| | | 1.2 | Identify stakeholders to be consulted on evaluation |
| | | 1.3 | Identify software requirements used in the robotic applications |
| | | 1.4 | Identify relevant compliance requirements of work health and safety (WHS) and regulatory requirements, codes of practice, standards and risk assessment requirements for robotic applications with particular emphasis on automation safety |
| | | 1.5 | Ensure appropriate support, including licensed electrical, technical and professional assistance, is available |
| | | 1.6 | Investigate sustainability implications of robotic applications |
| 2 | Confirm existing features of robotics applications | 2.1 | Review features and functions of robotic applications and classify industrial robotic devices |
| | | 2.2 | Review robots and robotic elements |
| | | 2.3 | Identify robotic principles and techniques required to evaluate and optimise the processes |
| | | 2.4 | Identify appropriate analysis techniques, software and software validation techniques |

- 3 Evaluate robotic applications
 - 3.1 Assess robotic hardware, sensors/transducers, signal conditioning, controllers, power interfaces, actuators and interface with the end effectors
 - 3.2 Assess motion analysis, load capability, accuracy, precision and repeatability
 - 3.3 Assess system integration, networks, data sharing, control and human machine interfaces
 - 3.4 Assess software and programming techniques for controllers, distributed control system (DCS), system control and data acquisition (SCADA) and system simulation
 - 3.5 Assess compliance of robot and system with WHS and regulatory requirements, codes of practice, standards and risk management requirements
 - 3.6 Apply mock-up and prototyping techniques for robot and subsystem testing
 - 3.7 Assess sustainability implications of robotic application
- 4 Report results
 - 4.1 Record results of evaluation
 - 4.2 Provide documentation, such as calculations, specifications, diagrams, computer programs and files, and mock-ups or prototypes

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying, reviewing and classifying features and functions of robotic applications and robotic devices, including relevant robotic principles and techniques, analysis techniques and software
- ensuring safe electrical working practice, including use of licensed personnel, where required
- identifying WHS and regulatory requirements, and risk management compliance with particular emphasis on automation safety
- investigating sustainability implications of robotic applications
- determining safety, condition, efficiency and functionality of robotics and associated applications, including:
 - controller functions and programming
 - network and system interfacing
 - compliance with WHS and regulatory requirements
 - automation safety
 - robotic hardware
 - sensors/transducers
 - signal conditioning
 - controllers
 - power interfaces
 - actuators and end effectors
- evaluating robotic motion, including:
 - load capability
 - accuracy
 - repeatability
 - efficiency
- determining efficiency and effectiveness of robotic interfacing, including:
 - system integration and networks
 - data sharing
 - control and human machine interfaces
 - software and programming
 - SCADA or DCS and system simulation
- applying mock-up, prototyping and virtual techniques for robot and subsystem testing
- reporting and documenting results of evaluation, including calculations, specifications,

diagrams, computer programs and files, and mock-ups or prototypes

Required knowledge

Required knowledge includes:

- compliance requirements of WHS and regulatory requirements, codes of practice, standards and risk management requirements for robotic applications
- classifications and applications of industrial robotic devices or systems
- features, mechanisms and components of robots
- advantages and disadvantages of different types of actuators for engineering applications
- types of actuator power interfaces
- end effectors and their applications
- robot sensors, such as:
 - contact, proximity and interrupted beam
 - distance sensing
 - pressure and temperature
 - relative and absolute encoders
 - vision and smart cameras
- sensor interface/transducer signal conditioning techniques and analog to digital converter (ADC)
- online and offline programming methods
- mechanical, fluid power, electrical, electronic, programming, communications and networking principles and techniques related to robotics
- the role of kinematic and kinetic analysis of robot mechanisms
- analysis of motions, loads, accuracy, precision and repeatability
- situations requiring licensed trade, technical or professional assistance (e.g. actuator power interfacing)
- interfaces for sensors and actuators, such as the use of signal conditioning techniques and ADC, power interfacing and digital to analog converter (DAC), and pulse-width modulation (PWM)
- programming techniques for motion control and load handling with specialist input, such as vision systems, proximity and distance measurement inputs, and variable velocity control which may be implemented using packaged routines
- automation safety in systems and programs, including appropriate use of emergency stop, failsafe design, redundancy, interlocks, guarding and data integrity
- system integration of sensing, control, end effectors and actuators, data requirements, network topology and communication protocols required
- software for simulation, motion analysis, control, DAC and SCADA
- sustainability implications of industrial robotics

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to evaluate industrial robotic applications and integration into automation systems. This includes working individually and as part of a team in accordance with organisational procedures.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • identify WHS, regulatory and risk management requirements, and compliance with particular emphasis on automation safety • investigate sustainability implications of robotic applications • identify, review and classify features and functions of robotic applications and robotic devices, robotic principles and techniques, analysis techniques and software • evaluate robotic hardware • evaluate robotic motion, load capability, accuracy, precision and repeatability • evaluate system integration, networking, data sharing, control and human machine interfaces, software and programming • apply mock-up, prototyping and virtual techniques for robot and subsystem testing • report and document results.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. • The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where

	applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Robotic device or system	Robots are mechanical, programmable self-controlling machines used widely in engineering and related applications where location, work environment, costs, accuracy, quality, repeatability and reliability dictate their use in preference to human or other machines. The robot may be networked so as to serve an automated environment
Industrial robotic	Industrial robotic applications vary widely. Examples include:

applications	<ul style="list-style-type: none"> • palletising and depalletising robots • welding and cutting robots • packaging robots • transfer robots • interactive remote surgery robots • interactive nuclear fuel cell robots
Mobile robotic applications	<p>Mobile robotic applications may include:</p> <ul style="list-style-type: none"> • military robots, including land mine detection and improvised explosive demolition • police bomb detection robots • automated guidance vehicles
Review features and functions of robotic applications	<p>Features and functions may be assessed by analysis of specifications and drawings, 'reverse engineering' of robotic applications and performance analysis using simulation and dynamic performance software. The review may include motion control but does not require validation of dynamic stability which is included in other units and dependant on solution of differential equations</p>
Sensor and actuator interfacing techniques	<p>Sensor and actuator interfacing techniques include the use of:</p> <ul style="list-style-type: none"> • signal conditioning techniques and ADC, power interfacing and DAC and PWM
Controller programming techniques for motion control and load handling	<p>Controller programming techniques may include the use of various motion pathway methods, including:</p> <ul style="list-style-type: none"> • 'teach' mode or coordinate and path programming • use of variable velocity algorithms • provision for input variables, such as contact, proximity, measured distance or load and vision, pressure and temperature, and open and closed loop actuator control
Sustainability	<p>Sustainability is used to mean the entire sustainable performance of the organisation/plant, including:</p> <ul style="list-style-type: none"> • meeting all regulatory requirements • conforming to all industry covenants, protocols and best practice guides • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative WHS impact on employees, community and customer

Analysis	<p>Analysis may include:</p> <ul style="list-style-type: none"> • static and dynamic analysis of loads • the stresses and deformations resulting • graphical and mathematical methods and software options
WHS, regulatory requirements and enterprise procedures	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> • WHS Acts and regulations • relevant standards • codes of practice from Australian and overseas engineering and technical associations and societies • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements
Standards and codes	<p>Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular robotic application</p>
Automation safety	<p>Automation safety refers to the reliance on emergency stop, failsafe design, redundancy, interlocks, guarding and data integrity. Standards apply to general plant design and use as well as the functional safety of safety-related electrical, electronic and programmable electronic control systems</p>
Appropriate technical and professional assistance	<p>Appropriate technical and professional assistance may include:</p> <ul style="list-style-type: none"> • licensed electrical tradespersons • technical support and advice relating to elements which have intrinsic dangers, such as: <ul style="list-style-type: none"> • high pressure • energised fluid vessels • high temperatures and heat energy capacity • wiring with high current control voltages above extra low voltage • professional support for technologies, such as: <ul style="list-style-type: none"> • specialist electric motor drives and controllers • specialist materials, plastics, metal alloys and nano materials • special processes, foundry, alloy welding, heat treatment, sealing and fastening

MEM23129A Evaluate thermal loads for heating, ventilation, air conditioning and refrigeration

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers the evaluation of thermal load estimates for a commercial refrigeration system and a multiple zone commercial/industrial building. It includes work health and safety (WHS) and related safety compliance requirements, and system evaluation, including the use of software and validation, thermodynamic concepts and laws.

Application of the Unit

This unit applies to individuals conducting thermal load evaluations for heating, ventilation, air conditioning and refrigeration (HVAC/R) systems in buildings and engineering, commercial refrigeration systems and related installations. It is suitable for people working as technicians, system designers, draftspersons, maintainers and those pursuing careers and qualifications in engineering or related disciplines.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A Apply technical mathematics

MEM23006A Apply fluid and thermodynamics principles in engineering

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

- | | | | |
|---|---|-----|---|
| 1 | Determine scope of evaluation of thermal loads and HVAC/R systems | 1.1 | Establish type, location and scope of HVAC/R systems, building and refrigerated enclosures from plans, data sheets, specifications and site inspections |
| | | 1.2 | Identify stakeholders to be consulted during evaluation |
| | | 1.3 | Establish software and software techniques required for evaluation analysis |
| | | 1.4 | Determine WHS, regulatory and environmental requirements relevant to evaluation |
| | | 1.5 | Investigate sustainability implications of HVAC/R and building management systems |
| 2 | Prepare for thermal loads and HVAC/R systems evaluation | 2.1 | Review thermal load analysis techniques for multiple zone commercial or industrial buildings, including use of tabulations and computer software |
| | | 2.2 | Identify sources of heat gains for building |
| | | 2.3 | Review room sensible and latent heat, including peak values |
| | | 2.4 | Review thermal load analysis techniques for commercial refrigeration systems, including use of tabulations and computer software |
| | | 2.5 | Identify heat load sources for refrigerated enclosures or zones |
| | | 2.6 | Determine tools, equipment, testing devices and |

- materials required for evaluation
- 2.7 Determine required measurements and measurement techniques
- 2.8 Calibrate, set up, and test measurement equipment and procedures
- 2.9 Identify appropriate analysis techniques, analysis and simulation software and software validation techniques
- 3 Evaluate thermal loads and HVAC/R systems
 - 3.1 Evaluate thermal load for a commercial refrigeration system
 - 3.2 Evaluate thermal load for a multiple zone commercial or industrial building
 - 3.3 Evaluate the effects of internal and external parameter changes on refrigeration system performance
 - 3.4 Evaluate thermal performance of a building and options for design improvements
 - 3.5 Evaluate building to identify and mitigate high thermal loads
 - 3.6 Evaluate performance of refrigeration and air conditioning system against specifications and determine optimum operational settings
 - 3.7 Evaluate equipment size, including coil and air handling unit capacities for constant and variable volume systems, and central refrigeration and boiler capacities
 - 3.8 Evaluate and validate software for refrigeration and building thermal performance analysis and system simulation
- 4 Report results
 - 4.1 Record results of evaluation, including recommendations for design and system setting optimisation
 - 4.2 Provide relevant documentation, such as thermal load audits, calculations for heating and cooling loads, building and refrigeration layouts, heating and cooling system and component arrangements, and system improvement diagrams

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- determining HVAC/R system parameters from plans, specifications and site inspections
- reviewing features and functions of HVAC/R system components
- investigating sustainability implications of HVAC/R systems
- identifying relevant thermodynamic principles and techniques
- testing and measuring system and component performance parameters
- evaluating system thermal loads and relationship to, and implications for, component sizes and system performance
- selecting and using appropriate calculations, techniques and software for analysis and simulations
- validating software and software techniques required for thermal load evaluations
- reporting and documenting processes, results and recommendations

Required knowledge

Required knowledge includes:

- WHS and regulatory requirements, codes of practice, standards, risk management and registration requirements
- sources of professional and technical assistance
- current options and trends in performance analysis software, including underpinning program techniques
- thermal load measuring equipment and test apparatus
- sustainability implications of HVAC systems, including consideration of energy sources and energy efficiency
- thermodynamic principles required by thermal loading analysis and HVAC/R management systems
- thermodynamic concepts related to HVAC/R:
 - properties, process and state
 - mass, conservation of mass, specific volume and density, specific volume, relative density, force, weight, pressure, temperature, Zeroth law, absolute scales and International System of Units (SI) units
 - systems, cycles and steady state
- energy forms
- effects of heating of solids and liquids

- heat transfer, conduction, convection and radiation:
 - property tables for conductivity, convection and radiation coefficients
 - Fourier law of conduction and conductivity of materials
 - convection:
 - mechanism of convection
 - convection heat transfer coefficient and factors affecting the coefficient
 - fluid flow characteristics (geometry of convection surfaces, natural and forced convection and flow regime)
 - units, kinematic viscosity and dynamic viscosity
 - convective heat transfer coefficients for conduit and annular flow, hydraulic diameter
 - heat exchangers (types, efficiency and measurements)
 - radiators:
 - emission, absorption and reflection (properties and measurements)
 - Wien's displacement law
 - Kirchhoff's law
 - solar energy, heating and power generation
 - radiant energy on surfaces $G_a = G_o r^{\mu}$
 - variations, such as Azimuth and zenith angles, path length, cloud cover and water vapour, and shade factors for windows
 - combined heat transfer
 - conduction plus convection, heat exchangers using air and water as transfer mediums
 - conduction, convection and radiation (qualitative)
 - cooling fins
 - heat flow, electrical analogy, graphical solution techniques and qualitative understanding of numerical methods
- vapour compression refrigeration:
 - vapour-compression cycle for refrigeration
 - system components, including throttling valves and capillary tubes as throttling devices
 - performance criteria for refrigeration system evaluation
 - types of refrigerant
 - refrigerant properties and p-h diagrams:
 - ideal vapour compression cycle on the p-h diagram
 - energy balance and heat transfers in compressor, evaporator and condenser
 - variation of actual cycles from the ideal
 - vapour-compression cycle with suction superheating, liquid sub-cooling and pressure drop in system components
- mechanical components of vapour compression (refrigeration and HVAC systems)
- refrigeration enclosures, cabinets, cold rooms and freezer rooms
- factors affecting refrigeration heat transfer
- building thermal performance survey procedures

- standard thermal values in relation to a commercial/industrial building
- equipment size for constant and variable volume systems and central refrigeration and boiler capacities
- thermal properties of buildings and building materials
- people loads
- cost implications of air conditioning and heating designs
- heat loads
- thermal lag
- occupant comfort and safety factors

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to evaluate the thermal loads for a commercial refrigeration system and for a multiple zone commercial or industrial building.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • determine HVAC/R system parameters • investigate sustainability implications of HVAC/R systems • identify relevant thermodynamic principles and techniques for particular HVAC/R system thermal load evaluations • review features and functions of HVAC/R systems and components • test and measure HVAC/R systems and component performance parameters • evaluate system and component performance with tabulated and software generated data • apply and validate software for analysis and simulation • report and document results.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. • The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure

MEM23130A Coordinate servicing and fault-finding of HVACR control systems

Modification History

Release 1 (MEM05v9)

Unit Descriptor

This unit of competency covers the coordination of servicing and fault-finding of heating, ventilation, air conditioning and refrigeration (HVAC/R) environment control systems. The control system may be a part of a building management system. It includes work health and safety (WHS) and related safety compliance requirements, performance analysis software and validation, and related thermodynamic concepts and laws.

Application of the Unit

This unit applies to technicians who are required to coordinate the servicing and fault-finding of HVAC/R control systems. This includes undertaking required technical analyses and coordinating and supervising tradespersons or other technicians. The extent of individual and joint work may vary according to the size of the HVAC/R system. The unit may also apply to system managers, designers and draftspersons, and others who are required to evaluate the performance of HVAC/R control systems.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A Apply technical mathematics

MEM23006A Apply fluid and thermodynamics principles in engineering

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Prepare for HVAC/R analysis and service task	1.1	Establish type, location and scope of control systems for HVAC/R plant
		1.2	Identify stakeholders to be consulted during analysis and service
		1.3	Lead review of functions and features of HVAC/R system
		1.4	Establish software and software techniques required for evaluation
		1.5	Identify relevant WHS, regulatory and environmental requirements
		1.6	Investigate sustainability implications of HVAC/R control and energy management systems
2	Coordinate review and analysis of HVAC/R control system	2.1	Review passive characteristics, heat loads and energy requirements for the HVAC/R system
		2.2	Review energy options, tariffs, system and component consumption against benchmarks and comparative tariffs
		2.3	Confirm scope of control system hardware, including controllers, analog and digital Input/Output (I/O), interfaces and actuators, including electrical, electronic, pneumatic and hydraulic devices
		2.4	Review, map and monitor HVAC/R control system, protocols and topology, system function, control settings, I/O, and major system hardware components

- and energy requirements
- 2.5 Identify building management system control system software and programming techniques
 - 2.6 Supervise selection of tools, equipment, testing devices and materials required for service and fault-finding
 - 2.7 Determine required measurements and measurement techniques
 - 2.8 Supervise calibrate, set up, and test measurement equipment and procedures
 - 2.9 Identify appropriate analysis techniques, analysis and simulation software and software validation techniques
- 3 Coordinate servicing, fault-finding and optimising of HVAC/R control systems
- 3.1 Supervise measuring of the performance of the control system in maintaining specified environmental conditions
 - 3.2 Adjusted HVAC/R system to specification according to specifications and enterprise procedures
 - 3.3 Ensure isolation, repair or replacement of components not performing to specification
 - 3.4 Validate control programs and software for system performance and simulation
 - 3.5 Supervise testing or measuring on an electrically live system
 - 3.6 Ensure compliance with WHS, regulatory, environmental and risk management requirements
 - 3.7 Optimise the control system for economic and efficient operation through daily, seasonal and annual cycles
 - 3.8 Develop control diagram and record settings for optimal system performance
- 4 Report results
- 4.1 Record results, including rectification or improvement recommendations
 - 4.2 Provide report and supporting documentation, such as building thermal and control system audits, energy

costing, and efficiency evaluations, control system map and signal diagrams, control programs, system analysis and simulation files

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting drawings, diagrams, manuals and design information to determine HVAC/R control system layout, components and functions
- identifying WHS and other regulatory requirements
- coordinating the work of others in HVAC/R servicing and fault-finding, including allocating tasks and confirming results
- communicating with clients, stakeholders and technical experts
- identifying sustainability implications of HVAC/R control systems
- selecting appropriate HVAC/R analysis and simulation software and validation techniques
- reviewing control systems techniques, hardware and software taking into account thermal loads, energy options, tariffs, consumption, benchmarks and comparative tariffs
- mapping and monitoring control system, function, settings, I/O, and hardware and energy requirements
- optimising the energy management system
- measuring control system performance and developing optimal control diagram and settings
- documenting and reporting evaluation results, including efficiency evaluations, maps and diagrams, programs, analysis and simulation files and conclusions

Required knowledge

Required knowledge includes:

- WHS and regulatory requirements, codes of practice, standards, risk management and registration requirements
- sources of professional and technical assistance
- trends in HVAC/R system design, installation, operation and maintenance, including integration with energy management systems
- current options and trends in performance analysis software, including underpinning program techniques
- sustainability implications of HVAC/R systems control and energy management systems
- building management systems features and functions related to HVAC/R and integration with other features, such as:
 - lighting, alarms and security
 - multi-zone operation
 - operating modes, such as occupied, unoccupied, morning warm-up, and night-time setback
- features, components, functions, protocols and topology of HVAC/R control systems, including:
 - protocols and topology

- control settings
- I/O devices and techniques
- software and programming techniques
- proportional-integral-derivative (PID) controller functions in HVAC/R control systems
- interface principles and techniques for electrical, electronic, pneumatic and hydraulic sensors and actuators
- HVAC/R principles and techniques related to energy distribution and consumption
- passive characteristics and heat load on the system under control
- daily, seasonal and annual HVAC/R load cycles
- sources of technical and professional assistance for engineering specialisations
- energy options, unit tariffs, system and component consumption, benchmarks for energy costs and comparative tariffs
- testing and measuring devices and materials and their calibration, set-up, test and use
- analysis techniques, including use of analysis and simulation software and software validation techniques

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to coordinate the servicing, fault-finding and optimisation of HVAC/R control systems. This includes working individually or as part of a team on analysis and optimisation technical tasks.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • communicate HVAC/R servicing and fault-finding tasks and requirements to others • identify relevant WHS, other regulatory requirements, standards and codes • investigate sustainability implications of HVAC/R control systems • assess HVAC/R control system and hardware, including building management system control systems • use appropriate analysis and simulation software and validation techniques • review thermal loads, hardware, energy options, tariffs, consumption, benchmarks and comparative tariffs • map and monitor control system, I/O, hardware and energy use • optimise HVAC/R control system for seasonal and load cycles • measure control system performance • develop optimal control diagram and settings • report and document results.

Unit sector Engineering science

Custom Content Section

Not applicable.

MEM23131A Evaluate rapid prototyping applications

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers the evaluation of rapid prototyping applications using additive processes, spray deposition and casting processes, rapid machining, cutting and welding. It requires consideration of product manufacturability, materials, resources and skills, plant and tooling requirements systems and processes, strength, form, fit, function, lead time and sustainability.

Application of the Unit

This unit applies to rapid prototyping for engineering-related applications. It is suitable for people working as manufacturing or maintenance technicians, designers and draftspersons, and those pursuing engineering or related technical qualifications and careers.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A Apply technical mathematics

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Establish scope of rapid prototyping application	1.1	Identify technology, including software, used in rapid prototyping application
		1.2	Identify purpose and product of rapid prototyping application
		1.3	Confirm stakeholders to be consulted as part of evaluation
		1.4	Confirm that appropriate support, including technical and professional assistance, is available
		1.5	Determine relevant work health and safety (WHS) and regulatory requirements, standards, codes of practice, risk management and organisational procedures
2	Identify principles and techniques required for evaluation of rapid prototyping application	2.1	Determine principles and techniques required to evaluate and optimise the rapid prototyping applications
		2.2	Select appropriate analysis and development software and software validation techniques
3	Evaluate rapid prototyping application	3.1	Assess WHS and regulatory compliance requirements and risk management practices of rapid prototyping processes
		3.2	Assess effectiveness of software for product design, process analysis and optimisation
		3.3	Determine suitability of facilities, services, plant and

- tooling for rapid prototyping processes
 - 3.4 Assess materials against specifications in design and suitability for rapid prototyping processes
 - 3.5 Review prototypes for compliance with specifications and process efficiency,
 - 3.6 Review rapid prototyping cost-effectiveness, including break-even and comparative costing relative to alternatives
 - 3.7 Review labour and skills requirement of rapid prototyping application
 - 3.8 Investigate sustainability implications of rapid prototyping application
 - 3.9 Apply systems thinking, continuous improvement, problem solving and decision making, and constraint and contingency management
- 4 Report results
- 4.1 Record results of evaluation
 - 4.2 Provide documentation, such as drawings, calculations, product and process analysis, and computer-aided design (CAD) files

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- determining technologies, parameters and context of rapid prototyping applications
- investigating sustainability implications of rapid prototyping applications
- reviewing features and functions of rapid prototyping applications
- identifying rapid prototyping principles and techniques, analysis techniques and software
- identifying relevant WHS, regulatory and risk management compliance requirements for rapid prototyping applications
- assessing software, facilities, services, plant and tooling, and materials
- analysing labour and skills distribution requirements, degree of automation and competitiveness, costs and break-even
- evaluating rapid prototyping against alternative methods and technologies
- reporting and documenting results of scoping, principles and techniques identification and evaluation of products and processes, product and process analysis, and CAD files

Required knowledge

Required knowledge includes:

- range, features and applications of rapid prototyping processes, including:
 - digitisers and reverse engineering processes
 - selective laser sintering (SLS)
 - fused deposition modelling (FDM)
 - stereolithography (SLA)
 - laminated object manufacturing (LOM)
 - electron beam melting (EBM)
 - 3-D printing (3-DP)
 - solid freeform fabrication
 - sprayed metal deposition
 - direct metal deposition (DMD)
 - casting (patternless and rapid pattern processes)
 - vacuum forming
 - rapid machining (subtractive) options
 - rapid cutting options, such as computer driven gas and laser cutting
 - robot and auto welding

- common applications for rapid prototyping, including:
 - concept modelling
 - multiple design iterations at low cost
 - form, fit and function testing prior to committing to tooling
 - market design verification prior to mass production
 - masters for vacuum forming and investment casting
 - one piece thermoplastic jigs and fixtures
 - one-off full strength plastic, cast, direct deposited metal or sprayed metal components
- sources of technical and professional assistance
- sustainability implications of rapid prototyping applications and processes
- rapid prototyping principles, techniques and software
- WHS, regulatory and risk management requirements relevant to rapid prototyping applications
- facilities, services, plant and tooling required for rapid prototyping applications
- materials used in additive 'printing' processes
- materials for sprayed metal deposition
- materials for rapid casting
- other materials, including:
 - thermoplastics for vacuum forming
 - materials for rapid machining and fabrication
- component design processes and CAD techniques relevant to rapid prototyping processes and applications, including:
 - size limitations
 - combining components
 - digitising
 - reverse engineering
- labour and skills requirements relevant to rapid prototyping
- systems thinking, continuous improvement, and constraint and contingency management techniques
- WHS and regulatory requirements, codes of practice, standards, risk management and registration requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to evaluate rapid prototyping applications for safety, economy and fitness for purpose.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • evaluate suitability of a rapid prototyping application against alternative processes • review features and functions of rapid prototyping processes • select appropriate rapid prototyping principles and techniques, analysis techniques and software • determine WHS and regulatory requirements, risk management and organisational procedures • report and document results.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. • The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning

	<p>knowledge to ensure correct interpretation and application.</p> <ul style="list-style-type: none"> • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Rapid prototyping applications	<p>Rapid prototyping applications are typically applications with either one-off or small to medium quantities. Rapid prototypes are typically developed for:</p> <ul style="list-style-type: none"> • concept modelling • multiple design iterations at low cost • form, fit and function testing prior to committing to tooling • market design verification prior to mass production • masters for vacuum forming and investment casting • one piece thermoplastic jigs and fixtures • one-off full strength plastic, cast, direct deposited metal or sprayed metal components
Appropriate technical and professional assistance	<p>Appropriate technical and professional assistance may include:</p> <ul style="list-style-type: none"> • technical support and advice relating to elements which have intrinsic dangers, such as: <ul style="list-style-type: none"> • high pressure • energised fluid vessels

	<ul style="list-style-type: none"> • high temperatures and heat energy capacity • wiring with high current control voltages above extra low voltage • professional support for technologies, such as: <ul style="list-style-type: none"> • specialist electric motor drives and controllers • specialist materials, plastics, metal alloys and nano materials • special processes, foundry, alloy welding, heat treatment, sealing and fastening
WHS, regulatory requirements and enterprise procedures	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> • WHS Acts and regulations • relevant standards • codes of practice from Australian and overseas engineering and technical associations and societies • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements
Standards and codes	<p>Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular rapid prototyping application</p>
Sustainability	<p>Sustainability is used to mean the entire sustainable performance of the organisation/plant, including:</p> <ul style="list-style-type: none"> • meeting all regulatory requirements • conforming to all industry covenants, protocols and best practice guides • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative WHS impact on employees, community and customer
Systems thinking	<p>Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or</p>

	potentially may effect, outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain
Continuous improvement implementation	<p>Continuous improvement implementation may relate to plant, products, processes, systems or services, including design, development, implementation or manufacture, commissioning, operation or delivery and maintenance.</p> <p>Improvement processes may include techniques, such as:</p> <ul style="list-style-type: none"> • balanced scorecard • current and future state mapping • measuring performance against benchmarks • process improvement, problem solving and decision making • data management, generation, recording, analysing, storing and use of software • training for improvement systems participation • technical training
Constraints and contingencies	<p>Constraints and contingencies may be:</p> <ul style="list-style-type: none"> • financial • organisational, procedural or cultural • physical constraints, such as limits to resources, limits to site access or logistical limitations

MEM23132A Evaluate rapid manufacturing processes

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers evaluation of rapid manufacturing based on additive, spray deposition and casting processes and includes evaluating the processes for their applicability, market competitiveness and sustainability. The unit requires consideration of product manufacturability, materials, systems and processes maintainability, plant and tooling requirements.

Application of the Unit

This unit applies technical evaluations of rapid manufacturing processes. It is suitable for people working as technicians, designers and draftspersons, and those pursuing manufacturing engineering or related technical qualifications and careers.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A Apply technical mathematics

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Establish scope of rapid manufacturing processes and application	1.1	Identify technologies, including software, used or proposed in rapid manufacturing application
		1.2	Confirm stakeholders to be consulted as part of evaluation
		1.3	Confirm that appropriate support, including technical and professional assistance, is available
		1.4	Identify market context for rapid manufacturing product
		1.5	Determine relevant work health and safety (WHS) and regulatory requirements, standards, codes of practice, risk management and organisational procedures
2	Identify principles and techniques required for evaluation of rapid manufacturing application	2.1	Determine principles and techniques required to evaluate and optimise the rapid manufacturing application
		2.2	Select appropriate analysis and development software and software validation techniques
3	Evaluate rapid manufacturing processes	3.1	Assess WHS and regulatory compliance requirements and risk management practices of rapid manufacturing processes
		3.2	Assess effectiveness of software used for product design, rapid manufacturing process control and process optimisation
		3.3	Review suitability of facilities, services, plant and

- tooling for rapid manufacturing processes
 - 3.4 Assess products and rapid manufacturing processes for sustainability
 - 3.5 Assess materials against specifications in design and suitability for rapid manufacturing processes
 - 3.6 Assess process for appropriate degree of automation and other technical efficiency aspects
 - 3.7 Review rapid manufacturing application for competitiveness, including supply chain performance, costs, break-even and comparative performance of alternative manufacturing methods
 - 3.8 Review labour and skill requirements
 - 3.9 Apply systems thinking, continuous improvement, problem solving and decision making, and constraint and contingency management
- 4 Report results
- 4.1 Record results of evaluation
 - 4.2 Provide documentation, such as drawings, calculations, product and process analysis, and computer-aided design (CAD) files

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- determining technologies, parameters and context of rapid manufacturing applications
- investigating sustainability implications of rapid manufacturing processes and associated products
- reviewing features and functions of rapid manufacturing processes, including assessing:
 - compliance of rapid manufactured product with design specifications
 - suitability of materials and equipment used in a rapid manufacturing process
 - efficiency of selected rapid manufacturing processes against other manufacturing processes, including cost-benefit analysis of alternative methods of rapid manufacturing, where applicable
 - integration of rapid manufacturing processes with manufacturing practice systems, such as lean manufacturing
 - skill and training requirements of the applicable rapid manufacturing processes
- identifying and evaluating rapid manufacturing control systems and software
- selecting and using appropriate analysis techniques and software for evaluation of rapid manufacturing processes
- identifying relevant WHS, regulatory and risk management compliance requirements for rapid manufacturing applications
- assessing software, facilities, services, plant and tooling, and materials for suitability to rapid manufacturing applications
- applying systems thinking, continuous improvement, and constraint and contingency management to evaluation of rapid manufacturing processes
- reporting and documenting results of scoping, principles and techniques identification and evaluation of systems, layouts, programs and flow charts

Required knowledge

Required knowledge includes:

- range, features and applications of rapid manufacturing processes, including:
 - digitisers and reverse engineering processes
 - selective laser sintering (SLS)
 - fused deposition modeling (FDM)
 - stereolithography (SLA)

- laminated object manufacturing (LOM)
- electron beam melting (EBM)
- 3-D printing (3-DP)
- solid freeform fabrication
- sprayed metal deposition
- direct metal deposition (DMD)
- casting (patternless and rapid pattern processes)
- vacuum forming
- sources of support, including technical and professional assistance
- sustainability implications of rapid manufacturing processes
- WHS, regulatory and risk management requirements relevant to rapid manufacturing applications
- relationship between process and product in rapid manufacturing technologies, for example:
 - using printing or SLA processes in low strength paper or plastic applications
 - higher component strength applications in plastics or sintered metals
 - applications using tool steels, brass, stainless steel, carbon steel and aluminum alloy, such as metal spray deposition or lost wax for cast products
- materials for additive ‘printing’ processes
- materials for sprayed metal deposition
- materials for rapid casting
- other materials (e.g. thermoplastics for vacuum forming)
- labour and skills requirements for rapid manufacturing processes
- systems thinking, continuous improvement, and constraint and contingency management
- CAD functions, features and techniques related to rapid manufacturing, including relevant file formats

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to evaluate rapid manufacturing applications for safety, economy and fitness for purpose.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently: <ul style="list-style-type: none"> • review technologies, including software, used in rapid manufacturing applications • evaluate rapid manufacturing processes for efficiency and

	<p>cost-benefit against alternative manufacturing techniques</p> <ul style="list-style-type: none"> • select appropriate analysis principles and techniques and software • identify and assess compliance against relevant WHS and regulatory requirements, risk management and organisational procedures • report and document results.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. • The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Rapid manufacturing applications</p>	<p>Rapid manufacturing applications can be found in most industries with the selection of a rapid manufacturing process depending on the suitability of the product and materials for available rapid manufacturing equipment and cost-benefit analysis against traditional manufacturing alternatives. Examples of rapid manufactured items may include:</p> <ul style="list-style-type: none"> • medical and biomedical prosthetics and implants • custom musical instruments • jewellery • consumer products • toys • any small to medium quantity item, particularly involving high set-up cost associated with using alternative or traditional methods
<p>Context of manufacturing processes</p>	<p>The context of manufacturing operations includes consideration of:</p> <ul style="list-style-type: none"> • global competitive markets • product and process sustainability • lean systems • product manufacturability • system maintainability • facilities, services, plant and tooling requirements • supply chains • material and product flow • transfer operations • process control • labour requirements and skills distribution • information flow • systems thinking, continuous improvement, and constraint and contingency management • WHS and regulatory requirements and risk management
<p>Appropriate technical and professional assistance</p>	<p>Appropriate technical and professional assistance may include:</p> <ul style="list-style-type: none"> • technical support and advice relating to elements which have intrinsic dangers, such as: <ul style="list-style-type: none"> • high pressure

	<ul style="list-style-type: none"> • energised fluid vessels • high temperatures and heat energy capacity • wiring with high current control voltages above extra low voltage • professional support for technologies, such as: <ul style="list-style-type: none"> • specialist electric motor drives and controllers • specialist materials, plastics, metal alloys and nano materials • special processes, foundry, alloy welding, heat treatment, sealing and fastening
WHS, regulatory requirements and enterprise procedures	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> • WHS Acts and regulations • relevant standards • codes of practice from Australian and overseas engineering and technical associations and societies • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements applying to electrical work
Standards and codes	Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular rapid manufacturing process
Sustainability	<p>Sustainability is used to mean the entire sustainable performance of the organisation/plant, including:</p> <ul style="list-style-type: none"> • meeting all regulatory requirements • conforming to all industry covenants, protocols and best practice guides • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative WHS impact on employees, community and customer
Systems thinking	Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems

	should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain
Continuous improvement implementation	<p>Continuous improvement implementation may relate to plant, products, processes, systems or services, including design, development, implementation or manufacture, commissioning, operation or delivery and maintenance.</p> <p>Improvement processes may include techniques, such as:</p> <ul style="list-style-type: none"> • balanced scorecard • current and future state mapping • measuring performance against benchmarks • process improvement, problem solving and decision making • data management, generation, recording, analysing, storing and use of software • training for improvement systems participation • technical training
Manage constraints and contingencies	<p>Contingencies arising during operations or improvement projects are responded to in the context of constraints. Contingencies may threaten operations or improvement projects and planning for contingencies may be essential to maintain resources, skilled labour and schedules. Each contingency will have constraints on possible solutions. These may be:</p> <ul style="list-style-type: none"> • financial, organisational, procedural or cultural • physical constraints, such as limits to resources, limits to site access or logistical limitations
Process competitiveness	Competitive or lean processes uses cost, capacity and responsiveness, quality, reliability and waste minimisation as drivers of the process and measures for process improvement. Lean manufacturing is the response of many organisations to local, regional, national and global market competitiveness
Automation	Automation options range from manual operations with manual information generation, handling, analysis and storage to islands of automation, supported by manual interfaces with some electronic information processing, to systems with major automation and networked data handling
Labour requirements and skills distribution	Globally competitive manufacturing processes require well trained employees for flexibility of deployment options and minimisation of labour waste. Continuous improvement requires continuous training to match skills to process improvements and developments. Modern manufacturing processes require proactive maintenance participation

	and skills development

MEM23133A Evaluate rapid tooling applications

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers evaluation of rapid tooling applications for their suitability for purpose. It includes additive processes, spray deposition and casting processes, and rapid machining, cutting and welding. It requires consideration of product manufacturability, materials, resources and skills, plant and tooling requirements systems and processes, strength, form, fit, function, lead time and sustainability.

Application of the Unit

This unit applies to rapid tooling applications. It is suitable for people working as manufacturing or maintenance technicians, designers and draftspersons, and those pursuing engineering or related technical qualifications and careers.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A Apply technical mathematics

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Determine scope of rapid tooling application	1.1	Identify technologies, including software, used or proposed in rapid tooling application
		1.2	Confirm stakeholders to be consulted on evaluation
		1.3	Confirm that appropriate support, including technical and professional assistance, is available
		1.4	Identify market context for rapid manufacturing product
		1.5	Identify relevant work health and safety (WHS) and regulatory requirements, standards, codes of practice, risk management and organisational procedures
2	Identify principles and techniques required for evaluation of rapid tooling application	2.1	Determine principles and techniques required to evaluate and optimise rapid tooling process and application
		2.2	Select appropriate analysis and development software and software validation techniques
3	Evaluate rapid tooling application	3.1	Evaluate WHS and regulatory compliance requirements and risk management practices of rapid tooling processes
		3.2	Assess tooling and rapid tooling processes for sustainability
		3.3	Assess effectiveness of software used for tool design, rapid tooling process control and process optimisation
		3.4	Review suitability of facilities, services and plant for

- rapid tooling processes
 - 3.5 Evaluate suitability of materials used in rapid tooling process
 - 3.6 Evaluate tooling and process effectiveness, costs, break-even, and comparative costing relative to alternatives
 - 3.7 Review labour and skill requirements of rapid tooling process
 - 3.8 Apply systems thinking, continuous improvement, problem solving and decision making, and constraint and contingency management
- 4 Report results
- 4.1 Record results of evaluation
 - 4.2 Provide documentation, such as tool, product and process analysis, and computer-aided design (CAD) files

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- determining technologies, parameters and context of tooling applications
- investigating sustainability implications of tooling and rapid tooling processes
- reviewing features and functions of rapid tooling processes, including assessing:
 - compliance of tooling with tool design
 - suitability of materials and equipment used in a rapid tooling process
 - efficiency of selected rapid tooling processes against other tool manufacturing processes, including cost-benefit analysis of alternative methods of rapid tooling, where applicable
 - skill and training requirements of the applicable rapid tooling processes
- identifying and evaluating rapid tooling control systems and software
- selecting and using appropriate analysis techniques and software for evaluation of rapid tooling processes
- identifying relevant WHS, regulatory and risk management compliance requirements for rapid tooling applications
- assessing software, facilities, services, plant and materials for suitability to rapid tooling applications
- applying systems thinking, continuous improvement, and constraint and contingency management to evaluation of rapid tooling processes
- reporting and documenting results of scoping, principles and techniques identification and evaluation of systems, layouts, programs and flow charts

Required knowledge

Required knowledge includes:

- features and functions of additive rapid tooling processes, including:
 - 3-D printing (3-DP)
 - stereolithography (SLA)
 - selective laser sintering (SLS)
 - electron beam melting (EBM)
 - fused deposition modelling (FDM) and direct metal deposition (DMD)
 - casting (patternless and rapid pattern processes)
 - vacuum forming
 - rapid prototyping machines

- metal spray deposition
- materials for additive 'printing' processes
- materials for sprayed metal deposition
- materials for rapid casting
- other materials, including:
 - thermoplastics for vacuum forming
 - materials for rapid machining and fabrication
- tool features and functions, such as:
 - functional requirements
 - punches and dies
 - cavity shapes
 - clearances and drafts
 - heat treatment options
 - surface finishing
 - tool component assembly, location and security
- CAD design and modelling techniques to suit rapid tooling materials, machines and processes
- sustainability implications of rapid tooling and rapid processes
- typical advantages and disadvantages of rapid tooling compared to alternative or traditional system costings
- sources of support, including technical and professional assistance
- rapid tooling software principles and applications
- WHS, regulatory and risk management requirements
- typical facilities, services, plant required for rapid tooling
- systems thinking, continuous improvement, constraint and contingency management, and comparative supply chain performance
- WHS and regulatory requirements, codes of practice, standards, risk management and registration requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to evaluate rapid tooling applications for safety, economy and fitness for purpose.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • review features and functions of rapid tooling processes and the fitness for purpose of tooling produced • evaluate rapid tooling processes for efficiency and cost-benefit against alternative tool manufacturing techniques • select appropriate analysis principles, techniques and software • identify and assess compliance against relevant WHS and regulatory requirements, risk management and organisational procedures • report and document results.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. • The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks

	<p>and include questioning on underpinning knowledge to ensure correct interpretation and application.</p> <ul style="list-style-type: none"> • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Rapid tooling applications	<p>Rapid tooling applications are typically used in:</p> <ul style="list-style-type: none"> • small to medium volumes of product using sintered tools • large volumes of product using sprayed metal tools • situations where one-off tooling requirements are common and speed of tooling manufacture is important
Context of rapid tooling processes	<p>The context of rapid tooling processes includes consideration of:</p> <ul style="list-style-type: none"> • global competitive markets • product and process sustainability • lean systems • product manufacturability • facilities, services, plant and tooling requirements • supply chains • material, transfer operations • process control • labour requirements and skills distribution • information flow • systems thinking, continuous improvement, and constraint and contingency management

	<ul style="list-style-type: none"> • WHS, regulatory requirements and risk management
WHS, regulatory requirements and enterprise procedures	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> • WHS Acts and regulations • relevant standards • codes of practice from Australian and overseas engineering and technical associations and societies • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements applying to electrical work
Standards and codes	Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular rapid tooling application
Appropriate technical and professional assistance	<p>Appropriate technical and professional assistance may include:</p> <ul style="list-style-type: none"> • technical support and advice relating to elements which have intrinsic dangers, such as: <ul style="list-style-type: none"> • high pressure • energised fluid vessels • high temperatures and heat energy capacity • wiring with high current control voltages above extra low voltage • professional support for technologies, such as: <ul style="list-style-type: none"> • specialist electric motor drives and controllers • specialist materials, plastics, metal alloys and nano materials • special processes, foundry, alloy welding, heat treatment, sealing and fastening
Sustainability	<p>Sustainability is used to mean the entire sustainable performance of the organisation/plant, including:</p> <ul style="list-style-type: none"> • meeting all regulatory requirements • conforming to all industry covenants, protocols and best practice guides • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative WHS impact on employees, community and customer
Systems thinking	Systems thinking refers to the conduct of engineering work in a

	<p>manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain</p>
Continuous improvement implementation	<p>Continuous improvement implementation may relate to plant, products, processes, systems or services, including design, development, implementation or manufacture, commissioning, operation or delivery and maintenance.</p> <p>Improvement processes may include techniques, such as:</p> <ul style="list-style-type: none"> • balanced scorecard • current and future state mapping • measuring performance against benchmarks • process improvement, problem solving and decision making • data management, generation, recording, analysing, storing and use of software • training for improvement systems participation • technical training
Constraints and contingencies	<p>Constraints and contingencies may be:</p> <ul style="list-style-type: none"> • financial • organisational, procedural or cultural • physical constraints, such as limits to resources, limits to site access or logistical limitations

MEM23134A Evaluate jigs and fixtures

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers the evaluation of design features and functions of jigs, fixtures, templates and gauges for the machining, fabrication, assembly and welding of manufactured products.

