- using manual handling techniques
- cleaning up and site remediation
- time management
- determining personnel and equipment requirements
- inspecting completed scaffolding with reference to structural integrity and design faults
- locating, reading and interpreting information on written job instructions, specifications, drawings, charts, lists and other reference documentation
- planning, sequencing operations
- checking and clarifying strategies
- working safely and confidently at heights

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

Look for evidence that confirms knowledge of:

- erection and dismantling procedures as set in the Australian standards
- codes of practice, for example the Scaffolder's Guide
- site specific requirements
- safety procedures
- types of scaffolding systems
- deck loadings
- hazards; electrical, stability, mobile plant issues/requirements; falls protection measures; minimum gap requirements; safe access and egress
- sequence of operations in erecting and dismantling the scaffolding
- design and materials faults such as rust, wear and tear, stress
- use and application of personal protective equipment
- safe work practices and procedures
- scaffolding techniques and equipment
- limitations of equipment
- materials handling, storage and environmentally friendly waste management

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to coordinate the erection, repair, maintenance and dismantling of all scaffolding applications. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with coordination of the erection, repair, maintenance and dismantling of all scaffolding applications or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Attach lifting gear to loads	1.1.Potential hazards associated with the use of cranes and other load shifting equipment are identified and measures to eliminate or control these hazards are planned. 1.2.Site information is obtained as necessary. 1.3.All work is undertaken safely and to prescribed procedures. 1.4.Load is inspected and best lifting method determined. 1.5.Load shifting equipment is selected appropriate to load. 1.6.Lifting gear is inspected and damaged or worn items are labelled and rejected. 1.7.Where appropriate, safe working loads are calculated to Australian standards. 1.8.Lifting gear is attached to load in most appropriate and safe manner and to specifications where required.
2. Move loads	2.1.Load moving is performed to acceptable safe working practices, Australian standards, codes of practice and specifications. 2.2.Lifting gear is connected to load shifting equipment using safe and appropriate techniques. 2.3.Communication and signalling methods are used as appropriate to coordinate the load movement in a safe manner. 2.4.Load is grounded or put down in accordance with prescribed procedure, in a safe and stable manner. 2.5.All lifting gear is detached from load mover and load.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms skills in:

- selecting lifting methods and load shifting equipment appropriate to the task
- attaching loads
- calculating safe working loads
- communicating with related personnel about the lift
- using of basic hand tools relating to lifts
- identifying hazards and assessing risk
- identifying damaged/worn lifting gear
- self management
- team work
- problem solving

Required knowledge

Look for evidence that confirms knowledge of:

- Australian standards, codes of practice and specifications
- lifting methods and lifting gear to suit various loads
- dogging signals and communication methods
- calculations relevant to lifting procedures
- lifting methods
- types and applications of load shifting equipment
- hazards and control measures associated with dogging
- use and application of personal protective equipment
- safe work practices and procedures
- licensing requirements
- permit requirements
- site/non-site personnel
- manufacturers' specifications
- enterprise procedures
- workplace communication procedures

---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Receive order	1.1.Orders are received and checked for errors. 1.2.Product to be picked is identified.
2. Pick order	2.1.Materials handling equipment appropriate to products is selected and used, if required. 2.2.Products to be picked are located using standard operating procedures. 2.3.Order is picked accurately, either by manual handling or using materials handling equipment. 2.4.Product is handled according to storage and handling requirements identified in standard operating procedures/regulations.
3. Finalise order picking	3.1.Picked order is checked against documentation. 3.2.Picked order is placed in correct area for consolidation. 3.3.Enterprise documentation is completed.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and interpreting routine information on written orders and standard operating procedures. May include simple drawings
- using materials handling equipment in a warehouse
- identifying dangerous goods
- following oral instruction
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- safe manual handling procedures
- reasons for selecting materials handling equipment

REQUIRED SKILLS AND KNOWLEDGE

- safe storage and handling procedures for a range of products including dangerous goods
- applicable Material Safety Data Sheets
- applicable industry standards, national/Australian standards, NOHSC guidelines, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with picking and processing orders

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to undertake production packaging and labelling of items.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with production packaging or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Packaging requirements	<ul style="list-style-type: none"> • Packaging methods include manual processes, semi automatic and fully automated packaging equipment • Procedures undertaken include standards, codes, legislative, company and customer requirements • Packaging material is generally determined from instructions, written or verbal
Storage conditions, site and legislative requirements	As per legislative requirements e.g. dangerous goods and storage of poisons acts and regulations

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use inventory procedures	1.1. Inventory procedures are applied to standard operational procedures. 1.2. Requisition, purchase, shipping and invoice documentation is used as required to standard operational procedures. 1.3. Inward/outward recording/filing system is accessed and maintained to standard operational procedures. 1.4. Customer orders are maintained to standard operational procedures. 1.5. Returned orders are booked back using standard operational procedures.
2. Requisition goods	2.1. Requisition procedures are applied to standard operational procedures. 2.2. Goods are requisitioned on time. 2.3. All recording is completed and filed correctly in accordance with site procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on requisition, purchase, shipping and invoice documentation, standard operating procedures, charts, lists and other applicable reference documents
- accessing and maintaining manual and electronic inventory information
- undertaking numerical operations and calculations within the scope of this unit
- organising information
- recording and filing information
- managing time
- checking for conformance to specifications
- measuring to specified tolerances
- entering information on to manual and electronic proformas and standard workplace documents

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

Look for evidence that confirms knowledge of:

- features and application of inventory systems such as Just-in-Time, KANBAN
- inventory procedures
- safe work practices and procedures
- use and application of personal protective equipment
- hazards and control measures associated with administering inventory procedures
- measurement techniques, tools and equipment for administering inventory procedures

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine packaging requirements	1.1.Safety or special packaging requirements are determined. 1.2.Storage requirements to meet safety, storage conditions, site and legislative requirements are determined. 1.3.Transport and store requirements are determined.
2. Undertake packaging	2.1.The most appropriate packaging method to suit the product is selected and used. 2.2.Correct seal, compression and packaging materials are used.
3. Label packaged items	3.1.Labels and identification stickers are correctly applied and accurately describe content of package.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- selecting packaging methods and materials to suit given products
- effectively communicating with the production and dispatch personnel
- undertaking numerical operations and calculations within the scope of this unit
- managing time
- following procedures for labelling packaged products
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- packaging methods, materials and legislation
- weights, measures and capacities
- types of transport
- knowledge of organisational receipt and dispatch functions
- applicable material safety data sheets (MSDS)

REQUIRED SKILLS AND KNOWLEDGE

- labelling procedures and standards
- storage and recording procedures
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with packaging materials

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine handling methods	1.1.Type of material is determined from labels, colour codes, signage. 1.2.Material properties are understood. 1.3.All relevant material properties are identified or clarified with appropriately qualified and authorised authority. 1.4.All relevant safety and emergency procedures are understood and implemented as required. 1.5.All relevant legislation, regulations and codes of practice are understood and observed. 1.6.Correct and appropriate handling methods are undertaken.
2. Store bulk fluids/gases	2.1.Correct storage conditions are determined from instructions/manufacturers' specifications/directions. 2.2.Containers are checked for safe and clean use. 2.3.Containers are filled/emptied in accordance with standard operating procedures, regulations/legislative requirements. 2.4.Containers are handled and moved in accordance with site procedures, regulations/legislative requirements. 2.5.Containers are correctly labelled and stored to standard operational procedures, regulations/legislative requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • reading, interpreting and following handling and storage instructions, labels, colour codes, signage and terminology • calculating quantities • communicating with users of the materials and appropriately qualified and

REQUIRED SKILLS AND KNOWLEDGE

authorised authority

- orally reporting routine information
- checking and clarifying task-related information
- applying appropriate Materials Safety Data Sheet
- selecting personal protective clothing and equipment
- filling/emptying applicable containers
- storing and handling bulk fluids/gases
- entering routine and familiar information onto labels, proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- OH&S and dangerous goods acts and regulations, transport of dangerous goods code, and industry codes of practice and standards relevant legislative requirements
- organisation's emergency response plan
- procedures for filling and emptying storage containers
- packaging requirements for dangerous goods
- personal protective clothing and equipment for various substances
- cleaning requirements for storage containers
- relevant hazards and control measures related to the competency

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to shift loads	1.1. Work area is inspected to identify hazards, and appropriate prevention/control measures are implemented to avoid hazards. 1.2. Routine pre-operational checks are undertaken in accordance with manufacturers' specifications and regulatory safety requirements. 1.3. Attachments and/or equipment are inspected.
2. Check controls and equipment	2.1. Pre-operational and post start-up equipment checks are carried out in accordance with manufacturers' specifications and/or operating manual. 2.2. Defects and damage are reported according to site procedures.
3. Shift loads	3.1. The most appropriate load shifting device is selected to suit load and shifting requirements. 3.2. Load shifting device is operated within design specifications and safe working load in accordance with standard operating procedures. 3.3. Load is lifted, ensuring balance, vision of operation and protection of load. 3.4. The safe and efficient path of movement is selected and used. 3.5. Path of movement is checked and monitored for obstacles and hazards and safety are maintained.
4. Place loads	4.1. Loads are placed ensuring safety, stability, protection of material and avoidance of hazards on site.
5. Shut down equipment and secure site	5.1. Machinery is parked avoiding equipment hazards. 5.2. Shut-down is conducted in accordance with manufacturers' specification to isolate vehicles. 5.3. Post-operational check is completed in accordance with operational procedures. 5.4. Machinery is parked in accordance with standard operating procedures, avoiding site hazards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting and following routine information on standard operating procedures. May include simple drawings, tables and figures, written documents
- performing routine safety, basic service and maintenance procedures
- calculating load masses and safe working loads
- selecting appropriate load shifting device
- following oral instructions
- safely operating load shifting devices and shifting loads
- working with others
- interpreting communication signals and instructions
- determining load masses and equipment requirements
- determining mass of irregular shaped loads
- demonstrating emergency operating procedures
- communicating faults, malfunctions and workplace hazards, reports and maintenance of operational records

Required knowledge

Look for evidence that confirms knowledge of:

- pre-operational checks
- design specifications of load shifting device
- load chart
- licensing requirements
- load protection
- safe load placement
- operational environment
- appropriate permits
- hazards and control measures associated with load shifting and equipment
- use and application of personal protective equipment
- safe work practices and procedures
- workplace communication procedures
- manufacturers' specifications

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Lift materials manually	1.1. Material weight is determined correctly utilising most appropriate technique, and risks associated with lifting are assessed. 1.2. Lifting techniques are undertaken to National Occupational Health and Safety Commission (NOHSC) and standard operating procedures. Types of movement, methods, storage, height and position are considered.
2. Move/shift materials manually	2.1. Appropriate equipment is selected where required. 2.2. Material is placed safely and securely on moving equipment. 2.3. Material is relocated ensuring safety of personnel and security of material. 2.4. Material is unloaded from moving equipment and placed in a safe and secure manner.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- identifying relevant standards and lifting techniques
- assessing weight of material
- selecting lifting equipment
- working and communicating in teams
- assessing risks
- planning
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings
- following oral instructions

Required knowledge

Look for evidence that confirms knowledge of:

- manual handling techniques

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine purchasing requirements	1.1. Client, customer, user is consulted as necessary to determine purchasing requirements. 1.2. Material specifications are determined from orders, instructions and/or technical drawings. 1.3. Quantities, price limitations and delivery requirements are determined from orders, instructions.
2. Prepare purchase order/list	2.1. Purchase order/list is developed to standard operational procedure.
3. Purchase material	3.1. Standard operating procedures are followed. 3.2. Supplier/vendor is informed of requirements and specifications. 3.3. Purchasing schedules are adjusted where required to standard operating procedures. 3.4. Appropriate paperwork/contracts are exchanged to standard operating procedures. 3.5. Records/files are maintained accurately using standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on orders, instructions and/or technical drawings, standard operating procedures, purchasing schedules, orders, records, files and other applicable reference documents
- planning and sequencing tasks
- checking and clarifying information
- entering and maintaining information on manual and electronic workplace documents
- checking for conformance to specifications
- communicating with client, customer, user, supplier/vendor
- identifying purchasing specifications

REQUIRED SKILLS AND KNOWLEDGE

- calculating quantity, price and delivery requirements
- selecting suppliers
- maintaining purchase documentation

Required knowledge

Look for evidence that confirms knowledge of:

- suppliers and available products
- purchasing procedures
- contract initiation and exchange procedures
- safe work practices and procedures
- hazards and control measures associated with purchasing materials

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to prepare a purchase order and purchase materials.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with preparing a purchase order and purchasing materials or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for	

EVIDENCE GUIDE

assessment

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Purchasing

Can cover one-off or multiple quantities of raw materials, components, equipment etc.

Purchasing schedules

- Purchasing specifications - determined from standard engineering drawings and data sheets, instructions written or verbal
- Purchasing schedules - developed to site procedures and for pre-contracted suppliers/vendors

Paperwork/contracts

Generated manually or electronically utilising on-site system

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Check supplier documentation	1.1. Supplier documentation is checked against order according to standard operating procedures.
2. Confirm the quality and quantity of received goods	2.1. The quality and quantity of goods are checked against order and supplier documentation. 2.2. Incorrect and damaged goods are identified and appropriate action is taken to standard operating procedures.
3. Arrange unloading of goods	3.1. Goods requiring special unloading procedures are identified. 3.2. Goods are unloaded using manual handling or appropriate lifting equipment. 3.3. Carrier or supplier documentation is signed or processed according to standard operating procedures.
4. Prepare, locate and store received goods	4.1. Goods are prepared for storage according to standard operating procedures. 4.2. Signs, codes or labels are applied according to standard operating procedures. 4.3. Inventory records documentation is completed. 4.4. Storage location is identified. 4.5. Goods are stored in correct location using appropriate materials handling techniques.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting information on job instructions, orders, supplier documents, signs, codes, labels and other applicable reference documents
- checking orders, quantities, descriptions and supplier documentation
- maintaining goods inwards documentation
- manual handling within the scope of this unit

REQUIRED SKILLS AND KNOWLEDGE

- selecting and using appropriate lifting equipment
- operating lifting equipment for goods inwards
- selecting storage procedures and processes, including labelling
- entering information onto manual and electronic workplace documents

Required knowledge

Look for evidence that confirms knowledge of:

- relevant legislation, regulations and codes
- checking and recording processes and procedures
- handling of hazardous goods
- storage procedures and processes, including labelling
- safe work practices and procedures
- hazards and control measures associated with undertaking warehouse receipt processes

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to undertake warehouse receipt processes. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, i.e. the candidate is not in productive work, an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with warehouse receipt processes or other units requiring the exercise of the skills and knowledge covered by this unit.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Arrange and consolidate orders	1.1.Packed orders are consolidated into customer or carrier batches according to standard operating procedures. 1.2.Consolidated goods are placed into correct dispatch area.
2. Prepare for dispatch of goods	2.1.Goods are packed, shrink-wrapped and/or palletised. 2.2.Goods are labelled and appropriate documentation is attached according to standard operating procedures. 2.3.Goods are placed in dispatch area ready for loading according to pick-up schedule and carrier requirements.
3. Dispatch goods	3.1.Carrier and customer documentation is checked. 3.2.Loading and transportation requirements are accurately communicated to driver and received from the driver. 3.3.Goods are loaded onto vehicle using appropriate materials handling techniques and devices. 3.4.Inventory records/documentation is completed according to requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting information on job instructions, orders, supplier documents, signs, codes, labels and other applicable reference documents
- checking orders, quantities, descriptions and supplier documentation
- packing, shrink-wrapping and/or palletising goods for dispatch
- maintaining dispatch documentation
- manual handling
- selecting and using lifting equipment appropriate to the load
- selecting dispatch procedures and processes, including labelling
- entering information onto manual and electronic workplace documents

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

Look for evidence that confirms knowledge of:

- relevant legislation, regulations and codes
- checking and recording processes and procedures
- handling of hazardous goods, storage procedures and processes, including labelling
- safe work practices and procedures
- hazards and control measures associated with undertaking warehouse dispatch processes

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Packed

- Wrapping, shrink wrapping, wrapping in bubble wrap, polystyrene packing, pallets, crates/boxes and others
- Sealing such as packing tape, banding, boxes, pallet racking

Labelled

Labelling meets requirements of dangerous goods legislation acts and regulations, storage of chemicals/poisons, industry codes of practice, environmental codes etc.

Documentation

Invoice, carrier or supplier documentation

Loading

Special loading procedures may be required with respect to hazardous goods, chemicals/poisons, etc. and for goods where size, shape, fragility require special procedures

Materials handling techniques and devices

Hand trolleys, wheelbarrows, motorised/hand pallet trucks (not sit on), hand carts, dedicated production or process lifting equipment such as baskets, spreader bars, cradles or the like attached to lifting equipment etc.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Monitor warehouse record keeping processes	1.1. Monitoring procedures are developed for requisition, purchase, shipping and invoice documentation. 1.2. Discrepancy reporting procedures are established for warehouse and other personnel in accordance with standard operating procedures. 1.3. Audit and archive procedures are followed according to standard operating procedures.
2. Supervise production of inventory system reports	2.1. Regular inventory reports are prepared in accordance with standard operating procedures. 2.2. Special stock level and other inventory reports are prepared as required. 2.3. Adjustments to inventory reporting procedures are made to meet internal and external customer requirements.
3. Analyse inventory reports	3.1. Reconciliation of inventory records against production or purchase of sales records is undertaken in accordance with standard operating procedures. 3.2. Major trends not requiring sophisticated statistical analysis are identified. 3.3. Inventory system relationship to manufacturing process is understood.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- producing, interpreting and analysing information on requisition, purchase, sales, shipping and invoice documentation, inventory records/reports, discrepancy reports, lists and other applicable reference documents
- accessing/managing manual and electronic information
- undertaking numerical operations and calculations
- organising and analysing inventory information
- communicating with staff about systems

REQUIRED SKILLS AND KNOWLEDGE

- monitoring warehouse documentation
- reconciling inventory records
- developing inventory monitoring/discrepancy procedure

Required knowledge

Look for evidence that confirms knowledge of:

- inventory systems for example JIT, KANBAN, MRP2
- quality procedures
- monitoring and discrepancy processes and procedures
- warehouse organisation principles
- storage of hazardous materials
- auditing procedures
- safe work practices and procedures
- hazards and control measures associated with managing warehouse inventory systems
- relationship of manufacturing system to inventory process
- techniques for developing inventory monitoring and discrepancy procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to manage a warehouse inventory system. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan stocktake	1.1. Inventory lists are prepared and distributed. 1.2. Warehouse and/or production areas are allocated to each individual or team assisting in stocktake.
2. Brief participants in stocktake	2.1. Clear directions and appropriate documentation and equipment are provided to each individual or team participating in stocktake.
3. Generate stocktake reports	3.1. Written or computer reports are collected from individuals or teams on stock counts. 3.2. Inventory data is confirmed to match stock levels. 3.3. Stock discrepancy report is prepared and distributed according to standard operating procedure.
4. Adjust inventory documentation	4.1. Inventory documentation is reconciled to match physical stock in accordance with regulatory and operating procedures. 4.2. Stocktake information is reconciled with audit requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • preparing inventory lists and instructions on procedures to be followed • entering inventory information onto manual and electronic proformas and standard workplace forms • analysing and reporting results of stocktakes by manual and electronic means • performing calculations related to reconciling stocktake records • using communication skills to effectively instruct/direct stocktake participants
Required knowledge
Look for evidence that confirms knowledge of: <ul style="list-style-type: none"> • relevant inventory systems and procedures • recording systems and procedures

REQUIRED SKILLS AND KNOWLEDGE

- analysis and reporting methods/procedures
- audit processes
- safe work practices and procedures
- hazards and control measures associated with organising and leading stocktakes

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to organise and lead a stocktake. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with organising and leading a stocktake or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Directions	Oral or written instructions, methodology, how to report discrepancies or damaged stock, timelines
Equipment	Calculators, scanners and portable computers
Inventory documentation	Reports on actual stock, damaged stock, out of date stock and discrepancies

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Allocate/coordinate work activities in receival and/or dispatch areas	1.1. Equipment and/or staff are allocated to meet receival and/or dispatch schedules. 1.2. Relevant documentation is distributed and collected. 1.3. Contingency procedures are developed and implemented for receival and dispatch problems.
2. Maintain stock receival and/or dispatch system	2.1. Information is provided and extracted accurately according to standard operating procedures. 2.2. Receival and dispatch reports are produced as required. 2.3. Modifications to dispatch and/or receival system are made according to standard operating procedures. 2.4. Problems with receival and/or dispatch system are identified and reported according to standard operating procedures. 2.5. Participate in continuous improvement of dispatch and/or receival systems.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- coordinating staff and equipment for receival and dispatch
- planning and sequencing operations/activities
- communicating with management and staff
- solving warehouse problems
- producing stock receival and dispatch reports
- developing and implementing procedures
- accessing, entering and maintaining information on manual and electronic records/files and forms
- checking and clarifying task-related information

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Look for evidence that confirms knowledge of:

- receipt and dispatch systems
- legislation, regulations, and codes of practice
- inventory systems and procedures
- auditing processes
- quality systems
- warehousing systems
- safe work practices and procedures
- continuous improvement processes and procedures
- hazards and control measures associated with organising and maintaining a warehouse stock receipt and/or dispatch system

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to organise and maintain a warehouse stock receival and/or dispatch system including allocating/coordinating work activities. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Order tools/tooling	1.1. Tools/tooling requirements are identified and consolidated from order documentation, drawings, and liaison with trade and production personnel according to standard operating procedures. 1.2. Appropriate tools/tooling are identified from supplier catalogues and manuals, including correct size, hardness, quality etc. 1.3. Order is placed according to standard operating procedures.
2. Receive tool/tooling orders	2.1. Orders are received from main receipt warehouse or direct from supplier according to standard operating procedures. 2.2. Orders are unpacked and stock placed in correct location. 2.3. Items are checked and confirmed against order. 2.4. Incorrect items are processed to standard procedures.
3. Maintain tooling	3.1. Tools/tooling are cleaned and protected as necessary. 3.2. Supplies are monitored to ensure maintenance of contingency stock.
4. Distribute tools/tooling	4.1. Tools/tooling are issued to users according to standard operating procedures. 4.2. Enterprise documentation procedures are followed. 4.3. Procedures against unauthorised use of tools/tooling are established and followed.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- maintaining documentation
- undertaking stock control
- performing manual handling

REQUIRED SKILLS AND KNOWLEDGE

- packaging and storing engineering specialist tools and tooling
- cleaning and maintaining engineering tools/tooling
- interpreting specifications, data sheets, drawings, supplier catalogues and manuals for relevant tools/tooling information
- checking and clarifying information

Required knowledge

Look for evidence that confirms knowledge of:

- types and applications of engineering tooling and specialist engineering tools
- methods of storing and protecting tools/tooling
- ordering procedures
- inventory systems
- procedures for protecting store against unauthorised entry and use of tools/tooling
- safe work practices and procedures
- hazards and control measures associated with tool store activities
- use and application of personal protective equipment

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to undertake tool store procedures in an engineering setting. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify programs appropriate to purpose	<p>1.1.The range of programs available on the system is identified.</p> <p>1.2. Correct selection of word processing, spreadsheet, database or special purpose program is made.</p>
2. Manipulate data for analysis and/or report generation	<p>2.1.Data is manipulated through merging of files, transfer of information between programs or other strategies to generate desired outcome.</p>
3. Edit program	<p>3.1.Categories in warehouse information system are created/deleted to cater for changes in stock lines.</p> <p>3.2.Report formats are generated and/or modified.</p> <p>3.3.Access control requirements are identified.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- selecting and accessing program appropriate to task
- performing data input and manipulation, editing programs, and formatting reports and production
- identifying required program outputs
- checking and clarifying task-related information
- generating and modifying reports
- producing accurate records related to the warehouse operations

Required knowledge

Look for evidence that confirms knowledge of:

- application, features/functions and operation of relevant computer programs
- stock control systems
- recording requirements of enterprise
- access control requirements
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine lifting and loading requirements	1.1. Load is identified and checked against safe working load and final position/location and/or relevant specifications or regulations. 1.2. Special handling requirements of load are identified, if applicable. 1.3. Load is lifted correctly and placed in final position/location to achieve specified balance of load.
2. Work in areas of restricted movement or conditions of restricted visibility	2.1. Load is collected and manoeuvred without damage to load or collision with obstacles according to standard operating procedures.
3. Identify and carry loads that require special care	3.1. Loads requiring special care are identified. 3.2. Loads are carried in accordance with special requirements of product according to standard operating procedures and/or regulations.
4. Operate forklifts in special traffic conditions	4.1. Forklifts are operated in areas of heavy traffic. 4.2. Forklifts are operated over difficult or uneven surfaces. 4.3. Forklifts are operated in areas shared with the general public, as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading/interpreting specifications, regulations, load charts and standard operating procedures, including simple drawings
- selecting appropriate load shifting device
- identifying safe working loads
- identifying/managing special conditions and equipment
- operating in a complex mobile plant environment
- communicating with personnel on movement/location

REQUIRED SKILLS AND KNOWLEDGE

- following oral instructions

Required knowledge

Look for evidence that confirms knowledge of:

- pre-operational checks
- licensing requirements and appropriate permits
- load protection
- operational environment
- methods and techniques for loads requiring special care
- hazards and control measures associated with this unit
- use and application of personal protective equipment
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Conduct routine operation and safety checks of load shifting equipment	<p>1.1. Operational principles of fixed/moveable load shifting equipment are understood.</p> <p>1.2. Routine pre-operational checks are undertaken in accordance with manufacturers' specifications and regulatory safety requirements.</p> <p>1.3. Non-compliance with specifications is reported using standard operating procedures.</p>
2. Pick up loads	<p>2.1. Appropriate load shifting device is selected for the load and shifting requirements.</p> <p>2.2. Load shifting device is operated within design specifications and safe working load.</p> <p>2.3. Load is lifted/rolled, ensuring balance, vision of operation, safety of personnel and protection of load.</p>
3. Shift loads	<p>3.1. Where required, load is moved at an appropriate and safe speed using a safe and efficient path.</p> <p>3.2. Path of movement is monitored for obstacles and hazards during shifting process.</p>
4. Place loads	<p>4.1. Loads are lowered at an appropriate and safe rate.</p> <p>4.2. Loads are placed to ensure stability, protection of material and avoidance of hazards on site.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and interpreting routine information on instructions, specifications, load charts and standard operating procedures. May include simple drawings
- selecting and operating appropriate load shifting device
- communicating with others about movement of equipment
- checking and clarifying task-related information
- identifying the safe working load in relation to the capacity of the crane and lifting gear
- following oral instruction

REQUIRED SKILLS AND KNOWLEDGE

- safely lifting, moving and placing loads

Required knowledge

Look for evidence that confirms knowledge of:

- operational principles of fixed/moveable load shifting equipment
- pre-operational checks
- loads and lifting attachments
- load chart and safe working loads (SWL)
- awareness of licensing requirements
- load protection
- operational environment
- appropriate permits
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with operating fixed/moveable load shifting equipment

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to operate fixed/moveable load shifting equipment to move and place loads.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, i.e. the candidate is not in productive work, an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with operating fixed/moveable load shifting equipment or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

assessment

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Fixed/moveable load shifting equipment

- Pendant cranes
- Yard, workshop and travelling overhead cranes
- Monorail hoists and chain blocks
- Pivoting and slewing jibs rails (manual, air or electric etc.)

Pre-operational checks

Hazards warning lights, wire rope, lifting blocks, compass, operation of controls, safe working load marked as determined by manufacturers' specifications and standard operating procedures

Obstacles and hazards

Overhead cables, electrical hazards (live rails), personnel, obstacles (fixed and moveable), swing of the load and failure of slings

MEM11023A Operate a bridge and gantry crane

Modification History

Not applicable.

Unit Descriptor

This unit of competency applies to the operation of bridge and gantry cranes that are operated from a permanent cabin/control station on the crane.

Application of the Unit

This unit applies to operation of a bridge and gantry crane in a manufacturing related environment, such as a factory, raw material or finished goods store. It covers safe and efficient operation of the crane and applies where the operator has responsibility to plan the work, transfer loads as well as the conduct of routine checks and shutting down and securing of the crane.

This unit does not cover the bridge and gantry crane types that are controlled from a location remote to a permanent cabin/control station on the crane and that have three or less powered operations, that is hoist/raise and lower in one operation. It also does not cover the slinging or rigging of loads.

While this unit applies to work covered by licensing requirements, it also includes other manufacturing related skills, such as integrating crane operations with production, jobbing, maintenance or warehouse operations.

This unit is not recognised by regulators for licensing requirements. In order to satisfy licensing requirements, the imported unit TLILIC3003A Licence to operate a bridge and gantry crane will be required.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

- | | |
|--------------------------|--|
| 1 Plan work | 1.1 Load transfer authorisation is obtained, including lift time and load destination |
| | 1.2 Potential hazards for load lift and transfer are identified |
| | 1.3 Hazard control measures are identified consistent with appropriate standards to ensure the safety of personnel and equipment |
| | 1.4 Weight (mass) of the load is estimated in consultation with associated personnel |
| | 1.5 Appropriate paths for the movement of loads in the work area are determined |
| | 1.6 Crane capacity is checked as appropriate to the load |
| | 1.7 Appropriate communication methods are identified with associated personnel |
| 2 Conduct routine checks | 2.1 Appropriate hazard prevention/control measures are applied to the work area according to procedures |
| | 2.2 Crane is accessed in a safe manner |
| | 2.3 Crane is visually checked for any damage or defects |
| | 2.4 All signage and labels are visible and legible according to the appropriate standard |
| | 2.5 Routine pre-operational crane checks are carried out according to procedures |
| | 2.6 All controls are located and identified |

- 2.7 Crane service logbook is checked for compliance
 - 2.8 Crane is started according to procedures and checked for any abnormalities
 - 2.9 Crane safety devices are tested according to procedures
 - 2.10 Post-start operational checks are carried out according to procedures
 - 2.11 All communication equipment is checked for serviceability
 - 2.12 All damage and defects are reported and recorded according to procedures, and appropriate action is taken
- 3 Transfer loads
- 3.1 Hoist block is positioned over load following directions from associated personnel
 - 3.2 Test lift is carried out according to procedures
 - 3.3 Loads are transferred along planned path
 - 3.4 All crane movements are according to procedures and the appropriate standard
 - 3.5 Communication signals are interpreted correctly according to procedures and the appropriate standard
 - 3.6 Crane is operated according to procedures
 - 3.7 Load movements are monitored constantly ensuring safety to personnel and load, and structural stability
 - 3.8 Unplanned and/or unsafe situations are responded to in line with procedures
- 4 Shut down and secure crane
- 4.1 Crane is parked according to procedures
 - 4.2 Crane and equipment are stowed and secured according to procedures and the appropriate standard
 - 4.3 All relevant motion locks and brakes are applied, where applicable
 - 4.4 Crane is shut down according to procedures
 - 4.5 Routine post-operational crane checks are carried out according to procedures
 - 4.6 Hazard prevention/control measures are removed, where applicable

- 4.7 All damage and defects are reported and recorded according to procedures, and appropriate action is taken

Required Skills and Knowledge

Required knowledge includes:

- appropriate mathematical procedures for estimation of loads
- bridge and gantry crane characteristics
- federal, state or territory occupational health and safety (OHS) legislation, standards and codes of practice relevant to the full range of processes for the crane class
- emergency procedures, including escape routes
- the hierarchy of hazard identification and control
- organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- typical hazards in manufacturing related environments, including:
 - process areas that must be avoided, ceased or special procedures adopted before load transfers occur, including welding, machining, melting and casting
 - transfers across areas frequented by personnel, including workstations and walkways
 - hazardous loads, including hot or liquid metals, chemicals, heavy and non-standard shaped loads
- procedures for the recording, reporting and maintenance of workplace records and information
- typical routine problems encountered in the operation of the crane and equipment and adjustments required for correction

Required skills include:

- accurately recording and maintaining information relating to bridge and gantry crane operations
- using communication techniques in the workplace, including hand signals, whistles and two-way radios
- using interpersonal and communication skills at a level sufficient to communicate with other site personnel
- operating a bridge and gantry crane, including all functions to their maximum for the lifting and moving of loads to the maximum rated capacity, in conjunction with other associated personnel
- applying risk assessment and hazard control strategies, including hierarchy of control, as applied to the safe operation of the crane (particular awareness of the risks associated with the workplace, including location of utilities, such as overhead powerlines, other electrical cables, water and compressed air lines, access to cabin, location of equipment, fixtures and workstations, vehicles and clear access whilst travelling)
- planning load transfer paths for safety and efficiency in a manufacturing related environment
- using and interpreting crane manufacturer specifications and data, including maximum load information, to ensure the crane is not overloaded
- identifying problems and equipment faults and demonstrating appropriate response procedures
- reading and comprehending manufacturer instructions, procedures and safety signs

Evidence Guide

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to operate a bridge and gantry crane to industry and enterprise standards, manufacturer specifications, and in accordance with safety regulations and procedures.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • comply with OHS licensing legislation • communicate and work safely with others in the work area • apply risk assessment and management procedures (particular awareness of the risks associated with overhead powerlines/electrical cables, access to cabin, other personnel and equipment in the work area, including vehicles and clear access whilst travelling) • conduct pre- and post-operational checks of the bridge and gantry crane • operate a bridge and gantry crane, including all functions to their maximum capacity in the lifting and moving of loads to the maximum rated capacity, in conjunction with other associated personnel • apply appropriate mathematical procedures for estimation of loads.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • Assessment must be undertaken either in the workplace or in a realistically simulated workplace setting. • Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace. • Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints. • Assessment is to comply with relevant appropriate standard requirements. • Applicants must have access to: <ul style="list-style-type: none"> • personal protective equipment for the purpose of the Performance Assessment • appropriate bridge and gantry crane and associated equipment in safe condition

	<ul style="list-style-type: none"> • suitable loads as specified by the endorsed Assessment Instrument • communication equipment (e.g. two-way radios and whistles) • other associated personnel to sling and direct the loads.
Method of assessment	<ul style="list-style-type: none"> • The use of 'simulators' in the assessment of this unit of competency is not acceptable. • Assessment may be in conjunction with the assessment of other units of competency. • Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
Guidance information for assessment	

Range Statement

Hazards	<p>Hazards may include, but are not limited to:</p> <ul style="list-style-type: none"> • ground stability (e.g. ground condition or slopes for load placement) • overhead hazards (e.g. powerlines and service pipes) • insufficient lighting • traffic (e.g. pedestrians, vehicles and plant) • environmental conditions (e.g. dust, wind, lightning and storms) • other specific hazards (e.g. dangerous materials)
Hazard control measures	<p>Hazard control measures refer to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls.</p> <p>It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:</p> <ol style="list-style-type: none"> 1) elimination 2) substitution 3) isolation 4) engineering control measures 5) using safe work practices 6) personal protective equipment
Appropriate standards	<p>Appropriate standards may include, but are not limited to:</p> <ul style="list-style-type: none"> • codes of practice • legislation • Australian standards • crane manufacturer specifications • industry and workplace standards, where applicable
Appropriate paths	<p>Appropriate paths are paths that:</p> <ul style="list-style-type: none"> • ensure clearances of fixed machinery, equipment, fixtures and work in progress • minimise transfers across workstations and walkways • minimise disruption to work unrelated to the load transfer • minimise transfer time and distance subject to safety and disruption assessments
Associated personnel	<p>Associated personnel may include, but are not limited to:</p> <ul style="list-style-type: none"> • riggers • doggers • supervisory and expert personnel to advise on any

	special features of the load or transfer
Crane	<p>Crane may include:</p> <ul style="list-style-type: none"> • bridge crane, a bridge beam mounted at each end to an end carriage, capable of travelling along elevated runways and having one or more hoisting mechanisms arranged to traverse across the bridge • gantry crane, a bridge beam, supported at each end by legs mounted on end carriages, capable of travelling on supported surfaces or deck levels, whether fixed or not and which has a crab with one or more hoisting units arranged to travel across the bridge <p>Bridge and gantry:</p> <ul style="list-style-type: none"> • excluded are cranes of the type that are controlled from a location remote to a permanent cabin/control station on the crane and that have three or less powered operations, that is hoist raise and lower is one operation
Communication methods	<p>Communication methods may include, but are not limited to:</p> <ul style="list-style-type: none"> • verbal and non-verbal language • written instructions • signage • hand signals • listening • questioning to confirm understanding • appropriate worksite protocol
Signage and labels	<p>Signage and labels may include, but are not limited to:</p> <ul style="list-style-type: none"> • crane data plates/labels • load charts • crane decals • control labels
Procedures	<p>Procedures may include, but are not limited to:</p> <ul style="list-style-type: none"> • manufacturer guidelines (instructions, specifications or checklists) • industry operating procedures • workplace procedures (work instructions, operating procedures and checklists)
Controls	<p>Controls may include, but are not limited to:</p> <ul style="list-style-type: none"> • long travel levers • cross travel levers • hoisting and lowering levers • rotating hook levers, where applicable

Service logbook	Service logbook may include, but is not limited to: <ul style="list-style-type: none"> • any logbook • service book • history record system where the service and maintenance history is kept
Safety devices	Safety devices may include, but are not limited to: <ul style="list-style-type: none"> • horns/sirens • audible and visual motion devices • operator restraint devices, where applicable • lights
Communication equipment	Communication equipment may include, but is not limited to: <ul style="list-style-type: none"> • two-way radios • whistles • bells • buzzers
Hazard prevention/control measures	Hazard prevention/control measures may include, but are not limited to: <ul style="list-style-type: none"> • safety tags on electrical switches/isolators • insulated powerlines • safety observer used inside exclusion zone • disconnected power • traffic barricades and controls • pedestrian controls • movement of obstructions • personal protective equipment • adequate illumination
Test lift	Test lift means the load is lifted just clear of the lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure that: <ul style="list-style-type: none"> • near capacity loads do not overload the crane • loads of unusual shape or weight distribution are correctly slung • load measuring equipment can be used to verify the calculated weight of the load • all crane equipment is functioning properly • adjustments to the slinging can be made in a safe manner
Relevant crane movements	Relevant crane movements may include, but are not limited to: <ul style="list-style-type: none"> • hoisting (raise and lower) • traversing (moving hoisting mechanisms along

	bridge) <ul style="list-style-type: none"> travelling (at minimum speed, gentle acceleration and braking, to minimise load swing)
Communication signals	Communication signals may include, but are not limited to: <ul style="list-style-type: none"> stop - hand stop - whistle hoist up - hand hoist up - whistle hoist down - hand hoist down - whistle traverse - hand travel - hand creep - hand
Unplanned and/or unsafe situations	Unplanned and/or unsafe situations may include, but are not limited to: <ul style="list-style-type: none"> failure/loss of control (e.g. brakes and steering) failure of equipment (e.g. hydraulic system) environmental conditions (e.g. wind, lightning and storms)
Shutdown	Shutdown may include, but is not limited to: <ul style="list-style-type: none"> retracting hoist rope and hook block travelling crane to park position removing key from control panel, where applicable locking and securing cabin, where applicable isolating power to crane

MEM11024A Undertake basic rigging

Modification History

Not applicable.

Unit Descriptor

This unit of competency applies to basic rigging in a manufacturing or related enterprise. It includes rigging work associated with movement of plant and equipment and temporary or permanent steel structures, such as platforms, access ways and ladders, hoppers and bins, and conveyors.

Application of the Unit

This unit requires the learner to be able plan the work, select and inspect equipment, set up tasks, and erect and/or dismantle the required equipment or structures. Work will often be required to be undertaken with other employees especially tradespersons, bridge and gantry and mobile crane drivers, and doggers.

This unit does not cover the slinging of loads which is covered in MEM11004B Undertake dogging, or the skills associated with fabrication and welding of metal structures or components. Where erection, alteration or dismantling of scaffolding is undertaken, the units MEM11001C Erect/dismantle scaffolding and equipment, or MEM11002C Erect/dismantle complex scaffolding and equipment, should be selected.

While this unit applies to work covered by licensing requirements, it also includes other manufacturing related skills, such as integrating rigging with welding, fabrication, production, jobbing, maintenance or warehouse operations.

This unit is not recognised by regulators for licensing requirements. In order to satisfy licensing requirements, the imported unit CPCCLRG3001A Licence to perform rigging basic level will be required.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

- | | |
|-----------------------|--|
| 1 Assess rigging site | <p>1.1 Rigging to be undertaken is identified and assessed from supervisor's instructions, drawings and other appropriate sources</p> <p>1.2 Equipment and processes in close proximity to rigging site are identified and need for protection, shielding or closure during rigging identified with appropriate personnel</p> <p>1.3 Other potential workplace hazards and appropriate hazard control measures are identified</p> <p>1.4 Site information is obtained</p> <p>1.5 Rigging equipment and associated equipment, including safety equipment available on site, is identified</p> |
| 2 Plan rigging work | <p>2.1 All forces and loads associated with erecting and dismantling structures and associated equipment are considered in consultation with appropriate personnel</p> <p>2.2 Required safety equipment for rigging task is identified</p> <p>2.3 Procedures for minimising disruption to other site processes are considered</p> <p>2.4 Appropriate communication methods are identified with appropriate personnel</p> |

- 3 Select and inspect equipment
 - 3.1 Rigging equipment and associated equipment is selected and inspected according to procedures and the appropriate standard
 - 3.2 Required safety equipment is selected and inspected according to procedures
 - 3.3 All defective rigging equipment, associated equipment and safety equipment is isolated, reported and recorded according to procedures
 - 3.4 Where applicable, communication equipment is selected and inspected for serviceability
- 4 Set up rigging task
 - 4.1 Appropriate hazard prevention or control measures are applied to the work area according to procedures
 - 4.2 Ground suitability is inspected and checked where appropriate
 - 4.3 Site information is reviewed and interpreted with appropriate personnel
 - 4.4 All forces and loads associated with erecting and dismantling structures and associated plant are determined and compared with planned forces and loads in consultation with appropriate personnel
 - 4.5 Required adjustments for actual forces and loads are made to rigging plan, rigging equipment, associated equipment and safety equipment
 - 4.6 Personal safety equipment is fitted and worn correctly
 - 4.7 Rigging equipment and associated plant are positioned for work application and stability according to procedures
 - 4.8 Methods of applying temporary connections using fibre rope are applied according to procedures and the appropriate standard
- 5 Erect, move or dismantle structures, plant or equipment
 - 5.1 Structures, plant or equipment are erected, moved or dismantled according to procedures and site information
 - 5.2 Stability of structures, plant or equipment is maintained during erection, movement or dismantling
 - 5.3 Where height work is required, safety procedures are followed, including safe and effective use of safety equipment
 - 5.4 Appropriate communication methods and communication

- equipment are used to coordinate the rigging tasks
- 5.5 Associated plant and equipment are used according to procedures and the appropriate standard
 - 5.6 Temporary guys, ties, propping and shoring, including flexible steel wire rope and tubing, are connected where required
 - 5.7 Procedures are followed to minimise disruption to other site operations
 - 5.8 The completed task is inspected according to the appropriate standard
- 6 Finalise rigging task
- 6.1 Approval for completion of rigging task is obtained according to site or enterprise procedures
 - 6.2 Excess materials are removed from the work area, where applicable
 - 6.3 Rigging equipment, associated equipment, safety equipment and associated plant used during rigging task are inspected for damage and defects
 - 6.4 All defective rigging equipment, associated equipment, associated plant and safety equipment are isolated reported and recorded according to procedures
 - 6.5 Rigging equipment and associated equipment are stored according to procedures and the appropriate standard
 - 6.6 Hazard prevention/control measures are removed, where appropriate

Required Skills and Knowledge

Required knowledge includes:

- appropriate mathematical procedures for estimation and measurement of loads
- principles relating to all plant, equipment and structural stability
- types and functions of rigging, safety and associated equipment, including an understanding of their limitations
- organisational and workplace standards, requirements, policies and procedures for rigging
- the hierarchy of hazard identification and control
- sources of specialist knowledge and support in typical manufacturing sites, including engineers, technicians, tradespersons, and supervisors and managers
- relevant federal, state or territory and local government occupational health and safety (OHS) legislation, standards and codes of practice for undertaking rigging activities
- inspection and maintenance requirements of a wide range of appropriate plant and equipment in line with Australian standards or manufacturer specifications
- minimum clearance distances from powerlines or electrical equipment as determined by the relevant state or territory authority or electrical supply authority
- estimation of ground bearing pressures of the full range of soil types and associated ground conditions for setting up plant and equipment

Required skills include:

- calculating safe working load (SWL) and working load limit (WLL)
- erecting and dismantling, levelling, plumbing and stabilising associated plant, equipment and structures
- working safely at heights, including the correct application of safety equipment
- accurately interpreting basic drawings, sketches and site plans
- applying methods for making temporary connections of ropes using fibre and synthetic types
- applying methods of splicing and whipping fibre and synthetic ropes
- correctly applying and using all rigging and associated equipment
- working with tradespersons on manufacturing related installation and removal of structures, plant and equipment
- applying risk assessment and hazard control strategies, including hierarchy of control
- interpreting manufacturer specifications for all plant and equipment use in rigging operations
- using interpersonal and communication skills at a level sufficient to determine site/workplace requirements, including the relevant communication methods and equipment
- verifying problems and equipment faults and demonstrate appropriate response

Evidence Guide

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to undertake rigging to industry and enterprise standards, manufacturer specifications, and in accordance with safety regulations and procedures.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • comply with OHS licensing legislation • effectively communicate and work safely with others in the work area, including tradespersons, doggers and crane operators • effectively conduct risk assessment and management procedures • effectively complete the following tasks: <ul style="list-style-type: none"> • inspection of relevant plant and equipment • installation of a fall arrest system (static line) • use of a safety harness/fall arrest system • installation of a safety net • installation safety screens • work safely at heights • erect and dismantle structures, • move and correctly locate plant and equipment • effectively demonstrate the following knots, bends and hitches: <ul style="list-style-type: none"> • sheet bend • becket hitch • running bowline • double bowline • effectively demonstrate the following splices and whippings: <ul style="list-style-type: none"> • eye splice • back splice • short splice • sail makers whipping • common whipping • west countryman's.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting. • Assessors must ensure that the assessment in the workplace is organised to ensure that all the required

	<p>equipment and materials and a suitable working area is made available to suit the assessment and the workplace.</p> <ul style="list-style-type: none"> • Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints. • Assessment is to comply with the requirements of any relevant standards or operating procedures for basic rigging. • Applicants must have access to: <ul style="list-style-type: none"> • personal protective equipment for the purpose of the Performance Assessment • appropriate safety equipment in safe condition • appropriate rigging equipment, associated equipment associated plant in safe condition as described in the endorsed Assessment Instrument • communication equipment (e.g. two-way radios) where applicable • appropriate materials as required for safe erection of structures • appropriate materials for conducting fibre rope slicing, whipping, knots, bends and hitches.
Method of assessment	<ul style="list-style-type: none"> • The use of 'simulators' in the assessment of this unit of competency is not acceptable. • Assessment may be in conjunction with the assessment of other units of competency. • Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

MEM11025A Operate a non-slewing mobile crane of greater than three tonnes capacity

Modification History

Not applicable.