Application of the Unit

This unit applies to evaluating the safety and suitability of proposed or existing jigs, fixtures, templates and gauges for the manufacture of components for engineering or related applications. It is suitable for people working as tool designers and maintenance technicians or paraprofessionals and draftspersons, and those pursuing manufacturing engineering or related technical qualifications and careers.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23109A	Apply engineering mechanic principles

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Determine scope of evaluation	1.1	Identify purpose and extent of use of jigs, fixtures, templates and gauges to be evaluated
		1.2	Confirm stakeholders to be consulted on evaluation
		1.3	Confirm that appropriate support, including technical and professional assistance, is available
		1.4	Identify relevant work health and safety (WHS) and regulatory requirements, standards, codes of practice, risk management and organisational procedures
2	Prepare for evaluation	2.1	Identify principles and techniques required to evaluate and optimise selected jigs, fixtures, templates and gauges and their use in related manufacturing processes
		2.2	Select appropriate analysis and development software and software validation techniques
		2.3	Consult with relevant tradespersons or contractors on any specific requirements or constraints for manufacture, supply or modification of jigs, fixtures, templates and gauges
3	Evaluate jigs, fixtures, templates and gauges and related manufacturing processes	3.1	Review design and construction features and functions of jigs, fixtures, templates and gauges and related manufacturing processes
		3.2	Apply systems thinking, continuous improvement, problem solving and decision making, and constraint and contingency management principles and techniques

- to evaluation
- 3.3 Assess jigs, fixtures, templates and gauges for compliance with WHS and other regulatory and risk management requirements
 - 3.4 Assess jigs, fixtures, templates and gauges, products and processes for sustainability
 - 3.5 Assess effectiveness of integration of jigs, fixtures, templates and gauges with lean systems and techniques used within the organisation
 - 3.6 Review integration of jigs, fixtures, templates and gauges with production management and control software
 - 3.7 Assess effectiveness of jigs, fixtures, templates and gauges for manufacturing process design and optimisation
 - 3.8 Review jigs, fixtures, templates and gauges in relation to product manufacturability and process maintainability
- 4 Report results
- 4.1 Record results of evaluation
 - 4.2 Provide documentation, such as tool, product and process analysis, and computer-aided design (CAD) files

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- determining role and benefit of jigs, fixtures, templates and gauges in a manufacturing process
- reviewing materials, treatments, finishing and assembly, and installation of jigs, fixtures, templates and gauges
- investigating sustainability implications of jigs, fixtures, templates and gauges
- selecting and using appropriate analysis techniques and software for evaluation of jigs, fixtures, templates and gauges
- identifying relevant WHS, regulatory and risk management compliance requirements
- relating use of jigs, fixtures, templates and gauges to:
 - lean manufacturing systems and techniques
 - requirements of manufacturing control software, such as system control and data acquisition software (SCADA)
- applying systems thinking, continuous improvement, and constraint and contingency management to evaluation of jigs, fixtures, templates and gauges
- reporting and documenting scoping, principles and techniques identification and evaluation of jigs, fixtures, templates and gauges and related manufacturing processes, graphics and models

Required knowledge

Required knowledge includes:

- WHS and regulatory compliance requirements, and risk management practices relevant to jigs, fixtures, templates and gauges and related manufacturing and maintenance processes
- typical range of jigs, fixtures, templates and gauge applications, including effects on:
 - repeatability of processes
 - accuracy and other quality requirements
 - labour and skill requirements for operations
- integration with or facilitation of jigs, fixtures, templates and gauges with lean manufacturing techniques, including:
 - standardisation
 - reduction of waste (also often called muda)
 - takt time
 - just in time (JIT)

- typical construction methods for jigs, fixtures, templates and gauges
- graphical representations and developments of jigs, fixtures, templates and gauges, including assemblies, component parts, operational overlays and user instructions
- dimensioning systems, including tolerances, limits and fits, and affect on manufacturing method
- materials and their applications in jigs, fixtures, templates and gauges
- positioning, locating and clamping methods
- design and simulation techniques, including use of CAD software for design and animations
- jig, fixture, template and gauge manufacturing techniques, such as:
 - fabrication and joining processes
 - machining (e.g. milling, turning and grinding)
 - post-processing of CAD files
 - computer numeric control (CNC) machining
 - electro-discharge machining (EDM)
 - 'rapid' (additive) processes
 - heat treatment,
 - surface treatments
 - finish grinding and polishing
- SCADA and other manufacturing control software and implications for jigs, fixtures, templates and gauges
- systems thinking, continuous improvement, constraint and contingency management, and comparative supply chain performance
- sustainability implications of jigs, fixtures, templates and gauges

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to evaluate jigs, fixtures, templates and gauges and their applications within manufacturing processes for safety, economy and fitness for purpose.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • determine parameters and context of jigs, fixtures, templates and gauges in manufacturing processes • review design and construction features, functions, applications and limitations of jigs, fixtures, templates and gauges • identify principles, design, analysis techniques and software required to evaluate and optimise jigs, fixtures, templates and gauges and related manufacturing processes • evaluate WHS, regulatory and risk management compliance • report and document results.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. • The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of

	<p>workplace relevant contexts) together with application of underpinning knowledge.</p> <ul style="list-style-type: none"> • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Jigs and fixtures	Jigs and fixtures are used to position, hold and support components for assembly, fabrication or machining operations. Jigs also guide operations, such as drilling. Jigs and fixtures are specially designed so that large numbers of components can be machined or assembled identically while maintaining the correct relationship and alignment between the tool and the work piece, and to ensure interchangeability of components. A jig or fixture is designed and built to hold, support and locate a component (part) to ensure that it is drilled, machined or fabricated within the specified limits
Templates	Templates are production tools used to accurately manufacture duplicate and interchangeable parts and may perform positioning and guidance functions as well as profile checking for machining and fabrication operations
Gauges	Gauges are used to check dimensions of components, machining operations or assemblies. For this unit gauges refers to:

	<ul style="list-style-type: none"> specifically manufactured items to allow quick dimensional or other checks, for example, go/no-go gauges with references or use of graduated devices or instruments
Features and functions, of jigs, fixtures, templates and gauges	<p>Features and functions of jigs, fixtures, templates and gauges include:</p> <ul style="list-style-type: none"> materials used in their construction method of fabrication (e.g. welding and machining) dimensions and tolerances method of holding or locating work pieces or production items method of installation and any capacity for operator adjustment during use method of adjustment for production changeover where the jig, fixture, template or gauge is being used by someone other than the designer or manufacturer, the degree of training required for its correct use any limitations on the use of the jig, fixture, template and gauge cost degree of saving generated by the jig, fixture, template or gauge over alternatives. The saving may be in: <ul style="list-style-type: none"> quality error rate production capacity labour requirement
WHS, regulatory requirements and enterprise procedures	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> WHS Acts and regulations relevant standards codes of practice from Australian and overseas engineering and technical associations and societies risk assessments safe work practices state and territory regulatory requirements
Standards and codes	<p>Standards and codes refer to all relevant Australian and international standards and codes applicable to evaluation of jigs and fixtures</p>
Appropriate technical and professional assistance	<p>Appropriate technical and professional assistance may include:</p> <ul style="list-style-type: none"> technical support and advice relating to elements which have intrinsic dangers, such as: <ul style="list-style-type: none"> high pressure energised fluid vessels

	<ul style="list-style-type: none"> • high temperatures and heat energy capacity • wiring with high current control voltages above extra low voltage • professional support for technologies, such as: <ul style="list-style-type: none"> • specialist electric motor drives and controllers • specialist materials, plastics, metal alloys and nano materials • special processes, foundry, alloy welding, heat treatment, sealing and fastening
Sustainability	<p>Sustainability is used to mean the entire sustainable performance of the organisation/plant, including:</p> <ul style="list-style-type: none"> • meeting all regulatory requirements • conforming to all industry covenants, protocols and best practice guides • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative WHS impact on employees, community and customer
Systems thinking	<p>Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain</p>
Continuous improvement implementation	<p>Continuous improvement implementation may relate to plant, products, processes, systems or services, including design, development, implementation or manufacture, commissioning, operation or delivery and maintenance.</p> <p>Improvement processes may include techniques, such as:</p> <ul style="list-style-type: none"> • balanced scorecard • current and future state mapping • measuring performance against benchmarks • process improvement, problem solving and decision making

	<ul style="list-style-type: none"> • data management, generation, recording, analysing, storing and use of software • training for improvement systems participation • technical training
Constraints and contingencies	<p>Constraints and contingencies may be:</p> <ul style="list-style-type: none"> • financial • organisational, procedural or cultural • physical constraints, such as limits to resources, limits to site access or logistical limitations
Lean principles	<p>Lean principles affecting tooling and related processes include:</p> <ul style="list-style-type: none"> • tooling and processing costs • capacity and responsiveness to product demand • quality of product • reliability of tooling, process and supply • waste minimisation which includes ease of tool change

MEM23135A Evaluate moulding tools and processes

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers the evaluation of design features and functions of moulding tools and related processes. It includes injection moulds, blow, extrusion, compression, rotating, thermoforming and die casting moulds, and moulds for low volume components.

Application of the Unit

This unit applies to moulding tools which manufacture components for engineering or related applications. It is suitable for people working as tool designers and maintenance technicians or paraprofessionals and draftspersons, and those pursuing manufacturing engineering or related technical qualifications and careers.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A Apply technical mathematics

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Determine scope of moulding tool evaluation	1.1	Identify moulding tools used and related moulded products for evaluation
		1.2	Confirm stakeholders to be consulted on evaluation
		1.3	Confirm that appropriate support, including technical and professional assistance, is available
		1.4	Identify relevant work health and safety (WHS) and regulatory requirements, standards, codes of practice, risk management and organisational procedures
2	Prepare for evaluation of moulding tools	2.1	Identify principles and techniques required to evaluate and optimise moulding tools and related manufacturing processes
		2.2	Select appropriate analysis techniques, software and software validation techniques
		2.3	Investigate sustainability implications of mould tooling and related manufacturing processes
3	Evaluate moulding tools and related manufacturing processes	3.1	Review design and construction features of functions of moulding tools and related manufacturing processes
		3.2	Assess moulding tools and related manufacturing processes for compliance with WHS and other regulatory and risk management requirements
		3.3	Assess moulding tools, products and processes for sustainability

- 3.4 Assess suitability of moulding tools for integration with quick changeover, preventative maintenance and other lean manufacturing-related techniques
 - 3.5 Review integration of moulding tools with production management and control software
 - 3.6 Apply systems thinking, continuous improvement, problem solving and decision making, and constraint and contingency management principles and techniques to evaluation
 - 3.7 Review tooling in relation to product manufacturability and process maintainability
- 4 Report results
 - 4.1 Record results of evaluation
 - 4.2 Provide documentation, such as tool, product and process analysis, and computer-aided design (CAD) files

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- determining role and performance requirements of moulding tools in manufacturing processes
- reviewing moulding tool design and construction
- reviewing features and functions of moulding tool in relation to products produced with the tool and any limitations of moulding tools in the related manufacturing processes
- selecting and using appropriate analysis techniques and software for evaluation and optimisation of moulding tools and related manufacturing processes
- identifying WHS, regulatory and risk management compliance
- investigating sustainability implications of moulding tools and associated manufacturing processes
- assessing use of moulding tools for integration with:
 - lean manufacturing systems and techniques
 - manufacturing control software, such as system control and data acquisition (SCADA) software
- applying systems thinking, continuous improvement, and constraint and contingency management to evaluation of moulding tools
- reporting and documenting scoping, principles and techniques identification and evaluation of tooling and related manufacturing processes, tooling graphics and models

Required knowledge

Required knowledge includes:

- design parameters, construction features, functions and context of moulding tools in manufacturing operations
- sources of technical and professional assistance
- WHS and regulatory compliance requirements, and risk management practices for moulding tools and related manufacturing and maintenance processes
- sustainability and lean systems implications for mould tooling and related manufacturing processes
- range of moulding processes that use tooling, including:
 - injection moulding
 - blow moulding
 - extrusion moulding

- compression moulding
- rotational moulding
- thermoform (vacuum) moulding
- die casting
- low volume and manual moulding
- moulding tool design features, functions and manufacturing techniques
- CAD design software and techniques, including software for:
 - analysis
 - mould flows
 - heat dissipation
- injection moulds process, including:
 - design features, functions and limitations
 - properties of materials for injection moulded components
 - enhanced injection moulding tools and processes
- blow moulds, including continuous and intermittent parison extrusion moulding, injection and stretch blow moulds:
 - enhanced blow moulding tools and techniques
 - properties of blow moulding materials)
- extrusion moulds, including:
 - design features, functions and limitations
 - properties of extruded materials
- compression moulds, including compression injection moulds:
 - design features functions and limitations
 - properties of materials for compression moulding
- rotating moulds:
 - design features functions and limitations
 - properties of materials for rotating moulded components, including acetal copolymer (POM)
- thermoforming (vacuum) moulds:
 - design features, functions and limitations
 - properties of materials for thermoformed components including amorphous thermoplastics and semicrystalline materials, with clearly defined melting points
- low volume moulds (e.g. flexible, laid up and sprayed shell moulds)
- die casting moulds:
 - design features functions and limitations
 - properties of materials for hot chamber die cast components
 - properties of materials for cold chamber die cast components
- analysis techniques, software and software validation techniques
- systems thinking, continuous improvement, problem solving and decision making, and constraint and contingency management principles and techniques

- reporting and documentation requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to evaluate moulding tools and processes for safety, economy and fitness for purpose.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • determine parameters and context of moulding tools in manufacturing processes • review design and construction features, functions, applications and limitations of moulding tools • identify principles, design, analysis techniques and software required to evaluate and optimise moulding tools and related manufacturing processes • evaluate WHS, regulatory and risk management compliance • report and document results.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. • The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. MEM23136A Evaluate stamping and forging tools

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers the evaluation of design features and functions of stamping and forging tools, and related processes. It includes cold piercing, punching, shearing, forming and drawing, and hot forging.

Application of the Unit

This unit applies to the evaluation of stamping or forging tools used in manufacturing and engineering applications.

It is suitable for people working as tool designers and maintenance technicians or paraprofessionals and draftspersons, and those pursuing manufacturing engineering or related technical qualifications and careers.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23109A	Apply engineering mechanic principles

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Determine scope of stamping or forging tool evaluation	1.1	Determine parameters and context of stamping and forging tools in manufacturing operations
		1.2	Confirm stakeholders to be consulted on evaluation
		1.3	Confirm that appropriate support, including technical and professional assistance, is available
		1.4	Identify relevant work health and safety (WHS) and regulatory requirements, standards, codes of practice, risk management and organisational procedures
2	Prepare for evaluation of forging or stamping tool	2.1	Identify principles and techniques required to evaluate and optimise stamping and forging tools
		2.2	Select appropriate analysis techniques
		2.3	Investigate sustainability implications of forging or stamping tooling
3	Evaluate stamping and forging tools and related manufacturing processes	3.1	Review design and construction features of functions of stamping and forging tools, and related manufacturing processes
		3.2	Assess stamping and forging tools and related manufacturing processes for compliance with WHS and other regulatory and risk management requirements
		3.3	Assess stamping and forging tools, products and processes for sustainability

- 3.4 Assess suitability of stamping and forging tools for integration with quick changeover, preventative maintenance and other lean manufacturing-related techniques
 - 3.5 Review integration of stamping and forging tools with production management and control software
 - 3.6 Apply systems thinking, continuous improvement, problem solving and decision making, and constraint and contingency management principles and techniques to evaluation
 - 3.7 Review tooling in relation to product manufacturability and process maintainability
- 4 Report results
 - 4.1 Record results of evaluation
 - 4.2 Provide documentation, such as tool, product and process analysis, and computer-aided design (CAD) files

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- determining type, role and performance requirements of stamping and forging tools in manufacturing processes
- reviewing stamping and forging tool design and construction, including tooling materials, treatment, finishing and assembly, tool installation and operation
- reviewing features and functions of stamping and forging tools in relation to products produced with the tool and any limitations of the tool in the related manufacturing processes
- selecting and using appropriate analysis techniques and software for evaluation and optimisation of moulding tools and related manufacturing processes
- identifying WHS, regulatory and risk management compliance
- investigating sustainability implications of stamping and forging tools and associated manufacturing processes
- assessing use of stamping and forging tools to:
 - lean manufacturing systems and techniques
 - requirements of manufacturing control software, such as system control and data acquisition (SCADA) software
- applying systems thinking, continuous improvement, and constraint and contingency management to evaluation of stamping and forging tools
- reporting and documenting scoping, principles and techniques identification and evaluation of tooling and related manufacturing processes, tooling graphics and models

Required knowledge

Required knowledge includes:

- hot and cold working and recrystallisation temperature
- functions and context of stamping and forging tools in manufacturing operations
- sources of technical and professional assistance
- WHS and regulatory compliance requirements and risk management practices for stamping and forging tools and related manufacturing and maintenance processes
- sustainability and lean systems implications for stamping and forging tools and related manufacturing processes
- stamping and forging processes, plant and tooling, including:
 - shearing
 - drawing

- impact deformation
- other forging processes
- forged component materials, including carbon, alloy and stainless steels, tool steel, copper, nickel, aluminium and titanium alloys
- stamping and forging tools general design features, functions and constraints, including:
 - shearing die design
 - deep drawing tool design
 - forging die tool design
- tool manufacture processes:
 - post-processing of CAD files
 - lathes, milling machines, grinding machines, jig borers and jig grinders
 - computer numeric control (CNC) machining
 - electro-discharge machining (EDM) and wire EDM
 - drilling and tapping
 - 'rapid' processes
 - heat treatment and surface treatments
 - finish grinding and polishing
- tool design and analysis software, including:
 - CAD software
 - analysis software, mould flows, heat dissipation and software validation techniques
- systems thinking, continuous improvement, problem solving and decision making, and constraint and contingency management principles and techniques
- reporting and documentation requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to evaluate stamping and forging tools and processes for safety, economy and fitness for purpose.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • determine parameters and context of stamping and forging tools in manufacturing processes • review design and construction features, functions, applications and limitations of stamping and forging tools • identify principles, design, analysis techniques and software required to evaluate and optimise stamping and forging tools and related manufacturing processes • evaluate WHS, regulatory and risk management compliance • report and document results.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. • The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with

	<p>application of underpinning knowledge.</p> <ul style="list-style-type: none"> • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Features and functions, of stamping and forging tools	<p>Features and functions of stamping and forging tools include:</p> <ul style="list-style-type: none"> • materials used in their construction • method of manufacture • method of installation and any capacity for operator adjustment during use • method of adjustment for production changeover • the degree of training of operators required before use of the tool • any limitations on the use of the tool • cost of manufacture
WHS, regulatory requirements and enterprise procedures	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> • WHS Acts and regulations • relevant standards • codes of practice from Australian and overseas engineering and

	<p>technical associations and societies</p> <ul style="list-style-type: none"> • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements
Standards and codes	Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular task
Appropriate technical and professional assistance	<p>Appropriate technical and professional assistance may include:</p> <ul style="list-style-type: none"> • technical support and advice relating to elements which have intrinsic dangers, such as: <ul style="list-style-type: none"> • high pressure • energised fluid vessels • high temperatures and heat energy capacity • wiring with high current control voltages above extra low voltage • professional support for technologies, such as: <ul style="list-style-type: none"> • specialist electric motor drives and controllers • specialist materials, plastics, metal alloys and nano materials • special processes, foundry, alloy welding, heat treatment, sealing and fastening
Sustainability	<p>Sustainability is used to mean the entire sustainable performance of the organisation/plant, including:</p> <ul style="list-style-type: none"> • meeting all regulatory requirements • conforming to all industry covenants, protocols and best practice guides • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community minimising the negative WHS impact on employees, community and customer
Systems thinking	<p>Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material,</p>

	software, internal services and personnel, and other organisations in the value chain
Continuous improvement implementation	<p>Continuous improvement implementation may relate to plant, products, processes, systems or services, including design, development, implementation or manufacture, commissioning, operation or delivery and maintenance.</p> <p>Improvement processes may include techniques, such as:</p> <ul style="list-style-type: none"> • balanced scorecard • current and future state mapping • measuring performance against benchmarks • process improvement, problem solving and decision making • data management, generation, recording, analysing, storing and use of software • training for improvement systems participation • technical training
Constraints and contingencies	<p>Constraints and contingencies may be:</p> <ul style="list-style-type: none"> • financial • organisational, procedural or cultural • physical constraints, such as limits to resources, limits to site access or logistical limitations
Lean principles	<p>Lean principles affecting tooling and related processes include:</p> <ul style="list-style-type: none"> • tooling and processing costs • capacity and responsiveness to product demand • quality of product • reliability of tooling, process and supply • waste minimisation which includes ease of tool change

Unit Sector(s)

Unit sector Engineering science

Custom Content Section

Not applicable.

MEM23137A Evaluate rolling tools and processes

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers evaluation of hot and cold rolling tools for structural profiles and roll forming of sheet and strip. It includes roll design criteria, consideration of materials properties and product features, work health and safety (WHS) and sustainability implications.

Application of the Unit

This unit applies to tooling used for industrial rolling of sheet and strip metal. It is suitable for people working as tool designers and maintenance technicians or paraprofessionals and draftspersons, and those pursuing manufacturing engineering or related technical qualifications and careers.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23109A	Apply engineering mechanic principles

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Determine scope of rolling tool evaluation	1.1	Identify rolling tools and related rolling products for evaluation
		1.2	Confirm stakeholders to be consulted on evaluation
		1.3	Confirm that appropriate support, including technical and professional assistance, is available
		1.4	Identify relevant WHS and regulatory requirements, standards, codes of practice, risk management and organisational procedures
2	Prepare for evaluation of rolling tools	2.1	Identify principles and techniques required to evaluate and optimise rolling tools and related manufacturing processes
		2.2	Select appropriate analysis techniques, software and software validation techniques
		2.3	Investigate sustainability implications of roll tooling and related manufacturing processes
3	Evaluate rolling tools and related manufacturing processes	3.1	Review design and construction features of functions of rolling tools and related manufacturing processes
		3.2	Assess rolling tools and related manufacturing processes for compliance with WHS and other regulatory and risk management requirements
		3.3	Assess rolling tools, roll products and related processes for sustainability

- 3.4 Assess suitability of rolling tools for integration with quick changeover, preventative maintenance and other lean manufacturing-related techniques
 - 3.5 Review integration of rolling tools with production management and control software
 - 3.6 Apply systems thinking, continuous improvement, problem solving and decision making, and constraint and contingency management principles and techniques to evaluation
 - 3.7 Review rolling tools in relation to product manufacturability and process maintainability
- 4 Report results
- 4.1 Record results of evaluation
 - 4.2 Provide documentation, such as tool, product and process analysis, and computer-aided design (CAD) files

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- determining features and performance requirements of rolling tools in the manufacturing processes
- reviewing hot and cold rolling tools design and construction, including tooling materials, treatment, finishing and assembly, tool installation and operation, related manufacturing processes and materials processed
- selecting and using appropriate analysis techniques and software for evaluation and optimisation of rolling tools and related manufacturing processes
- identifying WHS, regulatory and risk management compliance
- investigating sustainability implications of rolling tools and associated manufacturing processes
- assessing use of rolling tools for integration with:
 - lean manufacturing systems and techniques
 - manufacturing control software, such as system control and data acquisition (SCADA) software
- establishing of cross-sectional dimensions
- developing of a flower pattern for progressive forming
- establishing product and roll orientation
- designing rolls to suit the flower pattern
- adding support operations, such as fixtures, guides, side rolls, straightening devices, cutting and punching
- applying systems thinking, continuous improvement, and constraint and contingency management to evaluation of rolling tools
- reporting and documenting scoping, principles and techniques identification and evaluation of tooling and related manufacturing processes, tooling graphics and models

Required knowledge

Required knowledge includes:

- properties of hot and cold working of metals and alloys, including:
 - recrystallisation temperature
 - grain size and microstructure
- functions and context of rolling tools in a manufacturing operation
- sources of technical and professional assistance

- WHS and regulatory compliance requirements and risk management practices for rolling tools and related manufacturing and maintenance processes
- sustainability and lean systems implications for rolling tools and related manufacturing processes
- hot rolling, including:
 - critical design considerations for tooling
 - multi-pass, multi-roll (eg. 3 high, 4 high mills) and reversing mills
 - range of hot rolled products
 - effect of hot rolling and variations in rolling process on properties of rolled materials
 - ring rolling
- cold rolling, including:
 - critical design considerations for tooling
 - related processes (e.g. pickling, cleaning, annealing and slitting)
 - range of cold rolled products
 - properties of cold rolled materials, including strength and hardness increase and ductility decrease
- hot and cold rolling effects
- roll forming:
 - thread rolling for screws and bolts
 - combined rolling techniques
- roll pass design features:
 - product mechanical properties:
 - yield strength in tension and shear
 - work hardening strain rate effect
 - driven and non-driven rolls, and applied tension
 - friction in rolling process
 - roll bite geometry
 - deflection compensation
 - roll materials, manufacture and heat treatment
 - roll force, torque and power
 - product guide systems
 - roll and product temperature and cooling rate control
- roll forming pass design features
- labour and skills distribution requirements
- systems thinking, continuous improvement, constraint and contingency management, and comparative supply chain performance
- WHS and regulatory requirements, codes of practice, standards, risk management and registration requirements
- documentation, drawings, specifications, instructions required, process information and programming

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

MEM23138A Evaluate suitability of materials for engineering-related applications

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers the evaluation of materials for their suitability in engineering-related projects or processes. It requires consideration of materials in regards to design requirements, sustainability, product manufacturability, facilities, services, plant and tooling requirements, and safe use.

Application of the Unit

This unit applies to materials used in manufacturing, engineering or related applications. It is suitable for people working as manufacturing, maintenance, design and drafting technicians or paraprofessionals, and those pursuing manufacturing engineering or related technical qualifications.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A Apply technical mathematics

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Determine scope of materials evaluation	1.1	Identify materials to be evaluated and their related manufacturing or engineering-related applications
		1.2	Confirm stakeholders to be consulted on the evaluation
		1.3	Confirm that appropriate support, including technical and professional assistance, is available
		1.4	Identify relevant work health and safety (WHS) and regulatory requirements, standards, codes of practice, risk management and organisational procedures
2	Prepare for evaluation	2.1	Review design information for related products and processes for material specifications
		2.2	Identify analysis principles and techniques relevant to the materials, processes, services, plant and tooling covered by the evaluation
		2.3	Identify appropriate analysis software and software validation techniques
		2.4	Investigate sustainability implications of materials and related manufacturing or engineering processes
3	Evaluate materials and processes for an application	3.1	Determine properties of materials under evaluation, including supervising any required tests
		3.2	Assess materials and related processes for compliance with WHS and other regulatory and risk management requirements

- 3.3 Assess material, product and processes for sustainability
 - 3.4 Review materials for product and process suitability and process optimisation
 - 3.5 Apply systems thinking, continuous improvement, problem solving and decision making, and constraint and contingency management principles and techniques to evaluation
- 4 Report results
- 4.1 Record results of evaluation
 - 4.2 Provide documentation, such as tool, product and process analysis, and computer-aided design (CAD) files

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- determining context, specification and performance requirements of materials in manufacturing and engineering-related applications
- investigating sustainability implications of materials in the context of their manufacturing and engineering-related use
- identifying materials processing principles, techniques and requirements, including associated facilities, services, plant, tooling and software
- identifying WHS, regulatory and risk management compliance
- identifying materials and material use and processing for integration with:
 - lean manufacturing systems and techniques
 - manufacturing control software, such as system control and data acquisition (SCADA) software
- applying systems thinking, continuous improvement, and constraint and contingency management to evaluation of materials in manufacturing and engineering applications
- reporting and documenting results of evaluation

Required knowledge

Required knowledge includes:

- sources of technical and professional assistance
- sustainability implications of materials and related manufacturing and engineering-related products and processes
- WHS and regulatory compliance requirements and risk management practices related to materials, including use of material safety data sheets (MSDS)
- software options for materials and process analysis
- common materials, properties and structures in manufacturing and engineering, including:
 - mechanical, electrical, thermal, optical, chemical and magnetic properties
 - ferrous and non-ferrous metals and alloys
 - polymers
 - ceramics
 - glass
 - composites
- cold working of metals
- metal heat treatment

- processes for working, shaping and joining of materials, including:
 - metal machining
 - metal cutting
 - casting and moulding of metals
 - fabricating and welding of ferrous, non-ferrous metals and plastics
 - injection, compression and blow moulding of plastics
 - extrusion of plastics and metals
 - electroplating
 - powder coating
 - composite lay-up and moulding
 - sintering of plastic and metal powders
 - additive and rapid processes
 - casting of metals
 - stamping, drawing and roll forming of sheet metals
 - forging of metals
 - hot and cold rolling of billets, structural sections and coiled sheet
- systems thinking, continuous improvement, problem solving and decision making, and constraint and contingency management principles and techniques
- reporting and documentation requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

MEM23139A Design a basic single zone duct distribution system

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers the skills and knowledge required to use air flow and distribution principles used in heating, ventilation, air conditioning and refrigeration (HVAC/R) systems and to identify different system configurations to design a single, one-air distribution system and service related system components.

Application of the Unit

The unit applies to the design of single, one-air distribution system and service-related system components, including meeting environmental and cost control requirements. The unit may be applied to individuals working alone or as part of a design team.

The unit is suitable for people working as supervisors, technicians and HVAC/R draftspersons, and those pursuing manufacturing engineering or related technical qualifications and careers.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23006A	Apply fluid and thermodynamics principles in engineering
MEM30031A	Operate computer-aided design (CAD) system to produce basic drawing elements
MEM30033A	Use computer-aided design (CAD) to create and display 3-D models

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

- | | | | |
|---|---|-----|--|
| 1 | Determine design specification for basic single zone duct distribution system | 1.1 | Obtain and implement work health and safety (WHS) and environmental requirements for a given work area |
| | | 1.2 | Determine design requirements for the single zone duct distribution system from customer requirements, job specifications, and briefings or discussions with appropriate personnel |
| | | 1.3 | Identify and interpret relevant codes and standards |
| | | 1.4 | Prepare final specifications for the design and obtain relevant approvals |
| | | 1.5 | Identify sources of professional and technical assistance |
| | | 1.6 | Establish coordination and contingency management requirements of design work with other HVAC/R and building systems team members |
| | | 1.7 | Obtain resources required for the design task in accordance with enterprise procedures |
| 2 | Design basic single zone duct distribution system | 2.1 | Review options for basic single zone duct distribution system design and compare against specified requirements |
| | | 2.2 | Select most suitable single zone duct distribution system design to meet requirements |
| | | 2.3 | Use 3-D CAD system to design layout and other features of single zone duct distribution system against requirements |

- 2.4 Select appropriate duct materials and duct system components, including an appropriate fan for distribution
 - 2.5 Consult as appropriate on any design adjustments required to meet contingencies and unexpected situations
 - 2.6 Review design for cost reductions and compliance with environmental and regulatory requirements, as appropriate
 - 2.7 Review final design with appropriate personnel and make any required adjustments
- 3 Evaluate and finalise design
 - 3.1 Prepare final design documentation, including construction documentation if required
 - 3.2 Prepare final report according to enterprise procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- selecting air-diffusion
- sizing the system
- selecting fans
- designing duct work
- applying cost controlling strategies
- using 3-D CAD systems effectively
- interpreting drawings and specifications
- communicating effectively with others
- working in teams with others
- communicating technical and procedural requirements to others
- dealing effectively with unexpected situations

Required knowledge

Required knowledge includes:

- differentiation between static, velocity and total pressure in air distribution ducts
- laminar and turbulent flow
- use of Moody diagram for flow rate and pressure drop
- friction and dynamic pressure loss
- Colebrook-White formula
- sources of heat and pressure leakage and loss calculation
- noise minimisation
- fan laws
- control cost parameters
- duct design parameters, including:
 - standard duct sizes and gauges
 - available access and space
 - system performance requirements
- system sizing and balancing methods
- dual and single duct constant volume air systems
- variable volume air system
- multi-zone systems

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to design basic single zone duct distribution systems to meet customer requirements, including cost specifications, and WHS and other regulatory requirements.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently: <ul style="list-style-type: none"> • implement WHS workplace procedures and practices, including risk control measures • design basic single zone duct distribution systems to customer performance and cost requirements • select and size appropriate components, including fans and duct work • communicate technical requirements to others, including preparation of required drawings, CAD files and reports.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. • The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.

	<ul style="list-style-type: none"> • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

WHS requirements	<p>WHS requirements include:</p> <ul style="list-style-type: none"> • relevant legislation • protective equipment • material safety management systems, including use of material safety data sheets (MSDS) • hazardous substances and dangerous goods code • local safe operation procedures • WHS provisions in relevant awards and agreements
Environmental requirements	<p>Environmental requirements include:</p> <ul style="list-style-type: none"> • relevant legislation, regulations and codes • correct handling and disposal of liquid and solid waste • elimination or minimisation of gas, fume, vapour and smoke emissions, including fugitive emissions • dust elimination, minimisation and control • minimisation of energy and water use • elimination or control of excessive noise • use and recycling of refrigerants
Single zone duct distribution	A single zone duct distribution system is a basic central

system	system which can supply a constant air volume or a variable air volume at low, medium or high pressure through a single duct
Appropriate personnel	Appropriate personnel may include: <ul style="list-style-type: none"> • supervisor • leading hand • foreman • manager • engineer • technician • trainer • mentor • team member • customer • client
Enterprise procedures	Enterprise procedures may include: <ul style="list-style-type: none"> • use of tools and equipment • operating instructions, including job sheets, plans, drawings and designs • reporting and communication • manufacturer specifications • site operational procedures • references to industry standards
Resources	Resources may include: <ul style="list-style-type: none"> • reference manuals • scientific calculator • 3-D CAD software • computer workstation and software, either stand alone or networked • test apparatus • appropriate tools of trade, equipment and materials • standard duct sizes and gauges
Contingencies and unexpected situations	Contingencies and unexpected situations that arise during the course of the design process may include: <ul style="list-style-type: none"> • cost or time overruns • unavailability of required components • changes in customer requirements after design process has started • regulatory change • site or building features not on plans or drawings

	<ul style="list-style-type: none">• other situations not included in customer brief or normal enterprise procedures

MEM23140A Determine operational parameters for building HVAC hydronic systems

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers the skills and knowledge required to identify fluid flow and distribution characteristics of hydronic systems and measure system component performance, including chillers, boilers and flow control devices.

Application of the Unit

The unit applies to technicians required to determine features and performance of heating, ventilation and air conditioning (HVAC) hydronic systems, including performance and characteristics of components, piping and the overall system. The unit applies to design, manufacture, installation or servicing work in HVAC enterprises.

The unit is suitable for people working as, supervisors, technicians, and HVAC draftspersons and those pursuing manufacturing engineering or related technical qualifications and careers.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A Apply technical mathematics

MEM23006A Apply fluid and thermodynamics principles in engineering

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

- | | | | |
|---|---|-----|--|
| 1 | Determine parameters of HVAC hydronic system assessment | 1.1 | Obtain and implement work health and safety (WHS) and environmental requirements for a given work area |
| | | 1.2 | Identify consultation and coordination requirements with, client and other HVAC and building systems team members |
| | | 1.3 | Identify characteristics and specifications of the HVAC hydronic system from installations and/or mechanical service drawings, data sheets and manufacturer specifications |
| | | 1.4 | Identify system components relevant to determination of operational parameters |
| | | 1.5 | Predict system and component performance using installation/service drawings, data sheets and manufacturer specifications |
| | | 1.6 | Identify sources of professional and technical assistance |
| | | 1.7 | Obtain resources required for HVAC hydronic task in accordance with enterprise procedures |
| 2 | Determine flow component performance | 2.1 | Identify operating characteristics and performance data of pumps |
| | | 2.2 | Identify flow control devices and check piping for correct sizing |
| | | 2.3 | Measure and check fluid flow against specifications |

- 3 Identify required hydronic piping system
 - 3.1 Establish the operational requirements of the piping system in a HVAC installation
 - 3.2 Select a suitable hydronic piping system from given piping specifications and data
 - 3.3 Apply enterprise risk management procedures for contingencies and unexpected situations

- 4 Analyse hydronic system performance
 - 4.1 Verify system performance using practical or software modelling techniques
 - 4.2 Model HVAC system to determine system expected performance
 - 4.3 Document system performance analysis according to enterprise procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting drawings and specifications
- recognising system features and operational modes from drawings, manuals and specifications
- selecting and testing of pumps
- measuring of flow rates
- selecting valve/flow control devices and piping for given applications
- determining system performance parameters and analysing against specifications
- using appropriate modelling software
- communicating effectively with others
- working in teams with others
- communicating technical and procedural requirements to others
- dealing effectively with unexpected situations

Required knowledge

Required knowledge includes:

- system operation features:
 - closed/open systems
 - pump head/lift and static head (high rise building)
 - system friction losses
 - net positive suction head
 - system curves
- pumps:
 - types
 - selection criteria
 - performance characteristics
 - bladder tanks
 - coil characteristics
 - heat exchangers (plate, shell and tube, tube in tube)
 - flow measurements
 - flow switchers

- boilers (types and performance characteristics)
- cooling towers types and elementary cooling thermodynamics
- valves:
 - types and applications
 - throttle characteristics
 - flow measurements
 - selection and applications
- pipe sizing and relationship to system performance
- standard pipe sizes and specifications

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to identify fluid flow and distribution characteristics of hydronic systems and measure system component performance, including chillers, boilers and flow control devices.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently: <ul style="list-style-type: none"> • implement WHS workplace procedures and practices, including risk control measures • determine operational parameters for building HVAC hydronic systems • measure individual component performance of: <ul style="list-style-type: none"> • chillers • boilers • pumps • piping • flow control devices • communicate technical requirements to others, including preparation of required drawings, CAD files and reports.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then an appropriate simulation must be used where the range of

	<p>conditions reflects realistic workplace situations.</p> <ul style="list-style-type: none"> The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.
Method of assessment	<ul style="list-style-type: none"> Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

WHS requirements	<p>WHS requirements include:</p> <ul style="list-style-type: none"> legislation protective equipment material safety management systems hazardous substances and dangerous goods code
-------------------------	---

	<ul style="list-style-type: none"> • local safe operation procedures • awards provisions

MEM23141A Complete a building thermal performance survey

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers the skills and knowledge required to carry out a detailed heat load estimate for a multiple zone commercial/industrial building and then analyse building thermal performance and document results.

Application of the Unit

The unit applies to technicians in heating, ventilation and air conditioning (HVAC) manufacturing, servicing and maintenance enterprises who are required to conduct a building performance survey in order to inform the design and specification of HVAC equipment and system/s for a multiple zone commercial/industrial building, including consideration of improvements to building design.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit of competency.

Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23006A	Apply fluid and thermodynamics principles in engineering
MEM23142A	Determine psychrometric processes and system performance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Estimate heat load for a multiple zone commercial/industrial building	1.1	Obtain and implement work health and safety (WHS) and environmental requirements for a given work area
		1.2	Determine extent of the performance survey from work sheets, drawings, building specifications or other documentation and discussions with appropriate personnel
		1.3	Determine sources of heat gains
		1.4	Coordinate work effectively with all team members
		1.5	Obtain and check resources and equipment required for the performance survey
2	Analyse the air conditioning heat and cooling load	2.1	Complete room sensible and latent heat estimates of a multiple zone building
		2.2	Identify peak effective room latent, and sensible and latent heat loads over time of day and year for each zone
		2.3	Determine the thermal performance of the building using simulation software
3	Investigate building design improvement options	3.1	Analyse alternative building design improvement options with respect to the effect on thermal performance using simulation software
		3.2	Identify unacceptable high thermal loads on the building using check figures and industry standards

- 3.3 Prepare recommendations for changes in building design/treatment to eliminate unacceptably high thermal loads
 - 3.4 Document and recommend improvements of thermal performance of the building to appropriate personnel
 - 3.5 Consult as required on unexpected situations and take appropriate action
- 4 Specify system design
 - 4.1 Determine equipment size, including coil and air handling unit capacities for constant and variable volume systems, and central refrigeration and boiler capacities based on the recommendations
 - 4.2 Document the completed survey with all recommendations, building design improvements/treatments, and appropriate system design specifications according to enterprise procedures
 - 4.3 Prepare a formal survey report in consultation with appropriate personnel and enterprise procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- sourcing appropriate drawings, documentation and specifications for buildings
- interpreting building design information for sources of heat gains
- computing standard thermal values in relation to a commercial/industrial building
- computing internal and system heat gains
- using American Society of Heating, Refrigerating and Air Conditioning Engineers (ASHRAE) Handbook or similar Australian data books to determine design data
- using suitable computer software to determine equipment size for constant and variable volume systems and central refrigeration and boiler capacities
- communicate effectively with others
- working in teams with others
- communicating technical and procedural requirements to others
- dealing effectively with unexpected situations

Required knowledge

Required knowledge includes:

- heat gains in buildings
- heat transfer theory
- thermal properties of building materials, including materials designed to promote thermal conductivity or insulation
- heat transfer in buildings, including effects of:
 - ambient conditions
 - materials and equipment
 - windows and films
 - design effects, including external design, room and door design, and sun position calculations
- building heat flow, losses and gains, including:
 - convection
 - radiation
 - conduction
 - heat paths
- building heat loss and gain calculations

- thermal properties of buildings, including losses
- people loads
- cost implications of air conditioning and heating designs
- heat loads calculations, including lighting and equipment
- thermal lag
- relevant legislation and codes of practice
- energy efficiency and sustainability

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • implement WHS workplace procedures and practices, including the use of risk control measures • demonstrate essential knowledge and skills to complete a building thermal performance survey • demonstrate competency within a timeframe typically expected of the discipline, work function and industrial environment • carry out a building survey and load estimate for a multiple zone commercial building • complete a building thermal performance survey for different buildings. This must include: <ul style="list-style-type: none"> • minimum five (5) zones • internal and system heat gains • infiltration and fresh air rates • heat flow through windows accounting for internal and external shading • heat flows through building fabric • use of simulation software.

MEM23142A Determine psychrometric processes and system performance

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers the skills and knowledge required to identify psychrometric processes and determine system performance in a commercial building.

Application of the Unit

The unit applies to technicians in enterprises designing, manufacturing, installing, servicing or maintaining heating, ventilation, air conditioning and refrigeration (HVAC/R) equipment. The unit is suitable for people working as, supervisors, technicians and HVAC/R draftspersons, and those pursuing manufacturing engineering or related technical qualifications and careers.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit.

Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23006A	Apply fluid and thermodynamics principles in engineering

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Review psychrometric processes	1.1	Obtain and implement work health and safety (WHS) and environmental requirements for a given work area
		1.2	Apply knowledge of psychrometric processes to analytical solutions to HVAC/R systems according to enterprise procedures
		1.3	Diagnose air temperature and humidity problems using psychrometric charts
		1.4	Consult appropriate personnel to ensure that work is coordinated effectively with others
2	Analyse the psychrometric and system performance of HVAC/R systems	2.1	Determine plant/system capacity and airflow requirements for effects of coil bypass factor and apparatus dew point (ADP) and partial load control
		2.2	Calculate dehumidified air quantity using both target superheat (TSH) and effective room sensible heat (ERSH) methods
		2.3	Establish plant capacity and air flow rates for the system/building
		2.4	Establish air side systems and determine system performance
		2.5	Determine systemic performance parameters
		2.6	Consult as required on any contingencies and unexpected situations and take appropriate action based on specifications, codes and standards, and enterprise

procedures

- | | | | |
|---|--|-----|---|
| 3 | Document and report on psychrometric and HVAC/R system performance | 3.1 | Evaluate solutions to psychrometric and system performance to determine their effectiveness |
| | | 3.2 | Report and document analysis, including details of all findings, calculations and assumptions, according to enterprise procedures |
| | | 3.3 | Prepare and justify recommendations for any required actions in relation to HVAC/R equipment |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- plotting the psychrometric performance of a given HVAC/R coil
- calculating the psychrometric performance of the coil
- calculating the psychrometric performance of HVAC/R spray equipment
- calculating required plant capacity and airflow rates
- determining the psychrometric performance of a HVAC/R system in operation, including partial load control
- interpreting drawings and specifications
- communicating effectively with others
- working in teams with others
- communicating technical and procedural requirements to others
- dealing effectively with unexpected situations

Required knowledge

Required knowledge includes:

- adiabatic/evaporative cooling
- isothermal humidification
- cooling and dehumidification with high latent load
- cooling and dehumidification with all outdoor air
- cooling and dehumidification with all outdoor air and with dehumidified air requirements less than supply air
- cooling with evaporative humidification
- spray processes to include cooling and dehumidification, cooling and humidification with heated spray water, heating and humidification:
 - partial load processes
 - reheat
 - bypass of return air and mix of return air and outside air:
 - variable air volume
 - variable coil effective surface temperature
- analysis of cooling coil selection and performance
- psychrometric analyses, formulae and charts
- indirect evaporative coolers

- analysis of cooling coil selection and performance
- cooling tower characteristics

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • implement WHS workplace procedures and practices, including the use of risk control measures • demonstrate essential knowledge and skills to determine psychrometric processes and system performance • demonstrate competency within a timeframe typically expected of the discipline, work function and industrial environment • demonstrate the ability to determine psychrometric processes and system performance consistently for commercial buildings. This includes determining the plant capacity and airflow rates for a building and the ability to analyse system 'air side systems' and determine system performance.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. MEM23143A Apply energy management principles

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers the skills and knowledge required to determine an implementation strategy for an energy management program for the purpose of monitoring, fault-finding and managing a building management system (BMS).

Application of the Unit

The unit applies to technicians in enterprises designing, manufacturing, installing, servicing or maintaining heating, ventilation, air conditioning and refrigeration (HVAC/R) equipment who are required to determine or audit energy management procedures for a building. The unit assumes that the building has a BMS.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23006A	Apply fluid and thermodynamics principles in engineering

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

- | | | | |
|---|---|-----|--|
| 1 | Determine energy sources used in HVAC/R and their primary function in building energy management programs | 1.1 | Obtain and implement work health and safety (WHS) and environmental requirements for a given work area |
| | | 1.2 | Identify passive energy characteristics in the building design and predict their impact on energy management |
| | | 1.3 | Identify common energy sources, their standard units and local supply authorities and evaluate for safe usage |
| | | 1.4 | Establish the operating functions of all principle hardware components in a BMS |
| | | 1.5 | Identify energy requirements for major system components operating within their normal range |
| | | 1.6 | Consult with appropriate personnel to ensure that work is coordinated effectively with others |
| 2 | Monitor a building management system | 2.1 | Check and monitor equipment status using energy management functions and data from BMS |
| | | 2.2 | Use BMS software to access, monitor and control system components |
| | | 2.3 | Check status of monitored BMS for compliance with specified normal operating parameters and environmental requirements |
| | | 2.4 | Predict the annual consumption of major system components |
| | | 2.5 | Consult as required on any contingencies and unexpected situations and take appropriate action based |

- on specifications, codes and standards, and enterprise procedures
- 3 Conduct an energy audit for a building
 - 3.1 Determine objectives of a HVAC/R maintenance management system
 - 3.2 Evaluate energy costs and tariffs for local supply authorities
 - 3.3 Determine methodology for the auditing process, including data gathering techniques
 - 3.4 Prepare appropriate energy audit documentation and implementation strategy for an energy management program in a multi-storey building
 - 4 Plan efficient energy management operations
 - 4.1 Incorporate requirements of an energy efficient plant control system into building operation procedures, including suitable contingency and suitable risk management procedures
 - 4.2 Compile plant operating annual reporting timetable
 - 4.3 Advise on staff awareness raising policy for energy conservation in a multi-storey building

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- monitoring data of a BMS
- implementing energy management procedures for a building
- planning and conducting an energy audit
- using relevant software tools effectively
- interpreting drawings and specifications
- communicating effectively with others
- working in teams with others
- communicating technical and procedural requirements to others
- dealing effectively with unexpected situations

Required knowledge

Required knowledge includes:

- units of measure, characteristics and supply for common energy sources
- typical energy sources, characteristics and uses
- energy usage within a multi-storey building
- energy auditing process
- system operation for energy efficiency and relevant standards
- implementing energy management procedures for a building
- BMS attributes, such as functions, hardware, inputs and outputs

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • implement WHS workplace procedures and practices, including the use of risk control measures

Where assessment occurs off the job, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. • The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

WHS requirements	<p>WHS requirements include:</p> <ul style="list-style-type: none"> • legislation • protective equipment • material safety management systems • hazardous substances and dangerous goods code • local safe operation procedures • awards provisions
Environmental requirements	<p>Environmental requirements include:</p> <ul style="list-style-type: none"> • relevant legislation, regulations and codes • correct handling and disposal of liquid and solid waste • elimination or minimisation of gas, fume, vapour and smoke emissions, including fugitive emissions • dust elimination, minimisation and control • minimisation of energy and water use • elimination or control of excessive noise • use and recycling of refrigerants
Appropriate personnel	<p>Appropriate personnel may include:</p> <ul style="list-style-type: none"> • supervisor • leading hand • foreman • manager • engineer • technician • trainer • mentor • team member • customer • client
Common energy sources	<p>Common energy sources include:</p> <ul style="list-style-type: none"> • electricity • steam • hot water

	<ul style="list-style-type: none"> • high temperature hot water • natural gas • liquefied petroleum gas (LPG) • solar • waste heat • petrol • diesel
Enterprise procedures	<p>Enterprise procedures may include:</p> <ul style="list-style-type: none"> • the use of tools and equipment • instructions, including job sheets, plans, drawings and designs • reporting and communication • manufacturer specifications • operational procedures • industry standards
Energy management	<p>Energy management may include:</p> <ul style="list-style-type: none"> • night cycles • optimum stop/start • time and event programs • night purge • outside air percentage control • enthalpy • power demand control • duty cycle • presence detection • lighting control
Auditing process	<p>Auditing process may include:</p> <ul style="list-style-type: none"> • energy costs and tariffs • energy consumption • predicting future costs • plotting consumption trends • historical data • collecting information using surveys • comparisons of actual to recorded usage • energy balance • instrumentation • BMS • estimating savings potential

MEM23144A Contribute to the design of a commercial refrigeration system

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers the skills and knowledge required to contribute to the design of commercial refrigeration systems or for less complex systems to undertake the complete design. The unit includes applying of refrigeration and food storage technology, using standard manufactured components and piping, following design specifications, documenting system design and complying with safety and regulatory requirements.