Unit Descriptor

This unit of competency applies to the operation of non-slewing mobile cranes of greater than three tonnes capacity that incorporate a boom or jib. The mobile cranes may be articulated or non-articulated truck or locomotive cranes.

Application of the Unit

This unit applies to the operation of non-slewing mobile cranes of over three tonnes capacity in a manufacturing environment. The cranes are often referred to as yard cranes and require the crane to be moved for positioning in lifting and lowering loads. The unit can also be used to cover the operation of a non-slewing crane mounted on a self-propelled or locomotive drawn rail vehicle inside a large manufacturing enterprise.

The unit requires the operator to plan the work, conduct routine checks, set up the crane and coordinate with other employees (including truck drivers, production staff and stores staff) transfer loads, and shut down and secure the crane.

This unit is not recognised by regulators for licensing requirements. In order to satisfy licensing requirements, the imported unit TLILIC3006A Licence to operate a non-slewing mobile crane (greater than three tonnes capacity) will be required.

Elements and Performance Criteria

- | | |
|--------------------------|--|
| 1 Plan work | 1.1 Potential workplace hazards are identified |
| | 1.2 Hazard control measures are identified consistent with appropriate standards to ensure the safety of personnel and equipment |
| | 1.3 Requirement for load lifting and/or transfer is obtained according to procedures |
| | 1.4 The weight of the load is identified and estimated in consultation with associated personnel |
| | 1.5 Crane is assessed as appropriate to the load and workplace conditions |
| | 1.6 An appropriate path for the movement of loads in the work area is inspected and determined |
| | 1.7 Appropriate communication methods are identified with associated personnel |
| 2 Conduct routine checks | 2.1 Crane is visually checked for any damage or defects |
| | 2.2 Crane is accessed in a safe manner |
| | 2.3 All signage and labels are visible and legible according to the appropriate standard |
| | 2.4 Routine pre-operational crane checks are carried out according to procedures |
| | 2.5 All controls are located and identified |
| | 2.6 Crane service logbook is checked for compliance |
| | 2.7 Crane is started according to procedures and checked for any abnormal noises |
| | 2.8 All crane safety devices are tested according to procedures |

- 2.9 Post-start operational checks are carried out according to procedures
- 2.10 All communication equipment is checked for serviceability
- 2.11 All damage and defects are reported and recorded according to procedures, and appropriate action is taken
- 3 Set up crane
 - 3.1 Ground suitability is checked
 - 3.2 Crane is driven to the work area according to procedures
 - 3.3 Crane is positioned for work application and stability according to procedures
 - 3.4 Appropriate crane configuration for work task is determined according to procedures
 - 3.5 Boom or jib and counterweight configuration data is input into the crane computer, where applicable
 - 3.6 Appropriate hazard prevention or control measures are applied to the work area according to procedures
 - 3.7 All communications equipment is tested for functionality
- 4 Lift and transfer load
 - 4.1 Lifts are determined within the capacity of the crane and environmental conditions
 - 4.2 Boom or jib and hoist block is positioned over load following directions from associated personnel
 - 4.3 Test lift is carried out according to procedures
 - 4.4 Loads are lifted and where required transferred or mobiled using all relevant crane movements according to procedures and the appropriate standard
 - 4.5 Appropriate path is followed where load is transferred or mobiled
 - 4.6 All required communication signals are correctly interpreted according to procedures and the appropriate standard
 - 4.7 Load movement is monitored constantly ensuring safety to personnel and stability of load and crane
 - 4.8 Unplanned and unsafe situations are responded to in line with procedures

- 5 Shut down and secure crane
 - 5.1 Crane boom or jib and associated equipment is stowed and secured according to procedures and the appropriate standard
 - 5.2 Relevant motion locks and brakes are applied, where applicable
 - 5.3 Outriggers/stabilisers are stowed and secured according to procedures, where applicable
 - 5.4 Crane is shut down according to procedures
 - 5.5 Routine post-operational crane checks are carried out according to procedures
 - 5.6 Plates or packing are stowed and secured, where applicable
 - 5.7 All damage and defects are recorded and reported according to procedures, and appropriate action is taken

Required Skills and Knowledge

Required knowledge includes:

- appropriate mathematical procedures for estimation and measurement of loads
- federal, state or territory occupational health and safety (OHS) legislation, standards and codes of practice relevant to the full range of processes for the crane class
- crane characteristics and capabilities, including use of load charts, to allow the configuration of the crane to suit the range of loads
- the hierarchy of hazard identification and control
- organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- procedures for the recording, reporting and maintenance of workplace records and information
- typical routine problems encountered in the operation of the crane and equipment and adjustments required for correction

Required skills include:

- accurately recording and maintaining information relating to crane operations
- using communication techniques in the workplace, including whistles, hand signals and two-way radios
- using interpersonal communication skills at a level sufficient to communicate with other site personnel
- assessing ground conditions to confirm that the site is suitable (e.g. firm, level and safe) to operate crane
- liaising with others to ensure crane working combines efficiently with other enterprise operations (e.g. production, receiving or despatch activities)
- operating crane, including all functions to their maximum extension in the lifting and moving of loads to the safe working rated capacity, in conjunction with other associated personnel
- undertaking mobile load transfers where load is lifted and transferred to a different location by the crane
- applying risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the crane, in particular, awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, crane tipping and demolition sites
- using and interpreting crane manufacturer specifications and data, including load charts, to enable the crane to be configured for the load
- verifying problems and equipment faults and demonstrating appropriate response procedures
- reading and comprehending manufacturer instructions, procedures and safety signs

Evidence Guide

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to operate a non-slewing mobile crane of greater than three tonnes capacity to industry and enterprise standards, manufacturer specifications, and in accordance with safety regulations and procedures.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • comply with OHS licensing legislation • communicate and work safely with others in the work area • apply risk assessment and management procedures (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, crane tipping, other vehicles and personnel) • operate a non-slewing mobile crane, including all functions to their maximum extension in the lifting and moving of loads to the safe working rated capacity of non-slewing mobile cranes (over three tonnes capacity), in conjunction with other associated personnel • use appropriate mathematical procedures for estimation of loads • conduct lifts and transfers to designated locations and via appropriate paths.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument. • Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting. • Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace. • Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints. • Assessment is to comply with relevant appropriate standard requirements. • Applicants must have access to:

	<ul style="list-style-type: none"> • personal protective equipment for the purpose of the Performance Assessment • appropriate non-slewing crane (greater than three tonnes) and associated equipment in safe condition • suitable loads as specified by endorsed Assessment Instrument • communication equipment (e.g. two-way radios and whistles) • other associated personnel to sling and direct the loads.
<p>Method of assessment</p>	<ul style="list-style-type: none"> • The use of ‘simulators’ in the assessment of this unit of competency is not acceptable. • Assessment may be in conjunction with the assessment of other units of competency. • Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.
<p>Guidance information for assessment</p>	

Range Statement

<p>Hazards</p>	<p>Hazards may include, but are not limited to:</p> <ul style="list-style-type: none"> • ground stability (e.g. ground condition, recently filled trenches and slopes) • overhead hazards (e.g. powerlines and service pipes) • insufficient lighting • traffic (e.g. pedestrians, vehicles and other plant) • fixed equipment, including machinery, tanks and conveyors • environmental conditions (e.g. wind, lightning and storms) • other specific hazards (e.g. dangerous materials)
<p>Hazard control measures</p>	<p>Hazard control measures refer to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls.</p> <p>It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:</p> <p>13) elimination 14) substitution 15) isolation 16) engineering control measures 17) using safe work practices 18) personal protective equipment</p>
<p>Appropriate path</p>	<p>An appropriate path is one which:</p> <ul style="list-style-type: none"> • maximises safety and stability during lifting and transferring, including mobile operation of the crane and depositing of the load • minimises disruption to other operations in the enterprise • without compromising safety, stability and avoidance of disruption, is the most efficient route for the transfer of the load
<p>Appropriate standards</p>	<p>Appropriate standards may include, but are not limited to:</p> <ul style="list-style-type: none"> • codes of practice • legislation • Australian standards • manufacturer specifications • enterprise and industry standards, where applicable

Associated personnel	Associated personnel may include, but are not limited to: <ul style="list-style-type: none"> • doggers • riggers • forklift and truck drivers • production and trades employees
Environmental conditions	Environmental conditions may include, but are not limited to: <ul style="list-style-type: none"> • wind • lightning • storms • poor light
Crane	Crane may include: <ul style="list-style-type: none"> • a crane (greater than three tonnes capacity) which meets the requirements of AS 1418 Set-2009 Cranes, hoists and winches Set • articulated type mobile cranes • locomotive hauled and self-propelled rail cranes
Communication methods	Communication methods may include, but are not limited to: <ul style="list-style-type: none"> • verbal and non-verbal language • written instructions • signage • hand signals • listening • questioning to confirm understanding • appropriate worksite protocol
Signage and labels	Signage and labels may include, but are not limited to: <ul style="list-style-type: none"> • crane data plates/labels • load charts • crane decals • control labels
Procedures	Procedures may include, but are not limited to: <ul style="list-style-type: none"> • manufacturer guidelines (instructions, specifications, operators manual or checklists) • industry operating procedures • workplace procedures (work instructions, operating procedures and checklists)
Controls	Controls may include, but are not limited to: <ul style="list-style-type: none"> • luffing levers • hoisting and lowering levers • slewing levers, including brake

	<ul style="list-style-type: none"> boom extension levers (where fitted)
Service logbook	<p>Service logbook may include, but is not limited to:</p> <ul style="list-style-type: none"> any logbook service book history record system where the service and maintenance history is kept
Crane safety devices	<p>Crane safety devices may include, but are not limited to:</p> <ul style="list-style-type: none"> horns/sirens audible and visual reversing devices operator restraint devices lights
Communication equipment	<p>Communication equipment may include, but is not limited to:</p> <ul style="list-style-type: none"> fixed channel two-way radios whistles bells buzzers <p>NB: Where radio communication equipment is used the transmitting frequencies of the equipment must be selected to prevent interference to or from other radio equipment being used in the vicinity of the crane</p>
Ground suitability	<p>Ground suitability may include, but is not limited to:</p> <ul style="list-style-type: none"> rough, uneven ground backfilled ground soft soils hard, compacted soil rock bitumen concrete
Stability	<p>Stability may include, but is not limited to:</p> <ul style="list-style-type: none"> deploying outriggers establishing correct size plates or packing correctly positioning plates or packing
Crane configuration	<p>Crane configuration includes set up of crane for:</p> <ul style="list-style-type: none"> lift and lowering of loads where crane is not required to move (e.g. where a load is lifted of a truck and the truck then moves away to allow load to be lowered) mobile load transfer where load is lifted and transferred to a different location by the crane <p>The configuration may include, but is not limited to:</p> <ul style="list-style-type: none"> boom/jib

	<ul style="list-style-type: none"> • fly-jib • counterweights
Hazard prevention/control measures	<p>Hazard prevention/control measures may include, but are not limited to:</p> <ul style="list-style-type: none"> • safety tags on electrical switches/isolators • insulated power lines • safety observer used inside exclusion zone • disconnected power • traffic barricades and controls • pedestrian controls • trench covers • movement of obstructions • personal protective equipment • adequate illumination
Test lift	<p>Test list means the load is lifted just clear of the lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure that:</p> <ul style="list-style-type: none"> • near capacity loads do not overload the crane • loads of unusual shape or weight distribution are correctly slung • load measuring equipment can be used to verify the calculated weight of the load • all crane equipment is functioning properly • adjustments to the slinging can be made in a safe manner
Relevant crane movements	<p>Relevant crane movements may include, but are not limited to:</p> <ul style="list-style-type: none"> • telescope in and out • boom/jib up and down • articulating (as applicable) • raise and lower hoist (as applicable)
Communication signals	<p>Communication signals may include, but are not limited to:</p> <ul style="list-style-type: none"> • stop - hand • stop - whistle • hoist up - hand • hoist up - whistle • hoist down - hand • hoist down - whistle • luff boom down - hand • luff boom down - whistle • luff boom up - hand

	<ul style="list-style-type: none"> • luff boom up - whistle • telescope out - hand • telescope out - whistle • telescope in - hand • telescope in - whistle • slew/articulate right - hand • slew/articulate right - whistle • slew/articulate left - hand • slew/articulate left - whistle
Unplanned and/or unsafe situations	<p>Unplanned and/or unsafe situations may include, but are not limited to:</p> <ul style="list-style-type: none"> • failure/loss of control (e.g. brakes and steering) • failure of equipment (e.g. hydraulic system) • environmental conditions (e.g. wind, lightning and storms)
Planned route	<p>Planned route may include, but is not limited to:</p> <ul style="list-style-type: none"> • unusual or difficult terrains • obstacles or obstruction
Best mobile practice	<p>Best mobile practice may include, but is not limited to:</p> <ul style="list-style-type: none"> • minimum speed • gentle acceleration and braking (to minimise load swing) • minimum boom/jib length • carrying the load near to the ground surface • use of handheld taglines
Shutdown	<p>Shutdown may include, but is not limited to:</p> <ul style="list-style-type: none"> • retracting boom/jib/fly, where applicable • retracting hoist rope and hook block • idling engine to stabilise temperature • retracting outriggers/stabilisers, where applicable • turning off engine

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use comparison and/or basic measuring devices	1.1. Measuring devices are identified and used to undertake required comparisons or measurements using standard operating procedures. 1.2. Checking or sorting of items is undertaken using comparison and/or basic measuring device according to standard operating procedures.
2. Maintain comparison and/or basic measuring devices	2.1. Basic care and storage is maintained to manufacturers' standards or standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- using device in accordance with standard operating procedures
- storing and maintaining devices
- using basic numeracy skills for undertaking comparison measurements
- following oral instructions and written standard operating procedures

Required knowledge

Look for evidence that confirms knowledge of:

- use and application of various comparison or measurement devices
- procedures for the correct use of devices
- procedures for maintaining and storing devices
- hazards and control measures associated with conducting measurements, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to use comparison and basic measuring devices.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with using comparison and basic measuring devices or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Basic measuring devices	Linear measuring devices measuring to within 1mm graduation - may include rules, tapes and retractable tapes
Comparisons	Comparison of length, angle, size, temperature, pressure, weight, voltage, resistance and amperage
Comparison measuring devices	Go/no-go devices, thread angle and taper gauges, temperature gauges, pressure gauges, measuring gauges and overlay indicators, templates, digital devices and pre-set verniers and micrometers

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use electro-measuring devices to measure variables	1.1. Appropriate device or equipment and setting is selected to obtain required measurement. 1.2. Appropriate connections are made to obtain required measurement according to standard operating procedure. 1.3. Readings are obtained and interpreted correctly and conversion is made where necessary into the required units of measurement.
2. Maintain electro devices	2.1. Routine care and storage of devices is undertaken to manufacturer's specifications or standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- setting and using electro-measuring devices
- obtaining and interpreting specified electrical measurements
- selecting appropriate measuring devices
- performing arithmetic operations required to convert measurements into appropriate units of measurement
- maintaining and storing electro-measuring devices
- reading and interpreting information on standard operating procedures

Required knowledge

Look for evidence that confirms knowledge of:

- terminology and concepts relating to electrical/electronic measurement
- the selection of different measuring devices for particular applications within the scope of this unit
- specifications of selected electro-measuring devices
- the application of the settings on each electro-measuring device
- the procedures for obtaining electrical/electronic measurements
- procedures for connecting electro-measuring devices to circuitry

REQUIRED SKILLS AND KNOWLEDGE

- the correct scale for each setting on the electro-measuring device
- the scale factor to be applied to readings taken from the electro-measuring device
- the units applying to electrical and electronic measurements
- maintenance and storage requirements for a range of electro-measuring devices
- that devices can impact on the circuit condition
- relevant State/Territory or Commonwealth legislative and regulatory requirements, industry standards, NOHSC guidelines and code of practice
- hazards and control measures associated with electrical/electronic measurement
- safe work practices and procedures
- use and application of personal protective equipment

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use precision measurement equipment	1.1. Appropriate precision equipment is selected to achieve specified outcome. 1.2. Correct and appropriate measuring techniques are used for the measurement task. 1.3. Measurements are taken accurately to the finest graduation of instrument. 1.4. Readings and measurements are interpreted correctly and accurately.
2. Set comparative measuring devices	2.1. Measuring equipment is set to specifications using manufacturer guidelines or standard operating procedures and techniques.
3. Maintain precision equipment	3.1. Measuring equipment is adjusted and maintained to required accuracy, using manufacturer or standard operating procedures and techniques. 3.2. Equipment is stored to manufacturer specifications or standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and interpreting text and numerical information on manufacturer specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- selecting/using precision mechanical measuring devices
- setting measuring devices to specification
- obtaining specified mechanical measurements to the finest graduation of the device
- measuring components to specified tolerances
- reading and interpreting measurements
- maintaining and adjusting precision mechanical measuring devices
- storing precision mechanical measuring devices
- undertaking calculations and numerical operations for measurement using precision mechanical measuring equipment

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

Look for evidence that confirms knowledge of:

- the appropriate precision mechanical measuring device for given measurement requirements
- procedures to verify equipment being used has been recently calibrated
- suitability of environmental conditions for the measurements being carried out
- procedures/techniques for obtaining a range of mechanical measurements
- the accuracy to which a range of precision mechanical measuring devices can be read
- procedures for reading graduated mechanical measuring devices
- units of measurement and numerical operations within the scope of this unit
- procedures for setting precision mechanical measuring devices
- specifications of the equipment to be set
- tools and equipment for setting mechanical measuring devices
- the adjustments that can be made to a range of precision mechanical measuring devices
- procedures for adjusting and maintaining precision mechanical measuring devices
- procedures for storing precision mechanical measuring devices
- hazards and control measures associated with precision mechanical measurement, including housekeeping
- safe work practices and procedures

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use equipment for precision measurement	1.1. Specifications are interpreted accurately from drawings, instructions. 1.2. Appropriate equipment is selected to achieve specified outcome. 1.3. Correct and appropriate measuring techniques are used. 1.4. Readings and measurements are interpreted correctly and accurately.
2. Set measuring devices	2.1. Equipment is set up to specifications utilising manufacturers' or standard operating techniques.
3. Maintain precision equipment	3.1. Measuring equipment is adjusted and maintained to required accuracy, utilising manufacturers' specifications or standard operating techniques. 3.2. Care and storage of equipment is undertaken to manufacturers' specifications or standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting drawings, specifications, data sheets and instructions
- taking measurements using precision electrical/ electronic measuring devices
- interpreting measurements for a range of precision electrical/electronic measuring devices
- setting and adjusting precision electrical/electronic measuring devices
- maintaining and storing precision electrical/electronic measuring devices

Required knowledge

Look for evidence that confirms knowledge of:

- specifications of the circuitry and/or components to be tested
- application of a range of precision electrical/electronic measuring devices

REQUIRED SKILLS AND KNOWLEDGE

- procedures/techniques for obtaining a range of electrical/electronic measurements
- units of measurement used in conjunction with precision electrical/electronic measurement
- procedures for setting a range of precision electrical/electronic measuring devices
- specifications of the equipment to be set
- tools and equipment to be used in setting precision electrical/electronic measuring devices
- adjustments that can be made to a range of precision electrical/electronic measuring devices
- procedures for adjusting and maintaining a range of precision electrical/electronic measuring devices
- procedures for storing precision electrical/electronic measuring devices
- specifications of precision electrical/electronic measuring devices

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to perform precision electrical/electronic measurement.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with precision electrical/electronic measurement or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Equipment for precision measurement	Analog and digital meters, cathode ray oscilloscopes, bridges and potentiometers, wattmeters and digital probes etc.
Measurement	Peak and transient voltages, transient frequencies, digital wave form analysis etc.

MEM12005B Calibrate measuring equipment

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers checking measuring equipment for correct operation, and validating/calibrating precision measuring equipment in accordance with predetermined procedures.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to the calibration skills used in the setting, adjustment, validation or verification of precision mechanical and/or electrical/electronic measuring instruments using reference standards in accordance with predetermined standard procedures. This may involve the use of electronic setting equipment and the selection or determination of an appropriate external standard in accordance with standard operating procedures.</p> <p>This unit is not meant to apply to simple zeroing, external adjustment or manual adjustment for size range e.g. micrometers etc; these skills are covered by Unit MEM12023A (Perform engineering measurements), Unit MEM12003B (Perform precision mechanical measurement) or Unit MEM12004B (Perform precision electrical/electronic measurement) as appropriate.</p> <p>There may be occasions when both pathways MEM12003B and MEM12002B will be required.</p> <p>Where additional electrical/electronic measurement skills are required, then Unit MEM12004B (Perform precision electrical/electronic measurement) should be considered.</p> <p>Competence in this unit does not require the level of skill that applies to calibration as defined in ISO 9000 and/or carried out by personnel accredited under ISO/IEC 17025/NATA certification or similar.</p> <p>Unit MEM15010B (Perform laboratory procedures) should be considered for this level of calibration.</p> <p>Where reference standards only are to be verified under laboratory conditions, then MEM15022B (Verify reference standards) should be considered.</p> <p>Band: B</p> <p>Unit Weight: 6</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Check equipment for correct operation	1.1. Appropriate checks are made of components, leads, fasteners, etc. for wear, loose connections or other faults.
2. Validate/calibrate precision measuring equipment	2.1. Calibration of precision measuring equipment is assessed to manufacturers' specifications and/or standard operating procedures. 2.2. Equipment is calibrated against appropriate physical standards using correct calibration devices, equipment, techniques using predetermined procedures. 2.3. Equipment is recommissioned in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting work requirements
- using appropriate tools and equipment to check measuring equipment for faults
- using appropriate techniques to check the calibration of the measuring equipment for conformance to specifications
- calibrating the measuring equipment against the appropriate physical standard
- recommissioning the measuring equipment
- using literacy and numeracy skills to enable correct completion of calibration records

Required knowledge

Look for evidence that confirms knowledge of:

- measuring equipment specifications, operation, wearing parts, connections and components
- checks that are to be made of the measuring equipment and the tools and equipment to be used when checking the measuring equipment
- common fault(s) that may be found in the measuring equipment

REQUIRED SKILLS AND KNOWLEDGE

- effects of faults on the performance/accuracy of the measuring equipment
- general knowledge of standards, legislative or regulatory requirements applicable to the measuring equipment and/or its calibration
- standard operating procedures for calibrating the measuring equipment and the tools and equipment required to do so
- standard operating procedures for commissioning the measuring equipment
- calibration records to be kept/maintained in accordance with standard operating procedures
- hazards and controls associated with calibrating measuring equipment

MEM12006C Mark off/out (general engineering)

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit of competency covers marking off/out by transferring dimensions from engineering drawings, prints or plans to engineering items that are to be either manufactured or set up. Dimensions may be directly transferred or may require calculation from information on the drawings, prints or plans.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit of competency applies to marking off/out techniques used for the transfer of dimensions from engineering drawings, prints or plans to items that are to be set up or manufactured, for example, engineering components, jigs and fixtures, castings, templates, dies and tooling.</p> <p>This unit has been developed for Engineering Tradesperson - Mechanical apprenticeship training and the recognition of trade level skills in mark off/out in general engineering. Skills covered by this unit are generally applied in occupational and work situations associated with trade level fitting, machining and toolmaking work.</p> <p>Marking off/out is undertaken using appropriate tools and equipment and templates are produced as required. Marking off/out techniques may apply to a range of materials and shapes.</p> <p>The task may be performed in a workshop or in situ.</p> <p>This unit is not intended to cover the skills used in a simple transfer of a dimension or marking a location point associated with general engineering and maintenance functions. For these skills refer to MEM07005C Perform general machining, MEM18006C Repair and fit engineering components or MEM18014B Manufacture press tools and gauges.</p> <p>Where a higher level of calculation, measurement or precision work is required, see MEM30012A Use mathematical techniques and perform simple statistical computations, MEM12003B Perform precision mechanical measurement or MEM18003C Use tools for precision work, respectively.</p> <p>For marking out structural fabrications and shapes, refer to</p>
--------------------------------	--

	<p>MEM12007D Mark off/out structural fabrications and shapes.</p> <p>This unit covers the marking out skills only. When the manufacture of templates is required, other appropriate units may need to be selected.</p> <p>Band: A</p> <p>Unit Weight: 4</p>

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Drawings, job instructions and specifications are interpreted and understood 1.2. Appropriate methods and sequencing are selected consistent with proposed manufacturing process using standard operating procedures
2. Transfer dimension	2.1. All marking off/out is carried out to specifications using appropriate tools and equipment 2.2. Datum points are correctly established 2.3. Dimensions are transferred and correct and appropriate calculations are used where required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- determining job requirements
- transferring dimensions
- applying method and sequence of marking out
- making templates as required
- establishing datum points
- reading and interpreting routine information on written job instructions, specifications standard operating procedures and engineering drawings
- performing calculations using formulae
- locating, reading and interpreting information on written job instructions, specifications, drawings, charts, lists and other reference documentation
- checking and clarifying strategies

Required knowledge

Required knowledge includes:

- drawings, job instructions and specifications
- procedures for marking off/out
- tools, equipment and techniques related to the task

REQUIRED SKILLS AND KNOWLEDGE

- purpose of establishing datum points
- method of determining/calculating dimensions
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to mark off/out in a general engineering situation. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different workplace situations and contexts. Critical aspects of assessment and evidence include:</p> <ul style="list-style-type: none"> • examination of detailed drawings for marking out requirements and specifications including materials, measurements and tolerances, manufacturing methods, standards and code requirements • correct calculation of measurements not shown on drawings • sequence of measuring and/or development is determined correctly • correctly establishing and marking datum points • measurements are accurately transferred to component, jig, fixture, casting, template, die or tooling • accurate production of templates.
<p>Context of and specific resources for assessment</p>	<p>This unit has been developed to support training in and recognition of trade level competency in marking off/out general engineering items as applied to trade level fitting, machining and toolmaking work environment. Assessment should emphasise a workplace context and procedures found in the candidate's workplace.</p> <p>The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p>
<p>Method of assessment</p>	<p>Typically, persons engaged in Engineering Tradesperson - Mechanical work are required to apply their geometric development skills and techniques across a range of jobs and specifications.</p>

EVIDENCE GUIDE	
	<p>A single assessment event is not appropriate. On the job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	<p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with marking off/out general engineering items or other units requiring the exercise of the skills and knowledge covered by this unit.</p> <p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>

Range Statement

RANGE STATEMENT
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and</p>

RANGE STATEMENT	
regional contexts) may also be included.	
Marking off/out	Marking off/out may include engineering components, jigs and fixtures, castings, templates, dies and tooling
Tools and equipment	Tools and equipment may include: <ul style="list-style-type: none"> • marking out tables • surface tables • rotary tables • dividing heads • vee blocks • cylinder squares • sine bars • vernier height gauges • protractors • straight edge and set squares • hammers • scribes • centre punch • marking medium

MEM12007D Mark off/out structural fabrications and shapes

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit of competency covers the skills required by an Engineering Tradesperson - Fabrication for transferring the dimensions from the detail drawing to work, making templates as required, developing patterns and/or transferring measurements to structures, interpreting relevant codes, standards and symbols and estimating quantities of material from drawings.
------------------------	--

Application of the Unit

Application of the unit	<p>The unit of competency applies to the marking off/out of general fabrications and shapes using appropriate tools and equipment. The marking out is undertaken to specified measurements, tolerances and shapes.</p> <p>Skills covered by this unit are generally applied in occupational and work situations associated with steel fabrication, boilermaking or sheet metal work.</p> <p>This unit has been developed for Engineering Tradesperson - Fabrication apprenticeship training and the recognition of trade level skills in mark off/out of structural fabrications and shapes.</p> <p>All work and work practices are carried out to industry, regulatory and legislative requirements. The task may be performed in the workshop or in situ.</p> <p>Templates and patterns are produced as required.</p> <p>In a marine setting, it includes basic lofting/set out for construction of marine vessels and may include items such as stem and transom development and use of tables of offsets that reflect chine and hull configuration. This may include lofting surfaces, straight edges, string lines, French curves, templates, etc. Marking out techniques may apply to a range of materials and shapes.</p> <p>Where more extensive lofting practices are used, MEM09021B Interpret and produce curved 3-dimensional shapes should be considered.</p> <p>For marking out general engineering components, refer to MEM12006C Mark off/out (general engineering).</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Transfer dimensions from a detail drawing to work or surface	1.1. Specifications and work requirements are determined and understood using correct and appropriate calculations 1.2. Marking out is carried out to specifications or standard operating procedures using appropriate tools and equipment 1.3. Datum points are established
2. Make templates/patterns as required	2.1. Appropriate template/pattern material is chosen when required 2.2. Required templates are produced to specifications 2.3. Correct storage procedures are followed including labelling and identification to standard operating procedures
3. Develop patterns and/or transfer measurements to structures	3.1. Most appropriate development and/or measurement sequence is chosen and applied 3.2. Allowances for fabrication and assembly are correctly determined and transferred 3.3. Measurement transfer/layout of components is checked to ensure accuracy/set out
4. Interpret relevant codes, standards and symbols	4.1. Relevant standards/codes and symbols are interpreted 4.2. Requirements of standards/codes are interpreted and applied to materials and processes
5. Estimate quantities of materials from detail drawings	5.1. Materials are correctly identified 5.2. Quantities are estimated from drawing 5.3. Material wastage is minimised

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- reading, interpreting and following information on written job instructions,

REQUIRED SKILLS AND KNOWLEDGE

- specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit
 - planning and sequencing operations
 - using techniques and equipment required for marking off/out and developing patterns
 - checking for conformance to specifications
 - establishing and marking datum points
 - developing patterns according to specification
 - determining fabrication and assembly allowances and transferring to the pattern
 - where applicable, applying the requirements of the codes/standards during the geometric development/marketing off/out process
 - determining material and component quantities from drawings and job specifications
 - minimising material wastage

Required knowledge

Required knowledge includes:

- procedures for marking off/out and pattern development
- tools and equipment to be used in the preparation of the marking off/out
- datum points
- materials that can be used for the preparation of templates and their application
- manufacturing allowances that have to be considered when developing patterns
- template labelling and identification procedures
- storage requirements of templates
- appropriate methods of development/marketing off/out of a range of given objects
- appropriate fabrication and assembly allowances
- effects of material type and thickness on fabrication and assembly allowances
- sources of data on fabrication and assembly allowances
- relevant standards and codes and the meaning of symbols used
- requirements of the codes/standards applicable to the work to be done
- materials from which the component/assembly is to be manufactured
- benefits of minimising material wastage
- applicable industry standards, national/Australian Standards, NOHSC guides, state/territory regulatory codes of practice/standards
- safe work practices and procedures
- relevant hazards and control measures related to the competency

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to mark off/out structural fabrications and shapes. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different workplace situations and contexts. Critical aspects of assessment and evidence include:</p> <ul style="list-style-type: none"> • examining detailed drawings for fabrication requirements and specifications including materials, measurements and tolerances, joining methods, standards and code requirements • correctly determining sequence of measuring and/or development • correctly establishing and marking datum points • accurately transferring measurements to components • correctly calculating allowances for fabrication and assembly including shrinkage, thickness and inside/outside measurements • accurately producing templates.
<p>Context of and specific resources for assessment</p>	<p>This unit has been developed to support training in and recognition of trade level competency in marking off/out structural fabrications and shapes as applied to a sheet metal or metal fabrication environment. Assessment should emphasise a workplace context and procedures found in the candidate's workplace.</p> <p>The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify job requirements	1.1. Job sheets or equivalent instructions are interpreted correctly.
2. Load components	2.1. Pre-start checks are undertaken to standard operating procedures. 2.2. Correct safety procedures are observed and safety equipment is checked for correct operation. 2.3. Correct fixture/clamping device is selected. 2.4. Component and fixtures are loaded and clamped in accordance with standard operating procedures.
3. Set probes	3.1. Probe configuration is checked in accordance with standard operating procedures. 3.2. Pre-measurement manual hits are taken for manual alignment in accordance with standard operating procedures.
4. Measure components	4.1. Part program is selected as required, run and verified according to standard operating procedures. 4.2. Components are measured according to standard operating procedures. 4.3. Results are interpreted and non-conforming/out of tolerance measurements are identified and reported. 4.4. Part program is correctly shut down and components are removed according to standard operating procedures. 4.5. Coordinate measuring machine, accessories and surrounds are left in a clean, safe condition.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and following routine, familiar information for loading, setting probes and measuring components
- identifying and following pre-start check procedure

REQUIRED SKILLS AND KNOWLEDGE

- following safety procedures
- selecting specified fixture/clamping device
- positioning and clamping components
- taking manual hits and determining probe alignment
- verifying probe/s configuration to specifications
- selecting and activating part programs as required where machine is fitted with microprocessors
- verifying and confirming correct program operation
- applying correct measuring techniques
- reporting out of tolerance measurements
- shutting down the part program
- removing and handling components
- cleaning machine and site
- following verbal instructions
- orally reporting routine information

Required knowledge

Look for evidence that confirms knowledge of:

- task-related information on job sheets or equivalent
- pre-start checks
- hazards and control measures associated with operating a CMM, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures
- fixtures/clamping devices and their uses
- storage location and procedures
- fixing/clamping methods
- procedures for undertaking pre-measurement manual hits for manual alignment
- procedures for checking probe configuration
- procedures for running and verifying part program
- methods/techniques for interpreting results
- procedures for reporting results and recommendations for adjustment
- procedures for shutting down part program
- procedures to safely remove and handle components
- required cleaning tasks and the importance of cleaning the CMM
- effects of contamination

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to measure components using a coordinate measuring machine in accordance with instructions.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with measuring components using a coordinate measuring machine or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Probe

Solid or electronic trigger probes

Measurements

Are limited to those which can be measured directly and do not require to be constructed mathematically

Coordinate measurement machine

Manual machines and machines fitted with microprocessors

Unit Sector(s)

Unit sector

Unit Descriptor

Unit descriptor	This unit covers setting and operating coordinate measuring machines (CMM). It includes setting up/orienting components, selecting and activating part programs, preparing the machine, editing programs and measuring components.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to a range of coordinate measuring machines (CMM). Measurement procedure is determined according to established processes, practices, and specifications. Work is carried out autonomously using predetermined standards of quality and safety. The procedures apply to both one-off and multiple components.</p> <p>Appropriate levels of measurement, computer operations and drawing skills should be selected with this unit. Where a range of hand tools is required, Unit MEM08001B (Use hand tools) should also be selected.</p> <p>Band: A</p> <p>Unit Weight: 2</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify job requirements	1.1.The measurement to be made is determined from instructions/plans and relevant job specifications. 1.2.Drawing information is interpreted correctly, datums established and the range of tolerances applying to components is understood.
2. Set up/orient components	2.1.Pre-start checks are undertaken to standard operating procedures. 2.2.Correct safety procedures are observed and all equipment is checked for safe operation. 2.3.The most appropriate method of clamping/support is determined to minimise distortion and maximise measuring access. 2.4.Component/fixture/clamping devices are correctly set up and oriented.
3. Select and activate part programs	3.1.Part program is identified according to standard operating procedures as required. 3.2.Part program is verified. 3.3.Selected part program is activated according to standard operating procedures.
4. Prepare CMM	4.1.Probe configuration is determined according to specifications. 4.2.Probe configuration is adjusted on coordinate measuring machine according to standard operating procedures. 4.3.Probe angles are checked for compliance and adjusted as required. 4.4.CMM is re-set/re-calibrated. 4.5.Probes are manually aligned for one-off components.
5. Edit part programs	5.1.Part program is edited to compensate for errors or changes to component specifications.
6. Measure components	6.1.Components are measured and checked for conformance to specification. 6.2.Data/report is produced

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job sheets, instructions, standard operating procedures and drawings
- checking and clarifying task-related information
- entering information onto workplace documents
- checking for conformance to specifications
- measuring components to specified tolerances
- using methods of coordinate measurement
- positioning and securing components effectively
- selecting and running part programs
- loading configuring and adjusting probes
- checking and adjusting probe angles
- re-setting/re-calibrating the CMM
- taking manual hits
- identifying problems/errors in program
- editing program to ensure accurate operation
- checking results against drawings/specifications and interpreting for non-conformance

Required knowledge

Look for evidence that confirms knowledge of:

- principles and methods of coordinate measurement
- principles and interpretation of geometric tolerancing
- task-related information, symbols and terminology
- pre-start checks
- types and functions of various fixtures/clamping devices
- principles and methods of clamping
- efficient set-up/orientation procedure
- procedures to locate and activate part program
- procedures to verify changes/upgrades to part programs
- various probes and their uses and configurations
- setting and adjusting probes
- requirements and procedures for re-setting/re-calibrating the CMM
- procedure and reason for taking manual hits
- procedures for editing part programs
- procedure for interpreting results

REQUIRED SKILLS AND KNOWLEDGE

- the procedure for maintaining records
- reporting procedures
- hazards and control measures associated with setting up and operating coordinate measuring machines, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures
- techniques, tools and equipment to measure components

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify part program parameters	1.1. Job specifications and requirements are correctly established. 1.2. Inappropriate units are selected to comply with specifications. 1.3. Part program name is specified according to standard operating procedures.
2. Establish single probe configurations	2.1. Single probe configuration is determined according to standard operating procedures. 2.2. Probe angles are determined and qualified in accordance with standard operating procedures.
3. Position/align component	3.1. Component/part is positioned and oriented correctly. 3.2. Manual alignment is created according to standard operating procedures. 3.3. Single Direct Computer Control (DCC) alignment is created according to standard operating procedures.
4. Measure features	4.1. Features are measured correctly. 4.2. Probe movement parameters are defined in accordance with standard operating procedures. 4.3. Basic features are dimensioned according to specifications. 4.4. Operator notes are reported. 4.5. Dimension descriptions are inserted.
5. Verify and back up the program	5.1. Execution and accuracy of program is verified according to standard operating procedures. 5.2. Program is edited, if required. 5.3. Results are output to various formats according to standard operating procedures. 5.4. Program is archived and backed up.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms skills in:

- reading and interpreting information on written job instructions, specifications, charts, lists, drawings and other applicable reference documents
- using methods of coordinate measurement
- analysing and establishing part program parameters
- checking and clarifying information
- entering information onto proformas and standard workplace forms
- navigating and entering data in applicable program software
- checking for conformance to specifications
- using precision measurement equipment
- measuring components to specified tolerances
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit
- following verbal instructions
- orally reporting routine information
- selecting the correct units for the part program
- identifying the part program in accordance with current identification/quality system
- determining the probe configuration
- calculating/determining and qualifying probe angles
- positioning/aligning/securing component/part to appropriate orientation on CMM table and complying with probe configuration and calibrated angles
- taking an appropriate number of hits to create an accurate manual alignment
- demonstrating the correct procedure for creating DCC alignment
- measuring the part features in the correct sequence and location in a single work plane
- defining and verifying the parameters
- correctly dimensioning basic feature such as circles, points etc.
- producing and inserting explanatory notes for the operator
- inserting all necessary dimension descriptions
- running the part program and verifying the accuracy of the results
- editing, where non-conformance is identified
- outputting results to printer, disc or other format as required
- archiving and backing up part program

Required knowledge

Look for evidence that confirms knowledge of:

- the principles and methods of coordinate measurement
- principles and interpretation of geometric tolerancing
- the procedure for producing the part program

REQUIRED SKILLS AND KNOWLEDGE

- the specifications for the program
- the criteria for selecting specific units
- the procedures and parameters for naming programs
- the procedure for determining probe configuration
- the reasons for selecting single probe configuration
- the procedure for determining/calculating probe angles
- the correct procedure and parameters for qualification
- the reasons for the specific location and aligning/securing the component/part
- the method of securing/clamping
- the methodology used to create manual alignment for the part
- the procedure and reasons for creating a single DCC (Direct Computer Control) alignment
- the criteria for defining probe movement
- the procedure for verifying correct probe movement
- dimensioning techniques
- the procedure for running the program
- the procedure for verifying the results
- editing process and explanations
- the procedures used to output results to various formats
- the method used to archive and back up the program
- access limitations by personnel and quality control guidelines
- hazards and control measures associated with using CMMs, including housekeeping
- safe workplace practices and procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine program requirements	1.1.Part parameters and measurement requirements are determined. 1.2.Program attributes are established according to standard operating procedures.
2. Determine probe configuration for multiple probes	2.1.Probe configuration is determined according to standard operating procedures. 2.2.Probe angles are determined and multiple probes are qualified.
3. Create multiple Direct Computer Control (DCC) alignment	3.1.Multiple DCC alignment is created according to standard operating procedures. 3.2.DCC sub-routines are integrated.
4. Construct advanced geometric features	4.1.Geometric features are determined and constructed. 4.2.Features are dimensioned according to standard operating procedures.
5. Review and maintain part programs/system	5.1.Part programs are reviewed/edited to comply with changes to specifications. 5.2.System wide options are changed. 5.3.Programs are archived and backed up according to standard operating procedures. 5.4.Results are output to various formats according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
<p>Look for evidence that confirms skills in:</p> <ul style="list-style-type: none"> determining program parameters from written job instructions, specifications, charts, lists, drawings and other applicable reference documents selecting the correct units for the job requirements selecting suitable probes and determining probe configuration determining and qualifying probe angles for each probe creating multiple DCC alignment

REQUIRED SKILLS AND KNOWLEDGE

- integrating new and/or existing DCC sub-routines
- constructing geometric features for the program
- reviewing and editing program to specification
- changing system wide operations to ensure the most efficient operation of the program
- checking that the integrity of the system is maintained
- archiving and backing up
- outputting results output to printer, disc or other formats
- planning and sequencing operations/processes
- checking and clarifying information
- completing workplace documents and short reports
- checking for conformance to specifications
- undertaking calculations for determining program parameters and checking tolerances
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit
- following verbal instructions
- orally reporting information

Required knowledge

Look for evidence that confirms knowledge of:

- program specifications
- the procedure for producing the program
- the parameters for selecting attributes
- the reason for selecting multiple probes
- the procedure for determining multiple probe configuration
- the procedure for determining probe angles
- the qualification procedure
- the procedure for creating DCC alignment
- the critical differences between single and multiple DCC alignment
- problems due to integrating sub-routines
- advantages gained through integration of DCC sub-routines
- the procedure for constructing geometric features
- reasons for constructing features in the sequence followed
- the procedure for ensuring the dimensioning techniques comply with relevant standards
- the procedure for ensuring all notes/instructions are clear and logical
- the procedures and parameters for editing, archiving and backing up programs
- the effects of editing particular sections of the program
- the effects on other programs of changing software or hardware options

REQUIRED SKILLS AND KNOWLEDGE

- the procedures for changing system-wide options
- the list of recipients or those with access rights to the programs
- the procedures for producing/storing results/reports
- the procedure for notifying personnel of completion of the program is explained
- techniques, tools and equipment to measure components
- hazards and control measures associated with advanced CMM programming, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select appropriate device or equipment	1.1.Measurement requirements are determined from specifications. 1.2.Appropriate device or equipment is selected according to standard operating procedures, to achieve required outcome.
2. Obtain measurements using a range of measuring devices	2.1.Correct and appropriate measuring technique is used. 2.2.Measurements are accurately obtained . 2.3.Dimensions are determined or verified using basic calculations, where required.
3. Maintain measuring devices	3.1.Routine care and storage of devices is undertaken to manufacturers' specifications or standard operating procedures. 3.2.Routine adjustments to devices are made and checked.
4. Communicate measurements as required	4.1.Measurements are accurately recorded, where required. 4.2.Freehand sketch which depicts required information is prepared, as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- selecting the appropriate measuring device for given measuring tasks
- using appropriate measuring technique
- reading all measurements taken accurately to the finest graduation of the selected measuring device
- handling and storing measuring devices in accordance with manufacturers' specifications or standard operating procedures
- verifying all measuring devices before use
- making, where appropriate, routine adjustments to measuring devices
- reading, interpreting and following information on written job instructions,

REQUIRED SKILLS AND KNOWLEDGE

specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents

- planning and sequencing operations
- checking and clarifying task related information
- checking for conformance to specifications
- undertaking numerical operations involving addition, subtraction, multiplication, division, fractions and decimals within the scope of this unit
- preparing drawings as required

Required knowledge

Look for evidence that confirms knowledge of:

- correct application of a range of measuring devices
- correct and appropriate measuring technique for a range of measuring devices
- addition, subtraction, multiplication, division, fractions, decimals to the scope required by this unit
- procedures for handling and storing a range of measuring devices
- procedures for adjusting and zeroing a range of measuring devices
- methods of communicating measurements by drawings, as required
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to perform engineering measurements.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing engineering measurements or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Specifications	Drawings, sketches, job instructions, schematics, diagrams, technical manuals
Range of measuring devices	Protractors, combination squares, set squares, dial indicators, thermometers, tapes, rules, micrometers, vernier-scaled measuring equipment
Basic calculations	Calculations needed to assist in determining measurements where a reading of the graduated device is not sufficient, for example subtracting one measurement from another to give a third measurement. Examples of calculations needed are addition, subtraction, multiplication, division, fractions and decimals. Calculations may be made using a calculator
Routine adjustments	Validating the device using simple zeroing or scale adjustment
Measurements	Measuring length, squareness, flatness, angle, roundness, clearances or any other measurements that can be read off analog, digital or other measuring device
Information	Dimensions, instructions, base line or datum points