Application of the Unit

The unit applies to technicians in enterprises that design commercial refrigeration equipment. The unit applies to team situations where the technician may working with engineers and other technicians from the heating, ventilation, air conditioning and refrigeration (HVAC/R) and other disciplines on large design projects as well as individual design work that is within the technician's skill and knowledge.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23006A	Apply fluid and thermodynamics principles in engineering
MEM23129A	Evaluate thermal loads in heating, ventilation, air conditioning and refrigeration

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Determine optimum system design for a given application	1.1	Obtain and implement work health and safety (WHS) and environmental requirements for a given work area
		1.2	Consult appropriate personnel to determine system specifications and final confirmation is obtained
		1.3	Plan design development work to meet scheduled timelines in consultation with others involved on the worksite
2	Design system	2.1	Design system taking into account safety, regulatory requirements, relevant standards, system specifications and budgetary constraints
		2.2	Determine selected equipment required for the systems and locations in accordance with the design specifications and enterprise procedures
		2.3	Check system design draft for compliance with the design brief, regulatory requirements and environmental standards
		2.4	Document, validate and approve system design according to enterprise procedures
		2.5	Consult as appropriate on any design adjustments required to meet contingencies and unexpected situations

- 3 Validate system performance
 - 3.1 Establish operating criteria for expected ambient conditions
 - 3.2 Determine and validate likely operating characteristics for a given refrigeration load against the design specifications and standards
 - 3.3 Adjust the functional design and remap operating characteristics to achieve optimal system performance
 - 3.4 Program the control system to meet the operational requirements
 - 3.5 Document the designed system and its validation according to enterprise procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- selecting appropriate system components
- applying relevant standards and regulatory requirements to the design task
- documenting technical information and designs
- interpreting and applying manufacturers' data, tables and specifications
- using relevant software tools effectively
- interpreting drawings and specifications
- communicating effectively with others
- working in teams with others
- communicating technical and procedural requirements to others
- dealing effectively with unexpected situations

Required knowledge

Required knowledge includes:

- standards and codes relevant to commercial refrigeration systems
- calculation of capacity in heat exchangers
- commercial refrigeration systems features and components:
 - applications
 - system requirements
 - operating conditions and criteria
 - refrigerants
 - refrigeration cycle
 - evaporators
 - condensers
 - compressors
 - liquid expansion devices
 - system load balance point
 - line sizing
 - automatic controls
- commercial refrigeration and integration with an energy management system (E.M.S)
- E.M.S. control components and the function and operating parameters
- E.M.S system design, applications, operation and maintenance

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • implement WHS workplace procedures and practices, including the use of risk control measures • demonstrate essential knowledge and to design a commercial refrigeration system • demonstrate competency within a timeframe typically expected of the discipline, work function and industrial environment • demonstrate the design of commercial a refrigeration system consistently. One application must be related to food storage. The design must include standard manufactured components and piping, adherence to design specifications, documenting system design and compliance with safety and regulatory requirements.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. • The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. MEM23145A Apply codes and regulations to air conditioning designs

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers the skills and knowledge required to apply standards, codes of practice and regulatory requirements to produce air conditioning designs for typical large scale plant and multi-zone applications.

Application of the Unit

The unit applies to heating, ventilation, air conditioning and refrigeration (HVAC/R) technicians in enterprises that design air conditioning systems for typical large scale plant and multi-zone applications. The unit may be applied to working within a design team or to individual design tasks.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit.

Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23006A	Apply fluid and thermodynamics principles in engineering
MEM23140A	Determine operational parameters for building HVAC/R hydronic systems
MEM23142A	Determine psychrometric processes and system performance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Prepare for design compliance analysis	1.1	Obtain and implement work health and safety (WHS) and environmental requirements for a given work area
		1.2	Identify air conditioning codes and regulations relevant to zoning and usage together with environmental requirements from the client design requirement brief
		1.3	Consult with appropriate personnel to ensure that work is coordinated effectively with others
		1.4	Obtain equipment and resources needed for the task in accordance with enterprise procedures
2	Analyse design for compliance	2.1	Check and validate proposed air conditioning system compliance against relevant codes and regulations
		2.2	Prepare recommendations on any identified compliance issues relating to codes and regulations
		2.3	Discuss recommendations on any proposed design modifications with appropriate personnel, as required
		2.4	Consider alternative design and other solutions to meet codes and regulations requirements are proposed according to enterprise procedures if appropriate
3	Record findings	3.1	Document outcomes of the analysis according to enterprise procedures
		3.2	Document recommendations for any design rectifications, including details of all findings,

calculations and assumptions

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting air conditioning standards, codes and regulations, including relevant WHS and environmental standards, regulations and codes
- applying relevant standards and regulatory requirements to the design task
- interpreting client requirements and specifications against codes and regulations
- documenting technical information and designs for compliance
- using relevant software tools effectively
- communicating effectively with others
- communicating technical and procedural requirements to others
- dealing effectively with unexpected situations

Required knowledge

Required knowledge includes:

- relevant design criteria for typical large scale air conditioning plant and multi-zone applications
- air conditioning system selection criteria
- zoning and building usage and relevance to regulatory compliance of large scale air conditioning systems
- regulatory requirements which can impact on final design

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • implement WHS workplace procedures and practices, including the use of risk control measures • demonstrate essential knowledge and skills to apply

MEM23146A Contribute to the design of industrial refrigeration systems

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers the skills and knowledge required to contribute to the design of industrial refrigeration systems or for less complex systems to undertake the complete design. The unit includes the determination of the specific type of system and selection of major system components and materials using manufacturer's data to determine performance aspects of systems for a given application.

Application of the Unit

The unit applies to technicians in enterprises that design whole refrigeration systems or design modifications to existing systems, including systems incorporating multiple evaporators and compressors, moderate and low temperature, indirect refrigeration and flooded systems. The unit applies to design work undertaken as part of a design team comprising engineers and other technicians and to individual design tasks within the technician's skill and knowledge.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23006A	Apply fluid and thermodynamics principles in engineering

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Determine design specification and select components for an industrial refrigeration system	1.1	Obtain and implement work health and safety (WHS) and environmental requirements for a given work area
		1.2	Determine design requirements from client requirements, job specifications, briefings and/or discussions with appropriate personnel
		1.3	Identify and interpret relevant codes and standards
		1.4	Consult with appropriate personnel to ensure that work is coordinated effectively with others.
		1.5	Obtain equipment and resources needed for the task in accordance with enterprise procedures and check for correct operation and safety
2	Design system	2.1	Select the most suitable design for an industrial refrigeration system to meet the specified requirements
		2.2	Plan design development work to meet scheduled timelines
		2.3	Check system design draft for compliance with the design brief, regulatory requirements and environmental standards
3	Analyse and adjust system performance	3.1	Analyse system performance under variable conditions to client design brief and adjust component selection to meet performance criteria
		3.2	Determine fulfilment of required capacity under full and

partial load conditions using appropriate resources

- | | | | |
|---|------------------------|-----|--|
| 4 | Validate system design | 4.1 | Verify final design using enterprise procedures for compliance and regulatory requirements |
| | | 4.2 | Document final system design using appropriate equipment to industry standards for client approval |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting client requirements and specifications
- determining performance aspects of systems
- interpreting current refrigeration codes and regulations
- selecting of major system components and materials using manufacturer's data
- using relevant software tools effectively
- interpreting drawings and specifications
- communicating effectively with others
- communicating technical and procedural requirements to others
- documenting technical information and designs
- dealing effectively with unexpected situations
- working in teams with others

Required knowledge

Required knowledge includes:

- standards and codes of practice
- design criteria
- moderate and low temperature industrial refrigeration systems
- multiple evaporators and multiple compressors
- indirect refrigeration systems
- flooded systems
- cryogenic systems
- basic control sequences

MEM23147A Contribute to the design of hydronic systems

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers the knowledge and skills required to contribute to the design of hydronic systems or for less complex systems to undertake the complete design. The unit includes analysis of characteristics of water flow in a given pipework system; selection and sizing of pipes, fittings, suitable pumps, and associated fittings and valves.

Application of the Unit

The unit applies to heating, ventilation, air conditioning and refrigeration (HVAC/R) technicians in manufacturing, servicing and maintenance enterprises required to undertake design work on hydronic systems. The unit applies to design work undertaken as part of a design team comprising engineers and other technicians and to individual design tasks within the technician's skill and knowledge.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23006A	Apply fluid and thermodynamics principles in engineering
MEM23140A	Determine operational parameters for building HVAC/R hydronic systems

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Prepare design specification	1.1	Obtain and implement work health and safety (WHS) and environmental requirements for a given work area
		1.2	Identify the essential elements of a hydronic system to meet client design brief
		1.3	Consult with appropriate personnel to ensure that work is coordinated effectively with others
		1.4	Obtain equipment and resources needed for the task in accordance with enterprise procedures and check for correct operation and safety
2	Design system	2.1	Select a hydronic system design to meet the client requirements
		2.2	Plan design development work to meet scheduled timelines
		2.3	Check system design draft for compliance with the design brief, regulatory requirements and environmental standards
		2.4	Provide solutions to unplanned situations consistent with enterprise procedures
3	Analyse and adjust system performance	3.1	Apply knowledge of hydronic system operating parameters to analytical solutions to system design
		3.2	Analyse system performance under variable conditions and adjust component selection to meet performance

- criteria
- 3.3 Determine fulfilment of required capacity under full and partial load conditions using appropriate resources
- 4 Validate system design
- 4.1 Verify final design using enterprise procedures for compliance and regulatory requirements
 - 4.2 Document final system design using appropriate equipment to industry standards for client approval

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting client requirements and specifications
- determine performance aspects of systems
- sizing pipes
- selecting optimum pump performance
- minimising system friction losses
- selecting major system components and materials using manufacturers data
- using relevant software tools effectively
- interpreting drawings and specifications
- communicating effectively with others
- communicating technical and procedural requirements to others
- documenting technical information and designs
- dealing effectively with unexpected situations
- working in teams with others

Required knowledge

Required knowledge includes:

- principles of fluid flow
- pump performance and selection
- pipe sizes
- valve performance and selection
- pressure loss and static head calculations
- calculating system (static and dynamic) head
- optimum pump selection

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

MEM23148A Develop energy management solutions

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers the skills and knowledge required to develop energy management solutions. This includes performing a complete energy audit of a large commercial or industrial building and making recommendations on reducing energy usage.

Application of the Unit

The unit applies to heating, ventilation, air conditioning and refrigeration (HVAC/R) technicians who are required to investigate, advise and report on energy management solutions. As part of this work the technician may be required to conduct complete energy audits and model and validate solutions to improve energy use.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23006A	Apply fluid and thermodynamics principles in engineering
MEM23142A	Apply psychrometric processes and system performance
MEM23143A	Apply energy management principles
MEM23154A	Analyse and service heating, ventilation, airconditioning and refrigeration control systems

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

- | | | | |
|---|--|-----|---|
| 1 | Prepare for an energy audit | 1.1 | Obtain and implement work health and safety (WHS) and environmental requirements for a given work area |
| | | 1.2 | Determine procedure for completing an effective building energy audit |
| | | 1.3 | Collect data from building distribution diagrams and metering equipment |
| | | 1.4 | Ensure appropriate test equipment is maintained and is used correctly |
| | | 1.5 | Consult with appropriate personnel are to ensure that work is coordinated effectively with others |
| | | 1.6 | Obtain equipment and resources needed for the task in accordance with enterprise procedures |
| 2 | Analyse data and prepare energy use profiles | 2.1 | Select suitable energy simulation program for energy audit analysis using appropriate resources |
| | | 2.2 | Analyse test data taking into consideration seasonal effects |
| | | 2.3 | Prepare building energy use profiles using appropriate equipment |
| | | 2.4 | Identify major energy consuming components, their likely profiles and total consumption using enterprise procedures |

- | | | | |
|---|-----------------|-----|--|
| 3 | Model solutions | 3.1 | Determine significant inputs of the simulated results |
| | | 3.2 | Model alternate energy profiles using appropriate equipment to evaluate various components of a building |
| | | 3.3 | Provide solutions to unplanned situations consistent with enterprise procedures |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- monitoring data of a building management system (BMS)
- implementing energy management procedures for a building
- planning and conducting an energy audit
- using relevant software tools effectively
- interpreting drawings and specifications
- communicating effectively with others
- applying methods of energy conservation
- applying testing and data collection procedures
- determining electrical load control
- operating HVAC/R system control settings
- working in teams and with others
- communicating technical and procedural requirements to others
- dealing effectively with unexpected situations

Required knowledge

Required knowledge includes:

- energy usage within a multi-storey building, including major energy consuming plant
- criteria for determining selection and relevance of data for energy audits
- energy auditing process
- implementing energy management procedures for a building
- BMS attributes, such as functions, hardware, inputs and outputs
- contemporary methods in best practice in managing energy usage

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • implement WHS workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range • demonstrate essential knowledge and skills to carry out an energy audit of a building • demonstrate the competency within a timeframe typically expected of the discipline, work function and industrial environment • demonstrate ability to develop performance energy management solutions using simulation software and make predictive reports. Competency must be demonstrated for different building sites.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. • The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred

	<p>to other circumstances.</p> <ul style="list-style-type: none"> • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

WHS requirements	<p>WHS requirements include:</p> <ul style="list-style-type: none"> • legislation • protective equipment • material safety management systems • hazardous substances and dangerous goods code • local safe operation procedures • awards provisions
Environmental requirements	<p>Environmental requirements include:</p> <ul style="list-style-type: none"> • relevant legislation, regulations and codes • correct handling and disposal of liquid and solid waste • elimination or minimisation of gas, fume, vapour and smoke emissions, including fugitive emissions • dust elimination, minimisation and control • minimisation of energy and water use • elimination or control of excessive noise • use and recycling of refrigerants
Appropriate personnel	<p>Appropriate personnel may include:</p> <ul style="list-style-type: none"> • supervisor • leading hand • foreman • manager • engineer • technician

	<ul style="list-style-type: none"> • trainer • mentor • team member • customer • client
Resources	<p>Resources may include:</p> <ul style="list-style-type: none"> • energy management software • data from suitable building energy management systems • seasonal variation data
Enterprise procedures	<p>Enterprise procedures may include:</p> <ul style="list-style-type: none"> • the use of tools and equipment • instructions, including job sheets, plans, drawings and designs • reporting and communication • manufacturer specifications • operational procedures • industry standards
Equipment	<p>Equipment may include:</p> <ul style="list-style-type: none"> • computer workstation and software, either stand alone or networked • test apparatus • appropriate tools of trade, equipment and materials

MEM23149A Contribute to the design of commercial and industrial exhaust systems

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers the skills and knowledge required to contribute to the design of commercial and industrial exhaust systems, including industrial dust extraction systems or for less complex systems to undertake the complete design.

Application of the Unit

The unit applies to technicians in enterprises that design whole commercial and industrial exhaust systems or undertake design modifications to existing systems as part of manufacturing, installation, commissioning, servicing and maintenance activities.

The unit applies to design work undertaken as part of a design team comprising engineers and other technicians and to individual design tasks within the technician's skill and knowledge.

Licensing/Regulatory Information

The following licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM23004A Apply technical mathematics

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

- | | | | |
|---|--|-----|---|
| 1 | Determine commercial and industrial exhaust system requirement | 1.1 | Obtain and implement work health and safety (WHS) and environmental requirements for a given work area |
| | | 1.2 | Determine requirements for a commercial and industrial exhaust system using relevant standards, codes and authority information |
| | | 1.3 | Consult appropriate personnel to ensure that work is coordinated effectively with others |
| | | 1.4 | Obtain equipment and resources needed for the task in accordance with enterprise procedures |
| 2 | Design exhaust system | 2.1 | Prepare design and drawings for commercial and industrial system scenarios according to enterprise procedures |
| | | 2.2 | Plan design development work to meet scheduled timelines |
| | | 2.3 | Provide solutions to unplanned situations consistent with enterprise procedures |
| 3 | Document design | 3.1 | Validate specifications of exhaust system designed for meeting all relevant standards and codes for intended application |
| | | 3.2 | Verify final design using enterprise procedures for compliance and regulatory requirements |
| | | 3.3 | Prepare final system design documents to industry |

standards for client approval

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting requirements and specifications
- determining performance aspects of system
- applying noise abatement measures
- balancing fan duct systems
- using relevant drafting software tools effectively
- interpreting drawings and specifications
- communicating effectively with others
- communicating technical and procedural requirements to others
- documenting technical information and designs
- dealing effectively with unexpected situations
- working in teams with others

Required knowledge

Required knowledge includes:

- relevant codes and regulations
- system types
- duct design
- fluid dynamics including laminar and turbulent flow, friction and pressure loss
- outlet design and location, including consideration of:
 - environmental requirements
 - noise
 - access protection against pests
- cycling/operation control
- dust collection and control, including:
 - filter types
 - cyclone and shaker type collectors
- motor ratings
- fan types
- noise control
- sound proofing
- flame proofing

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

MEM23150A Contribute to the design of heating systems

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers the skills and knowledge required to contribute to the design of appropriate heating equipment to provide optimum performance or for less complex systems to undertake the complete design. The unit includes determination of best piping configurations and system pipe sizes, taking into account thermal heat losses.

Application of the Unit

The unit applies to manufacturing, servicing and maintenance enterprises incorporating refrigeration and air conditioning design, manufacture and installation.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23006A	Apply fluid and thermodynamics principles in engineering
MEM23140A	Determine operational parameters for building HVAC/R hydronic systems
MEM23147A	Contribute to the design of hydronic systems

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

- | | | | |
|---|-------------------------------|-----|--|
| 1 | Prepare design specifications | 1.1 | Obtain and implement work health and safety (WHS) and environmental requirements for a given work area |
| | | 1.2 | Identify the essential elements of a heating system to meet client design brief |
| | | 1.3 | Consult appropriate personnel to ensure that work is coordinated effectively with others |
| | | 1.4 | Obtain equipment and resources needed for the task in accordance with enterprise procedures and check for correct operation and safety |
| 2 | Design system | 2.1 | Select a heating system design to meet the client requirements |
| | | 2.2 | Plan design development work to meet scheduled timelines |
| | | 2.3 | Check system design draft for compliance with the design brief, regulatory requirements and environmental standards |
| | | 2.4 | Calculate heating loads and matching heating capacity |
| | | 2.5 | Select appropriate heating equipment to satisfy design specifications |
| | | 2.6 | Provide solutions to unplanned situations consistent with enterprise procedures |
| | | 2.7 | Document method of capacity rating and sizing for each discrete component in the system to industry standard |

using enterprise procedures

- | | | | |
|---|--|-----|--|
| 3 | Analyse system and adjust system performance | 3.1 | Evaluate system performance under variable conditions |
| | | 3.2 | Adjust component selection where required to meet heating system performance criteria |
| | | 3.3 | Determine fulfilment of required heating capacity under full and partial load conditions |
| 4 | Validate final design | 4.1 | Verify final design using enterprise procedures for compliance and regulatory requirements |
| | | 4.2 | Document final system design according to industry standards and enterprise procedures for client approval |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting client requirements and specifications
- determining performance aspects of systems
- sizing pipes
- minimising system heat losses
- selecting major system components and materials using manufacturers data
- selecting appropriate heating equipment
- evaluating piping configuration
- using relevant software tools effectively
- interpreting drawings and specifications
- communicating effectively with others
- communicating technical and procedural requirements to others
- documenting technical information and designs
- dealing effectively with unexpected situations
- working in teams and with others

Required knowledge

Required knowledge includes:

- heating techniques, including relative advantages and disadvantages of:
 - heat pumps
 - boilers and hydronic systems, including underfloor systems
 - gas
 - electric
 - solar
 - solid fuel
- system configuration
- piping configuration, including:
 - standard materials and sizes
 - sources of information (e.g. catalogues)
- system pipe sizes
- WHS and environmental requirements relevant to heating systems

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

MEM23151A Commission and optimise performance of HVACR systems

Modification History

Release 1 (MEM05v9)

Unit Descriptor

This unit of competency covers the skills and knowledge required to commission and optimise a heating, ventilation, air conditioning and refrigeration (HVAC/R) system and associated plant and equipment.

Application of the Unit

The unit applies to HVAC/R technicians in manufacturing, servicing and maintenance enterprises who are required to commission HVAC/R systems, and as part of the commissioning process, ensure optimal performance.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23006A	Apply fluid and thermodynamics principles in engineering
MEM23154A	Analyse and service HVAC/R control systems
MEM23140A	Determine operational parameters for building HVAC hydronic systems

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

- | | | | |
|---|--|-----|--|
| 1 | Prepare HVAC/R system for commissioning | 1.1 | Obtain and implement work health and safety (WHS) and environmental requirements for a given work area |
| | | 1.2 | Determine system operating parameters by reviewing system specifications and component technical data |
| | | 1.3 | Identify correct building codes and local government regulations using appropriate resources |
| | | 1.4 | Prepare industry standard report on system performance levels using enterprise procedures |
| | | 1.5 | Consult appropriate personnel are to ensure the work is coordinated effectively with others involved on the work site |
| | | 1.6 | Obtain equipment, resources and testing devices needed for the work in accordance with enterprise procedures |
| 2 | Commission and optimise complex HVAC/R systems | 2.1 | Set up and connect testing and measuring devices appropriately for task and to manufacturer specifications |
| | | 2.2 | Measure and adjust equipment components and controls, as required |
| | | 2.3 | Undertake required measurements and tests and analyse results to provide optimum system performance in accordance with system specifications and regulatory requirements |
| | | 2.4 | Provide solutions to unplanned situations consistent with enterprise procedures |

- 2.5 Ensure commissioning is carried out efficiently without waste of materials or damage to equipment and surroundings
- 3 Complete and report commissioning activities
 - 3.1 Verify that plant and equipment are operating to specification
 - 3.2 Document adjustment settings and notify appropriate personnel in accordance with enterprise procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting commissioning requirements and system specifications
- determining performance aspects of system
- using appropriate test equipment effectively
- devising a commissioning schedule and plan
- setting up commissioning tests and documenting them
- interpreting drawings and specifications
- communicating effectively with others involved in the commissioning task
- communicating technical and procedural requirements to others
- documenting technical information and designs
- dealing effectively with unexpected situations
- working in teams and with others

Required knowledge

Required knowledge includes:

- fundamentals of HVAC/R systems, including:
 - air systems
 - hydronic systems
 - control systems
 - chillers
 - boilers and furnaces
 - cooling towers
 - heat exchangers
 - piping
 - ducts
- plant and equipment commissioning techniques and procedures, including:
 - set up
 - measuring and testing
 - fault-finding
 - adjustments
 - reporting and documenting
 - commissioning schedules

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

MEM23152A Apply principles of refrigeration food storage technology

Modification History

Release 1 (MEM05v9)

Unit Descriptor

This unit of competency covers the skills and knowledge required to recognise common causes of food spoilage and apply the optimum methods for commercial food preservation processes.

Application of the Unit

The unit applies to manufacturing, servicing and maintenance enterprises incorporating refrigeration and air conditioning design, manufacture and installation.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

- | | | | |
|---|---|-----|--|
| 1 | Recognise causes of food spoilage | 1.1 | Obtain and implement work health and safety (WHS) and environmental requirements for a given work area |
| | | 1.2 | Determine causes of food spoilage from observation, testing, measurements and/or supply chain tracking |
| | | 1.3 | Interpret and apply relevant Australian standards, codes and regulations for food storage and handling |
| | | 1.4 | Consult appropriate personnel to ensure that work is coordinated effectively with others |
| | | 1.5 | Obtain equipment and resources needed for the task in accordance with enterprise procedures |
| 2 | Analyse food spoilage risks in supply chain | 2.1 | Identify critical points in the food supply chain and determine the associated risks |
| | | 2.2 | Identify and document risks and propose appropriate risk minimisation strategies |
| | | 2.3 | Check proposed risk minimisation strategies against relevant standards, codes and legislative requirements |
| | | 2.4 | Provide solutions to unplanned situations consistent with enterprise procedures |

- 3 Select optimum methods storage of perishable food
 - 3.1 Propose options to minimise food spoilage based on analysis of the produce type, facilities available and supply chain requirements
 - 3.2 Select optimum solutions with respect to equipment, facilities, processing techniques and cost, and discuss with appropriate personnel
 - 3.3 Document adopted storage and handling method in accordance with enterprise procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- controlling and managing risks associated with food storage
- identifying relevant codes, standards and regulations and applying compliance procedures
- determining main reasons for food spoilage
- preventing food spoilage through microorganisms
- complying with relevant legislative and regulatory requirements
- communicating effectively with others
- documenting findings, plans and recommendations
- dealing effectively with unexpected situations
- working in teams and with others

Required knowledge

Required knowledge includes:

- codes, standards and regulations relevant to refrigerated food storage
- food spoilage and possible causes
- food preservation equipment and techniques
- microorganisms relevant to food safety and preservation
- types of heat processing techniques
- types of chilling processing techniques
- cold storage chain
- controlled atmosphere storage
- refrigerant choices
- energy usage
- refrigeration plant
- insulation

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • implement WHS workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range • demonstrate essential knowledge and skills of principles of refrigeration and storage technology • demonstrate competency within a timeframe typically expected of the discipline, work function and industrial environment • demonstrate the ability to apply principles of refrigeration food storage technology consistently in different contexts.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. • The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

	<ul style="list-style-type: none"> Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

WHS requirements	<p>WHS requirements include:</p> <ul style="list-style-type: none"> relevant legislation protective equipment material safety management systems hazardous substances and dangerous goods code local safe operation procedures awards provisions
Environmental requirements	<p>Environmental requirements include:</p> <ul style="list-style-type: none"> relevant legislation, regulations and codes correct handling and disposal of liquid and solid waste elimination or minimisation of gas, fume, vapour and smoke emissions, including fugitive emissions dust elimination, minimisation and control minimisation of energy and water use elimination or control of excessive noise use and recycling of refrigerants
Appropriate personnel	<p>Appropriate personnel may include:</p> <ul style="list-style-type: none"> supervisor leading hand foreman manager engineer technician trainer

	<ul style="list-style-type: none"> • mentor • team member • customer • client
Food spoilage	<p>Food spoilage may include:</p> <ul style="list-style-type: none"> • physical damage • animal damage • chemical breakdown • enzyme activity • microorganisms • effects of: <ul style="list-style-type: none"> • temperature change • humidity change • freezing on fresh produce • slow freezing time • refreezing
Enterprise procedures	<p>Enterprise procedures may include:</p> <ul style="list-style-type: none"> • the use of tools and equipment • instructions, including job sheets, plans, drawings and designs • reporting and communication • manufacturer specifications • operational procedures • industry standards
Resources	<p>Resources may include:</p> <ul style="list-style-type: none"> • reference manuals/data sheets • scientific calculator • stationery • access to relevant standards, codes, laws and by-laws
Equipment	<p>Equipment may include:</p> <ul style="list-style-type: none"> • computer workstation and software, either stand alone or networked • chemical analysers • measurement instruments (e.g. thermometers and probes) • hand tools
Processing techniques	<p>Processing techniques may include:</p> <ul style="list-style-type: none"> • heat processing techniques, such as blanching, pasteurisation, sterilisation, evaporation, dehydration,

	baking and roasting, steam and water • chilling processing techniques, such as freezing, freeze drying and freeze concentration, cryovac, and controlled atmosphere

MEM23153A Contribute to the design of heat exchanger systems

Modification History

Release 1 (MEM05v9)

Unit Descriptor

This unit of competency covers the skills and knowledge required to contribute to the design of heat exchanger systems or for less complex systems to undertake the complete design.

Application of the Unit

The unit applies to heating, ventilation, air conditioning and refrigeration (HVAC/R) technicians in manufacturing, servicing and maintenance enterprises who are required to undertake design work on heat exchangers. The unit applies to design work undertaken as part of a design team comprising engineers and other technicians and to individual design tasks within the technician's skill and knowledge.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23006A	Apply fluid and thermodynamics principles in engineering

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

- | | | | |
|-------|--|-------------|--|
| 19) 1 | Establish requirements for heat exchanger design | 20) 1.
1 | Obtain and implement work health and safety (WHS) and environmental requirements for a given work area |
| | | 21) 1.
2 | Determine the extent of the design from design briefs, reports and in consultations with appropriate personnel |
| | | 22) 1.
3 | Determine and interpret relevant standards, codes or regulations applicable to the design |
| | | 23) 1.
4 | Consult appropriate personnel to ensure that work is coordinated effectively with others |
| | | 24) 1.
5 | Obtain equipment and resources needed for the task in accordance with enterprise procedures |
| 25) 2 | Determine specifications for heat exchanger design | 26) 2.
1 | Obtain parameters and performance requirements in relation to refrigeration system |
| | | 27) 2.
2 | Model design solutions based on developed heat exchanger specifications to determine the most effective solution |
| | | 28) 2.
3 | Establish final selection on heat exchanger design in consultation with appropriate personnel |
| | | 29) 2.
4 | Provide solutions to unplanned situations consistent with enterprise procedures |

- 30) 3 Document heat exchanger design
- 31) 3. 1 Document design, including all details of findings, calculations and assumptions in accordance with enterprise procedures
- 32) 3. 2 Notify appropriate personnel about the completion of the design task

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting client requirements and specifications
- determining performance aspects of heat exchanger
- interpreting current codes and regulations
- selecting major system components and materials using manufacturer's data
- using relevant software tools effectively
- interpreting drawings and specifications
- communicating effectively with others
- communicating technical and procedural requirements to others
- documenting technical information and designs
- dealing effectively with unexpected situations
- working in teams and with others

Required knowledge

Required knowledge includes:

- thermodynamic principles
- heat transfer
- refrigeration/heat pump parameters
- airflow parameters and measurement of airflow
- calorimetric measurements
- measurement of temperature

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • implement WHS workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range • demonstrate essential knowledge and skills to design heat exchanger systems • demonstrate competency within a timeframe typically expected of the discipline, work function and industrial environment • demonstrate the design of heat exchanger systems consistently.

MEM23154A Analyse and service HVACR systems

Modification History

Release 1 (MEM05v9)

Unit Descriptor

This unit of competency covers the skills and knowledge required to analyse and evaluate heating, ventilation, air conditioning and refrigeration (HVAC/R) control system requirements for a specific application.

This includes evaluation of existing automatic control systems; interpreting and producing control diagrams; commissioning, fault-finding and repairing a HVAC/R control system.

Application of the Unit

The unit applies to HVAC/R technicians in manufacturing, servicing and maintenance enterprises. The unit applies to existing HVAC/R control systems and does not cover the design of new HVAC/R systems.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A Apply technical mathematics

MEM23006A Apply fluid and thermodynamics principles in engineering

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

- | | | | |
|---|---------------------------------------|-----|---|
| 1 | Prepare for analysis and service task | 1.1 | Obtain and implement work health and safety (WHS) and environmental requirements for a given work area |
| | | 1.2 | Identify essential elements of a control system |
| | | 1.3 | Determine the function of electrical, pneumatic and electronic control and flow devices using control circuit diagrams and/or specifications or other specialised resources |
| | | 1.4 | Obtain sequence of control, specify settings and adjust control devices from system's specifications |
| | | 1.5 | Consult appropriate personnel to ensure that work is coordinated effectively with others |
| | | 1.6 | Obtain equipment and resources needed for the task in accordance with enterprise procedures and check for correct operation and safety |
| 2 | Analyse performance of control system | 2.1 | Identify HVAC/R system operating parameters and system features |
| | | 2.2 | Use appropriate equipment and HVAC/R energy management principles to evaluate the operating economy of the system |
| | | 2.3 | Produce control diagrams according to applicable standards and practices |
| | | 2.4 | Report analysis to appropriate personnel and establish appropriate action to be taken based on findings |

- 3 Adjust and service control system
 - 3.1 Confirm plant control compliance with desired conditions through appropriate measurements and recordings of system performance
 - 3.2 Adjust system to required specification
 - 3.3 Isolate, replace or repair components not performing to specification
 - 3.4 Arrange appropriate tests and measurements on an electrically live system in accordance with WHS and regulatory requirements
 - 3.5 Provide solutions to unplanned situations consistent with enterprise procedures

- 4 Make recommendations to improve the performance of plant
 - 4.1 Document analysis, including details of all findings, calculations and assumptions
 - 4.2 Prepare recommendations on control system modifications and discuss with appropriate personnel
 - 4.3 Ensure work area is cleaned and made safe in accordance with enterprise procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting standards, codes and regulations relevant to HVAC/R control systems
- producing control diagrams
- evaluating automatic control systems
- determining control requirements, including:
 - full and partial load performance requirements
 - automated and manual control sequences
 - integration with energy management system requirements
- commissioning control systems
- using relevant software tools effectively
- interpreting drawings and specifications
- communicating effectively with others
- working in teams and with others
- communicating technical and procedural requirements to others
- dealing effectively with unexpected situations

Required knowledge

Required knowledge includes:

- thermodynamic principles relevant to HVAC/R controls
- control fundamentals
- types of control equipment, including microprocessors, sensors, and so on
- direct data control (DDC) systems
- supervisory control systems

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • implement WHS workplace procedures and practices, including the use of risk control measures • demonstrate essential knowledge and skills to analyse and service HVAC/R control systems • demonstrate the competency within a timeframe typically expected of the discipline, work function and industrial environment • demonstrate analysing and servicing HVAC/R control systems consistently in different applications.

MEM234001A Plan and manage engineering-related projects or operations

Modification History

Release 2 - Replacement of text missing from Element 3 PCs. Equivalent.

Unit Descriptor

This unit of competency covers the skills associated with high level planning and management of engineering-related projects or operations. The unit covers the skills required to plan, establish, maintain and manage complex engineering systems and resources associated with time-defined engineering-related projects or high level engineering operations management in a manufacturing or engineering-related organisation.

Application of the Unit

This unit applies to the planning and management of engineering-related projects or operations. Activities include significant project or operations management responsibilities and may require personal and electronic communication, self-directed and group activities, business planning, project or operations planning and scheduling, and an understanding of the technology, skills and techniques, and quality aspects required by the project or operations.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | |
|---|---|---|
| 1 | Establish parameters for project or operations management | <ul style="list-style-type: none"> 1.1 Establish budget and control measures for project or operations to conform to the business plan 1.2 Prepare project or operations management plan to conform with the business plan 1.3 Establish procurement requirements 1.4 Establish the need and provide for appropriate technical and professional assistance 1.5 Establish physical resources requirements 1.6 Establish human resources and skills development requirements 1.7 Establish compliance and environmental requirements for project or operation, including occupational health and safety (OHS) requirements, codes of practice, regulations, standards and other regulatory requirements, and enterprise procedures 1.8 Carry out required project and operations modelling and calculations using appropriate modelling and analysis software |
| 2 | Implement project or operations management plan | <ul style="list-style-type: none"> 2.1 Select an appropriate team and establish communication and cooperation within the team 2.2 Review and agree on plans, schedules and requirements with the team, assign responsibilities within the team, and establish other functional groups and expert support, as required 2.3 Determine internal and external reporting requirements, |

- including content, regulatory compliance, schedule and sign-off arrangements
- 2.4 Establish suppliers, contractors and delivery schedules
- 2.5 Arrange for any required recruitment and training of employees
- 3 Monitor and review accountability for project or operations implementation
- 3.1 Monitor, review and maintain records of operations or project for accountability against the project objectives, and schedule and cost budget, including required quality outcomes
- 3.2 Monitor, review and maintain records of regulatory compliance, including enterprise agreements or awards, OHS, codes of practice and other legislative requirements, environmental and social obligations, and ethical practice
- 3.3 Maintain records of professional, trades and industry contacts, sources of information and resources used in the implementation of the project or operation
- 3.4 Establish, monitor and review a schedule of procurement requirements and associated contracts and any installation requirements
- 4 Manage progress of implementation
- 4.1 Establish mechanisms to manage constraints and contingencies, including coordination with team members, project stakeholders and contractors
- 4.2 Adjust short-term planning and schedules, as required
- 4.3 Manage technical support, specialist and professionals services to meet schedules, budgets and quality and performance requirements
- 4.4 Apply principles of continuous improvement to implementation
- 4.5 Document the project outcomes against the project requirements, as required
- 4.6 Supervise the completion of project, including sign-off and completion of required documentation of the project, as required

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- ensuring project or operations activities are accurately identified and implemented in priority order in accordance with implementation schedules
- investigating and validating the suitability of performance analysis, modelling and simulation software
- identifying potential implications for the project or operation from non-engineering contexts, including:
 - competitive environment for the organisation
 - customer and supplier relationships
 - labour and skill supply and demand
 - industrial relations
 - regulatory environment
- managing complex engineering-related projects and operations
- managing the interrelationships between concurrent engineering techniques, electronic data control and supervisory systems
- managing roles, responsibilities and levels of authority, and delegating, as appropriate, to team members and in accordance with project and operation schedules
- evaluating projects and operations for feasibility against business plan, including relevant engineering and financial calculations and analysis
- communicating, negotiating and reviewing actions with relevant stakeholders and team members

Required knowledge

Required knowledge includes:

- personal authorities and priorities for projects or operations
- current options and trends in performance analysis, project and financial modelling, engineering-related modelling and simulation software, including underpinning program and software validation techniques
- budget and control measurement and analysis techniques for project or operations management
- project plan and schedule from project design activities
- physical resource availability for project or operations
- human resource/skills availability for engineering-related projects

- accountability – audit, recording and implementation requirements for projects or operations, such as tenders, contracts, schedules, budgets, personnel and resource allocations, and financial management procedures and standard operating procedures, including maintenance procedures
- technical documentation management, graphics and specifications and records of meetings, communications, negotiations, and decisions and agreements with stakeholders
- sources of information and resources, including:
 - professional services
 - finance
 - accounts
 - taxation
 - legal
 - insurance
 - human resources
 - trade and industry contacts
- contemporary contingency and constraints management approaches
- implications for engineering projects or operations associated with typical financial planning and accounting processes which may relate to an engineering project or operation such as:
 - capital flow and liquidity
 - assets and liabilities
 - depreciation
 - balance sheet
 - costing
 - budgeting and cost control
 - break-even analysis
 - profit and loss
 - capital investment and return on investment
 - financial record keeping procedures for expenditures
- typical legal requirements for engineering-related projects or operations
- OHS requirements, codes of practice, regulations, standards and regulatory requirements for project or operations
- risk management and reduction, current safe work methods statements, material safety data sheets (MSDS) and work permits
- professional and ethical practice
- tendering and contracts requirements and processes, including agreement on design and specification, negotiations and optimisations, provisions for variations, delays and penalties
- work organisation and management theory
- conflict resolution, problem solving and decision making

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • identify, plan and establish engineering and organisation requirements for the project or operation • establish resources required, including labour, materials, equipment within budgets, and procedures • investigate and validate performance analysis, modelling and simulation software • commence project or operation management, including establishing support team and responsibilities • overcome constraints and contingencies to achieve schedules and budgets as contained in business plan • undertake appropriate internal and external reporting • manage continuous improvement.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, or a combination of both on and off the job assessment based on appropriate project and simulation activities. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency

	<p>is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</p> <ul style="list-style-type: none"> • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Engineering-related projects or operation	<p>Engineering-related projects or operations may occur in a wide variety of industries, for example:</p> <ul style="list-style-type: none"> • manufacturing • defence • transport and logistics • health • utilities <p>The distinguishing feature for the engineering-related project or operation, as it applies to this unit, is that the project or operations management requires high level para-professional engineering skills in an established engineering discipline or area</p>
Business plan	<p>Business plan means a plan for either a time-defined project or an ongoing engineering-related operation that:</p> <ul style="list-style-type: none"> • is approved by the client or management of the organisation • contains budgets and which has financial and performance targets • specifies a project or operational schedule • specifies stakeholder reporting/approval mechanisms and degree of autonomy for decision making • specifies any legal requirements or other resources available or required to be established
Appropriate technical and professional assistance	<p>Appropriate technical and professional assistance may include:</p> <ul style="list-style-type: none"> • technical support and advice relating to elements which have intrinsic dangers, for example:

	<ul style="list-style-type: none"> • high pressure • energised fluid vessels • high temperatures and heat energy capacity • wiring or devices with high current or voltages above extra low voltage • professional support for technologies, such as: <ul style="list-style-type: none"> • specialist electric motor drives and controllers • specialist materials, plastics, metal alloys and nano materials • special processes, foundry, alloy welding, heat treatment, sealing and fastening • professional services for: <ul style="list-style-type: none"> • finance, accounts and tax • insurance and legal • training and human resources (HR)
OHS requirements, codes of practice, regulatory requirements and enterprise procedures	<p>OHS, codes of practice, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> • OHS Acts and regulations • relevant standards • codes of practice from Australian and overseas engineering and technical associations and societies • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements
Appropriate modelling and analysis software	<p>Appropriate modelling and analysis software may include:</p> <ul style="list-style-type: none"> • project tracking • financial modelling, analysis and tracking • process modelling and analysis • engineering simulation and modelling • manufacturing operation simulation
Records of operations or project	<p>Records of operations include:</p> <ul style="list-style-type: none"> • tenders, contracts and schedule • personnel, resource allocations and financial management procedures • standard operating procedures, including maintenance procedures • OHS committee minutes and actions • risk management and mitigation • documentation and records of current safe work methods statements • MSDS, work permits, standards and codes of practice • Audits

	<ul style="list-style-type: none"> • Meetings and communications • graphics and specifications
Manage constraints and contingencies	<p>Contingencies arising during operations or improvement projects are responded to in the context of constraints. Contingencies may threaten operations or improvement projects and planning for contingencies may be essential to maintain resources, skilled labour and schedules. Each contingency will have constraints on possible solutions. These may be:</p> <ul style="list-style-type: none"> • financial, organisation procedural or culture constraints • physical constraints, such as limits to resources, limits to site access or logistical limitations
Legislative requirements	<p>Legislative requirements may include:</p> <ul style="list-style-type: none"> • industrial law and awards • customer protection law • restrictive trade practice • environmental protection • workers compensation • equality and anti-discrimination • contract law
Continuous improvement	<p>Continuous improvement may relate to plant, products, processes, systems or services, including design, development, implementation or manufacture, commissioning, operation or delivery and maintenance.</p> <p>Improvement processes may include techniques such as:</p> <ul style="list-style-type: none"> • balanced scorecard • current and future state mapping • measuring performance against benchmarks • process improvement, problem solving and decision making • data management, generation, recording, analysing, storing and use of software • training for improvement systems participation • technical training

MEM234002A Integrate engineering technologies

Modification History

New unit

Unit Descriptor

This unit of competency covers the skills required to integrate technologies, processes, components or equipment for projects or operations. Apart from engineering considerations the unit encompasses sustainability, occupational health and safety (OHS) and regulatory requirements and implications of the project.

Application of the Unit

This unit applies to individuals working as a Principal Technical Officer or in an equivalent engineering-related position who are required to integrate different technologies, processes, components or equipment. The unit applies to all forms of manufacturing and engineering operations. It is suitable for persons with system design, installation, commissioning and project or operational management responsibilities who have to integrate different technologies. The technologies may be all in one discipline or technical field or across engineering and related disciplines. For installation, commissioning and project or operational management application, the unit assumes that discretion as to the type and level of integration applies and the actual level of integration must be determined.

Prior or concurrently developed experience in the application of scientific principles, mathematics, materials, manufacturing processes, computer software for computer-aided design (CAD), system analysis, modelling and simulation, project work and risk management and experience in the technologies to be integrated is required.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | |
|---|--|---|
| 1 | Clarify the scope of the integration design task and elaborate the specification | <ul style="list-style-type: none"> 1.1 Identify processes, machine, equipment, components and technologies covered by integration task 1.2 Determine other parameters to the integration task 1.3 Determine stakeholders to be consulted 1.4 Determine if and when input and advice should be obtained from experts in other technical fields and disciplines 1.5 Assess OHS, regulatory, sustainability or environmental issues relevant to integration task 1.6 Confirm design brief, including budget and schedule, and provide preliminary advice on feasibility |
| 2 | Prepare integration analysis and concept proposal for designs or operational changes | <ul style="list-style-type: none"> 2.1 Carry out initial investigations into technologies and equipment to be integrated 2.2 Identify any existing or pre-designed integration 2.3 Determine any special features of machines, equipment or processes that need to be considered 2.4 Carry out required analysis, modelling and calculations using appropriate software and validation techniques 2.5 Obtain design or advice from experts in other technical fields and disciplines, if required 2.6 Generate a range of integration solutions 2.7 Check feasibility and evaluate solutions against design criteria, project brief or operating specifications ensuring conformity to technical, economic and OHS |

- requirements
- 2.8 Determine social and sustainability implications of solutions
- 2.9 Present integration concept proposals to client or supervisors
- 3 Finalise integration strategy
 - 3.1 Evaluate concept proposals with client
 - 3.2 Finalise selected integration strategy, including design elements or modifications and implementation strategy, ensuring preparation of all required documentation, drawings, specifications and instructions
 - 3.3 Consult with client and stakeholders to obtain sign-off on integration strategy and documentation
- 4 Implement integrated engineering technologies strategy
 - 4.1 Monitor and support prototyping or testing of machine, process or technology using selected integrated engineering strategy
 - 4.2 Analyse performance against strategy and internal or external client specifications
 - 4.3 Adjust strategy, as required
 - 4.4 Obtain sign-off and oversight production of adjusted documentation, drawings, specifications and instructions
 - 4.5 Communicate and negotiate with stakeholders to address issues such as design and resources adjustments
 - 4.6 Ensure design and implementation documentation and records are maintained in accordance with organisational requirements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting features of machines or equipment
- establishing parameters to the brief or contract, including extent to which integration task goes beyond own technical field
- communicating and negotiating with client and stakeholders
- generating a range of solutions, including the technical requirements of an implementation plan
- applying design standards, performance analysis, and modelling and simulation software
- validating software
- evaluating solutions for feasibility against design criteria
- developing and optimising chosen solution and technical implementation plan and schedule
- preparing proposals, including the implementation plan, resource requirements, documents, specifications, graphics and instructions
- monitoring and supporting implementation
- commissioning the project or operation

Required knowledge

Required knowledge includes:

- design, implementation, commissioning and troubleshooting process
- technology requirements for integration task
- holistic engineering principles, such as systems thinking, design, research and investigations methods
- modelling and calculation techniques
- current options and trends in design, performance analysis, and modelling and simulation software
- software validation techniques
- design and implementation criteria
- critical activities and resources as input to the planning process
- planning and scheduling techniques
- requirements for sign-off
- documentation, drawings, specifications and instructions required
- OHS and regulatory requirements, codes of practice, standards and registration requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • determine the scope of the integration task • establish parameters to the integration task • communicate and negotiate with client and stakeholders • generate a range of solutions, including the technical requirements of an implementation plan, using systems thinking, innovation and creativity • apply design standards, performance analysis, modelling and simulation software • validate software • evaluate solutions for feasibility against design criteria • develop and optimise chosen solution and technical implementation plan and schedule • prepare proposals, including the implementation plan, resource requirements, documents, specifications, graphics and instructions • monitor and support implementation • commission the project or operation.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its

	<p>correct interpretation and application.</p> <ul style="list-style-type: none"> • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Integration task	<p>For the purposes of this unit, an integration task has the following features:</p> <ul style="list-style-type: none"> • the integration must require application of engineering skill and knowledge across a range of engineering technologies and systems. The integration task may or may not go across disciplines or technical fields of work • the integration must not already be fully pre-designed • integration may be required across one or more processes, machines and sets of equipment <p>Typical integration tasks would be those requiring integration of mechanical, fluid power and electrical systems with control technologies, structural support, and other engineering-related systems as may be found in automated applications</p>
Parameters to the integration brief	<p>Parameters to the integration brief include:</p> <ul style="list-style-type: none"> • technology and process limits • capital and design budgets • product cost limits and budgets • anticipated post-integration performance specifications • equipment availability, capacities and restrictions • specified administrative, communication and approval procedures

	<ul style="list-style-type: none"> • other special features and limits in the integration brief
Stakeholders	<p>Stakeholders include:</p> <ul style="list-style-type: none"> • clients • financier • project or operations team • support services, such as accounts and legal professionals, technical experts, suppliers and transporters • those responsible for plan implementation activities, such as installation, commissioning and process improvement
OHS, regulatory, sustainability and environmental issues	<p>OHS, regulatory, sustainability and environmental issues may include:</p> <ul style="list-style-type: none"> • OHS Acts and regulations • relevant standards • industry codes of practice • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements
Software and validation techniques	<p>Software may be employed for performance analysis/modelling. Underpinning program techniques and algorithms should be understood, such as:</p> <ul style="list-style-type: none"> • the use of failure effects analysis (FEA) and numerical methods within object oriented modelling techniques <p>Validation techniques include:</p> <ul style="list-style-type: none"> • comparison of traditional solutions for simple design problems with software solutions to the same design problems • review of previously implemented design challenges which were completed using the software
Sustainability	<p>For the purposes of this unit, sustainability includes consideration of economic, social, ecological and resources implications of activities. Sustainability issues may include:</p> <ul style="list-style-type: none"> • resources and energy: <ul style="list-style-type: none"> • sources, access, processing and consumption • food security and agriculture, health, education and shelter • land, energy and water • social and economic factors affecting design of machines and equipment • life cycle design of product (manufacture to re-manufacture or recycle) • raw material, solids and hazardous waste, and production

	by-products <ul style="list-style-type: none"> contamination of land, air and stormwater pollutants, and discharge to sewerage climate change
Monitor and support the implementation	Monitoring and supporting may include: <ul style="list-style-type: none"> provision of assistance with hardware procurement and system assembly and arrangements to suit design assisting installation and commissioning provision of advice on adjustments, revisions and required documentation
Systems thinking	Systems thinking: <ul style="list-style-type: none"> is the process of developing solutions within the context of an entire system recognises that an improvement in one subsystem can adversely affect another subsystem
Critical activities and resources	Critical activities and resources are those identified as critical to schedule milestones and project success
Standards and codes	Standards refer to all relevant Australian and international standards and codes applicable to a particular design task
Planning and scheduling techniques	Implementation requirements may be a critical factor in evaluation of design options. Planning and scheduling options may include: <ul style="list-style-type: none"> critical path or Pert network plans and Gantt charts

MEM234003A Design machines and ancillary equipment

Modification History

New unit

Unit Descriptor

This unit of competency covers the design of machines and ancillary equipment. It includes sustainability implications, occupational health and safety (OHS), modelling and calculations, use of software, product analysis and product life cycle design, investigating, generating ideas, synthesis, prototype completion and manufacture and evaluation.

Application of the Unit

This unit applies to the design of any significant machinery and ancillary equipment for domestic, commercial, industrial, medical, military or entertainment purposes. Design activities may also include reverse engineering, design rectification or modifications of an existing design. Activities include the design of specific machine elements, such as shafts, bearings, brakes, clutches, springs, pressure vessels, flywheels, and may also include selection of ancillary equipment, such as motors, pumps and valves.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | |
|---|---|--|
| 1 | Clarify the design task and elaborate the specification | 1.1 Establish, in consultation with client, required features of machine and ancillary equipment |
| | | 1.2 Determine parameters to the brief or contract |
| | | 1.3 Determine stakeholders to be consulted in design process |
| | | 1.4 Assess OHS, regulatory, sustainability or environmental issues relevant to design task |
| | | 1.5 Confirm design brief, including budget and schedule, and provide preliminary advice on feasibility |
| 2 | Perform design analysis and prepare concept proposals | 2.1 Carry out initial investigations and measurements |
| | | 2.2 Using current industrial design techniques carry out required modelling and calculations using appropriate software |
| | | 2.3 Generate a range of solutions to the design brief |
| | | 2.4 Check feasibility and evaluate solutions against design criteria ensuring conformity to standards and codes, technical, economic and OHS requirements |
| | | 2.5 Determine, social and sustainability implications of solutions |
| | | 2.6 Review concept proposals with client and identify preferred solution |
| 3 | Design machines or equipment | 3.1 Finalise selected machine or equipment design, including ensuring preparation of all required documentation, drawings, specifications and instructions |
| | | 3.2 Consult with client and stakeholders to obtain sign-off on design |
| | | 3.3 Monitor installation and commissioning with stakeholders and make any necessary adjustments to design |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required knowledge includes:

- determining features of machines or equipment, including OHS, regulatory and risk management requirements
- interpreting parameters to the brief or contract
- researching latest trends and techniques in:
 - machine and equipment design
 - reverse engineering
 - sustainability issues and implications for machine and equipment design
 - materials
 - assembly, fabrication and construction techniques
 - lean and other quality techniques
 - latest relevant modelling and other software
- investigating and presenting options
- investigating faults in existing designs and proposing solutions
- selecting and using software and validation techniques, including 2-D and 3-D modelling
- creating design solutions to match client expectations of innovation as well as fitness for purpose
- designing for servicing, maintainability, cost, manufacturability and assembly, and ease of operation
- applying calculus to engineering design solutions requiring computations, such as rate of change, moments of inertia and friction forces
- evaluating solutions for feasibility against design criteria, including relevant engineering and financial calculations and analysis
- selecting materials, equipment and sub-assemblies based on availability, price and performance characteristics
- applying graphical techniques, such as those required by dynamic balancing diagrams
- communicating, negotiating and reviewing with stakeholders and client throughout process to obtain agreement of proposal and sign-off on design
- documenting design with drawings, specifications and instructions

Required knowledge

Required knowledge includes:

- contemporary engineering design methods
- research and investigations methods
- techniques for:
 - continuous improvement
 - problem solving and decision making
 - root cause analysis (RCA) or failure mode and effects analysis (FMEA) or design review based on failure mode (DRBFM), and Pareto analysis
- engineering design software options
- software validation processes
- documentation, drawings, specifications and instructions
- OHS and regulatory requirements, codes of practice, standards, risk minimisation and registration requirements.
- machine element assembly arrangements and methods
- fastening and sealing methods
- gear design standards and techniques
- strength and stress analysis
- shaft design
- forces, stresses and deflections of coil springs
- stresses in thick-walled pressurised vessels and cylinders subject to shrink and press fitting
- disk, hydraulic and cone clutches
- velocity and acceleration analysis of mechanisms
- ergonomics principles
- materials selection
- failure modes

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • determine features of machines or equipment, OHS, regulatory and risk management requirements • generate design solutions • interpret parameters to the brief or contract • research current design trends and sustainability implications • investigate options for machine and equipment design • measure, model, calculate and analyse using software and validation techniques • innovate and create solutions • evaluate solutions for feasibility against design criteria • communicate, negotiate and review with stakeholders and client throughout process to obtain agreement of proposal and sign-off on design.

MEM234004A Design for engineering-related noise and vibration mitigation

Modification History

New unit

Unit Descriptor

This unit of competency covers the design of noise and vibration mitigation systems for product, plant and equipment to ensure satisfactory operation, safety and comfort of people using, or in the proximity of the product, plant and equipment.

Application of the Unit

This unit applies to the design of products, plant and equipment across all forms of manufacturing and engineering. Design activities may also include reverse engineering, design rectification or modifications of an existing design. The unit includes the selection and use of appropriate measuring and monitoring equipment, modelling and calculations, and incorporation of noise and vibration mitigation techniques into designs.

This unit does not cover structural or civil engineering-related noise mitigation techniques, such as the design of noise barriers and anechoic chambers.

Prior experience in application of scientific principles, mathematics, measurement and evaluation of noise and vibration, computer software and file handling is required.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Clarify the design brief and specifications for noise and vibration mitigation	1.1	Establish features of product, plant or equipment design specification likely to generate noise and vibration
		1.2	Confirm technical, commercial and environmental parameters to the brief or contract
		1.3	Determine stakeholders to be consulted in design process
		1.4	Assess occupational health and safety (OHS), regulatory, sustainability or environmental regulations and issues relevant to noise and vibration mitigation design task
		1.5	Confirm design brief, including budget and schedule, and provide preliminary advice on feasibility
2	Evaluate design analysis and prepare concept proposals	2.1	Appraise initial qualitative and quantitative analysis of the design task using appropriate equipment and techniques
		2.2	Carry out required modelling and calculations using appropriate software and validation techniques
		2.3	Generate a range of noise and vibration mitigation solutions to the design brief
		2.4	Check feasibility and evaluate solutions against design criteria ensuring conformity to standards and codes, technical, economic and OHS requirements
		2.5	Determine, social and sustainability implications of solutions
		2.6	Present concept proposals to client

- 3 Design for noise and vibration mitigation
 - 3.1 Evaluate concept proposals with client
 - 3.2 Ensure that design solution is optimised with respect to the noise and vibration mitigation design task
 - 3.3 Finalise noise and vibration mitigation design, including ensuring preparation of all required documentation, drawings, specifications and instructions
 - 3.4 Consult with client and stakeholders to obtain sign-off on design
 - 3.5 Monitor installation and commissioning with stakeholders and make any necessary adjustments to design

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting features of plant and equipment and parameters to the brief or contract
- advising clients based on discipline knowledge and OHS and regulatory standards
- researching sustainability implications and current industrial design techniques
- designing noise and vibration mitigation solutions
- assessing features of plant and equipment designs that generate or decrease noise and vibration
- assessing a brief or contract specifications and the limits and constraints they impose on the ability to achieve noise and vibration mitigation in a design
- determining OHS, regulatory and risk management requirements
- selecting appropriate noise measurement and testing equipment and techniques
- selecting appropriate vibration measurement and testing techniques
- modelling and calculating using appropriate software and validation techniques
- generating and evaluating a range of solutions for feasibility against design criteria
- communicating, negotiating and reviewing with stakeholders and client throughout process to obtain agreement on proposal and sign-off on design
- investigating faults in existing designs and arriving at solutions

Required knowledge

Required knowledge includes:

- common sources of noise and vibration in plant and equipment
- features of plant or equipment in relation to noise and vibration mitigation
- feasibility and evaluation methods and design criteria
- OHS and regulatory requirements, codes of practice, standards, risk minimisation and registration requirements
- noise and vibration modeling and calculation techniques
- current options and trends in performance analysis, modelling and simulation software, including underpinning program techniques, including software validation
- physiological effects of noise and vibration
- risk factors for vibration and the human body
- industrial health and safety – audiometric testing
- noise and vibration concepts, such as vibration, noise, transmission of noise and vibration, and harmonic excitation

- sources of noise generation in plant and equipment
- noise mitigation, such as hearing protection, insulation, enclosures, fans and ducts
- sources of vibrations in plant and equipment
- vibration mitigation and shock control measures
- options for noise reduction in machine design (rotor bearing positioning)
- statistical energy analysis (SEA)
- techniques for:
 - continuous improvement
 - problem solving and decision making
 - root cause analysis (RCA) or failure mode and effects analysis (FMEA) or design review based on failure mode (DRBFM), and Pareto analysis

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • design noise and vibration mitigation solution • interpret features of plant and equipment and parameters to the brief or contract • advise client based on discipline knowledge and OHS and regulatory standards • research sustainability implications and current industrial design techniques • determine OHS, regulatory and risk management requirements • select, calibrate and set up equipment • investigate and measure • model and calculate using appropriate software and validation techniques • generate and evaluate a range of solutions for feasibility against design criteria • communicate, negotiate and review with stakeholders and client throughout process to obtain agreement on proposal and sign-off on design.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job, or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and

	<p>include questioning on underpinning knowledge to ensure its correct interpretation and application.</p> <ul style="list-style-type: none"> • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Parameters to the design brief	<p>The design brief may include the design of new equipment or fault analysis, rectification or modification to an existing design.</p> <p>Parameters to the design brief may include:</p> <ul style="list-style-type: none"> • determination of the degree of innovation and creativity expected by the client • design process limits and budgets • product cost limits and budgets • performance specifications • equipment availability, capacities and restrictions • specified administrative, communication and approval procedures • other special features and limits in the design brief
OHS, regulatory, sustainability and environmental issues	<p>OHS, regulatory, sustainability and environmental issues may include:</p> <ul style="list-style-type: none"> • OHS Acts and regulations • relevant standards • industry codes of practice • risk assessments • registration requirements

	<ul style="list-style-type: none"> • safe work practices • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative OHS impact on employees, community and customer • state and territory regulatory requirements
Initial qualitative and quantitative analysis	<p>Initial qualitative and quantitative analysis may include:</p> <ul style="list-style-type: none"> • a hazard and risk analysis related to existing or proposed plant or equipment • routine noise and vibration monitoring data or investigative measurements
Equipment and techniques	<p>Equipment and techniques may include:</p> <ul style="list-style-type: none"> • data required related to test requirements • spectrum analysis or simple noise measurement of linear sound pressure levels • microphones and preamplifiers • specialist applications requiring supplementary transducers to locate source of noise • noise meters, such as hand-held, a-weighted, noise dose and precision options • recording techniques and equipment for various environments and sound characteristics • calibration • electrodynamics exciter • sinusoidal and random excitation • sub and super harmonics • force testing and structural response • simulated and real environment testing of shock • calibration
Range of noise and vibration mitigation solutions	<p>Range of noise and vibration mitigation solutions may include:</p> <ul style="list-style-type: none"> • controlling the source • controlling the transmission path • controlling the receiver • changing the operating condition of plant and machinery • vibration isolation • active vibration control
Standards and codes	<p>Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular design task</p>

MEM234005A Design hydrodynamic pumping systems

Modification History

New unit

Unit Descriptor

This unit of competency covers the design of new or modified hydrodynamic pumping systems, including the layout; choice of motor and pumps, pipes and valves; the fluid source and delivery requirements of the system. It includes sustainability implications, occupational health and safety (OHS) and regulatory requirements.

Application of the Unit

This unit applies to the design of hydrodynamic pumping systems across all forms of manufacturing and engineering. Design activities may also include reverse engineering, design rectification or modifications of an existing design. It applies to pumping system designers and maintenance personnel, and those pursuing engineering or related qualifications and careers.

Prior experience in the application of scientific principles, evaluation of hydrodynamic systems, mathematics, computer software and file handling is required.

 - 3.1 Evaluate concept proposals with client
 - 3.2 Ensure that design solution is optimised with respect to the system specifications
 - 3.3 Finalise selected design, including equipment, layout, fluid source and delivery, and other features desired by client
 - 3.4 Ensure preparation of all required documentation, drawings, specifications and instructions
 - 3.5 Consult with client and stakeholders to obtain sign-off on design
 - 3.6 Monitor installation and commissioning with stakeholders and make any necessary adjustments to design

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting features of plant and equipment and parameters to the brief or contract
- advising clients based on discipline knowledge and OHS and regulatory standards
- researching sustainability implications and current industrial design techniques
- determining OHS, regulatory and risk management requirements
- investigating and measuring
- investigating faults in existing designs and arriving at solutions
- modelling and calculating using appropriate software and validation techniques
- generating and evaluating a range of solutions for feasibility against design criteria
- designing hydrodynamic pumping systems solution using current design methods
- communicating, negotiating and reviewing with stakeholders and clients throughout the process
- documenting design with drawings, specifications and instructions

Required knowledge

Required knowledge includes:

- research and investigation methods
- techniques for:
 - continuous improvement
 - problem solving and decision making
 - root cause analysis (RCA) or failure mode and effects analysis (FMEA) or design review based on failure mode (DRBFM),and Pareto analysis
- contemporary engineering design methods
- relevant engineering design software
- design, research, modelling and computational methodologies applied to hydrodynamic pumping systems
- documentation, drawings, specifications and instructions
- OHS and regulatory requirements, codes of practice, standards, risk minimisation and registration requirements
- fundamentals of hydrodynamics, including properties of substances and conservation of energy principles
- types of pumps, such as centrifugal, rotary and reciprocating

- pumping systems specifications, such as head equations, performance curves, valves, flow rates and efficiency
- pump placements
- cavitations
- rotodynamic pump performance parameters and specifications
- series and parallel pumps
- practical pump installations and operation problems
- pumping special fluids, such as viscous fluids, slurries, Newtonian and non-Newtonian fluids

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • interpret features of plant and equipment and parameters to the brief or contract • advise client based on discipline knowledge and OHS and regulatory standards • research sustainability implications and current industrial design techniques • determine OHS, regulatory and risk management requirements • investigate and measure • model and calculate using appropriate software and validation techniques • generate and evaluate a range of solutions for feasibility against design criteria • design hydrodynamic pumping solution • communicate, negotiate and review with stakeholders and client throughout process to obtain agreement on proposal and sign-off on design • document design with drawings, specifications and instructions.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.

	<ul style="list-style-type: none"> • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Parameters to the design brief	<p>The design brief may include the design of new equipment or fault analysis, rectification or modification to an existing design. Parameters to the design brief may include:</p> <p>These may include:</p> <ul style="list-style-type: none"> • determination of the degree of innovation and creativity expected by the client • design process limits and budgets • product cost limits and budgets • performance specification • equipment availability, capacities and restrictions • specified administrative, communication and approval procedures • other special features and limits in the design brief
OHS, regulatory, sustainability and environmental issues	<p>OHS, regulatory, sustainability and environmental issues may include:</p> <ul style="list-style-type: none"> • OHS Acts and regulations • relevant standards • industry codes of practice • risk assessments

	<ul style="list-style-type: none"> • registration requirements • safe work practices • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative OHS impact on employees, community and customer • state and territory regulatory requirements
Client	<p>Client may be:</p> <ul style="list-style-type: none"> • internal or external to the designer's organisation
Range of solutions	<p>Range of solutions may include those that:</p> <ul style="list-style-type: none"> • satisfy the technical requirements of the design brief • are within budget • are able to be manufactured • meet any regulatory requirements • minimise environmental and sustainability impacts
Standards and codes	<p>Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular design task</p>
System specifications	<p>System specifications may include, but are not limited to:</p> <ul style="list-style-type: none"> • pump types • system head requirements • pump performance requirements • duty point • flow rates • cavitation issues and control • power and efficiency • energy cost of pumping • valves for flow control • component layout

MEM234006A Evaluate and select thermodynamic systems or subsystems

Modification History

New unit

Unit Descriptor

This unit of competency covers the evaluation of performance, efficiency and the selection of appropriate thermodynamic plant and equipment using thermodynamic principles, including the Law of Entropy and the Second Law of Thermodynamics, as applied to gas cycles and vapour cycles, flow-through nozzles and blade passages, impulse and reaction stages of turbines. It includes generation and transfer of heat energy using solid, liquid and gas mediums and application of software.

Application of the Unit

This unit applies to the evaluation of performance, efficiency and selection of appropriate thermodynamic plant and equipment across all forms of manufacturing and engineering. It is suitable for Principal Technical Officers and people in equivalent positions working with heat transfer, air conditioning, solar, geo-thermal and other power generation applications involving thermal energy transfer.

Prior experience in the application of scientific principles, evaluation of thermodynamic system components, mathematics and computer techniques is required.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | |
|---|---|---|
| 1 | Clarify the specifications required for thermodynamic system | <ul style="list-style-type: none"> 1.1 Establish features of plant and equipment and thermodynamic performance and efficiency parameters 1.2 Confirm technical, commercial and environmental parameters to specifications 1.3 Determine stakeholders to be consulted in evaluation and selection process 1.4 Assess occupational health and safety (OHS), regulatory, sustainability or environmental regulations and issues relevant to the evaluation and selection task 1.5 Confirm selection requirements, including budget and schedule, and provide preliminary advice on feasibility |
| 2 | Evaluate thermodynamic system options and prepare concept proposals | <ul style="list-style-type: none"> 2.1 Appraise initial qualitative and quantitative analysis of the evaluation and efficiency task 2.2 Carry out required modelling and calculations using appropriate software and validation techniques 2.3 Generate a range of thermodynamic system solutions to the selection requirements, including choice of equipment, layout, fluid source and delivery 2.4 Check feasibility and evaluate solutions against selection requirements ensuring conformity to standards and codes, technical, economic and OHS requirements 2.5 Determine, social and sustainability implications of solutions 2.6 Present concept proposals to client |

- 3 Select thermodynamic system
 - 3.1 Evaluate concept proposals with client
 - 3.2 Finalise selection, including equipment, layout, fluid source and delivery, and other features desired by client
 - 3.3 Ensure preparation of all required documentation, drawings, specifications and instructions
 - 3.4 Consult with client and stakeholders to obtain sign-off on selection
 - 3.5 Monitor installation and commissioning with stakeholders and make any necessary adjustments to design

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting features of plant and equipment and parameters to the brief or contract
- advising clients based on discipline knowledge and OHS and regulatory standards
- researching sustainability implications and current industrial design techniques
- determining OHS, regulatory and risk management requirements
- modelling and calculating using appropriate software and validation techniques
- calculating, measuring and assessing thermodynamic system performance parameters, such as:
 - efficiency
 - fuel consumption
 - carbon equivalent emissions
- evaluating a range of solutions for feasibility against design criteria
- selecting thermodynamic systems to match performance and efficiency requirements
- communicating, negotiating and reviewing with stakeholders and client throughout process to obtain agreement on proposal and sign-off on system selection
- document evaluation and selection with drawings, specifications and instructions

Required knowledge

Required knowledge includes:

- typical documentation, drawings, specifications and instructions required in thermodynamic system selection processes
- OHS and regulatory requirements, codes of practice, standards, risk minimisation and registration requirements
- current options and trends in design, performance analysis, and modelling and simulation software relevant to thermodynamic systems, including underpinning program techniques and software validation techniques
- concepts of thermodynamics, properties of substances, conservation of mass and energy principles
- Law of Entropy and the Second Law of Thermodynamics
- second law analysis of thermodynamic systems
- actual and ideal gas cycles and vapour cycles
- impulse and reaction stages of turbines
- theory of heat transfer, such as conduction, convection, and radiation through various

materials and geometric shapes

- heat flow solutions by analytical, electrical analogy, graphical, numerical, failure effects analysis (FEA) and graphical software solution techniques

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • interpret features of plant and equipment and parameters to the brief or contract • advise client based on discipline knowledge and OHS and regulatory standards • research sustainability implications and current thermodynamic system design techniques • determine OHS, regulatory and risk management requirements • model and calculate using appropriate software and validation techniques • generate and evaluate a range of solutions for feasibility against selection requirements • evaluate and select most appropriate thermodynamic solution • communicate, negotiate and review with stakeholders and client throughout process to obtain agreement on proposal and sign-off on selection • document evaluation and selection with drawings, specifications and instructions.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. MEM234007A Design fluid power systems

Modification History

New unit

Unit Descriptor

This unit of competency covers the design of fluid power systems, including pneumatic multi-actuator control systems; hydraulic systems, including hydrostatic transmissions, proportional and servo valve control, and programmable logic controllers (PLC). It includes occupational health and safety (OHS), regulatory requirements, automation safety and systematic design processes. Design considerations include dynamic loads and optimised control system response and stability.

Application of the Unit

This unit applies to fluid power systems across all forms of manufacturing and engineering. Design activities may also include reverse engineering, design rectification or modifications of an existing design. It is suitable for fluid power system and automation designers and maintenance personnel, and those pursuing engineering or related qualifications and careers.

Prior experience in evaluation of fluid power systems and hydrodynamics, mathematics, computer techniques, basic electrical and controllers is required.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--|-----|--|
| 1 | Interpret design brief for fluid power systems | 1.1 | Confirm the design brief and operational requirements with the client |
| | | 1.2 | Establish technical, commercial and environmental parameters to the brief or contract |
| | | 1.3 | Determine stakeholders to be consulted in design process |
| | | 1.4 | Consider regulatory, sustainability or environmental issues relevant to the briefs |
| | | 1.5 | Provide preliminary advice to client on the feasibility for realising the fluid power system design |
| 2 | Prepare concept proposal | 2.1 | Analyse and establish worksite requirements for fluid power system realisation in conjunction with the client |
| | | 2.2 | Undertake initial design investigations for fluid power system capacity and responsiveness |
| | | 2.3 | Carry out required modelling, simulation and calculations using appropriate software, and test equipment to determine fluid power system, function, behaviour and safety |
| | | 2.4 | Generate a range of possible solutions to the design |
| | | 2.5 | Check feasibility and validate solutions against design criteria ensuring conformity to OHS requirements and relevant standards |
| | | 2.6 | Determine social and sustainability implications of solutions |

- 2.7 Review concept proposals with client to identify preferred solution
- 3 Design fluid power system
 - 3.1 Develop selected fluid power design to meet specifications, including dimensioning, sizing and positioning of system components
 - 3.2 Evaluate sequence and mode control methods for multi-actuator circuit, stand alone and network designs for implementation
 - 3.3 Determine options for design of compressed air supply for a multi-application facility, if applicable
 - 3.4 Ensure that design solution is optimised with respect to the system specifications
 - 3.5 Develop fluid power design documentation, including drawings, circuit diagrams, specifications, operating instructions, manuals and training materials, if appropriate
 - 3.6 Check that the final design meets all required specifications and operational capabilities
 - 3.7 Consult with client and stakeholders to obtain sign-off on design

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- determining features of fluid power systems, including OHS, regulatory and risk management requirements
- interpreting parameters to the brief or contract
- researching trends and techniques in:
 - fluid power design
 - reverse engineering
 - sustainability issues and implications
 - materials and components
 - assembly, fabrication and construction techniques
 - lean and other quality techniques
 - latest relevant modelling, simulation and validation techniques, and other software
- investigating and presenting options
- investigating faults in existing designs and propose solutions
- selecting and using software and validation techniques, including 2-D and 3-D modelling
- creating optimised design solutions for fluid power systems
- evaluating fluid power solutions for feasibility against design criteria, including relevant engineering and financial calculations and analysis
- communicating, negotiating and reviewing with stakeholders and clients throughout process to obtain agreement of proposal and sign-off on design
- documenting design with drawings, specifications and instructions

Required knowledge

Required knowledge includes:

- fluid power design methods
- current options and trends in design, performance analysis, modelling and simulation software, including underpinning program techniques and software validation techniques
- research and investigations methods
- techniques for:
 - continuous improvement
 - problem solving and decision making
 - root cause analysis (RCA) or failure mode and effects analysis (FMEA) or design review

based on failure mode (DRBFM), and Pareto analysis

- principles of fluid power designs
- dimensions, capacity and position of system components
- system responsiveness
- electrical and mechanical behaviours of fluid power systems
- hydraulics and designing with hydraulics components
- applications and characteristics of servo valves
- electronic controllers for proportional and servo valves
- sensor/transducer/amplifiers
- pneumatics and designing with pneumatic components
- multiple actuator control circuits
- compressed air system design
- OHS and regulatory requirements, codes of practice, standards, risk minimisation and registration requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

MEM234008A Design plant using computer simulations

Modification History

New unit

Unit Descriptor

This unit of competency covers the use of computer simulations to develop engineering solutions for the design of plant, equipment and manufacturing processes. It includes mathematical models and computer simulation models, sensitivity estimation and optimisation to ensure reliability, validity and robustness of simulations.

Application of the Unit

This unit applies to the use of computer simulation for design of significant plant, equipment or manufacturing processes across all forms of manufacturing and engineering. Design activities may also include reverse engineering, design rectification or modifications of an existing design. It is suitable for plant and process designers and maintenance personnel, and those pursuing engineering or related qualifications and careers.

Prior experience in the evaluation of plant and processes; scientific principles; analysis of loads on machine elements; selection of components; mathematics, including calculus and differential equations, materials, manufacturing processes and computer-aided design (CAD) is required.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Clarify the simulation task and elaborate the specification	1.1	Establish, in consultation with client, required features of the computer simulations
		1.2	Determine parameters to the brief or contract
		1.3	Determine stakeholders to be consulted in design process
		1.4	Assess occupational health and safety (OHS), regulatory, sustainability or environmental issues relevant to design task
		1.5	Confirm design brief, including budget and schedule, and provide preliminary advice on feasibility
2	Research and test computer simulation options for a range of applications	2.1	Analyse computer simulations software for reliability, validity and robustness
		2.2	Assess process simulation software for applications in commercial plant and processes
		2.3	Test computer simulation software with known solutions
		2.4	Select the most appropriate simulation option for the application
3	Prepare concept proposal	3.1	computer simulation design
		3.2	Complete required modelling, optimisation and sensitivity analysis
		3.3	Generate a range of design solutions, if required
		3.4	Check feasibility and evaluate solutions against design

- criteria, standards and codes ensuring conformity to OHS requirements
- 3.5 Prepare a proposal that includes results of feasibility study, consideration of expert opinion, initial calculations, modelling and the use of judgment and discretion
- 3.6 Review concept proposal with client to improve outcomes and overcome possible problems
- 3.7 Negotiate adjustments to brief or contract parameters if required
- 4 Design plant, equipment or manufacturing process
 - 4.1 Design plant, equipment or process using chosen simulation methods
 - 4.2 Optimise simulation and analyse sensitivity
 - 4.3 Provide documentation, graphics, specifications and instructions
 - 4.4 Consult with client and stakeholders
 - 4.5 Obtain sign-off on design simulation

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- determining design parameters, performance targets and system variables of plant, equipment or process to be simulated, including OHS, regulatory and risk management requirements
- interpreting parameters to the brief or contract
- researching latest trends and techniques in:
 - computer simulation models, methods for sensitivity estimation and optimisation to ensure reliability, validity and robustness of simulation, simulation software, and programming and validation techniques
 - reverse engineering
 - sustainability implications and implications for computer simulation design applications
 - selecting appropriate simulation model
 - modelling, optimising and analysing model sensitivity
- generating and evaluating a range of solutions using appropriate innovation and creativity for feasibility against design criteria
- investigating faults in existing designs and arriving at solutions
- designing simulated plant
- communicating, negotiating and reviewing with stakeholders and client throughout process to obtain agreement on proposal and sign-off on simulated design
- documenting design with files, drawings, specifications and instructions

Required knowledge

Required knowledge includes:

- design methods, research and investigations methods
- techniques for:
 - continuous improvement
 - problem solving and decision making
 - root cause analysis (RCA) or failure mode and effects analysis (FMEA) or design review based on failure mode (DRBFM), and Pareto analysis
- computer simulation packages
- advantages of design simulation, such as development time, low cost and minimum resources

- disadvantages of design simulations, such as level of uncertainty, and cost of making decisions based on invalid simulations
- simulation applications:
 - physical simulation using physical objects as analogues of another reality
 - interactive simulation or 'human in the loop' simulations (e.g. space experiences, flight and driving simulation, medical procedure training etc.)
 - computer architecture simulation
 - training simulation
 - business performance
 - plant or process design
- mathematical models:
 - linear and non-linear
 - deterministic and stochastic
 - steady-state and dynamic
 - lumped and distributed parameter models
- computer simulation types:
 - continuous and discrete
 - deterministic and stochastic
 - local or distributed simulations
 - object-oriented physical modelling (OOPM) simulation
- model variable types:
 - state variables, constants and random variables
 - inputs, outputs and decisions variables
- sensitivity estimation and optimisation
- graphical techniques for visual model building

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • interpret design parameters, performance targets and system variables of plant, equipment or process to be simulated • advise client based on discipline knowledge, OHS and regulatory standards • research sustainability implications, computer simulation design applications, mathematical and computer simulation models, methods for sensitivity estimation and optimisation to ensure reliability, validity and robustness of simulation, simulation software, programming and validation techniques • determine OHS, regulatory and risk management requirements related to plant • investigate and measure to confirm the parameters for required design • select appropriate simulation model • model, optimise and analyse model sensitivity • generate and evaluate a range of solutions using appropriate innovation and creativity for feasibility against design criteria • design simulated plant • communicate, negotiate and review with stakeholders and client throughout process to obtain agreement on proposal and sign-off on simulated design • document design with files, drawings, specifications and instructions.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Client	<p>Client may be:</p> <ul style="list-style-type: none"> • internal or external to the designer's organisation
Computer simulations	<p>A computer simulation is a computer programme or network of computers that attempts to simulate an abstract model of a particular system in order to gain insight into the operation of the system or operator characteristics</p> <p>Typical applications include:</p> <ul style="list-style-type: none"> • process simulations • performance analysis and optimisation • fault simulations • machine simulations, stress, deflection and heating • environmental modelling • mathematical design modelling

	<ul style="list-style-type: none"> • hydraulic system modelling • virtual engineering
Parameters to the design brief	<p>The design brief may include the design of new equipment or fault analysis, rectification or modification to an existing design. Parameters to the design brief may include:</p> <ul style="list-style-type: none"> • determination of the degree of innovation and creativity expected by the client • design process limits and budgets • product cost limits and budgets • performance specifications • equipment availability, capacities and restrictions • specified administrative, communication and approval procedures • other special features and limits in the design brief
OHS, regulatory, sustainability and environmental issues	<p>OHS, regulatory, sustainability and environmental issues may include:</p> <ul style="list-style-type: none"> • OHS Acts and regulations • relevant standards • industry codes of practice • risk assessments • registration requirements • safe work practices • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative OHS impact on employees, community and customer • state and territory regulatory requirements
Sustainability	<p>Sustainability is used to mean the entire sustainable performance of the organisation/plant including:</p> <ul style="list-style-type: none"> • meeting all regulatory requirements • conforming to all industry covenants, protocols and best practice guides • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative OHS impact on employees, community and customer
Standards and codes	Standards and codes refer to all relevant Australian and

	international standards and codes applicable to a particular design task
Sensitivity estimation, optimisation and validation	<ul style="list-style-type: none"> • Software may be employed for estimation, optimisation and validation. • Sensitivity is a measure of impacts of changes to parameter values and assumptions on the output or conclusions from the model. Sensitivity analysis can be used as a measure of robustness and validity. • Optimisation is the process of adjustment of variables and parameters to fine-tune the output to closer match expected real system outputs. • Validation techniques include: <ul style="list-style-type: none"> • comparison of traditional solutions for simple design problems with software solutions to the same design problems • review of previously implemented design challenges which were completed using the software • robustness relates to the ability of a simulation model to respond to inputs in a stable manner

MEM234009A Design computer-integrated manufacturing systems

Modification History

New unit

Unit Descriptor

This unit of competency covers the design of a computer-integrated manufacturing (CIM) system, including control of machine and processes and the generation of manufacturing information. It includes occupational health and safety (OHS), automation safety and risk management.

Application of the Unit

This unit applies to the design of automated plant and equipment, control and data sharing systems across all forms of manufacturing and engineering. Design activities may also include reverse engineering, and design rectification or modifications of an existing design. It is suitable for automated manufacturing system designers and maintenance personnel, and those pursuing engineering or related qualifications and careers.

Prior experience in the application of computing technology, mathematics, scientific principles and techniques, electrical principles and techniques, programming of computers and controllers, methods, processes and mechanical construction techniques, manufacturing plant and processes, and evaluation of CIM systems is required.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--|-----|--|
| 1 | Interpret the design brief or contract requirements for CIM system | 1.1 | Establish, in consultation with the client, the required features and extent of integration of the CIM system |
| | | 1.2 | Establish technical, commercial and environmental parameters to the brief or contract |
| | | 1.3 | Determine stakeholders to be consulted in design process |
| | | 1.4 | Consider OHS, regulatory requirements and enterprise procedures relevant to the brief |
| | | 1.5 | Provide preliminary advice to the client on feasibility of the CIM project |
| 2 | Prepare concept proposal | 2.1 | Carry out initial investigations and measurements |
| | | 2.2 | Carry out required modelling and calculations using appropriate software and validation techniques |
| | | 2.3 | Generate a range of solutions that include consideration of data requirements, hardware requirements, system integration, network topology, communication protocols and automation safety, using appropriate innovation and creativity |
| | | 2.4 | Check feasibility and evaluate solutions against design criteria ensuring conformity to standards and codes, technical, economic and OHS requirements |
| | | 2.5 | Determine social and sustainability implications of solutions |
| | | 2.6 | Review concept proposals with client and identify preferred solution |

- 3 Design CIM system
 - 3.1 Develop CIM design that includes results of feasibility study, consideration of expert opinion, initial calculations and modelling and the use of judgment and discretion
 - 3.2 Provide documentation, drawings, specifications and instructions
 - 3.3 Consult with client and stakeholders
 - 3.4 Obtain sign-off on design

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- determining features of CIM system, including OHS, regulatory and risk management requirements
- interpreting parameters to the brief or contract
- researching latest trends and techniques in CIM practices, including:
 - machine and equipment design
 - reverse engineering
 - sustainability issues and implications for machine and equipment design
 - assembly, fabrication and construction techniques
 - purchasing and inventory control systems
 - lean and other quality techniques
 - latest relevant modelling and other software
- investigating and presenting options
- investigating faults in existing designs and arriving at solutions
- selecting and using software and validation techniques
- creating design solutions to match client expectations of innovation as well as fitness for purpose
- designing for servicing, maintainability, cost, manufacturability and assembly, and ease of operation
- evaluating solutions for feasibility against design criteria, including relevant engineering and financial calculations and analysis
- communicating, negotiating and reviewing with stakeholders and client throughout process to obtain agreement on proposal and sign-off on design
- documenting design with drawings, specifications and instructions

Required knowledge

Required knowledge includes:

- current CIM design knowledge, skills and techniques, including mechanical, electrical, fluid, electronic and information technologies, sensor/transducers, controllers, interfacing and signal conditioning, networking, software, data sharing and control functions
- techniques for:
 - continuous improvement

- problem solving and decision making
- root cause analysis (RCA) or failure mode and effects analysis (FMEA) or design review based on failure mode (DRBFM), and Pareto analysis
- features and capability of plant, equipment, controllers, software, network and communication systems
- OHS and regulatory requirements, codes of practice, standards, risk management and registration requirements
- engineering design software options
- contemporary engineering design methods
- software options for control and data sharing
- hardware options and capabilities to suit processes and products
- programming and use of CIM software
- documentation, drawings, specifications, instructions required, process information and programming

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • interpret features of plant and equipment and parameters to the brief or contract • advise client based on discipline knowledge and OHS and regulatory standards • research sustainability implications and current industrial design techniques • determine OHS, regulatory and risk management requirements • investigate and measure • model and calculate using appropriate software and validation techniques • generate and evaluate a range of solutions for feasibility against design criteria • design CIM system solution • communicate, negotiate and review with stakeholders and client throughout process to obtain agreement on proposal and sign-off on design • document design with drawings, specifications and instructions.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, a combination of both on and off the job, or off the job if suitable design and simulation facilities to test the design are available. MEM234010A Design microcontroller applications

Modification History

New unit

Unit Descriptor

This unit of competency covers the design of an automated device for a machine or equipment using a microcontroller. The automated device may use digital or analog input/output (I/O) and may involve feedback control. The microcontroller application may be an autonomous device or it may be integrated into a local area network (LAN) or distributed control system (DCS) using wired or wireless communications. It includes sustainability implications, occupational health and safety (OHS) and automation safety.

Application of the Unit

This unit applies to the design of automated devices using microcontrollers across all forms of manufacturing and engineering. Design activities may also include reverse engineering, and design rectification or modifications of an existing design. The unit is suitable for automated device or systems designers and maintenance personnel, and those pursuing engineering or related qualifications and careers.

Prior experience in the application of basic computing, controllers, mathematics, electrical, electronic, and evaluation of microprocessor systems and safety procedures is required. Mechanical, fluid power, thermodynamic, manufacturing methods and processes experience may be required by particular system designs.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---|-----|---|
| 1 | Clarify client brief or contract requirements | 1.1 | Establish, in consultation with the client, the required features and functions of the microcontroller application |
| | | 1.2 | Determine technical, commercial and environmental parameters to the brief or contract |
| | | 1.3 | Determine stakeholders to be consulted in design process |
| | | 1.4 | Provide initial advice to client on the feasibility of the project |
| 2 | Prepare concept proposal | 2.1 | Carry out initial investigations and measurements |
| | | 2.2 | Carry out required modelling and calculations |
| | | 2.3 | Where appropriate, consider need for continuous improvement, constraints and contingency management, as part of concept proposal |
| | | 2.4 | Generate a range of microcontroller application design options |
| | | 2.5 | Check feasibility and evaluate solutions against design criteria ensuring conformity to OHS, regulatory, sustainability and environmental requirements |
| | | 2.6 | Prepare a device design proposal that includes appropriate consideration of results of feasibility study, required modelling and calculations, and any required expert opinions |
| | | 2.7 | Review concept proposal with client and select preferred solution |

- 3 Design microcontrolled device
 - 3.1 Finalise selected device design
 - 3.2 Provide documentation, drawings, specifications and instructions
 - 3.3 Consult with client and stakeholders to obtain sign-off on design
 - 3.4 Monitor installation and commissioning with stakeholders, when required, and make any necessary modifications

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- determining the features and functions of the application, including OHS, regulatory and risk management requirements
- interpreting parameters to the brief or contract
- researching latest trends and techniques in application of microcontrollers
- researching latest trends and techniques in reverse engineering
- investigating, measuring, modelling and calculating for options
- investigating faults in existing designs and arriving at solutions
- prototyping and systematically programming and testing actuators and interfaces, input sensor/transducers, communications and network connections, human machine interfaces (HMIs) and graphical user interfaces (GUIs)
- generating and evaluating a range of solutions for feasibility against design criteria
- evaluating solutions for feasibility against design criteria, including relevant engineering and financial calculations and analysis
- selecting actuators, interfaces, microcontroller, sensor/transducers, signal conditioning, HMIs, communication and network software and connections, if required
- communicating, negotiating and reviewing with stakeholders and client throughout process to obtain agreement on proposal and sign-off on design
- documenting design with drawings, specifications and instructions

Required knowledge

Required knowledge includes:

- contemporary engineering microcontroller application design methods
- research and investigations methods
- techniques for:
 - continuous improvement
 - problem solving and decision making
 - root cause analysis (RCA) or failure mode and effects analysis (FMEA) or design review based on failure mode (DRBFM), and Pareto analysis
- engineering design software options
- software simulation/validation processes
- documentation, drawings, specifications and instructions
- OHS and regulatory requirements, codes of practice, standards, risk minimisation and

registration requirements

- microcontroller software programming techniques
- control options
- device component options which may include microcontroller, user interfaces, HMIs and GUIs, software, data communications, telemetry, modems and networking topology, as appropriate
- specifications for I/O and I/O channels

MEM234011A Design programmable logic controller applications

Modification History

New unit

Unit Descriptor

This unit of competency covers the design of an engineering application using a programmable logic controller (PLC). It includes sustainability implications, occupational health and safety (OHS) and automation safety.