Unit Descriptor

Unit descriptor	This unit covers estimating approximate answers to arithmetical problems, carrying out basic calculations involving percentages and proportions, and determining simple ratios and averages. The unit includes producing and interpreting simple charts and graphs.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies in manufacturing, engineering or related environments. It includes the application of the four rules of algebraic expressions, extracting information from drawings, diagrams, graphs and charts and producing simple charts and graphs.</p> <p>Data may be derived from readings taken or may be computer generated. Applications can include computations associated with pressure, volume, temperature, heat, speed, power, elasticity, density, mass, force etc.</p> <p>Calculations may be performed using pen and paper or on a calculator.</p> <p>Band: A</p> <p>Unit Weight: 3</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine work requirement	1.1. Required outcomes are established from job instructions. 1.2. Data is obtained from relevant sources and interpreted correctly. 1.3. Required calculation method is determined to suit the application, including selection of relevant arithmetic operations and/or formulae. 1.4. Expected results are estimated, including rounding off, as appropriate.
2. Perform calculations	2.1. Calculation method is applied correctly. 2.2. Correct answer is obtained. 2.3. Answer is checked against estimation.
3. Produce charts and graphs from given information	3.1. Data is transposed accurately to produce charts or graphs. 3.2. Charts or graphs accurately reflect data on which they are based.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • performing calculations involving whole numbers using all four basic rules • performing calculations involving length, perimeter, area and volume • checking calculated answers for accuracy • rounding off estimated answers • expressing information presented in fractional or decimal format as a percentage • selecting appropriate formulae for the given application • substituting the correct values for each term in the relevant formulae • using appropriate mathematical operations • performing calculations involving ratios or proportions • determining required information from appropriate charts or graphs • producing simple charts or graphs from given information or observations made

REQUIRED SKILLS AND KNOWLEDGE

- selecting appropriate scales and using them in the production of charts and graphs
- marking appropriate limits clearly on the graph or chart
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- checking for conformance to specifications
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- formula applicable to the determination of perimeter, area and volume of simple geometric shapes
- techniques for estimating approximate answers
- reasons for using dimensions with the same units when calculating length, perimeter, area and volume
- concepts of perimeter, area and volume
- procedures for rounding off figures when estimating approximate answers
- mixed numbers, decimals, fractions and whole numbers
- concept of percentage
- procedures to be followed in converting a decimal to a percentage
- procedures for carrying out calculations involving fractions and using each of the four basic rules
- procedures to be followed on converting a fraction to a percentage
- sources of appropriate formulae
- reasons for ensuring that the units of each term are consistent with the formulae selected
- procedures for converting given units to those required for use in formulae
- concepts of ratio and proportion
- given ratios and proportions can be expressed in terms of whole numbers, fractions and decimal fractions
- scales applicable to the axes of the graphs or charts
- three types of charts and/or graphs used in the individual's field of work
- where appropriate, upper and lower limits of acceptability applicable to data entered on a graph or chart
- where appropriate, the trends indicated by the slope or gradient of a graph
- where appropriate, the action to be taken when given trends occur or set limits are approached on graphs or charts
- procedures for drawing 'lines of best fit'

REQUIRED SKILLS AND KNOWLEDGE

- the trends indicated by the graphs or charts drawn
- hazards and control measures associated with performing computations, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to perform computations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing computations or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Relevant sources	Charts, graphs, diagrams, measurement data, reference manuals and specifications
Application	Applications can include computations associated with pressure, volume, temperature, heat, speed, power, elasticity, density, mass, force etc.
Arithmetic operations	<ul style="list-style-type: none"> • Application of subtraction, addition, multiplication and division • Manipulation of decimals, fractions and mixed numbers and whole numbers • Determining of percentages • Performing of algebraic expressions • Calculation of proportions and ratios
Charts and graphs	Simple histograms, control charts, pie charts etc.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Read and construct graphs from given or determined data	1.1. Complex information is extracted from graphical representation. 1.2. Data is analysed with respect to emerging trends. 1.3. Graphs are constructed as required from data and drawn with respect to scale and accepted method. 1.4. Significant features of graphical representation are understood such as limit lines, gradients (straight line graphs), intercepts, maximum and minimum values. 1.5. A wide variety of graphs are constructed as required including histograms, control charts, straight line graphs and parabolic graphs.
2. Perform basic statistical calculations	2.1. Mean, median and mode are calculated from given data. 2.2. Standard deviation is calculated. 2.3. Application of standard deviation and limits to process improvement techniques is understood.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining required information by interpreting data presented in graphical form
- determining the trend(s) indicated by the data presented in graphical form
- constructing graphs to scale
- labelling the axes appropriately
- selecting scales appropriate to the purpose for which the graph is intended
- constructing histograms, control charts, straight line and parabolic graphs
- determining for a given set of data the mean, median and mode
- determining for a given set of data the standard deviation
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations

REQUIRED SKILLS AND KNOWLEDGE

- checking and clarifying task related information
- checking for conformance to specifications
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- characteristics of straight line, parabolic and hyperbolic curves
- procedures for determining the slope/rate of change of a curve
- the trend(s) indicated by changes in gradient of a graph
- procedures for drawing the line of best fit for the coordinates plotted
- standard form of equations relating to straight lines and parabolic curves
- gradient, intercepts, maximum and minimum values and limit lines for straight line and parabolic curves
- function of control charts
- the meaning of the terms mean, median and mode
- the meaning of the term standard deviation
- the significance of 1, 2 and 3 sigma limits
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Perform emergency first aid	1.1. Correct procedures for EAR (expired air resuscitation) and CPR (cardiopulmonary resuscitation) are demonstrated on a mannequin. 1.2. First aid treatment of injuries is carried out correctly. 1.3. Details of first aid administered are accurately recorded. 1.4. Understanding of relevant regulatory and legislative requirements is demonstrated.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- planning and sequencing operations
- checking and clarifying task-related information
- performing EAR (expired air resuscitation) and CPR (cardiopulmonary resuscitation) on a mannequin
- simulated first aid treatment for the full range of injuries covered by the range statement
- reading, interpreting and following emergency first aid procedures and related documents
- entering information onto proformas and other relevant documents
- communicating effectively with injured persons, appropriate personnel and authorities

Required knowledge

Look for evidence that confirms knowledge of:

- applicable regulatory and legislative requirements
- use and application of any applicable personal protective equipment
- hazards and control measures associated with performing emergency first aid, including housekeeping
- instances where EAR and CPR should be performed
- procedures for preparing a person for the administration of EAR and CPR

REQUIRED SKILLS AND KNOWLEDGE

- procedures for performing EAR and CPR on a child and an adult
- dangers and precautions to be taken when administering EAR and CPR
- emergency first aid procedures for injuries covered by the scope of this unit
- details to be recorded of first aid administered
- procedures and reasons for recording first aid administered
- relevant regulatory and legislative requirements with respect to emergency first aid
- the impact of regulatory/legislative requirements on the individual and others
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to perform emergency first aid.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply principles of OHS in a workplace	<p>1.1. Basic OHS principles of hazard identification, risk assessment and control are described.</p> <p>1.2. Understanding of OHS legislation as it is applied in the workplace is demonstrated.</p>
2. Carry out safety audit	2.1. Regular safety audits in the area of responsibility are carried out in accordance with appropriate OHS standards.
3. Identify health and safety improvements	<p>3.1. OHS issues and suggestions for improvements are made to OHS Representatives and Committees as appropriate.</p> <p>3.2. On the basis of safety audits or as required, hazards are identified and recommendations for their control are made.</p> <p>3.3. Contributions to safety improvements are made using standard operating procedures.</p> <p>3.4. OHS training needs are identified.</p>
4. Follow requirements of enterprise OHS program	4.1. Requirements of the OHS program are satisfied within the area of responsibility. This includes for example, accident investigation and emergency procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- performing safety audits
- making safety improvements
- initiating OHS training
- meeting requirements of the OHS program and procedures in the individual's area(s) of responsibility
- reading and interpreting audit and safety-related documentation
- following audit and OHS procedures
- entering information onto audit reports and other relevant documents

REQUIRED SKILLS AND KNOWLEDGE

- communicating effectively about OHS activities with workplace personnel

Required knowledge

Look for evidence that confirms knowledge of:

- principles of hazard identification, assessment and control as applied to the workplace
- procedures for hazard identification, assessment and control
- application of OHS legislation in the workplace
- procedures for conducting safety audits
- safety standards applicable to the individual's area(s) of responsibility
- the frequency at which safety audits should be conducted
- procedures for implementing OHS improvements
- the means of rectifying given or identified hazards
- reasons for selecting the chosen means of rectifying the hazard
- the authority to whom recommended OHS improvements are to be reported
- procedures for making safety improvements
- requirement for OHS training in the individual's area(s) of responsibility
- objectives of OHS training
- procedures for initiating OHS training
- accident investigation procedures
- emergency OHS procedures
- the role of the individual in carrying out accident investigations and emergency procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to undertake OHS activities in the workplace.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Risk assessment

Risk assessment is a process that involves:

- analysing the risk to identify influencing factors and the range of potential consequences
- assessing:
 - the effectiveness of existing controls
 - the likelihood of each consequence considering exposure and hazard level
- and combining these in some way to obtain a level of risk

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use personal protective equipment	1.1. Correct and appropriate safety clothing including personal protective equipment is selected and used correctly based on information in relevant material safety data sheet (MSDS).
2. Identify emergency procedures	2.1. Emergency procedures and plan relevant to the particular work environment are documented, understood and demonstrated as laid down in approved safety instructions.
3. Observe safe working practices	3.1. Hazardous areas and materials are identified and special handling procedures are identified and understood. 3.2. Permits to work (if necessary) are obtained. 3.3. All equipment and hazardous materials are used in accordance with relevant OHS legislation, manufacturers' instructions and standard operating procedures. 3.4. All site-specific safety policies, safety signs, symbols and labels are correctly identified and understood. 3.5. Material safety data sheets are understood and applied. 3.6. Safe manual handling procedures (including equipment) are used. 3.7. Decanted chemicals and storage is to State/Territory dangerous goods and OHS legislation and requirements. 3.8. Housekeeping duties are performed according to standard operating procedures to maintain a safe working environment.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • undertaking risk assessment

REQUIRED SKILLS AND KNOWLEDGE

- communicating with others
- performing proper manual handling techniques
- interpreting safety signage, labelling and placarding

Required knowledge

Look for evidence that confirms knowledge of:

- dangerous goods classification and labelling/placarding
- testing, use and maintenance of PPE
- inherent hazardous properties of the chemicals to be used
- interpretation of the relevant MSDS
- basic fire fighting procedures
- site-specific emergency plan procedures
- chemical spill confinement procedures
- dangerous occurrence (near miss) reporting procedures
- hierarchy of control

Unit Descriptor

Unit descriptor	<p>This unit covers working safely with molten metals or glass including the appropriate using personal protective equipment (PPE), identifying and responding to emergency procedures, observing safe work practices, and identifying the hazardous conditions in a heavy engineering environment.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>This unit may be applied in all workplaces in which there is molten metal or molten glass, for example, in foundries, die casting operations, glass or molten glass operations, explosives manufacture.</p> <p>Evidence of competency is to encompass the satisfactory application of any current State/Territory OHS legislation, standards and codes of practice, and the hierarchy of hazard control measures with elimination, substitution, isolation and engineering control measures being selected before safe work practices and personal protective equipment.</p> <p>This competency is to be exhibited in accordance with all relevant OHS legislation.</p> <p>Band: A</p> <p>Unit Weight: 2</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the need for the use of personal protective equipment	1.1.Appropriate personal protective equipment is identified and used correctly, as specified in standard operating procedures (SOP) and OHS information relating to the specific hazard(s).
2. Adhere to emergency procedures for working with molten metal and glass	2.1.Emergency equipment is located and used in accordance with workplace policies and procedures. 2.2.Responses to emergency procedures are demonstrated as detailed in approved safety procedures and instructions.
3. Identify, assess and control hazardous conditions operating in a heavy engineering environment	3.1.Hazards are identified and reported and planning is undertaken to maintain a healthy and safe work environment. 3.2.Workplace procedures and work instructions for controlling risks are followed accurately.
4. Observe good OHS practices	4.1.Hazardous areas and materials associated with molten metal/glass are identified and potential risks are identified. 4.2.Safety signs and symbols are identified and understood. 4.3.Equipment (including personal protective equipment) is used according to specifications and standard operating procedures. 4.4.Personal protective equipment is inspected and maintained in good order and stored for reuse. 4.5.Hazardous items associated with task are identified and removed from hot material area if required and assessed and controlled. 4.6.Housekeeping duties are performed according to standard operating procedure to maintain a safe working environment and include the safe use, accessibility and maintenance of PPEs.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE**Required skills**

Look for evidence that confirms skills in:

- using appropriate personal protective equipment
- responding to emergency procedures (fires, accidents etc.)
- handling hazardous materials and equipment within the scope of this unit
- maintaining equipment
- housekeeping
- identifying and reporting hazardous conditions and taking actions to rectify hazards
- interpreting text and numerical (e.g. quantities, units of measurement) information on material safety data sheets, safety signs, symbols and labels
- using manual handling techniques

Required knowledge

Look for evidence that confirms knowledge of:

- hazards, hazardous areas and materials and hazard control measures associated with molten metal/glass
- hierarchy of control
- procedures relevant to raising OH&S issues
- rights and responsibilities of workplace parties under OH&S acts, regulations, codes of practice etc.
- designated personnel responsible for OH&S
- applicable personal protective equipment
- emergency procedures
- safety signs, symbols and labels
- procedures for correct inspection and service of equipment including personal protective equipment
- routine maintenance procedures for equipment
- workplace procedures for working in hazardous areas
- the consequences of not maintaining a clean and safe working environment
- specific hazards associated with the work environment/industry
- safe manual handling procedures
- location of emergency equipment including first aid facilities

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to work safely with molten metals/glass.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with working safely with molten metals/glass or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Personal protective equipment	<ul style="list-style-type: none"> • Face protection • Eye protection • Respiratory protection • Hearing protection • Hand protection • Clothing and footwear protection
Risk	Likelihood and consequences of injury or damage
Hazardous material	<ul style="list-style-type: none"> • Hot material • Molten metals • Molten glass and associated products etc. • Explosive materials

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Carry out standard OHS measurement	1.1.Data is collected using standard equipment in accordance with manufacturers' specifications.
2. Evaluate data	2.1.Data from measurements taken is evaluated to identify non-conformance with OHS standards.
3. Report outcomes of data evaluation	3.1.Results requiring remedial action are reported to appropriate personnel using standard operating procedures. 3.2.Reports are prepared correctly to detail data findings. 3.3.Non-compliances and non-conformances are reported and recorded.
4. Maintain records	4.1.Records are maintained in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings, data and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task-related information
- preparing reports
- checking conformance to specifications
- using calculations and numerical operations within the scope of this unit
- taking and recording required measurements in accordance with manufacturers' specifications and standard operating procedures
- maintaining records of the OHS factors monitored in accordance with standard operating procedures
- detecting and reporting hazards in accordance with standard operating procedures

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms knowledge of:

- the measurements to be taken and recorded
- the procedures for taking each type of measurement
- the tools, techniques and equipment required to carry out the measurements
- the OHS standards for each factor being measured
- variations between the data collected and the appropriate OHS standard
- probable causes of the variation of the data collected from the OHS standard
- the procedures for maintaining records of OHS factors measured
- the procedures for reporting hazards
- the authority to whom hazards are to be reported
- hazards and control measures associated with collecting and evaluating occupational health and safety data for an enterprise or section of an enterprise, including housekeeping
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply principles of Australian Standard 3666 or equivalent	1.1. Causes of corrosion, scale, algae and treatment/prevention can be explained. 1.2. Air distribution of cooling towers can be explained.
2. Assess reticulation system	2.1. Relevant water conditions are assessed against specifications using standard procedures and test equipment. 2.2. Condition of water circulation system is assessed and appropriate action determined. 2.3. Performance of regulating, filtering, conditioning/dosing and pumping systems is assessed against specification.
3. Measure relevant water properties	3.1. Test equipment is correctly used and applied. 3.2. Water properties are accurately determined/recorded.
4. Maintain reticulation/treatment systems	4.1. Water temperature control system is recorded and non-compliances are reported. 4.2. Dosing is adjusted to specification. 4.3. Faults are reported to appropriate personnel according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- planning and sequencing operations
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- checking and clarifying task-related information
- testing the condition of the water in the cooling tower/treatment system
- testing dosing components for correct operation/performance
- testing water properties using appropriate techniques and equipment

REQUIRED SKILLS AND KNOWLEDGE

- checking for conformance to specifications
- determining and recording test results
- adjusting dosing flow in the system to specification
- reporting system faults to appropriate personnel

Required knowledge

Look for evidence that confirms knowledge of:

- causes of corrosion, scale and algae
- methods of treating/preventing occurrence of corrosion, scale and/or algae in water cooling towers and treatment systems
- the air flow patterns of cooling towers
- the testing requirements of AS 3666 and/or other relevant regulations relating to water cooling towers
- precautions for preventing contamination of systems by legionella bacteria
- procedures for testing the condition of the water in the cooling tower
- specifications of the water condition
- variations of the test results from specification
- procedures to be followed when water condition varies from specification
- the correct operation/performance of the following system components: regulators, filters, conditioners and pumps related to treatment systems
- performance tests for treatment system components
- water properties to be tested
- procedures for testing water properties
- test equipment and techniques
- water temperature specifications
- procedures for reporting system faults
- codes and regulations relevant to maintaining water treatment systems
- hazards and controls associated with maintaining water cooling towers and treatment systems, including housekeeping
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Implement OHS procedures for work site or section	1.1. Legislative requirements for the work section and work supervisor are identified. 1.2. Consultation mechanisms are established for the work section. 1.3. Personal Protective Equipment (PPE) is allocated to all staff as required. 1.4. Safety and housekeeping practices and procedures are established for the work site or section. 1.5. Tools and equipment are checked for suitability and serviceability. 1.6. Safety monitoring procedures are established. 1.7. Non-conformances with legislative requirements are assessed and addressed.
2. Assess risks in the work site or section	2.1. Hazards in the work site or section are identified. 2.2. Risks are assessed.
3. Apply risk management strategies for work section	3.1. Appropriate risk control measures are implemented. 3.2. Control measures are assessed for effectiveness in controlling the risk. 3.3. Hazards are monitored. 3.4. The need for expert advice to manage risks is determined. 3.5. Accident investigations are conducted as required to determine cause.
4. Supervise others in the implementation of OHS procedures in the work site or section	4.1. Communication on OHS matters is supervised. 4.2. OHS training needs are identified for the work section. 4.3. Workplace OHS training and communication activity is coordinated, evaluated and documented according to legislative requirements and organisational procedure. 4.4. Statutory OHS training requirements are coordinated and documented according to legislative requirements and organisational procedure.
5. Maintain records and statistics	5.1. Accident/incident records are maintained. 5.2. Records are analysed for trends, and particular problem areas are identified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- keeping records/minutes of discussions with consultative forums on OHS matters
- scheduling meetings with the relevant consultative forums to discuss OHS matters
- participating in consultative forums
- communicating with staff regarding OHS matters
- identifying OHS training needs in the workplace
- supervising OHS training implementation
- interpreting and following information on OHS legislation, workplace practices and procedures, written job instructions, specifications, standard operating procedures, charts, lists, and other applicable reference documents
- keeping records for monitoring the effectiveness of work practices and procedures with respect to the safety of the working environment
- investigating accidents in accordance with standard workplace procedures
- obtaining results of safety audits in accordance with workplace procedures
- obtaining expertise external to the workplace to assist in the identification and control of workplace hazards
- maintaining accident and incident records in accordance with standard workplace procedures

Required knowledge

Look for evidence that confirms knowledge of:

- legislative requirements for the workplace and supervisory responsibilities
- procedures for initiating discussions with the relevant consultative forums
- relevant consultative forums
- the frequency of discussions to be held with the relevant consultative forums
- organisational OHS communication requirements
- OHS training practices, procedures and options available
- work practices and procedures developed in conjunction with the relevant consultative forums
- the effect of work practices and procedures on the safety of the working environment
- procedures for monitoring the success of the work practices and procedures developed
- variables to be recorded during the monitoring process
- sources of information on occupational health and safety issues
- procedures for conducting accident investigations

REQUIRED SKILLS AND KNOWLEDGE

- the hierarchy of hazard control measures
- reasons for progressively implementing the hierarchy of control of hazards
- the likely causes of accidents investigated
- principles of hazard control
- the mechanisms for controlling hazards
- the areas of occupational health and safety for which the workplace lacks acknowledged expertise
- procedures for accessing expertise external to the workplace
- procedures for recording accidents and incidents
- the probable causes of trends or problem areas
- hazards and control measures relevant for the work site or section, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>

EVIDENCE GUIDE

Guidance information for assessment

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Consultation mechanisms	OHS committees, OHS representation, toolbox meetings, safety meetings, record keeping systems
Personal Protective Equipment	Safety boots, gloves, goggles, glasses, ear muffs, hard hats, clothing, respirators or masks, reflective vests
Safety and housekeeping practices and procedures	Emergency/evacuation procedures, tool and equipment cleaning, maintenance and storage procedures, safety reporting and documentation procedures, barricades and signage, procedures for managing hazardous chemicals and materials
Hazards	Risks associated with tools and equipment, lighting, gases, electricity and water, toxic and hazardous substances, flammable materials and fire hazards, lifting practices, working in confined spaces, working at height, spillage, waste and debris, noise, mobile plants such as forklifts and front end loaders, moving parts of machinery, gravity (falls from heights), dusts
Risks	The chance of something happening that will result in injury or damage. It is measured in terms of consequences and likelihood
Risk control measures	Elimination of the hazard, substitution with a lesser hazard, isolation of personnel from the hazard, engineering controls, administrative

RANGE STATEMENT	
	controls (e.g. procedures and training), personal protective equipment
Communication	Signage and labelling, hazard identification notices, access to policies, procedures, SOPs, etc., meeting notices, documentation procedures, reporting procedures, meetings
Supervised	Coordinated, implemented, referred, delegated, facilitated, monitored, documented
Training needs	Induction programs, technical training, coaching and mentoring, supervision, specialist training, on site/off site, involvement of training specialists, organisational training requirements, referral to training personnel

MEM13013B Work safely with ionizing radiation

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers working safely with ionizing radiation when performing radiographic testing in a range of industrial applications.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to safely working with ionizing radiation in open or closed sites: on fabrications, structures and components across a wide range of industries. It is a prerequisite to undertaking any other radiographic competency standards unit. The work can relate to scheduled and unscheduled maintenance activities, using general tools, specific radiographic testing equipment as specified in maintenance documentation, testing procedures or operator instructions.</p> <p>All testing must be completed with particular attention to personal and OH&S regulations. Certification against Australian standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712.</p> <p>Materials and chemicals which are subject to codes and regulations - for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products - must be subject to safe work habits must be stored and used in accordance with safe work practices.</p> <p>Band: A</p> <p>Unit Weight: 4</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the hazards and effects of ionizing radiation in the workplace	1.1.The source of ionizing radiation is identified in accordance with relevant organisational policy and procedures. 1.2.Production of X-rays and gamma rays is explained in relation to radiographic testing activities. 1.3.Attenuation factors of ionizing radiation and the biological effects on living tissue are outlined. 1.4.The biological effects of radiation are identified.
2. Apply radiation safety procedures/plans	2.1.Appropriate ionizing radiation protective measures are employed in accordance with relevant organisational policy and procedures. 2.2.SI units of radiation are explained as per the National Health and Medical Research Council/ statutory requirements. 2.3.Exposure limits for personnel as laid down by the radiation authorities in Australia are stated and adhered to. 2.4.Minimum exposure rates/distances are determined from calculations and charts. 2.5.Ionizing radiation sources are operated in accordance with legislation, standards and/or organisational policy, procedures or guidelines.
3. Select and use radiation monitoring equipment	3.1.The tools and equipment necessary to monitor radiation are selected and used as required. 3.2.Techniques and system verification checks necessary to monitor radiation are selected and applied. 3.3.Safety breaches are documented and/or reported in accordance with organisational policy and procedures.
4. Respond to emergency situations	4.1.Procedures for dealing with both X-ray and gamma ray emergency situations are demonstrated.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE**Required skills**

Look for evidence that confirms skills in:

- calculating and numerical operations within the scope of this unit
- reading and interpreting charts, written job instructions, specifications, standard operating procedures, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task-related operations
- checking for conformance to specifications
- using monitoring equipment
- calculating and monitoring radiation
- handling emergencies
- following safety requirements
- assessing risk

Required knowledge

Look for evidence that confirms knowledge of:

- properties of X-rays and gamma rays and principal radioactive sources used in industrial radiography
- attenuation factors
- known biological effects of radiation
- general principles of gas ionisation, photographic effect, luminescence
- use of film, film badges, ionisation chamber devices, quartz fibre, fluorescent, electronic devices accuracy limits (energy/range)
- different SI units of radiation including becquerel, sievert and gray
- exposure limits for personnel as laid down by the radiation authorities in Australia
- the three exposure reduction factors including: time, distance and shielding
- procedures for establishing safe working barriers
- relevant techniques and checks
- emergency procedures
- safety procedures including for:
 - types of X-ray equipment
 - types of isotope cameras
 - shielding materials
 - design and requirements for exposure areas
 - requirements for storage of radioisotopes
- emergency situations, causes and appropriate responses
- hazards and control measures associated with ionizing radiation, including housekeeping
- storage requirements of equipment and materials

REQUIRED SKILLS AND KNOWLEDGE

- use and application of personal protective equipment
- safe workplace practices and procedures
- legal requirements including;
 - Australian/NSW regulations, code of practice (detail)
 - ICRP recommended limits for various persons and various parts of the body for short-term, long-term and accumulated exposure
 - background radiation
 - duties of RSO
 - requirements for transport
 - IATA regulations
 - obligations of the licensee

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to safely work with ionizing radiation when performing radiographic testing.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with radiographic testing or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant organisational policy and procedures

- Legislation
- Standard operating procedures (SOPs)
- Australian or international standards
- Risk assessments
- Previous testing reports
- Manufacturer specifications

Production of X-rays and gamma rays

- Atomic structure, protons, neutrons, electrons, atomic number, mass number, isotopes
- Electromagnetic radiation wavelength, frequency, energy relationships, intensity
- Construction and operation of X-ray tube anode, cathode, target
- Gas and coolidge tubes
- Glass and ceramic tubes
- X-ray spectrum
- Characteristic and continuous spectra effect of voltage and current on continuous spectra
- Efficiency
- Natural and artificial radioisotopes
- Production of radioisotopes
- Decay mechanisms, alpha, beta-, beta+, and gamma
- Concept of half life, decay constants
- Selection of gamma ray sources
- Units definition of curie, becquerel, conversion of units, multiple units (e.g. GBq), nuclide chart

Biological effects of radiation

- Ionisation, absorption, scatter (Compton, Rayleigh, photo-electric, pair production)
- Attenuation coefficient, absorption edges
- Units roentgen, rad, coulomb/kg, gray

RANGE STATEMENT	
	<p>conversions</p> <ul style="list-style-type: none"> • Effects of varying doses on living tissue • Somatic effects, genetic effects, cell biology nucleus, cytoplasm • DNA, chromosome, mitosis; symptoms, effect of time, ICRP recommendations • Dose, dose equivalent, RBE, rem, seivert, conversions • Occupancy factor
Protective measures	<ul style="list-style-type: none"> • Personal protective equipment (PPE) including for risks other than ionizing radiation • Safety protocols of workplace (e.g. flame limitations in refineries) • Signage, barriers/guards • Limitations on operation of specific equipment/machines
Minimum exposure	<ul style="list-style-type: none"> • Time, distance, shielding effect of distance, inverse square law • Half and tenth value layers • Emergency procedures, company procedure codes

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Follow safe work practices</p>	<p>1.1. Work is carried out safely and in accordance with company policy and procedures and legislative requirements.</p> <p>1.2. Housekeeping is undertaken in accordance with company procedures.</p> <p>1.3. Responsibilities and duties of employees are understood and demonstrated in day-to-day actions.</p> <p>1.4. Personal protective equipment is worn and stored according to company procedures.</p> <p>1.5. All safety equipment and devices are used according to legislative requirements and company/manufacturers' procedures.</p> <p>1.6. Safety signs/symbols are identified and followed as per instruction.</p> <p>1.7. All manual handling is carried out in accordance with legal requirements, company procedures and National Occupational Health&Safety Commission guidelines.</p> <p>1.8. Emergency equipment is identified and appropriate use is demonstrated.</p>
<p>2. Report workplace hazards and accidents</p>	<p>2.1. Actual and foreseeable workplace hazards are identified during course of work and reported to appropriate person according to standard operating procedures.</p> <p>2.2. Accidents and incidents are reported according to workplace procedures</p>
<p>3. Follow emergency procedures</p>	<p>3.1. Appropriate personnel and emergency services and means of contacting them in the event of an incident can be identified.</p> <p>3.2. Emergency and evacuation procedures are understood and carried out where required.</p> <p>3.3. Company evacuation procedures are followed in case of an emergency.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

Look for evidence that confirms skills in:

- following safe working practices
- maintaining a safe and clean condition workplace
- carrying out workplace activities such as working safely, not endangering others, following company and legislative requirements, following procedures
- selecting, wearing and storing appropriate personal protective equipment
- using appropriate safety equipment and devices
- carrying out work with the information given by safety signs and symbols
- carrying out manual handling principles
- using emergency equipment correctly
- noting workplace hazards
- contacting appropriate personnel and emergency services in the event of an accident
- following emergency and evacuation procedures
- communicating and interpreting information appropriate to OH&S within the scope of this unit
- checking and clarifying task-related information
- communicating with emergency personnel
- checking for conformance to specifications

Required knowledge

Look for evidence that confirms knowledge of:

- rights, responsibilities and duties of employees and employers
- use of personal protective equipment
- appropriate equipment and safety devices for particular workplace tasks
- reasons for using safety equipment and devices
- meaning and application of safety signs and symbols
- procedures and limits for manual handling
- location and use of emergency equipment
- reasons for selecting a particular type of equipment
- procedures for identifying and reporting hazards
- persons or services to be contacted in the event of a range of accidents
- reasons for use of standard procedures
- standard procedures including those for emergencies and evacuation
- hazards and housekeeping requirements associated with the work environment
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>

EVIDENCE GUIDE

Guidance information for assessment

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Personal protective equipment

- Safety glasses
- Face and head protection
- Hard hats
- Protective footwear
- Protective clothing
- Breathing apparatus
- Ear protection
- Gloves

Safety equipment and devices

- Safety harness
- Screens, barriers and shielding
- Extraction fans
- Machine guards
- Isolation devices

Safety signs/symbols

- Standard signage/symbols conforming to AS 1319-1994
- Safety signs for the occupational environment, and any other applicable Australian Standards
- Workplace-specific signage
- Typical classes of relevant signs/symbols are:
 - mandatory
 - prohibition
 - danger
 - caution
 - general safety
 - safety information

RANGE STATEMENT	
	<ul style="list-style-type: none"> • fire safety equipment
Manual handling	Posture, weight limits, bending, twisting
Hazards	<p>For the purposes of this unit a hazard is defined as anything with the potential for injury or damage. Hazards may be:</p> <ul style="list-style-type: none"> • physical: <ul style="list-style-type: none"> • machinery • hot metal • electricity • fire • poor housekeeping: <ul style="list-style-type: none"> • spills • trip hazards such as congestion, clutter, waste build-up • cleanliness • noise and vibration • extremes of temperature and humidity • condition/design of equipment • individual (behavioural): <ul style="list-style-type: none"> • skylarking and foolishness • substance abuse • failure to follow procedures • lack of training or experience • carelessness • poor personal health/hygiene • using the wrong techniques/procedures • ignoring safety rules and signs • taking short cuts • knowingly using unsafe equipment • environmental hazards: <ul style="list-style-type: none"> • explosive materials • flammable materials • poor ventilation • poor lighting • dust • fumes • vapours

RANGE STATEMENT	
	<ul style="list-style-type: none"> • gases • liquids • mineral fibres • chemical spills • pollutants • other toxic or dangerous materials
Accidents and incidents	<p>For the purposes of this unit an accident is defined as 'an unplanned and unexpected event which interrupts the normal course of activity. It may or may not result in damage or injury'. This definition includes near misses.</p> <p>An incident is defined here as any other unexpected or extraordinary event not classed as an accident. Examples include:</p> <ul style="list-style-type: none"> • burns • poisoning • broken limbs • eye accidents • other injuries • spills • explosions • falls • electrical accidents • breakdowns • damage to equipment or materials/product • incidents involving physical, individual or environmental hazards
Appropriate personnel	<ul style="list-style-type: none"> • Safety representative • Occupational health and safety officer • OHS committee member • First aid officer • Supervisor • Union representative
Emergency and evacuation procedures	Documented workplace emergency procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify material requirements	1.1. Materials required are identified from appropriate documentation including type and quality. 1.2. Quantities required are estimated in accordance with standard operating procedures.
2. Schedule material delivery	2.1. Delivery requirements and dates are determined from production plans or job sequencing requirements. 2.2. Material supply is followed up and problems reported. 2.3. Material orders are processed in accordance with established organisational practice and procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- communicating
- planning
- assessing
- reading and interpreting engineering specifications
- organising information
- prioritising
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- identification of material specifications from appropriate documentation
- established organisational practice and procedures relating to estimating, ordering and follow up of materials
- interpretation of production plans, or job sequencing requirements
- safe workplace practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to plan and schedule material deliveries.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify production requirements and capacities	1.1.Engineering production data is identified and obtained in accordance with workplace procedures. 1.2.Inventory capacities and requirements are identified and obtained in accordance with workplace procedures. 1.3.Procurement and supply requirements and constraints are identified and obtained in accordance with workplace procedures. 1.4.Production capacity and constraints are identified and obtained in accordance with workplace procedures. 1.5.Standard times are identified and obtained in accordance with workplace procedures.
2. Prepare schedule for production of a component/part	2.1.Production of component is scheduled in accordance with production, inventory, procurements, time constraints, supply capacities and requirements. 2.2.Schedule is documented in accordance with accepted organisation procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining, reading and interpreting production process data and procedure
- prioritising
- communicating
- time management
- organising
- documenting
- using project management tools such as Gantt Charts
- analysing
- performing arithmetic calculations

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

Look for evidence that confirms knowledge of:

- scheduling techniques
- production methods
- quality assurance requirements
- inventory policies
- procurement, supply requirements and constraints
- general staffing levels, capabilities and application of standard times
- machine set-up, capability and application of standard times
- enterprise safety requirements and directives

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify task requirements	1.1. Instructions and procedures are obtained, understood and where necessary clarified. 1.2. Relevant specifications for task outcomes are obtained, understood and where necessary clarified. 1.3. Task outcomes are identified. 1.4. Task requirements such as completion time and quality measures are identified.
2. Plan steps required to complete task	2.1. Based on instructions and specifications provided, the individual steps or activities required to undertake the task are understood and where necessary clarified. 2.2. Sequence of activities is identified. 2.3. Plan is checked to ensure it complies with specifications and task requirements.
3. Review plan	3.1. Effectiveness of plan is reviewed against specifications and task requirements. 3.2. If necessary, plan is revised to better meet specifications and task requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining instructions for tasks from correct source of information (job card, supervisor, work colleagues and others)
- clarifying tasks and required outcomes with appropriate personnel where necessary
- identifying relevant specifications from documentation, job cards, or other information source
- preparing plans for tasks
- sequencing activities
- comparing planned steps against specifications and task requirements
- communicating and interpreting information appropriate to the scope of this unit

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

Look for evidence that confirms knowledge of:

- correct sources of information for a particular task
- procedures for obtaining instructions and clarification
- specifications for the task
- hazards and established control measures associated with the routine task, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE

The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with planning to undertake a routine task or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Specifications

- Specific product or process information, such as:
 - outcome and performance requirements
 - quality requirements and checks
 - quantity
- Specifications are conveyed verbally or on familiar standard forms, such as on job sheets

Requirements

- General requirements necessary to carry out routine tasks, such as:
 - dedicated tools and equipment
 - materials and parts
 - work procedures
 - completion time
 - safety measures and equipment
- Requirements and instructions are supplied verbally or on familiar standard forms, such as on job sheets. Instructions are carried out under supervision and in accordance with established procedures

MEM14005A Plan a complete activity

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers planning activities which, whilst following established procedures, may require a response and modification of procedures or choice of different procedures to deal with unforeseen developments.
------------------------	--

Application of the Unit

Application of the unit	<p>The unit covers the development of plans for individual complete activities and may include the use of planning techniques and tools.</p> <p>The activity may require prioritising of the individual plan components to facilitate the meeting of the objectives. Examples of activities to be planned may include: fault diagnosis and repair of an item of equipment, a modification of an established sequence of assembly tasks. However the activities may require a response and modification of procedures or a choice of different procedures to deal with unforeseen developments.</p> <p>Activities are normally performed by the individual undertaking the planned activity, and associated reports are completed as required. Planning will be related to familiar work tasks and environments and be performed to standard operating procedures.</p> <p>Where more extensive reporting requiring research and forming conclusions is required, refer to Unit 16.14 (Report technical information).</p> <p>Band: A</p> <p>Unit Weight: 4</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify activity requirements	1.1. Activity outcomes and objectives are identified and clarified with appropriate persons. 1.2. Activity requirements, including resources, overall timeframe, quality requirements and criteria for acceptable completion are identified and clarified. 1.3. Relevant specifications and procedures are obtained and clarified.
2. Plan process to complete activity	2.1. The individual components of the activity are identified and prioritised. 2.2. Planning tools and techniques are selected and used according to the needs of the activity. 2.3. The plan is checked for accuracy and conformance to instructions and requirements.
3. Modify plan	3.1. The plan is referred to and modified as necessary to overcome unforeseen difficulties or developments that occur as work progresses. 3.2. The results of the activity are reviewed against the plan, and possible future improvements to plan are identified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining, reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawing and other applicable reference documents
- preparing a plan including sequential steps that will enable the activity to be completed
- modifying the plan where appropriate, to take account of difficulties or developments that occur while following the prepared plan
- planning and sequencing activities
- checking and clarifying task-related information

REQUIRED SKILLS AND KNOWLEDGE

- checking for conformance to specifications
- using numerical operations, geometry and calculations/formulae within the scope of this unit
- using planning techniques such as scheduling, time management, brainstorming, setting of goals and defined outcomes, prioritising, review and evaluation strategies

Required knowledge

Look for evidence that confirms knowledge of:

- tasks to be performed
- person/s who can clarify the objectives, requirements and specifications
- specifications relevant to the tasks to be performed
- outcomes to be achieved
- timeframe for activity completion
- quality requirements of the product or service
- priority of each step in the plan
- reasons for the relative priority of each step
- modifications to the plan to overcome a range of unforeseen situations
- hazards and control measures associated with planning the complete activity, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to plan a complete activity.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with planning a complete activity or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Requirements

- Formal or informal information about the task required, such as:
 - timeframe
 - quality requirements
 - outcome and performance requirements
 - job history
 - checks and tests
 - special reporting requirements
 - tools and equipment
 - materials and parts
 - reference documents
- Requirements and instructions are supplied verbally or in written form such as on job sheets. Instructions are carried out in accordance with established procedures

Specifications

Technical task related information conveyed verbally or as found in:

- task lists
- instructions
- manufacturer manuals
- diagrams and schematics
- technical drawings and sketches
- parts lists
- computer records

Planning techniques and tools

Scheduling, time management, brainstorming, setting goals and defined outcomes, prioritising, review and evaluation strategies

MEM14065A Plan and design aeronautical engineering projects

Modification History

Not applicable.

Unit Descriptor

This unit of competency covers systematically planning and designing within an aeronautical engineering context.

Application of the Unit

Competency in this unit includes significant contribution to the planning, design and acceptance process for aeronautical engineering applications. Planning and design should be implemented systematically within the context of market or customer requirements and prevailing industrial environment, in accordance with planning and design parameters, such as performance, financial, legal, resource and scheduling.

Applications of planning and design in aeronautical engineering may include the conceptual development, management, design, manufacture, implementation, installation, commissioning and maintenance of aerospace structures, structural components, systems and system components for civil or military applications.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA349A	Apply basic scientific principles and techniques in aeronautical engineering situations
MEA350A	Select and test aeronautical engineering materials
MEM14083A	Apply aeronautical engineering fundamentals to support design and development of projects
MEM16008A	Interact with computing technology
MEM23052A	Apply basic electro and control scientific principles and techniques in aeronautical engineering situations
MEM23073A	Select and apply aeronautical engineering methods, processes and construction techniques
MEM23084A	Apply scientific principles and techniques in aeronautical engineering situations
MEM23095A	Apply aeronautical system design principles and techniques in engineering situations
MEM30012A	Apply mathematical techniques in manufacturing, engineering or related situations

Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

- | | |
|--|---|
| <p>1 Research and report the context and parameters of the planning and design process for aeronautical engineering applications</p> | <p>1.1 Research and report on the context and parameters of the planning and design process for aeronautical engineering applications</p> <p>1.2 Identify and report on the market and industrial context and parameters of the planning and design process for a significant and particular aeronautical engineering application</p> |
|--|---|

- 2 Interpret the brief and clarify client requirements
 - 2.1 Interpret client requirements for an application in an engineering environment
 - 2.2 Develop the design requirements and parameters with client
- 3 Prepare concept proposal
 - 3.1 Generate a range of different, innovative and creative approaches to achieve design requirements
 - 3.2 Check feasibility of a range of design solutions against design parameters
 - 3.3 Assess opportunities for concurrent design activities
 - 3.4 Assess design solutions for conformity to occupational health and safety (OHS), environment and regulatory requirements
 - 3.5 Seek opinions of colleagues and a range of creative and technical experts/specialists
 - 3.6 Prepare plan and design concept proposal that includes results of feasibility study consideration of expert opinion, initial calculations and modelling and the use of judgment and discretion
 - 3.7 Review concept proposal with client to improve outcomes and overcome possible problems
- 4 Implement the planning and design process for particular applications
 - 4.1 Select and manage resources and processes to develop the plan or design
 - 4.2 Document management processes
 - 4.3 Incorporate appropriate components and systems in the planning and design process
 - 4.4 Perform engineering activities and manage self to implement the planning and design process
 - 4.5 Apply appropriate calculations and assumptions in implementing the planning and design process
 - 4.6 Implement appropriate computing hardware and software and programming techniques in the planning and design process
 - 4.7 Apply appropriate scientific principles to implement planning and design process

- 4.8 Implement appropriate materials properties knowledge in the planning and design process
 - 4.9 Implement appropriate engineering methods and processes knowledge in the planning and design process
 - 4.10 Ensure implementation is appropriate and efficiently carried out in the planning and design process
- 5 Review the design and implementation plan
- 5.1 Review the design and implementation plan to ensure conformity with current specification, contract and organisational procedures, OHS and regulatory standards, that it addresses feedback from stakeholders and meets client expectations
 - 5.2 Achieve and document client acceptance of the design
- 6 Maintain design documentation
- 6.1 Complete all design documentation in accordance with organisational requirements
 - 6.2 Confirm planning charts are current, resource and costing records complete
- 7 Review design outcomes
- 7.1 Review design outcomes in terms of the intended and actual use

Required Skills and Knowledge

Required knowledge includes:

- context and parameters of the planning and design process for a comprehensive range of engineering applications
- market and industrial context and parameters, such as financial, legal, resource and scheduling of the planning and design process for a significant and particular engineering application the procedures for documenting and confirming client requirements
- client requirements
- appropriate codes, standards, specifications and legislative and regulatory requirements
- implications for sustainability and options for improved environmental outcomes
- issues of sustainability and environmental impact
- constraints and risks associated with the development and implementation of the design
- the scope of the design
- sources of information on standard and innovative or creative project solutions
- issues of sustainability, environmental and/or community impact
- design parameters or constraints
- process of analysis, comparison and contrasting
- sequential and concurrent design activities
- input and effects of advice from colleagues, experts and specialists
- features of concept proposal in the context of design brief, feasibility study and expert opinion
- concept proposal review process
- human and physical resources available to carry out the design task
- the most appropriate process to develop the plan and design to meet the agreed outcomes and cost structure
- reasons for establishing and maintaining a document management process
- engineering fundamentals affecting selection of components and systems
- relevance of defined engineering activities to successful project completion and career enhancement
- reasons for using particular design approach, calculations and assumptions
- reasons for using particular hardware and software and programming technique
- reasons for considering or using particular scientific principles
- reasons for providing for particular materials properties knowledge in the implementation of the planning and design process
- reasons for providing for particular methods and processes in the implementation of the planning and design process
- graphical and documentary options
- rationale for graphics and documents raised in the context of application, project and contractual requirements
- reasons for use of elective competencies in the implementation of the planning and design process
- key aspects of the design and implementation plan in the context of current specification,

- contract and organisational procedures, OHS and regulatory standards
- effect of design team, expert input and client feedback on design and implementation plan
- procedures for gaining client endorsement and documenting client acceptance of the design solution and implementation plan
- significance of the document control process
- procedures for initiating and gaining approval for design changes
- procedures for updating issued documents
- appropriate tests and testing schedules to monitor the outcomes or performance of the project
- reasons for selecting the chosen tests and schedules
- variations in measured performance from design specifications
- corrective action to return the design outcome or project performance to specification

Required skills include:

- researching and reporting context and parameters of the planning and design process for a comprehensive range of engineering applications
- planning and designing a significant and particular engineering application within the market and industrial context and in conformance with project parameters, such as financial, legal, resource and scheduling
- documenting and confirming client requirements in accordance with organisational procedures and practices
- informing client of known OHS, regulatory, ethical, environmental, physical and cost limitations
- identifying design parameters
- establishing scope of design brief
- writing specifications to meet design requirements
- documenting and agreeing on acceptance criteria with the client
- reviewing different approaches of technical feasibility, innovation, creativity, and acceptance to client
- documenting possible design concepts
- analysing, comparing and contrasting the relative merits of possible design concepts
- documenting an objective analysis of each approach (e.g. weighted 'trade-off' table)
- organising design activities into sequential and concurrent design activities
- discussing proposals with colleagues and specialists
- clarifying creative and technical aspects of the proposals
- documenting concept proposal in accordance with organisational procedures
- establishing the design and planning team in accordance with organisational procedures
- identifying resources and establishing management procedures
- controlling documentation in accordance with established procedures
- selecting components and systems
- addressing professional indemnity and ethical issues
- negotiating, documenting and monitoring outcomes and performance measures
- developing work instructions

- monitoring and correcting project progress
- performing risk analysis and corrective action
- assumptions and calculations for implementation of the planning and design process
- preparing design diagrams and calculations
- applying scientific principles in the implementation of the planning and design process
- selecting materials
- selecting engineering methods and processes
- creating demonstration models
- confirming the design solution and plan
- authorising modifications to the engineering specification in accordance with organisational procedures
- incorporating corrections and improvements to the design
- applying OHS, environment and regulatory standards
- completing design documentation
- documenting changes to the design and implementation plan
- obtaining and reviewing feedback from the commissioning process
- monitoring the project outcomes or performance in the user's environment
- addressing deficiencies in project outcomes or performance as measured against current specifications

Evidence Guide

Overview of assessment	A person who demonstrates competency in this unit must be able to plan and design aeronautical engineering projects for a range of engineering applications. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.
Method of assessment	This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with planning and design of aeronautical engineering projects or other units requiring the exercise of the skills and knowledge covered by this unit.