Application of the Unit

This unit applies to the control of machines, equipment or processes that may have thermodynamic, hydrodynamic, fluid power or mechanical system elements using a PLC. Control functions may be digital and analog and may include feedback. Network and remote control may be used. The unit is suitable for mechatronics and automated systems designers, systems maintenance, machine and process control, or computer-integrated manufacturing (CIM) designers. Design activities may also include reverse engineering, and design rectification or modifications of an existing design.

Prior experience in the evaluation of PLC systems, application of computing, controllers, mathematics, and basic electrical and electronics safety procedures is required. Additionally, experience in mechanical, fluid power, thermodynamic, manufacturing methods and processes may be required by particular system designs.

- selecting actuators, interfaces, microcontroller, sensor/transducers, signal conditioning, HMIs, communication and network software and connections, if required
- communicating, negotiating and reviewing with stakeholders and client throughout process to obtain agreement on proposal and sign-off on design
- documenting design with drawings, specifications and instructions

Required knowledge

Required knowledge includes:

- contemporary engineering PLC application design methods
- automation fundamentals, including mechanical, electrical, electronic and information technologies, sensor/transducers, controllers, interfacing and signal conditioning, networking (if required), software, data sharing and control functions
- features and capability of plant, equipment, controllers, software, network and communication systems
- OHS and regulatory requirements, codes of practice, standards, risk management and registration requirements
- processes for investigation, developing options, modelling and calculating, generating a range of solutions, completing feasibility and evaluation studies, and preparing proposals
- use of techniques for:

- continuous improvement
- problem solving and decision making
- root cause analysis (RCA) or failure mode and effects analysis (FMEA) or design review based on failure mode (DRBFM), and Pareto analysis
- communications and control systems standards, protocols and programming
- system logic as flow charts and state diagrams
- specifications for inputs/outputs (I/O)

Evidence Guide

The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant

	<p>contexts) together with application of underpinning knowledge.</p> <ul style="list-style-type: none"> • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Client	<p>Client may be:</p> <ul style="list-style-type: none"> • internal or external to the designer's organisation
Parameters to the brief	<p>The design brief may include the design of new equipment or fault analysis, rectification or modification to an existing design. Parameters to the design brief may include:</p> <ul style="list-style-type: none"> • determination of the degree of innovation and creativity expected by the client • design process limits and budgets • product cost limits and budgets • performance specifications • equipment availability, capacities and restrictions • specified administrative, communication and approval procedures • other special features and limits in the design brief

PLC solutions	<p>PLC solutions may include consideration of:</p> <ul style="list-style-type: none"> • I/O capacity • I/O module types: <ul style="list-style-type: none"> • discrete • special • signal conditioning • interface requirements • control functions • system integration • communication protocols • automation safety • network topology • programming languages
Applications	<p>Applications may include:</p> <ul style="list-style-type: none"> • control of machines, equipment or processes that may have thermodynamic, hydrodynamic, fluid power or mechanical system elements • control functions: <ul style="list-style-type: none"> • digital • analog • feedback loops • communications networks and remote control
OHS, regulatory, sustainability and environmental issues	<p>OHS, regulatory, sustainability and environmental issues may include:</p> <ul style="list-style-type: none"> • OHS Acts and regulations • relevant standards • industry codes of practice • risk assessments • registration requirements • safe work practices • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative OHS impact on employees, community and customer • state and territory regulatory requirements

MEM234012A Design integrated maintenance management systems

Modification History

New unit

Unit Descriptor

This unit of competency covers the skills required for the systematic design of integrated maintenance processes to complement engineering and business objectives through the maximisation of plant utilisation. It includes consideration of quality aspects, design for reliability and maintainability, and the generation of system data which is analysed and used to aid continuous improvement processes.

Application of the Unit

This unit applies to the design of integrated maintenance systems for existing plant and for new plant and processes in all areas of manufacturing and engineering. Design activities may also include reverse engineering, and design rectification or modifications of an existing design. It is suitable for maintenance personnel and system designers involved in engineering, manufacturing and related asset maintenance systems, and those pursuing engineering or related qualifications and careers.

Prior or concurrent experience in evaluation of maintenance systems, mathematics, mechanical, electrical, fluid, thermal, production methods and processes, materials handling and automated systems, repair techniques, occupational health and safety (OHS) and risk management is required.

This unit applies where substantial engineering-related skills are required to design the maintenance management system.

Where the emphasis is on competitive manufacturing related skills, such as lean manufacturing, reliability centred maintenance (RCM), proactive or total productive maintenance (TPM), and the engineering support is provided by other personnel, then the unit MSACMT681A Develop a proactive maintenance strategy should be considered.

Licensing/Regulatory Information

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Interpret client brief or contract requirements	1.1	Determine required features of the integrated maintenance management system
		1.2	Interpret parameters to the brief or contract
		1.3	Determine stakeholders to be consulted in design process
		1.4	Research current maintenance systems and management techniques relevant to brief or contract, including lean systems maintenance, systems thinking, continuous improvement, and constraint and contingency management
		1.5	Assess OHS regulatory, sustainability or environmental issues relevant to contract or brief
		1.6	Seek appropriate technical and professional assistance as required
		1.7	Provide initial advice on feasibility based on specified or anticipated operations, including expectations for equipment availability and budget for maintenance
2	Prepare concept proposal	2.1	Establish integrated maintenance management system options for plant and plant support services
		2.2	Establish facilities and service maintenance response system options

- 2.3 Categorise maintainable assets
 - 2.4 Establish data collection, storage, analysis and system feedback requirements
 - 2.5 Establish personnel participation and development requirements.
 - 2.6 Carry out required modelling and calculations using appropriate software and validation techniques
 - 2.7 Generate a range of solutions to the design brief ensuring conformity with OHS requirements
 - 2.8 Determine social and sustainability implications of solutions
 - 2.9 Review concept proposals with client to identify most appropriate solution
-
- 3 Design and handover integrated maintenance management system
 - 3.1 Develop integrated maintenance management system design
 - 3.2 Provide documentation, diagrams, specifications and instructions
 - 3.3 Consult with client and stakeholders on features and operation of final design
 - 3.4 Obtain sign-off on design
 - 3.5 Monitor implementation with stakeholders and make any necessary adjustments to design

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- designing maintenance system proposals that are properly integrated with engineering and business objectives
- categorising maintainable assets
- determining maintainable features of plant and equipment and parameters to the brief or contract
- determining OHS, regulatory, risk management and sustainability requirements
- advising clients based on discipline knowledge and OHS and regulatory standards
- establishing maintenance management system options for plant and plant support services, facilities and service maintenance response system options, data collection, storage, analysis and system feedback requirements, and personnel participation and development requirements
- investigating faults in existing designs and proposing solutions
- analysing financial costs and management implications of maintenance management systems, including life cycle cost and break-even
- modelling and calculating using appropriate software and validation techniques
- generating and evaluating a range of solutions for feasibility against design criteria
- planning for staffing requirements and training to operate maintenance management system
- communicating, negotiating and reviewing with stakeholders and client throughout process to obtain agreement on proposal and sign-off on design
- documenting design with drawings, specifications and instructions

Required knowledge

Required knowledge includes:

- current maintenance management techniques and systems
- options and trends in performance analysis, modelling and simulation software
- design techniques for reliability, maintainability and life cycle costing
- maintenance system options, such as corrective, preventative, predictive (condition monitoring), precision, RCM, proactive or TPM
- economic, social and environmental implications of maintenance management systems
- OHS and regulatory requirements, codes of practice, standards, risk management and registration requirements
- technical and professional support services required to comply with license, legal and

- indemnity requirements
- processes for investigation, such as developing options, modelling and calculating, generating a range of solutions, completing feasibility and evaluation studies and preparing proposals
- maintainable features of assets
- asset importance, such as risk to operations, critical plant, semi-critical and remainder of plant
- strategies for critical assets to maintain reliability, such as back-up assets, storing spares and use of redundant monitoring
- maintenance activities, online and break-down, such as manual and instrumented monitoring, adjustments, lubrications, lubricant testing, alignments, balancing, machining, fabricating, assembling and mounting, and reporting results
- management of spares inventory recognising cost and criticality of assets
- techniques for:
 - continuous improvement
 - problem solving and decision making
 - root cause analysis (RCA) or failure mode and effects analysis (FMEA) or design review based on failure mode (DRBFM), and Pareto analysis
 - theory of constraints (TOC)
- integrated maintenance data systems, including analysis, collection, handling, storage, scheduling, recording and reporting
- maintenance and operational system control documents, such as flowcharts, schedule and report templates, network specifications, data analysis and feedback procedures
- monitoring options, such as manual and sensor/transducer options

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • design a maintenance system proposal integrated with engineering and business objectives • interpret maintainable features of plant and equipment and parameters to the brief or contract • advise client on maintenance system options • research current maintenance management techniques and systems • establish maintenance management system options • categorise maintainable assets
---	--

	<ul style="list-style-type: none"> • determine sustainability and OHS, regulatory and risk management requirements • model and calculate using appropriate software and validation techniques • generate and evaluate a range of solutions for feasibility against design criteria • communicate, negotiate and review with stakeholders and client throughout process to obtain agreement on proposal and sign-off on design • document design with drawings, specifications and instructions.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • Full assessment of this unit would normally need to be undertaken on the job in the context of a commercial design project and software. Assessment of some elements of the maintenance system design process may be possible off the job providing full plant simulation facilities and software are available that reflect realistic workplace situations. • The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Integrated maintenance management systems</p>	<p>Integrated maintenance management systems usually combine management, financial, engineering and other practices for cost-effective maintenance of assets such as plant, equipment and facilities. These systems involve the design for reliability and maintainability, manufacture, installation, commissioning and eventual write-off and replacement of the assets. Data is collected and analysed to assess the reliability, life cycle costs and productivity of the assets against the design criteria.</p> <p>Reliability relates to the productivity of assets, that is, the maintenance of service or product output (quantities) and its quality within cost parameters. Systems may also include consideration of:</p> <ul style="list-style-type: none"> • maintenance priority • maintenance activity audit • monitoring and testing • maintenance system data • facilities and service maintenance response systems • maintainability
<p>Parameters to the brief</p>	<p>The design brief may include the design of new equipment or fault analysis, rectification or modification to an existing design. Parameters to the design brief may include:</p> <ul style="list-style-type: none"> • determination of the degree of innovation and creativity expected by the client • design process limits and budgets • product cost limits and budgets • performance specifications • equipment availability, capacities and restrictions • specified administrative, communication and approval procedures • other special features and limits in the design brief

Maintenance systems	<p>Maintenance systems may include:</p> <ul style="list-style-type: none"> • break-down maintenance • preventive maintenance • predictive maintenance (On-condition) • precision maintenance • proactive maintenance • reliability centred maintenance • total productive maintenance
Lean systems maintenance	<p>Lean maintenance systems aim at maximising machine and process uptime, minimising waste and costs, maintaining quality and delivery and customer service. Maintenance processes and procedures are subject to continuous improvement and are set to complement engineering business objectives. Processes covered under the lean systems maintenance reference include:</p> <ul style="list-style-type: none"> • process improvement • problem solving and decision making • RCA, FMEA or DRBFM • application of TOC
Systems thinking	<p>Systems thinking:</p> <ul style="list-style-type: none"> • is the process of developing solutions within the context of an entire system • recognises that an improvement in one subsystem can adversely affect another subsystem
Continuous improvement	<p>Continuous improvement implementation may relate to:</p> <ul style="list-style-type: none"> • plant, products, processes, systems or services, including design, development, implementation or manufacture, commissioning, operation or delivery and maintenance
Constraints and contingencies	<p>Contingencies are unplanned events that may require a maintenance system response. Examples may include:</p> <ul style="list-style-type: none"> • breakdowns • loss of services • sudden increases or decreases in production • regulatory change <p>Constraints are limitations on possible</p>

	<p>maintenance system solutions. These may be technical or physical constraints, such as:</p> <ul style="list-style-type: none"> • lack of spare parts • delays in supply • shortage of skilled workers • limits to site access or logistical limitations • financial, regulatory or internal procedures constraints
OHS, regulatory requirements and enterprise procedures	<p>OHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> • OHS Acts and regulations • relevant standards • industry codes of practice • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements applying to electrical work
Appropriate technical and professional assistance	<p>Appropriate technical and professional assistance may include:</p> <ul style="list-style-type: none"> • technical support and advice relating to elements which have intrinsic dangers, for example: <ul style="list-style-type: none"> • high pressure • energised fluid vessels • high temperatures and heat energy capacity • wiring with high current control voltages above extra low voltage • professional support for technologies, such as: <ul style="list-style-type: none"> • specialist electric motor drives and controllers • specialist materials, plastics, metal alloys and nano materials • special processes, foundry, alloy welding, heat treatment, sealing and fastening
Sustainability	<p>Sustainability is used to mean the entire sustainable performance of the organisation/plant, including:</p> <ul style="list-style-type: none"> • meeting all regulatory requirements • conforming to all industry covenants, protocols and best practice guides

	<ul style="list-style-type: none"> • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative OHS impact on employees, community and customer
Data collection, storage and analysis	<p>Manual methods or maintenance management software may be employed for:</p> <ul style="list-style-type: none"> • management of asset data, maintenance inventory, maintaining essential documentation (e.g. material safety data sheets (MSDS), work permits and databases) • planning, data recording and analysis • generation of documents, such as work orders, inventory reorders, and reports for process improvement or design feedback <p>Software options include:</p> <ul style="list-style-type: none"> • computer maintenance management (CMM) • computer-aided process planning (CAPP) • system control and data acquisition (SCADA)/distributed control systems (DCS) • automated storage and retrieval systems (ASRS) • enterprise resource planning (ERP) • quality assurance (QA) and quality control (QC) systems software
Personnel participation and development requirements	<p>Personnel, participation and development requirements in the maintenance system include the determination of labour requirements and functions for:</p> <ul style="list-style-type: none"> • autonomous and supervised maintenance-related activities, such as monitoring, adjustment, lubrication, disassembly, repair or replacement of parts, balancing and assembly • installation, alignment and recommissioning in accordance with standard procedures • participation in process improvement, including: <ul style="list-style-type: none"> • measuring performance against benchmarks, such as life cycle costs, time between failures (TBF), and overall

	<p>equipment effectiveness (OEE), as appropriate to individual job functions in design or operations</p> <ul style="list-style-type: none"> • data management, generation, recording, analysing, storing and use of software • required training, including: <ul style="list-style-type: none"> • training for systems participation • technical training
<p>Appropriate software and validation techniques</p>	<p>Software may be employed for:</p> <ul style="list-style-type: none"> • performance analysis/modelling. Underpinning program techniques and algorithms should be understood, such as the use of FEA and numerical methods within object oriented modelling techniques <p>Validation techniques include:</p> <ul style="list-style-type: none"> • comparison of traditional solutions for simple design problems with software solutions to the same design problems • review of previously implemented design challenges which were completed using the software

MEM234013A Plan and design engineering-related manufacturing processes

Modification History

New unit

Unit Descriptor

This unit of competency covers the skills and knowledge required to plan and design engineering-related manufacturing processes, including consideration of client requirements, process control, sustainability, lean systems, product manufacturability, system maintainability, facilities, services, plant and tooling requirements, supply chains, material and product flow, continuous improvement and constraint and contingency management, occupational health and safety (OHS) and regulatory requirements.

Application of the Unit

This unit applies to the design of manufacturing processes across all forms of manufacturing and engineering. Design activities may also include design rectification or modifications of an existing engineering-related manufacturing process. It is suitable for manufacturing system designers or manufacturing operations personnel, and those pursuing engineering or related qualifications and careers.

Prior or concurrent experience in production control techniques, manufacturing plant and processes, product and process improvement techniques, manufacturing plant and processes and evaluation of business performance, computing technology and mathematics is required.

The unit does not apply to technical leadership in project, operational or engineering management. Where these skills are required see unit MEM234001A Plan and manage engineering-related project or operations.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | |
|---|--|--|
| 1 | | <ul style="list-style-type: none"> 1.1 Clarify product performance objectives and specifications with client 1.2 Determine parameters to the brief or contract 1.3 Determine OHS, regulatory, sustainability and environmental issues relevant to the proposed manufacturing process 1.4 Confirm client's production system capability and provide initial advice on feasibility 1.5 Discuss 'time to market' issues with the client and establish timelines 1.6 Decide, in conjunction with client, whether the proposed project should fit in with an existing production system or a new or redesigned process be established for the product 1.7 Prepare a product development flow chart |
| 2 | Develop manufacturing process design options and prepare concept proposals | <ul style="list-style-type: none"> 2.1 Analyse client's company's production system, if applicable 2.2 Generate and validate a range of manufacturing process design solutions using current design methodologies that may include automated design tools 2.3 Evaluate and rank options against client's criteria for quality, cost, application of automation, maintainability and regulatory requirements 2.4 Determine, social and sustainability implications of solutions |

- 2.5 Document and present concept proposals to client
 - 2.6 Provide feedback on product manufacturability
 - 2.7 Evaluate concept proposals with client and select preferred process
- 3 Design manufacturing process
- 3.1 Determine manufacturing process control, maintenance management, human resources and continuous improvement systems implications for final design
 - 3.2 Finalise manufacturing process design, including material and product flow, logistics, transfers, new or modified facilities, services, plant and tooling layout
 - 3.3 Ensure preparation of all required documentation, drawings, specifications and instructions
 - 3.4 Consult with client and stakeholders to obtain sign-off on design
 - 3.5 Monitor installation and commissioning of manufacturing process with stakeholders and make any necessary adjustments to design

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting features of product performance objectives and specifications
- planning and designing manufacturing facilities, services, plant, tooling and process, and process control systems
- advising clients based on discipline knowledge and OHS and regulatory standards
- preparing a product development flow chart
- establishing budget and control measures and designing schedule within project control plan
- determining sustainability, OHS, regulatory and risk management requirements
- reviewing software options, facilities and logistics, services, labour, plant and tooling requirements
- modelling and calculating using automated design tools and validation techniques
- generating and evaluating a range of solutions for feasibility against design criteria
- incorporating maintenance management, human resources, information management and continuous improvement systems requirements
- implementing systems thinking, continuous improvement and constraint and contingency management options
- calculating estimated and actual time to market
- communicating, negotiating and reviewing with stakeholders and client throughout process to obtain agreement on proposal and sign-off on design
- documenting design with drawings, specifications and instructions
- investigating faults in existing manufacturing process designs and proposing solutions

Required knowledge

Required knowledge includes:

- advanced and current manufacturing process design methodologies
- standardisation techniques
- economic, social and sustainability implications
- market competitiveness factors
- lean manufacturing principles
- automated design tools
- project planning, scheduling and control techniques, including budgeting and costing
- characteristics of, and differences between, jobbing, flexible and mass production, and continuous process
- implications of maintenance management and human resource systems for engineering-related planning processes
- production information flow required for and from a manufacturing process

- regulatory environment requirements, applicable standards and codes of practice
- process design documentation, drawings, specifications and instructions
- techniques for:
 - continuous improvement
 - problem solving and decision making
 - root cause analysis (RCA) or failure mode and effects analysis (FMEA) or design review based on failure mode (DRBFM), and Pareto analysis

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • plan and design manufacturing facilities, services, plant, tooling and process, and process control system • interpret features of product and processing options and parameters to the brief or contract • advise client based on discipline knowledge and OHS and regulatory standards • establish budget and control measures and design schedule within design project control plan • research current manufacturing process design techniques, product manufacturability, process design, layout and automation options, lean systems and supply chain value analysis • determine sustainability, OHS, regulatory and risk management requirements • review software options, facilities, services, plant and tooling requirements of products, stock control, warehousing, buffer and emergency stock, material and product flow, transfer operations, information flow and manufacturing process control, process maintenance management, labour requirements and skills distribution • model and calculate using appropriate software and validation techniques • generate and evaluate a range of solutions for feasibility against design criteria • incorporate maintenance management, HR, information management and continuous improvement systems • implement systems thinking, continuous improvement, and constraint and contingency management options • communicate, negotiate and review with stakeholders and client throughout process to obtain agreement on proposal and sign-off on design • document design with required drawings, specifications and instructions.

MEM234014A Design a robotic system

Modification History

New unit

Unit Descriptor

This unit of competency covers the design of an engineering application employing a robot and integrating it with other equipment and systems. It includes the use and integration of actuators, sensors, end effectors, including tactile effectors, dynamic analysis of strength and stability, programming and protocols for communications and networking, as appropriate.

Application of the Unit

This unit applies to the design of a robotic system across all forms of manufacturing and engineering. Design activities may also include reverse engineering, design rectification, integration of off the shelf components, or modifications of an existing design. It is suitable for robotic system designers or maintenance technologists, and those pursuing qualifications and careers in engineering design involving robotics and automation.

Prior experience in the application of computing technology, mathematics, scientific principles and techniques, including kinematics and kinetics, electrical and fluid power principles and techniques, programming of computers and controllers, robotic systems evaluation and mechanical construction techniques is required.

Licensing/Regulatory Information

 - 3.2 Provide documentation, drawings, specifications and instructions
 - 3.3 Consult and negotiate with clients and stakeholders to obtain sign-off on design
 - 3.4 Monitor installation and commissioning with stakeholders, when required, and make any necessary modifications

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- determining the features and functions of the application, including OHS, regulatory and risk management requirements
- interpreting parameters to the brief or contract
- researching latest trends and techniques in application of robots, robot functions, programming options and reverse engineering
- investigating and measuring, modelling and calculating for options
- investigating faults in existing designs and proposing solutions
- simulating and systematically programming and testing
- generating and evaluating a range of solutions for feasibility against design criteria
- evaluating solutions for feasibility against design criteria, including relevant engineering and financial calculations and analysis
- evaluating suitability of off the shelf components
- communicating, negotiating and reviewing with stakeholders and client throughout process to obtain agreement on proposal and sign-off on design
- documenting design with drawings, specifications and instructions

Required knowledge

Required knowledge includes:

- contemporary engineering for robot and robotic application design methods
- robotic fundamentals, including mechanical, electrical, fluid, electronic and information technologies, sensor/transducers, controllers, interfacing and signal conditioning, networking, software, data sharing and control functions
- techniques for:
 - continuous improvement
 - problem solving and decision making
 - root cause analysis (RCA) or failure mode and effects analysis (FMEA) or design review based on failure mode (DRBFM), and Pareto analysis
- OHS and regulatory requirements, codes of practice, standards, risk management and registration requirements
- processes for investigation, developing options, modelling and calculating, generating a range of solutions, completing feasibility and evaluation studies, and preparing proposals and designing
- software modelling techniques to analyse robot capability including motions, loads, accuracy, precision and repeatability, kinematics, kinetics and dynamic stability
- validation techniques, including use of simple case traditional methods and calculations:

- robot drive systems
- manipulators and end effector options
- fundamentals of locomotion for mobile robots, such as wheels, legs, combined leg and wheels and tracks:
 - object detection and sensor options
- program techniques for a range of robot functions, such as:
 - pick and place
 - proximity detection (presence and distance)
 - motion control algorithms
- system control and data acquisition (SCADA) or distributed control systems (DCS), communications methods and protocols, and networking requirements
- programs and programming techniques for robot functions, communications and networking, as required by design
- documentation, drawings, specifications, programs and instructions

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • consult and negotiate throughout the design process • interpret features of the robotic system • confirm parameters to the brief or contract and provide initial advice based on discipline knowledge, standards, OHS, regulatory and risk assessment requirements • research sustainability and current and emerging trends • investigate and review robotic concept proposals and performance parameters and options • measure, model and calculate using appropriate techniques, software and validation techniques • apply innovation and creativity to generate a range of solutions • evaluate solutions against design criteria ensuring conformity to OHS requirements • prepare robotic system proposal • design a robotic system • provide documentation, drawings, specifications and instructions • obtain sign-off on design.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its

	<p>correct interpretation and application.</p> <ul style="list-style-type: none">• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.• Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Client	<p>Client may be:</p> <ul style="list-style-type: none"> • internal or external to the designer's organisation
Parameters to the design brief	<p>The design brief may include the design of new equipment or fault analysis, rectification or modification to an existing design. Parameters to the design brief may include:</p> <ul style="list-style-type: none"> • determination of the degree of innovation and creativity expected by the client • design process limits and budgets • product cost limits and budgets • performance specifications • equipment availability, capacities and restrictions • specified administrative, communication and approval procedures • use and integration of off the shelf components • other special features and limits in the design brief
Robotic system	<p>A robotic system is a system that includes a self-controlling machine (robot) that can perform functions automatically without human initiation and assistance after initial programming and other components to allow integration with other equipment and systems within the workplace. The robot may have sensory elements, electrical, hydraulic or pneumatic actuators for linear or rotary motion and components to perform functions (e.g. grasping hands, lifting magnets and heating pads). The robot may be networked so as to serve an automated environment.</p> <p>Robots are usually programmed to perform repetitive tasks or tasks unsuitable for humans.</p>
OHS, regulatory, sustainability and environmental issues	<p>OHS, regulatory, sustainability and environmental issues may include:</p> <ul style="list-style-type: none"> • OHS Acts and regulations • relevant standards • industry codes of practice • risk assessments • registration requirements • safe work practices • minimising ecological and environmental footprint of process, plant and product

	<ul style="list-style-type: none">• maximising economic benefit of process plant and product to the organisation and the community• minimising the negative OHS impact on employees, community and customer• state and territory regulatory requirements
Standards and codes	Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular design task

MEM234015A Design hydronic heat exchanger systems

Modification History

New unit

Unit Descriptor

This unit of competency covers the design of hydronic heat exchanger systems using steam or water as the heat transfer medium. It includes boilers for heat generation, cooling towers and chillers for heat dissipation.

Application of the Unit

This unit applies to the design of hydronic heat exchanger systems across all forms of manufacturing and engineering. Design activities may also include reverse engineering, and design rectification or modifications of an existing design. It is suitable for hydronic system contractors, building heating, ventilation and air conditioning (HVAC) consultants, designers and maintenance personnel.

Prior experience in the evaluation of hydronic systems, application of heating, ventilation, air conditioning and refrigeration (HVAC/R) principles, mathematics and computer techniques is required.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--|-----|--|
| 1 | Clarify the design brief and specifications for the hydronic heat exchanger system | 1.1 | Establish required features and performance parameters of a hydronic heat exchanger system |
| | | 1.2 | Confirm technical, commercial and environmental parameters to the brief or contract |
| | | 1.3 | Determine stakeholders to be consulted in design process |
| | | 1.4 | Assess occupational health and safety (OHS), regulatory, sustainability or environmental issues relevant to the design task |
| | | 1.5 | Confirm design brief, including budget and schedule, and provide preliminary advice on feasibility |
| 2 | Evaluate design analysis and prepare concept proposals | 2.1 | Appraise initial qualitative and quantitative analysis of the design task |
| | | 2.2 | Carry out required detailed modelling and calculations using appropriate software and validation techniques appropriate to given environments |
| | | 2.3 | Generate a range of solutions to the design brief for a hydronic heat exchange system |
| | | 2.4 | Check feasibility and evaluate solutions against design criteria ensuring conformity to OHS, air quality, environmental and sustainability requirements. |
| | | 2.5 | Present concept proposals to client and select preferred solution |

- 3 Design hydronic system
 - 3.1 Develop a hydronic system design
 - 3.2 Provide documentation, drawings, specifications and instructions
 - 3.3 Consult with client and stakeholders to obtain sign-off on design
 - 3.4 Monitor installation and commissioning with stakeholders and make any necessary adjustments to design

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting features of plant and equipment and parameters to the brief or contract
- advising clients based on discipline knowledge and OHS and regulatory standards
- researching sustainability implications and current industrial design techniques
- determining OHS, regulatory and risk management requirements
- modelling and calculating using appropriate software and validation techniques
- generating and evaluating a range of solutions for feasibility against design criteria
- designing hydronic heat exchange systems, including selection of boilers, pumps, cooling towers and chillers, as required using current design methods
- investigating faults in existing designs and arriving at solutions
- communicating, consulting, negotiating and reviewing with client and stakeholders
- documenting design with drawings, specifications and instructions

Required knowledge

Required knowledge includes:

- contemporary engineering design methods
- techniques for:
 - continuous improvement
 - problem solving and decision making
 - root cause analysis (RCA) or failure mode and effects analysis (FMEA) or design review based on failure mode (DRBFM), and Pareto analysis
- documenting design with drawings, specifications and instructions required
- OHS, regulatory and environmental requirements for work areas and refrigerated spaces, standards, codes of practice, risk management and organisational procedures related to HVAC/R design, installation, operation and maintenance
- concepts of thermodynamics, hydronics, properties of substances, conservation of mass and energy principles
- heat transfer (e.g. conduction, convection and radiation)
- heat exchangers
- water chillers
- pumping systems and cavitation
- practical pump installations and operation problems

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • design hydronic systems • apply safe working practices and procedures • communicate, consult, negotiate and review with client and stakeholders • research and respond to current issues • measure and investigate site and system requirements • model and calculate • use appropriate software and validation techniques • innovate and create for a range of solutions incorporating systems thinking, continuous improvement, and constraint and contingency management • evaluate solutions against design criteria • conform to OHS, environmental and sustainability requirements • obtain sign-off on design • document, produce graphics and drawings, specifications and instructions.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. MEM234018A Design heating, ventilation, air conditioning and refrigeration control systems

Modification History

New unit

Unit Descriptor

This unit of competency covers the design of heating, ventilation, air conditioning and refrigeration (HVAC/R) control and energy management systems. It includes the selection of control system elements to suit HVAC/R environmental and hardware control requirements and development of an energy management plan.

Application of the Unit

This unit applies to the design of control systems and energy management plans across all forms of manufacturing and engineering. Design activities may also include reverse engineering, and design rectification or modifications of an existing design. It is suitable for refrigeration system contractors, HVAC/R consultants, designers and senior maintenance personnel.

Prior or concurrent experience in the evaluation of HVAC/R control systems, hydronic and refrigeration systems and thermal loads, electrical principles, controller programming and computing is required.

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | |
|---|---|---|
| 1 | Clarify the design brief and specifications for HVAC/R control system | 1.1 Establish required features and performance parameters of HVAC/R control system |
| | | 1.2 Confirm technical, commercial and environmental parameters to the brief or contract |
| | | 1.3 Determine stakeholders to be consulted in design process |
| | | 1.4 Assess occupational health and safety (OHS), regulatory, sustainability or environmental issues relevant to the design task |
| | | 1.5 Confirm design brief including budget and schedule and provide preliminary advice on feasibility |
| 2 | Evaluate design analysis and prepare concept proposals | 2.1 Appraise initial qualitative and quantitative analysis of the design task |
| | | 2.2 Carry out required detailed modelling and calculations using appropriate software and validation techniques appropriate to given environments |
| | | 2.3 Generate a range of solutions to the design brief for an HVAC/R control system and associated energy management plan |
| | | 2.4 Integrate building management systems (BMS) considerations into the design, where required |
| | | 2.5 Check feasibility and evaluate solutions against design criteria ensuring conformity to standards and codes, technical, economic and OHS requirements |
| | | 2.6 Determine social and sustainability implications of |

- solutions
- 2.7 Present concept proposals to client
- 3 Design HVAC/R control system
 - 3.1 Evaluate concept proposals with client
 - 3.2 Ensure that design solution is optimised with respect to the system specifications
 - 3.3 Finalise selected design, including equipment, layout and fluid requirements
 - 3.4 Ensure preparation of all required documentation, drawings, specifications and instructions
 - 3.5 Consult with client and stakeholders to obtain sign-off on design
 - 3.6 Monitor installation and commissioning with stakeholders and make any necessary adjustments to design

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required knowledge includes:

- interpreting features of plant and equipment, and parameters to the brief or contract
- advising clients based on discipline knowledge and OHS and regulatory standards
- researching sustainability implications and current industrial design techniques
- investigating faults in existing designs and arriving at solutions
- determining OHS, regulatory and risk management requirements
- modelling and calculating using appropriate software and validation techniques
- generating and evaluating a range of solutions for feasibility against design criteria
- designing HVAC/R control system and energy management plans using current design methods
- programming building control systems software
- communicating, consulting, negotiating and reviewing with client, stakeholders, experts, licensed technical and professional services
- documenting design with drawings, specifications and instructions

Required knowledge

Required knowledge includes:

- contemporary engineering design methods
- HVAC/R control systems techniques
- energy management principles
- relevant engineering design methods
- design, research, modelling and computational methodologies applied the HVAC/R control systems
- design methods, research and investigations methods
- techniques for:
 - continuous improvement
 - problem solving and decision making
 - root cause analysis (RCA) or failure mode and effects analysis (FMEA) or design review based on failure mode (DRBFM), and Pareto analysis
- OHS and regulatory requirements, codes of practice, standards, risk minimisation and registration requirements
- control system principles applied to HVAC/R systems

- types of control equipment
- system hardware requirements, such as industrial and commercial refrigeration systems, hydronic systems and automated controls
- HVAC/R load cycles
- BMS principles
- energy options, such as unit tariffs, system and component consumption, benchmarks for energy costs and comparative tariffs of supply authorities
- interface principles for system components
- building management control system software
- major system hardware component control and energy requirements
- interface principles and techniques for electrical, electronic, pneumatic and hydraulic sensors and actuators

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • design control system and energy management plans • apply safe working practices and procedures • conform to OHS, regulatory and environmental requirements, standards, codes of practice, risk management and organisational procedures • investigate and interpret brief and options • communicate, consult, negotiate and review with client, stakeholders, experts, and licensed technical and professional services • research current issues, sustainability implications, control system and energy management options, software and programming techniques • measure and investigate for initial proposals • model and calculate • use judgement and discretion • use appropriate software and validation techniques • innovate and create for a range of solutions incorporating systems thinking, continuous improvement and constraint and contingency management • evaluate solutions against design criteria • conform to OHS requirements • obtain sign-off on design • document and produce graphics and drawings, specifications and instructions.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical

	resources should include equipment modified for people with disabilities.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>HVAC/R control system</p>	<p>System components may include:</p> <ul style="list-style-type: none"> • human machine interfaces • web servers, network topology and bus systems • protocols • system or network controllers • programmable logic controllers (PLCs) • terminal unit controllers for major plant components, such as boilers and HVAC/R central plant air handlers, chilled and hot water valves, air dampers, supply fans and lighting • analog and digital input/output (I/O) • remote control systems, including ethernet options
<p>Parameters to the brief or contract</p>	<p>The design brief may include the design of new equipment or fault analysis, rectification or modification to an existing design. Parameters to the design brief may include:</p> <ul style="list-style-type: none"> • determination of the degree of innovation and creativity expected by the client • design process limits and budgets • product cost limits and budgets • performance specifications • equipment availability, capacities and restrictions • specified administrative, communication and approval procedures • other special features and limits in the design brief
<p>OHS, regulatory, sustainability or environmental issues</p>	<p>OHS, regulatory, sustainability or environmental issues may include:</p> <ul style="list-style-type: none"> • OHS Acts and regulations • relevant standards • industry codes of practice • risk assessments • registration requirements • safe work practices • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community

	<ul style="list-style-type: none"> • minimising the negative OHS impact on employees, community and customer • state and territory regulatory requirements
Given environments	<p>Given environments may include:</p> <ul style="list-style-type: none"> • workplaces • food halls • restaurants • hotels • hospitals • domestic dwellings • industrial sites, factories, warehouses and cold storage areas • transport and refrigerated vehicles and trains
Range of solutions	<p>Range of solutions may include solutions that:</p> <ul style="list-style-type: none"> • satisfy the technical requirements of the design brief • are within budget • are able to be manufactured • meet any regulatory requirements • minimise environmental and sustainability impacts
Standards and codes	<p>Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular design task</p>
Client	<p>Client may be:</p> <ul style="list-style-type: none"> • internal or external to the designer's organisation
System specifications	<p>System specifications may include, but are not limited to:</p> <ul style="list-style-type: none"> • ducts and duct systems: <ul style="list-style-type: none"> • materials • supports • factory and field fabricated • sealants • layout and placements • capacity • zoning • heating and cooling loads • air flow and pressures • refrigerants • energy efficiency • air intake points • control equipment • monitoring equipment

Energy management plan	An energy management plan is a planning document that acts as a single source for all the critical information, steps, resources and methods you need to make efficient and effective movement to improved energy management and reduce energy consumption
BMS	BMS include: <ul style="list-style-type: none">• HVAC/R control systems and may also include fire, security and lighting controls

MEM234019A Apply finite element analysis in engineering design

Modification History

New unit

Unit Descriptor

This unit of competency covers the application of finite element analysis (FEA) for engineering design and modification analyses, including stress analysis, displacements and natural frequencies, and temperature and heat distributions in engineering or related applications.

Application of the Unit

This unit applies to engineering or related applications across all forms of manufacturing and engineering. It is suitable for people with structural, plant or equipment design or maintenance responsibilities, and those pursuing engineering or related qualifications and careers.

Prior experience in mechanics, mathematics and computing techniques and computer-aided design (CAD) is required and areas, such as thermodynamics or structures, depending on the application of the FEA.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--|-----|---|
| 1 | Integrate requirement for FEA into an engineering design application | 1.1 | Establish functions, features and performance parameters of plant, structure or equipment to be analysed |
| | | 1.2 | Determine parameters to the brief or contract |
| | | 1.3 | Determine occupational health and safety (OHS), regulatory, sustainability and environmental requirements of the application |
| | | 1.4 | Provide initial advice based on discipline knowledge, OHS and regulatory standards relating to the suitability of using FEA as an analytical technique |
| 2 | Apply FEA solution techniques | 2.1 | Set up a finite element model, including internal and external parameters, element mesh and nodes |
| | | 2.2 | Select appropriate solver and adjust parameters for optimum solution |
| | | 2.3 | Generate and assess solution file for warnings or errors |
| | | 2.4 | Interpret results and generate graphics |
| | | 2.5 | Identify areas of excessive stress, deformation, instability and excessive temperatures |
| | | 2.6 | Verify results to the required certainty level |
| | | 2.7 | Apply systems or holistic thinking, contingencies and constraints management, problem solving and decision making techniques in making recommendations to achieve satisfactory functions, features and performance parameters |

- 2.8 Review initial results with client
 - 2.9 Negotiate adjustments to brief or contract parameters, if required
- 3 Embed FEA results in design application
 - 3.1 Report and recommend design improvements or modifications as a result of the FEA analysis
 - 3.2 Document results of investigations, analysis and recommendations
 - 3.3 Obtain sign-off

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- gathering information relevant to the FEA task
- interpreting and evaluating documentation, specifications and drawings for FEA purposes
- researching FEA, mathematical techniques, applicability and limitations, software and evolving opportunities for FEA
- setting up FEA model, parameters, element mesh and nodes
- using FEA software, including pre- and post-processor, if any, effectively
- constructing models of engineering part or structure suitable for FEA using appropriate software
- determining and setting parameters and conditions for required type of analysis
- applying boundary conditions to suit type of analysis required, including axisymmetric analysis
- choosing, setting up, and running appropriate solvers, such as linear static, linear buckling, non-linear static, natural frequency, steady state, heat, and so on
- interpreting results, generating graphics and identifying significant issues
- validating software outputs
- reporting and documenting results

Required knowledge

Required knowledge includes:

- FEA task parameters for applications, such as:
 - stresses and displacements
 - natural frequencies
 - heat and temperature distribution
- software modelling and validation techniques, including:
 - element type and shape for error minimisation
 - library files
 - geometry importation from other software packages
 - application of boundary conditions
 - validation using comparison with traditional solution of simple examples and reviewing of past successful applications
 - methods for presentation of results, including software-generated graphics
 - measures of excessive stress and/or deformation and to recommend modifications
- software functions and features, such as:
 - deformed displays

- colour contour plots, contour averaging and contour jumps
- peeking, graphing and animating
- multiple views
- coordinate systems:
 - Cartesian
 - polar
 - spherical coordinate systems
- stress concentrations
- structural loads:
 - dead loads, live loads and wind loads
 - structural and non-structural mass
- material libraries:
 - types of beam, plate and brick elements
 - properties of materials, such as stress, strain, modulus of elasticity, modulus of rigidity, Poisson's ratio and allowable stress
- stresses:
 - equivalent stresses based on Von Mises criterion and Tresca criterion
 - shear force and bending moment diagrams, bending stress and torsional stress
 - heat transfer modes (conduction, convection and radiation)
 - thermal stress
- accuracy checking methods, including use of strain gauges and solvers
- software validation techniques

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • determine functions, features and performance parameters of plant, structure or equipment to be analysed • determine parameters to the brief or contract, OHS, regulatory, risk management and sustainability requirements • communicate, advise, negotiate and review with stakeholders and client throughout process • apply FEA solution techniques • set up FEA model, parameters, element mesh and nodes • select solver and adjust and optimise parameters
---	---

	<ul style="list-style-type: none"> • generate and assess solution file • interpret results, generate graphics and identify significant issues • validate software outputs • apply systems or holistic thinking, contingencies and constraints management, problem solving and decision making techniques in making recommendations • report and document results.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. MEM234020A Coordinate small lot manufacture using rapid manufacture processes

Modification History

New Unit

Unit Descriptor

This unit of competency covers the coordination of rapid manufacture (RM), rapid prototyping (RP) and rapid tooling (RT) processes for single or small lot production. It includes choice of materials, machinery and processes, generation of data and post-processing.

Application of the Unit

This unit applies to the RM of components or prototypes across all forms of manufacturing and engineering. It is suitable for manufacturing maintenance technicians, component and tool designers, and those pursuing engineering or related qualifications and careers.

Prior experience in the application of computer-aided design (CAD), computing technology, mathematics, scientific principles and techniques, materials, methods, processes and mechanical construction techniques is required.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Clarify the production task and elaborate the specifications	1.1	Determine features of object to be produced
		1.2	Determine parameters for the process and production and provide initial advice based on knowledge of rapid processes
		1.3	Assess occupational health and safety (OHS) and regulatory requirements, codes of practice, standards and risk management requirements
		1.4	Confirm object parameters with client
2	Prepare software model and relevant data files for object	2.1	Check or create initial CAD model using appropriate modelling software
		2.2	Select an appropriate rapid processing technology for object implementation
		2.3	Ensure that CAD model data has been pre-processed and the required files have been created for given rapid processing equipment
		2.4	Determine social and sustainability implications of solution
3	Finalise and direct production of first-off prototype	3.1	Finalise selected process ensuring preparation of all required programming and documentation
		3.2	Direct test run first-off sample
		3.3	Obtain sign-off on sample by client
		3.4	Direct production of batch quantity of objects, as required

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting features of object, materials, machinery and processes, and parameters for rapid processes
- advising clients based on discipline knowledge and OHS and regulatory standards
- researching sustainability implications and current industrial rapid production techniques
- determining OHS, regulatory and risk management requirements
- investigating, measuring and considering options
- modelling and calculating using appropriate software and validation techniques
- designing components and process adaptations
- communicating, negotiating and reviewing with stakeholders and client throughout object development and manufacture
- documenting process with drawings, specifications and instructions, and storing appropriate data files

Required knowledge

Required knowledge includes:

- technical and professional support services required to comply with ethical, license, legal and indemnity requirements
- economic, social and environmental implications of rapid processes
- OHS and regulatory requirements, codes of practice, standards, risk management and registration requirements
- factors affecting prototype material, machine and process selection
- current developments in machine and process capabilities for direct and indirectly manufactured components or tools
- machine data, including:
 - data digitising
 - reverse engineering
 - CAD and CAD files:
 - CAD functions, features and techniques related to RP
 - CAD model requirements for effective post-processing and suitability for the rapid process
 - file formats: .STL

- post-processing
- current developments in materials:
 - materials for additive printing processes
 - materials for sprayed metal deposition
 - materials for rapid casting
 - other materials, for example:
 - thermoplastics for vacuum forming
 - materials for rapid machining and fabrication
- documentation, drawings, specifications and instructions required, process information and programming

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • coordinate small lot manufacture using RM processes • apply RM principles and processes • interpret features of objects, materials, machinery and processes and parameters for rapid processes • advise client based on discipline knowledge and OHS and regulatory standards • research sustainability implications and current industrial design techniques • determine OHS, regulatory and risk management requirements • investigate and measure • model and calculate using appropriate software and validation techniques • generate and evaluate a range of solutions for feasibility against design criteria • communicate, negotiate and review with stakeholders and client throughout process to obtain agreement on proposal and sign-off on design • document design with drawings, specifications and instructions, and store appropriate data files • produce a batch quantity of objects.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. <p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant

	<p>contexts) together with application of underpinning knowledge.</p> <ul style="list-style-type: none"> • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RM applications	<p>RM applications are found in a variety of industries and for a number of purposes, including products requiring a high degree of customisation, or where speed to market is critical. Examples of rapid manufacturing or ‘mass customisation’ applications include:</p> <ul style="list-style-type: none"> • medical and dental prosthetics and implants • customised components for automotive, aerospace, marine and general product manufacture • jewellery and other art objects • any small to medium quantity item, particularly involving high set-up cost associated with using alternative or traditional methods
Rapid Prototyping (RP) applications	<p>RP is typically developed for:</p> <ul style="list-style-type: none"> • concept modelling and multiple design iterations at low cost • form, fit and function testing prior to committing to expensive tooling
Rapid Tooling (RT) applications	<p>RT applications include:</p> <ul style="list-style-type: none"> • tooling for most RM components. Both ‘direct’ and ‘indirect’ methods may be used to produce the tool

OHS and regulatory requirements, codes of practice, standards and risk management requirements	OHS and regulatory requirements, codes of practice, standards and risk management requirements may include: <ul style="list-style-type: none"> • OHS Acts and regulations • relevant standards • industry codes of practice • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements applying to electrical work
Standards and codes	Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular rapid processing task
Sustainability	Sustainability is used to mean the entire sustainable performance of the organisation/plant, including: <ul style="list-style-type: none"> • meeting all regulatory requirements • conforming to all industry covenants, protocols and best practice guides • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative OHS impact on employees, community and customer

MEM234021A Apply statistics to technology problems

Modification History

New unit

Unit Descriptor

This unit of competency covers the application of advanced statistics in an engineering or related application. It includes probability distributions, correlation, inference and significance, and covers both the application of theory in simple calculations and the use of relevant statistical packages for more complex situations.

Application of the Unit

This unit applies to projects or tasks requiring advanced statistical analysis involving probability distributions, correlation, inference and significance, and the use of statistical tables and equations, either manually or through use of an appropriate statistics package. It is suitable for paraprofessionals and technologists required to solve advanced statistical problems in an engineering or related field, or those pursuing technologist careers and qualifications.

Prior or concurrent experience in probability and statistics covering central tendency, measures of variability and confidence limits is required.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---|-----|--|
| 1 | Identify a need for the application of statistics | 1.1 | Identify a problem requiring a statistical application |
| | | 1.2 | Define the problem |
| | | 1.3 | Determine data currently available for analysis |
| | | 1.4 | Determine information required from outcome |
| 2 | Prepare to solve statistical problem | 2.1 | Determine statistical techniques to be applied |
| | | 2.2 | Identify and gain access to appropriate computational devices |
| | | 2.3 | Collect required input data |
| | | 2.4 | Analyse collected data for suitability and completeness |
| | | 2.5 | Take appropriate action to address any deficiencies found |
| 3 | Solve statistical problem | 3.1 | Apply appropriate techniques to collected data |
| | | 3.2 | Check answer by appropriate means |
| | | 3.3 | Interpret answer to determine information required by problem definition |
| 4 | Communicate outcomes | 4.1 | Communicate outcome to relevant stakeholders by appropriate means |
| | | 4.2 | Explain outcome to stakeholders, as appropriate |
| | | 4.3 | Check outcome has addressed problem |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying and defining problems
- collecting and analysing data
- reporting and presenting data and quantitative information
- communicating effectively with stakeholders on problem resolution

Required knowledge

Required knowledge includes:

- discrete and continuous data
- presentation data:
 - frequency distribution tables
 - histograms
 - ogives
- measures of central tendency:
 - arithmetic mean
 - median
 - mode
- measures of dispersion:
 - standard deviation
 - range
 - interquartile range
- probability
 - probability laws
 - probability distributions (binomial, and normal)
 - random walk and Monte Carlo methods
- statistical inference
 - large and small samples
 - sample size
 - statistical significance (student t, paired difference and two populations)
 - short cut methods (rank-sum, run tests and Kolmogorov-Smirnov)
- linear regression and correlation

- analysis of variance:
 - one way, two way and multiple
 - factorial experiments
 - failure time distributions
 - reliability and life testing

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • identify appropriate statistical techniques for engineering or related problems • apply the appropriate technique to the problem • communicate the outcome of the analysis in an appropriate way.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competency covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Problem definition	A problem definition for the purposes of this unit is one that allows for a statistical analysis and the application of quantitative data
Data available	Data currently available includes: <ul style="list-style-type: none"> all relevant data which is currently available within the organisation or could be readily obtained
Information required	Information required is: <ul style="list-style-type: none"> the outcome which needs to be produced in order to solve/assist in resolving the defined problem
Statistical techniques	Statistical technique may include: <ul style="list-style-type: none"> one or more or any of the techniques listed under 'required knowledge' a related technique
Computational device	Computational devices include: <ul style="list-style-type: none"> calculators with statistical functions computer software packages
Appropriate action	Appropriate action may include: <ul style="list-style-type: none"> taking necessary steps to obtain required data obtaining some relevant proxy for the desired data choosing a different statistical technique/computational device which will function with available data
Appropriate technique	Appropriate technique includes: <ul style="list-style-type: none"> selected statistical technique which will yield required outcome technique which is appropriate for the available data and which is relevant to the problem
Check answer	Checking answer means that the answer is examined to ensure it is within the range of expected rational results
Interpret answer	Interpret answer means translating the result of the statistical analysis into a form which is useable by the relevant stakeholders
Appropriate communication	Appropriate communication may include: <ul style="list-style-type: none"> report presentation

	<ul style="list-style-type: none">• verbal communication• web-based• electronic or hard copy
Check outcome	Check outcome includes: <ul style="list-style-type: none">• ensuring that the result of the analysis does assist in the resolution of the problem

MEM234022A Apply advanced calculus to technology problems

Modification History

New unit

Unit Descriptor

This unit of competency covers the application of advanced calculus in an engineering or related application. It includes differential and integral calculus and covers both the application of theory in simple calculations and the use of relevant software packages for more complex situations.

Application of the Unit

This unit applies to projects or tasks requiring advanced calculus, either manually or through use of an appropriate software package. It is suitable for paraprofessionals and technologists required to solve advanced mathematical problems in an engineering or related field, or those pursuing technologist careers and qualifications.

Prior or concurrent experience in mathematics covering calculus and differentials is required.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---|-----|--|
| 1 | Identify a need for the application of calculus | 1.1 | Identify a problem requiring application of calculus |
| | | 1.2 | Define the problem |
| | | 1.3 | Determine data currently available for analysis |
| | | 1.4 | Identify ways of obtaining other required data |
| | | 1.5 | Determine information required from outcome |
| 2 | Prepare to solve problem by calculus | 2.1 | Determine appropriate calculus to be applied |
| | | 2.2 | Identify and gain access to appropriate computational devices |
| | | 2.3 | Collect required input data |
| | | 2.4 | Analyse collected data for suitability and completeness |
| | | 2.5 | Take appropriate action to address any deficiencies found |
| 3 | Solve problem using calculus | 3.1 | Apply appropriate technique to collected data |
| | | 3.2 | Check answer by appropriate means |
| | | 3.3 | Interpret answer to determine information required by problem definition |
| 4 | Communicate outcomes | 4.1 | Communicate outcome to relevant stakeholders by appropriate means |
| | | 4.2 | Explain outcome to stakeholders, as appropriate |
| | | 4.3 | Check outcome has addressed problem |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying and defining problems
- collecting and analysing data
- reporting and presenting data and quantitative information
- communicating effectively with stakeholders on problem resolution

Required knowledge

Required knowledge includes:

- differential calculus:
 - introduction - review of standard derivatives and rules:
 - power rule
 - product rule
 - quotient rule
 - chain or function of a function rule
 - standard derivatives for a variety of common functions
 - higher order derivatives
 - graph sketching
 - maxima and minima (optimisation)
 - rates of change
 - small increments (errors and approximations)
 - implicit differentiation
 - logarithmic differentiation
 - partial differentiation
 - directional derivatives
- integral calculus
 - revision-integration techniques (areas and volumes)
 - partial fractions
 - integration by parts
 - trigonometric and hyperbolic substitution methods
 - improper integrals
 - integration of partial derivatives

- evaluation of arc lengths
- evaluation of surface areas
- mean and RMS values
- approximate integration (the trapezoidal and Simpson's rules)
- evaluation of centre of mass
- evaluation of centroidal positions in plane regions
- evaluation of moments of inertia and second moments of area
- evaluation of work and energy
- evaluation of centres of pressure on submerged plates

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • identify appropriate calculus technique for engineering or related problems • apply the appropriate technique to the problem • check answer has addressed problem • communicate the outcome of the analysis in an appropriate way.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competency covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---|-----|--|
| 1 | Identify a need for the application of DE's | 1.1 | Identify a problem requiring application of DE's |
| | | 1.2 | Define the problem |
| | | 1.3 | Determine data currently available for analysis |
| | | 1.4 | Identify ways of obtaining other required data |
| | | 1.5 | Determine information required from outcome |
| 2 | Prepare to solve problem by DE's | 2.1 | Determine appropriate DE to be applied |
| | | 2.2 | Identify and gain access to appropriate computational devices |
| | | 2.3 | Collect required input data |
| | | 2.4 | Analyse collected data for suitability and completeness |
| | | 2.5 | Take appropriate action to address any deficiencies found |
| 3 | Solve problem using DE's | 3.1 | Apply appropriate technique to collected data |
| | | 3.2 | Check answer by appropriate means |
| | | 3.3 | Interpret answer to determine information required by problem definition |
| 4 | Communicate outcomes | 4.1 | Communicate outcome to relevant stakeholders by appropriate means |
| | | 4.2 | Explain outcome to stakeholders, as appropriate |

4.3 Check outcome has addressed problem

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying and defining problems
- collecting and analysing data
- reporting and presenting data and quantitative information
- communicating effectively with stakeholders on problem resolution

Required knowledge

Required knowledge includes:

- ordinary DE's
- first order separable DE's
- first order linear DE's
- first order exact DE's
- second order linear homogeneous DE's with constant coefficients
- second order linear non-homogeneous DE's with constant coefficients
- DE's
 - definition of a DE
 - first order DE's – separation of variables and applications
 - second order DE's of the form: $\frac{d^2 y}{dx^2} = f(x)$
 - second order DE's of the form: $\frac{d^2 y}{dx^2} = f(y)$
 - first order DE's of the form: $\frac{dy}{dx} + Py = Q$
 - second order DE's of the form: $a\frac{d^2 y}{dx^2} + b\frac{dy}{dx} + cy = 0$
 - second order DE's of the form: $a\frac{d^2 y}{dx^2} + b\frac{dy}{dx} + cy = f(x)$
- motion
- kinematics
- resisted gravitational motion

- simple harmonic motion
- vibratory motion

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Identify a need for the application of advanced mathematics	1.1	Identify a problem requiring application of mathematics
		1.2	Define the problem
		1.3	Determine data currently available for analysis
		1.4	Identify ways of obtaining other required data
		1.5	Determine information required from outcome
2	Prepare to solve problem by advanced mathematics	2.1	Determine appropriate mathematics to be applied
		2.2	Identify and gain access to appropriate computational devices
		2.3	Collect required input data
		2.4	Analyse collected data for suitability and completeness
		2.5	Take appropriate action to address any deficiencies found
3	Solve problem using advanced mathematics	3.1	Apply appropriate techniques to collected data
		3.2	Check answer by appropriate means
		3.3	Interpret answer to determine information required by problem definition
4	Communicate outcomes	4.1	Communicate outcome to relevant stakeholders by appropriate means
		4.2	Explain outcome to stakeholders as appropriate

4.3 Check outcome has addressed problem

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying and defining problems
- collecting and analysing data
- reporting and presenting data and quantitative information
- communicating effectively with stakeholders on problem resolution

Required knowledge

Required knowledge includes:

- exponential, trigonometric and hyperbolic functions
 - revision - functionality and inverse functions
 - exponential and logarithmic functions;
 - trigonometric and inverse trigonometric functions
 - hyperbolic and inverse hyperbolic functions
- series:
 - revision of arithmetic and geometric progressions
 - limits
 - linear and quadratic approximations (Taylor polynomials)
 - partial sums
 - geometric series
 - power series
 - Maclaurin series
- vectors:
 - vectors in 3-dimensions
 - i j k notation
 - magnitude (or modulus) of a vector
 - unit vectors and direction angles
 - scalar or 'dot' product of two vectors
 - vector or 'cross' product of two vectors
 - resolution of vectors
 - differentiation and integration of vectors
 - dynamics:

- Newton's Laws of Motion
- energy, work and power
- the work-energy theorem
- moment of a force
- analytical geometry:
 - equation of a plane
 - the angle between two planes
 - the distance from a point to a plane
 - lines in 3-dimensional space
- graphing techniques:
 - coordinate geometry
 - graphs of exponential growth and decay
 - graphs with logarithmic scales
 - method of least squares
 - polar coordinates and polar graphs
 - graphs of functions of two variables
 - quadric surfaces
- complex numbers:
 - introduction to complex numbers:
 - Cartesian form
 - the Argand plane
 - trigonometric and polar form
 - subsets of the complex plane
 - De Moivre's Theorem
 - exponential form of complex numbers
 - applications to mesh current network analysis
- linear algebra:
 - matrix algebra:
 - basic operations
 - applications
 - transformations
 - determinants
 - systems of equations I:
 - solutions and inverses
 - applications
 - systems of equations II (numerical techniques)
 - systems of equations III (other systems)

- 4 Communicate outcomes
 - 4.1 Communicate outcome to relevant stakeholders by appropriate means
 - 4.2 Explain outcome to stakeholders, as appropriate
 - 4.3 Check outcome has addressed problem

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying and defining problems
- collecting and analysing data
- reporting and presenting data and quantitative information
- communicating effectively with stakeholders on problem resolution

Required knowledge

Required knowledge includes:

- numerical solutions:
 - finite difference techniques
 - polynomial interpolation
- errors:
 - computer arithmetic
 - propagation of errors
- solution of non-linear equations:
 - fixed point and bisection method
 - Secant and Newton-Raphson iterative methods
 - convergence
- solution of systems of linear equations:
 - Gaussian elimination
 - pivoting strategies
 - LU factorisation
 - Ill-conditioning
 - errors and residuals
 - iterative methods
- solution of differential equations:
 - Euler method
 - Taylor and Runge-Kutta methods
 - convergence
- Interpolation and Approximation:
 - polynomial interpolation

- Lagrange form
- Newton's divide formula
- error bound
- finite difference techniques:
 - solution of problems in electrostatics and wave propagation

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • identify appropriate numerical methods for engineering or related problems • apply the appropriate technique to the problem • communicate the outcome of the analysis in an appropriate way.

MEM234026A Develop and coordinate engineering-related contingency plans

Modification History

New unit

Unit Descriptor

This unit of competency covers the skills required to develop and coordinate contingency plans for engineering projects or operations that provide for recovery from a major incident or non-conformance.

Application of the Unit

This unit applies to contingency planning for engineering-related projects or operations across all forms of manufacturing and engineering. Activities covered include systematic analysis of the engineering activity to identify major contingencies, developing appropriate responses and coordinating the implementation of contingency plans into operations. It embraces personal and electronic communication, self-directed and group activities, business planning, employee briefing and training, project or operations planning and scheduling, and an understanding of the technology, skills, techniques and quality requirements of the project or operations.

This unit does not cover the planning required to contain/remediate an emergency non-conformance, such as a fire or explosion. Relevant emergency management skills from other Training Packages should be accessed for these skills.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Establish contingency plan task	1.1	Review existing technologies, processes, standards and procedures
		1.2	Clarify contingency plan objectives and scope with client
		1.3	Prepare task schedules and requirements for development of contingency plans
		1.4	Establish contingency planning team, if required, and assign responsibilities within the team
2	Conduct impact assessment	2.1	Prepare comprehensive list of potential incidents
		2.2	Rate each potential incident for impact severity level
		2.3	Identify which incidents will be included in plan
3	Develop contingency plan	3.1	Formulate an action plan to deal with each significant risk
		3.2	Ensure occupational health and safety (OHS) requirements, codes of practice, regulations, standards and other regulatory requirements and enterprise procedures are included
		3.3	Determine resources required to support plans
		3.4	Assign responsibility for each planned action
		3.5	Determine costs associated in planned responses
		3.6	Determine trigger points for planned responses

- 3.7 Review plan proposals and costs with client and stakeholders to obtain sign-off, and adjust plan, as required

- 4 Implement and maintain the plan
 - 4.1 Finalise planning, including ensuring preparation of all required documentation, drawings, specifications and instructions
 - 4.2 Communicate the plan with all personnel who have a role in implementing the contingency plan
 - 4.3 Generate standard procedures to ensure plan is maintained and updated following any change in the project or operations

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- assessing engineering-related technologies and operations for contingency risks and significance, including relevant engineering, production and financial calculations and analysis
- evaluating solutions for feasibility against engineering design or specification criteria, including relevant engineering calculations and analysis
- performing responsibilities in priority order
- using and validating performance analysis, modelling and simulation software for contingency-related analyses
- delegating roles, responsibilities and levels of authority, as appropriate, to team members
- communicating, negotiating and reviewing with stakeholders and team members throughout project and operation duration

Required knowledge

Required knowledge includes:

- context of operations or project, such as competitive pressures or markets, customer-supplier relationships, regulatory and industrial environment, resourcing and labour issues
- engineering-related modelling and simulation software, including underpinning program and software validation techniques
- budget and control measures for project or operations management from the financial business plan
- physical resources for project or operations
- human resources and skills development techniques and requirements for engineering-related projects
- recording and implementation requirements for engineering projects or operations, such as, schedules, budgets, personnel and resource allocations, and standard operating procedures, including maintenance procedures
- tendering and contracts requirements and processes, including agreement on engineering design and technical specification, negotiations and optimisations, provisions for variations, delays and penalties
- requirements for, and functions of, technical documentation, graphics and specifications and records of meetings, communications, negotiations, decisions and agreements with stakeholders
- systems thinking, contingency and constraints management

- typical management accounting processes which may relate to an engineering project or operation, such as:
 - cash flow and liquidity
 - assets and liabilities
 - costing and break-even analysis
 - financial record keeping procedures for expenditures
- typical legal requirements for engineering-related projects or operations
- OHS requirements, codes of practice, regulations, standards, regulatory requirements for project or operations, current safe work methods statements, material safety data sheets (MSDS) and work permits
- work organisation and management theory
- conflict resolution, problem solving and decision making

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • identify and establish risks and consequences for the project or operation • establish resources required, including labour, materials, and equipment within budgets and procedures • establish support team and responsibilities • overcome constraints to achievement of schedules and budgets as contained in contingency plan • undertake appropriate internal and external reporting • manage continuous improvement.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, or a combination of both on and off the job assessment based on appropriate project and simulation activities. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.

	<ul style="list-style-type: none"> • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

A major incident or non-conformance	<p>A major incident or non-conformance may include:</p> <ul style="list-style-type: none"> • power, fuel energy failure or shortage • breakdown of critical plant or equipment • loss of key personnel • material supply shortages • safety issues • product liability issues • substantial material price increase
--	--

Action plans	<p>Action plans may include the use of:</p> <ul style="list-style-type: none"> • substitute materials and components • alternate processing • alternate approved supply sources • rationing of materials in short supply • external sources of labour • expert technical sources
OHS requirements, codes of practice, regulations, standards and other regulatory requirements and enterprise procedures	<p>OHS requirements, codes of practice, regulations, standards and other regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> • OHS Acts and regulations • relevant standards • industry codes of practice • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements
Appropriate modelling and analysis software	<p>Appropriate modelling and analysis software may include:</p> <ul style="list-style-type: none"> • project tracking • financial modelling, analysis and tracking • process modelling and analysis • engineering simulation and modelling • manufacturing operation simulation
Existing technologies, processes, standards and procedures	<p>Existing technologies, processes, standards and procedures may include:</p> <ul style="list-style-type: none"> • standard operating procedures, including maintenance procedures • records of operations, including tenders, contracts, schedules, personnel, resource allocations and financial management procedures • documentation and records of current safe work methods statements, MSDS, work permits, standards and codes of practice
Legislative requirements	<p>Legislative requirements may include:</p> <ul style="list-style-type: none"> • industrial law and awards • customer protection law • restrictive trade practice • environmental protection • workers compensation • equal opportunity and anti-discrimination

MEM234027A Plan and manage materials supply for an engineering project or manufacturing operation

Modification History

New unit

Unit Descriptor

This unit of competency covers the engineering skills and knowledge required to plan and manage all aspects of the supply of materials to an engineering project or operation. It includes managing supplier identification and negotiations, purchasing and scheduling, including the interpretation of client, design, marketing, sales and production requirements to enable matching to available resources, budgets, workforce and contractors. It also includes the control of processes, physical resources, workforce skills and resources to enable the use of assets within budget requirements.

Application of the Unit

This unit applies to people who require significant engineering skills and knowledge to plan and manage supply, scheduling and purchasing of materials across all forms of manufacturing and engineering. Typical applications would be where there are:

- many material inputs, major assembly lines or manufacturing cells, such as whitegoods and vehicle manufacturing
- heavy and light fabrication involving significant use of material
- requirements to either determine, select or interpret technical specifications and standards for purchasing, scheduling and production planning.

The unit can provide technical support training where the planning, scheduling and purchasing is done in an engineering or manufacturing organisation following lean principles. In this situation it is recommended that the unit be co-delivered with appropriate Manufacturing Skills Australia (MSA) Competitive Manufacturing units of competency.

Prior or concurrently developed capability in personal and electronic communication, self-directed and group activities, planning and scheduling, performance analysis, process control and improvement, and an understanding of technology, skills and techniques, and quality aspects required by operations is required.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Identify and verify production or fabrication requirements	1.1	Identify parameters, context and objectives of manufacturing or project operations
		1.2	Verify key internal and external stakeholders, labour and skills distribution, functional team relationships, information flow requirements, communications and reporting lines, and procedures are appropriate to manufacturing or project operational objectives
		1.3	Review operations planning and management and confirm compatible scheduling, purchasing and production control measures
		1.4	Confirm reporting and technical support arrangements
		1.5	Verify facilities, services, plant, tooling and software, process layout and use of automation are appropriate to product manufacturability
		1.6	Identify and confirm that compliance requirements of occupational health and safety (OHS) and regulations, codes of practice, standards, risk assessment and registration requirements for manufacturing plant are observed

- | | | |
|---|---------------------------------|--|
| 2 | Develop the production plan | 2.1 Participate in development of demand forecast |
| | | 2.2 Prepare production or project plan in consultation with relevant stakeholders to meet quality, demand and delivery timelines within capacity and budget constraints |
| | | 2.3 Manage preparation of purchasing schedules |
| | | 2.4 Manage or assist in preparation of production schedules |
| | | 2.5 Develop contingency arrangements |
| | | 2.6 Review final proposals with relevant stakeholders |
| | | 2.7 Develop key performance indicators for materials supply |
| 3 | Implement the production plan | 3.1 Delegate responsibilities for purchasing and detailed scheduling, including communication of priorities and key performance indicators |
| | | 3.2 Manage materials and product flow and transfer operations, buffer and emergency stocks, warehousing, stores and logistics |
| | | 3.3 Coordinate quality and process control procedures |
| | | 3.4 Coordinate and monitor physical, human and financial resources and budget to achieve production plan |
| | | 3.5 Communicate and maintain information and reporting procedures, and participate, cooperate and negotiate with relevant stakeholders |
| | | 3.6 Coordinate continuous improvement, problem solving and decision making, address systems constraints and contingencies, adjust short-term planning and reschedule, as necessary |
| 4 | Monitor operational performance | 4.1 Review actual materials supply against key performance indicators |
| | | 4.2 Contribute to review of manufacturing operations against production plan and other key performance indicators |

- 4.3 Participate in continuous improvement procedures, including lean operation principles and procedures, where implemented
- 4.4 Review options and implementation of software options, such as enterprise resource planning (ERP), system control and data acquisition (SCADA) and spreadsheets
- 4.5 Contribute to risk management procedures and system maintenance in accordance with organisational procedures
- 4.6 Report progress against production plan in accordance with procedures
- 4.7 Provide documentation, data entry and analysis, as required

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- accurately taking large numbers of complex factors into account when planning materials supply
- managing and integrating information from a wide variety of sources
- managing supplier contracts and arrangements to meet the needs of the engineering and manufacturing operations
- developing continuous improvement, problem solving and decision making, constraint and contingency strategies, including short-term planning and rescheduling arrangements
- communicating and maintaining information consistent with reporting procedures
- participating, cooperating and negotiating with relevant stakeholders
- monitoring operations for compliance with organisational policies and procedures, OHS and regulatory requirements, product and process sustainability
- contributing to risk management procedures and system maintenance in accordance with organisational procedures
- reporting and documenting in accordance with procedures
- maintaining records of professional, trades and industry contacts, sources of information and resources

Required knowledge

Required knowledge includes:

- sources of information and resources relating to materials supply
- personal and team skills and professional development requirements and options for addressing them
- operations management structures, labour and skills distribution, functional team relationships, and communications and reporting lines
- manufacturing management systems and philosophies relevant to planning and managing materials supply
- facilities, plant and services requirements
- OHS requirements, codes of practice, regulations, standards, regulatory requirements, risk management, current safe work methods statements, material safety data sheets (MSDS) and work permits
- financial requirements relevant to materials supply
- engineering approaches and processes underpinning project or manufacture

- labour and skills distribution
- formal procedures and informal communications and information flow
- automation and control technologies relevant to materials supply
- software options for tracking and managing of materials supply chain
- principles of value chain management, current and future state mapping
- requirements for, and functions of, technical and business documentation that may impact on the sustainability of operations

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • coordinate delegated responsibilities for manufacturing operations to the supplying, scheduling and purchasing of priority materials consistent with priorities and product flow • coordinate transfer operations, buffer and emergency stocks • implement constraint and contingency strategies • monitor operations for compliance with organisational policies and procedures, product and process sustainability • communicate, cooperate and negotiate with relevant stakeholders • manage reporting against key performance indicators and organisation requirements.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package.

	<ul style="list-style-type: none"> • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Production	<p>Production in this unit refers to operations requiring major engineering input and significant coordination of suppliers, purchasing and scheduling including:</p> <ul style="list-style-type: none"> • volume production of components or full items (e.g. whitegoods, vehicles, transformers and transport equipment) • jobbing production • on-site fabrication of engineering-related items
Identify parameters, context and objectives of operations	<p>Parameters, context and objectives to be taken into account may include:</p> <ul style="list-style-type: none"> • customer requirements • stock levels • production capacity and availability • labour requirements and availability • supplier capacity • warehousing, stores and logistics

<p>Relevant stakeholders</p>	<p>Relevant stakeholders may include:</p> <ul style="list-style-type: none"> • team • organisation functional groups • supervisors with approval delegation • customers and suppliers
<p>OHS, regulatory requirements and enterprise procedures</p>	<p>OHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> • OHS Acts and regulations • relevant standards • industry codes of practice • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements
<p>Legal obligations of businesses</p>	<p>Businesses have legal obligations under:</p> <ul style="list-style-type: none"> • contract law • commercial law • company law • fair trading act has customer protection and restrictive trade provisions • environmental planning and assessment act • Commonwealth and state/territory tax laws • industrial law which deals with employee and employer relationships, awards and agreements, trade unions, and their powers and rights • OHS Act and regulations
<p>Records of operations</p>	<p>Records of operations may include:</p> <ul style="list-style-type: none"> • tenders, contracts and schedules • personnel, resource allocations and financial management procedures • standard operating procedures, including maintenance procedures • OHS committee minutes and actions, risk management and mitigation • documentation and records of current safe work methods statements, MSDS and work permits • standards, codes of practice, audits and meetings • communications, graphics and specifications
<p>Continuous improvement implementation</p>	<p>Continuous improvement implementation may relate to plant, products, processes, systems or services, including design, development, implementation or manufacture, commissioning, operation or delivery and maintenance. Improvement processes may</p>

	<p>include techniques, such as:</p> <ul style="list-style-type: none"> • balanced scorecard • current and future state mapping • measuring performance against benchmarks • process improvement, problem solving and decision making • data management, generation, recording, analysing, storing and use of software • training for improvement systems participation • technical training
Constraints and contingencies	<p>Contingencies arising during operations or improvement projects will have constraints on possible solutions. These may be:</p> <ul style="list-style-type: none"> • financial • organisation procedural or culture • physical constraints such as limits to resources, limits to site access or logistical limitations
Systems thinking	<p>Systems thinking:</p> <ul style="list-style-type: none"> • is the process of developing solutions within the context of an entire system • recognises that an improvement in one subsystem can adversely affect another subsystem
Lean manufacturing	<p>Lean manufacturing uses cost, capacity and responsiveness, quality, reliability and waste minimisation as drivers of the process and measures for process improvement. Lean manufacturing is the response of many organisations to local, regional, national and global market competitiveness</p>
Software options and the need for validation	<p>Software may be employed for planning, scheduling, and performance analysis/modelling and may include:</p> <ul style="list-style-type: none"> • enterprise resources planning (ERP), system control and data acquisition (SCADA) and spreadsheets. Underpinning program techniques and algorithms should be understood <p>Validation techniques include:</p> <ul style="list-style-type: none"> • comparison of traditional solutions for simple design problems with software solutions to the same design problems • review of previously implemented design challenges which were completed using the software

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--|-----|--|
| 1 | Develop technical documentation | 1.1 | Evaluate the requirement for technical documentation, including purpose, scope and intended audience |
| | | 1.2 | Consult original sources of engineering and other technical data |
| | | 1.3 | Determine the required layout, style, content and resources required for production of documentation |
| | | 1.4 | Draft technical documentation and verify for accuracy against standards and other original sources |
| | | 1.5 | Develop review and version control procedures |
| | | 1.6 | Submit technical documentation, version control and review procedures for approval |
| | | 1.7 | Develop and apply a technical documentation archiving system that complies with organisational policy and applicable legislative and regulatory requirements |
| 2 | Produce and distribute technical documentation | 2.1 | Produce technical documentation and apply version and distribution controls |
| | | 2.2 | Distribute technical documentation |
| 3 | Monitor usage and revise technical documentation | 3.1 | Monitor the usage of technical documentation |
| | | 3.2 | Revise and improve technical documentation, when necessary |
| | | 3.3 | Apply version and distribution controls to revised technical documentation |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying the requirement for technical documentation
- determining original sources for researching and verifying engineering-related technical content
- determining the style and layout of technical documentation
- analysing, designing, planning, executing and verifying content requirements against engineering and other technical data from original sources
- determining procedures for review and amendment
- developing and applying version control procedures
- effectively controlling technical documentation distribution and archiving of completed documentation
- using oral and written communication to convey broad and specialised information in a variety of media and formats

Required knowledge

Required knowledge includes:

- word processing, spreadsheet and database software to produce technical documentation
- typical sources for researching engineering and technical data for applications and discipline area
- types of technical documentation
- layouts for technical documentation
- version and distribution control systems
- archiving systems
- legislative and regulatory requirements associated with technical documentation that are relevant to the organisation

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • identify and establish engineering and organisation goals and requirements for the project or operation that may bear on the production of technical documentation • establish resources required for the research, production, distribution and ongoing maintenance of technical documentation, including labour, materials, and equipment within budgets and procedures • identify and consult original sources of engineering and technical data • produce technical documentation and verify for technical accuracy and suitability for application • distribute technical documentation to users • arrange for handling of enquires, updates and version control.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, or a combination of both on and off the job assessment based on appropriate project and simulation activities. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. Where simulation is used for this unit, it is important that the simulation includes appropriate testing of the suitability of the produced documentation for user groups. For example, production of standard operating procedures should include testing of the standard operating procedures for ease of use by operators or other target groups and accuracy of description of the process or equipment covered by the standard operating procedures. • The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package.

	<ul style="list-style-type: none"> • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning engineering knowledge to technical documentation production. • Assessment methods should include questioning or other assessment method on sources and extent of engineering knowledge to ensure ability interpret, apply and verify engineering content for documents. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

The requirement for technical documentation	<p>The requirement for technical documentation may arise from:</p> <ul style="list-style-type: none"> • organisational policy • standard procedures • quality procedures • production and process control requirements • the need to specify procedures and requirements for contractors • the need to comply with legislative requirements and associated regulations
Types of technical documentation	Types of technical documentation may include:

	<ul style="list-style-type: none"> • production and process control records • process specifications • work instructions, standard operating procedures and checklists • certification documents • OHS procedures • quality procedures • contractor instructions • processes or records for compliance with legislation and/or regulations • tender/contract deliverable requirements
Original sources	<p>Original sources provide the engineering and other technical information used to inform and verify the technical documentation being produced. The sources may include:</p> <ul style="list-style-type: none"> • standards, codes, Acts and regulations • manufacturer's instructions and manuals • engineering-related textbooks and journals • professional engineers, scientists and other technical experts • technical drawings and other design information • customer brief • production records and schedules
Version control	<p>Version control:</p> <ul style="list-style-type: none"> • is required whenever technical documentation may be subject to revision • may take the form of either a date or issue number (or both) inserted in the document header or footer • should include a formal recording process that could take the form of a version control database
Distribution control	<p>Distribution control may consist of:</p> <ul style="list-style-type: none"> • a listing of recipients of each type of document and, where required, a document tracking system
Archiving of technical documentation	<p>Archiving of technical documentation:</p> <ul style="list-style-type: none"> • may be required to comply with legislative or regulatory requirements, and/or with organisational policy • should include an indexing system that specifies the period for which the document is to be retained • should comply with relevant requirements regarding physical storage and security
Regulatory requirements, and organisational policies and	<p>Regulatory requirements, and organisational policies and</p>

procedures	procedures may be found in: <ul style="list-style-type: none">• organisational policy manuals• procedures manuals• quality manuals• Commonwealth and state/territory OHS legislation• industrial law and awards• customer protection law• environmental protection• workers compensation• contract law

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | |
|---|--|---|
| 1 | Develop technical publications | 1.1 Identify the requirement for technical publications |
| | | 1.2 Determine the required medium, style and layout |
| | | 1.3 Obtain or access relevant data |
| | | 1.4 Identify potential problems and consult relevant experts involved in product engineering design and/or production |
| | | 1.5 Determine resolution strategies |
| | | 1.6 Draft the publication using relevant guidelines and specified or selected software package |
| | | 1.7 Select required graphics and raise illustrator briefs |
| | | 1.8 Observe copyright legislation |
| | | 1.9 Insert completed graphics into the draft and add annotations/labels |
| | | 1.10 Prepare the draft for publishing and submit for editorial review |
| 2 | Produce and distribute technical publications | 2.1 Submit proof copy of the publication or publication amendment for client acceptance |
| | | 2.2 Arrange publication |
| | | 2.3 Update distribution records, as required, and arrange delivery or distribution of the completed publication |
| 3 | Manage the amendment of technical publications | 3.1 Identify the need for publication amendment action |
| | | 3.2 Initiate amendment action |
| | | 3.3 Produce or edit draft amendments |
| | | 3.4 Arrange production and distribution of amendments |

- 4 Manage the distribution and control of technical publications
 - 4.1 Establish a publication distribution and amendment control system
 - 4.2 Manage publications in accordance with regulatory requirements, and organisational policies and procedures
 - 4.3 Monitor the operation of the publication distribution and control system

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- researching engineering design, production and issues, such as end use, environment and related technical maintenance and product support policies
- using oral and written communication to convey broad and specialised information in a variety of media and formats
- analysing, designing, planning and implementing amendment generation, approval, recording and distribution procedures
- solving problems
- selecting and using word processing software and graphics packages
- specifying the style and layout of technical publications
- controlling procedures for technical publication distribution

Required knowledge

Required knowledge includes:

- word processing and graphics packages used for technical publication and publication amendment drafting
- publication writing conventions, standards and specifications
- the use of style guides
- illustration techniques
- reading of engineering drawings, including:
 - standard drawing sheets and drawing layouts
 - types of drawing
 - engineering standards and specifications
 - technical terms and abbreviations
 - sectioned views
 - dimensioning
 - tolerancing of dimensions
 - types of fit
 - standard hardware
 - screw threads
 - threaded components and washers
 - locking devices

- rivets
- special structural fasteners
- spur gears
- welding symbols and geometry tolerancing
- surface texture
- material specifications and metal surface treatment
- reading of electrical and electronic circuits and wiring diagrams
- development of system schematics
- development of block diagrams
- sketching
- use and development of logic charts
- development of fault diagnosis guides
- the preparation of illustrators' briefs
- the preparation of indexes to publication contents
- problem solving methodology
- regulations relevant to technical publications
- OHS legislation
- for print-based publications, procedures for processing drafts through desktop publishing to printing, binding and distribution
- for electronic format publications, the principles for publication database systems and the development of input data
- requirements for, and methods of, maintaining publication records
- applicable publication standards and systems
- copyright legislation
- desktop publishing software systems
- printing methods
- binder systems
- management methods for amendment, custody and distribution of technical publications
- version control procedures which will normally consist of a recording system for amendment distribution and incorporation

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • identify requirements for drafting and amendment of technical publications
---	--

	<ul style="list-style-type: none"> • conduct research and gather required data from engineering records and relevant engineering staff and managers • select appropriate publication media and publication style and format • use selected software packages to draft technical publications • prepare illustrator briefings and observe copyright legislation • prepare proof copies of publications and obtain client approval • manage the production and devise distribution, amendment and version control systems.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit may be assessed on the job, or a combination of both on and off the job assessment based on appropriate project and simulation activities. . Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that

	<p>competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</p> <ul style="list-style-type: none"> Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Technical publications	<p>Technical publications may include:</p> <ul style="list-style-type: none"> workshop manuals operating instructions assembly instructions parts catalogues technical specifications technical brochures for sales/marketing procedures manuals
The required medium	<p>The required medium may be:</p> <ul style="list-style-type: none"> print-based electronic microfiche
<ul style="list-style-type: none"> Style and layout 	<p>Style and layout may be determined from:</p> <ul style="list-style-type: none"> an applicable style guide contract requirements industry standards and specifications
Relevant data sources	<p>Relevant data sources may include:</p> <ul style="list-style-type: none"> design and production data and drawings parts and materials listings engineering specifications operating procedure documentation

	<ul style="list-style-type: none"> • component assembly procedures • maintenance schedules • manufacturer and trade catalogues • relevant legislation and regulations
<ul style="list-style-type: none"> • Relevant experts 	<p>Relevant experts may include:</p> <ul style="list-style-type: none"> • the client • design engineers and staff • production staff • maintenance managers and staff • component and material suppliers • regulator representatives
<ul style="list-style-type: none"> • The requirement for publication amendment action 	<p>The requirement for publication amendment action may arise from:</p> <ul style="list-style-type: none"> • publication user feedback • modifications to systems or components • test procedure development or refinement • quality system audits • compliance with regulatory requirements
The editing process	<p>The editing process may involve checking for:</p> <ul style="list-style-type: none"> • compliance with the style guide • completeness and ease of understanding • appropriate use of graphics • observance of applicable regulations and legislation including copyright • final draft mark-up for desktop publishing • application of version control procedures

MEM234030A Provide specialised technical and engineering guidance to other technical employees

Modification History

New unit

Unit Descriptor

This unit of competency covers the provision of technical advice, including mentoring to other technical and paraprofessional employees, usually but not always, working in the same technical field or discipline.

Application of the Unit

This unit applies across all forms of manufacturing and engineering where an individual is using their professional skills and knowledge to provide engineering and technical guidance to other technical employees within the organisation. Examples of technical guidance situations include acting as a technical resource person to other technical employees or teams, or mentoring of other technical employees because of specialised skill and knowledge.

The emphasis in this unit is on the provision of technical advice usually as part of day-to-day operations where the person is not in a formally designated managerial or leadership role. The unit assumes technical competence to Advanced Diploma of Engineering level or equivalent industrial experience.

Where formal leadership and management of engineering and related projects or operations applies see the unit MEM234001A Plan and manage engineering-related projects or operations or other subject specific engineering leadership units, such as:

- MEM234031A Manage installation, commissioning or modification of machines and equipment
- MEM234032A Manage fluid power related technologies in an enterprise
- MEM234033A Lead engineering-related quality operations in an enterprise.

This unit does not cover the giving of general advice associated with conditions of employment, such as career planning and wages.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Respond to requests for technical advice or assistance	1.1	Confirm that request for assistance is of an engineering nature, including engineering-related outcomes required
		1.2	Identify extent of engineering information currently known
		1.3	Define issue or problem in engineering-related terms
		1.4	Identify whether request is within own discipline and skills and knowledge or should be referred to other expert technical or professional assistance
		1.5	Assist individuals or technical team to identify stakeholders to engineering issues and practice in the organisation
		1.6	Assist individuals or team to identify constraints and solution steps
		1.7	Verify solution
2	Identify other situations where current practice may be inadequate	2.1	Identify technical, engineering or sustainability-related risk factors in workplace
		2.2	Identifies risks associated with professional and ethical practice, occupational health and safety (OHS) and other

- | | | |
|-------------------------------|-----|--|
| within the department or team | | statutory responsibilities and liabilities |
| | 2.3 | Identify risk situations without adequate preventative and contingency planning |
| | 2.4 | Identify technical individuals or teams responsible for management of risks without adequate preventative and contingency planning |
| | 2.5 | Offer assistance and advice to resolve inadequacy |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying a range of information sources to develop and strengthen present engineering knowledge of other technical employees
- proposing options to achieve engineering solutions within discipline area
- proposing means of testing, measuring and evaluating solutions that fit with organisation objectives and accepted engineering practice
- providing advice on engineering-related costs and risks
- encouraging learning and professional practice in other engineering and technical employees, including adherence to legislative and regulatory requirements and ethical, OHS and quality standards
- assisting individuals and teams in setting performance targets for engineering-related activities
- advising on budgeting and financial management of engineering activities

Required knowledge

Required knowledge includes:

- the principles of engineering as applied by designers in own area of expertise
- normal planning and scheduling approaches to engineering operations and tasks
- relationship of levels of practice in own engineering discipline, including situations where professional engineering, engineering technologist and engineering associate assistance or decision making is appropriate
- the situations where mathematics, including statistics, calculus or other advanced mathematics, must be used by to generate solutions to engineering problems, as well as situations where professional or other expert assistance should be accessed
- the structure, roles and capabilities of the engineering workforce in the organisation
- the interactions between engineering technologies and business operations, including impact of engineering on meeting client, employee, shareholder, regulatory and community expectations of the organisation
- regulatory and OHS responsibilities of technical and engineering workforce of the organisation
- administrative, human resources (HR) and other support services available to technical and engineering staff in the organisation

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • identify engineering-related situations that require referral to other experts • identify and establish any risks or consequences for advice offered • offer advice that takes into account the engineering operations and procedures of the organisation, the discipline area, and accepted engineering ethical practice • identify situations where modelling, calculations or other investigations should occur before advice is offered • understand and apply verification procedures to a range of engineering solutions in own area of expertise.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of

	<p>workplace relevant contexts) together with application of underpinning knowledge.</p> <ul style="list-style-type: none"> • Assessment methods must include assessment of underpinning knowledge to ensure correct interpretation of guidance required and provision of appropriate advice. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Expert technical and professional assistance	<p>Areas where expert technical and professional assistance may be sought include:</p> <ul style="list-style-type: none"> • technical support and advice relating to elements which have intrinsic dangers, such as: <ul style="list-style-type: none"> • high pressure • energised fluid vessels • high temperatures and heat energy capacity • wiring or devices with high current or voltages above extra low voltage • professional support for technologies, such as: <ul style="list-style-type: none"> • specialist electric motor drives and controllers • specialist materials, plastics, metal alloys and nano materials • special processes, foundry, alloy welding, heat
---	---

	<p>treatment, sealing and fastening</p> <ul style="list-style-type: none"> • professional advice on issues that may overlap with: <ul style="list-style-type: none"> • finance, accounts and tax • insurance and legal • training and HR
<p>OHS requirements, codes of practice, regulations, standards and other regulatory requirements and enterprise procedures</p>	<p>OHS requirements, codes of practice, regulations, standards and other regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> • OHS Acts and regulations • relevant standards • industry codes of practice • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements
<p>Legislative requirements</p>	<p>Legislative requirements may include:</p> <ul style="list-style-type: none"> • industrial law and awards • customer protection law • restrictive trade practice • environmental protection • workers compensation • equality and antidiscrimination • contract law
<p>Sustainability</p>	<p>Sustainability includes consideration of economic, social, ecological and resources implications of activities. Sustainability issues may include:</p> <ul style="list-style-type: none"> • resources and energy: <ul style="list-style-type: none"> • sources, access, processing and consumption • food security and agriculture, health, education and shelter • land, energy and water • social and economic factors affecting design of machines and equipment • life cycle design of product (manufacture to re-manufacture or recycle) • raw material, solids and hazardous waste, and production by-products • contamination of land, air and stormwater pollutants, and discharge to sewerage • climate change

Standards and codes	Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular design or engineering related task
Planning and scheduling techniques	Planning and scheduling techniques may include: <ul style="list-style-type: none">• critical path or Pert network plans• Gantt charts
Software and validation techniques	Advice may need to be offered on software and validation techniques. These include: <ul style="list-style-type: none">• software employed for performance analysis/modelling (Underpinning program techniques and algorithms should be understood, such as the use of failure effects analysis (FEA) and numerical methods within object oriented modelling techniques) Validation techniques include: <ul style="list-style-type: none">• comparison of traditional solutions for simple design problems with software solutions to the same design problems• review of previously implemented design challenges which were completed using the software

MEM234031A Manage installation, commissioning or modification of machines and equipment

Modification History

New unit

Unit Descriptor

This unit of competency covers the skills and knowledge required to provide the technical leadership role in the installation, commissioning or modification of machines and equipment. It includes interpreting manufacturer specifications, implications of relevant regulations, internal or external client brief, liaison with designers, and ensuring that team members are aware of technical and performance requirements.

Application of the Unit

This unit applies to the installation, commissioning or modification of significant machines and equipment across all forms of manufacturing and engineering. The unit applies to individuals who are required to provide high level technical leadership to other members in the installation, commissioning or modification team. The other members of the team will normally include engineering tradespersons and may also include technicians and production personnel.

The unit complements the more general technical leadership and management skills found in MEM234001A Plan and manage engineering-related projects or operations. Informal technical or engineering advice situations are covered by the unit MEM234030A Provide specialised technical and engineering guidance to other technical employees.