MEM14083A Apply aeronautical engineering fundamentals to support design/development of engineering projects

Modification History

Not applicable.

Unit Descriptor

This unit of competency covers engineering fundamentals required to support aerospace mechanical and manufacturing product, process, system or service design, development and improvement.

Control, data collection and supervisory systems are selected and implemented with technical assistance.

Application of the Unit

Competency in this unit requires significant application of aerospace aeronautical engineering fundamentals in support of engineering product, process, system or service design, development or improvement.

Control, data collection and supervisory systems may be selected and implemented with technical assistance.

The candidate should provide significant support to the design and development process as a member of a design and development or engineering support team.

Design, development and improvement activities apply to selection and implementation of human resources, software, test equipment, materials, components and systems, support structures, power supply and control, data collection and supervisory systems (with technical support).

Licensing/Regulatory Information

systems of aeronautical engineering projects

- 3 Identify and use sources of information on resources, skills and knowledge for engineering projects
 - 3.1 Identify and use appropriate sources of information on resources, skills, knowledge and techniques for engineering projects
 - 3.2 Use trade language and descriptions of resources and techniques as appropriate
 - 3.3 Implement appropriate computing techniques in the process of sourcing, categorising, cataloguing and reporting on resources search results for engineering applications
- 4 Apply engineering fundamentals in support of selection of resources for engineering applications
 - 4.1 Apply appropriate basic scientific principles and techniques in support of selection of resources for engineering applications
 - 4.2 Use appropriate calculations and assumptions to enable choices of resources for engineering applications
 - 4.3 Apply appropriate materials properties, methods and processes knowledge in support of selection of resources for engineering applications
 - 4.4 Select appropriate resources for the engineering application based on functional or performance specification of system and components of application
- 5 Specify resources, and technical support requirements
 - 5.1 Specify resources and technical support for engineering applications sufficient to facilitate their identification and supply
 - 5.2 Identify suppliers of resources and technical support
- 6 Assist with design specifications and development procedures for engineering applications
 - 6.1 Contribute significantly to the creation of design, implementation, installation, commissioning and maintenance procedures, and documents for specific engineering applications
 - 6.2 Implement appropriate computing and programming techniques in the process of development of design specifications and documentation for specific engineering applications
 - 6.3 Create and file design graphics and documentation suitable to the design and development process of the application or project in accordance with

organisational and contractual requirements

- 7 Assist with implementation of design and development
 - 7.1 Assist significantly with implementation of design, development, installation, commissioning and maintenance in accordance with regulatory requirements, specifications and documentation for specific aeronautical engineering applications

- 8 Review and report on design implementation
 - 8.1 Review design implementation
 - 8.2 Report on and record results of design, investigation, selection, specification and implementation, installation, commissioning and maintenance processes

Required Skills and Knowledge

Required knowledge includes:

- problem solving, implementation and improvement processes, philosophies and techniques, including problem solving, brainstorming, decision-tree, trade-off tables, Kaizen, TQM and tools of TQM
- implementation of specific aeronautical engineering projects incorporating problem solving, improvement processes, philosophies and techniques, including ILS
- continuous, mass, batch, jobbing or prototype production processes, sequential and cellular manufacture and assembly, JIT, and competitive (lean) manufacturing
- implementation of specific aeronautical engineering projects within continuous, mass, batch, jobbing or prototype production processes, sequential and cellular manufacture and assembly, JIT, competitive (lean) manufacturing, design for reliability, optimum maintenance and computer-managed maintenance
- significance and characteristics of software, test and analysis equipment, materials, components and systems, support structures, power supply, methods and processes, principles and techniques, control and supervisory systems to the application can be explained
- functional attributes of resources
- relationship of essential attributes to application function
- classification of attributes as essential versus desirable
- the value of desirable attributes
- methods of accessing and using alternative information sources
- appropriate sources of information
- trade language and descriptions
- reasons for using particular hardware and software
- methods of using hardware and software
- reasons for using particular scientific principles
- reasons for using particular calculations and assumptions
- reasons for providing for particular materials properties in the engineering application
- reasons for selecting resources with reference to functional or performance specification of system and components of application
- trade language descriptions used in specification
- procedural steps for implementation, commissioning and maintenance purposes
- graphical and documentary options
- rationale for graphics and documents raised can be explained in the context of application, project and contractual requirements
- implementation of design, development, installation, commissioning and maintenance procedures in the context of the specific application
- installation, programming, commissioning and maintenance of computer and control hardware and software in the context of the specific application
- design implementation review procedures

Required skills include:

- researching, evaluating and implementing specific aeronautical engineering projects using integrated logistic support (ILS) processes that may encompass problem solving, implementation and improvement processes, philosophies and techniques, including problem solving, brainstorming, decision-tree, trade-off tables, Kaizen, TQM and tools of TQM
- researching, evaluating and implementing specific aeronautical engineering projects within continuous, mass, batch, jobbing or prototype production processes, sequential and cellular manufacture and assembly, just in time (JIT), competitive (lean) manufacturing, design for reliability, optimum maintenance and computer-managed maintenance
- selecting test and analysis equipment, materials, components and systems, support structures, power supply and control systems appropriate to particular engineering applications
- identifying functional attributes of test and analysis equipment, materials, components and systems, support structures, power supply and control systems
- identifying essential attributes and desirable attributes in preparation for investigation, research and sourcing
- establishing provision for control systems from expert advice
- using computer hardware and software for gathering and analysing information
- applying scientific principles in the choice of test and analysis equipment, materials, components and systems, support structures, power supply and control systems
- making assumptions and calculations to justify choice of test and analysis equipment, materials, components and systems, support structures, power supply and control systems
- selecting materials properties for the engineering application
- selecting test and analysis equipment, materials, components and systems, support structures, power supply and control systems appropriate for the engineering application
- using relevant trade language
- specifying appropriate technical support
- specifying implementation, installation, commissioning and maintenance documentation and procedures
- providing for control system requirements
- using computer hardware and software and effectively in the design and development process of the engineering applications
- preparing design graphics and documentation to satisfy application and contractual requirements
- giving feedback on variations
- ensuring provision for control systems
- completing reports, records and design documentation

Evidence Guide

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply aeronautical engineering fundamentals to support design and development of projects for a range of engineering applications and within the application of ILS. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
<p>Method of assessment</p>	<p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying aeronautical engineering fundamentals to support design and development of projects or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Guidance information for assessment</p>

MEM14085A Apply mechanical engineering analysis techniques

Modification History

Release 1 - New unit Replaces MEM14061A, but not equivalent.

Unit Descriptor

This unit of competency covers the skills needed to undertake a range of mechanical engineering-related analyses. The analyses may relate to design, fitness for purpose evaluations, installation and commissioning, and other mechanical engineering-related tasks. Documentation of the design process includes calculations, specifications, computer-aided design (CAD) files, risk analysis, sustainability and life cycle assessments.

Application of the Unit

This unit applies to mechanical engineering analyses undertaken as part of a mechanical design or mechanical assessment of plant, products, projects, system changes or improvements. It is suitable for people working as mechanical designers and draftspersons and those pursuing careers and qualifications in mechanical engineering or related disciplines. The work may be undertaken individually or as part of a team.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23109A	Apply engineering mechanic principles

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Investigate mechanical analysis context and need	1.1	Review the context and negotiate parameters of the mechanical design or task in consultation with stakeholders
		1.2	Identify relevant engineering scientific principles and required analysis techniques
		1.3	Investigate life cycle design and sustainability implications of mechanical design or existing plant or equipment
		1.4	Determine specification, documentation and graphical techniques required for analysis
		1.5	Confirm work health and safety (WHS) and regulatory requirements, codes of practice, standards, and risk management relevant to mechanical analysis task
		1.6	Determine available sources for any required technical and professional assistance
2	Apply mechanical analysis techniques	2.1	Plan, schedule and coordinate the analysis task
		2.2	Create adequate and accurate calculations, preliminary graphics and maintain analysis process records
		2.3	Evaluate multiple solutions against analysis criteria
		2.4	Apply systems thinking to problem solving and decision making
		2.5	Incorporate professional and technical assistance, as

- required
- 2.6 Apply specification, documentation and graphical techniques modelling, mock-up or prototyping techniques, where required, to achieve or test solution
- 3 Report results
 - 3.1 Record results of analysis
 - 3.2 Provide documentation, such as calculations, specifications, diagrams, CAD files, mock-ups or prototypes

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating and negotiating with stakeholders and team
- determining or confirming relevance of mechanical engineering scientific principles and analysis techniques, including principles of:
 - mechanics
 - fluid power
 - fluid dynamics
 - thermodynamics
 - electrical fundamentals
 - engineering materials, properties and processes
- evaluating WHS and regulatory requirements, standards and codes of practice for relevance to analysis tasks
- evaluating multiple solutions against analysis criteria, risk, sustainability and cost factors
- applying life cycle design and sustainability parameters to analysis task
- planning, scheduling and coordinating the analysis task
- applying problem solving and decision making with systems thinking for contingencies and constraints and continuous improvement
- specifying, documenting and applying graphical techniques, including modelling
- undertaking or supervising mock-up or prototyping techniques, where required, to achieve solution
- creating and maintaining adequate and accurate calculations and analysis process records
- reporting and documenting results of investigations, application of principles and techniques, calculations, specifications, diagrams, CAD files, mock-ups or prototypes of designs

Required knowledge

Required knowledge includes:

- implications of life cycle design, fitness for purpose evaluation and sustainability for mechanical analysis process
- mechanical engineering-related analysis processes and techniques to investigate, synthesise and develop proposals, evaluate feasibility against analysis criteria, and review and revise in consultation with stakeholders and team or support functional group
- common model, mock-up and prototyping techniques relevant to mechanical engineering

- systems thinking, problem solving and decision making, and continuous improvement methods
- WHS and regulatory requirements, codes of practice, standards, risk management and registration requirements
- sources of professional and technical assistance
- procedures for planning, scheduling and coordination of analysis
- hardware requirements of typical mechanical, fluid power, hydrodynamic and thermal applications
- engineering scientific principles required for design analysis:
 - mechanical
 - fluid power
 - fluid dynamics
 - thermodynamics
 - electrical fundamentals
 - engineering materials, properties and processes
- mechanical analysis calculation techniques
- software for product planning and analysis, such as CAD, stress analysis and mould design, and project management
- documentation and required information
- prototyping options, including mock-ups, physical and virtual modelling, and rapid prototyping

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to apply mechanical analysis techniques consistent with an analysis brief information, relevant standards and conventions.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently: <ul style="list-style-type: none"> • communicate, negotiate and review analysis brief and specification requirements with stakeholders • determine or confirm relevant scientific principles and analysis techniques, WHS and regulatory requirements • evaluate multiple solutions • investigate life cycle analysis and sustainability • plan, schedule and coordinate the analysis task • solve problems and make decisions with systems thinking for

	<p>contingencies and constraints and continuous improvement</p> <ul style="list-style-type: none"> • define analysis, specify and document and apply graphical techniques, modelling, mock-up or prototyping techniques • create and maintain adequate and accurate calculations and analysis process records • report and document, results and processes.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Mechanical engineering analysis	<p>Mechanical engineering analysis may be required for a variety of reasons, including:</p> <ul style="list-style-type: none"> • design of mechanical devices and plant • design or evaluation of significant modifications, process changes or improvements • sustainability issues relevant to plant, equipment or processes • static and dynamic analysis of loads, including the resulting stresses and deformations • fitness for purpose evaluation • installation and commissioning of plant and equipment
Planning processes	<p>Planning processes may include:</p> <ul style="list-style-type: none"> • establishing analysis parameters and criteria • contributing to the negotiation and advice process • preliminary planning, analysis investigations and costing • identifying analysis, development, prototyping activities and skills requirements • planning and scheduling analysis activities • improving, adjusting and rescheduling as required by emergency contingencies and constraints
Analysis process	<p>Analysis as a systematic process includes:</p> <ul style="list-style-type: none"> • establish analysis parameters and criteria • research, measurement, experimentation, and investigation • generating ideas • synthesis, problem solving and decision making, and addressing constraints • apply scientific principles, calculation and graphics, prototyping and mock-up techniques • evaluating solutions against analysis criteria • consultation, adjustments and agreement • finalise analysis and sign-off
Analysis criteria	<p>Analysis includes relevant technical criteria and may also include criteria relating to:</p> <ul style="list-style-type: none"> • function • manufacturability and maintainability • marketability

	<ul style="list-style-type: none"> • sustainability • cost constraints • ergonomics and anthropometrics and physiology • facilities, plant and skills available • contingencies and constraints minimisation • safety and risk
Sustainability	<p>Sustainability is used to mean the entire sustainable performance of the organisation/plant, including:</p> <ul style="list-style-type: none"> • meeting all regulatory requirements • conforming to all industry covenants, protocols and best practice guides • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative WHS impact on employees, community and customer
Life cycle analysis	<p>Life cycle analysis can be used to improve sustainability of products and services. It may be applied to:</p> <ul style="list-style-type: none"> • all aspects of manufacture of a single product • the entire operations of an organisation • a particular aspect of operations, such as environmental implications
Prototyping	<p>Prototyping may include:</p> <ul style="list-style-type: none"> • mock-ups • physical and virtual modelling with post-processing for computer numeric control (CNC) and rapid prototyping
Systems thinking	<p>Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain</p>
Appropriate licensed technical and professional	<p>Appropriate licensed technical and professional assistance may include:</p>

assistance	<ul style="list-style-type: none"> • technical support and advice relating to elements which have intrinsic danger, such as: <ul style="list-style-type: none"> • high pressure • energised fluid vessels • high temperatures and heat energy capacity • wiring with high current control voltages above extra low voltage • professional support for technologies, such as: <ul style="list-style-type: none"> • specialist electric motor drives and controllers • specialist materials, plastics, metal alloys and nano materials • special processes, foundry, alloy welding, heat treatment, sealing and fastening
WHS, regulatory requirements and enterprise procedures	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> • WHS Acts and regulations • relevant standards • codes of practice from Australian and overseas engineering and technical associations and societies • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements
Standards and codes	<p>Standards and codes refer to all relevant Australian and international standards and codes applicable to the mechanical engineering analysis task</p>

MEM14086A Apply mechatronic engineering analysis techniques

Modification History

Release 1 - New unit. Replaces MEM14062A, but not equivalent.

Unit Descriptor

This unit of competency covers the skills needed to undertake a range of mechatronic analyses. The analyses may relate to design or contribution to the design of mechatronic devices or automated plant or be for other purposes, including fitness for purpose evaluations, installation and commissioning, system changes or improvements or other mechatronic engineering-related tasks. It includes application of mechanical, fluid, electrical and controller design and analytical techniques.

Application of the Unit

This unit applies to mechatronic analyses undertaken as part of a mechatronic engineering design or assessment of automated plant or devices for projects, system changes or improvements.

It is suitable for people working as mechatronic or automated system designers and draftspersons and those pursuing careers and qualifications in mechatronic, automation, maintenance or manufacturing engineering. The work may be undertaken individually or as part of a team.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23111A	Select electrical equipment and components for engineering applications
MEM23112A	Investigate electrical and electronic controllers in engineering applications
MEM14090A	Integrate mechatronic fundamentals into an engineering task

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Investigate mechatronic analysis context and need	1.1	Review the context and negotiate parameters of the engineering design brief in consultation with stakeholders
		1.2	Identify relevant engineering scientific principles and required analysis techniques
		1.3	Investigate life cycle design and sustainability implications of mechatronic design or existing mechatronic systems, devices or equipment
		1.4	Determine specification, documentation and graphical techniques required for analysis
		1.5	Confirm work health and safety (WHS), regulatory requirements, codes of practice, standards, and risk management relevant to mechatronic analysis task
		1.6	Determine available sources for any required technical and professional assistance
2	Apply mechatronic analysis techniques	2.1	Plan, schedule and coordinate the analysis task
		2.2	Create adequate and accurate calculations, preliminary graphics and maintain design process records
		2.3	Evaluate multiple solutions against analysis criteria
		2.4	Integrate mechatronic techniques, hardware and software, including mechanical, fluid, electrical, electronic, controller and networking

- 2.5 Apply systems thinking, problem solving and decision making
 - 2.6 Incorporate professional and technical assistance, as required
 - 2.7 Apply specification, documentation and graphical techniques modelling, mock-up or prototyping techniques, where required, to achieve or test solution
- 3 Report results
- 3.1 Record results of analysis
 - 3.2 Provide documentation such as calculations, specifications, diagrams, computer-aided design (CAD) files, control circuits and controller programs, mock-ups or prototypes

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating and negotiating with stakeholders and team
- determining or confirming relevance of mechatronic scientific principles and analysis techniques, including principles of:
 - mechanical
 - fluid power
 - fluid dynamics
 - thermodynamics
 - electrical and electronic fundamentals
 - controller and system control and data acquisition (SCADA) or distributed control systems (DCS) programming
 - engineering materials, properties and processes
 - techniques for integration of mechanical, fluid, electrical, electronic, controller and networking elements
- evaluating relevance of WHS, and regulatory requirements, standards and codes of practice
- evaluating multiple solutions against design criteria, risk, sustainability and cost factors
- applying life cycle design and sustainability parameters to analysis task
- planning, scheduling and coordinating the mechatronic analysis task
- solving problems and making decisions with systems thinking approach for contingencies and constraints, and continuous improvement
- integration of hardware and software and mechatronic techniques, such as mechanical, fluid, electrical, electronic, controller and networking
- specifying, documenting and applying graphical techniques, including modelling
- undertaking or supervising mock-up or prototyping techniques, where required, to achieve solution
- creating and maintaining adequate and accurate calculations and analysis process records
- reporting and documenting, results of investigations, application of principles and techniques, calculations, specifications, diagrams, CAD files, mock-ups or prototypes of designs

Required knowledge

Required knowledge includes:

- implications of life cycle design, fitness for purpose evaluation and sustainability for mechatronic analysis process
- mechatronic analysis processes and techniques to investigate, synthesise and develop proposals, evaluate feasibility against design criteria, and review and revise in consultation with stakeholders, team or support functional group
- common model, mock-up and prototyping techniques relevant to mechatronic engineering
- systems thinking, problem solving and decision making, and continuous improvement methods
- WHS and regulatory requirements, codes of practice, standards, risk management and registration requirements with particular emphasis on automation safety requirements
- sources of professional and technical assistance
- procedures for planning, scheduling and coordination of analysis
- hardware requirements of typical mechatronic or automation applications
- engineering mechatronic scientific principles and techniques required for analysis tasks:
 - mechanical
 - fluid power
 - fluid dynamics
 - thermodynamics
 - electrical and electronic fundamentals
 - controller and SCADA or DCS programming
 - engineering materials, properties and processes
 - techniques for integration of mechanical, fluid, electrical, electronic, controller and networking elements
- mechatronic analysis calculations techniques
- software for product planning and design, such as CAD, circuit design, controller programming and project management
- required documentation prototyping options, including mock-ups, physical and virtual modelling and rapid prototyping

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to apply mechatronic design techniques consistent with a design brief information, relevant standards and conventions.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • communicate, negotiate and review design brief with stakeholders and team or support functional group • determine or confirm relevant scientific principles and analysis techniques, WHS and regulatory requirements • evaluate multiple solutions • investigate life cycle design and sustainability • plan, schedule and coordinate the design task • integrate mechatronic techniques, hardware and software • solve problems and make decisions with systems thinking for contingencies and constraints, and continuous improvement • define analysis, specify and document and apply graphical techniques, modelling, mock-up or prototyping techniques • create and maintain adequate and accurate calculations and design process records • report and document results and processes.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace

	<p>relevant contexts) together with application of underpinning knowledge.</p> <ul style="list-style-type: none"> • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Mechatronic engineering analysis	<p>Mechatronic engineering analysis may be required for a variety of reasons, including:</p> <ul style="list-style-type: none"> • design of automated devices and plant • design or evaluation of significant modifications, process changes or improvements • sustainability issues relevant to plant, equipment or processes • fitness for purpose evaluation • installation and commissioning of plant and equipment
Planning processes	<p>Planning processes may include:</p> <ul style="list-style-type: none"> • establishing design parameters and design criteria • contributing to the negotiation and advice process • preliminary planning, design investigations and costing • identifying design, development, prototyping activities and skills requirements • planning and scheduling design activities • improving, adjusting and rescheduling as required by emergency

	contingencies and constraints
Analysis process	<p>Designing as a systematic process includes:</p> <ul style="list-style-type: none"> • establish design parameters and criteria • research, measurement, experimentation and investigation • generating ideas • synthesis, problem solving and decision making, and addressing constraints • apply scientific principles, calculation and graphics, prototyping and mock-up techniques • evaluating solutions against design criteria • consultation, adjustments and agreement • finalise design and sign-off
Analysis criteria	<p>Analysis includes relevant technical criteria and may also include criteria relating to:</p> <ul style="list-style-type: none"> • function • aesthetics • manufacturability and maintainability • marketability • sustainability • cost constraints • ergonomics and anthropometrics and physiology • manufacturability, maintainability • facilities, plant and skills available • safety and risk
Sustainability	<p>Sustainability is used to mean the entire sustainable performance of the organisation/plant, including:</p> <ul style="list-style-type: none"> • meeting all regulatory requirements • conforming to all industry covenants, protocols and best practice guides • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative WHS impact on employees, community and customer
Life cycle assessment	<p>Life cycle analysis can be used to improve sustainability of products and services. It may be applied to:</p> <ul style="list-style-type: none"> • all aspects of manufacture of a single product • the entire operations of an organisation • a particular aspect of operations, such as environmental implications

Prototyping	<p>Prototyping may include:</p> <ul style="list-style-type: none"> • mock-ups, physical and virtual modelling with post-processing for computer numeric control (CNC) and rapid prototyping
Appropriate licensed technical and professional assistance	<p>Appropriate licensed technical and professional assistance may include:</p> <ul style="list-style-type: none"> • technical support and advice relating to elements which have intrinsic dangers, such as: <ul style="list-style-type: none"> • high pressure • energised fluid vessels • high temperatures and heat energy capacity • wiring with high current control voltages above extra low voltage • professional support for technologies, such as: <ul style="list-style-type: none"> • specialist electric motor drives and controllers • specialist materials, plastics, metal alloys and nano materials • special processes, foundry, alloy welding, heat treatment, sealing and fastening
WHS, regulatory requirements and enterprise procedures	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> • WHS Acts and regulations • relevant standards • codes of practice from Australian and overseas engineering and technical associations and societies • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements
Standards and codes	<p>Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular mechatronic analysis task</p>
Systems thinking	<p>Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel,</p>

	and other organisations in the value chain
Automation safety	Automation safety refers to the reliance on emergency stop, failsafe design, redundancy, interlocks and data integrity. Standards apply to general plant design and use as well as the 'functional safety of safety-related electrical, electronic and programmable electronic control systems'
Mechatronic hardware	<p>Mechatronic hardware may include:</p> <ul style="list-style-type: none"> • mechanical, fluid and electric actuators • power transmission devices • pipes, conduits wires, fittings and connectors • controllers • power interfaces • signal conditioning interfaces
Documentation	<p>Documentation includes:</p> <ul style="list-style-type: none"> • documented calculations • specifications • CAD files • risk analysis • sustainability and life cycle assessments

MEM14087A Apply manufactured product design techniques

Modification History

Release 1 - New unit. Replaces MEM14063A, but not equivalent.

Unit Descriptor

This unit of competency covers the application of engineering design techniques to manufactured products. It includes documentation of the design process, calculations, specifications, computer-aided design (CAD) files, risk analysis, sustainability and life cycle assessments.

Application of the Unit

This unit applies to where engineering and related skills and knowledge are required for the design of manufactured products or components. The unit applies to people working individually or as part of a team. It is suitable for individuals working alone as designers on simpler manufactured product and component design or as part of a design team consisting of other paraprofessional and professional engineering designers. The unit is also suitable for design draftspersons undertaking design tasks.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM14089A Integrate mechanical fundamentals into an engineering task

MEM23004A Apply technical mathematics

MEM23063A Select and test mechanical engineering materials

MEM23109A Apply engineering mechanic principles

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Investigate manufactured product design requirements	1.1	Review product design brief
		1.2	Determine engineering and scientific principles and design techniques required for product design process
		1.3	Investigate life cycle design and sustainability implications of design requirement
		1.4	Determine required specification, documentation and graphical techniques to define design
		1.5	Confirm work health and safety (WHS) and other regulatory requirements
		1.6	Identify codes, standards and risk management requirements
		1.7	Investigate software requirements for product design process

- 2 Apply manufactured product design techniques
 - 2.1 Plan, schedule and coordinate the design task
 - 2.2 Analyse available materials, components, manufacturing processes, tooling and suppliers against design requirements
 - 2.3 Create adequate and accurate calculations, preliminary graphics and maintain design process records
 - 2.4 Evaluate multiple solutions against design criteria, risk, failure mode, sustainability and cost
 - 2.5 Apply systems thinking, problem solving and decision making techniques in dealing with contingencies and constraints, continuous improvement and development of design options
 - 2.6 Incorporate professional and technical assistance, as required
 - 2.7 Finalise specification and documentation, modelling, mock-up or prototyping

- 3 Report results
 - 3.1 Record results of investigations, application and development of design
 - 3.2 Provide documentation, such as calculations, specifications, diagrams, CAD files, mock-ups or prototypes

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating and negotiating with stakeholders
- determining or confirming appropriate engineering and scientific principles for product or component design task
- determining sustainability, WHS, regulatory and risk management requirements
- evaluating multiple solutions for materials and components, manufacturing processes, tooling and component supply for product
- investigating life cycle and sustainability of a design
- evaluating requirement for technical and professional assistance
- planning, scheduling and coordinating a design task
- solving problems and making decisions with systems thinking for contingencies and constraints, and continuous improvement
- specifying and documenting designs, including applying graphical techniques, modelling, mock-up or prototyping techniques
- creating and maintaining adequate and accurate calculations and design process records
- reporting and documenting results of investigations, application of principles and techniques, calculations, specifications, diagrams, CAD files, mock-ups or prototypes of designs

Required knowledge

Required knowledge includes:

- sustainability implications of materials, product and processes, including consideration of life cycle analysis
- manufactured product design processes and techniques
- systems thinking, problem solving and decision making, and continuous improvement methods
- WHS and regulatory requirements, standards and risk assessment for design, and prototyping activities
- sources of professional and technical assistance procedures for planning, scheduling and coordination of design
- typical product design criteria
- design calculation techniques
- product planning and design software, such as for CAD, stress analysis and project management

- design process documentation, records and reports, including specifications and CAD graphics
- typical materials and components used in manufacturing
- tooling, plant and processes for particular products and materials
- characteristics of cast, forged, machined and sheet metal components, moulded and extruded plastic components, and components made from other materials or by other processes
- professional and technical assistance for product development

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to apply manufactured product design techniques consistent with a design brief, relevant standards and conventions. It includes working individually and as part of a team in accordance with organisational procedures.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • communicate, negotiate and review design brief with stakeholders • determine or confirm scientific principles and design techniques, WHS and regulatory requirements, and design specification requirements • evaluate multiple solutions, materials and components, manufacturing processes, tooling and component supply chain for product • investigate life cycle design and sustainability, technical and professional assistance required • plan, schedule and coordinate the design task • select design components using design process and scientific principles • solve problems and make decisions with systems thinking for contingencies and constraints and continuous improvement • define designs, specify and document and apply graphical techniques, modelling, mock-up or prototyping techniques • create and maintain adequate and accurate calculations and design process records • report and document results and processes.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical

	resources should include equipment modified for people with disabilities.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Context of manufactured product design	<p>The context for product design activity may include:</p> <ul style="list-style-type: none"> • budget and market considerations • technological advantages/disadvantages of materials, equipment and suppliers • resources supply (e.g. materials, labour and skills) • sustainability issues relevant to design task (e.g. WHS, risk management, standards and codes of practice)
Planning processes	<p>Planning processes may include:</p> <ul style="list-style-type: none"> • establishing design parameters and design criteria • contributing to the negotiation and advice process

	<ul style="list-style-type: none"> • preliminary planning, design investigations and costing • identifying design, development, prototyping activities and skills requirements • planning and scheduling design activities • improving, adjusting and rescheduling as required by emergency contingencies and constraints
Design process	<p>Designing as a systematic process includes:</p> <ul style="list-style-type: none"> • establish design parameters and criteria • research, measurement, experimentation and investigation • generate ideas and develop proposals • synthesis, problem solving and decision making, and addressing constraints • apply scientific principles, calculation and graphics, prototyping and mock-up techniques • evaluate solutions against design criteria • review and revision of design in consultation with stakeholders • finalise design and sign-off
Design criteria	<p>Design criteria include:</p> <ul style="list-style-type: none"> • function • aesthetics • manufacturability and maintainability • marketability • sustainability, including life cycle analysis • cost constraints on costs of design, development, tooling up, manufacture, marketing and distribution • ergonomics and anthropometrics and physiology • facilities, plant and skills available • safety and risk
Analysis	<p>Analysis may include:</p> <ul style="list-style-type: none"> • product and component performance requirements • assessment against manufacturing capability of organisation • failure mode effects and risk • static and dynamic analysis of loads • the stresses and deformations resulting • graphical and mathematical methods and software options • suitability of materials for purpose and manufacturing process
Sustainability	<p>Sustainability is used to mean the entire sustainable performance of the organisation/plant, including:</p> <ul style="list-style-type: none"> • meeting all regulatory requirements • conforming to all industry covenants, protocols and best

	<p>practice guides</p> <ul style="list-style-type: none"> • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative WHS impact on employees, community and customer
Life cycle assessment	<p>Life cycle analysis can be used to improve sustainability of products and services. MEM14088A Apply maintenance engineering techniques to equipment and component repairs and modifications

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers the skills needed to apply maintenance engineering techniques to equipment or component modification or repair. It includes decision making on the need for repair, replacement or modification and design of any repair or modification. The unit covers maintenance techniques for repair and modification of mechanical, fluid and electrical plant, and facilities in accordance with procedures, work health and safety (WHS) and legislative requirements, and risk management procedures. Documentation of the repair or modification process includes calculations, specifications, computer-aided design (CAD) files, risk analysis, sustainability and life cycle assessments.

Application of the Unit

This unit applies to maintenance-related work where a technical evaluation must occur on whether to repair, replace or modify equipment or components and where engineering design techniques are applied where repair or modification is required. The unit applies across all engineering disciplines and would normally be selected in conjunction with appropriate technical units for the equipment or components being considered for maintenance.

The unit includes reviewing condition analysis and non-destructive test (NDT) reports. However, the conduct of condition analysis and NDT tests is covered by the relevant specialist technical units.

Where an organisation or whole of plant maintenance management systems is being reviewed or considered for change the unit MEM23125A Evaluate maintenance systems, should be selected.

The unit is suitable for people working at a technician level in maintenance-related design drafting or in maintenance-related supervision or management.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM14092A Integrate maintenance fundamentals into an engineering task

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Investigate requirements of equipment or component maintenance task	1.1	Review the context and parameters of the maintenance task in consultation with stakeholders
		1.2	Review equipment or component original design and any subsequent modifications and repairs
		1.3	Review current performance specifications
		1.4	Determine engineering scientific principles and design techniques required for equipment or component maintenance
2	Investigate alternatives of repair, replacement or modification	2.1	Review preventative maintenance system requirements or defect/failure details to determine if replacement is required
		2.2	Review equipment or component condition analysis reports, including the results of any required NDT
		2.3	Review maintenance repair techniques and processes, standard parts, labour and skill requirements
		2.4	Consider life cycle design and sustainability implications of maintenance design and maintenance activities

- 2.5 Determine specification, documentation and graphical techniques required to define designs
 - 2.6 Confirm WHS and regulatory requirements, codes of practice, standards, risk management and registration requirements relevant to repair and modification design projects
 - 2.7 Assess the need for technical and professional assistance
 - 2.8 Consider software options for repair and modification design, such as computer-aided design (CAD), stress analysis and project management software
 - 2.9 Decide if repair, replacement or modification is appropriate and seek any necessary approvals
- 3 Apply repair and modification design techniques
- 3.1 Plan, schedule and coordinate the repair or modification design task
 - 3.2 Apply the design process and scientific principles to repair and modification design proposals
 - 3.3 Determine materials, components, maintenance processes, equipment and tools required to implement design
 - 3.4 Create adequate and accurate calculations, preliminary graphics and maintain design process records, including use of software, as appropriate
 - 3.5 Assess repair and modification designs against design criteria
 - 3.6 Apply systems thinking to problem solving and decision making techniques in dealing with contingencies and constraints for continuous improvement and development of design options
 - 3.7 Incorporate professional and technical assistance, as required
 - 3.8 Use specification, documentation and graphical techniques, modelling, mock-up or prototyping techniques, as appropriate, to define repair or modification

- 4 Report results
 - 4.1 Record results of investigations, application and development of repair and modification design
 - 4.2 Provide appropriate documentation, such as calculations, specifications, diagrams, CAD files, mock-ups or prototypes

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- determining or confirming scientific principles and maintenance design techniques, WHS and regulatory requirements, and design specification requirements required to meet maintenance brief
- evaluating multiple solutions, materials and components, maintenance repair processes and techniques, standard parts, skill requirements, equipment and tools
- investigating life cycle design and sustainability, technical and professional assistance alternatives for repair, replacement or improvement, and software options for maintenance planning and design
- planning, scheduling and coordinating the maintenance task
- applying design process and scientific principles to component and hardware selection and design proposals
- solving problems and making decisions with systems thinking for contingencies and constraints, and continuous improvement
- defining designs, specifying and documenting and applying graphical techniques, modelling, mock-up or prototyping techniques
- creating and maintaining adequate and accurate calculations and design process records
- reporting and documenting results of investigations, application of principles and techniques, calculations, specifications, diagrams, CAD files, mock-ups or prototypes of designs

Required knowledge

Required knowledge includes:

- sustainability implications of maintenance processes, materials and products, including consideration of life cycle analysis
- design processes and techniques
- concurrent engineering techniques, systems thinking, problem solving and decision making, and continuous improvement methods
- WHS Acts and regulations, codes of practice, standards, registration and risk assessment for design, maintenance and prototyping activities
- procedures for planning, scheduling and coordination of maintenance design
- typical maintenance criteria, such as:
 - strength and servicability of repairs compared to original
 - function and aesthetics

- maintainability and manufacturability
- preventative maintenance evaluation criteria, such as mean time between failure (MTBF) and failure mode effects analysis (FMEA)
- required quality, cost and sustainability
- design calculations techniques
- typical maintenance design requirements of various industries
- typical repairs, parts, skills and maintenance processes
- hardware specifications and catalogues
- typical maintenance plant, equipment and tools
- plant condition and maintenance assessment techniques
- typical maintenance techniques and technologies for monitoring, preventative maintenance, online and breakdown maintenance, disassembly, repair, reassembly and recommission
- design calculations layout and documentation for design checking and maintenance records
- design process documentation and reports, including specifications and CAD graphics
- software for maintenance planning and repair and modification design, including CAD and stress analysis software
- software and systems, such as system control and data acquisition (SCADA) and distributed control systems (DCS) for maintenance control and information distribution
- developments in repair and modification design
- options for mock-up, modelling and prototyping

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to apply repair and modification techniques consistent with a design brief information, relevant standards and conventions.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently: <ul style="list-style-type: none"> • communicate, negotiate and review maintenance brief with stakeholders • determine or confirm scientific principles and design techniques, WHS and regulatory requirements, and design

	<p>specification requirements</p> <ul style="list-style-type: none"> • evaluate multiple solutions • investigate life cycle design, sustainability, technical and professional assistance required, and maintenance alternatives for repairs and modifications • plan, schedule and coordinate the maintenance task • solve problems and make decisions with systems thinking for contingencies and constraints, and continuous improvement • define designs, specify and document and apply graphical techniques, modelling, mock-up or prototyping techniques • select components and hardware • create and maintain adequate and accurate calculations and design process records • report and document results and processes.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
<p>Guidance information</p>	<p>Assessment processes and techniques must be culturally</p>

for assessment	appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.
-----------------------	--

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Maintenance repair and modification requirements	<p>Maintenance repair and modification requirements may include:</p> <ul style="list-style-type: none"> • scheduled maintenance required under the maintenance management system • unscheduled maintenance as a result of system/component failure • repairs to restore systems/components to operation • modifications to improve system/component reliability or maintainability • maintenance schedule change or equipment or component modification required because of a change in equipment performance requirements (e.g. changed production or product design) • competitive market pressure and ‘lean maintenance’ • changes in available maintenance technology • resources supply (e.g. materials, labour and skills) • introduction or changes to asset technologies (e.g. mechanical, fluid, electrical, electronic and system control) • sustainability relevant to repair and modification design tasks • WHS, risk and applicable standards and code requirements
Planning processes	<p>Planning processes may include:</p> <ul style="list-style-type: none"> • establishing maintenance parameters and design criteria • contributing to the negotiation and advice process • preliminary planning, investigations and costing • identifying design, development, prototyping activities and skills requirements • planning and scheduling design activities • improving, adjusting and rescheduling as required by emergency contingencies and constraints

Design process	<p>Where equipment or component repair or modification design is required the design process includes:</p> <ul style="list-style-type: none"> • establish design parameters and criteria • research, measurement, experimentation and investigation • generating ideas • synthesis, problem solving and decision making, and addressing constraints • apply scientific principles, calculation and graphics, prototyping and mock-up techniques if required • selection of components and hardware • evaluating solutions against design criteria • consultation, adjustments and agreement • finalise design and sign-off
Design criteria	<p>Design criteria may include:</p> <ul style="list-style-type: none"> • function and fit for purpose • aesthetics • manufacturability and maintainability • sustainability • cost constraints • ergonomics and anthropometrics and physiology • facilities, plant, services and skills available • WHS and risk
Sustainability	<p>Sustainability is used to mean the entire sustainable performance of the organisation/plant, including:</p> <ul style="list-style-type: none"> • meeting all regulatory requirements • conforming to all industry covenants, protocols and best practice guides • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative WHS impact on employees, community and customer
Life cycle	<p>Life cycle analysis can be used to improve sustainability of repaired or modified equipment or components. It may be applied to all aspects of</p>

assessment	the repair or modification process
Appropriate licensed technical and professional assistance	<p>Appropriate licensed technical and professional assistance may include:</p> <ul style="list-style-type: none"> • technical support and advice relating to elements which have intrinsic dangers, such as: <ul style="list-style-type: none"> • high pressure • energised fluid vessels • high temperatures and heat energy capacity • wiring with high current control voltages above extra low voltage • professional support for technologies, such as: <ul style="list-style-type: none"> • specialist electric motor drives and controllers • specialist materials, plastics, metal alloys and nano materials • special processes, foundry, alloy welding, heat treatment, sealing and fastening
WHS, regulatory requirements and enterprise procedures	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> • WHS Acts and regulations • relevant standards • codes of practice from Australian and overseas engineering and technical associations and societies • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements applying to electrical work
Standards and codes	Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular maintenance repair and modification design task
Prototyping	<p>Prototyping may include:</p> <ul style="list-style-type: none"> • mock-ups, physical and virtual modelling with post-processing for computer numeric control (CNC) and rapid prototyping
Systems thinking	Systems thinking refers to the conduct of engineering work in a

	<p>manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain</p>

Custom Content Section

Not applicable.

MEM14089A Integrate mechanical fundamentals into an engineering task

Modification History

Release 1 - New unit. Replaces MEM14081A and MEM23071A, but not equivalent.

Unit Descriptor

This unit of competency covers the integration of mechanical fundamentals to achieve an engineering or related task. It includes identifying task parameters, personal and team functions, chain of responsibility and work health and safety (WHS) guidelines. It includes investigation of machines, mechanisms and mechanical systems, and mechanical fundamentals, such as mechanical methods and processes, workshop techniques, materials, scientific and mathematical principles and computer software. It requires completion of the task in cooperation with the team and documentation of the process and outcomes.

Application of the Unit

The unit applies to engineering or related projects requiring mechanical engineering skills and covers the identification, application and integration of mechanical fundamentals. It is suitable for people working as mechanical designers and draftspersons and those pursuing careers and qualifications in mechanical engineering.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23109A	Apply engineering mechanics principles

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

- | | | | |
|---|---------------------------------------|-----|--|
| 1 | Investigate scope of engineering task | 1.1 | Identify mechanical and related fundamentals to be integrated into engineering task |
| | | 1.2 | Identify stakeholders to be consulted |
| | | 1.3 | Confirm WHS, regulatory requirements, risk management and organisational procedures |
| | | 1.4 | Review functions and features of machines, mechanisms and mechanical systems required by the task |
| | | 1.5 | Review software techniques required for task analysis and graphics |
| 2 | Integrate mechanical fundamentals | 2.1 | Use systems thinking to address contingencies and constraints, problem solving and decision making, and continuous improvement to achieve integration task |
| | | 2.2 | Integrate mechanical fundamentals to achieve task objectives |
| | | 2.3 | Seek technical and professional assistance or clarification of design information, as required |
| 3 | Report results | 3.1 | Record results of investigation, evaluation and integration |
| | | 3.2 | Provide documentation, such as diagrams and calculations, programs and files |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating, cooperating and negotiating with stakeholders
- identifying parameters and context, WHS and regulatory requirements, risk management and organisational procedures
- evaluating requirements, principles, techniques, and typical applications related to task
- selecting software for required analysis and graphics
- planning the task
- solving problems and making decisions using systems thinking and continuous improvement to address contingencies and constraints
- reporting and documenting results of investigation, evaluation and integration, diagrams and calculations
- reviewing sustainability implications, functions and features for the engineering task

Required knowledge

Required knowledge includes:

- WHS and regulatory requirements, codes of practice, and risk minimisation and registration requirements
- mechanical and related fundamentals, including:
 - materials properties
 - mechanics
 - chemistry
 - thermodynamics
 - fluid mechanics
 - fluid power
 - electrical fundamentals
 - and may also include depending on the application:
 - light, sound and electromagnetic effects
- methods and processes for shaping, cutting, joining and coating of metal and other materials
- functions and features of machines, mechanisms and mechanical systems
- current options and trends in software, including system layout and simulation

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to undertake investigation of an engineering task to determine the mechanical fundamentals required by the task and integrating them into a task plan and report the plan and any investigations undertaken.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • determine task parameters and context and identify and investigate required mechanical fundamentals • evaluate task requirements, principles, techniques, typical applications and software • plan the task • integrate mechanical fundamentals to achieve task objectives • communicate, cooperate and negotiate with stakeholders to achieve integration task • report and document results.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment must cover the integration of two or more mechanical fundamentals to achieve the engineering task.

	<ul style="list-style-type: none"> • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. MEM14090A Integrate mechatronic fundamentals into an engineering task

Modification History

Release 1 - New unit. Replaces MEM14082A and MEM23072A, but not equivalent.

Unit Descriptor

This unit of competency covers the integration of mechatronic fundamentals to achieve an engineering or related task. It includes identifying task parameters, personal and team functions, and work health and safety (WHS) requirements. It includes investigation of programmable machines, controllers and mechatronic devices, and automated systems and mechatronic fundamentals, including mechatronic methods and processes, workshop techniques, materials, scientific and mathematical principles and computer software. It requires completion of the task in cooperation with the team and documentation of the process and outcomes.