This unit does not supply all technical skills and knowledge required for machine and equipment installation, commissioning or modification tasks. The required technical skills will depend on the particular task and will normally be covered through selection of relevant technical units as well as the combined skills and knowledge of the team. However, the unit presumes engineering skills and knowledge to at least Advanced Diploma level.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--|-----|--|
| 1 | Identify scope of machine installation, commissioning or modification task | 1.1 | Examine machine and equipment drawings, manufacturer's manuals and other technical data on machines and equipment |
| | | 1.2 | Determine performance and production requirements expected from machines and equipment after installation, commissioning or modification |
| | | 1.3 | Determine relevant regulatory requirements |
| | | 1.4 | Inspect site and determine appropriateness of structural supports, ventilation, services, security and other critical requirements |
| | | 1.5 | Determine mechanical, electrical, fabrication and machine control skills and task requirements |
| | | 1.6 | Produce or review installation, commissioning or modification schedule |
| 2 | Brief team on requirements | 2.1 | Distribute and discuss drawings, schedules, and major materials and equipment with team |
| | | 2.2 | Arrange for request for further information (RFIs) with designers, where required |
| | | 2.3 | Brief team on key compliance and risk factors, including regulatory, occupational health and safety (OHS) and environmental requirements |

- | | | | |
|---|---|-----|---|
| | | 2.4 | Agree with team on critical control points and reporting requirements |
| 3 | Commence installation, commissioning or modification task | 3.1 | Supervise machine and equipment shutdowns required for task |
| | | 3.2 | Supervise unloading of any new machines, equipment and materials required for task |
| | | 3.3 | Check and determine that supply of services to work are adequate for task commencement |
| | | 3.4 | Ensure all tradespersons have correct drawings |
| 4 | Monitor progress and deal with contingencies | 4.1 | Establish procedures to ensure assembly and connections are against drawing specifications |
| | | 4.2 | Ensure electrical, fluid power, and control systems and circuits are consistent with specifications and regulations |
| | | 4.3 | Identify problems and contingencies and establish and rectify root cause |
| 5 | Finalise installation, commissioning or modification | 5.1 | Conduct final check to ensure installation, commissioning or modification is consistent with drawings, manufacturer manuals and any regulatory requirements |
| | | 5.2 | Conduct test run of equipment |
| | | 5.3 | Identify and correct any malfunctions or errors in required output |
| 6 | Conduct handover and finalise documentation | 6.1 | Brief client and operators on machine or equipment operation after installation |
| | | 6.2 | Prepare and submit any required reports on installation, commissioning or modification |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- performing responsibilities in priority order in accordance with implementation schedules
- investigating and validating performance analysis, modelling and simulation software
- interpreting machine and equipment design and detailed drawings, including the ability to:
 - identify materials and surface finishes used or required
 - apply assembly, fabrication and construction techniques used in the existing machinery or equipment and required for the installation, commissioning or modification task
 - identify systems and features of the machinery and equipment
- identifying sustainability and environmental issues and implications for the installation, commissioning or modification task
- selecting and using software and validation techniques, including 2-D and 3-D modelling
- identifying problems that require solutions involving computations, such as rate of change, moments of inertia and friction forces, and arranging for, or undertaking, the required computations
- identifying situations and issues that require additional technical or professional assistance
- evaluating solutions for feasibility against the installation, commissioning or modification criteria, including relevant engineering, and financial calculations and analysis
- selecting materials, equipment and sub-assemblies based on availability, price and performance characteristics
- establishing budget and control measures for team, and incorporating within installation, commissioning or modification project control plan
- delegating roles, responsibilities and levels of authority, as appropriate, to team members
- communicating, negotiating and reviewing with stakeholders and team members throughout duration of installation, commissioning or modification project

Required knowledge

Required knowledge includes:

- purpose of and range of systems typically found in modern machinery and equipment including:
 - hydraulics
 - pneumatics
 - electrical motors, electrical supply and associated equipment
 - electronics, mechatronics and other control systems

- mechanical transmissions, including gears, shafts and clutches
- force and stress analysis techniques
- requirements for, and functions of, technical documentation, graphics and specifications and records of meetings, communications, negotiations, decisions and agreements with stakeholders
- OHS requirements, codes of practice, regulations, standards, and regulatory requirements for project or operations
- risk management and reduction, current safe work methods statements, material safety data sheets (MSDS) and work permits
- professional and ethical practice
- conflict resolution, problem solving and decision making

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none">• determine features of machines or equipment, OHS, regulatory and risk management requirements both before and after installation, commissioning or modification• lead a multi-disciplinary team• measure, model, calculate and analyse using software and validation techniques• analyse drawings and manufacturer specifications to determine machine and equipment systems and components• determine steps and processes needed for machine and equipment installation• determine steps and processes needed for machine and equipment commissioning• determine steps and processes needed for machine and equipment modification• innovate and create solutions to engineering-related contingencies• verify machine and equipment performance to specifications after installation, commissioning or modification• communicate, negotiate and review with stakeholders and client throughout installation, commissioning or

MEM234032A Manage fluid power related technologies in an enterprise

Modification History

New unit

Unit Descriptor

This unit of competency covers the skills required to provide a technical leadership role in the installation, maintenance and productivity, quality enhancement of fluid-related technologies in an enterprise.

It includes awareness of current options and trends in fluid power design, interpreting manufacturer specifications, production requirements, implications of relevant regulations, internal or external client brief, liaison with designers and ensuring that team members are aware of technical and performance requirements.

Application of the Unit

This unit applies to a technician who is providing technical leadership in the installation, maintenance and quality, productivity enhancement of fluid-related technologies in an enterprise, including fluid power control systems; hydraulic systems, including hydrostatic transmissions, proportional and servo valve control; and programmable logic controller (PLC) control.

The unit covers the fluid power technologies in equipment, such as robotics; fluid power drives; mobile equipment using fluid power; such as earthmoving equipment, compressors, pumps, and compressed air distribution systems across all forms of manufacturing and engineering.

The unit applies to individuals who are required to provide high level technical leadership to other members in the installation, commissioning or modification team. The other members of the team will normally include engineering tradespersons and may also include technicians and production personnel.

The unit complements the more general technical leadership and management skills found in MEM234001A Plan and manage engineering-related projects or operations. Informal technical or engineering advice situations are covered by the unit MEM234030A Provide specialised technical and engineering guidance to other technical employees.

This unit does not supply all technical skills and knowledge required for fluid power related tasks. The required technical skills will depend on the particular task and will normally be covered through the combined skills and knowledge of the team. However, the unit presumes engineering skill and knowledge to at least Advanced Diploma level.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--|-----|---|
| 1 | Identify scope of fluid power related systems installation | 1.1 | Review machine and equipment drawings, manufacturer manuals and other technical data for fluid power systems specifications |
| | | 1.2 | Determine performance and production requirements expected from fluid power equipment |
| | | 1.3 | Determine if any commissioning or modification of fluid power systems are required to ensure production requirements are met |
| | | 1.4 | Determine relevant regulatory requirements |
| | | 1.5 | Inspect site and equipment to confirm or determine suitability, availability of other services and control requirements |
| | | 1.6 | Produce or review fluid power management schedule, including any required installation, commissioning, modification or maintenance requirements |

- | | | | |
|---|---|-----|--|
| 2 | Brief team on fluid power work requirements | 2.1 | Distribute and discuss drawings, schedules, and major materials and equipment with team |
| | | 2.2 | Arrange for request for further information (RFIs) with designers, where required |
| | | 2.3 | Brief team on key compliance and risk factors, including regulatory, occupational health and safety (OHS) and environmental requirements |
| | | 2.4 | Agree with team on critical control points and reporting requirements |
| 3 | Commence installation, commissioning, modification or maintenance tasks | 3.1 | Supervise machine and equipment shutdowns required for task |
| | | 3.2 | Confirm availability of equipment components and materials for scheduled fluid power tasks |
| | | 3.3 | Check and determine that supply of services to work are adequate for task commencement |
| | | 3.4 | Ensure all tradespersons have correct drawings |
| 4 | Monitor progress and deal with contingencies | 4.1 | Establish procedures to ensure assembly and connections are against drawing specifications |
| | | 4.2 | Ensure electrical, fluid power and control systems and circuits are consistent with specifications and regulations |
| | | 4.3 | Identify problems and contingencies and establish and rectify root cause |
| 5 | Finalise fluid power installation, commissioning, modification or maintenance tasks | 5.1 | Conduct final check to ensure completed work is consistent with drawings, manufacturer manuals and any regulatory requirements |
| | | 5.2 | Conduct test run of equipment and system |
| | | 5.3 | Identify and correct any malfunctions or errors in required output |

- 6 Conduct handover and finalise documentation
 - 6.1 Brief client and operators on machine or equipment operation after installation
 - 6.2 Prepare and submit any required reports on installation, commissioning or modification

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- performing responsibilities in priority order in accordance with implementation schedules
- investigating and validating performance analysis, modelling and simulation software
- interpreting fluid power design and detailed drawings
- identifying sustainability and environmental issues and implications for the fluid power system
- selecting and using software and validation techniques, including 2-D and 3-D modelling
- identifying situations and issues that require additional technical or professional assistance
- evaluating solutions for feasibility against the installation, commissioning, modification or maintenance criteria, including relevant engineering and financial calculations and analysis
- establishing budget and control measures for team, and incorporating within installation, commissioning or modification project control plan
- delegating roles, responsibilities and levels of authority, as appropriate, to team members
- communicating, negotiating and reviewing with stakeholders and team members throughout duration of installation, commissioning or modification project

Required knowledge

Required knowledge includes:

- current options and trends in fluid power modelling and simulation software, including underpinning programme techniques and software validation techniques
- research and investigations methods
- principles of fluid power systems
- dimensions, capacity and position of system components
- electrical and mechanical behaviours of fluid power systems and system responsiveness
- hydraulics and hydraulics components
- applications and characteristics of servo valves
- electronic controllers for proportional and servo valves
- sensor/transducer/amplifiers:
- pneumatics and designing with pneumatic components
- multiple actuator control circuits
- compressed air system design
- OHS and regulatory requirements, codes of practice, standards, risk minimisation and registration requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • interpret plans, specifications and other documentation to determine features and performance characteristics and requirements of fluid power systems • advise other technicians, tradespersons and production personnel on fluid power installation, modification, commissioning, operation and maintenance • determine adequacy of standard operating procedures for fluid power systems and adjust, if required • check fluid power systems for safe operation, including automation safety • determine situations that require other technical and professional assistance • research sustainability implications and current industrial design techniques • determine OHS, regulatory and risk management requirements.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Sustainability	<p>Sustainability may include:</p> <ul style="list-style-type: none"> • resources and energy • social and economic • life cycle design of product raw material, solids and hazardous waste, and production by-products • contamination of land, air and stormwater pollutants, and discharge to sewerage • climate change
Appropriate software	Appropriate software may include software for:

	<ul style="list-style-type: none"> • computer-aided design (CAD) • circuit design and analysis • animation • simulation • modelling • performance analysis
Validation techniques	<p>Validation techniques include:</p> <ul style="list-style-type: none"> • comparison of traditional solutions for simple design problems with software solutions to the same design problems • review of previously implemented designs which were completed using the software • use of failure modes and effects analysis (FMEA)
Fluid power related technologies	<p>Fluid power related technologies refers to:</p> <ul style="list-style-type: none"> • hydraulic and pneumatic systems used for industrial and mobile equipment applications
Fluid power system maintenance	<p>Fluid power systems maintenance refers to maintenance fluid power systems for fitness for purpose and includes:</p> <ul style="list-style-type: none"> • safety and integrity of the system • adequacy and correct operations of controls • automation safety • adequacy of standard operating procedures for users • safe integration with mechanical and electrical equipment
OHS requirements	<p>OHS requirements may include:</p> <ul style="list-style-type: none"> • OHS Acts and regulations • relevant standards • industry codes of practice • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements
Standards	<p>Standards may include:</p> <ul style="list-style-type: none"> • AS 4024.1-2006 Series Safety of machinery • AS/NZS ISO 31000:2009 Risk management – Principles and guidelines • NOHSC:1010 National standard for plant • NOHSC:1014 National standard for the control of major hazard facilities • AS 61508.1-2011 Functional safety of

	electrical/electronic/programmable electronic safety-related systems – General requirements
Sequence and mode control methods for multi-actuator circuit	<p>Sequence may include:</p> <ul style="list-style-type: none"> • sequential operations with or without conditional jumps • optimisation techniques • functions such as: <ul style="list-style-type: none"> • timing, counting, stop start, cycle selection and boundary conditions <p>Control methods may include:</p> <ul style="list-style-type: none"> • pneumatic and electrical relay cascade control. • pneumatic and electrical relay step-sequenced control • PLC control • microcontrollers for special purpose machines
Stand alone and network control	<p>Options for stand alone and network control of fluid power systems may include:</p> <ul style="list-style-type: none"> • compressor control and application control • fluid powered machine control, including proportional-integral-derivative (PID) parameter control from remote host controller • communications bus systems, serial systems • distributed control systems (DCS) • system control and data acquisition (SCADA) • computer-interated manufacture (CIM) options

MEM234033A Lead engineering-related quality operations in an enterprise

Modification History

Not applicable.

Unit Descriptor

This unit of competency covers the skills and knowledge required to provide a technical leadership role in the coordination of quality operations in an enterprise on an ongoing or project basis.

It includes knowledge of relevant regulations, interpreting internal or external client brief, liaison with designers and other professional and technical specialists, and ensuring that organisation members are aware of technical and performance requirements.

Application of the Unit

This unit applies to a Principal Technical Officer or equivalent who is providing high level technical leadership in the coordination of engineering-related quality operations and quality-related projects across all forms of manufacturing and engineering, including small run/single lot production. The technical officer may provide this leadership working alone or with a team in which case other members of the team may include technicians, production personnel and engineering tradespersons.

The leadership situations covered by this unit include quality project or quality operations responsibilities that require significant understanding of the technologies, procedures and equipment used in the enterprise and the skills and capabilities required by the quality team in order to be effective.

The unit complements the more general technical leadership and management skills found in MEM234001A Plan and manage engineering-related projects or operations. Informal technical or engineering advice situations are covered by the unit MEM234030A Provide specialised technical and engineering guidance to other technical employees.

This unit does not supply engineering and mathematical skills and knowledge required for quality-related tasks. The required engineering and mathematical skills will depend on the particular processes and technologies used in the enterprise and will normally be covered through the combined skill and knowledge of the team. However, the unit presumes engineering skill and knowledge to at least Advanced Diploma level.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Set strategy for integration of quality operations with organisation, project goals and business plans	1.1	Prepare or review organisation formal policy documents and establish implications for quality operations
		1.2	Establish senior management expectations and objectives for quality department and communicate as appropriate
		1.3	Identify role of quality department in organisation, project or business plan including capability reporting, budgeting, and contribution to marketing and sales strategy and communicate to organisation, team as appropriate
2	Set key performance output variables	2.1	Liaise with sales and marketing staff to identify external customer profiles and requirements
		2.2	Review internal customer specifications
		2.3	Set and manage required key performance output variables

- 2.4 Recommend any required changes to key performance output variables
- 3 Set key performance input variables
 - 3.1 Analyse drawings, specifications, procedures and regulatory requirements for project, product or process
 - 3.2 Set parameters for any capability studies of process or procedures, where appropriate
 - 3.3 Analyse data from capability studies of process or procedures, as required, and take appropriate action
 - 3.4 Identify key equipment, technologies procedures used and set performance input variables
 - 3.5 Identify current maintenance strategies, where appropriate
 - 3.6 Identify risks, vulnerabilities and critical control points
 - 3.7 Recommend any required changes to maintenance strategies in order to maintain quality performance
- 4 Implement quality operations
 - 4.1 Communicate key performance input and output variables to team, where appropriate
 - 4.2 Ensure key performance input and output variables are communicated to appropriate departments, including purchasing, logistics and dealer liaison, or directly along the value stream
 - 4.3 Allocate quality-related responsibilities to quality team
 - 4.4 Identify or set budget and other resources required for quality operation
 - 4.5 Establish reporting processes for quality team operations
 - 4.6 Establish and monitor data collection procedures, including integration with process control
 - 4.7 Identify and eliminate root causes of defective processes or procedures in participation with the processing departments and quality team
 - 4.8 Provide advice on work environments to enable employees to be responsible for quality of their own

- work
- 4.9 Establish regular employee feedback on quality operations
- 5 Evaluate present, past performance and undertake risk assessment
- 5.1 Ensure timely and effective communication from customer liaison of complaints, warranty claims and returns, where appropriate
- 5.2 Analyse data for non-conformances to key performance input and output variables and establish root causes and recommend actions to be taken in conjunction with quality team
- 5.3 Analyse risks to quality from supplier or distributor failure
- 5.4 Identify performance levels required to maintain regulatory and commercial contractual compliance
- 5.5 Communicate data throughout the organisation to assist in future improvements
- 6 Establish procedures for engineering-related quality non-conformances
- 6.1 Establish reporting procedures for quality non-conformances within the project, process or procedure across the organisation
- 6.2 Establish short-term contingency procedures to cover non-conformances
- 6.3 Allocate responsibilities to determine root cause and recommendations for corrective action, as appropriate

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating, negotiating and reviewing with stakeholders and team members throughout project and operation duration
- providing leadership in quality functions and monitoring
- providing clear vision with ability to communicate goals
- assessing internal and external customer requirements, and establishing key output requirements
- assessing equipment, technologies and procedures for impact on quality, and establishing key input requirements, including appropriateness of maintenance strategies
- assessing suitability of standard operations procedures and recommending revisions, when required

Required knowledge

Required knowledge includes:

- process, procedure quality management and improvement procedures, zero defects, six sigma or similar programs
- context of operations or project, such as competitive pressures or markets, customer-supplier relationships, regulatory and industrial environment, resourcing and labour issues
- statistical process control (SPC) techniques
- problem solving, root cause identification and elimination techniques
- benchmarking and role in setting quality related performance indicators
- conducting customer surveys to establish key quality issues
- liaison with customers on warranty claims and legal obligations
- maintenance strategies and implications for quality systems, such as total productive maintenance (TPM) and reliability centred maintenance (RCM)
- use of employee suggestion schemes, employee involvement, quality circles, and so on
- requirements for, and functions of, technical documentation, graphics and specifications and records of meetings, communications, negotiations, decisions and agreements with stakeholders

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • identify, plan and establish key quality input and output variables, and requirements for the project, procedure or operation • establish resources required, including labour, materials, and equipment within budgets and procedures • commence project or operation management, including establishing, where required, support team and responsibilities • overcome constraints to achievement of the quality objectives • undertake appropriate internal and external reporting • investigate and validate quality performance analysis, and manage continuous improvement • undertake customer liaison, including surveys, warranty claim analysis and returns.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of

	<p>tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.</p> <ul style="list-style-type: none"> • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. <p>Assessment may be in conjunction with assessment of other units of competency where required.</p>
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Organisation formal policy documents	<p>Organisation formal policy documents are those that have Board and/or senior management approval and include:</p> <ul style="list-style-type: none"> • vision statements • organisation goals • annual reports • business plans • regulatory reports
Quality team	<p>For this unit the term quality team means all employees, and in some cases suppliers and customers, who have a role in ensuring the quality of products and processes meet specifications. The quality team may be:</p> <ul style="list-style-type: none"> • a formally designated team consisting of employees allocated full or part time to a quality role or a group of employees who have quality responsibilities as part of their normal job role
Coordination of the quality role	<p>Coordination of the quality role includes:</p> <ul style="list-style-type: none"> • aligning enterprise outputs products or services with customer

	<p>requirements</p> <ul style="list-style-type: none"> • identifying defective processes or procedure • establishing the engineering related key process input/output variables • establishing action plans and putting control systems in place <p>Coordination may also include:</p> <ul style="list-style-type: none"> • contributing to current or new product, process or procedure design
External customer profiles and requirements	<p>External customer profiles and requirements may include:</p> <ul style="list-style-type: none"> • analysis of customer surveys • existing profiles • past orders • other communication and documentation
Internal customer specifications	<p>Internal customer specifications may include:</p> <ul style="list-style-type: none"> • employee surveys • operating procedures • drawings • other documentation/records
Maintenance strategies	<p>Maintenance strategies include:</p> <ul style="list-style-type: none"> • TPM • RCM • failure modes and effects analysis (FMEA) • proactive maintenance • breakdown or corrective maintenance
Areas of responsibilities for quality team members	<p>Responsibilities for quality team members may be allocated on a departmental or functional basis. Examples of functional responsibilities include:</p> <ul style="list-style-type: none"> • statistical data collection and analysis • non-conformances • managing quality performance of new products or processes • customer liaison, including surveys, warranty claim analysis and returns • contributing to design processes to ensure quality objectives are taken into account <p>Examples of functional quality responsibilities include:</p> <ul style="list-style-type: none"> • production • maintenance • support services, including engineering-related quality logistics, administration and purchasing

Engineering-related quality advice on work environment	<p>Engineering-related quality advice on work environments includes advice on:</p> <ul style="list-style-type: none"> • skills development needed to enable employees to achieve quality targets • workstation design, including jigs and fixtures • equipment operation and machine and tool setting specifications • plant layout • inspection procedures • standardisation of processes
Employee feedback	<p>Employee feedback may include:</p> <ul style="list-style-type: none"> • toolbox meetings, quality circles • suggestion schemes • regular meetings between quality team, supervisors and employees • production and error reports

MEM234034A Manage heating, ventilation, air conditioning and refrigeration systems or projects

Modification History

New unit

Unit Descriptor

This unit of competency covers the skills and knowledge required to provide a technical leadership role in the installation, modification, commissioning or ongoing management of heating, ventilation, air conditioning and refrigeration (HVAC/R) systems.

It includes awareness of current options and trends in (HVAC/R) design, analysis of existing sites and systems, interpreting manufacturer specifications, implications of relevant regulations, internal or external client brief, liaison with designers, and ensuring that team members are aware of technical and performance requirements.

Application of the Unit

This unit applies to all forms of manufacturing and engineering where a technician who is providing technical leadership in HVAC/R system projects or management. The unit assumes that the system or modification has already been designed.

The unit applies to individuals who are required to provide high level technical leadership to other members in HVAC/R installation, commissioning, modification, maintenance or management. The other members of the team will normally include engineering tradespersons and may also include technicians and production personnel.

Prior or concurrent experience in the HVAC/R control systems, hydronic and refrigeration systems and thermal loads, electrical principles, controller programming and computing is required.

The unit complements the more general technical leadership and management skills found in MEM234001A Plan and manage engineering-related projects or operations. Informal technical or engineering advice situations are covered by the unit MEM234030A Provide specialised technical and engineering guidance to other technical employees.

This unit does not supply all technical skills and knowledge required for HVAC/R related tasks. The required technical skills will depend on the particular task and will normally be covered through the combined skill and knowledge of the team. However the unit presumes engineering skill and knowledge to at least Advanced Diploma level.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--|-----|---|
| 1 | Identify scope of HVAC/R system installation | 1.1 | Review HVAC/R system drawings, manufacturer manuals and other technical data for system specifications |
| | | 1.2 | Determine HVAC/R system performance requirements |
| | | 1.3 | Determine if any commissioning or modification actions are required to ensure performance requirements are met |
| | | 1.4 | Determine relevant regulatory requirements |
| | | 1.5 | Inspect site and any existing HVAC/R equipment to confirm or determine suitability, availability of other services and control requirements |
| | | 1.6 | Produce or review HVAC/R system management schedule, including any required installation, commissioning, modification or maintenance requirements |
| | | 1.7 | Integrate building management systems (BMS) considerations into the schedule, where required |

- | | | | |
|---|---|-----|--|
| 2 | Brief team on HVAC/R system work requirements | 2.1 | Distribute and discuss drawings, schedules, and major materials and equipment with team |
| | | 2.2 | Arrange for request for further information (RFIs) with designers, where required |
| | | 2.3 | Brief team on key compliance and risk factors, including regulatory, occupational health and safety (OHS) and environmental requirements |
| | | 2.4 | Agree with team on critical control points and reporting requirements |
| | | | |
| 3 | Commence installation, commissioning, modification or maintenance tasks | 3.1 | Supervise any equipment shutdowns required for task |
| | | 3.2 | Confirm availability of equipment components and materials for scheduled tasks |
| | | 3.3 | Check and determine that supply of services to work are adequate for task commencement |
| | | 3.4 | Ensure all tradespersons have correct drawings |
| | | | |
| 4 | Monitor progress and deal with contingencies | 4.1 | Establish procedures to ensure installation, commissioning or modification are against design specifications |
| | | 4.2 | Ensure electrical and HVAC/R control systems and circuits are consistent with specifications and regulations |
| | | 4.3 | Identify problems and contingencies and establish and rectify root cause |
| | | | |
| 5 | Finalise HVAC/R system work requirements | 5.1 | Conduct final check to ensure completed work is consistent with drawings, manufacturer manuals and any regulatory requirements |
| | | 5.2 | Conduct test run of equipment and system |
| | | 5.3 | Identify and correct any malfunctions or errors in required output |

- 6 Conduct handover and finalise documentation
 - 6.1 Brief client and operators on machine or equipment operation after installation
 - 6.2 Prepare and submit any required reports on installation, commissioning or modification

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- performing responsibilities in priority order in accordance with implementation schedules
- investigating and validating performance analysis, modelling and simulation software
- interpreting HVAC/R system specifications, including design and detailed drawings
- identifying sustainability and environmental issues and implications for the HVAC/R system
- selecting and using software and validation techniques, including 2-D and 3-D modelling
- identifying situations and issues that require additional technical or professional assistance
- evaluating solutions for feasibility against the installation, commissioning, modification or maintenance criteria, including relevant engineering and financial calculations and analysis
- establishing budget and control measures for team and incorporation within installation, commissioning or modification project control plan
- delegating roles, responsibilities and levels of authority, as appropriate, to team members
- communicating, negotiating and reviewing with stakeholders and team members throughout duration of installation, commissioning or modification project

Required knowledge

Required knowledge includes:

- current options and trends in HVAC/R system modelling and simulation software, including underpinning program techniques and software validation techniques
- research and investigations methods
- principles of HVAC/R systems
- types of control equipment
- common HVAC/R system hardware, including industrial and commercial refrigeration systems, hydronic systems and automated controls
- HVAC/R load cycles
- BMS principles
- interface principles for HVAC/R system components
- building management control system software
- dimensions, capacity and position of system components
- electrical, electronic and mechanical features of HVAC/R systems, including interface principles and techniques for electrical, electronic, pneumatic and hydraulic sensors and actuators
- OHS and regulatory requirements, codes of practice, standards, risk minimisation and

registration requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • interpret plans, specifications and other documentation to determine features and performance characteristics and requirements of HVAC/R systems • advise other technicians, tradespersons and production personnel on HVAC/R systems installation, modification, commissioning, operation and maintenance • determine adequacy of standard operating procedures for HVAC/R systems and adjust, if required • check HVAC/R systems for safe operation • determine situations that require other technical and professional assistance • research sustainability implications and current HVAC/R systems design techniques • determine OHS, regulatory and risk management requirements.

MEM234035A Maintain and apply technical and engineering skills

Modification History

New unit

Unit Descriptor

This unit of competency covers the skills and knowledge required by a Principal Technical Officer, or someone in an equivalent position, to plan and manage their own technical role and development in their field of engineering for the benefit of themselves and their organisation. It covers the technical, analytical, communication and system skills to ensure effective performance in complex technical and engineering environments.

Application of the Unit

This unit applies to Principal Technical Officers and others in equivalent engineering and engineering-related positions in an organisation. The unit covers the skills required for an individual to manage their engineering role and provides the core underpinning skills for an individual to appropriately apply technical skills gained from other units of competency in the MEM80111 Vocational Graduate Diploma of Engineering. This unit applies to an individual performing high level engineering-related work whether in a project management, supervisory or technical specialist role in an organisation. The unit covers skills associated with ensuring that the individual's skills and knowledge in their chosen discipline or area of responsibility are up to date and appropriate for their work.

The unit applies across all forms of manufacturing and engineering. The unit covers high level technical, analytical, communication and system thinking skills.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | |
|---|---|--|
| 1 | Develop, apply and maintain capacity for analysis | <ul style="list-style-type: none"> 1.1 Demonstrate a systematic approach to investigation, analysis and solution of broadly defined engineering and related problems 1.2 Analyse causes and effects of non-conformances 1.3 Identify issues which require specialist assistance or have implications beyond personal expertise 1.4 Use modelling, prototyping, tests and/or experiments to support problem solving 1.5 Interpret, apply and verify compliance with relevant legislation, standards and codes of practice 1.6 Determine properties, performance, safe working limits, failure modes, and/or other inherent parameters of materials, components and systems relevant to specialist area of expertise 1.7 Apply research and communication techniques to access external reference material and assistance 1.8 Report results of analysis and propose solutions that are appropriate to the needs of the organisation 1.9 Share and encourage review of work by others in organisation |
| 2 | Communicate in a manner appropriate for content and | <ul style="list-style-type: none"> 2.1 Actively communicate with others, as appropriate, including listening to, and critically and fairly comprehending, the viewpoints of others 2.2 Express information effectively and succinctly |

- audience
- 2.3 Communicate formally and informally, as required, with technically competent and non-technically competent individuals and groups in a manner appropriate to their level of knowledge and competency
 - 2.4 Present clear arguments and justification for recommendations
 - 2.5 Use textual, diagrammatic, pictorial and graphical media, as required, and as appropriate to the context
 - 2.6 Prepare relevant and comprehensive engineering-related documents and reports, as required
- 3 Work within the quality systems and management practices that apply to the organisation
- 3.1 Apply principles of safety engineering
 - 3.2 Understand the role of quality management systems
 - 3.3 Work effectively on engineering-related project activity
 - 3.4 Respect and accommodate the broader context of engineering work within the organisation
- 4 Maintain and apply technical and engineering skills in a professional manner
- 4.1 Identify own area of expertise and responsibility in the organisation and relate to one or more engineering disciplines
 - 4.2 Show familiarity with current state of development and recent applications in area of specialist knowledge or discipline
 - 4.3 Demonstrate a knowledge of the key scientific and engineering principles relevant to own area of specialist knowledge or discipline
 - 4.4 Apply, adapt and manage engineering knowledge and practice in a variety of contexts and applications
 - 4.5 Work from first principles, when appropriate
 - 4.6 Identify and select relevant materials, components, devices, systems, processes, resources, plant and equipment using appropriate reference materials and own knowledge to meet briefs
 - 4.7 Demonstrate commitment to sustainable engineering practices and the achievement of sustainable outcomes

in all facets of technological project work

- 4.8 Monitor and suggest improvements to the technical framework of the organisation through monitoring of developments in own discipline

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating, negotiating and reviewing complex technical information and processes with a variety of stakeholders and across different levels of technical understanding
- managing resources
- managing budgets
- scheduling and prioritising engineering and related activities
- complying with OHS and regulatory requirement
- performing work requiring mature technical knowledge involving a high degree of autonomy, and independent judgment, and without requiring detailed instructions
- identifying need for professional development and further education and training when reviewing own capability to undertake designated work
- providing specialised technical guidance to other employees performing work within the same technical field
- preparing engineering and related documentation
- preparing specifications, graphics and reports, as required

Required knowledge

Required knowledge includes:

- the nature of the work of professions and occupations within the organisation and the impact their work may have on relevant engineering and related activities
- methods and opportunities for professional development, including knowledge or means of identifying relevant journals, short courses and seminars, and industry and technical associations
- context and limitations associated with delegated responsibilities within the organisation, including role and responsibilities for subordinates and others working in own technical field who may not have equivalent technical knowledge
- context and limitations associated with delegated responsibilities related to OHS and regulatory requirements, organisation business plan and budgets and financial objectives
- organisation management and operations control systems
- document management systems operation
- sustainability issues relevant to own engineering activities, including, where relevant:
 - environmental (e.g. water, land, air pollution, recycling, life cycle design and waste minimisation)

- efficient use of materials and energy
- methods of formal and informal communication, including all forms of verbal and electronic means required to maintain information flow and perform functions

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • determine the scope of their technical skills and identify when they should seek assistance • follow a planned and systematic approach to technical tasks and own professional development • provide detailed technical advice in own area of expertise to others • communicate complex technical information effectively to a variety of audiences.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit should be assessed may be assessed in conjunction with technical focused units in the MEM80111 Vocational Graduate Diploma of Engineering. • Assessment may be conducted on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering

	<p>Training Package.</p> <ul style="list-style-type: none"> • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Stakeholders	<p>Stakeholders may include:</p> <ul style="list-style-type: none"> • internal and external customers • own team members • other employees, including professional engineers, technicians, tradespersons and operators • support services and departments, such as maintenance, accounts and logistics • regulators • the general community
Non-conformance	A non-conformance is an occurrence in a process, operation, design or product that is outside planned

	<p>specifications. Examples of non-conformances include:</p> <ul style="list-style-type: none"> • equipment breakdowns and faults • product returns and warranty claims • software errors • cost overruns • design faults • non-compliance to a customer brief • breaches of statutory requirements
Working from first principles	<p>Occasionally an individual will be required to work from first principles in their chosen area of engineering. The term first principles is used to indicate:</p> <ul style="list-style-type: none"> • that in solving a particular issue or problem the individual will be required to start their work directly at the level of established laws of physics and science, including fundamental calculations in their technological area of expertise
Documentation and reports	<p>Documentation and reports covers those that must be produced by the individual and those that must be read and/or followed by the individual in the course of their engineering work. Examples of documentation and reports include:</p> <ul style="list-style-type: none"> • progress reports • project plans • technical investigations and feasibility studies • proposals • manufacturer specifications and workshop manuals • operating procedures • customer instructions • design records, • engineering drawings
OHS requirements	<p>OHS requirements may include:</p> <ul style="list-style-type: none"> • OHS Acts and regulations • relevant standards • industry codes of practice • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements
Non-engineering related objectives	<p>Particular engineering tasks and projects may require working to achieve objectives or within constraints that are not directly related to an engineering discipline.</p>

	<p>These may include objectives relating to:</p> <ul style="list-style-type: none"> • budgets and other financial management • sales and marketing • environment • human resources (HR) • relationship with the broader community
Sustainability	<p>Sustainability includes consideration of economic, social, ecological and resources implications of activities. Sustainability issues may include:</p> <ul style="list-style-type: none"> • resources and energy: <ul style="list-style-type: none"> • sources, access, processing and consumption • food security and agriculture, health, education and shelter • land, energy and water • social and economic factors affecting design of machines and equipment: • life cycle design of product (manufacture to re-manufacture or recycle) • raw material, solids and hazardous waste, and production by-products • contamination of land, air and stormwater pollutants, and discharge to sewerage • climate change
Legislation, standards and codes of practice	<p>Legislation, standards and codes of practice refer to all relevant Australian and international standards and codes applicable to a particular engineering-related task. Examples include:</p> <ul style="list-style-type: none"> • AS 4024.1-2006 Series Safety of machinery • AS/NZS ISO 31000:2009 Risk management – Principles and guidelines • NOHSC:1010 National standard for plant • NOHSC:1014 National standard for the control of major hazard facilities • OHS legislation and regulations • industrial law and awards • trade practices • environmental protection • workers compensation • equality and antidiscrimination • contract law • Australian and international standards

MEM234036A Apply configuration management procedures in engineering project management

Modification History

Release 1 (MEM05v9)

Unit Descriptor

This unit of competency covers the skills and knowledge required to apply configuration management as a formal control mechanism that may be used in conjunction with the systems engineering process during initial design and during modification development. The outputs are configuration documentation that may be used to control the design baseline throughout the life of a product or for data input to logistics management plans where integrated logistics support (ILS) is the overarching through-life management system.

Application of the Unit

This unit applies to engineering or related projects or operations across all forms of manufacturing and engineering. It is suitable for people with system design, installation, commissioning and project or operational management responsibilities who are required to apply configuration management (CM) procedures during system design and/or during the life cycle of a product. The procedures are used as the control mechanism during the application of the systems engineering design processes which may be used in the design of complex hardware and software products, both for initial design and then as an iterative process as the need for modifications are identified throughout the life cycle of the product. The outputs of the CM process are configuration documentation that can be used for through-life management or for input of data to logistic management plans where ILS is mandated as the through-life management system.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23003A	Operate and program computers and/or controllers in engineering situations
MEM234028A	Produce and manage technical documentation
MEM234029A	Produce and manage technical publications

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

- | | | | |
|---|-------------------------------------|-----|--|
| 1 | Plan CM activities | 1.1 | Identify the context and environment in which CM is to be applied |
| | | 1.2 | Identify any contractual requirements and specifications for the application of CM procedures to through-life management of product configuration, including the relationship with logistics management systems, such as ILS |
| | | 1.3 | Document the required CM activities |
| 2 | Develop CM plan | 2.1 | Describe how CM is to be accomplished |
| | | 2.2 | Specify how consistency between the product definition, configuration and the configuration management records is to be achieved and maintained throughout the applicable phases of the product's life cycle |
| | | 2.3 | Identify and specify performance indicators for assessing the effectiveness of the plan in terms of implementation and performance of the CM discipline |
| 3 | Specify and set up CM documentation | 3.1 | Identify records required to effectively implement CM within the identified product context and environment and CM plan |
| | | 3.2 | Select documentation media and develop documentation templates |
| | | 3.3 | Specify a document version control system |

- | | | | |
|---|---|-----|--|
| 4 | Establish and control CM baseline | 4.1 | Establish product CM baseline in relation to the systems engineering or other design process |
| | | 4.2 | Revise CM baseline at applicable stages of product development, production and engineering changes in accordance with the CM plan |
| | | 4.3 | Establish and review documentation baselines in line with the requirements of the CM plan and with changes in the product CM baseline |
| 5 | Implement CM processes | 5.1 | Develop and deliver training to responsible individuals covering roles and responsibilities and the procedures for implementing CM processes as defined in the CM plan |
| | | 5.2 | Measure performance against the performance indicators in the CM plan and assess measurements/trends to identify possible process improvements |
| 6 | Perform configuration status accounting | 6.1 | Develop and populate a database with information relating to the configuration of products classified as configuration items (CIs) |
| | | 6.2 | Develop and promulgate procedures to update and validate the database whenever there is a configuration change throughout product life cycle |
| | | 6.3 | Disseminate data in accordance with the CM plan and standard enterprise procedures |
| 7 | Participate in configuration audits | 7.1 | Participate in configuration audits where required by the applicable CM standard and the CM plan |
| | | 7.2 | Initiate action to correct deficiencies identified during audits |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying CM requirements for a product, including listing CIs
- applying CM processes to the data produced through systems engineering
- establishing CM baselines during product design and development
- developing a CM plan
- training organisation staff in CM plan implementation
- developing CM documentation and related access, version control and security protocols
- implementing and reviewing CM for a product
- developing and applying CM status accounting and maintain baseline records
- participating in configuration audits and initiate action to resolve deficiencies
- inputting CM data to logistic support plans, where applicable

Required knowledge

Required knowledge includes:

- the use and application of CM in through-life management of product configuration
- CM standards and procedures
- relationship between CM and systems engineering during initial design and production
- iteration of the CM and systems engineering interface throughout the product life cycle during modification development and configuration baseline revision
- relationship between CM and logistic support requirements, such as providing data and updates for ILS plans throughout the product life cycle

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • determine the scope of the CM task and identify items for CM (CIs) • compile CM documentation from systems engineering data • establish and review configuration baselines during product development and production • develop CM plans • implement CM plans • review CM performance • establish and maintain CM status accounting databases and procedures • participate in CM audits and manage the remedy of deficiencies.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. • The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.

	<ul style="list-style-type: none">• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.• Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>CM context and environment</p>	<p>CM context and environment may include:</p> <ul style="list-style-type: none"> • the nature of the products, such as hardware and/or software, complete systems and system components or subsystems • whether or not CM must extend to subcontractors and/or vendors • specific CM value adding functions and level of emphasis • contractual CM requirements, including specification of a CM standard to be applied
<p>Relationship with logistic management systems</p>	<p>Data from CM documentation may be used in logistic management system activities, such as:</p> <ul style="list-style-type: none"> • reliability and maintainability engineering • maintenance planning • life cycle costing • spares support requirements • technical data and publications • support and test equipment identification • determining facilities requirements • determining personnel training requirements
<p>CM plan</p>	<p>The contents of CM plans may include topics such as:</p> <ul style="list-style-type: none"> • brief description of system or top level CI and of the lower level CIs covered by the plan • list of reference documents (e.g. specifications, standards and manuals) • CM organisation and responsibilities • CM phasing and milestones • data management • configuration identification, including selection of CIs, baseline establishment, and configuration identifiers for hardware and for software • interface management • performance indicators • configuration control procedures • configuration status accounting procedures

	<ul style="list-style-type: none"> • configuration audit procedures • subcontractor/vendor control procedures
Systems engineering interface	<p>Systems engineering processes result in the output of technical information that is controlled through the CM process. Through the service life of the product the CM process identifies the need for modifications and the systems engineering process is used to design and develop the modifications which then result in changes to the CM baseline and documentation which may then also feed into logistic support plan updates</p>
CM standards and references	<p>CM standards and references include:</p> <ul style="list-style-type: none"> • EIA-649-A 2004 National Consensus Standard for Configuration Management • GEIA Standard 836-2002 Configuration Management Data Exchange and Interoperability • IEEE Standard 828-1998 IEEE Standard for Software Configuration Management Plans • MIL-STD-973 Configuration Management • STANAG 4159 NATO Materiel Configuration Management Policy and Procedures for Multinational Joint Projects • STANAG 4427 Introduction of Allied Configuration Management Publications • IEEE Standard 1042-1987 IEEE Guide to Software Configuration Management • MIL-HDBK-61A Configuration Management Guidance • 10007 Quality management – Guidelines for configuration management • GEIA-HB-649 Implementation Guide for Configuration Management • EIA-836 Consensus Standard for Configuration Management Data Exchange and Interoperability • ANSI/EIA-632-1998 Processes for Engineering a System

MEM234037A Perform maintenance-related integrated logistic support management activities

Modification History

Release 1 (MEM05v9)

Unit Descriptor

This unit of competency covers the skills and knowledge required to perform a range of maintenance-related integrated logistic support (ILS) activities at a managerial level for any complex system or product where ILS has been selected as the through-life management system.

Application of the Unit

This unit requires application of competencies relating to ILS elements and related data management and analysis tools in the maintenance-related management and support of systems/products throughout their life of type.

Applications include the planning and support of maintenance on any complex system or product where ILS has been selected as the through-life management system and also includes the application of data produced through the configuration management (CM) process where that process has been selected to establish and maintain the design baseline of a system or product. Application of the CM process is covered by unit MEM234036A Apply configuration management procedures in engineering project management.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23003A	Operate and program computers and/or controllers in engineering situations
MEM234028A	Produce and manage technical documentation
MEM234029A	Produce and manage technical publications

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Assist to develop and maintain logistic support analysis plans	1.1	Draft technical content for logistic support analysis plans
		1.2	Review the technical content of logistic support analysis plans in line with trends in system supportability and affordability and with changes in the design baseline
		1.3	Propose revisions to logistic support analysis plans
2	Perform life cycle cost analysis	2.1	Identify actual and anticipated costs through to life of type
		2.2	Analyse cost data
3	Establish and maintain baselines for reliability, availability and maintainability	3.1	Gather data on in-service reliability, availability and maintainability (RAM) and establish baselines
		3.2	Review data against established baselines and initiate action to deal with deviations from the established baselines
4	Develop and maintain a maintenance plan and identify associated requirements	4.1	Perform a level of repair analysis (LORA)
		4.2	Specify maintenance activities and timelines
		4.3	Identify and document support and test equipment requirements
		4.4	Identify and document skills and maintenance manpower requirements

- 4.5 Identify and document requirements for maintenance facilities
 - 4.6 Identify and document technical documentation requirements
 - 4.7 Provide data for initial spares assessment
 - 4.8 Revise the maintenance plan and applicable associated requirements when required by baseline changes
- 5 Revise technical logistic support analysis record data
- 5.1 Analyse logistic support analysis parameters using current data
 - 5.2 Enter analysis results in the logistic support analysis record
- 6 Manage data
- 6.1 Develop and manage a technical data management system in accordance with contractual and regulatory requirements
 - 6.2 Monitor the relevance of technical data and initiate amendment action, where necessary
 - 6.3 Apply and support logistic support management information systems

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- effectively using all forms of oral and written communication
- populating and extracting data from databases
- applying data from design sources, such as CM data
- performing task analysis
- applying ILS principles

Required knowledge

Required knowledge includes:

- ILS management and support philosophy and practice
- logistic support analysis concepts and methods, including:
 - preparation of logistic support analysis plans
 - management and conduct of logistic support analysis programs
 - supportability analysis
 - task analysis
 - logistic support analysis record population
- RAM determination and application, including:
 - baseline determination and application
 - RAM modelling
 - reliability and maintainability apportionment
- performance of LORA and development of maintenance plans and associated requirements
- data management concepts and methods

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts for the maintenance-related application of ILS.</p>
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. • The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred

	<p>to other circumstances.</p> <ul style="list-style-type: none">• Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Technical data for logistics plans	Technical data may be sourced from design data taken from CM data during the design and production phase and thereafter from maintenance records and data gathered to comply with organisational and/or regulatory requirements, plus the iteration of the CM process whenever modification action is required
Life cycle cost analysis	Life cycle cost analysis includes the systematic identification and analysis of all actual and anticipated costs associated with implementing and sustaining a system or product throughout its service life
Costs through to life of type	Costs through to life of type may arise from: <ul style="list-style-type: none"> • operation • engineering support • maintenance support • supply support • facilities costs • personnel costs
Data analysis and review	Data analysis and review may be performed using enterprise databases and analysis tools
Analysis results	Analysis results may include: <ul style="list-style-type: none"> • in-service failure mode effects and criticality analysis • corrective maintenance analysis • reliability centred maintenance analysis • maintenance task analysis • repair level analysis
LORA	LORA refers to an analytical methodology used to assist in the development of maintenance concepts and to establish the maintenance level at which components will be repaired, replaced or discarded on the basis of constraints (economic or other) and readiness requirements

<p>A technical data management system</p>	<p>A technical data management system should provide for:</p> <ul style="list-style-type: none"> • maintenance of all applicable technical data • retention of original and back-up data in separate locations • storage in a manner that minimises the risk of data loss, theft or destruction
<p>The relevance of technical data</p>	<p>The relevance of technical data may be determined through:</p> <ul style="list-style-type: none"> • monitoring engineering, maintenance and supply support activities • utilising user feedback
<p>ILS standards and references</p>	<p>ILS standards and references include:</p> <ul style="list-style-type: none"> • Army Regulation 700-127 Integrated Logistic Support • Defence Standard 00-600 Integrated Logistic Support for MOD Projects • Defence Standard 00-40 Reliability and Maintainability Pt 1 • Defence Standard 00-41 Reliability and Maintainability MOD Guide to Practices and Procedures • MIL-STD 1390D Level of Repair Analysis • NAVAIR 00 -25 403 Guidelines for the Naval Aviation Reliability-Centred Maintenance Process • Integrated Logistic Support Handbook, third edition • NASA Fault Tree Assessment Handbook

MEM234038A Apply systems engineering procedures to engineering design project management

Modification History

Release 1 (MEM05v9)

Unit Descriptor

This unit of competency covers the application of systems engineering procedures in the management of complex engineering design projects, in particular where extensive integration of subsystems and components is required. The system hardware, architecture and software design aspects of systems engineering are covered in specialist design units of competency which all include a requirement for the application of systems thinking.