Application of the Unit

The unit applies to engineering or related projects requiring mechatronic engineering skills and covers the identification, application and integration of mechatronic fundamentals. It is suitable for people working as mechatronic or automation technicians and drafters and those pursuing careers and qualifications in mechatronic engineering.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23111A	Select electrical equipment and components for engineering applications
MEM23112A	Investigate electrical and electronic controllers in engineering applications

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Investigate scope of engineering task	1.1	Identify mechatronic and related fundamentals to be integrated into engineering task
		1.2	Identify stakeholders to be consulted
		1.3	Review functions and features of machines, controllers, devices and automated systems requiring mechatronics
		1.4	Confirm WHS, regulatory requirements, risk management and organisational procedures
		1.5	Review software techniques required for task analysis and graphics
2	Integrate mechatronic fundamentals	2.1	Use systems thinking to address contingencies and constraints, problem solving and decision making, and continuous improvement to achieve integration task
		2.2	Integrate mechatronic fundamentals to achieve task

objectives

- 2.3 Seek technical and professional assistance or clarification of design information, as required

- 3 Report results
 - 3.1 Record results of investigation, evaluation and integration

 - 3.2 Provide documentation, such as diagrams, calculations, programs and files

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating, cooperating and negotiating with stakeholders
- identifying task parameters and context, WHS and regulatory requirements, risk management and organisational procedures
- evaluating task requirements, including principles, techniques, machines, controllers and mechatronic devices, and typical automated systems
- selecting and using software for required analysis and graphics
- planning the task
- solving problems and making decisions using systems thinking and continuous improvement to address contingencies and constraints

reporting and documenting results of investigation, evaluation and integration, diagrams and calculations

- reviewing sustainability implications, functions and features for the engineering task

Required knowledge

Required knowledge includes:

- WHS and regulatory requirements, codes of practice, and risk minimisation and registration requirements
- mechatronic fundamentals, including:
 - mathematics
 - materials properties
 - mechanics
 - electrical and electronic fundamentals

fundamentals of controller programming, interfacing and signal conditioning, and which depending on the application may also include:

- chemistry
- light, sound and electromagnetic effects
- thermodynamics and heating, ventilation and air conditioning (HVAC)
- fluid mechanics
- fluid power
- system control and data acquisition systems (SCADA) and distributed control systems (DCS)

- computing
- graphics, including computer-aided design and drafting systems (CAD)
- methods and processes for shaping, cutting, joining and coating of metal and other materials
- functions and features of machines, controllers and mechatronic devices and automated systems
- current options and trends in software, including circuit and system layout and simulation

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

MEM14091A Integrate manufacturing fundamentals into an engineering task

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers the integration of manufacturing fundamentals to achieve an engineering or related task. It includes identifying task parameters, personal and team functions, and work health and safety (WHS) guidelines. It includes investigation of function and features of manufacturing plant, methods and processes and manufacturing fundamentals, including workshop techniques, materials, scientific and mathematical principles, and computer software.

Application of the Unit

The unit applies to engineering or related projects requiring manufacturing engineering skills and covers the identification, application and integration of manufacturing fundamentals. It is suitable for people working as manufacturing technicians and draftspersons and those pursuing manufacturing engineering or related technical qualifications and careers. If applying the unit into an enterprise or context where knowledge and skills of lean manufacturing techniques is also required, relevant competitive systems and practices units should also be selected.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A Apply technical mathematics

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

- | | | | |
|---|---------------------------------------|-----|---|
| 1 | Investigate scope of engineering task | 1.1 | Identify manufacturing engineering and related fundamentals to be integrated into engineering task |
| | | 1.2 | Review current functions and features of manufacturing plant, methods and processes, including production control, process maintenance options, and continuous improvement and lean manufacturing-related systems and processes |
| | | 1.3 | Identify stakeholders to be consulted |
| | | 1.4 | Confirm WHS, regulatory requirements, risk management and organisational procedures |
| | | 1.5 | Review software techniques required for task analysis and graphics |
| 2 | Integrate manufacturing fundamentals | 2.1 | Plan the task |
| | | 2.2 | Communicate, cooperate and negotiate with stakeholders, as required |
| | | 2.3 | Use systems thinking to address contingencies and constraints, problem solving and decision making, and continuous improvement to achieve integration task |
| | | 2.4 | Integrate manufacturing fundamentals to achieve task objectives |
| | | 2.5 | Seek technical and professional assistance or clarification of design information, as required |

- 3 Report results
 - 3.1 Record results of investigation, evaluation and integration
 - 3.2 Provide documentation, such as diagrams, graphics, flow charts and calculations

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating, cooperating and negotiating with stakeholders
- identifying task parameters and manufacturing context, WHS, regulatory requirements, risk management and organisational procedures
- evaluating manufacturing principles, systems, methods and processes, and production machinery, such as:
 - lean manufacturing
 - jobbing (individual lot manufacturing)
 - transfer lines
 - cellular manufacturing
 - typical manufacturing departments, such as logistics, warehouse, production, maintenance, scheduling, sales, marketing and administration
- selecting and using software and graphics for required analysis and graphics
- planning the task
- integrating manufacturing fundamentals to achieve task objectives
- solving problems and making decisions using systems thinking and continuous improvement to address contingencies and constraints
- reporting and documenting results of investigation, evaluation and integration, diagrams and calculations
- reviewing sustainability implications, functions and features for the engineering task

Required knowledge

Required knowledge includes:

- WHS and regulatory requirements, codes of practice, and risk minimisation and registration requirements
- manufacturing methods, such as:
 - production control and flow
 - continuous improvement
 - lean techniques for quality, speed, quantity and reliability
 - manufacturing systems maintenance, such as total productive maintenance
 - jobbing, batch and mass systems
 - production lines and work cells, and batch and queue manufacturing

- functions and features of production machinery and systems related to the task
- general mechanical, electrical and mechatronic engineering fundamentals relevant to manufacturing, such as:
 - materials properties
 - mechanics
 - chemistry
 - thermodynamics
 - fluid mechanics
 - fluid power
 - electrical fundamentals
- current options and trends in software, including manufacturing process simulation software

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to undertake investigation of an engineering task to determine the manufacturing fundamentals required by the task and integrating them into a task plan and report the plan and any investigations undertaken.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently: <ul style="list-style-type: none"> • communicate, cooperate and negotiate with stakeholders to achieve manufacturing integration task • determine task parameters and context and identify and investigate required manufacturing fundamentals • identify relevant WHS, regulatory requirements, risk management and organisational procedures • integrate manufacturing fundamentals to achieve task objectives • report and document results.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment

	<p>Guidelines of the MEM05 Metal and Engineering Training Package.</p> <ul style="list-style-type: none"> • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
<p>Guidance information for assessment</p>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Appropriate licensed technical and professional assistance</p>	<p>Appropriate licensed technical and professional assistance may include:</p> <ul style="list-style-type: none"> • technical support and advice relating to elements which have intrinsic dangers, such as: <ul style="list-style-type: none"> • high pressure • energised fluid vessels • high temperatures and heat energy capacity • wiring with high current control voltages above extra low
--	--

	<p>voltage</p> <ul style="list-style-type: none"> • professional support for technologies, such as: <ul style="list-style-type: none"> • specialist electric motor drives and controllers • specialist materials, plastics, metal alloys and nano materials • special processes, foundry, alloy welding, heat treatment, sealing and fastening
WHS, regulatory requirements and enterprise procedures	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> • WHS Acts and regulations • relevant standards • codes of practice from Australian and overseas engineering and technical associations and societies • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements
Systems thinking	<p>Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain.</p>
Continuous improvement implementation	<p>Continuous improvement implementation may relate to plant, products, processes, systems or services, including design, development, implementation or manufacture, commissioning, operation or delivery and maintenance.</p> <p>Improvement processes may include techniques, such as:</p> <ul style="list-style-type: none"> • balanced scorecard • current and future state mapping • measuring performance against benchmarks

	<ul style="list-style-type: none"> • process improvement, problem solving and decision making • data management, generation, recording, analysing, storing and use of software • training for improvement systems participation • technical training
Constraints and contingencies	<p>Constraints and contingencies may include:</p> <ul style="list-style-type: none"> • financial • organisation procedural or culture • physical constraints, such as limits to resources, limits to site access or logistical limitations
Sustainability	<p>Sustainability is used to mean the entire sustainable performance of the organisation/plant, including:</p> <ul style="list-style-type: none"> • meeting all regulatory requirements • conforming to all industry covenants, protocols and best practice guides • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative WHS impact on employees, community and customer
Lean principles	<p>Lean manufacturing uses cost, capacity and responsiveness, quality, reliability and waste minimisation as drivers of the process and measures for process improvement. Lean manufacturing is the response of many organisations to local, regional, national and global market competitiveness.</p>

MEM14092A Integrate maintenance fundamentals into an engineering task

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers the integration of maintenance fundamentals to achieve an engineering or related task. It includes identifying task parameters, personal and team functions, and work health and safety (WHS) requirements. It includes investigation of maintainable features of plant, facilities and services, and evaluation of related fundamentals of mathematics, scientific principles, workshop skills, materials and processes, and software required by the task. It requires completion of the task in cooperation with the team and documentation of the process and outcomes.

Application of the Unit

The unit applies to engineering and related tasks in a project or organisation and covers the identification, application and integration of maintenance fundamentals, including breakdown and preventative maintenance fundamentals. It is suitable for people working as maintenance technicians and draftspersons and those pursuing careers and qualifications in maintenance engineering.

This unit should be undertaken in conjunction with technical units relevant to the equipment and processes used in the organisation.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A Apply technical mathematics

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|----------|--|-----|--|
| 1 | Investigate scope of engineering task | 1.1 | Identify the breakdown and preventative maintenance and other related fundamentals to be integrated into engineering task |
| | | 1.2 | Identify stakeholders to be consulted |
| | | 1.3 | Confirm WHS, regulatory requirements, risk management and organisational procedures |
| | | 1.4 | Identify maintainable features of plant, facilities and services affected by integration task |
| | | 1.5 | Identify methods, processes and workshop techniques required by task |
| | | 1.6 | Review sustainability implications for task |
| | | 1.7 | Review software techniques required for task analysis and graphics |
| | | 1.8 | Plan task to maximise performance and reliability and prevent future breakdowns |
| 2 | Integrate maintenance fundamentals | 2.1 | Use systems thinking to address contingencies and constraints, problem solving and decision making, and continuous improvement to achieve integration task |
| | | 2.2 | Consult with stakeholders on timing and scope of |

integration task

2.3 Integrate maintenance fundamentals to achieve task objectives

2.4 Seek technical and professional assistance or clarification of design information, as required

3 Report results

3.1 Record results of investigation, evaluation and integration

3.2 Provide documentation, such as diagrams, calculations, programs and files

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating, cooperating and negotiating with stakeholders
- identifying task parameters and context, WHS and regulatory requirements, risk management and organisational procedures
- evaluating task requirements, including principles, methods, processes and construction techniques, maintainable features of plant, facilities and services
- selecting and using software required for analysis and graphics
- evaluating maintenance-related task activities for effect on performance, reliability and prevention of failure
- solving problems and making decisions using systems thinking and continuous improvement to address contingencies and constraints

reporting and documenting results of investigation, evaluation and integration, diagrams and calculations

- reviewing sustainability implications, functions and features for the engineering task

Required knowledge

Required knowledge includes:

- maintenance and related fundamentals may include:
 - materials properties
 - maintenance methods and processes
 - mechanics
 - chemistry
 - thermodynamics
 - fluid mechanics
 - fluid power
 - electrical and electronic fundamentals
 - fundamentals of controller programming, interfacing and signal conditioning
 - computing
 - graphics, including computer-aided design (CAD)
 - workshop and maintenance equipment
- functions and maintainable features of plant, facilities and services

- maintenance methods and procedures:
 - breakdown maintenance
 - preventive maintenance
 - predictive maintenance (on-condition)
 - precision maintenance
 - proactive maintenance
 - reliability centred maintenance and modification
 - total productive maintenance
 - repair and replace methods and processes
- role and application of maintenance-related risk management procedures and analysis
- current options and trends in maintenance software
- typical software applications for engineering maintenance fundamentals

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	<p>A person who demonstrates competency in this unit must be able to undertake investigation of an engineering task to determine the maintenance fundamentals required by the task and integrating them into a task plan and report the plan and any investigations undertaken.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • communicate, cooperate and negotiate with stakeholders to achieve integration task • determine task parameters and context, chain of responsibility, WHS, regulatory requirements, risk management and organisational procedures • evaluate task requirements, principles, techniques, typical applications and software • plan the task • integrate maintenance fundamentals to achieve task objectives • report and document results.

<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities. •
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
<p>Guidance information for assessment</p>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

--	--

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Integrate maintenance fundamentals	Integrate maintenance fundamentals refers to situations where maintenance skills and knowledge must be applied across more than one engineering, system or application area to achieve a task objective
Appropriate licensed technical and professional assistance	<p>Appropriate licensed technical and professional assistance may include:</p> <ul style="list-style-type: none"> • technical support and advice relating to elements which have intrinsic dangers, such as: <ul style="list-style-type: none"> • high pressure • energised fluid vessels • high temperatures and heat energy capacity • wiring with high current control voltages above extra low voltage • professional support for technologies, may include: <ul style="list-style-type: none"> • specialist electric motor drives and controllers • specialist materials, plastics, metal alloys and nano materials • special processes, foundry, alloy welding, heat treatment, sealing and fastening
WHS, regulatory requirements and enterprise procedures	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> • WHS Acts and regulations • relevant standards • codes of practice from Australian and overseas engineering and technical associations and societies • risk assessments • registration requirements • safe work practices

	<ul style="list-style-type: none"> state and territory regulatory requirements
Systems thinking	<p>Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain.</p>
Continuous improvement implementation	<p>Continuous improvement implementation may relate to plant, products, processes, systems or services, including design, development, implementation or manufacture, commissioning, operation or delivery and maintenance.</p> <p>Improvement processes may include techniques, such as:</p> <ul style="list-style-type: none"> balanced scorecard current and future state mapping measuring performance against benchmarks process improvement, problem solving and decision making data management, generation, recording, analysing, storing and use of software training for improvement systems participation technical training
Constraints and contingencies	<p>Constraints and contingencies may include:</p> <ul style="list-style-type: none"> financial organisation procedural or culture physical constraints such as limits to resources, limits to site access or logistical limitations
Maintenance system data	<p>Maintenance system data may include:</p> <ul style="list-style-type: none"> asset ID and plant warranties standard repair schemes

	<ul style="list-style-type: none"> • modification data and configuration • procedural documents: <ul style="list-style-type: none"> • monitoring and preventative maintenance schedules • safe work methods statements • material safety data sheets (MSDS) • work permits • monitoring reports and system measurements • maintenance actions and costs • spares inventory control
Standards and codes	Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular engineering integration task
Sustainability	<p>Sustainability is used to mean the entire sustainable performance of the organisation/plant, including:</p> <ul style="list-style-type: none"> • meeting all regulatory requirements • conforming to all industry covenants, protocols and best practice guides • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative WHS impact on employees, community and customer

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Take samples	1.1. Difference between population and sample is understood and various sampling schemes are applied in accordance with standard operating procedures.
2. Apply statistical process to monitor production	2.1. Concept of variation in terms of average and spread is understood. Data is used to produce relevant statistical information. 2.2. Data is interpreted accurately and information is presented to appropriate authority according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, standard operating procedures, charts, lists, drawings and other applicable reference documents
- applying statistical process control procedures in accordance with instructions to a given production process
- obtaining data from samples including average, range and random or assignable causes
- producing tally, run or control charts from sampling data
- reporting information from sampling data
- checking and clarifying task-related information
- completing proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- the difference between population and sample, and the concept of variation in terms of average and range, random and assignable causes
- numerical operations and statistical calculations/formulae within the scope of this unit

REQUIRED SKILLS AND KNOWLEDGE

- statistical process control procedures, which may include Six Sigma etc. and the sampling procedures to be followed
- the types of charts that can be produced to assist monitoring of products including run charts, tally charts, histograms, control charts
- procedures for reporting sample data information
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to perform basic statistical quality control.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing basic statistical quality control or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Work within a quality system	1.1. Instructions and procedures are followed and duties are performed in accordance with requirements of quality improvement system. 1.2. Conformance to specifications is ensured. 1.3. Defects are detected and reported according to standard operating procedures. 1.4. Performance of operation or quality of product or service is monitored to ensure customer satisfaction.
2. Engage in quality improvement	2.1. Current performance is assessed. 2.2. Established performance measures are identified. 2.3. Specifications and standard operating procedures are identified. 2.4. Defects are detected and reported according to standard operating procedures. 2.5. Process improvement procedures are participated in. 2.6. The improvement of internal/external customer/supplier relationships is participated in. 2.7. Performance of operation or quality of product or service is monitored to ensure customer satisfaction.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job sheets, instructions, standard operating procedures and drawings
- checking and clarifying task-related information
- entering information onto workplace documents
- checking for conformance to specifications
- identifying duties of the individual within the quality improvement system
- identifying customers' requirements with respect to the operation or quality of the product or service
- reporting where appropriate, defects detected

REQUIRED SKILLS AND KNOWLEDGE

- carrying out work in accordance with the process improvement procedures
- carrying out work in a manner consistent with the improvement of customer/supplier relationships
- performing numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- quality system terminology and concepts, e.g.
 - quality assurance - planning to meet customers' requirements
 - quality control - checks and procedures to ensure customer requirements are met
 - quality inspection - inspecting and testing products and services
 - total quality control - a company-wide approach that combines both quality assurance and quality control so that the customer is always satisfied
- commonly accepted meaning/s of the terms quality and quality system
- the reasons for following the requirements of the quality improvement system
- strategies and approaches for working within a quality system
- procedures to be followed in undertaking the work
- specifications to which the individual's work is to comply
- reasons for ensuring work conforms to specification
- benefits of good quality:
 - quality products
 - reduced costs
 - customer confidence, satisfaction and loyalty
 - good reputation
 - job satisfaction
 - solving problems
 - increased competitiveness
 - keeping up with technology
- costs and consequences of poor quality e.g.
 - lost customers
 - accidents
 - wastage
 - lost time
 - low morale
 - conflict
- procedures for reporting defects
- examples of common defects

REQUIRED SKILLS AND KNOWLEDGE

- quality improvement procedures
- four steps of the quality cycle: plan, do, check, act
- reasons for following process improvement procedures
- examples of ways in which customer/supplier relationships can be improved
- benefits of good customer/supplier relationship
- hazards and control measures associated with applying quality procedures, including housekeeping
- safe work practices and procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify areas for improvement and/or solve problems	<p>1.1. Participation in team is used to select improvement tools and methods appropriate to the situation.</p> <p>1.2. Teamwork is used to process improvement tools to identify improvements and/or solve problems.</p>
2. Implement improvement strategy	<p>2.1. Teamwork is used to implement improvement strategies as required in accordance with standard operating procedures.</p> <p>2.2. In conjunction with work team, further action is recommended as required using standard operating procedures.</p>
3. Monitor implementation of improvement	<p>3.1. Performance is monitored for change, utilising feedback data.</p>
4. Evaluate improvement	<p>4.1. Analytical tools are used to evaluate improvement as required.</p> <p>4.2. In conjunction with work team, further action is recommended where required using standard operating procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- participating and communicating in a team setting
- identifying improvements and/or solving problems in a team setting
- implementing improvement strategies in a team setting
- recommending further action in accordance with standard operating procedures
- collecting and collating feedback data
- evaluating the improvement strategy implemented
- reading, interpreting information on written job instructions, specifications, charts, lists, drawings and other applicable reference documents
- planning and sequencing tasks
- checking and clarifying information

REQUIRED SKILLS AND KNOWLEDGE

- entering information onto workplace documents
- following verbal instructions
- orally reporting routine information

Required knowledge

Look for evidence that confirms knowledge of:

- roles and functions of self and team members
- team discussion and problem solving processes
- improvement tools and methods and their application
- procedures for using process improvement tools in the team environment
- improvement strategies
- procedures for implementing the improvement strategies
- the individual's role in implementing improvement strategies
- procedures for initiating further action
- the procedures for collecting and collating improvement feedback data
- the analytical tools and processes to evaluate the improvement strategy
- safe workplace practices

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to use improvement processes in a team environment. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, i.e. the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with using improvement processes in team activities or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit of. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Unit Descriptor

Unit descriptor	This unit covers inspecting products, keeping records and providing feedback on the conformance of product to specifications.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to basic inspection of completed or partly completed products produced by others. Inspection is carried out according to a site quality plan or specifications; it applies to a range of manufacturing enterprises; and requires application of a range of measuring equipment/devices/tools.</p> <p>Location and frequency of checks/tests and measurements are undertaken to standard operating procedures. In general, verification should be made as close as possible to the point of production of the feature or characteristic. Inspection may involve 'first piece inspection', fixed interval, sample etc. Depending on the inspection process, other technical units may need to be accessed, for example, appropriate measurement units.</p> <p>This unit is not intended to be applied to maintenance personnel carrying out their day-to-day activities, for example, fault finding, remedial and checking activities. These skills are covered by other units such as Unit MEM18006C (Repair and fit engineering components).</p> <p>This unit should not be selected for the purposes of non destructive testing, where Unit MEM24002B (Perform penetrant testing), Unit MEM24004B (Perform magnetic particle testing), Unit MEM24006B (Perform eddy current testing), Unit MEM24008B (Perform ultrasonic testing) or Unit MEM24010B (Perform radiographic testing) have already been selected.</p> <p>Band: A</p> <p>Unit Weight: 2</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Inspect products	1.1. Products are tested for conformance to specifications in accordance with standard operating procedures.
2. Keep records	2.1. Test status identification is made on conforming and non-conforming products and records are accurately kept using standard operating procedures.
3. Provide feedback	3.1. Products are tested/inspected/measured after rework or repair. 3.2. Deficiencies or deviations are reported according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, standard operating procedures and other applicable reference documents
- testing products for conformance to specifications in accordance with job instructions
- testing reworked/repared products for conformance to specification, in accordance with job instructions
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- the procedures as defined by job instructions to be used to check conformance to specifications
- the data to be recorded and the frequency of recording required
- the consequences of not keeping accurate records
- non-conformances of given products that can be removed by rework/repair in accordance with job instructions
- hazards and control measures associated with performing basic inspection activities
- use and application of personal protective equipment

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to perform inspection (basic).
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing inspection (basic) or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select inspection/test procedures	1.1. Appropriate methods of inspection are selected and implemented. 1.2. Inspection/test procedures are monitored to ensure desired outcomes.
2. Control inspection/test environment and equipment	2.1. Environmental conditions are monitored to ensure reliability of tests and results. 2.2. Equipment/instruments are checked for correct calibration. 2.3. Calibration of equipment/instruments is initiated or undertaken against appropriate standard as required. 2.4. Calibration records are maintained to standard operating procedure. 2.5. If equipment/instruments are found to be out of calibration, validity of previous results is checked and reported according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on standard operating procedures and other applicable reference documents
- checking and clarifying task-related information
- entering and maintaining information onto proformas and standard workplace forms and records
- checking for conformance to specifications
- using measurement equipment within the scope of this unit
- measuring components to specified tolerances
- implementing inspection method for the product/ process
- monitoring inspection/test procedures to ensure desired outcomes are achieved
- monitoring environmental conditions
- checking calibration of measuring equipment
- initiating calibration of measuring equipment

REQUIRED SKILLS AND KNOWLEDGE

- calibrating measuring equipment against the appropriate reference standard
- detecting and reporting out of calibration equipment
- applying units of measurement and numerical operations/calculations within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- a range of inspection methods and their application
- the appropriate inspection method for the process/product
- procedures for implementing inspection methods
- the desired/target outcomes of the inspection/test procedures
- reasons for discrepancies/trends
- procedures for monitoring inspection/test procedures
- the effects of environmental conditions on test equipment and the results
- procedures for monitoring environmental conditions
- the acceptable range of variations to environmental conditions
- the correct operation of the measuring equipment
- the specifications of the measuring equipment
- procedures for checking the calibration of the measuring equipment
- appropriate techniques, tools and equipment to measure components
- units of measurement and numerical operations/calculations within the scope of this unit
- codes, standards, legislative or regulatory requirements applicable to the measuring equipment and/or calibration
- procedures for initiating the calibration of measuring equipment
- the physical reference standard against which the measuring equipment is to be calibrated
- procedures for calibrating measuring instruments
- tools and equipment required to calibrate measuring equipment
- procedures for recording calibration details
- the reasons for keeping calibration records
- the procedures to be followed when measuring equipment is found to be out of calibration
- the reasons for checking results from out of calibration measuring equipment
- procedures for reporting out of calibration measuring equipment
- hazards and control measures associated with inspection, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Conduct process capability studies	1.1.Procedure for conducting capability study is determined. 1.2.Instructions for personnel conducting trial run are prepared. 1.3.Data from trial run is analysed and the process capability is calculated. 1.4.Possible number of product defects from a particular process is estimated. 1.5.Optimum target mean to suit process capability data is determined. 1.6.Reports listing various options from process capability studies are prepared. 1.7.Design specifications based on an analysis of data are recommended.
2. Set control limits	2.1.Control limits for sample/subgroup average, range and standard deviation are calculated. 2.2.Warning limits for subgroup average, range and standard deviation are calculated. 2.3.Course of action resulting from out of control situation is determined and documented to standard operating procedures.
3. Select sampling plans	3.1.Appropriate sampling plan to suit production schedule is selected and acceptable quality limits are determined, taking into account specified producer and consumer risks. 3.2.Sampling plan is documented including implementation strategy.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • collecting and collating data

REQUIRED SKILLS AND KNOWLEDGE

- analysing data, identifying solutions and developing recommendations
- preparing reports listing the various options identified from the process capability study
- determining process design specifications from process capability data
- documenting sampling plan and implementation strategy

Required knowledge

Look for evidence that confirms knowledge of:

- the process to be studied
- the procedures for conducting process capability studies
- the data used to calculate the process capability
- the procedures for estimating the possible number of product defects
- options for improving the process and benefits of each
- the procedures for determining the optimum target mean
- the procedures for setting control limits
- numerical operations and calculations/formulae for process capability, control limits and other outcomes within the scope of this unit
- the procedures for setting warning limits
- the concept of 'out of control' situations
- the action to be taken when an 'out of control' situation is detected
- the procedures for documenting 'out of control' situations
- the acceptable level of quality
- a variety of sampling plans and their application
- the sampling plan to be applied to a given situation
- the reasons for selecting the chosen plan
- the acceptable quality limits
- the risks associated with identifying acceptable quality limits for the producer and customer
- the procedures for documenting and implementing sampling plans
- hazards and control measures
- use and application of personal protective equipment
- safe work practices and procedures

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Work under laboratory conditions	1.1.Independent tests are conducted under controlled conditions.
2. Perform calibration	2.1.Equipment is verified and calibrated to agreed quality standards. 2.2.Calibration status is safeguarded against unauthorised adjustment. 2.3.Accurate records are kept for reference purposes. 2.4.Test equipment is periodically recalled for adjustment, repair and re-calibration. 2.5.Documentary evidence is maintained, covering identification of equipment; frequency of re-calibration; calibration status and procedures for recall, handling and storage, adjustment, repair, calibration, installation and use. 2.6.Calibration to reference standards of known accuracy such as national or international standards is traced, or where these do not exist, is set to specifically developed criteria.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining, reading and interpreting relevant drawings, circuits, specifications, instructions and data in accordance with standard operating procedures
- planning and sequencing operations
- checking and clarifying task-related operations
- using calculations and numerical operations within the scope of this unit
- conducting independent tests under controlled conditions
- checking measuring equipment for correct calibration against the agreed quality standards
- safeguarding the calibration status of the equipment against unauthorised adjustment

REQUIRED SKILLS AND KNOWLEDGE

- completing and maintaining records of measuring equipment calibrated
- recalling test equipment for adjustment, repair and re-calibration
- using reference standards or specific criteria as the basis for calibration.
- documenting test results
- preparing reports on the tests carried out
- conducting inspections, tests and audits in accordance with standard
- using results of inspections, tests and audits to inform the design and service

Required knowledge

Look for evidence that confirms knowledge of:

- the tests to be undertaken
- the conditions under which the tests are to be undertaken
- the testing procedures to be followed
- the reasons for conducting tests under controlled conditions
- the need for tests to be conducted independently
- the quality standards against which the measuring equipment is to be calibrated
- the correct operation of the measuring equipment
- the specifications of the measuring equipment
- the tools and equipment required to check the calibration of the measuring equipment
- the procedures for checking the calibration of the measuring equipment
- any codes, standards, legislative or regulatory requirements applicable to the measuring equipment and/or calibration
- the procedures for preventing unauthorised adjustment of equipment
- the reasons for protecting equipment against unauthorised adjustment
- the records to be kept with respect to the calibration of measuring equipment
- the reasons for keeping accurate calibration records
- the procedures for recalling test equipment for adjustment, repair and re-calibration
- the frequency of test equipment recall
- the reasons test equipment may be recalled
- all relevant documentation relating to the calibration/re-calibration of test equipment
- the procedures for completing the relevant documentation
- sources of reference standards and procedures to be used in the absence of reference standards
- the reports to be prepared/provided with respect to the test equipment being tested
- the procedures for preparing/ providing reports on tests carried out on test equipment
- the auditing processes to be applied to testing procedures
- the use of information from the inspections, tests and audits conducted in the development of design and servicing of products/equipment

REQUIRED SKILLS AND KNOWLEDGE

- hazards and control measures associated with performing laboratory procedures, including housekeeping
- safe work practices and procedures

Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Tests	<p>Tests will be conducted to a standard method and may be:</p> <ul style="list-style-type: none"> • mechanical tests such as for hardness, tensile and impact • electrical tests such as for resistance, capacitance and inductance • semiconductor or other electronic tests
Calibration	<p>Calibration refers to those calibrations which are conducted to a specified standard using equipment available in the workplace/laboratory. It may include the testing of known standard samples</p>
Test equipment	<p>May be mechanical, electrical or electronic or some combination</p>
Documentary evidence	<p>Documentary evidence of calibration will be sufficient to satisfy the needs the certifying body (e.g. NATA) or as otherwise specified in the calibration standard or in accordance with manufacturers' recommendation</p>
Documented	<p>Documentation of test/calibration results will conform to good laboratory practice and will allow for the verification of results and for a historical record of results such as might be required for verification of results, quality audits and legal inquiries.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Liaise with external suppliers	1.1. The exact quality requirements are communicated to suppliers. 1.2. Quality assurance system is negotiated and agreed. 1.3. Verification method and systems and procedures for dispute settlement are established and agreed. 1.4. Recording system of procured products or services which ensures traceability is established.
2. Check for conformance to specifications	2.1. The requirements of all relevant documentation including contract specifications, drawings and purchase orders are obtained and understood. 2.2. The conformance of the procured product or service to all of the documented requirements is established.
3. Assess external suppliers	3.1. Assessment and evaluation of suppliers' capability and/or quality system are conducted. 3.2. Suppliers' goods or services are evaluated.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- communicating quality requirements to the supplier
- negotiating quality assurance system
- implementing system for recording and tracing products or services procured
- obtaining and interpreting relevant drawings, specifications, documentation etc.
- checking products/materials or services provided for conformance to documented requirements/ specifications
- assessing supplier capability to provide the required product/material or service
- evaluating supplier quality systems
- evaluating supplier goods or services
- using communication and conflict resolution

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms knowledge of:

- the exact quality requirements of the product/material to be supplied
- the procedures to be followed to ensure the supplier understands the quality requirements
- the requirements of a quality assurance system to ensure the supplied product/material conforms to the quality requirements
- the procedures for negotiating agreements with suppliers
- the procedures for verifying that the agreed quality assurance system is being utilised by the supplier
- techniques for dispute resolution
- the procedures for recording procured products or services
- the means of tracing procured products or services
- the reasons for tracing procured products or services
- the specifications of the product/material to be supplied or service to be provided
- any variations from documented requirements/ specifications
- the procedures for assessing/evaluating a supplier's capability to supply the required product/material or service
- the procedures for evaluating a supplier's quality system
- the procedures for evaluating a supplier's goods or services
- any equipment and techniques required to carry out the evaluation procedures
- hazards and control measures within the scope of this unit
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to exercise external quality assurance. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with exercising external quality assurance or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

--	--

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality assurance system

ISO 9000 procedures, Six Sigma procedures, sampling plans of all kinds etc.

Traceability

Unique identification of individual product or batches as appropriate

Assessment and evaluation

Vendor rating procedures, design reviews, audit reports, site surveillance reports, failure reports and concession applications etc.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Improve quality system	1.1. Specifications to meet customer needs (internal and external) are interpreted. 1.2. Leadership role as a supplier is undertaken to ensure quality within the supply chain.
2. Collect and summarise data	2.1. Data is recorded and interpreted accurately in accordance with standard operating procedures. 2.2. Data is used to produce relevant statistical information, for example, average and range or the production of charts such as tally, run or control charts.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining and interpreting the specifications of the product or service to be provided
- communicating effectively with suppliers and customers
- recording data collected
- calculating relevant statistical information from collected data
- producing tally, run and control charts from collected data
- using leadership skills
- using analysis skills

Required knowledge

Look for evidence that confirms knowledge of:

- specifications to be achieved in providing the service or producing the product
- the team's supplier(s) and customer(s)
- the possible effects of supplying products and/or services to customers that do not comply with specifications
- the procedures to be followed in producing the product and/or supplying the service
- the checks to be undertaken to ensure the product/service complies with

REQUIRED SKILLS AND KNOWLEDGE

- specifications
- the personnel responsible for the quality of the product/service provided
 - the actions to be taken when a non-conformance to specifications is detected and reasons for taking those actions
 - the procedures for recording data collected
 - the possible trends from the collected data
 - the actual trends indicated by given samples of data
 - the reasons for collecting data
 - the statistical information to be calculated
 - the use of statistics in interpreting production data
 - the functions of tally, run or control charts in representing production data
 - the trends indicated by the statistical information calculated and/or the charts produced
 - the action to be taken in response to any trends identified
 - the reasons for taking proposed action
 - appropriate techniques, tools and equipment to measure machined components
 - hazards and control measures within the scope of this unit
 - use and application of personal protective equipment
 - safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to maintain/supervise the application of quality procedures. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with maintaining/supervising the application of quality procedures or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Explain the requirements of trade measurement legislation relating to trading practices	1.1. Legislation requirements that apply to trading practices are explained. 1.2. Policy guidelines that apply to trading practices are explained.
2. Inspect trading practices for compliance	2.1. Trading practice methods employed on premises are examined for compliance with legislative requirements. 2.2. Incidents of non-compliance in a range of trading environments are identified and, where appropriate, activities are undertaken to prove the breach of legislation. 2.3. Results of inspection are documented.
3. Finalise inspection and identify appropriate action	3.1. Trading practice information relevant to the inspection is communicated to the trader. 3.2. Appropriate actions to encourage compliance are determined and identified. 3.3. Inspection documentation is completed in accordance with organisational procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • applying relevant organisational policy and procedures in regard to trading practices • examining methods utilised for advertising and the sale of goods employed on the premises for compliance with legislative requirements • examining the manner in which a measuring instrument is used on the premises • identifying incidents of non-compliance in a range of trading environments • determining action to be undertaken based on the organisation's enforcement policy • gathering sufficient and relevant evidence to prove a breach • accurately recording information

REQUIRED SKILLS AND KNOWLEDGE

- advising on appropriate trading practices to assist compliance
- undertaking observation and surveillance in relation to trading practices
- explaining legislative requirements and obligations
- completing notices accurately in accordance with organisational guidelines
- planning follow-up activities as required
- accurately recording results of the inspection and recommendations in the organisation's information files
- completing breach reports in accordance with organisational guidelines

Required knowledge

Look for evidence that confirms knowledge of:

- definition of the term 'trading practices'
- relevant policy and procedures across a range of trading environments
- legislation relating to trading practices
- the range of trading environments
- trading practices relevant to a range of business types
- processes for evidence collection and evidence handling
- specific reporting procedures
- techniques to liaise with traders
- legislative requirements and obligations for the issuing of notices
- organisation's policy guidelines for return visits
- specific reporting procedures
- types of evidence

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to examine trading practices involving measurement employed by traders. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislation requirements and policy guidelines	Enabling legislation, organisational procedures and policies - workplace, health and safety, enforcement policies
Trading practices	Methods of sale of goods, advertising, use of measuring instrument, position of measuring instruments, misrepresentations, environmental factors, suitability of instrument, over-pricing, incorrect measurement
Premises	Supermarkets, fruit and vegetables retailers, packing house, meat, seafood and smallgoods, bakery, etc.
Examination for compliance	Observation, trial purchase, questioning, reviewing records
Activities used to prove a breach of legislation	Trial purchases, observation/surveillance, photographs, seizure of documentations, articles, measuring instruments, testing the measuring instruments
Appropriate actions to encourage compliance	Warning letter, non-compliance notice, infringement notice, prosecution

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Explain the requirements of trade measurement legislation relating to pre-packed articles	1.1. Legislative requirements that apply to pre-packed articles are explained. 1.2. Approved markings as they apply to all pre-packed articles intended for sale are described.
2. Inspect pre-packed articles for compliance with marking requirements	2.1. Pre-packed articles are examined for the marking of quantity statements and unit pricing in accordance with legislative requirements. 2.2. Pre-packed articles are examined for the marking of packer identification. 2.3. Results of examination are documented for further action.
3. Measure pre-packed articles	3.1. Articles are selected for check measuring in accordance with marketplace intelligence, legislative requirements and organisational procedures. 3.2. Product handling and disposal requirements are assessed and complied with in accordance with workplace, health and safety requirements, environmental considerations and public sector auditor's requirements. 3.3. Specialised equipment and measuring devices are selected in accordance with organisational procedures. 3.4. Articles are check measured in accordance with organisation's procedures to determine compliance with legislation. 3.5. Results of check measurements are documented for further action.
4. Finalise inspection and take appropriate action	4.1. Trading practice information relevant to the inspection is communicated to the trader. 4.2. Approved procedures to remedy non-compliance are determined and applied, 4.3. Inspection documentation is completed in accordance with organisational procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- applying relevant sections of the legislation to pre-packed articles
- measuring pre-packed articles
- assessing quantity and unit pricing statements, for compliance with legislation
- comparing marking of packer identification, against legislation
- recording marking non-compliance accurately for further action
- interpreting marketplace intelligence
- safely handling and disposing of products in relation to measuring pre-packed articles
- documenting check-measurement results and non-compliances in accordance with organisational guidelines
- checking the accuracy and suitability of the measuring devices
- discussing trader's enquiries and concerns
- explaining legislative requirements to traders
- completing legal documentation
- planning follow-up activities
- recording results of the inspection accurately in organisation's information files
- making clear and accurate recommendations

Required knowledge

Look for evidence that confirms knowledge of:

- definition of 'pre-packed articles'
- relevant sections of legislation across a range of pre-packed articles
- the range of packing types
- quantity statement or measurement marking form, size and position
- pre-packed articles exempted from the requirements of legislation
- all symbols for units of measurement
- application of qualifying statements
- pre-packed articles exempted from marking packer identification
- how to identify origin of packing
- marketplace intelligence, legislative requirements and organisational procedures in relation to selecting pre-packed articles
- the impact of environmental factors on pre-packed articles
- use of protective clothing and equipment
- checking of hazardous product data sheet
- the organisation's policy and procedures

REQUIRED SKILLS AND KNOWLEDGE

- the accuracy and suitability of the measuring devices used to check pre-packed articles
- procedures for determining the measurement method of pre-packed articles
- the number of articles to check-measure in accordance with legislative requirements
- methods of determining the tare weight of packages
- responding to trader's enquiries
- advising the trader
- accurate wording of notices
- legislative requirements and obligations for the issuing of notices
- organisation's guidelines for return visits
- specific reporting procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the appropriate class of reference standard suitable to verify a range of trade measuring instruments	1.1.Tolerances required for reference standards are researched in relation to testing a range of trade measuring instruments and legislation. 1.2.The correct classes of reference standards are selected to test a range of trade measuring instruments.
2. Use reference standards and test equipment in a safe and metrologically sound manner	2.1.Standards Laboratory purpose and function are explained. 2.2.An operational assessment on reference standards and test equipment is performed prior to use. 2.3.Documented operating policies and procedures for reference standards and test equipment are accessed and followed. 2.4.Safety requirements for the use of reference standards and test equipment within the work environment are demonstrated.
3. Store and transport reference standards and test equipment to maintain their integrity	3.1.Specialised equipment and reference standards are stored in accordance with organisational procedures. 3.2.Specialised equipment and reference standards are transported in accordance with organisational procedures.
4. Perform required maintenance of reference standards and test equipment	4.1.Maintenance requirements of reference standards and test equipment are identified. 4.2.Regular maintenance of reference standards and test equipment is undertaken in accordance with maintenance register. 4.3.Defective reference standards and test equipment are identified and reported for repair.
5. Interpret documentation relating to the use of maintenance of reference standards and test equipment	5.1.Information contained in the certificate of verification is checked and compared with reference standards and test equipment being used. 5.2.Reference standards are used in accordance with documented instructions and certificates.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- accessing correct reference manuals for appropriate information concerning tolerances for reference standards
- identifying correct class of reference standard and matching with the appropriate trade measuring instrument
- accessing documented operating procedures for reference standards and test equipment
- using reference standards and test equipment
- calibrating/maintaining reference standards and test equipment
- maintaining maintenance register
- identifying and recording/reporting malfunction of or damage to reference standards or test equipment
- interpreting certificates of verification in relation to the use of reference standards
- using graphs and tables within certificates

Required knowledge

Look for evidence that confirms knowledge of:

- definition of 'legal metrology'
- the hierarchy of reference standards in relation to legal metrology
- Australian legal units of measurement used for trade
- the organisations involved in legal metrology in Australia
- application of different classes of reference standards used to test measuring instruments
- maintenance requirements for reference standards and test equipment
- major function and purpose of the Standards Laboratory
- the actions to be taken if reference standards and test equipment are found to be defective
- test equipment and reference standards storage specifications and procedures
- personal responsibility for workplace, health and safety requirements
- specialised equipment, reference standards and transport specifications and procedures
- transport specifications and procedures
- variations from storage specifications and procedures requiring appropriate approval
- variations from transport specifications and procedures requiring appropriate approval
- maintenance required for test equipment where manufacturers' requirements are

REQUIRED SKILLS AND KNOWLEDGE

unavailable

- a range of maintenance and calibration procedures
- procedure for reporting faults
- action to be taken where legal traceability can not be confirmed
- the purpose of certificates of verification issued under the national legislation
- information in graphs and tables within certificates
- workplace, health and safety requirements relating to reference standards and test equipment

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to use and maintain reference standards. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with using and maintaining reference standards, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Reference standards

Reference standards	Mass, volume, density, area, length, master meters, temperature
Legislation	Enabling legislation, workplace, health and safety, environmental legislation
Operating policies and procedures	Manufacturers' specifications, industry guidelines, Australian standards, legislation, organisational procedures and guidelines
Specialised equipment	Reference standards, measuring devices, safety equipment
Maintenance requirements of reference standards and test equipment	Cleaning and painting, electrical safety testing and tagging, continuity and pressure testing, manufacturers' service requirements

Legislation**Operating policies and procedures****Specialised equipment****Maintenance requirements of reference standards and test equipment****Unit Sector(s)**

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Receive and document the complaint	1.1. Allegations are recorded in accordance with organisational procedures. 1.2. Complaints are screened to ensure that they are relevant to trade measurement and are assessed to determine priority. 1.3. Complainant is advised of investigative process and timeframes for feedback.
2. Plan the investigation	2.1. The information received is assessed for possible breaches in relation to the legislation. 2.2. Trader history and complaint precedence is researched. 2.3. Suitable equipment and personnel are organised to undertake the investigation. 2.4. Enforcement policies and procedures are researched to ascertain appropriate action to be implemented.
3. Investigate the complaint	3.1. Preliminary investigation to gather prima facie evidence is conducted in accordance with organisational procedures. 3.2. Evidence is gathered to substantiate a breach in accordance with investigative practices. 3.3. The relevant components of a routine field inspection are conducted in accordance with organisational procedures.
4. Finalise the complaint investigation	4.1. Information relevant to the inspection is communicated to the trader. 4.2. Approved procedures to remedy non-compliance are determined and applied. 4.3. Inspection documentation is completed in accordance with organisational procedures.
5. Complete complaint file documentation	5.1. Complainant is advised of outcome of the investigation. 5.2. Complaint documentation is completed in accordance with organisational guidelines.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- accurately recording complaint details
- prioritising complaints and other related activities
- researching and applying relevant legislation to the complaint investigation
- accessing and using organisational information systems
- identifying and organising suitable equipment and personnel
- briefing personnel concerning the requirements of the investigation
- accessing the organisation's enforcement policies and procedures
- establishing appropriate courses of action
- conducting surveillance of trading premises is conducted
- gathering information to verify the complainant's allegations
- gathering evidence to prove all elements of a breach
- using appropriate investigative techniques are used
- maintaining the integrity of evidence
- responding to traders' concerns
- discussing traders' enquiries and concerns.
- explaining legislative requirements and obligations to the trader
- completing notices in accordance with organisational guidelines
- planning follow-up activities
- recording results of the inspection accurately in organisation's information files
- completing breach reports in accordance with organisational guidelines
- communicating outcomes of the investigation to the complainant within specified organisational timeframes
- applying interpersonal communication and listening skills
- accurately recording results of the investigation in the complaint file

Required knowledge

Look for evidence that confirms knowledge of:

- the different methods of complaint lodgements
- organisational policy guidelines concerning complaints
- organisational guidelines in regard to timelines
- the equipment required to investigate a range of complaints
- the organisation's guidelines for the deployment of personnel
- the range of possible investigation activities available
- elements of offence
- available surveillance methods for a range of complaints and premises

REQUIRED SKILLS AND KNOWLEDGE

- the evidence required to prove a range of breaches of legislation
- a range of investigation methods
- the required procedures for the handling of evidence to maintain its integrity
- the reasons for selecting relevant components of a routine field inspection
- legislative requirements and obligations for the issuing of notices
- organisation's policy guidelines for return visits
- specific reporting procedures
- complaint outcome classifications
- complaint documentation procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop a work plan to conduct field inspections	1.1.Traders are identified for inspection in accordance with organisational priorities. 1.2.Routine field inspections are scheduled to complement other inspection activities whilst maximising organisational efficiencies and effectiveness. 1.3.Appropriate equipment is identified and accessed. 1.4.Specific inspection arrangements are made with the trader. 1.5.Relevant reference and/or technical information and trader history is researched.
2. Maintain test equipment during a field inspection	2.1.Test equipment is transported in accordance with manufacturers' specifications and organisational procedures. 2.2.Test equipment is operated within manufacturers' specifications and organisational procedures. 2.3.Failures and repairs of test equipment are reported in accordance with organisational procedures.
3. Conduct initial on-site assessment of the trading premises	3.1.Surveillance of the trading premises is undertaken to evaluate the trading practices in use. 3.2.Officer establishes their identity with the trader or responsible person and explains the purpose of the inspection. 3.3.Local workplace, health and safety issues relevant to the premises are identified and appropriate action is taken to comply. 3.4.Measuring instruments used for trade are identified and the inspection is planned with minimal disruption to the trader. 3.5.Locations for product return or disposal are identified for later use.
4. Inspect instruments and/or trading practices	4.1.Measuring instruments are selected for inspection in accordance with organisational guidelines. 4.2.Test equipment is used in accordance with organisational procedures taking into consideration workplace health and safety factors. 4.3.Relevant test procedures for verification and in-service inspection are conducted in accordance with organisational procedures. 4.4.Inspection of pre-packed articles is conducted in

ELEMENT	PERFORMANCE CRITERIA
	<p>accordance with organisational procedures.</p> <p>4.5.Trading practices are identified and action is taken to remedy any non-compliance.</p>
5. Undertake an investigation where a breach is detected	<p>5.1.Evidence relating to the breach is gathered.</p> <p>5.2.Trader and witnesses are interviewed for supporting evidence.</p> <p>5.3.Chain of evidence is maintained.</p>
6. Complete documentation for inspection	<p>6.1.Instrument and trader information is recorded accurately for the organisation's information system.</p> <p>6.2.Inspection documentation is completed in accordance with organisational procedures.</p>
7. Advise trader of inspection outcomes	<p>7.1.The trader is advised of instrument test, pre-packed article and trading practice results where appropriate.</p> <p>7.2.The trader's enquiries and concerns are discussed.</p> <p>7.3.Legislative requirements, obligations and possible corrective solutions are explained to the trader where appropriate.</p> <p>7.4.The trader is advised of reporting procedures and possible outcomes for any detected breaches.</p> <p>7.5.Follow-up activities are planned if required.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- accessing and interrogating organisation's information system for relevant trader information
- researching and collecting information
- scheduling inspection activities
- identifying priorities and their integration into routine field inspections
- being aware of the operational needs of the trader
- selecting instruments for tests
- completing calibration/repairs
- evaluating information gathered during surveillance to identify non-compliance

REQUIRED SKILLS AND KNOWLEDGE

- conducting surveillance of trading premises
- using the organisation's identification procedure (e.g. ID card)
- explaining the purpose of the inspection to the trader
- obtaining workplace, health and safety information specific to the trading environment
- recording data plate information and instrument errors
- monitoring sales transactions
- assessing advertising used on or outside the premises
- identifying incorrect trading practices
- gathering evidence to prove a breach
- preparing interview questions to cover all elements of an offence
- using assertive communication and active listening

Required knowledge

Look for evidence that confirms knowledge of:

- the organisation's inspection priorities
- options for dealing with conflicting priorities
- a range of equipment used for trade measurement field inspections
- alternative contact arrangements
- a range of environmental factors that impinge on measuring instruments
- criteria for selecting instruments
- test equipment transportation specifications and procedures
- variations from transport specifications and procedures requiring appropriate approval
- variations from operating specifications and procedures requiring appropriate approval
- types of failure that might occur and possible remedies in a range of test equipment
- preventative work practices/maintenance to keep equipment in good working order
- methods of surveillance
- legislative requirements for the inspection
- personal responsibility for workplace, health and safety
- workplace, health and safety issues relating to a range of occupational and business environments
- contingencies to facilitate minimal disruption to the trader
- action that would be taken if incorrect disposal occurs
- research methods used to determine instrument performance trends
- workplace, health and safety requirements for a range of test procedures and working environments
- a range of environmental and operational factors that may adversely influence the accuracy of instruments, and action required to remedy their effect
- organisational guidelines for the selection of pre-packed articles for inspection

REQUIRED SKILLS AND KNOWLEDGE

- a range of non-compliance issues for trading practices
- strategies used to prove breaches of trading practices including trial purchases
- the format and procedure for conducting an interview in accordance with organisational guidelines
- the principles of natural justice; requirements of appropriate legislation; judges' or court rules; the organisation's code of conduct
- strategies for handling conflict
- cultural and gender issues that influence the communication/interviewing process
- maintenance of evidence integrity
- recording and secure storage of evidence in accordance with organisational procedures can be explained.
- types of ownership entities for legal responsibilities
- appropriate forms used for inspection outcomes including non-compliance and rejection notices, instrument performance records, fees and traders' files
- suitable environment to communicate inspection outcomes with trader
- strategies for handling conflict situation
- sensitivity to cultural and gender issues that influence the communication process
- corrective solutions for a range of scenarios
- legislative requirements for a range of trading environments
- reporting processes and outcomes
- accurate interpretation of enforcement guidelines
- methods for conducting a follow-up activity

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to conduct a field inspection. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Technical information and trader history

Organisation's databases, business/company details

Trading practices

Advertising, over the counter sales, correct use of measuring instruments, method of sale of goods, positioning of instruments, environmental factors, suitability of instrument, over-pricing, incorrect measurement

Test equipment

Specific test equipment, reference standards, safety equipment, product handling equipment

Workplace, health&safety

Storage of test equipment, site/premises conditions, disposal of dangerous materials, storage of seized equipment, specific safety equipment and clothing

Non-compliance

Short measure, over-pricing, incorrect marking of packages

Documentation

Organisational forms, notices, field books, evaluation form or report, fees, servicing licensee forms, educational material/brochures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Describe the design and application of basic components in trade measuring instruments	1.1.The fundamental operating features for a range of measuring instruments are identified. 1.2.The purpose of major components within the range of measuring instruments is described.
2. Determine the type of inspection required for a range of measuring instruments	2.1.Instrument is assessed to determine whether a verification/certification or in-service tolerance is to be applied for inspection. 2.2.The processes required for both the verification/certification and in-service of a range of measuring instruments are explained. 2.3.Appropriate tolerances are identified for the determined inspection.
3. Perform inspection of measuring instruments to determine compliance	3.1.The operating environment of the instrument is analysed and monitored to determine its impact on the instrument. 3.2.Sources of any possible operational error in the use of measuring instruments/systems are identified. 3.3.Specialised equipment is selected and used in the prescribed manner for the inspection. 3.4.Inspection of measuring instrument is conducted in accordance with appropriate test procedures, legislation and policies, and workplace, health and safety considerations.
4. Finalise inspection and take appropriate action	4.1.The appropriate action to be undertaken is determined and implemented. 4.2.Performance trends of particular models of measuring instruments are identified and reported. 4.3.The information is recorded in the organisation's information system.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms skills in:

- examining instruments for existing verification/certification marks
- identifying operational errors relevant to the type of instrument being tested
- selecting and correctly using the test equipment
- testing measuring instruments
- preparing technical reports relating to verification/certification or in-service inspection
- completing files

Required knowledge

Look for evidence that confirms knowledge of:

- the major components and functions of an instrument
- the purpose of major components and functions of an instrument
- differences in the application of tolerances being applied
- process variations between verification/certification and in-service inspection
- appropriate tolerances for a range of measuring instruments
- environmental factors that may not result in an instrument rejection but other remedial actions
- specialised equipment that may be required from other organisations
- the action to be taken where a conflict occurs between uniform test procedures and those test procedures contained in certificates of approval
- removal of verification/certification marks is impractical on some instruments and the appropriate action to be taken in these circumstances
- methods to monitor performance trends

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to perform verification/certification or in-service inspection. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing verification/certification, or in-service inspection or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

	MEM18001C	Use hand tools

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Explain the licensing system for servicing licensees and public weighbridges	1.1. Major components of the licensing system for certification of measuring instruments are described. 1.2. Major components of the licensing system for public weighbridges are described. 1.3. The requirements for issuing servicing and public weighbridge licences in accordance with legislation and organisational policies/ procedures are described.
2. Identify measuring instruments for audit of certifiers	2.1. Servicing licensee's documentation is monitored for compliance with organisational requirements. 2.2. Organisational procedures are used to generate a list of measuring instruments to be audited.
3. Conduct performance audits on certifiers	3.1. Inspection of measuring instruments is performed to determine compliance in accordance with legislation and organisational procedures. 3.2. The certifier's procedures and documentation are assessed to ensure legislative requirements are met. 3.3. Results of audit are recorded in the organisation's information system. 3.4. Action required to remedy non-compliance is determined and applied.
4. Examine public weighbridge licensee's operations for compliance with legislation	4.1. Licensee's documentation is assessed for compliance with legislation and organisational requirements. 4.2. The operator's ability to undertake public weighbridge duties is observed for compliance with legislation. 4.3. Action required to remedy non-compliance is determined and applied.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- evaluating servicing licensee's documentation for completeness of information

REQUIRED SKILLS AND KNOWLEDGE

- monitoring lodgement of servicing licensee's documentation
- selecting instruments for auditing
- scheduling audits
- testing measuring instruments
- recording instrument errors
- assessing the certifier's documentation for accuracy against the instrument certified and legislative requirements
- completing audit reports
- determining and implementing appropriate remedial action
- assessing licensee's documentation for accuracy against the public weighbridge instrument certified and legislative requirements
- assessing signage, certificates and public weighbridge tickets for accuracy
- evaluating the operator's ability to perform the duties of a public weigher
- investigating and reporting detected breaches

Required knowledge

Look for evidence that confirms knowledge of:

- major components of the licensing system for certification of measuring instruments such as legislative requirements, eligibility, conditions of licence including provision of competent employees, provision of reference standards, use of test procedures, and use of reporting documentation and quality assurance systems
- major components of the licensing system for public weighbridge such as legislative requirements, eligibility, conditions of licence including provision of competent employees, maintaining accuracy of the public weighbridge, weighing methods and obligations, and use of reporting documentation
- the process for issuing servicing and public weighbridge licences, specifically the activities undertaken by trade measurement personnel
- the process for handling incomplete forms
- inspection variations between verification inspection and an audit inspection
- reporting variations for a range of instruments
- requirements to complete a public weighbridge ticket
- methods to complete a public weighbridge ticket
- requirements for authority to operate a public weighbridge
- duties of operator of public weighbridge
- options to remedy non-compliance

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to conduct audits of servicing licensees and public weighbridge licensees. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with conducting audits of servicing licensees and public weighbridge licensees, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the categories and levels of verification for reference standards	1.1. The categories of reference standards that the organisation is authorised to verify are identified. 1.2. The classes of reference standards required to verify a range of standards are identified. 1.3. Tolerances for a range of reference standards are identified. 1.4. Tolerances for a range of reference standards are described.
2. Maintain suitable environmental conditions to facilitate verification of reference standards	2.1. Reference standard details are recorded in accordance with organisational guidelines. 2.2. Sources of possible operational procedures errors in the verification of reference standards are identified. 2.3. Required atmospheric conditions for the verification of a range of reference standards are applied. 2.4. Environmental conditions are assessed to determine whether a verification can be conducted.
3. Examine the design and required markings for a range of reference standards	3.1. The identification marking required for reference standards is located and explained. 3.2. Design features of a range of reference standards are correctly identified and applied. 3.3. The function of major components for a range of reference standards is described and applied. 3.4. The fundamental features of a range of reference standards are identified and explained.
4. Perform verification of reference standards	4.1. A variety of reference standards are verified. 4.2. Uncertainty and tolerances for reference standards are applied. 4.3. Results of verification are documented and certificate of verification is issued in accordance with organisational procedures, legislation and policies.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE**Required skills**

Look for evidence that confirms skills in:

- researching and identifying suitable reference standards for verification within standards hierarchy
- accessing reference manuals to gain appropriate information concerning tolerances for reference standards
- completing the organisation's information tracking documentation
- identifying operational errors relevant to the verification
- locating identification marks on reference standards
- researching design features on a range of reference standards
- completing verification work sheets
- completing and issuing certificates of verification

Required knowledge

Look for evidence that confirms knowledge of:

- relevant categories of reference standards for which the organisation is authorised to verify
- a range of classes for reference standards
- appropriate tolerance for a range of reference standards
- current status of clients' reference standards
- atmospheric factors required for verifying a range of reference standards
- remedial action for atmospheric deficiencies
- environmental factors that may adversely influence the integrity of the reference standards
- remedial action for a range of environmental deficiencies
- requirements for identification marking on reference standards
- the purpose of design specifications
- the purpose of the major components and functions of reference standards
- the fundamental features of reference standards
- the process for maintaining integrity of results including calculation
- the reference material for uncertainty and maximum permissible errors for a variety of reference standards.
- the process for producing certificates of verification in accordance with verifying authority status

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Take responsibility for own quality	1.1. Concept of supplying product or service to meet the customer requirements (internal and external) is understood and applied. 1.2. Responsibility is taken for quality of own work.
2. Apply standard procedures of workplace quality to own job	2.1. Quality system procedures are followed. 2.2. Conformance to specifications is ensured.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- identifying and communicating instances of non-compliance to work specifications
- following quality procedures including work instructions
- conforming to product and process specifications
- checking and clarifying task-related information

Required knowledge

Look for evidence that confirms knowledge of:

- concepts of quality and the benefits of using specifications and standard operating procedures
- quality procedures applying to own work
- standard operating procedures
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Participate in formal meetings	1.1. A set agenda is understood and followed. 1.2. Meeting conventions are followed. 1.3. Discussion is focused on the objectives of the meeting.
2. Give formal presentations	2.1. Presentation of a technical, job related or trade nature is given. 2.2. Presentations are accurate and structured and all necessary content is included. 2.3. Sources are acknowledged.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- following an agenda
- following meeting rules/conventions
- focusing discussions on the objectives of the meeting
- giving a prepared technical/job related presentation clearly and concisely
- preparing and using visual aids and/or handout materials
- logically structuring presentations
- addressing relevant material
- using effective communication strategies for meetings and presentations

Required knowledge

Look for evidence that confirms knowledge of:

- the topics for discussion during the meeting
- meeting conventions and terminology
- the objective of the meeting
- the topic/subject on which a presentation is to be made
- effective presentation techniques
- the information to be conveyed
- the sources of information used in the presentation

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and conduct interviews	1.1. Interview is planned and initiated to achieve a specified purpose. 1.2. Suitable questions appropriate to the purpose are used. 1.3. Discretion and confidentiality are exercised where appropriate.
2. Participate in interviews	2.1. Appropriate preparation is undertaken. 2.2. Active listening skills are employed. 2.3. Self-presentation is applied appropriate to the purpose. 2.4. Questions are asked where appropriate. 2.5. Follow-up activities are clarified and reported in accordance with standard operating procedure.
3. Take part in negotiations	3.1. Language appropriate to the other party is used. 3.2. Own and others' needs/wants are stated and clarified. 3.3. The views of fellow employees, including own group or team, are represented to others. 3.4. The appropriate communication medium is selected. 3.5. Follow-up activities are clarified and reported in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- planning and formatting interviews
- developing open and closed interview questions to gain required information
- building rapport
- maintaining discretion and confidentiality
- preparing for interviews
- using active listening skills
- identifying interview goals

REQUIRED SKILLS AND KNOWLEDGE

- identifying selection/assessment criteria
- clarifying follow-up activities
- reporting follow-up activities
- using appropriate language to the other party(s)
- clarifying needs/wants of others
- representing the views of fellow team or group members during negotiations
- selecting appropriate communication media during the negotiations

Required knowledge

Look for evidence that confirms knowledge of:

- the purpose of the interview
- the assessment criteria for the interview
- the procedures to be followed in planning and conducting the interview
- the detail/information to be obtained from the interview
- questions appropriate to the detail/information to be obtained
- active listening techniques that can be applied in interview situations
- the effect(s) of the individual's presentation during the interview upon the interview
- the effect(s) of the timing of questions on the interviewee
- the need to follow-up issues raised during the interview and negotiations
- the procedures for reporting the outcomes of follow-up activities
- the parties to be involved in the negotiations
- the reasons for using appropriate language
- the reasons for maintaining confidentiality
- the reasons for clarifying the needs/wants of others
- the needs/wants of the individual
- the views of fellow team or group members
- a range of communication media
- the appropriate communication medium
- safe workplace practices

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify customer relationship to enterprise	1.1. For repeat customers, formal customer identification details are obtained and checked, for example, by order, requisition or account number according to standard operating procedures. 1.2. Customer is identified as a new or repeat customer.
2. Identify customer requirements	2.1. Customer requirements are identified from order or other verbal or written communication. 2.2. The degree to which customer requirements can be met is clearly communicated including details such as price, delivery date, quantity or quality. 2.3. Alternatives are proposed for any inability to completely satisfy customer requirements.
3. Action customer requirements	3.1. Appropriate action to implement customer requirements is undertaken, for example by filling or entering of order, corrective action to resolve complaints, or repair or service to customer equipment. 3.2. Customer requirements not able to be met immediately are recorded, and follow-up checks are undertaken according to standard operating procedures.
4. Promote better customer service	4.1. Methods of improving customer service are identified and reported.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications and other applicable reference documents
- obtaining and checking customer identification details
- establishing rapport with the customer
- dealing with difficult or unsatisfied customers

REQUIRED SKILLS AND KNOWLEDGE

- checking and clarifying information
- identifying and communicating the degree to which customer requirements can be met
- identifying alternative products and/or services
- taking appropriate action to meet customer requirements
- recording customer requirements including those not able to be immediately met
- following up unmet customer requirements
- reporting/recommending methods of improving customer service
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- the procedures for identifying customers and defining customer relationships
- service provision procedures for new/repeat customers
- procedures for identifying customer requirements
- the price of the required product or service
- the quantities of the product available
- the quality and characteristics of the product or service
- the delivery date/requirements of the product or service
- the procedures for informing the customer of the degree to which the customer's requirements can be met
- the reasons for informing the customer promptly of the ability/inability to meet the customer's requirements
- alternative products and/or services that may meet the customer's requirements
- the procedures for actioning customer orders
- the procedures for recording and managing customer complaints
- the procedures for initiating repairs and/or service to customer equipment
- the procedures for managing organisational errors in service provision
- principles and practices of effective customer service
- record keeping requirements of customer service interactions and transactions
- the procedures for following up on unmet customer requirements
- the procedures for reporting/recommending improvement to customer service
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to provide advanced customer service.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with providing advanced customer service or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Customer relationship

- Internal or external
- Repeat or one-off
- New or established
- Significance in terms of purchase size, length of association, company status, relationship
- Previous history
- Special service requirements or conditions
- Reciprocal arrangements
- Supply chain relationship

Methods of improving customer service

- New documentation
- New communication
- System improvements
- Delivery improvements
- Product or service improvements

Unit Descriptor

Unit descriptor	This unit covers providing assistance to internal/external customers across a range of products and services.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to the provision of assistance to internal/external customers across a range of products and services. Situations covered would go beyond simple sales and enquiries and could include taking one-off or special orders requiring detailed descriptions or handling of complaints. Customer liaison can be undertaken through telephone, written, email or face-to-face contact. Typical applications of this unit would be found in service and design departments.</p> <p>This unit should not be selected when Unit MEM16003B (Provide advanced customer service) has already been selected.</p> <p>Band: A</p> <p>Unit Weight: 2</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify customer requirements	1.1. Customer requirements are identified from verbal or written communication. 1.2. The degree to which customer requirements can be met is clearly communicated including details such as cost, delivery date, quantity or quality. 1.3. Alternatives are proposed for any inability to completely satisfy customer requirements.
2. Action customer requirements	2.1. Appropriate action is taken to implement customer requirements. 2.2. Customer requirements not able to be met are recorded and followed up.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information
- entering routine and familiar information onto proformas and standard workplace forms
- checking and clarifying information
- following verbal instructions
- orally reporting routine information
- communicating and questioning
- proposing alternative products and/or services
- taking action to implement customer requirements
- recording and following up customer requirements not able to be met

Required knowledge

Look for evidence that confirms knowledge of:

- the cost of the required product or service
- the quantities of the available product
- the quality of the available product

REQUIRED SKILLS AND KNOWLEDGE

- the delivery date of the product or service
- the reasons for informing the customer promptly of the ability/inability to meet the customer requirements
- alternative products and/or services that may meet the customer's requirements
- the procedures for actioning customer orders
- the procedures for recording and actioning customer complaints
- the procedure for recording customer requirements which are not met
- the procedures for following up on customer requirements that are not met
- safe workplace practices

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify team goals and processes	<ul style="list-style-type: none">1.1. Team goals and requirements are identified.1.2. Processes in place to assist in meeting team goals are identified.1.3. Workflow and processes are described.1.4. Roles and responsibilities of team members are identified.1.5. Relationships within team and with other work areas are identified.
2. Communicate and cooperate with team members	<ul style="list-style-type: none">2.1. Effective interpersonal skills are used to interact with team members and to contribute to activities and objectives.2.2. Formal and informal forms of communication are used effectively to support team achievement.2.3. Team members are assisted as required to ensure team achieves goals and requirements.2.4. Diversity is respected and valued in team functioning.2.5. Views and opinions of other team members are understood and reflected accurately.2.6. Workplace terminology is used correctly to assist communication.
3. Work as a team member	<ul style="list-style-type: none">3.1. Tasks are performed in accordance with organisational and team requirements, specifications and workplace procedures.3.2. Agreed reporting lines are followed using standard operating procedures.
4. Solve problems as a team member	<ul style="list-style-type: none">4.1. Potential and real problems faced by team are identified.4.2. Procedures for avoiding and managing problems are identified.4.3. Problems are solved effectively and in a manner which supports team functioning.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- contributing to achievement of team goals
- communicating and cooperating with team members
- coordinating work effort with others
- applying effective interpersonal skills
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- solving problems

Required knowledge

Look for evidence that confirms knowledge of:

- effective interpersonal strategies and skills:
 - effective listening
 - basic speaking skills
 - use of terminology and jargon
 - giving and receiving feedback
 - checking and clarifying task-related information
 - interpreting instructions
 - basic conflict resolution
 - selecting modes and methods of communication
 - identifying and resolving communication breakdowns and barriers
 - principles of effective communication
- relationships and roles within team and with others
- reporting relationships and procedures
- own responsibilities with respect to products/services to be provided by team
- skills and competencies of the individual and other employees performing interdependent activities
- team goals, objectives and task requirements
- sources of technical expertise/assistance
- appropriate forms of communication
- hazards and control measures associated with team activities, including housekeeping
- safe work practices and procedures

assessment

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Access procedures

Logging on and security procedures, virus checks, start-up routines, application start-up

Technology

Hand held data recording devices, screen based equipment, personal computers, bar coders

Applications

- Word processing spreadsheets and databases
- Customised engineering and manufacturing applications
- Material Resource Planning (MRP)
- Warehousing inventory applications
- Predictive reliability and maintenance applications
- Production data management applications

Data output

Report, email, chart, graph, printout, data transfer, labels

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research information	1.1. Research requirements are identified and clarified with appropriate persons. 1.2. Sources of research data/information are identified and verified for currency and accuracy. 1.3. Information is compiled, recorded and stored using research techniques appropriate to the task requirements. 1.4. Information is sorted for relevance to research and analysis requirements. 1.5. Research is conducted within given timeframe, resource and quality constraints.
2. Analyse information	2.1. Scope, criteria and method for analysis are determined and verified, if necessary, with appropriate persons. 2.2. Information is accurately analysed according to established criteria. 2.3. Analysis is documented in an appropriate format according to workplace requirements.
3. Establish findings and conclusions	3.1. Findings are factual and accurately describe the results of the analysis 3.2. Conclusions are reached that are logical and based on objective analysis of available data. 3.3. Research data, analysis, findings and conclusions are verified, if necessary, with appropriate persons.
4. Summarise and organise technical data	4.1. Information is recorded in suitable form according to workplace requirements. 4.2. Information is summarised and organised for ease of reference, using established communication principles. 4.3. Information is disseminated to others according to workplace procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE**Required skills**

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- questioning
- applying research techniques
- checking and clarifying information
- note-taking
- analysing information and data
- sorting and identifying relevant information/data
- establishing findings and conclusions based on analysis
- summarising and organising information and technical data
- preparing materials for dissemination to others
- planning and sequencing operations

Required knowledge

Look for evidence that confirms knowledge of:

- basic principles and methods of research and analysis
- effective communication principles with respect to research, analysis and organisation of technical data
- sources of research data/information
- use of internal/external databases
- relevant personnel for consultation
- relevant information/data
- effect of variations in the information/data on the conclusions reached
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to research and analyse engineering information. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with researching and analysing engineering information or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Research requirements

Purpose, expected outcomes, scope and nature, timeframe, required resources

Sources of research data/information

- Surveys
- Interview
- Observation
- Test results
- Data records
- Reference books and journals
- Technical manuals
- Job histories
- Internal/external databases

Research techniques

- Surveying/scanning
- Skimming
- Questioning
- Note-taking
- Summarising
- Relationship diagrams
- Tabling

Communication principles

- Avoidance of ambiguity, redundancy, verbosity, circumlocution etc.
- Use of headings
- Logical ordering
- Summarising
- Layout

MEM16010A Write reports

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers writing technical or non-technical reports that include some level of analysis and/or research.
------------------------	--

Application of the Unit

Application of the unit	<p>The term report is used to denote any required written communication that goes beyond a simple recording of facts (such as completion of a pro forma shift production schedule) and which is based on a level of analysis and/or research.</p> <p>Where reports include technical information or details, then the writer would have the required technical knowledge/capability.</p> <p>Conclusions and/or recommendations where required are based on prior research or analysis of data. The analysis and conclusions should be consistent with the level of skill and knowledge of an employee working at that level. Simple analysis and research would be required.</p> <p>If data research and analysis is necessary to produce information for the report, Unit MEM16009A (Research and analyse engineering information should also be selected).</p> <p>For preparation of simple technical reports, see unit MEM16014A (Report technical information).</p> <p>Band: B</p> <p>Unit Weight: 2</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify report requirements	1.1. Requirements for a written report are identified and confirmed with appropriate persons. 1.2. Information for the report is accessed according to workplace procedures. 1.3. Information is assessed for currency, accuracy and relevance for inclusion in the report.
2. Prepare and produce report	2.1. A structure and outline of the report are developed according to identified report requirements. 2.2. The report is written using terminology appropriate to the reader and established principles of report writing. 2.3. Findings and conclusions are based on factual analysis. 2.4. Recommendations, alternatives/suggestions are given, and supporting evidence supplied, where required. 2.5. Protocols, conventions and legal requirements related to acknowledgements and intellectual property are applied where necessary.
3. Finalise and distribute report	3.1. The report is checked for accuracy and edited as required. 3.2. The completed report is consistent with objectives and requirements. 3.3. The report is copied, distributed and stored according to instructions and workplace procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents

REQUIRED SKILLS AND KNOWLEDGE

- following instructions
- checking and clarifying information
- sorting information/data
- assessing information/data for relevance
- using terminology and language appropriate to the target audience
- structuring and writing reports
- applying principles of report writing
- presenting findings and conclusions based on factual analysis
- making recommendations
- managing own time
- planning and sequencing information
- reviewing and editing

Required knowledge

Look for evidence that confirms knowledge of:

- principles of report writing
- report types and purposes
- structure, style and parts of a report
- use of language and expression in reports
- common pitfalls, such as ambiguity, truisms, tautology, verbosity, circumlocution etc.
- report numbering systems
- techniques for reviewing and editing
- importance and benefits of preparing reports appropriate for the intended audience
- referencing and the importance of acknowledging sources
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to write reports. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. MEM16011A Communicate with individuals and small groups

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit covers communicating effectively across a range of communication networks in the workplace.</p> <p>Communication levels include interpersonal (one-to-one), person-to-group, and mediated (e.g. telephone, letter, memo).</p>
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies where an individual is required to undertake a broad range of communication activities within a manufacturing or engineering organisation.</p> <p>The person would regularly use a variety of communication channels and media to communicate with others.</p> <p>To satisfy this unit, the person would need to exercise skills in verbal and non-verbal communication, along with demonstrating an understanding of communication principles and processes.</p> <p>Applications include common workplace activities such as facilitating small group discussions and meetings, writing memos or letters, making telephone calls, counselling co-workers, resolving issues or routine conflicts, talks or speeches.</p> <p>This unit includes written communication by letter, short memorandum or report etc. If research and/or structured report writing is required, Unit MEM16009A (Write reports) and/or Unit MEM16009A (Research and analyse engineering information) should be selected.</p> <p>Band: This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V).</p> <p>Unit Weight: 2</p>
--------------------------------	--

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare communication	1.1. Communication types and networks within the enterprise are identified. 1.2. Enterprise conventions, policies and procedures are followed when planning and preparing communication activities. 1.3. Communication channels and codes appropriate to objectives, circumstances and receiver/s are selected. 1.4. Communication is planned and structured to promote the accurate transfer of meaning. 1.5. Communication setting and climate is established appropriate to purpose and content of message. 1.6. Required resources are prepared and or obtained.
2. Communicate effectively in interpersonal, mediated and group settings	2.1. Effective communication skills, strategies and principles are applied to a variety of communication events. 2.2. Verbal and non-verbal language is used appropriate to the topic, sensitivities and technical understanding of the person/s being addressed. 2.3. Individual differences are respected and considered. 2.4. Purpose and objectives of communication are adhered to. 2.5. Participation in communication is encouraged. 2.6. Conventions, rules, policies and procedures are followed.
3. Evaluate communication	3.1. Feedback regarding the effectiveness of the communication activity is obtained. 3.2. Outcomes are assessed against communication objectives and selected channels and codes. 3.3. Communication barriers are identified and strategies for overcoming them are identified and implemented.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE**Required skills**

Look for evidence that confirms skills in:

- selecting and using various communication channels
- coding and decoding verbal and non-verbal messages
- giving and receiving feedback
- identifying blockages, barriers and breakdowns in communication
- applying principles of effective communication
- applying speaking and listening skills to interpersonal and group situations
- using writing skills to communicate technical and non-technical information using common verbal written channels
- undertaking reading and comprehension of written workplace communications

Required knowledge

Look for evidence that confirms knowledge of:

- communication process, stages and roles
- communication types and networks
- verbal and non-verbal channels - advantages and disadvantages
- verbal and non-verbal codes - advantages and disadvantages
- principles, strategies and conventions for interpersonal, mediated and group communication
- communication skills for sender and receiver
- communication blockages, barriers and breakdowns and strategies for overcoming them
- individual differences between communicators and strategies for effective communication
- establishing communication climate

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to communicate across a range of environments using different methods and techniques appropriate to the content and purpose of the communication. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. EVIDENCE GUIDE

Guidance information for assessment	
--	--

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Communication types

- Upward - examples: reporting, suggestions, grievances
- Downward - examples: policy, procedure, job instruction, feedback, information
- Horizontal - examples: task coordination, conflict resolution, discussion, problem solving, information sharing

Communication networks

- Hierarchies, patterns or clusters of personnel
- Enterprise conventions, protocols and procedures for communication

Communication channels and codes

- Channels - defined here as the route a message takes through any of the three broad media: written verbal, spoken verbal and non-verbal
- verbal channels involve visual and sound media.
- non-verbal channels may involve visual, sound, touch, taste and smell and combinations of these
- Codes - defined here as any system of language, symbols, signals, gestures etc. that gives mutual meaning to a message. Codes may be:
 - verbal (spoken or written language)
 - non-verbal e.g. symbols and emblems, body language

Effective communication skills,

- Questioning and clarifying

RANGE STATEMENT	
strategies and principles	<ul style="list-style-type: none"> • Speaking and conversation skills • Effective and active listening • Reading and comprehension skills • Giving and receiving feedback • Giving and interpreting verbal and non-verbal messages • Using the telephone and similar mediated channels • Establishing communication climate • Basic conflict resolution • Seeking and acknowledging contribution • Agreeing on communication protocols • Clarifying the purpose of the communication activity • Principles and protocols for informal and formal meetings • Principles and protocols for speaking to a group • Group discussion strategies, principles and protocols • Interpersonal strategies and principles
Communication events	<ul style="list-style-type: none"> • Letters, memos, emails etc. • Telephone calls • Group talk • Meetings • Individual and group discussion • Task coordination • Information sharing
Individual differences	<ul style="list-style-type: none"> • Age, sex, ethnic origin, language • Status in the organisation • Level of expertise

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and locate technical information resources	1.1.Information needs are identified and confirmed with appropriate persons. 1.2.Workplace information resources are identified and their location is determined in the information system. 1.3.Appropriate technical information is obtained.
2. Access technical information	2.1.Relevant technical information is located using search techniques appropriate to the resource and information requirements. 2.2.Symbols, codes, legends, and abbreviations are interpreted correctly. 2.3.Technical information is accessed and relevant application is understood. 2.4.Clarification or further explanation of technical information is obtained, where required. 2.5.If applicable, the revision status of the technical information is verified to ensure current status.
3. Interpret and analyse technical information	3.1.Technical information/data appropriate to work requirements and/or application is checked for currency and authenticity. 3.2.Technical information is interpreted and analysed for use in given engineering or manufacturing applications. 3.3.Technical information is used according to the specific engineering or manufacturing application.
4. Explain and use information	4.1.Information and analyses is explained and distributed to appropriate personnel. 4.2.Information resources are used according to work requirements. 4.3.Where applicable, work is undertaken in accordance with acquired technical information.
5. Identify implications of changes to technical information	5.1.Technical information systems are monitored for changes. 5.2.Personnel affected by changes to internal or external specifications or other technical information are identified. 5.3.Means of distributing changed information are established. 5.4.Changes to technical information are documented

ELEMENT	PERFORMANCE CRITERIA
	according to enterprise procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- accessing, reading and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning, sequencing operations
- following oral/written instructions
- checking and clarifying task-related information
- checking for conformance to specifications
- undertaking numerical operations and calculations/formulae within the scope of this unit
- entering information onto workplace documents
- accessing and using technical documentation
- identifying and using correct specifications for process and/or systems
- using components of system, where appropriate
- completing formal documentation and reporting as required
- adopting appropriate communication strategy, including confirmation of received information and distribution of instructions
- communicating information in ways appropriate for the audience
- maintaining appropriate records
- identifying and analysing implications of changes to information systems

Required knowledge

Look for evidence that confirms knowledge of:

- available industry information resources
- uses and applications of information resources
- range of formats that information can be presented
- safe work practices and procedures
- location and retrieval requirements of system information
- correct process used to identify relevant specifications

REQUIRED SKILLS AND KNOWLEDGE

- quality improvement processes for information systems
- interpretation of technical data and information
- appropriate communication strategies
- dissemination of information regarding information systems
- a range of instructional techniques
- implications of changes to technical information
- procedures for responding to information changes
- hazards and control measures associated with changes to technical information, including housekeeping
- safe workplace practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>

MEM16013A Operate in a self-directed team

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers an individual effectively participating in a highly developed and self-directed team.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to participation in a formally established, developed or developing self-directed team.</p> <p>Examples are engineering production teams responsible for a product or process, maintenance teams and special-purpose project teams.</p> <p>Typically, team parameters, constraints and objectives would be determined by sources external to the team.</p> <p>The team would be responsible for all aspects of its designated function and members would have day-to-day responsibility for managing themselves and their work.</p> <p>Typical team tasks might include planning and scheduling activities, making production-related decisions and acting on problems.</p> <p>Where team parameters require adjustment as a result of team discussions or planning, then appropriate authorisation and approvals are established using standard operating procedures. Individual team participants would already be competent with technical aspects of team activities.</p> <p>This unit is intended to apply to participation within a formally established and recognised team. Where an individual works with others, such as within a section or department, unit MEM16007A (Work with others in a manufacturing, engineering or related environment) should be regarded as sufficient.</p> <p>This unit may be included in a Certificate II in Engineering - Production Technology or higher qualification.</p> <p>Band: This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V).</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify team function and composition	1.1. Team purpose and scope are identified and understood. 1.2. Team composition, including role of self and team members, is understood. 1.3. Established parameters, rules and team norms are identified and understood.
2. Participate in team planning	2.1. Significant contribution is made to planning the team activities, based on the individual's technical skills, knowledge and competence. 2.2. Contribution is made to the allocation and performance of team tasks.
3. Function effectively as a team member	3.1. Interaction with team members is in accordance with established rules, conventions and procedures. 3.2. Tasks and responsibilities are performed effectively and in accordance with team objectives. 3.3. Real or perceived issues are resolved by effective and appropriate contributions from team member. 3.4. Significant contribution is made to team performance, based on member's own technical skills and application of established principles and practices for effective teamwork.
4. Monitor and review team performance	4.1. The team member participates effectively in the planning and development of team review process. 4.2. Relevant performance data is collected and analysed on an individual and team basis using standard enterprise procedures and methodology. 4.3. Results are used to evaluate own and team performance against established performance indicators and to assist determination of improvement requirements. 4.4. Principles/techniques for effective team development are used to identify own/team improvement strategies.
5. Implement team performance improvements	5.1. Performance improvement processes and strategies are implemented on an individual and collective basis using standard enterprise procedures. 5.2. Individual and team performance improvements are evaluated using standard enterprise procedures. 5.3. Adjustments to improvement strategies are made in accordance with team requirements and standard

ELEMENT	PERFORMANCE CRITERIA
	enterprise procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- identifying team goals and objectives
- participating in team planning - shared and individual
- allocating tasks and sequencing activities
- communicating and interacting effectively with team members
- solving problems individually and with others
- resolving conflict
- performing various team behavioural functions - task and maintenance focused
- making individual and joint decisions
- coordinating effort with others to achieve common objectives
- collecting team performance data
- reviewing performance against indicators
- identifying strategies to improve team performance
- implementing performance improvement processes
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- checking and clarifying task-related information
- checking for conformance to specifications

Required knowledge

Look for evidence that confirms knowledge of:

- team objectives
- team targets/goals, performance indicators
- team member roles - task and behavioural
- team processes, rules and conventions
- scope of work for which the team is responsible
- methods for planning team activities
- team member technical skills, knowledge and competence, relevant to the tasks

REQUIRED SKILLS AND KNOWLEDGE

- being planned
- the person(s) responsible for team planning
- impact of planning decisions on other teams, personnel and/or resources
- procedures for obtaining resources
- structure, formation and operation of teams
- characteristics of effective teams
- strategies for effective team development/functioning
- effective team communication
- forms of team leadership and decision-making
- strategies for resolving conflict
- techniques for team problem-solving
- issues that may affect team performance
- the sources of data relevant team performance indicators
- reasons for reviewing team performance
- methods/procedures to evaluate team performance
- where appropriate, source(s) of approval to change team performance parameters
- processes/strategies for improving team performance
- hazards and control measures associated with operating in a self-directed team environment, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to operate within a self-directed team. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with operating within a self-directed team or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

EVIDENCE GUIDE

Guidance information for assessment	
--	--

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Team

- A highly developed and cohesive work group in which the individuals have a common aim, and in which the jobs and skills of each member fit in with those of others
- Team members manage day-to-day activities within operating parameters and constraints
- The team is typically characterised by interdependent and complementary effort, high cohesion and culture, conjunctive tasks, effective use of team resources and a focus on continuous improvement
- The team may have a single leader or shared leadership

Principles and practices for effective teamwork

Relating to:

- goals
- problem solving
- resolving conflict
- team leadership
- team decision making
- team rules and norms
- team roles and behaviours
- team maintenance

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify information required for report	1.1. Reporting requirements are identified according to standard operating procedures and confirmed where necessary with appropriate persons. 1.2. Methods for investigating and justifying information to be presented are determined
2. Prepare report	2.1. Information required for the report is accessed according to workplace procedures. 2.2. Information is assessed for currency, accuracy and relevance for inclusion in report. 2.3. The content, structure and format of information is appropriate for the information and type of report 2.4. Findings and conclusions are based on factual analysis. 2.5. Recommendations and alternatives are given if required and supporting evidence is supplied. 2.6. The report is copied, distributed and stored according to instructions and workplace procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents • following instructions • checking and clarifying information • accessing and sorting information/data • assessing information/data for relevance • using terminology and language appropriate to the target audience • structuring and formatting technical information • presenting findings and conclusions based on factual analysis • making recommendations

REQUIRED SKILLS AND KNOWLEDGE

- managing own time
- planning and sequencing information
- reviewing and editing

Required knowledge

Look for evidence that confirms knowledge of:

- reporting methods and purposes
- structure, style and parts of a short report
- correct use of language and expression
- techniques for checking and editing
- importance and benefits of preparing reports appropriate for the intended audience
- referencing and the importance of acknowledging sources
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to report technical information to others at a level above the simple retelling of factual information. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with reporting technical information or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Report

- Reports for this unit are written documents conveying technical information that at a minimum contain a description of the issue being addressed, some discussion and conclusions which may include recommendations. The report may be formal or informal. Examples of the type of reports that could be covered by this unit are:
 - accident/injury report
 - equipment purchase report
 - condition monitoring report
 - test results
 - production data
- Reports may be in number of formats including:
 - a standard workplace format
 - memoranda
 - written short reports
- For the purposes of this unit a report must include:
 - reference to the scope of the report
 - justification for any conclusions
 - references to any authorities or persons responsible for investigations and or conclusions
 - description of the methodology involved in

RANGE STATEMENT	
	<p>preparing and analysing the technical information in the report</p> <ul style="list-style-type: none"> • While the above information must be included this unit does not require report preparation skills to the level required to prepare fully referenced and corroborated academic reports. • Where detailed/complex written reports of this nature are required, Unit MEM16010A (Write reports) should be considered.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for delivery of on the job training	1.1.Objectives of training and competency to be achieved are identified. 1.2.Role in provision of training is clarified.
2. Deliver on the job training	2.1.Training objectives are explained to trainee. 2.2.Training is carried out using appropriate techniques: logical presentation; sound communication methods; explanation, demonstration; practice; feedback. 2.3.Trainee progress is monitored and constructive feedback is provided to trainee.
3. Review training program	3.1.Training program is evaluated according to standard operating procedures. 3.2.Training data is recorded according to standard operating procedures. 3.3.Training is reported according to standard operating procedures. 3.4.Training is promoted according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- communicating effectively with the trainee
- applying training techniques appropriate to the trainee and training requirements
- giving feedback
- monitoring and recording trainee progress
- evaluating training program
- recording training data
- completing reports on training completed and training required
- promoting training within the workplace

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms knowledge of:

- competencies to be achieved through the training
- role of the trainer in the provision of training
- training techniques to be used in delivering the training
- reasons for selecting the chosen training techniques
- procedures for recording trainee progress
- reasons for providing positive feedback
- procedures for evaluating training programs
- reasons for evaluating training programs
- training records to be kept
- procedures for recording training data
- procedures for preparing training reports
- procedures for promoting training in the workplace
- reasons for promoting training in the workplace

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and plan assessment requirements	1.1. Area and purpose of assessment are identified in consultation with appropriate personnel and person/s being assessed. 1.2. Appropriate competency standard/s and assessment guides are identified and selected as required. 1.3. Evidence required to establish competency is determined according to industry and enterprise assessment procedure. 1.4. Evidence required and assessment arrangements are discussed and confirmed in an appropriate way with person being assessed.
2. Carry out assessment	2.1. Agreed assessment procedure is implemented in a manner, time and location to maximise active participation from assessment candidate/s. 2.2. Evidence consistent with the agreed assessment procedure is gathered using appropriate and specified methods and tools, and is documented according to agreed industry or site procedures. 2.3. Evaluation and assessment decisions are made according to agreed assessment procedures. 2.4. Clear and appropriate feedback is provided to person/s assessed. 2.5. Advice is provided to assessment candidate/s on training needs, appeal mechanisms, as appropriate.
3. Record results and review the procedure	3.1. Assessment results are recorded according to industry or site procedures. 3.2. Records are kept/stored in a manner appropriate to maintenance of confidentiality and safety. 3.3. Assessment procedure are reviewed in cooperation with person being assessed and revised, if appropriate.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE**Required skills**

Look for evidence that confirms skills in:

- obtaining and interpreting relevant competency standards and assessment guides
- discussing and confirming evidence required and the assessment arrangements
- performing assessments
- gathering and documenting evidence
- evaluating evidence and making assessment decisions
- providing clear and appropriate feedback
- advising on training needs and/or the appeals procedures
- recording assessment results
- storing records
- reviewing and revising the assessment procedure

Required knowledge

Look for evidence that confirms knowledge of:

- area and purpose of the assessment
- persons to be consulted when determining the assessments to be carried out
- relevant competencies
- evidence required to establish competency
- reasons for identifying the evidence to be obtained
- industry assessment procedure
- reasons for discussing and confirming the assessment arrangements with the assessment candidate
- time and location of the assessment
- reasons for selecting the time/location for the assessment
- methods of gathering the evidence
- reasons for using the selected methods of obtaining evidence
- procedures for documenting the assessment
- procedures for evaluating the gathered evidence
- need to provide clear and positive feedback to the assessment candidate
- appeals procedure
- any further training required by the assessment candidate
- procedures for recording assessment results
- need to keep records securely stored
- procedures for storing assessment records
- procedures for reviewing assessments undertaken
- reasons for evaluating assessment methods/procedures
- procedures for revising assessment procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to conduct workplace assessment.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with conducting workplace assessment or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Purpose of assessment	Recognition of prior learning, determination of award classification level or identification of training needed
Evidence required	Should address task skills, task management, contingency management application
Assessment procedure	Observation, documentation, demonstration, projects, oral tests, computer based assessment, written tests
Appropriate and specified methods and tools	Should address issues such as clarity, reliability, validity of results, fairness in assessment application, and cost effectiveness of process

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine role of on the job training	1.1.Objectives of training and role of on the job training are identified in consultation with team leaders or other appropriate personnel.
2. Provide on the job training	2.1.Training is conducted using learning methods appropriate to the training objectives and learner. 2.2.Trainee progress is monitored and feedback is provided appropriate to the learning outcomes.
3. Report on trainee performance	3.1.Trainee's progress is reported according to standard operating procedure.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining all relevant information with respect to the training to be provided
- applying suitable training methods
- providing feedback to the trainee throughout the training process
- reporting on the trainee's progress
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task-related information

Required knowledge

Look for evidence that confirms knowledge of:

- training to be delivered
- personnel to be consulted with respect to the training to be provided
- the individual's role in the provision of training
- objectives of the training
- the person(s) to be trained
- procedures to be followed when training individuals

REQUIRED SKILLS AND KNOWLEDGE

- training location(s)
- tools, equipment, procedures, materials and resources
- training delivery methods, their applications, advantages and disadvantages
- feedback techniques
- reasons for monitoring trainee progress
- reporting procedures
- hazards and control measures associated with assisting in the provision of on the job training, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to assist in the provision of on the job training.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with assisting in the provision of on the job training or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Learning methods	Explanation, demonstration, simulation
Report	Should include information about the skills satisfactorily achieved and those where further practice is required

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use hand tools	1.1. Hand tools are selected appropriate to the task requirements. 1.2. Hand tools are used to produce desired outcomes to job specifications which may include finish, tension, size or shape. 1.3. All safety requirements are adhered to before, during and after use. 1.4. Unsafe or faulty tools are identified and marked for repair according to designated procedures before, during and after use. 1.5. Routine maintenance of tools, including hand sharpening is undertaken according to standard operational procedures, principles and techniques. 1.6. Hand tools are stored safely in appropriate location according to standard operational procedures and manufacturers' recommendations.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and following information on standard operating procedures
- following verbal instructions
- selecting hand tools appropriate to the task
- using hand tools safely
- identifying hand tool defects and marking for repair
- maintaining/sharpening hand tools using appropriate techniques
- storing hand tools in accordance with manufacturers'/standard operating procedures

Required knowledge

Look for evidence that confirms knowledge of:

- applications of different hand tools in a general engineering context
- common faults and/or defects in hand tools

REQUIRED SKILLS AND KNOWLEDGE

- procedures for marking unsafe or faulty tools for repair
- routine maintenance requirements for a range of hand tools
- storage location and procedures for a range of hand tools
- hazards and control measures associated with using hand tools
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to use hand tools for a range of general engineering applications.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. ---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use power tools	1.1. Power tools are selected appropriate to the task requirements. 1.2. Power tools are used for a determined sequence of operations - which may include clamping, alignment and adjustment to produce desired outcomes - to job specifications which may include finish, size or shape. 1.3. All safety requirements are adhered to before, during and after use. 1.4. Unsafe or faulty tools are identified and marked for repair before, during and after use according to designated procedures. 1.5. Operational maintenance of tools, including hand sharpening, is undertaken according to standard workplace procedures, principles and techniques. 1.6. Power tools are stored safely in appropriate location according to standard workshop procedures and manufacturers' recommendations.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and following information on standard operating procedures
- following verbal instructions
- selecting power tools appropriate to the task
- using power tools safely
- using clamping/securing devices
- identifying power tool defects
- maintaining power tools using appropriate techniques
- sharpening tools/tool bits within the scope of this unit
- storing power tools according to manufacturers'/ standard operating procedures.

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms knowledge of:

- application of different power tools
- clamping/securing methods
- adjustments/alignments to a range of power tools
- common faults and/or defects in power tools
- procedures for marking unsafe or faulty power tools for repair
- routine maintenance requirements of a range of power tools
- tool sharpening techniques for a range of power tools
- storage location and procedures of a range of power tools
- hazards/control measures associated with power tools
- use and application of personal protective equipment
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1.Task requirements and specifications are determined and clarified with appropriate persons. 1.2.Processes/techniques are selected appropriate to task, specifications and material.
2. Prepare tools and tooling to produce precision outcome	2.1.Tools, accessories and consumables are selected appropriate to task, specifications and material. 2.2.Where applicable, cutting tool modifications required to produce outcome are determined using engineering principles. 2.3.Tools/tooling are prepared and modified as required.
3. Use tools to produce work to precise specifications	3.1.The work area is prepared and made safe. 3.2.The work piece is prepared and secured using appropriate method for selected operation/s. 3.3.Tools are used according to acceptable engineering principles, methods, applications and procedures to produce specified outcome to the required accuracy. 3.4.Tools and equipment are inspected for safe and proper working order before, during and after use. 3.5.Unserviceable tools/equipment are identified, repaired where appropriate, or marked for repair and/or disposal, according to prescribed procedure. 3.6.Tools are stored and maintained to ensure serviceability.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • obtaining and interpreting relevant drawings, specifications, instructions etc. • preparing and making safe the work area(s) prior to the work being carried out • using appropriate tools to produce the specified outcomes • checking tools and equipment for safe and proper working order before, during and after use

REQUIRED SKILLS AND KNOWLEDGE

- where appropriate, marking unsafe or faulty tools and equipment for repair
- where appropriate, repairing/maintaining unsafe or faulty tools
- checking condition of all tools and equipment for conformance to specifications and safe and proper operation prior to storage
- safely storing all tools and equipment in the appropriate location

Required knowledge

Look for evidence that confirms knowledge of:

- work to be undertaken
- specifications to be achieved
- appropriate tools, processes and equipment required to carry out the work to the required specifications
- reasons for selecting the chosen tools, processes and equipment
- hazards and control measures associated with using the selected tools, processes and equipment, including housekeeping
- safety procedures to be followed to ensure the safety of the individual and other personnel
- procedures for using the selected tools
- engineering principles to be applied during the use of the tools
- manufacturers' specifications of the tools and equipment selected
- safe and proper function of tools and equipment selected
- procedures for checking tools and equipment for correct and safe operation
- common faults and/or defects in tools and equipment used/selected
- procedures for marking unsafe or faulty tools and equipment for repair
- repairs/operational maintenance that can be made to the tools and equipment used/selected
- procedures for repairing/maintaining the tools and equipment used/selected
- procedures for checking tools and equipment prior to storage
- storage location of the tools and equipment used/selected
- procedures for storing tools and equipment used/selected

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to use tools to fashion or shape work to high levels of precision for dimension and or finish to specifications. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Processes

- Hand tools and hand held power tools are used to fashion or shape work to high levels of precision for dimension and or finish to specifications
- Engineering techniques, methods and procedures may include cutting out, drilling, fitting, filing, reaming, lapping, broaching, burnishing, scraping, polishing, hand held grinding, chiselling

Precision outcomes

Specified tolerances, allowances, fits, finishes, alignments

Tools

Any tools or equipment required to achieve precision outcomes

Tool modifications

Tool shape, rake angle and clearance angles

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Perform preventative maintenance tasks and adjustments	<p>1.1.Preventative maintenance schedule is read and task requirements are determined.</p> <p>1.2.Appropriate maintenance principles and techniques are used and routine maintenance tasks are performed on mechanical equipment, components or sub-assemblies using correct tools, equipment and procedures.</p> <p>1.3.Mechanical equipment, components, sub-assemblies are checked visually and with test equipment, using prescribed procedures and safety requirements to ensure correct function or determine malfunction.</p> <p>1.4.Adjustments are made to equipment or components to ensure specifications are met using acceptable fitting techniques and procedures, observing all safety requirements.</p>
2. Diagnose and locate faults	<p>2.1.Equipment component function is determined by reference to engineering drawings, technical manuals and or consultation with appropriate personnel.</p> <p>2.2.Maintenance reports are checked, reviewed and faults are diagnosed.</p> <p>2.3.Consultation with operators and other relevant plant personnel is carried out to assist in locating faults.</p> <p>2.4.Where appropriate, test equipment is selected and applied in accordance with defined requirements and procedures to assist fault location.</p> <p>2.5.Fault condition is diagnosed and localised at component level using appropriate test equipment and procedures.</p> <p>2.6.Faulty condition is evaluated and appropriate corrective action is taken.</p> <p>2.7.Faults are documented to standard operating procedures.</p>
3. Repair or overhaul mechanical system	<p>3.1.Machine or equipment is isolated safely or checked for isolation.</p> <p>3.2.Faulty equipment, component or sub-assembly is removed from system using appropriate engineering principles, tools, equipment and procedures.</p> <p>3.3.Replaceable items are selected from manufacturers' catalogues and obtained by appropriate means.</p> <p>3.4.Correct repair procedure, tools and equipment are selected and prepared for use on serviceable items.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.5.Using appropriate engineering principles, designated procedures, correct tools/equipment and safe workshop practices, serviceable items are repaired or overhauled to manufacturers' or site specifications.</p> <p>3.6.Components are checked with precision instruments to ensure conformance to specifications where applicable.</p>
4. Fit and adjust mechanical equipment	<p>4.1.All electrical, safety and site requirements are adhered to throughout the maintenance cycle.</p> <p>4.2.Maintenance report is completed to standard operating procedures and conveyed to designated personnel.</p> <p>4.3.Fitting requirements are determined and sequential assembly planning is carried out where applicable.</p> <p>4.4.Sound fitting principles and techniques are applied in the preparation and assembly of component parts using fastening equipment and methods which ensure conformance to specifications, operational performance, quality and safety.</p> <p>4.5.Using acceptable maintenance practices, correct gland packing, jointing and gasket materials are selected and applied correctly in conformance to specifications and operational requirements.</p> <p>4.6.Correct lubrication requirements are determined by appropriate means and attended to where applicable using mechanical or manual applications.</p> <p>4.7.Appropriate wedges and levelling devices are used to level mechanical equipment as appropriate.</p> <p>4.8.Correct alignment and balancing functions are performed where appropriate.</p> <p>4.9.Final adjustments are performed on mechanical equipment to align to operational specifications using acceptable engineering principles, fitting techniques and procedures</p> <p>4.10. Mechanical equipment is tested for accuracy and correct operation where applicable, and returned to service to specifications using acceptable procedures.</p> <p>4.11. Appropriate work and safety clearances are obtained throughout maintenance cycle.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- planning and sequencing of multiple tasks
- sourcing resources
- using diagnostic skills to check and test mechanical systems/equipment
- using communication skills to consult with operators and other relevant plant personnel to assist in locating faults
- making systematic operational adjustments
- checking system
- using language and literacy skills to enable all reporting requirements to be met including checking maintenance reports; documenting faults etc.
- reading and interpreting engineering drawings, technical manuals equipment component function

Required knowledge

Look for evidence that confirms knowledge of:

- preventative maintenance procedures
- functions of system/equipment and their operational requirements
- causes and symptoms of faults and failures
- system and equipment hazard identification and isolation procedures
- options for sourcing replacement parts
- consequences of incorrect adjustments
- procedures for testing the mechanical systems and equipment
- procedures for returning mechanical systems and equipment to service
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with maintaining and overhauling mechanical equipment

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to, in an integrated manner, diagnose, locate faults, repair, overhaul, fit and adjust mechanical systems and equipment. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, i.e. the candidate is not in productive work, an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with maintaining and overhauling mechanical equipment or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

EVIDENCE GUIDE

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Routine maintenance tasks

Checks for correct operation, lubrication, adjustments; repair to leaking glands

Test equipment

Engineers level, laser alignments etc., and appropriate equipment for measurement of alignment, flatness, squareness, straightness, temperature, vibration, load deflection, noise level, RPM

Fitting techniques and procedures

Appropriate fitting principles and techniques are utilised in the assembly/disassembly of component parts using fastening equipment and methods, e.g. dowelling, pinning and pegging, keying, thread production and repair, etc. which ensures conformance to specifications, operational performance, quality and safety. It also includes the straightforward removal and replacement of pre-manufactured bearings and seals and using acceptable maintenance procedures, appropriate lubrication, gland packing, jointing/gaskets, and seals. Materials are selected and applied in conformance to application requirements and specifications as applicable. Using acceptable workshop practices new components are manufactured including by marking out, drilling, scraping, filing, reaming, tapping or threading to specifications

------------------------	--

Application of the Unit

Application of the unit	<p>This unit involves using acceptable engineering principles, correct tools and equipment to undertake routine static and dynamic bearing checks; bearing fault diagnostics; and bearing removal, replacement, installation and lubrication.</p> <p>All bearing replacements are selected from spare parts lists, manufacturers' catalogues, engineering drawings and data sheets.</p> <p>Mounting/dismounting methods may include the use of press, dowel, keys, keeper plate, heat, shrink, hydraulic and mechanical mounting and dismounting tools and associated methods etc.</p> <p>Industry and enterprise standards of quality and safety are used to install and replace plain, ball and roller bearings.</p> <p>Where diagnostic skills are not required and where straightforward removal and replacement of pre-manufactured bearings is undertaken, Unit MEM18055B (Dismantle, replace and assemble engineering components) should be regarded as sufficient.</p> <p>Band: A</p> <p>Unit Weight: 4</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Perform routine bearing checks during operation and non-operation	1.1. Bearing installation is inspected and task requirements are determined by the most appropriate means. 1.2. Bearing installation is checked during operation using standard procedures of listening, feeling, observing and by using test equipment appropriate to the installation. 1.3. Seal condition is checked for seal and wear leaks using correct and appropriate means. 1.4. Lubricating devices are checked for correct operation using tools and techniques appropriate to the task.
2. Diagnose bearing faults	2.1. Visual and sensory inspection of bearing arrangement is performed. 2.2. Bearings are tested for correct operation and malfunction using manufacturers' specifications and diagnostic equipment appropriate to the task. 2.3. Faulty bearings are identified for replacement using relevant engineering principles. 2.4. Causes of failure are identified using techniques and equipment appropriate to the task. 2.5. Corrective action to avoid recurrences is taken where necessary.
3. Identify bearing requirements for replacement or installation	3.1. Bearing installation is inspected and task requirements are determined. 3.2. Operational function of bearings to be installed or replaced is determined using bearing and engineering principles.
4. Remove bearings	4.1. Bearing removal techniques and tools are determined for the task. 4.2. Bearings are removed from shafts or bearing housings with minimal damage to components. 4.3. Condition of serviceable items is inspected using measuring and test equipment appropriate to the task. 4.4. Serviceable items are repaired using engineering, techniques, tools and equipment appropriate to the task.
5. Install plain bearings	5.1. Standard replaceable items for plain, wrapped, flanged, split bush and thrust bearings are selected from manufacturers' parts lists, catalogues or

ELEMENT	PERFORMANCE CRITERIA
	<p>engineering drawings.</p> <p>5.2. Installation techniques and tools are selected appropriate to the task.</p> <p>5.3. Bearings are sized to correct clearance.</p> <p>5.4. Lubrication requirements are catered for to meet specification and/or application requirements.</p> <p>5.5. Bearings are fitted correctly.</p> <p>5.6. Bearings are tensioned down and run according to standard operating procedures or manufacturers' recommendations.</p> <p>5.7. Final clearance, adjustments and lubrication are checked and corrective action taken if necessary.</p>
6. Install anti-friction bearings	<p>6.1. Standard replaceable ball and roller anti-friction bearings are selected from manufacturers' catalogues, spare parts lists or interpreted from engineering drawing to meet specifications.</p> <p>6.2. Bearing inside/outside diameters are determined from specifications or manufacturers' catalogue and checked using measuring instruments appropriate to the task.</p> <p>6.3. Shafts and housings size are checked for correct fit and clearances.</p> <p>6.4. Installation techniques are selected appropriate to the task.</p> <p>6.5. Bearings are fitted to shafts or housings using engineering principles and tools, equipment, techniques appropriate to the task.</p> <p>6.6. Bearing are sealed and, where required, capped, to specifications.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on standard operating procedures,

REQUIRED SKILLS AND KNOWLEDGE

- manufacturer specifications, and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task-related information
- measuring bearings and components to specified tolerances
- numerical operations and calculations/formulae within the scope of this unit
- performing routine bearing checks including of seals, lubrication and lubrication devices
- diagnosing bearing faults
- identifying bearing requirements for replacement or installation
- removing bearings
- installing bearings
- checking for conformance to specifications

Required knowledge

Look for evidence that confirms knowledge of:

- procedures for checking bearings and seals
- procedures for checking bearing lubrication/lubrication devices
- manufacturer specifications
- engineering principles relating to fault diagnosis, installation and removal of bearings
- reasons for deciding to replace/not replace given bearings
- common causes of bearing failure and their indicators
- procedures for determining the appropriate clearances for a range of plain bearings
- procedures for 'sizing' plain bearings
- lubricants and lubrication requirements within the scope of this unit
- hazards and control measures associated with fault diagnosis, installation and removal of bearings
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to perform fault diagnosis, installation and removal of bearings. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication materials handling, recording and reporting associated with fault diagnosis, installation and removal of bearings or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

EVIDENCE GUIDE

Guidance information for assessment	
--	--

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Plain bearings

Rotational plain bearings:

- plain bush, wrapped bush, flanged bush, split bush, self-lubricating and thrust bearings for radial, thrust and combination radial and thrust loading applications.

Anti-friction bearings

Ball and roller bearings (anti-friction or rolling element bearings):

- self-aligning ball bearings with cylindrical bore, taper bore (and adaptor sleeve), taper bore (and unthreaded adaptor sleeve); single row deep groove ball bearings; magneto bearings (separable ball bearings); single row angular contact ball bearings; double row angular contact ball bearings; spherical roller bearings, including narrow type and C design; spherical roller bearings (NV, N NS Type); double row cylindrical roller bearings; linear ball bearings; needle roller bearings; taper roller bearings; single thrust ball bearings; double thrust ball bearings; single thrust ball bearings with spherical housing washer and seating ring; spherical roller thrust bearings; radial bearings with cylindrical, tapered bore (and adaptor or withdrawal sleeve); and associated bearings for radial, axial and combination radial and axial applications

MEM18006C Repair and fit engineering components

Modification History

Not Applicable

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit of competency covers mechanical repair and fitting trade skills including fault finding, repair of faulty components, manufacturing of new parts/components, and fitting mechanical engineering components into assemblies or sub-assemblies to specified measurements and tolerances and consistency with manufacturer's specification.</p> <p>Repair and fitting of engineering components is undertaken using mechanical engineering and maintenance principles, designated procedures, correct and appropriate tools/equipment, and safe working practices.</p>
-------------------------------	--

Application of the Unit

<p>Application of the unit</p>	<p>This unit of competency applies to repair and fitting work undertaken by a tradesperson in a mechanical maintenance, service or workshop environment. Work is undertaken autonomously or as part of a team using predetermined standards of quality, safety and workshop procedures. Skills covered include determining the need for repair or replacement of parts and assemblies, and undertaking of repair, replacement, assembly and final fitting of items, sub-assemblies and assemblies. All specifications are interpreted from engineering drawings, detailed/technical sketches and associated data sheets. The unit includes the use of appropriate workshop practices. New components are manufactured as required to specifications.</p> <p>This unit has been developed for Engineering Tradesperson - Mechanical apprenticeship training and the recognition of trade level skills in repair and fitting of engineering components. Skills covered by this unit are generally applied in occupational and work situations associated with trade level fitting and machining work. It may also apply to other mechanical trade occupational areas requiring high level repair and fit of engineering component skills.</p> <p>This unit has application in the MEM30205 Certificate III in Engineering - Mechanical qualification and other qualifications requiring a trade level of repair and fit skills.</p>
---------------------------------------	---

	<p>This unit does not address machining competencies and welding, if these are required, the appropriate units should also be accessed. Where additional or higher marking out skills are required, refer to MEM12006C Mark off/out (general engineering). The knowledge and skills associated with the installation, removal, repair or replacement of mechanical seals is covered by MEM18012B Perform installation and removal of mechanical seals. For high pressure fluid power seals, refer to MEM18020B Maintain hydraulic system components.</p> <p>Band: A</p> <p>Unit Weight: 6</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify scope of repair and/or fit required	1.1.Operational specifications for components are obtained from appropriate source and are interpreted and understood 1.2.Operation and condition of components are assessed against specifications 1.3.Faulty/worn components are identified 1.4.Causes of faults are determined using appropriate engineering principles, techniques, procedures, tools and equipment 1.5.Repair, replacement, adjustment or manufacture requirements are determined
2. Repair/replace faulty components	2.1.Where applicable, appropriate method of repair is determined 2.2.Where applicable, faulty components are repaired or adjusted to conform to specifications 2.3.Where applicable, replacement parts are selected from manufacturers' catalogues and assessed against specifications
3. Manufacture parts/components	3.1.Parts/component specifications are determined from appropriate source 3.2.Materials are selected to meet specification requirements 3.3.New components are produced in conformance to specifications using appropriate workshop practices 3.4.Completed components are inspected for compliance with dimensions 3.5.Where appropriate, component parts are marked for identification prior to assembly
4. Fit engineering components into assemblies or sub-assemblies	4.1.Fitting requirements and sequence of assembly are determined 4.2.Appropriate fitting principles and techniques are applied in the preparation and assembly of component parts using fastening equipment and methods which ensures conformance to specifications, operational performance, quality and safety 4.3.Using acceptable engineering practices, correct gland packing, jointing/gasket materials are selected and applied correctly in conformance to specifications and operational requirements

ELEMENT	PERFORMANCE CRITERIA
	<p>4.4. Correct lubrication requirements are determined by appropriate means and attended to where applicable</p> <p>4.5. Final adjustments are performed on component assembly to meet operational specifications using acceptable engineering principles, fitting techniques and procedures</p>
5. Check operation of repaired components/unit	<p>5.1. Components/unit are checked under operational conditions for compliance to operational specifications using acceptable engineering principles to standard operating procedures</p> <p>5.2. Out of specification modification/alterations are approved by appropriate authority and are recorded and documented to standard operating procedures</p> <p>5.3. Final component assembly is commissioned and returned to service according to standard operating procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- obtaining operational specifications for the components
- assessing operation against specification and identifying faults
- checking components visually and dimensionally against the operational specifications using work site procedures
- checking repaired components visually and dimensionally for conformance to specifications
- adjusting components to achieve conformance to specifications where appropriate
- selecting replacement parts which conform to specifications
- preparing and assembling components using appropriate fitting techniques and principles
- where appropriate, applying gland packing, jointing or gasket materials, using acceptable engineering practices
- applying appropriate lubricants to the assembly using acceptable engineering practices, where required

REQUIRED SKILLS AND KNOWLEDGE

- checking components for conformance to specification
- where required, adjusting components to achieve conformance to specifications
- where required, recording any approved modifications/alterations to work site procedures
- inspecting the final assembly and checking conformance to operational specifications
- where appropriate, returning the final assembly to service in accordance with work site procedures
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Required knowledge includes:

- tools and equipment to be used to dismantle the components
- consequences of having components that do not comply with operational specifications
- types of adjustment applicable to the components being repaired/fitted
- appropriate methods of repair
- features and/or dimensions upon which replacement parts are to be selected
- process of identifying replacement parts from third party suppliers' catalogues
- material properties required
- manufacturing operations to be used in the production of new components
- sequence of operations to be used in the production of new components
- fitting requirements for assembling components
- appropriate sequence of assembly tasks
- purpose of using gland packing, jointing or gasket materials
- reasons for selecting particular jointing or packing materials
- applications of different types of lubricants
- consequences of using inappropriate or no lubricant
- the need to have approval for out of specification modifications
- reasons for documenting out of specification modifications
- return to service procedures
- consequences of not following work site return to service procedures
- hazard and control measures associated with repairing and fitting engineering components, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to repair and fit engineering components to specifications in both workshop and site environments. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different situations and contexts. Critical aspects of assessment and evidence include:</p> <ul style="list-style-type: none"> • obtaining manufacturer's and enterprise specifications for equipment, materials and components • checking components visually and dimensionally in the workplace including tolerances, allowances, clearances and limits • repairing and fitting components and assemblies in a workshop environment to required specifications • repairing and fitting components and assemblies in a production or other work site environment • manufacturing and fitting components including commissioning and return to service checking of component and equipment through first off production or other recognised return to service checking procedure • procedures for out of specification modification/alterations.
<p>Context of and specific resources for assessment</p>	<p>This unit has been developed to support training in and recognition of trade level competency repair and fit of engineering components as applied to a trade level fitting and machining work environment. Assessment should emphasise a workplace context and procedures found in the candidate's workplace.</p> <p>The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p>

EVIDENCE GUIDE	
Method of assessment	<p>Typically, persons engaged in Engineering Tradesperson - Mechanical work are required to apply their repair and fit skills and techniques across a range of jobs and specifications.</p> <p>A single assessment event is not appropriate. On the job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials</p>
Guidance information for assessment	<p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with repair and fit of engineering components or other units requiring the exercise of the skills and knowledge covered by this unit.</p> <p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>

Range Statement

RANGE STATEMENT

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Manufacturers' catalogues

Manufacturers' catalogues may include any appropriate manufacturers' catalogues that contain replacement parts that conform with specifications and operational requirements

Appropriate workshop practices

Appropriate workshop practices may include:

- drilling
- scraping
- filing
- reaming
- tapping
- threading

Fitting principles and techniques

Fitting principles and techniques may include:

- limits of tolerance
- allowances and clearances
- effects of wear, stress, temperature
- types of fits - clearance transition interference
- press fitting methods
- force fits
- shrink and freeze (expansion) fits
- keyed fits
- taper fits
- lateral and radial forces
- backlash
- configuration and mating of parts
- applied use of precision tools and measuring equipment
- engineering components - shafts, single and multi-throw crankshafts, cams and journals, bearings and bearing surfaces, keys
- squareness, roundness, concentricity, flatness, straightness, surface finish and angular correctness
- datum and centrelines

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Undertake maintenance checks of mechanical drives and mechanical transmission components</p>	<p>1.1. Principles of mechanical drives and mechanical transmission components are understood.</p> <p>1.2. The function of the main parts of the designated mechanical drive/transmission assembly is understood.</p> <p>1.3. Appropriate maintenance principles, techniques, tools and equipment, mechanical drive/transmission components are used to check for wear, distortion, tensions, misalignment, fatigue, lubrication, slackness, tooth wear, breakages and other related malfunctions.</p> <p>1.4. Assembly requiring further diagnosis, repair or adjustment is identified and findings are documented.</p>
<p>2. Adjust mechanical drives and transmission assemblies</p>	<p>2.1. Adjustment requirements are determined.</p> <p>2.2. A suitable adjustment method is determined from manufacturers' instruction sheets, standard workshop manuals/procedures or other means.</p> <p>2.3. Adjustment tools and equipment are selected according to the type of assembly being serviced.</p> <p>2.4. Appropriate maintenance principles, techniques, tools and equipment are used, and drives/transmission components are tensioned, aligned balanced or adjusted to manufacturers'/site specifications according to safe workshop practices.</p> <p>2.5. Drive/transmission assembly is checked after adjustment for correct operation or identified for further diagnosis or repair.</p> <p>2.6. Service report is completed.</p> <p>2.7. Further diagnosis or repair requirements are actioned.</p>
<p>3. Diagnose faults</p>	<p>3.1. Service reports are read and visual and sensory inspection of the drive/transmission assembly is undertaken.</p> <p>3.2. Given manufacturers' specifications, and where applicable, diagnostic equipment drive/transmission assembly is tested using sound maintenance principles and procedures.</p> <p>3.3. Faults are localised at the component level and identified for repair or replacement.</p> <p>3.4. Fault causes are analysed and preventative measures</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>to avoid re-occurrence are developed, documented and actioned by appropriate means.</p> <p>3.5. Requirements for repair or replacement are actioned.</p>
<p>4. Repair mechanical drives/transmission assemblies</p>	<p>4.1. Service reports are read and visual and sensory inspection of the drive/transmission assembly is undertaken.</p> <p>4.2. Task requirements are ascertained.</p> <p>4.3. Tools and equipment are selected according to the type of assembly being serviced.</p> <p>4.4. Mechanical drive/transmission assembly is dismantled using appropriate maintenance principles, techniques, tools, equipment and safe workshop practices.</p> <p>4.5. Serviceable items are repaired using appropriate maintenance procedures according to manufacturers' specifications and standard workshop practices.</p> <p>4.6. Standard replaceable items are selected and obtained using manufacturers' catalogues, spare parts lists, engineering specifications.</p> <p>4.7. Component parts are refitted to mechanical drive/transmission assembly using sound maintenance principles, techniques, tools and equipment in accordance with manufacturers'/site specifications.</p>
<p>5. Final adjustment and commissioning</p>	<p>5.1. Using applicable maintenance principles and procedures, drive/transmission components are tensioned, balanced, aligned or adjusted to suit specifications and operational requirements.</p> <p>5.2. Drive/transmission assembly is checked after adjustment and operational performance is analysed.</p> <p>5.3. Assembly is commissioned to specifications.</p> <p>5.4. Service report is completed.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

Look for evidence that confirms skills in:

- locating, reading and interpreting information on written job instructions, specifications, manufacturers' instructions, standard workshop manuals/procedures, drawings, charts, lists and other reference documentation
- checking and clarifying task-related information
- interpreting manufacturers' catalogues or engineering specifications
- undertaking diagnostic and testing
- analysing operational performance
- planning and sequencing operations
- completing proformas, standard workplace forms and short reports using relevant terminology
- checking for conformance to specifications
- measuring components to specified tolerances
- undertaking calculations for determining cutting parameters and checking tolerances
- undertaking numerical operations and engineering calculations/formulae within the scope of this unit
- following verbal instructions
- orally reporting information

Required knowledge

Look for evidence that confirms knowledge of:

- uses and characteristics of lubricants
- principles of operation of a range of mechanical drives and transmissions
- techniques, tools and equipment to measure components
- common malfunctions in mechanical drives, transmissions and their components
- procedures for checking and adjusting mechanical drives, transmissions and their components
- preventative measures that can be undertaken to avoid recurrence of the fault/failure
- any applicable industry standards, national/Australian standards, NOHSC guidelines, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with maintaining and repairing mechanical drives and mechanical transmission assemblies

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to diagnose faults and repair drives and transmission assemblies and undertake final adjustment and commissioning. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with maintaining/repairing mechanical drives and mechanical transmission assemblies or other units requiring the exercise of the skills and knowledge covered by this unit.

Method of assessment

Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes,

	MEM18055B	Dismantle, replace and assemble engineering components

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Check balance	1.1.Principles of equipment balance testing are understood. 1.2.Most appropriate balancing check procedure is selected. 1.3.Component is set up correctly and to site/manufacturer's procedure for balance check. 1.4.Balance/out of balance is determined and compared to specification requirements. 1.5.Out of balance readings are recorded to prescribed procedures.
2. Balance equipment	2.1.Principles and methods of rigid and/or flexible rotation balancing are understood. 2.2.Techniques of single and/or multi-plane balancing are used appropriate to application. 2.3.Equipment is balanced utilising correct procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- setting up component to be balanced
- operating balancing equipment
- recording out of balance readings
- balancing equipment using the appropriate techniques
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task-related information
- checking for conformance to specifications
- undertake numerical operations, geometry and calculations/formulae within the scope of this unit

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

Look for evidence that confirms knowledge of:

- principles of balancing
- reasons for testing equipment for balance
- effect of out of balance components on machine/equipment operation and life
- several procedures for checking the balance of equipment
- the most appropriate procedure to be applied to selected balancing situations
- reasons for selecting the chosen balancing check procedure
- procedures for setting up the component to be balanced
- procedures for operating the balancing equipment
- specifications of the component to be balanced
- procedures for recording out of balance readings
- principles of rigid and flexible rotation balancing
- methods of rigid and flexible rotation balancing
- the techniques of single and multiple plane balancing
- the appropriate balancing technique for given balancing situations
- reasons for selecting the chosen balancing technique
- procedures for balancing out of balance equipment
- the precautions to be taken when adding or removing material to achieve balance
- hazard and control measures associated with balancing equipment, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to balance equipment. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with balancing equipment or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Undertake levelling and alignment measurements/readings	1.1.Principles of levelling and alignment are understood and utilised. 1.2.Task requirements are determined by inspection of equipment to be levelled and/or components to be aligned. 1.3.The correct appropriate levelling and/or alignment procedure is selected. 1.4.Correct and appropriate levelling or alignment devices/equipment are selected and set up to standard operating procedures or manufacturers' recommendation. 1.5.Measurements/readings are taken accurately and recorded correctly to standard operating procedures.
2. Perform levelling and/or alignment tasks	2.1.Correct and appropriate engineering principles, techniques, tools and equipment are selected. 2.2.Levelling realignment calculations are performed using correct and appropriate method for levelling/alignment application. 2.3.Equipment is levelled to specifications using correct and appropriate techniques 2.4.Levelling and alignment task is completed to specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • reading, interpreting and following information on standard operating procedures, manufacturer recommendations, drawings and other applicable reference documents • taking levelling and alignment measurements/readings • performing levelling/alignment calculations • setting up levelling/aligning equipment

REQUIRED SKILLS AND KNOWLEDGE
<ul style="list-style-type: none">• completing levelling and/or alignment tasks
Required knowledge
Look for evidence that confirms knowledge of: <ul style="list-style-type: none">• principles of levelling and alignment• numerical operations, geometry and calculations/formulae for levelling and alignment• effects on equipment performance and life of non-level or out of alignment components• techniques, tools, equipment and procedures to carry out the levelling and/or alignment• reasons for selecting tools, techniques and equipment• hazards and control measures associated with levelling and alignment• use and application of personal protective equipment• safe work practices and procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Undertake condition monitoring	1.1.Principles and methods of equipment condition monitoring are understood and applied 1.2.Appropriate condition monitoring technique is selected to achieve required outcomes. 1.3.Checks are undertaken correctly, safely and to standard operating procedures. 1.4.Results are plotted and deviations from specification are reported to appropriate authority and recorded.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task-related information
- applying correct principles for monitoring
- selecting appropriate technique for the situation
- following standard operating procedures
- recording results and preparing and submitting deviation reports

Required knowledge

Look for evidence that confirms knowledge of:

- the application of principles and methods for a variety of situations
- appropriate records for a variety of situations
- hazards and control measures associated with equipment monitoring, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Shut down machine/equipment	1.1. Machine/equipment operational function is determined and understood. 1.2. Shut-down sequence is undertaken safely and to standard operating procedures. 1.3. Machine/equipment is depressurised/emptied/de-energised/bled to standard operating procedures. 1.4. Safe shut-down of machine/equipment is verified. 1.5. Safety/security lock-off devices and signage are installed to standard operating procedures. 1.6. Machine/equipment is left in clean and safe state.
2. Isolate machine/equipment	2.1. Machine/equipment operational function is determined and understood. 2.2. Isolation methods and points are recognised and identified. 2.3. Isolation is undertaken safely and to standard operating procedures. 2.4. Safe isolation of machine/equipment is verified. 2.5. Safety/security lock-off devices and signage are installed to standard operating procedure. 2.6. Machine/equipment is left in clean and safe state.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications and other applicable reference documents
- checking and clarifying task-related information
- entering information onto proformas and standard workplace forms
- shutting down machine/equipment
- purging/de-energising equipment
- installing safety/security lock-off devices and signage\

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

Look for evidence that confirms knowledge of:

- the operational function of the machine/equipment
- the shut-down sequence
- the procedures for shutting down and isolating the machine/equipment
- safety precautions for shutting down and isolating the machine/equipment
- procedures for purging/de-energising the machine/equipment and reasons for doing so
- procedures for verifying machine/equipment shut-down and isolation and reasons for verifying
- the safety/security lock-off devices and signage to be installed
- the reasons and procedures for installing lock-off devices and signage
- the reasons for ensuring the machine/equipment is left in a clean, safe state
- hazards and control measures
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to shut down and isolate machines/equipment.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with shutting down and isolating machines/equipment or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Shut down/isolate

Shut down/isolation means and includes isolation of mechanical, electrical drives, pipework (pressure) rotating equipment etc. utilising electrical lock-off isolators, mechanical and power driven valves etc. in accordance with standard operating instructions. Relevant regulations, Australian standards and legislative requirements governing isolation and shut-down must be complied with

Machine/equipment

Manual, semi automatic and automatic machines of a stand-alone, continuous production or process nature.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine mechanical seal requirements	1.1.Principles of mechanical seals are understood and applied. 1.2.Operational function of mechanical seal components is understood. 1.3.For new mechanical seal installation, specifications are interpreted from engineering drawings etc.
2. Dismantle mechanical seal installations	2.1.Mechanical seal assembly is examined and appropriate dismantling techniques, tools and equipment are selected to suit work requirements. 2.2.Mechanical seal assembly is dismantled using engineering techniques and safe workshop procedures appropriate to the work requirements. 2.3.All component parts are examined for wear, including housing, shafts, primary sealing elements, secondary seals, seat assembly etc., to determine need for repair or replacement. 2.4.Where applicable, serviceable items are repaired by appropriate means. 2.5.Primary sealing elements and secondary seals are removed for replacement where required, using correct and appropriate engineering techniques and tools.
3. Select replacement items	3.1.Replacement items are selected using manufacturers' catalogues, spare parts lists, engineering specifications or sample, using standard operating procedures.
4. Reassemble mechanical seal installations	4.1.Mechanical seal components are fitted using correct and appropriate engineering techniques and tools, including seal head, secondary seals, seat assembly, shaft and housing. 4.2.Mechanical seal assembly is tensioned and adjusted to manufacturers' specifications. 4.3.Mechanical seal assembly is tested using appropriate methods for compliance with specifications and operational performance.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on standard operating procedures, written job instructions, specifications, charts, lists, drawings and other applicable reference documents
- determining mechanical seal requirements
- dismantling mechanical seal installations
- selecting replaceable items
- reassembling/repairing mechanical seal installations
- adjusting mechanical seal tensions
- testing mechanical seal assembly
- checking for conformance to specifications
- measuring components to specified tolerances

Required knowledge

Look for evidence that confirms knowledge of:

- principles of operation and range of mechanical seals
- components and function of a range of mechanical seal designs
- installation specifications and procedures
- failure patterns/wear limits of mechanical seal components
- techniques/tools for removing primary sealing elements and secondary seals from the mechanical seals
- units of measurement, numerical operations and calculations/formulae within the scope of this unit
- reasons for selection of the mechanical seal
- specified mechanical seal tension
- testing mechanical seals
- techniques, tools and equipment to measure components
- hazards and control measures associated with installing/ removal of mechanical seals, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Inspect glands and gland packing	1.1.Principles of gland packing are applied. 1.2.Stuffing box assembly and gland packing are inspected and job requirements are determined.
2. Remove gland packing	2.1.Using appropriate engineering techniques, tools and equipment, gland is extracted or removed.
3. Replace or top up gland packing	3.1. Correct and appropriate gland packing is selected and cut to size and shape to conform with application and/or specifications. 3.2.The stuffing box is filled with packing material and the gland is reassembled using standard operating procedures or manufacturers' recommended procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- checking and clarifying task-related information
- inspecting glands and gland packing
- removing gland packing
- cutting gland packing to size and shape
- replacing or topping up gland packing
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings
- following oral instructions
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- principles of gland packing
- tools, techniques and equipment required to remove gland packing

REQUIRED SKILLS AND KNOWLEDGE

- various types of gland packing
- reasons for selecting gland packing
- methods of cutting gland packing to size and shape
- reassembling procedures
- hazards and control measures associated with gland packing, including housekeeping
- safe work practices

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to pack glands. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with gland packing or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Packing material

Carbon, hemp, rubber, leather, teflon, felt, neoprene etc. that are flat, ribbon, square, round, moulded, dry and lubricated, etc.

Unit Sector(s)

Unit sector

MEM18014B Manufacture press tools and gauges

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers preparing to manufacture and manufacture tooling (press tools and gauges) including matching use of hand and hand held power tools, assembly of the tooling components and trialling the tooling.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit includes the skills required to manufacture and trial all types of production tooling. Work is undertaken autonomously or in a team environment.</p> <p>The tooling being produced may include, but is not limited to, the following types: press tools, jigs, fixtures, gauges, special purpose machines and equipment requiring precision manufacture. A normal range of tool room equipment would be used which may include lathes, mills, copy/duplicator, grinders, EDM and wire cut equipment, precision measurement, hand and power tools.</p> <p>Where simple welding or brazing skills are required, see Units MEM05012C (Perform routine manual metal arc welding) and Unit MEM05006B (Perform brazing and/or silver soldering). Where manufacture of cavity dies is required, unit MEM18097A (Manufacture cavity dies) should be selected.</p> <p>Band: A</p> <p>Unit Weight: 8</p>

-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to manufacture tool or gauge	<p>1.1.Tooling requirements are determined from customer's components drawings, prints or sample component.</p> <p>1.2.Tooling type and design are conceptualised and planned with reference to customer's specifications (written or verbal) for numbers, finish, quality and material.</p> <p>1.3.Production machine to be used to produce components is assessed and considered in tooling design.</p> <p>1.4.Tool design is interpreted and visualised from tooling drawings, prints or plan and checked against customer requirements.</p> <p>1.5.Selected production machine mounting requirements are determined to ensure any special or additional provisions are incorporated in tooling design.</p>
2. Manufacture tooling	<p>2.1.Appropriate materials are selected and obtained to meet tooling requirements for strength, durability, component finish, heat treatment qualities where necessary and accounting for materials availability.</p> <p>2.2.Selected material is tested for hardness as appropriate to aid selection of machine tools, hand tools and hand held power tools to be used to fashion or shape tooling components.</p> <p>2.3.Plan is developed to sequence and stage manufacturing process, including establishing datum, mark out, rough out (machine or fashion), stress relieve/heat treat, finish size, fashion and fit and assemble componentry.</p>
3. Perform machining operations	<p>3.1.Appropriate machines and machining process is selected from a range of standard tool room machines to shape/produce tooling components to specifications.</p>
4. Use hand and hand held power tools	<p>4.1.A range of hand and hand held power tools are selected and used to fashion/manufacture tooling components to specification.</p> <p>4.2.Where practical, components sample or section is produced for testing.</p>
5. Assemble tooling components	<p>5.1.Using acceptable tool making techniques and procedures, components are checked and fitted/assembled correctly to specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
6. Trial tooling	<p>6.1. First-off component is checked with precision instruments against specification.</p> <p>6.2. Tooling is modified as necessary to produce components to specification.</p> <p>6.3. Modified tooling is re-trialled and component is produced.</p> <p>6.4. Conformance to specification is verified and reported according to standard operating procedures.</p> <p>6.5. Where necessary all deviations or modifications to original tooling design, prints or plans are recorded and reported according to standard operating procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining and interpreting relevant drawings, prints and/or sample components, specifications and instructions
- sketching or drawing the tool design
- incorporating mounting requirements into the tooling design
- testing tooling materials for hardness
- preparing sequential plan for the manufacture of the required tooling
- shaping/producing tooling components to specifications using appropriate machines and machining processes
- using hand and hand held power tools to fashion/ manufacture tooling components to specification
- assembling and fitting tooling components using acceptable tool making techniques and procedures
- producing first-off component/product
- checking first-off component/product for conformance to specification
- modifying tooling using appropriate tool making techniques and procedures
- checking conformance of the component/product to specifications
- recording/reporting modifications or alterations to original tooling design

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

Look for evidence that confirms knowledge of:

- customers' tooling requirements
- the type of tooling to be manufactured
- the machine(s) in which the tooling is to be used
- the tooling design concept in terms of customer specifications and proposed production machine(s)
- the performance requirements of the tooling
- the method of mounting the tooling in the production machine into which it is to be installed
- the physical properties of a range of tool steels
- the appropriate materials for each component of the tooling to be produced
- the reasons for selecting the chosen materials in terms of strength, durability, component finish, heat treatment requirements, and availability
- the procedures for hardness testing materials
- the effect of material hardness on machinability of the material
- the appropriate machinery and tools to be used to fashion or shape tooling components
- the reasons for selecting the chosen machinery and tooling
- the reasons for establishing a sequential plan for the manufacture of tooling
- the procedures for documenting plans for the manufacture of tooling
- the hand and hand held power tools to be used to fashion/manufacture the required tooling components
- the reasons for selecting the chosen hand and hand held power tools
- procedures for fitting/assembling the tooling components
- the precautions to be taken when fitting/assembling tooling components
- the appropriate precision instruments for checking the components produced
- the specifications of the finished product
- causes of any non-conformance to specification
- the tool making techniques/procedures to be applied to return the tooling to specification
- procedures for reporting/recording the conformance of the component/product produced by the tooling to specifications
- procedures for recording/reporting modifications and/or alterations to tooling design
- hazards and control measures associated with the manufacture of tools and gauges, including housekeeping
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and analyse defects in tooling	<p>1.1. Defects are determined from any of: production components produced, production reports or tool inspections.</p> <p>1.2. Sequence of maintenance operations is planned.</p>
2. Disassemble and assess tooling components	<p>2.1. Tooling is disassembled, and condition of components against prints, drawings, manufacturers' drawings etc. is assessed.</p> <p>2.2. Worn/damaged parts are replaced/reconditioned.</p>
3. Obtain and prepare replacement materials	<p>3.1. Materials are obtained to meet tooling requirements.</p>
4. Manufacture/repair tooling components	<p>4.1. Appropriate hand and hand held power tools are selected and used.</p> <p>4.2. Appropriate machining process is chosen from a range of standard tool room machines.</p> <p>4.3. Machining parameters are set to produce components to specification.</p> <p>4.4. Where appropriate, heat treatment is initiated according to specification.</p>
5. Assemble tooling components	<p>5.1. Using acceptable tool making techniques and procedures, tooling components are checked and assembled correctly in conformance with specifications.</p>
6. Measure production components	<p>6.1. Production components are checked with precision instruments to ensure conformance to specifications as required.</p>
7. Identify potential production/maintenance problems	<p>7.1. Conditions leading to tooling failure are identified and recorded.</p> <p>7.2. Recurrent faults are identified and solutions are initiated.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms skills in:

- obtaining all relevant information with respect to defective tooling
- examining the defective tooling for breakage, wear, etc.
- preparing a sequential plan for the repair/maintenance of the defective tooling and documenting the plan
- disassembling the defective tooling in accordance with acceptable tool making techniques and procedures
- obtaining all relevant drawings, specifications and sample products/components
- marking worn/damaged components for repair or replacement
- testing tooling components for hardness
- obtaining the appropriate materials for manufacture of replacement tooling components
- using the appropriate hand and hand held power tools to fashion/manufacture tooling components to specification
- utilise sample components or sections to test the tooling components being manufactured
- shaping and producing the tooling components to specifications using appropriate machines and machining processes
- assembling and fitting all tooling components to specification using acceptable tool making techniques and procedures
- checking the first-off component/product using appropriate precision instruments for conformance to specification
- recording the conditions that lead to the failure of the given set of tooling
- initiating design modifications/alterations to rectify recurring faults or failure

Required knowledge

Look for evidence that confirms knowledge of:

- common tooling defects from a range of sample products/components
- the probable causes of tooling failure
- the reasons for selecting the probable causes of tooling failure
- the reasons for establishing a sequential plan for the repair/maintenance of defective tooling
- the procedures for documented plans for the repair/ maintenance of defective tooling
- the procedures for disassembling defective tooling
- the specifications of all tooling components
- the precision instruments to be used to check tooling components for conformance to specification
- the reasons for selecting the chosen precision instruments
- the procedures for identifying worn/damaged tooling
- components for repair or replacement

REQUIRED SKILLS AND KNOWLEDGE

- the reasons for deciding to repair or replace worn/damaged components
- the appropriate materials for each component of the tooling to be replaced
- the required physical properties of the tooling to be replaced
- the reasons for selecting the chosen materials in terms of: strength, durability, component finish, heat treatment requirement, and availability
- the procedures for hardness testing materials
- the procedures for obtaining tooling materials
- the hand and hand held power tools to be used to fashion/manufacture the required tooling components
- the reasons for selecting the chosen hand and hand held power tools
- the appropriate machines and machining processes to shape/produce the required tooling components
- the reasons for selecting the chosen machines and machining processes
- the effect of machining parameters on the surface finish and tolerances achievable from machining processes
- the machining parameters appropriate to given machining tasks and specifications
- the reasons for selecting the chosen machining parameters
- the reasons for heat treating the tool steel in accordance with heat treatment procedures and specifications
- the heat treatment of tooling components initiated
- the heat treatment requirements of a range of given tool steels to achieve specified hardness
- the procedures for heat treating tool steels
- the procedures for initiating the heat treatment of tool steels
- the procedures for fitting/assembling the tooling components
- the precautions to be taken when fitting/assembling tooling components
- the appropriate precision instruments for checking the components produced
- the specifications of the finished product
- the common causes of tooling failure
- the procedures for documenting tooling failures
- the conditions leading to the failure of a given set of tooling
- the reasons for selecting the chosen mode of failure
- previous faults with the given set of tooling
- any commonalities of causes of failures or trends/events associated with tooling failure
- appropriate proposed solutions for a range of recurrent faults that may occur in tooling
- the reasons for selecting the chosen solutions
- the procedures for initiating modifications/alterations to tooling design

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse condition monitoring results	1.1. Records/graphs/results of condition monitoring are examined and analysed and problem areas are identified. 1.2. Necessary calculations/computations are undertaken. 1.3. Appropriate reports/determinations of analyses are undertaken to prescribed site procedure.
2. Develop recommendations	2.1. Recommendations are developed based on previous history, results, specifications and legislative requirements. 2.2. Recommendations are reported to appropriate authority.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining results of condition monitoring of plant/equipment
- performing calculations to analyse condition monitoring data
- preparing reports based on the analysis of the condition monitoring data
- reporting recommendations to the appropriate authority
- orally reporting routine information

Required knowledge

Look for evidence that confirms knowledge of:

- the operational specifications of the plant/equipment being monitored
- any trends and/or deviations from operational specifications
- numerical operations and calculations/formulae for data analysis within the scope of this unit
- the reasons for undertaking the identified calculations
- the procedures for reporting the analysis of condition monitoring data
- the previous history of the plant/equipment being monitored
- any relevant legislative requirements

REQUIRED SKILLS AND KNOWLEDGE

- the operational specifications of the plant/equipment
- the recommendations with respect to action to be taken
- the reasons for the recommendations made
- the expected effect of the recommendations on the operational performance of the plant/equipment
- the procedures for reporting recommendations
- the authority/person to whom the recommendations are to be made

	MEM18011C	Shut down and isolate machines/equipment
	MEM18016B	Analyse plant and equipment condition monitoring results
	MEM18055B	Dismantle, replace and assemble engineering components

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine modification requirements	1.1.Maintenance reports and system output information are analysed. 1.2.Defective components, sub-assemblies and design faults are identified. 1.3.Corrective action plan is developed.
2. Undertake standard modifications to mechanical systems and equipment	2.1.Modification options for overcoming parts failures and design faults are identified. 2.2.Failed components and sub-assembly replacements are selected from manufacturers' catalogue. 2.3.Modification designs are developed in conjunction with and approved by appropriate authority. 2.4.Modification is recorded according to standard operating procedures
3. Evaluate modified mechanical system/equipment	3.1.Alterations are evaluated for effectiveness and efficiency. 3.2.Effectiveness/efficiency is reported and recorded. 3.3.Results are checked against specifications. 3.4.Additional modification/changes, if required, are recommended.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining, reading, interpreting and following information on relevant maintenance reports, production data, drawings, circuits, condition monitoring data, specifications, instructions, etc.
- analysing reports and other relevant information
- developing and planning corrective action plans
- inspecting plant/equipment for correct location, alignment, operation, performance and conformance to specifications
- documenting and approving planned modifications
- preparing and authorising drawings of the modified components and/or

REQUIRED SKILLS AND KNOWLEDGE

sub-assemblies

- recording approved modifications undertaken
- operating and monitoring performance of modified plant/equipment to ensure conformance with the required performance specifications
- reporting/recording efficiency/effectiveness of the modifications undertaken
- recommending further modifications to the plant/equipment

Required knowledge

Look for evidence that confirms knowledge of:

- the desired changes in performance of the plant/equipment
- the specifications of the plant/equipment and its performance requirements
- the procedures for inspecting the plant/equipment against specifications
- where appropriate, defective components, sub-assemblies and design faults
- the effect of defective components, sub-assemblies and design faults on the performance of plant/equipment
- the action to be taken to achieve the desired changes in performance
- the reasons for taking the action identified
- the procedures for documenting the proposed modifications to the plant/equipment
- the authority from whom approval to undertake the proposed modifications is to be obtained
- typical part failure modes and the causes
- the action to be taken to correct part failures and design faults
- for given part failures and/or design faults, the options for modifying the plant/equipment
- for given components and/or sub-assemblies, appropriate standard replacements from manufacturers'/suppliers' catalogues
- the procedures for modifying drawings of components and/or sub-assemblies
- the procedures for authorising changes made to drawings of plant/equipment
- the procedures for recording modifications undertaken
- the procedures for checking the operation of the modified plant/equipment against required performance specifications
- procedures to report/record the effectiveness/efficiency of the modifications
- the tests to be undertaken to check the performance of the modified plant/equipment
- engineering design and drawing skills associated with modifying mechanical systems and equipment
- numerical operations, geometry and calculations/formulae within the scope of this unit
- hazards and control measures associated with modifying mechanical systems and equipment
- use and application of personal protective equipment

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Analysed

Interpretation and integration of data from consultations, process control instrumentation and condition monitoring systems, etc.

Modifications

Changes to plant and equipment which lead to desired changes in performance

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Check pneumatic system components	1.1. System components are identified correctly. 1.2. The characteristics and operational function of each system component are understood. 1.3. The operational function of each component is inspected and tested. 1.4. Correct operation of each component is assessed against specifications.
2. Identify, repair or replace faulty pneumatic system components	2.1. Faulty system components are localised and malfunction is confirmed by inspection and testing using fluid power principles, procedures and safety requirements. 2.2. Faulty system components are dismantled and repaired to manufacturers'/site specifications. 2.3. Replacement parts are selected from manufacturers' catalogue according to required specifications. 2.4. System components are reassembled and verified for correct operation and tested against specifications. 2.5. Correct operation of the pneumatic system is confirmed to standard operating procedures. 2.6. Appropriate follow-up procedures are adopted according to standard operating procedures. 2.7. Where appropriate, service reports are completed using standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- inspecting and testing pneumatic system components
- obtaining, interpreting and following written job instructions, specifications, standard operating procedures, charts, lists, drawings, relevant data sheets and other applicable reference documents
- planning and sequencing operations

REQUIRED SKILLS AND KNOWLEDGE

- checking and clarifying task-related information
- checking individual components within the pneumatic system for correct operation
- dismantling and repairing faulty system components
- selecting replacement parts from manufacturers'/suppliers' catalogues
- assembling pneumatic system components
- testing pneumatic components for correct operation and conformance to specifications
- checking the operation of the pneumatic system for conformance to specification
- checking repaired/replaced pneumatic system components for correct operation
- completing service reports

Required knowledge

Look for evidence that confirms knowledge of:

- the full range of pneumatic system components
- characteristics/operational function of each component
- procedures for inspecting and testing pneumatic system components
- equipment to test pneumatic system components
- the specifications of each pneumatic system component
- faulty system components
- causes of faulty pneumatic components
- individual components within the pneumatic system
- the safety procedures for working on pneumatic components
- the procedure for repairing pneumatic system components
- procedures for checking pneumatic system operation
- follow-up procedures with respect to repaired/replaced pneumatic system components
- reporting/recording procedures
- hazard and control measures associated with maintaining pneumatic system components, including housekeeping
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Undertake preventative maintenance checks/adjustments on pneumatic systems	1.1. System components, assemblies or sub-assemblies are identified and prepared for inspection/preventative maintenance. 1.2. Visual inspection and testing with appropriate test equipment are carried out according to fluid power principles, procedures and safety requirements. 1.3. Scheduled preventative maintenance tasks are performed including obvious repairs and adjustments according to manufacturers' specification using fluid power techniques/practices.
2. Undertake fault finding on pneumatic systems	2.1. Designated pneumatic system components are identified and a visual inspection of the system is carried out for the collection of fault finding data. 2.2. System operator is consulted where appropriate and additional data is collected. 2.3. Maintenance reports and preventative maintenance schedules are checked and reviewed for additional fault finding data. 2.4. Using fluid power principles, checks and tests are undertaken using appropriate test equipment and techniques. 2.5. Faults and malfunctions are identified and verified. 2.6. Faults and malfunctions are documented or reported by appropriate means to designated personnel and actioned.
3. Repair and/or overhaul pneumatic power system	3.1. System or sub-assembly is isolated safely and residue pressure is discharged in accordance with prescribed procedures or checked for correct isolation. 3.2. Isolated system or sub-assembly is tagged according to designated means. 3.3. Component or sub-assembly is removed from system using correct removal principles and techniques. 3.4. Components or sub-assemblies are dismantled, examined and verified for replacement, overhaul or repair, using correct and appropriate techniques and procedures. 3.5. Replacement items are selected from manufacturers' catalogues to meet specifications 3.6. Faulty items are repaired/replaced/overhauled, using

ELEMENT	PERFORMANCE CRITERIA
	<p>correct and appropriate principles, techniques and procedures.</p> <p>3.7. Component or sub-assembly items are refitted to equipment and tested for correct operation assessed against specifications.</p>
4. Recommission pneumatic system	<p>4.1. System or sub-assembly is recommissioned according to prescribed procedures and specifications.</p> <p>4.2. Using fluid power principles and system application techniques, correct operation of the system is verified.</p> <p>4.3. Appropriate follow-up procedures are instigated.</p> <p>4.4. Maintenance records/service reports are updated and completed by appropriate designated means.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing pneumatic system components for inspection/preventative maintenance
- inspecting and testing pneumatic system and components
- performing scheduled preventative maintenance tasks
- performing repairs on the pneumatic system/components as required
- visually inspecting pneumatic system and its components for indications of correct/incorrect operation
- consulting system operator with respect to the fault being investigated
- obtaining and interpreting maintenance reports and preventative maintenance schedules
- checking/testing pneumatic system/component operation
- verifying/confirming apparent faults/malfunctions
- documenting or reporting verified faults/malfunctions
- initiating repair/overhaul of the pneumatic system
- isolating and depressurising pneumatic system
- checking pneumatic system to ensure isolation and depressurisation
- tagging isolated pneumatic system

REQUIRED SKILLS AND KNOWLEDGE

- removing pneumatic components/sub-assembly from the system
- dismantling pneumatic components/sub-assemblies
- examining pneumatic components/sub-assemblies and their parts for conformance to specification
- selecting replacement parts selected from manufacturers' catalogues
- overhauling faulty items
- refitting pneumatic component/sub-assembly into the system
- testing pneumatic component/sub-assembly for correct operation
- recommissioning pneumatic system/sub-assembly to specification
- checking/testing pneumatic system/sub-assembly for correct operation
- initiating follow-up procedures
- updating and completing maintenance records/reports

Required knowledge

Look for evidence that confirms knowledge of:

- common pneumatic system components
- pneumatic system/component faults that can be determined by visual inspection
- the application of common pneumatic system/component test equipment
- scheduled preventative maintenance tasks
- manufacturers' specifications
- common pneumatic system and component faults
- any previous faults in the pneumatic system/components
- any previous maintenance carried out on the pneumatic system/components
- typical checks/tests that can be carried out on pneumatic systems/components and their application
- pneumatic system/component tests and testing techniques
- apparent faults/malfunctions
- documentation/reporting requirements with respect to verified faults/malfunctions
- procedures for initiating repair and/or overhaul of the pneumatic system
- hazards associated with working on pneumatic systems/components, including housekeeping
- the procedures for isolating and depressurising pneumatic systems
- the tagging requirements for isolated systems
- the structure of typical pneumatic components
- specifications of pneumatic components and their constituent parts
- reasons for deciding to repair, replace or overhaul pneumatic components
- system recommissioning procedures
- the pneumatic system operational specifications
- any appropriate follow-up maintenance or operational checks
- maintenance recording/reporting requirements

REQUIRED SKILLS AND KNOWLEDGE

- consequences of inaccurate or incomplete recording/reporting of maintenance/service activities
- pneumatic principles
- safe work practices and procedures

Faulty system components are dismantled and rectified to manufacturers'/site specifications. 2.3. Replacement parts are selected from manufacturers' catalogues according to required specifications. 2.4. System components are reassembled and tested for correct operation and assessment against specifications. 2.5. Correct operation of the hydraulic system is confirmed to designated operating procedure. 2.6. Appropriate follow-up procedures are adopted according to standard operating procedures. 2.7. Where appropriate, service reports are completed using standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- inspecting a range of hydraulic system components in accordance with standard operating procedures
- reading, interpreting and following relevant data sheets, specifications, hydraulic circuits, drawings, instructions and manuals

REQUIRED SKILLS AND KNOWLEDGE

- checking the individual components within the hydraulic system for correct operation
- dismantling and rectifying faulty system components to manufacturers'/site specifications in accordance with standard operating procedures
- where appropriate, selecting replacement parts from the manufacturers'/suppliers' catalogues
- reassembling and testing the hydraulic system components
- checking the operation of the hydraulic system for conformance to specification
- checking repaired/replaced hydraulic system components for correct operation
- completing service reports where appropriate

Required knowledge

Look for evidence that confirms knowledge of:

- the full range of hydraulic system components
- characteristics and operational function of each hydraulic system component
- procedures for inspecting and testing hydraulic system components
- equipment required to test hydraulic system components
- specifications of each hydraulic system component
- hydraulic components not operating in accordance with specifications
- reasons for hydraulic components not operating in accordance with specification
- individual components within the hydraulic system
- safety procedures to be followed when working on hydraulic components
- where appropriate, faulty system components
- procedure for repairing hydraulic system components
- parts to be replaced
- reasons for replacing the parts identified
- the correct operation of the hydraulic system
- procedures for checking hydraulic system operation
- where appropriate, the follow-up procedures with respect to repaired/replaced hydraulic system components
- reporting/recording procedures
- reasons for completing service reports for hydraulic system components repaired/replaced
- hazards associated with maintaining hydraulic system components, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to maintain hydraulic system components. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with maintaining hydraulic system components or other units requiring the exercise of the skills and knowledge covered by this unit.

Method of assessment

Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Undertake preventative maintenance checks/adjustments on hydraulic systems</p>	<p>1.1. System components, assemblies or sub-assemblies are identified and prepared for inspection/preventative maintenance.</p> <p>1.2. Visual inspection and testing with appropriate test equipment are carried out according to fluid power principles, procedures and safety requirements.</p> <p>1.3. Scheduled preventive maintenance tasks are performed including obvious repairs and adjustments according to manufacturers' specifications using fluid power techniques/practices.</p>
<p>2. Undertake fault finding on hydraulic systems</p>	<p>2.1. Designated hydraulic system components are identified and a visual inspection of the system is carried out for the collection of fault finding data.</p> <p>2.2. System operator is consulted where appropriate and additional data is collected.</p> <p>2.3. Maintenance reports and preventative maintenance schedules are checked and reviewed for additional fault finding data.</p> <p>2.4. Using fluid power principles, checks and tests are undertaken using appropriate test equipment and techniques.</p> <p>2.5. Faults and malfunctions are identified and verified.</p> <p>2.6. Faults and malfunctions are documented or reported by appropriate means to designated personnel and actioned.</p>
<p>3. Repair and/or rectify hydraulic system</p>	<p>3.1. System or sub-assembly is isolated safely and residue pressure is discharged in accordance with prescribed procedure and checked for correct isolation.</p> <p>3.2. Isolated system or sub-assembly is tagged according to designated means.</p> <p>3.3. Components or sub-assembly is removed from system using correct removal principles and techniques.</p> <p>3.4. Components or sub-assemblies are dismantled, examined and verified for replacement, overhaul or repair, using correct and appropriate techniques and procedures.</p> <p>3.5. Replacement items are selected from manufacturers' catalogues to meet specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.6. Faulty items are rectified using correct and appropriate principles, techniques and procedures. 3.7. Component or sub-assembly items are refitted to equipment and tested for correct operation against specifications.
4. Recommission hydraulic system	4.1. System or sub-assembly is recommissioned according to prescribed procedures and specifications. 4.2. Using fluid power principles and system applications techniques, correct operation of the system is verified. 4.3. Appropriate follow-up procedures are instigated. 4.4. Maintenance records/service reports are updated and completed by appropriate designated means.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing hydraulic system components for inspection/preventative maintenance
- inspecting and testing the hydraulic system/components
- planning and sequencing operations
- performing scheduled preventative maintenance tasks
- where appropriate, performing obvious repairs on the hydraulic system/components
- visually inspect the hydraulic system and its components for indications of correct/incorrect operation
- where appropriate, consulting with the system operator with respect to the fault being investigated
- obtaining and interpreting maintenance reports and preventative maintenance schedules
- using appropriate test equipment and techniques to check/test hydraulic system/component operation
- verifying apparent faults/malfunctions
- documenting or reporting all verified faults/malfunctions

REQUIRED SKILLS AND KNOWLEDGE

- initiating the repair/overhaul of the hydraulic system
- isolating and depressurising the hydraulic system
- tagging the isolated hydraulic system
- removing the hydraulic components/sub-assembly from the system
- dismantling the hydraulic components/sub-assemblies
- examining the hydraulic components/sub-assemblies and their parts for conformance to specification
- selecting replacement parts from manufacturers' catalogues in compliance with specifications
- repairing/replacing/overhauling faulty items
- refitting the hydraulic component/sub-assembly into the system
- testing the hydraulic component/sub-assembly for correct operation and compliance with specifications
- recommissioning the hydraulic system/sub-assembly to specification
- checking/testing the hydraulic system/sub-assembly for correct operation
- where appropriate, initiating follow-up procedures
- updating and completing all maintenance records/reports

Required knowledge

Look for evidence that confirms knowledge of:

- common hydraulic system components
- hydraulic system/component faults that can be determined by visual inspection
- the application of common hydraulic system/component test equipment
- schedule of preventative maintenance tasks
- the manufacturers' specifications
- common hydraulic system and component faults
- any previous faults in the hydraulic system/components
- any previous maintenance carried out on the hydraulic system/components
- typical checks/tests that can be carried out on hydraulic systems/components and their application
- hydraulic system/component test and testing techniques
- apparent faults/malfunctions
- the documentation/reporting requirements with respect to verified faults/malfunctions
- the procedures for initiating repair/replacement and/or overhaul of the hydraulic system
- the hazards and control measures associated with working on hydraulic systems/components, including housekeeping
- the procedures for isolating and depressurising hydraulic systems
- tagging requirements for isolated systems
- the structure of typical hydraulic components

REQUIRED SKILLS AND KNOWLEDGE

- the specifications of hydraulic components and their constituent parts
- the appropriate repair/overhaul procedures
- system recommissioning procedures
- the hydraulic system operational specifications
- any appropriate follow-up maintenance or operational checks
- the maintenance recording/reporting requirements
- the consequences of inaccurate or incomplete recording/reporting of maintenance/service activities
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to maintain hydraulic systems. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with maintaining and repairing hydraulic systems or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

EVIDENCE GUIDE

Guidance information for assessment	
--	--

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Preventative maintenance

Preventative maintenance is undertaken on a periodic basis and appropriate documentation is maintained

Systems

For the purposes of this unit a system is regarded as a functionally related group of elements. The unit extends to tests involving interacting, interrelated, or interdependent components

Test equipment

Leak testers, escape rate gauges, hand held pressure testers and other appropriate equipment

Rectify

Replacement, repair and/or reuse of components

Unit Sector(s)

Unit sector	
--------------------	--

Co-requisite units

Co-requisite units	
---------------------------	--

Co-requisite units		

Competency field

Competency field	Maintenance and diagnostics
-------------------------	-----------------------------

MEM18022B Maintain fluid power controls

Modification History

Single band identifier removed to clarify dual status

Unit Descriptor

Unit descriptor	This unit covers installing and repairing and/or rectifying fluid power controls, and adjusting fluid power system control sequence and operation.
------------------------	--

Application of the Unit

Application of the unit	<p>It also covers fault finding of fluid power systems control circuits, maintaining and repairing or replacing system control components and checking and adjusting the sequence of fluid power system controls. System circuit/components are identified, traced, inspected and operational function is assessed and verified using fluid power principles to predetermined specifications interpreted from data sheets and circuit diagrams.</p> <p>Work is undertaken using predetermined standards of quality, safety and work procedures, autonomously or in a team environment.</p> <p>Installation, adjustment, repairs, replacements and overhauls are undertaken to site or manufacturers' specifications using working knowledge and application of principles of fluid power systems control sequencing which may include: PLCs, relay logic control systems, unitised/modular sensors, transducers, timers, counters and associated equipment.</p> <p>If skills beyond the sequencing of PLC controls are required, then Units MEM10004B (Enter and change programmable controller operational parameters) and/or Unit MEM10005B (Commission programmable controller programs) should also be accessed.</p> <p>Band:</p> <p>This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V).</p> <p>Unit Weight: 8</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Install/replace fluid power systems and controls	1.1.Fluid power control principles and system/circuit diagrams are interpreted and understood. 1.2.System/circuit components are identified and inspected for compliance with specifications. 1.3.Sequential installation is undertaken according to manufacturers' specifications and standard operating procedures.
2. Check and adjust fluid power system control sequence and operation	2.1.Controls and system operation is checked against operational specifications using appropriate test equipment and application principles/techniques. 2.2.Adjustments are performed to sequence system to meet/align to operational requirements and specifications. 2.3.Modifications/alterations are recorded and reported in accordance with standard operating procedures. 2.4.Controls and system operation is checked and commissioned to specifications.
3. Fault find fluid power systems control circuit	3.1.System/circuit diagrams and data sheets are interpreted and understood. 3.2.System/circuit components are identified and inspected. 3.3.System/circuit is traced and action of components is diagnosed to identify and localise faults. 3.4.System/circuit parts are tested using appropriate test equipment and application principles. 3.5.System/circuit parts are assessed against operational specifications. 3.6.Fault condition is localised at the component level. 3.7.Faulty condition is evaluated, root cause is analysed and corrective action is planned.
4. Maintain and repair or rectify system control components	4.1.Correct maintenance procedures are applied according to standard operating procedures. 4.2.Repair procedures are selected and applied using correct and appropriate techniques, tools and equipment. 4.3.Faulty items are tested, repaired or replaced using sequential installation procedures according to manufacturers' recommendations. 4.4.Replacement items are selected from manufacturers' catalogues to meet specifications.

ELEMENT	PERFORMANCE CRITERIA
	4.5. System control components are reassembled using appropriate principles and procedures according to specifications required.
5. Check and adjust sequence of fluid power system controls	5.1. Using circuit diagrams and fluid power system control principles, circuit sensors and controllers are identified. 5.2. Necessary adjustments to sequence system control circuit are made to meet operational specification. 5.3. Correct operation of system control circuit is checked against operational specification. 5.4. Correct operation is confirmed. 5.5. Fluid power system controls are commissioned to specifications. 5.6. Appropriate follow-up procedures are adopted. 5.7. Service/maintenance report is completed to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining and interpreting system/circuit diagrams, system operation data sheets and control data
- planning and sequencing operations
- checking/inspecting system/circuit components for compliance with specifications
- undertaking installation of the fluid power system and controls in accordance with manufacturers' specifications and work site procedures
- using test equipment to check control and system operation against specification
- adjusting the system where appropriate, to ensure that the sequence of operations conforms to operational requirements
- recording/reporting any modifications/alterations to the system
- checking the operation of the controls and system for conformance to specification
- commissioning the system in accordance with work site procedures
- identifying and localising components not conforming to operational specification
- conducting appropriate maintenance in accordance with work site procedures

REQUIRED SKILLS AND KNOWLEDGE

- repairing control components where appropriate
- testing faulty items for conformance to specification
- installing repaired/replaced components
- selecting replacement items from manufacturers' catalogues
- reassembling control components
- initiating maintenance and/or service follow-up procedures
- completing maintenance and/or service reports

Required knowledge

Look for evidence that confirms knowledge of:

- system operational and control requirements and specifications
- the application of common fluid power system components and controllers
- the system/circuit components
- any special installation requirements
- fluid power test equipment and application
- the correct operational sequence of the system
- typical adjustments to correct sequencing variations from specification
- the consequences of not recording/reporting modifications to systems
- the procedures for recording/reporting modifications/alterations
- the fluid power system commissioning procedures
- common test equipment and its application
- the component(s) not complying with operational specification
- typical causes of component failure
- the cause of the faulty condition in the component(s)
- appropriate procedures for rectifying the faulty condition
- the appropriate maintenance schedule and procedures
- appropriate control component repair procedures
- typical test equipment and its application
- circuit sensors and controllers
- common adjustments that can be made to control systems and their effect
- any maintenance/service follow-up procedures
- the maintenance/service recording/reporting requirements
- hazards and control measures associated with maintaining and rectifying fluid power controls, including housekeeping
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine modification requirements	1.1. Service/maintenance reports and system output information is interpreted and analysed correctly. 1.2. Using knowledge and principles of fluid power systems, defective components, sub-assemblies and design faults are identified. 1.3. Defective components and design faults are verified using appropriate means and techniques. 1.4. Corrective action plan is researched and developed in consultation with appropriate personnel. 1.5. Modification/design options are investigated to overcome parts failure or design faults. 1.6. Most appropriate modifications design option is developed, selected and specifications are prepared.
2. Undertake modifications to fluid power systems	2.1. Replacement components are selected from manufacturers catalogue to meet specifications. 2.2. Modifications are undertaken or delegated to appropriate personnel and supervised. 2.3. Modifications are recorded and documented according to standard operating procedures.
3. Monitor and evaluate repaired or modified fluid power system	3.1. Modified/repaired fluid power systems are monitored and operation system is assessed for compliance with operational specifications. 3.2. Modifications/repairs are evaluated for effectiveness, efficiency and compliance with operational specifications. 3.3. Where applicable, further corrective action is recommended to appropriate personnel, instigated and monitored until desired efficiencies/outcomes are achieved. 3.4. Evaluation reports are completed to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE**Required skills**

Look for evidence that confirms skills in:

- obtaining, interpreting and analysing service/maintenance reports and system output information
- planning and sequencing operations
- checking and testing components/sub-assemblies for conformance to specification
- confirming design faults
- obtaining relevant information with respect to the modification requirements
- developing an appropriate action plan to overcome system problems
- undertaking modifications to fluid power systems where appropriate
- delegating work to appropriate personnel where appropriate and supervising work
- recording/reporting modifications to the fluid power system
- checking the operation of the modified/repared fluid power system for compliance with operational specifications
- initiating and monitoring further corrective action, where applicable
- confirming that desired outcomes are achieved
- preparing evaluation reports on the modifications/repairs

Required knowledge

Look for evidence that confirms knowledge of:

- fluid power system performance, faults history and variations from operational specification
- faults attributable to poor design
- defective components/sub-assemblies
- appropriate test equipment and applications
- techniques for verifying design faults
- personnel to be consulted during the modification process
- sources of information relevant to the modification requirements
- the specifications pertaining to the selected modification/design option
- the modification/design options available to overcome system faults
- the cost and benefits associated with the available options
- the most appropriate modification/design option
- the procedures for undertaking the selected modification/design option
- replacement components conforming to predetermined specifications from manufacturer's catalogues
- the modifications to be undertaken
- the requirements for recording/reporting modifications to fluid power systems
- the revised operational specification of the fluid power system
- the frequency of checks for compliance against operational specifications

REQUIRED SKILLS AND KNOWLEDGE

- the effectiveness and efficiency of the modifications/repairs
- any variations from operational specifications
- any further modifications/repairs that could improve the effectiveness and efficiency of the fluid power system
- personnel to whom recommendations are to be made
- the appropriate reporting requirements
- hazards and control measures associated with modifying fluid power system operation, including housekeeping
- safe work practices and procedures

MEM18024B Maintain engine cooling systems

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers assessing cooling system operation, and repairing or replacing faulty components.
------------------------	--

Application of the Unit

Application of the unit	<p>Cooling system testing would typically require the person to obtain air and/or water flows, temperatures and pressures; assess serviceability; and repair a range of flow/pressure regulators, sensors, actuators and solenoids on shutter type systems or fan drives, or on water type inter/after coolers and oil coolers.</p> <p>Typical symptoms of faults would be coolant pressures and the presence of steam, gases, oil, fuel or air. This unit would typically apply to engine or vehicle cooling systems. On large stationary plant, cooling systems may include the use of cooling towers.</p> <p>All is work undertaken to manufacturers specifications and standard operating procedures.</p> <p>Band: A</p> <p>Unit Weight: 2</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess cooling system operation	1.1.Heat transfer characteristics, water treatment, and corrosion principles and terminology are understood. 1.2.Relevant information is obtained and correctly interpreted prior to any testing. 1.3.System checks are undertaken safely and to prescribed procedures. 1.4.Water/air flows, pressures and temperatures are correctly determined and recorded. 1.5.Faults are correctly isolated to component level and appropriate corrective action is determined. 1.6.Test equipment is adapted and used correctly. 1.7.Coolant test samples are correctly obtained and tested. 1.8.Component parts are correctly assessed for reuse or replacement.
2. Rectify faulty components	2.1.Component wear and clearances are correctly determined using appropriate test equipment and manufacturers' recommendations. 2.2.Replacement components are correctly selected for application using manufacturers' data. 2.3.Components are removed and refitted to engine by following prescribed procedures. 2.4.Test and repair/replacement activities are accurately recorded. 2.5.Engine is free of coolant leaks and the cooling system contains the correct level of additive/inhibitor after repair work is carried out.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions,

REQUIRED SKILLS AND KNOWLEDGE

- specifications, standard operating procedures, charts, lists, drawings and other applicable documents
- planning and sequencing operations
 - checking and clarifying task-related information
 - checking the cooling system safely and in accordance with standard operating procedures
 - accurately measuring and recording water/air flows, pressures and temperatures of the cooling system
 - identifying faulty component(s)
 - adapting test equipment for use on the cooling system being tested
 - obtaining and interpreting coolant test samples
 - checking cooling system components for wear and clearances using appropriate equipment
 - testing coolant condition including anti-corrosion, anti-freezes etc.
 - interpreting relevant specifications, parts lists, catalogues etc.
 - obtaining replacement parts
 - removing and refitting cooling system components
 - undertaking test and repair/replacement activities on the cooling system
 - testing the engine for coolant leaks after repair
 - checking for conformance to specifications
 - undertaking calculations and numerical operations within the scope of this unit
 - reporting and documenting task related information

Required knowledge

Look for evidence that confirms knowledge of:

- the principles of heat transfer as applied to cooling systems
- the effect of water treatment and corrosion on the effectiveness of cooling system operation
- the components of the cooling system and their function
- the checks and procedures to be carried out on cooling systems
- hazards and control measures associated with testing cooling systems, including housekeeping
- the procedures for measuring water/air flows, pressures and temperatures in cooling systems
- the necessary tools, techniques and equipment to carry out the above tests
- variations of test results from specifications and the likely causes of those variations
- the appropriate corrective action to be taken when variations are identified
- the precautions to be taken when adapting test equipment
- the procedures, tools, techniques and equipment for testing coolant test samples
- the reasons for identifying faulty components for repair or replacement

REQUIRED SKILLS AND KNOWLEDGE

- the procedures for testing components for wear and clearances and the appropriate measuring/test equipment
- the procedures for obtaining replacement parts
- the procedures for removing/replacing cooling system components from the engine
- the procedures for checking coolant levels and engine coolant leaks
- the correct amount of additive/inhibitor to be added to the coolant
- the procedures for recording test and rectification
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to maintain and rectify engine cooling systems. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with maintaining and rectifying engine cooling systems, or other units requiring the exercise of the skills and knowledge covered by this unit.

Method of assessment

Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Tested	Includes testing for coolant condition i.e. correct, anti-corrosion, antifreezes etc.
Component	Sensors, caps, gauges, pumps, fan drive belts etc.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Check and assess items for serviceability	1.1.Engine consumable fluids and components are correctly assessed for condition. 1.2.Replacement fluids/items are correctly identified using manufacturers' data. 1.3.Abnormal appearance/condition of engine consumables fluids and components is identified and reported to appropriate authority. 1.4.Lubricant, cooling system additives and filtering principles are understood.
2. Perform servicing procedures	2.1.Engine fluids are drained, flushed and replaced with correct fluid and/or additives, and to the correct level/concentration according to manufacturers' recommendations. 2.2.Engine consumable components are removed and replaced according to manufacturers' recommended procedures. 2.3.Engine is free of lubricant, water and air leaks after servicing work. 2.4.Hoses, wiring, ducts etc. are correctly secured and clear of moving parts after servicing work. 2.5.Minor running adjustments are made to specification. 2.6.Test samples of fluids are correctly obtained from system as determined by standard operating procedures.
3. Report activities	3.1.Servicing activities are accurately recorded on report sheet/proforma, or accurate oral report is given.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions,

REQUIRED SKILLS AND KNOWLEDGE

- specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- checking items removed from the engine for serviceability and conformance to specifications
 - planning and sequencing operations
 - checking task-related information
 - identifying and reporting on fluids and items which have abnormal appearance
 - flushing engine fluids from the engine and cleaning the engine of any residual fluids
 - replacing engine fluids with the correct fluids to the correct levels
 - removing and replacing engine consumable fluids and components
 - checking the engine for lubricant, water and air leaks after servicing
 - securing wires, hoses and ducts after servicing
 - making minor running adjustments
 - obtaining test samples
 - undertaking calculations and numerical operations within the scope of this unit
 - recording and reporting service activities

Required knowledge

Look for evidence that confirms knowledge of:

- common defects that can be identified from the appearance of fluids and items
- the procedures for reporting items/fluids with abnormal appearance
- the principles of operation of the lubrication and cooling systems
- the function of filters
- the purpose of a range of additives
- the procedures for draining and flushing fluids from the engine including the reasons for ensuring any residual/spilt fluids are removed from the engine
- the appropriate grade and type of replacement fluid
- the procedures for replacing engine fluids
- the correct proportions of additive to be used
- the procedures for removing/replacing engine consumable fluids and components
- the procedures for checking serviced engines for leaks
- the methods of fastening/securing wires, hoses, ducts, etc.
- the procedures for undertaking minor running adjustments
- the specifications pertaining to those adjustments
- the procedures for taking test samples
- the procedures for reporting service activities
- hazards and control measures associated with servicing combustion engines
- safe work practices and procedures

Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Engine consumable fluids and components	These include components and fluids that are designed to be replaced or restored as their effectiveness diminishes, or where they are wearing/failing. Typically they would include filters, coolants, lubricants, hydraulic and other fluids, additives etc, simple drive belts and coolant hoses
Running adjustments	These are limited to straightforward adjustments typical of which are belt tensions, shroud clearances, linkage adjustments, etc.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess fuel system operation	1.1. Fuel injection principles and component part functions/operation are understood. 1.2. Plant/equipment is started, operated and shut down to prescribed procedures. 1.3. Checks are undertaken safely and to prescribed procedures. 1.4. Flows, pressures and speeds are correctly determined and recorded. 1.5. Plant operating characteristics and parameters are understood. 1.6. Data is correctly interpreted regarding serviceability. 1.7. Faults are correctly interpreted regarding serviceability. 1.8. Governing characteristics and terminology are understood. 1.9. Test equipment is used correctly.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents • planning and sequencing operations • checking task-related information • checking for conformance to specification • starting/operating and shutting down diesel plant/equipment • conducting operational checks of the diesel fuel system • determining and recording fuel flows, pressures and engine speed • determining the serviceability of the fuel system from the test results and plant operating characteristics and parameters • using test equipment

REQUIRED SKILLS AND KNOWLEDGE

- undertaking calculations and numerical operations within the scope of this unit
- recording and reporting service activities

Required knowledge

Look for evidence that confirms knowledge of:

- the principles of fuel injection
- the function/operation of each component in a fuel injection system
- the procedures for starting up, operating and shutting down diesel plant and equipment
- the operational checks to be made on the diesel fuel system and procedures for carrying out checks
- the methods of determining flows, pressures and speeds and the tools, techniques and equipment to be used
- the procedures for carrying out and recording the above tests
- the plant operating characteristics and parameters
- the reasons for the decisions made with respect to serviceability
- likely faults and causes for unserviceable systems
- the principles of governing and the function of the governor on the given plant/equipment
- hazards and control measures associate with testing compression ignition fuel systems, including housekeeping
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Clean and assess parts	1.1.Components are disassembled according to manufacturers' recommendations. 1.2.Specialised tools are used correctly. 1.3.Parts are assessed visually for abnormal wear or defects. 1.4.Characteristics of surface finishes and wear patterns associated with pumps/governors/injectors are understood. 1.5.Appropriate cleaning method/solution and procedures are selected. 1.6.Parts are correctly protected and stored ready for reassembly. 1.7.Parts are made identifiable according to their original location in the pump/injector and protected and stored as required for reassembly.
2. Record and interpret measurements	2.1.Measurements are accurately obtained and recorded. 2.2.Measurements and part condition is correctly interpreted when determining reuse/replacement.
3. Recondition and set up equipment	3.1.Fuel system and governing functions, characteristics, applications and terminology are understood. 3.2.Components identified as faulty are reconditioned and replaced. 3.3.Components are assembled according to manufacturers' specifications. 3.4.Test equipment is used correctly. 3.5.Components are tested and set to specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other

REQUIRED SKILLS AND KNOWLEDGE

- applicable reference documents
- planning and sequencing operations
- checking task-related information
- dismantling the engine fuel system components
- using specialised tools and test equipment
- visually checking parts for abnormal wear or defects
- storing fuel system parts
- identifying parts according to their original location in the pump/injector
- identifying parts to be reused/replaced
- measuring fuel system components
- recording measurements
- obtaining specifications, parts lists, etc. of fuel system components
- replacing, reconditioning and assembling faulty components
- testing and setting to specification fuel system components
- undertaking calculations and numerical operations within the scope of this unit
- checking for conformance to specification

Required knowledge

Look for evidence that confirms knowledge of:

- the sequence for disassembling engine fuel components
- specialised tools required and their application
- common defects, examples and causes of abnormal wear
- the characteristics of surface finishes and wear patterns for fuel system components
- the method of cleaning fuel system components
- the appropriate solvents for cleaning fuel systems
- the procedures for cleaning, protecting and storing fuel system components
- the procedures for marking fuel system components in readiness for reassembly
- the measuring instruments to be used to measure fuel system components and reasons for selecting the chosen measuring instruments
- the procedures for recording fuel system component measurements
- the principles of operation of diesel fuel systems
- the procedures for reconditioning and/or replacing faulty fuel system components
- the procedures for assembling and testing fuel system components
- the specifications of the fuel system components
- the tools, techniques and equipment required to carry out fuel system component tests
- the procedures for setting fuel system components
- hazards and control measures associate with overhauling engine fuel system components, including housekeeping
- safe work practices and procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess lubrication system operation	1.1.Relevant information is obtained and correctly interpreted prior to any testing. 1.2.Checks are undertaken safely and to prescribed procedures. 1.3.Flows, pressures and temperatures are correctly determined and recorded. 1.4.Faults are correctly isolated to component level and appropriate corrective action is determined. 1.5.Lubricant fluid characteristics, terminology and applications are understood. 1.6.Test equipment is used correctly. 1.7.Results of spectrographic or laboratory analysis are correctly evaluated and recommendations are made regarding adjustments to future maintenance activities. 1.8.Auxiliary lubrication systems are assessed for correct operation.
2. Rectify faulty components	2.1.Replacement components are correctly selected using manufacturers' data. 2.2.Components are removed and refitted to engine by following prescribed procedures. 2.3.Final adjustments are made that bring system in line with specifications. 2.4.Test and rectification activities are accurately recorded. 2.5.Engine is free of lubricant leaks after repair work is carried out. 2.6.Component wear and clearances are correctly determined using appropriate test equipment and manufacturers' recommendations.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking task-related information
- checking for conformance to specification
- checking the lubrication system
- determining and recording oil flows, pressures and temperatures
- identifying faulty components
- using test equipment
- obtaining/interpreting the results of lubricating oil tests
- checking auxiliary lubrication systems for correct operation where appropriate
- selecting replacement components
- removing, refitting and adjusting lubrication system components
- reporting and recording test and work activities
- checking lubrication system components for wear and clearance
- undertaking calculations and numerical operations within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- the operation of the lubrication system
- the procedures for testing/checking lubrication
- hazards and control measures associated with checking and rectifying lubrication systems, including housekeeping
- the tests to be undertaken and equipment and techniques to be used to determine oil flows, pressures and temperatures
- the procedures for recording lubrication system test results
- the specifications of the lubrication system components
- the appropriate corrective action for faulty components
- the characteristics of lubricants and application of a variety of lubricants
- the procedures and reasons for analysing lubricating oil samples
- the likely causes of a range of out of specification test results
- the appropriate corrective action to be taken
- the implications of out of specification test results on maintenance schedules and requirements
- the reasons for installing auxiliary lubrication systems on diesel plant and equipment
- the operation of the auxiliary lubrication system
- the procedures for removing/replacing lubrication system components

REQUIRED SKILLS AND KNOWLEDGE

- the procedures for adjusting lubrication systems
- the procedures for recording test and repair activities
- the procedures for checking lubrication systems for leaks
- the measuring equipment/techniques used to determine lubrication system component wear and clearances
- safe work practices and procedures

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Faults

Typical symptoms of faults would be lubrication pressures/temperatures that are too low/high; excessive or too little consumption/flow, etc.

Test equipment

Pressure/temperature and/or flow meters

Adjustments

May include setting of bypass/regulating/relief valves to specified pressures of flows

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Compression test engine	1.1.Injectors are removed and fuel system for each cylinder is isolated correctly. 1.2.Appropriate adaptors are selected and fitted. 1.3.Readings obtained are accurately recorded and interpreted. 1.4.Compression readings are corrected for adaptor used.
2. Perform tune up	2.1.If applicable, firing pressures are accurately determined and adjusted to specification. 2.2.Engine is started, operated, loaded, and shut down safely. 2.3.Test equipment is correctly applied. 2.4.Air restriction, boost, back pressure and flow tests are performed according to manufacturers' recommendations. 2.5.Readings are recorded and variances from specifications are correctly determined. 2.6.Density of exhaust smoke is correctly determined. 2.7.Valve clearance and/or timing is correctly adjusted. 2.8.Injection pump or injector timing is adjusted to specification. 2.9.Governor rack travel, torque spring load limit, overspeed trips, aneroid or fuel ratio control is adjusted to specification. 2.10. Injector opening pressure is correctly determined and adjusted.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other

REQUIRED SKILLS AND KNOWLEDGE

- applicable documents
- planning and sequencing operations
 - checking and clarifying task-related information
 - removing injectors from each cylinder and isolating the fuel system
 - fitting appropriate adaptors to the cylinders
 - obtaining and recording compression readings and correcting readings for the adaptor used
 - where appropriate, adjusting firing pressures
 - starting, operating, loading and shutting down the engine safely in accordance with standard operating procedures
 - using test equipment
 - selecting and conducting appropriate tests
 - recording test readings
 - identifying variations from specifications of any test result
 - determining the density of exhaust smoke
 - adjusting valve clearance and/or timing
 - adjusting injector pump or injector timing to specification
 - adjusting the governor rack travel, torque spring load limit, overspeed trips, aneroid or fuel ratio control to specification
 - adjusting the injector opening pressure to specification

Required knowledge

Look for evidence that confirms knowledge of:

- the procedures for removing injectors from cylinders and reasons for isolating the fuel system
- appropriate adaptors and reasons for using adaptors
- the procedures for fitting adaptors to the cylinders
- the procedures for compression testing diesel engines
- the procedures for recording compression readings
- the procedures for comparing the compression readings with specifications and identifying any deviations
- the likely causes of any detected deviations from specification
- the corrections required for compression readings to take account of the adaptor used
- the procedures for adjusting firing pressures
- the procedures for starting, operating, loading and shutting down diesel engines
- hazards and control measures associated with starting, operating, loading and shutting down diesel engines, including housekeeping
- the test equipment and procedures to be used in the tuning of diesel engines
- the manufacturer's recommended tests and reasons for conducting the tests
- the procedures for recording test results

REQUIRED SKILLS AND KNOWLEDGE

- the procedures, equipment and techniques for determining exhaust smoke density
- the procedures for adjusting valve clearances and/or timing
- the procedures for adjusting injector pump and injector timing
- the timing and pressures to be achieved
- the procedures for adjusting the governor rack travel, torque spring load limit, overspeed trips, aneroid or fuel ratio control
- the governor specifications
- the procedures for adjusting injector opening pressure
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to tune diesel engines. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with tuning diesel engines, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