Application of the Unit

Systems engineering procedures are applied in setting up management procedures for engineering design projects involving the design of complex systems that require the integration of subsystems and/or components by a multi-discipline engineering team. The management processes may relate to all design stages and may include the development of systems software. In the production and life cycle management stages, systems engineering design stage output data may be used in the application of configuration management (CM) procedures (refer to MEM234036A Apply configuration management procedures in engineering project management) and/or to support the application of integrated logistic support (ILS) (refer to MEM234037A Perform maintenance-related integrated logistic support management activities) where justified by system size and complexity or where required by contract.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

- | | | | |
|---|--|-----|--|
| 1 | Analyse and document system requirements | 1.1 | Identify and document customer or contractual system requirements |
| | | 1.2 | Set up a systems engineering team and allocate responsibilities |
| | | 1.3 | Analyse system requirements and define functional requirements and design constraints |
| 2 | Perform functional analysis and allocation | 2.1 | Decompose system functions to lower level functions applicable to system design |
| | | 2.2 | Allocate design constraints to all functional levels |
| | | 2.3 | Define and refine internal and external functional interfaces |
| | | 2.4 | Define, refine and integrate functional architecture |
| | | 2.5 | Review functional analysis outcomes against requirements and revise, where necessary |
| | | 2.6 | Develop and document the functional baseline |
| 3 | Manage preliminary design activities | 3.1 | Coordinate the development of performance specifications for the system and components |
| | | 3.2 | Define alternatives for system concepts, components and system elements |
| | | 3.3 | Select preferred product and process solutions |

- 3.4 Define and refine internal and external physical interfaces
 - 3.5 Define and refine system software requirements
 - 3.6 Develop and document the allocated baseline
- 4 Manage the detail design activities
 - 4.1 Coordinate the development of item, process and material specifications
 - 4.2 Coordinate the development of software specifications
 - 4.3 Coordinate the development of engineering drawings and associated material/component/hardware lists
 - 4.4 Coordinate the development of item performance specifications
 - 4.5 Determine product review and design verification procedures
 - 4.6 Develop and document the product baseline
- 5 Provide oversight of production and delivery
 - 5.1 Apply product review and verification procedures and initiate action to remedy design or production deficiencies
 - 5.2 Ensure that all relevant regulatory requirements are being met
- 6 Provide for life cycle management of the system, components and software
 - 6.1 Where there is a contractual requirement for application of CM, provide the technical data package and define the configuration items (CIs) and baselines
 - 6.2 Where there is a contractual requirement for ILS, provide the technical data package and data required for the development of the relevant ILS plans
 - 6.3 Where there are no contractual requirements regarding life cycle management, deliver the technical data package and develop procedures for the management of the configuration of the system, system components and software

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- setting up and managing procedures for systems analysis and control
- setting up and managing a systems engineering team
- developing and implementing procedures for identification of systems engineering process inputs
- managing and recording the outcomes of requirements analysis
- managing and recording the outcomes of functional analysis and allocation and applying the requirements loop process
- developing and documenting the functional baseline
- managing the development of the system specification and preliminary design
- developing and documenting the allocated baseline
- applying the design loop process
- managing the detail design process and using outputs to develop a technical data package
- developing and documenting the product baseline
- maintaining oversight of the production and delivery phase
- providing process outputs for the establishment of CM procedures or ILS plans
- determining requirements for life cycle management where CM or ILS is not required and setting up and documenting the life cycle management system

Required knowledge

Required knowledge includes:

- the systems engineering process and management procedures
- how to set up and manage the activities of a systems engineering design team
- development of specifications and standards
- identification of applicable published specifications and standards
- how to set up and manage a systems analysis and control database
- how to use process outputs to set up CM and ILS systems for through-life management
- how to develop and document an applicable life cycle management system where CM or ILS is not prescribed or is inappropriate
- ethical considerations in systems engineering

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in managing the application of the systems engineering process.</p>
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. • The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred

	<p>to other circumstances.</p> <ul style="list-style-type: none">• Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Systems engineering process management</p>	<p>The systems engineering process is a comprehensive process for the design and integration of complex systems that cover a range of engineering disciplines. The actual design work will be performed by appropriately qualified specialist engineers and the management process ensures that the design activities are coordinated and integrated into a system that meets specified performance requirements</p>
<p>System requirements analysis</p>	<p>System requirements analysis involves inputs such as customer needs and objectives, regulatory requirements and the technology base. It must clarify and define functional requirements and design constraints</p>
<p>Functional analysis and allocation</p>	<p>Functional analysis and allocation provides a greater understanding of what the system has to do and allocates overall system performance requirements to lower level subsystem and component functions. In so doing, it provides information essential to optimising physical solutions</p>
<p>Baselines</p>	<p>The functional, allocated and product baselines document a product at a specific stage of design definition. The functional baseline describes system level requirements, the allocated baseline describes design requirements for items below systems level and the product baseline describes the product physical detail</p>
<p>Technical data package</p>	<p>Technical data packages may include:</p> <ul style="list-style-type: none"> • engineering drawings and associated lists • technical manuals • manufacturing part programs • verification provisions • spares provisioning lists • specifications developed for the system and system components • specifications and standards from international and national bodies (government and non-government) • relevant regulatory standards and requirements

MEM24001B Perform basic penetrant testing

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers performing basic penetrant testing procedures in a range of industrial applications.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to basic penetrant testing techniques on fabrications, structures and components across a wide range of industries and restricted to basic visible dye and/or process penetrant line methods.</p> <p>The work can relate to scheduled and unscheduled maintenance activities, using general tools, specific penetrant testing equipment as specified in maintenance documentation, testing procedures or operator instructions.</p> <p>Actual and potential defects are to be considered, together with ongoing abnormalities in fabrications, components and structures.</p> <p>Penetrant testing is performed on critical component or structural zones.</p> <p>All testing must be completed with particular attention to personal safety and OH&S regulations. Certification against Australian standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712.</p> <p>Materials and chemicals which are subject to codes and regulations - for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products - must be subject to safe work habits and must be stored and used in accordance with safe work practices.</p> <p>This unit should not be selected when Unit MEM24002B (Perform penetrant testing) has already been selected.</p> <p>Where power tools are required, Unit MEM18002B (Use power tools/hand held operations) should also be selected.</p> <p>Band: A</p> <p>Unit Weight: 2</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas for basic penetrant testing	1.1. Inspection areas are cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant procedures and OH&S requirements. 1.3. Inspection areas are visually assessed and obvious discontinuities are identified.
2. Perform basic penetrant testing	2.1. Nominated test is identified from standard operating procedures. 2.2. Test equipment is prepared in accordance with standard operating procedures. 2.3. Test media is selected and applied in accordance with workplace practices and specifications. 2.4. Penetrant test is carried out in accordance with relevant work instructions and OH&S requirements. 2.5. Penetrant testing equipment is maintained and stored in accordance with standard operating procedures and OH&S requirements.
3. Report the results of penetrant test(s)	3.1. Basic indications are checked and defects are identified in accordance with enterprise standards and/or procedures. 3.2. Basic indications are confirmed in accordance with enterprise standards and/or procedures. 3.3. Test results are reported in accordance with enterprise standards and/or procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing inspection areas
- identifying discontinuities
- applying procedures

REQUIRED SKILLS AND KNOWLEDGE

- applying test media
- applying principles of penetrant testing techniques
- identifying defects
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures.
- following oral instructions
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes
- precleaning methods and their areas of use - solvents, vapour degrease, etching, detergents, paint removers, mechanical methods
- consequences of incorrect preparation
- procedures and OH&S requirements in relation to the preparation process
- basic concepts and principles of NDT; general terms, purpose of NDT and areas of application of NDT
- scope and basic description of test
- general properties of penetrants - penetrability, removability, visibility
- emulsifier types
- developer types
- use of standard test panels
- established inspection procedures and techniques
- types of discontinuities and their consequences
- procedure for carrying out penetrant testing
- penetrant application
- dwell times
- penetrant removal
- developer application
- dry powder
- development time
- factors affecting indications
- non-relevant indications
- post-cleaning methods and their areas of use
- basic maintenance and storage procedures for testing equipment
- OH&S requirements including storage requirements
- definition of a defect and common basic defects
- methods/procedures for reporting test results

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to perform basic penetrant testing. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing basic penetrant testing or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas for penetrant testing	1.1. Inspection areas are identified, cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant procedures, statutory and OH&S requirements. 1.3. Inspection areas are visually assessed and obvious discontinuities are identified.
2. Perform penetrant testing	2.1. The most appropriate penetrant test for the material/application is selected. 2.2. Test equipment is selected and prepared in accordance with standards and/or procedures. 2.3. Appropriate test media is selected and applied in accordance with workplace/industry practices. 2.4. Penetrant test is carried out in accordance with relevant standards, specifications and OH&S requirements. 2.5. Penetrant test equipment is checked for defects, maintained and stored in accordance with procedures, OH&S requirements and manufacturer instructions.
3. Interpret and report the results of penetrant test(s)	3.1. Indications are assessed and defects are detected and classified in accordance with national and international codes and standards. 3.2. Defects are confirmed in accordance with enterprise procedures and industry practices. 3.3. Test results are reported in accordance with enterprise procedures, accepted industry practices and customer service requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

REQUIRED SKILLS AND KNOWLEDGE

- interpreting and following procedures
- identifying inspection areas
- conducting visual inspections
- identifying discontinuities and defects
- selecting appropriate testing techniques and procedures
- using decision making skills
- assessing risk
- performing measurements needed to meet the requirements of this unit
- entering routine and familiar information onto proformas and standard workplace forms
- locating, reading and interpreting information on written job instructions, specifications, drawings, charts, lists and other reference documentation
- planning, sequencing operations

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes for a range of test surfaces
- procedure, statutory and OH&S requirements in relation to the preparation process
- established assessment procedures and techniques
- types of discontinuities and their consequences/effect on the material
- penetrant testing techniques and procedures for a range of situations
- tools, equipment, techniques
- principles and applications of penetrant testing techniques
- hazards and safety requirements associated with penetrant testing
- maintenance and storage procedures for test equipment
- common faults and damage
- range of defects
- meaning and application of national and international codes and standards
- methods/procedures for reporting test results
- implications of test results for the particular material/application
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas for magnetic particle testing	1.1. Inspection areas are identified, cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant procedures, statutory and OH&S requirements. 1.3. Inspection areas are visually assessed and obvious discontinuities are identified.
2. Perform magnetic particle testing	2.1. The most appropriate magnetic particle test for the material/application is selected. 2.2. Testing equipment is selected and prepared in accordance with standards and/or procedures. 2.3. Magnetic particle test is carried out in accordance with relevant standards, specifications and OH&S requirements. 2.4. Magnetic particle testing equipment is checked for defects, and maintained and stored in accordance with procedures, OH&S requirements and manufacturer instructions.
3. Interpret and report the results of magnetic particle tests	3.1. Indications are assessed and defects are detected and classified in accordance with national and international codes and standards. 3.2. Defects are confirmed in accordance with enterprise procedures and industry practices. 3.3. Test results are reported in accordance with enterprise procedures, accepted industry practices and customer service requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting and following procedures

REQUIRED SKILLS AND KNOWLEDGE

- identifying inspection areas
- identifying discontinuities and defects
- selecting appropriate testing techniques, equipment and procedures
- reading, interpreting and applying relative testing standards
- reading, interpreting and applying relative conformance standards
- assessing risk
- undertaking calculations using formulae
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes
- procedures and OH&S requirements in relation to the preparation process
- established assessment procedures and techniques
- types of discontinuities and their consequences
- magnetic particle testing techniques and procedures for a range of situations
- system verification checks necessary to carry out the magnetic particle test
- principles and applications of magnetic particle testing
- advantages and limitations of magnetic particle testing
- hazards and safety precautions associated with magnetic particle testing
- basic maintenance and storage procedures for testing equipment
- types of magnetism;
- magnetic properties
- magnetic materials
- magnetic circuits
- relative permeability of common engineering materials
- magnetic discontinuity, leakage fields
- types of equipment - portable, stationary, automated etc.
- equipment features
- nature and properties of the various types of magnetising current
- current requirements for testing
- media types - advantages and limitations of dry powders and fluid suspensions
- quality control of media, viewing conditions
- disposal procedures
- environment care
- preparation of parts
- effect of surface coatings on sensitivity
- effect of surface roughness
- dressing of welds

REQUIRED SKILLS AND KNOWLEDGE

- interpretation of indications
- lighting conditions
- use of magnification
- factors influencing appearance
- spurious indications, false indications
- surface and sub-surface indications
- common basic defects
- methods/procedures for reporting test results
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to perform magnetic particle testing. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing magnetic particle testing in a range of industrial applications or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Preparation processes	Surface cleaning and drying

Unit Descriptor

Unit descriptor	This unit covers operating eddy current testing equipment and performing basic testing procedures in a specific range of industrial applications. Knowledge of metallurgy, electricity, magnetism and electromagnetism associated with the level of application in this unit is required.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to the preparation and performance of eddy current testing on fabrications, structures and components across a wide range of industries. It includes wheel bead seat, production line, tube production line and conductivity measurement methods. The work can relate to scheduled and unscheduled maintenance activities using general tools and specific eddy current testing equipment as specified in maintenance documentation, testing procedures or operator instructions.</p> <p>Actual and potential defects are to be considered, together with ongoing abnormalities in fabrications, components and structures. Eddy current testing is performed on critical component or structural zones, and may require re-assessment of competency at regular intervals in accordance with relevant standards. All testing must be completed with particular attention to personal safety and OH&S regulations. Certification against Australian standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712.</p> <p>Materials and chemicals which are subject to codes and regulations - for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products - are subject to safe work habits and must be stored and used in accordance with safe work practices.</p> <p>This unit should not be selected when Unit MEM24006B (Perform eddy current testing) has already been selected.</p> <p>Where tests require the interpretation of drawings, Unit MEM09002B (Interpret technical drawings) should also be selected.</p> <p>Where power tools are required, Unit MEM18002B (Use power tools/hand held operations) should also be selected.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas for basic eddy current testing	1.1. Inspection areas are cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant procedures and OH&S requirements. 1.3. Inspection areas are visually assessed and obvious discontinuities are identified.
2. Perform basic eddy current testing	2.1. Nominated test is identified from standard operating procedures. 2.2. Test equipment is prepared in accordance with standards and/or procedures. 2.3. Eddy current test procedure is carried out in accordance with relevant work instructions and OH&S requirements. 2.4. Eddy current test equipment is maintained and stored in accordance with standard operating procedures and OH&S requirements.
3. Report the results of basic eddy current test(s)	3.1. Basic indications are checked and defects are identified in accordance with enterprise standards and/or procedures. 3.2. Basic indications are confirmed in accordance with enterprise standards and/or procedures. 3.3. Test results are reported in accordance with enterprise standards and/or procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • interpreting and following procedures • identifying inspection areas • identifying discontinuities and defects • selecting appropriate testing techniques, equipment and procedures

REQUIRED SKILLS AND KNOWLEDGE

- documenting and reporting
- assessing risk
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings
- performing calculations using formulae

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes
- procedures and OH&S requirements in relation to the preparation process
- visual inspection
- eddy current instrument set-up
- probe selection
- established assessment procedures and techniques
- types of discontinuities and their consequences
- procedure for carrying out basic eddy current testing
- system verification checks necessary to carry out basic eddy current testing
- testing and compliance standards (enterprise specific)
- standard recording and reporting formats
- standard defects and comparative techniques
- basic principles of electricity, magnetism, electromagnetism and eddy current testing
- basic electrical principles
- test principles
- overview of factors affecting eddy current response
- basic metallurgy
- limitations of eddy current testing
- hazards and safety precautions associated with eddy current testing
- basic maintenance and storage procedures for testing equipment
- common basic defects (these are industry-specific and relevant workplace defects should be chosen)
- methods/procedures for reporting test results
- use and application of personal protective equipment

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas for eddy current testing	1.1. Inspection areas are identified, cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant procedures, statutory and OH&S requirements. 1.3. Inspection areas are visually assessed and obvious discontinuities are identified.
2. Perform eddy current testing	2.1. The most appropriate eddy current test for the material/application is selected. 2.2. Test equipment is selected and prepared in accordance with standards and/or procedures. 2.3. Eddy current test is carried out in accordance with relevant standards, specifications and OH&S requirements. 2.4. Eddy current test equipment is checked for defects, and maintained and stored in accordance with procedures, OH&S requirements and manufacturer instructions.
3. Interpret and report the results of eddy current tests	3.1. Indications are assessed and defects are detected and classified in accordance with national and international codes and standards. 3.2. Defects are confirmed in accordance with enterprise procedures and industry practices. 3.3. Test results are reported in accordance with enterprise procedures, accepted industry practices and customer service requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting and following procedures

REQUIRED SKILLS AND KNOWLEDGE

- identifying inspection areas
- identifying discontinuities and defects
- selecting appropriate testing techniques and procedures
- reading, interpreting and applying relative testing standards
- reading, interpreting and applying relative conformance standards
- using calculations relating to eddy current testing
- assessing risk
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes
- procedures and OH&S requirements in relation to the preparation process
- established assessment procedures and techniques
- types of discontinuities and their consequences
- procedure for carrying out eddy current testing
- tools, equipment, techniques and system verification checks necessary to carry out eddy current testing
- basic principles of electricity, magnetism, electromagnetism and eddy current testing:
 - Reactance - field made by eddy current
 - Biot and Savant law - Definition, Practical (right hand) rules
 - Amperes law - Definition, Applications (toroid, infinite coil, flat coil)
 - Lenz law - Definition, Auto-induction factor, Mutual induction factor, Coupling factor
- induced currents - short circuit coil, metallic mass, skin effect, reactance
- cylindrical bars
- theory of eddy currents
- tubes
- geometric defect characterisation
- multiple defects
- characteristics of eddy current probes
- eddy current equipment:
 - transmission
 - reception
 - data presentation
- equipment controls
- types of equipment:
- physical properties of materials

REQUIRED SKILLS AND KNOWLEDGE

- electrical conductivity
- magnetic permeability
- applications of eddy current testing
- influence of various parameters on eddy current measurement
- defect position and orientation
- compensation
- structure and geometry of test part
- coupling influence
- relative speed
- limitations of eddy current testing
- hazards and safety precautions associated with eddy current testing
- basic maintenance and storage procedures for testing equipment
- common basic defects
- methods/procedures for reporting test results
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures

3. Report the results of ultrasonic thickness tests	3.1. Basic thicknesses are identified and explained in accordance with enterprise standards and/or procedures. 3.2. Basic thicknesses are confirmed in accordance with enterprise standards and/or procedures. 3.3. Test results are reported in accordance with enterprise standards and/or procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting and following procedures
- identifying inspection areas
- identifying discontinuities and defects
- selecting appropriate testing techniques, equipment and procedures
- performing calculations

REQUIRED SKILLS AND KNOWLEDGE

- assessing risk
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes for a variety of test surfaces
- procedures and OH&S requirements in relation to the preparation process
- established assessment procedures and techniques
- basic principles of ultrasonic thickness testing
- properties and behaviour of ultrasound
- basic concepts associated with frequency, velocity, wavelength, amplitude
- generation of ultrasound
- types of discontinuities and their consequences
- procedures for carrying out ultrasonic thickness tests
- tools, equipment, techniques and system verification checks necessary to carry out the ultrasonic thickness test
- advantages and limitations of ultrasonic thickness testing
- hazards and safety requirements associated with ultrasonic thickness testing
- basic maintenance and storage procedures for testing equipment
- common basic defects
- indications and thicknesses
- methods/procedures for reporting test results
- ultrasonic thickness testing equipment
- types of displays:
 - a-scan display
 - b-scan display
- types of couplants, desirable characteristics
- straight beam testing method:
- calibration of thickness testing equipment
- frequency
- probe size and shape
- thickness testing
- plate testing
 - acceptance standards within the scope of this unit
- recording and reporting:
 - job records
 - routine reports
 - codes and standards
- variables affecting test results

REQUIRED SKILLS AND KNOWLEDGE

- methods of controlling variables
- component variables:
 - size and geometry
 - distance location from entry surface
 - orientation to entry surface
 - reflecting characteristics of back wall
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting and following procedures

REQUIRED SKILLS AND KNOWLEDGE

- identifying inspection areas
- identifying discontinuities and defects
- selecting appropriate testing techniques, equipment and procedures
- analysing test results
- reading, interpreting and applying relative testing standards
- reading, interpreting and applying relative conformance standards
- performing calculations relating to ultrasonic testing
- assessing risk
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes for a variety of test surfaces
- procedures and OH&S requirements in relation to the preparation process
- established assessment procedures and techniques
- principles of ultrasonic testing
- variables affecting test selection
- variables affecting test results
- ultrasound - frequency, velocity, wavelength, amplitude
- behaviour of ultrasound at interfaces
- characteristics of ultrasound in materials
- generation of ultrasound
- detection of ultrasound
- the flaw detector
- basic test methods:
 - pulse-echo and transmission methods
 - resonance methods
 - a, b, c, and p scan
 - types of coupling
 - single, dual and two-probe methods
- characteristics and applications associated with probes
- calibration methods
- variables
- contact and immersion test methods
- testing methods and their application
- flaw size evaluation
- interpretation and evaluation:
 - defect types as related to product

REQUIRED SKILLS AND KNOWLEDGE

- codes and standards
- recording and reporting:
 - job records
 - routine reports
 - codes and standards
- written procedures:
 - presentation
 - use of standards
- types of discontinuities and their consequences
- procedures for carrying out ultrasonic tests
- tools, equipment, techniques and system verification checks necessary to carry out the ultrasonic test
- advantages and limitations of ultrasonic testing
- hazards and safety requirements associated with ultrasonic thickness testing
- maintenance and storage procedures for testing equipment
- range of defects
- methods/procedures for reporting test results
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to perform ultrasonic testing. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with operating ultrasonic testing equipment and the application of the testing procedure in a range of industrial applications, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Preparation processes

Surface cleaning and drying

Obvious discontinuities

Observed changes in material homogeneity

Defects

Corrosion, metal fatigue, deformation in non-ferrous/ferrous alloys steels, composite materials, fatigue cracks, stress corrosion cracking, manufacturing defects, thickness measurement and fit, mechanical and bonded repairs, laminar tearing, welding defects and casting defects and/or aircraft components

Reported

Accurate identification of location and size of discontinuities

Unit Descriptor

Unit descriptor	This unit covers performing basic radiographic testing procedures in a range of industrial applications. Knowledge of metallurgy associated with the level of application in this unit is required.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to working with ionizing radiation in open or closed sites; on fabrications, structures and components across a wide range of industries. The work can relate to scheduled and unscheduled maintenance activities using general tools and specific radiographic testing equipment as specified in maintenance documentation, testing procedures or operators instructions. All testing must be completed with particular attention to personal and OH&S regulations. Ionizing radiation equipment materials and chemicals, which are subject to codes and regulations, must be stored, used, and transported in accordance with safe work practices. Certification against Australian standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712.</p> <p>This unit should not be selected when Unit MEM24010B (Perform radiographic testing) has already been selected.</p> <p>Where power tools are required, Unit MEM18002B (Use power tools/hand held operations) should also be selected.</p> <p>Where tests require the interpretation of drawings, Unit MEM09002B (Interpret technical drawings) should also be selected.</p> <p>Band: A</p> <p>Unit Weight: 2</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas ready for basic radiographic testing	1.1. Radiographic specimens are cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant procedures and OH&S requirements. 1.3. Inspection areas are visually assessed and obvious discontinuities are identified.
2. Set up radiographic test equipment	2.1. Nominated test is identified from standard operating procedures. 2.2. Radiation testing and processing equipment is set up in accordance with standard operating procedures.
3. Carry out basic radiographic tests	3.1. Basic properties of X-rays and gamma rays are identified. 3.2. Safety practices and controls for minimising radiation exposure are applied. 3.3. Radiographic testing and safety equipment is operated in accordance with relevant work instructions and OH&S requirements. 3.4. Films are processed to achieve optimum results.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting and following procedures
- identifying inspection areas
- identifying discontinuities and defects
- selecting appropriate testing techniques, equipment and procedures
- calculating and producing optimum quality radiographs
- effectively designing exposure and storage areas
- calculating shielding thicknesses
- reading, interpreting and applying relative testing standards

REQUIRED SKILLS AND KNOWLEDGE

- reading, interpreting and applying relative conformance standards
- documenting and reporting
- assessing risk

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes for a range of test surfaces
- cleaning and preparation processes for a range of test surfaces
- assessment procedures and techniques
- types of discontinuities and their consequences/effect on the material
- procedure for carrying out each radiographic test
- principal types of X-ray generators and radioisotopes and their effect on radiographic sensitivity
- tools, equipment, techniques and system verification checks
- relevant standards, regulations and codes
- hazards associated with radiographic testing
- procedures for specialised radiographic applications
- principles of image formation, film and chemical properties and processing techniques
- various types of films and screens, their properties and effects on image quality
- maintenance and storage procedures for test equipment
- common faults and damage
- safety features of radioisotope cameras and X-ray equipment
- production of X-rays and gamma rays
- absorption of ionizing radiation by matter and the biological effects on living
- X-ray equipment
- gamma ray sources
- comparison of X-ray and gamma ray sources on basis of energy and intensity
- shielding thickness
- exposure calculations
- reciprocity law
- preparation and use of exposure charts, radiographic equivalence charts
- exposure techniques
- equipment types
- recording and reporting
- safety aspects
- types of materials
- industrial applications
- set-up procedures
- methods/procedures for reporting test results

REQUIRED SKILLS AND KNOWLEDGE

- implications of test results for the particular material/application
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas for radiographic testing	1.1. Inspection areas are identified, cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant procedures, statutory and OH&S requirements. 1.3. Inspection areas are visually assessed and obvious discontinuities are identified.
2. Select and prepare radiographic test	2.1. The most appropriate radiographic test for the material/application is selected. 2.2. Appropriate testing and processing equipment is selected and set up for various geometries in accordance with standards and/or procedures. 2.3. Quality of radiographic test is optimised.
3. Perform radiographic testing	3.1. Radiographic tests are carried out in accordance with relevant standards, codes, specifications and OH&S requirements. 3.2. Radiographs are set up and carried out for specialised applications. 3.3. Films are processed to maximise quality of image. 3.4. Films are processed to achieve optimum results.
4. Maintain radiographic testing equipment	4.1. Radiographic testing equipment is checked for defects, maintained and stored in accordance with procedures, OH&S requirements and manufacturer instructions.
5. Monitor and ensure radiation safety	5.1. Safety controls are set up and maintained. 5.2. Exposure to radiation employees and general public is minimised. 5.3. Radiation monitoring equipment is selected and used.
6. Interpret and report the results of radiographic tests	6.1. Conditions necessary to view and interpret radiographs are established. 6.2. Radiographs are interpreted/evaluated in accordance with applicable codes, standards and specifications. 6.3. Test results are reported in accordance with enterprise procedures, accepted industry practices and customer service requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting and following procedures
- identifying inspection areas
- identifying discontinuities and defects
- selecting appropriate testing techniques, equipment and procedures
- calculating and producing optimum quality radiographs
- effectively designing exposure and storage areas
- calculating shielding thicknesses
- reading, interpreting and applying relative testing standards
- reading, interpreting and applying relative conformance standards
- documenting and reporting
- assessing risk

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes for a range of test surfaces
- cleaning and preparation processes for a range of test surfaces
- assessment procedures and techniques
- types of discontinuities and their consequences/effect on the material
- procedure for carrying out each radiographic test
- principal types of X-ray generators and radioisotopes and their effect on radiographic sensitivity
- tools, equipment, techniques and system verification checks
- relevant standards, regulations and codes
- hazards associated with radiographic testing
- procedures for specialised radiographic applications
- principles of image formation, film and chemical properties and processing techniques
- various types of films and screens, their properties and effects on image quality
- maintenance and storage procedures for test equipment
- common faults and damage
- safety features of radioisotope cameras and X-ray equipment
- production of X-rays and gamma rays
- absorption of ionizing radiation by matter and the biological effects on living
- X-ray equipment

REQUIRED SKILLS AND KNOWLEDGE

- gamma ray sources
- comparison of X-ray and gamma ray sources on basis of energy and intensity
- shielding thickness
- exposure calculations
- reciprocity law
- preparation and use of exposure charts, radiographic equivalence charts.
- exposure techniques
- equipment types
- recording and reporting
- safety aspects
- types of materials
- industrial applications
- set-up procedures
- methods/procedures for reporting test results
- implications of test results for the particular material/application
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess requirements for non-destructive test	1.1. Inspection area is assessed for testing and all possible failure sites are identified utilising metallurgical analysis. 1.2. Relevant information for test development is collected from available sources using accepted techniques. 1.3. Information is analysed and interpreted. 1.4. Test requirements are determined.
2. Establish non-destructive test techniques and procedures	2.1. Test methods, techniques and procedures to be used for specific NDT work are designated. 2.2. Codes, standards, specifications and procedures are interpreted. 2.3. Test procedures are developed in accordance with established techniques and metallurgical principles.
3. Validate/confirm non-destructive tests	3.1. General and specific test procedures are validated in accordance with established techniques. 3.2. Inspection results are interpreted and evaluated in terms of existing codes, standards and specifications.
4. Approve non-destructive test procedures	4.1. Procedures are approved in accordance with workplace procedures and relevant codes and standards. 4.2. Procedures are documented and distributed in accordance with workplace requirements and relevant codes and standards.
5. Evaluate non-destructive test procedures	5.1. Procedures are evaluated for effectiveness. 5.2. Evaluation results are documented and reported according to workplace requirements. 5.3. Changes/amendments to non-destructive test procedures are made and distributed as necessary.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE**Required skills**

Look for evidence that confirms skills in:

- conducting metallurgical assessment of inspection areas
- designating most appropriate method, technique or procedure
- referencing information
- developing and validating test procedures
- applying safety procedures, standard operating procedures and legislative requirements to all work
- reading/interpreting/applying relative testing standards
- reading/interpreting/applying relative conformance standards
- documenting procedure and results

Required knowledge

Look for evidence that confirms knowledge of:

- application of metallurgical analysis to assess inspection areas
- NDT methods, techniques and procedures
- meaning and validity of relevant codes, standards, specifications and procedures
- test procedure for testing techniques and specimen
- validation processes
- process for approval of procedures
- process for documentation/distribution of procedures
- evaluation procedures
- process for documentation of evaluation results
- process for amending tests and distributing amendments
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Interpret and apply the principles of solidification and crystal structures in metals and alloys	1.1.Principles of solidification and crystal structures in metals and alloys are interpreted and applied in relation to NDT techniques.
2. Interpret equilibrium diagrams for metals and alloys	2.1.Equilibrium diagram for metal or alloy is correctly sourced 2.2.Equilibrium diagrams are correctly interpreted.
3. Interpret and apply the principles of fusion welding of metals and alloys	3.1.Principles and methods for fusion welding of metals and alloys are applied to NDT test selection. 3.2.Defects in weldments are identified and classified from NDT test results.
4. Interpret and apply the principles of the formation of castings	4.1.Principles and methods used to produce metal castings are applied to NDT test selection. 4.2.Defects in metal and alloy castings are identified and classified from NDT test results.
5. Interpret and apply the principles of steel forging	5.1.Principles and methods used to produce steel forgings are applied to NDT test selection. 5.2.Defects in steel forgings are identified and classified from NDT test results.
6. Interpret and apply the principles of mechanical testing	6.1.Principles of mechanical testing are applied to NDT test selection. 6.2.Defects in metal product are identified and classified from NDT test results

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • research • understanding and applying metallurgy principles • selecting NDT test appropriate to metal or alloy and manufacturing process

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

Look for evidence that confirms knowledge of:

- principles of solidification and crystal structures in metal:
 - classification of materials
 - structure of atoms
 - process of solidification
 - crystal structures
 - defects formed during solidification
 - modification of crystal structure
 - heat treatment processes
 - defects formed during heat treatment
- meaning of equilibrium diagrams representative of a range of metals including aluminium, iron, steel and common non-ferrous alloys:
 - alloy systems
 - solid and liquid solubility
 - basic equilibrium diagrams
 - equilibrium diagrams for common alloys
- principles of fusion welding in relation to NDT testing
- defects in fusion welding:
 - processing defects
 - grinding cracks
 - pickling cracks
 - heat treatment cracks
 - service defects
 - fatigue cracks
 - corrosion and stress corrosion cracks
- principles of the formation of castings
- defects in castings
- principles of steel forging
- defects in steel forging
- principles of mechanical testing:
 - mechanical testing
 - tensile testing
 - impact testing
 - hardness testing
 - fatigue testing
- other tests

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply metallurgy principles to NDT test selection and interpretation. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying basic metallurgy principles as related to non-destructive testing techniques, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes,</p>

EVIDENCE GUIDE	
	standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Principles and methods for fusion welding of metals and alloys	<ul style="list-style-type: none"> • MMAW • SAW • GMAW • GTAW • FCAW
Defects in weldments	Cracks, lack of fusion, cavities, imperfect shape, solid inclusions, miscellaneous
Defects in metal and alloy castings	Shrinkage cavities, hot tears, cold cracks, gas holes
Principles and methods used to produce steel forgings	Deformations, strengthening mechanisms, annealing
Principles of mechanical testing	Impact, tensile, hardness testing

MEM25001B Apply fibre-reinforced materials

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers applying and forming/shaping fibre-reinforced materials. It covers the use of manual and mechanical methods using a variety of glass reinforcements and other fibres. Typical applications include marine vessel and aircraft construction.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to application and forming operations conducted within a mould or over a former assembly. Tasks may include hand and mechanical lay-up practices and sheathing applications. Typical applications may include hull, deck, superstructures, bulkhead and partitions, transverse and longitudinal frame members, engine beds and tanks.</p> <p>Materials may include a variety of glass reinforcements and other fibres, types of laminating resins, stiffening materials such as foams, core mat etc.</p> <p>Tools and equipment may include appropriate brushes and rollers, metal rollers, gel coat and resin depositors.</p> <p>Forming and integration work and vacuum bagging techniques are covered by Unit MEM25002B (Form and integrate fibre-reinforced structures).</p> <p>This unit should not be selected if Unit MEM25002B (Form and integrate fibre-reinforced structures) has already been selected.</p> <p>Band: A</p> <p>Unit Weight: 2</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for application/forming operations	1.1. Appropriate tools and equipment are selected according to organisational requirements and instructions. 1.2. Equipment is set up and adjusted ready for operation, in accordance with standard operating procedures. 1.3. Required specifications are identified. 1.4. Materials are selected according to job specifications. 1.5. Allowances for thickness to specifications are made.
2. Apply reinforced materials	2.1. Components are positioned ready for reinforcement operation. 2.2. Equipment is started up, shut down and operated according to standard operating procedures. 2.3. Safe working practices are followed, including the use of personal protective equipment.
3. Form and shape reinforcement materials	3.1. Materials are rolled/shaped to specified thicknesses and/or finishes. 3.2. Materials are laminated according to specifications. 3.3. Final application and shape is checked for compliance to specifications and adjusted as necessary.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- selecting equipment for the application/forming job
- checking equipment for correct operation
- setting up and operating/adjusting equipment
- interpreting and clarifying work instructions
- selecting materials to suit different operations

REQUIRED SKILLS AND KNOWLEDGE

- making allowances to suit conditions and specifications
- positioning components
- following operating procedures
- working safely
- using personal protective equipment (PPE)
- rolling/shaping material
- smoothing irregularities
- laminating
- ensuring compliance to specification

Required knowledge

Look for evidence that confirms knowledge of:

- tools and equipment for application/forming operations
- procedures for setting up and adjusting equipment
- terminology and information relevant to standard work instructions
- applicable codes and regulations
- different chemicals and materials and their properties, including mixing ratios
- the importance and relevance of thickness allowances
- techniques for positioning components
- safety requirements and start up/shut down/operating procedures
- safe working practices and safe use of personal protective equipment
- methods for rolling and shaping
- problems associated with rolling and shaping and methods for rectifying
- the lamination sequence
- methods of checking final application and form
- cleaning procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Form components	1.1.Relevant materials for component construction are selected. 1.2.Relevant drawings and templates are selected. 1.3.Components are formed to specifications 1.4.Component sizing matches the appropriate template.
2. Integrate components	2.1.Integration requirements, materials fixing/bonding methods and mixing practices are determined from job specifications and manufacturer specifications. 2.2.Equipment is set up and adjusted according to standard operating procedures. 2.3.Components are fixed/bonded in accordance with job requirements and specifications. 2.4.Reinforcement materials are formed/shaped to specifications. 2.5.Component is prepared for encapsulation process.
3. Undertake post-curing of materials	3.1.Post-curing method is selected to suit job application. 3.2.Equipment/accessories for post-curing are set up. 3.3.Equipment/accessories are stored according to standard procedure.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- selecting and gathering laminating resins, fibre reinforces, core materials, resins, hardeners, releasing agents, pigments, fillers
- identifying and interpreting drawings/templates for construction process
- selecting and using hand tools, power tools, workshop equipment and machinery
- checking component dimensions for compliance against templates, drawings and specifications
- selecting and mixing fixing/bonding materials
- setting and adjusting equipment such as resin/roving depositor gun, vacuum

REQUIRED SKILLS AND KNOWLEDGE

bagging equipment

- selecting adhesive/filler materials and applying fixing/bonding methods for component integration
- cutting and shaping/bevelling foams, timber/plywood reinforcements to specification
- cleaning excess fixing/bondage material
- using personal protective equipment (PPE)
- working safely
- disposing of waste in accordance with legislation
- selecting post-curing methods
- following operational procedures/safety requirements
- disassembling, cleaning and storing equipment/accessories

Required knowledge

Look for evidence that confirms knowledge of:

- typical components, fibre reinforcement and core materials, resins and hardeners, fillers, release agents, pigment additives, their attributes and their uses
- chemical and physical properties of resins, mixing ratios, laminate thicknesses, strengths and curing properties
- drawings and templates and their construction role
- applicable codes and regulations
- hand tools, power tools, workshop equipment and machinery and their use
- personal protective equipment and safety practices
- waste disposal obligations and regulations
- method used to check component dimensions against drawings, templates and specifications
- procedures used to install component, fixing/bondage and mixing application
- methods of component integration
- procedures required in setting up and adjusting equipment
- relevant adhesive/filler and fixing/bonding methods
- procedures for forming/shaping and tools/machinery used
- importance of cleaning excess fixing/bondage material
- post-curing methods, procedures and applications
- storage procedures

MEM25003B Set up marine vessel structures

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers setting up marine vessel structures. It includes straightforward levelling and alignment.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to work undertaken individually or as part of team environment.</p> <p>Structures include composite, metal and timber requiring a location/erection process. Structures would typically be those where fairness and load bearing is critical and/or where building/marine regulations may apply. Specifications for the structure would be supplied via engineering drawings or similar and include site location information. Structures would include framework such as hull framing, deck framing, superstructures, jig construction, stairways, walkways, tanks, platforms, cradles etc. completed prior to commencement of installation work.</p> <p>Levelling and alignment undertaken would be of a straightforward nature, which may include plumb bob/lines, spirit levels, water and dumpy levels etc. This unit does not include fixed structures, such as jetties, wharves, moorings etc.</p> <p>Materials include timber and other non-metallic materials.</p> <p>Where erection of metal structures is required, Unit MEM10001C (Erect structures) should be selected.</p> <p>Where construction and assembly of entirely marine timber components is undertaken, Unit MEM25005B (Construct and assemble marine timber components) should be selected.</p> <p>Where lifting or rigging skills are required, appropriate materials handling units should be accessed.</p> <p>Band: A</p> <p>Unit Weight: 4</p>

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Inspect and prepare site	1.1.The site is checked for location, dimensions and levels in accordance with industry standards. 1.2.Minor alterations, corrections or adjustments are undertaken with approval of appropriate authority. 1.3.Surfaces and materials/components are prepared for use. 1.4.Structural components and materials are identified.
2. Undertake levelling and measurement readings	2.1.Principles of levelling and measurement reading are applied. 2.2.Task requirements are determined. 2.3.Levelling procedures are identified. 2.4.Levelling equipment is selected and set up to operating procedures. 2.5.Levelling measurements are taken accurately. 2.6.Levelling tasks are completed to specifications.
3. Erect marine vessel structures	3.1.All work is carried out safely and in accordance with defined procedures. 3.2.Components of structure are prepared correctly for sequential erection. 3.3.Components are erected and fixed according to specifications. 3.4.Structure alignment meets required specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- checking construction site location, dimension and levelling
- effecting minor alterations, corrections or adjustments
- identifying and confirming relative structural components and material species against job specification
- selecting and using levelling and measurement tools/methods

REQUIRED SKILLS AND KNOWLEDGE

- taking measurements
- applying engineering principles and techniques
- using tools and measuring equipment
- interpreting specifications, establishing alignment requirements and achieving levelled structures
- identifying safe working requirements
- making adjustments to achieve correct specifications

Required knowledge

Look for evidence that confirms knowledge of:

- practices used for checking construction site location, dimensions and levelling procedures
- procedures for effecting authorised minor alterations, correction or adjustment
- practices used to prepare surfaces, materials/component structures
- structural components and material species/types in accordance with job specifications
- process for obtaining levelling and measurement reading
- levelling and measurement tools/methods
- levelling method used to level equipment/component assembly structure
- levelling equipment and set-up procedure
- engineering principles, techniques, tools and equipment for levelling and measurement
- personal protective equipment and safe working practices
- safety principles for erecting structures
- sequence of assembly of component structure
- erecting and fixing methods

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine requirements for operation	1.1. Job requirements are identified. 1.2. Sequence of operations is determined.
2. Prepare for filling/sanding/grinding operations	2.1. Safety equipment is set up in accordance with standard procedure. 2.2. Appropriate fillers and abrasive materials are selected and prepared to suit job requirements and required surface finish. 2.3. Appropriate equipment and accessories are selected and set up ready for operation.
3. Perform filling, sanding, fairing and grinding operations	3.1. Work is carried out to specified finishes. 3.2. Power tools are used to optimise equipment and material use. 3.3. Safety procedures are observed, safety glasses/shield worn and, where applicable, protective clothing is worn. 3.4. Surfaces are checked to ensure compliance to specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- determining and applying job requirements
- identifying and selecting materials to be prepared
- filling/sanding/grinding, fairing and shaping to requirements
- setting up and using safety equipment such as fans, extraction unit
- preparing fillers and abrasive materials
- setting up and using sanding/grinding, power tools such as disc sander, angle grinder and associated safety accessories such as dust extraction assemblies and guard protection
- surface filling, sanding, internal and external sanding to achieve flat, concave and convex surfaces

REQUIRED SKILLS AND KNOWLEDGE

- using personal safety protection
- checking surface and finish visually and by use of fairing battens, straightedges, stringlines, french curves, templates etc.

Required knowledge

Look for evidence that confirms knowledge of:

- filling and fairing specifications
- types, properties and characteristics of fillers and materials to be prepared and features/specific preparation requirements
- filler ingredient measuring and preparation techniques
- relevant safety equipment and uses/application
- filling, fairing and shaping techniques
- equipment and accessories and applications
- means of optimising life of abrasive materials and reducing waste
- personal safety procedures and protective equipment relevant to sanding/grinding practices
- safety hazards and hazard reduction relating to faired materials, fillers and abrasives
- compliance testing procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to fair and shape surfaces. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with fairing and shaping surfaces, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

MEM25005B Construct and assemble marine vessel timber components

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers constructing and assembling marine timber components, including laminating by cold processes.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to marine vessel backbone components such as keel, deadwoods, stem etc., transverse and longitudinal framing, knees, deck framing, hull construction, laid deck construction and superstructures.</p> <p>Where hull is to be planked, planking may include but is not limited to carvel, strip, clinker, double diagonal systems. Fastenings, joining methods and sealing systems may vary according to application.</p> <p>Timber joinery must be appropriate for application and fixed to industry standards. This unit includes laminating by cold processes.</p> <p>A variety of hand and hand held power tools and workshop equipment such as bandsaw, surfacer and thicknesser etc. may be used for the construction and assembly practices.</p> <p>Where permanent timber bending practices are required, such as boiling/steam bending, Unit MEM25009C (Form timber shapes using hot processes) should also be selected.</p> <p>Band: A</p> <p>Unit Weight: 8</p>
--------------------------------	--

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units		
Path 1	MEM04018B	Perform general woodworking machine operations
	MEM09002B	Interpret technical drawing
	MEM12007D	Mark off/out structural fabrications and shapes
	MEM12023A	Perform engineering measurements
	MEM18001C	Use hand tools
	MEM18002B	Use power tools/hand held operations

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1.Required information is determined from drawings, instructions and specifications. 1.2.Construction process is selected to suit job application.
2. Construct marine vessel timber components	2.1.Appropriate tools/equipment are selected to suit job application. 2.2.Template/measurement is selected to suit component construction. 2.3.Material is dressed, sized and shaped to suit job requirements and specifications. 2.4.Final form/shape of component is checked against template/measurement specification and modified if necessary. 2.5.Component identification and set-up markings are applied.
3. Assemble components	3.1.Jig support assembly is set up to suit job requirements. 3.2.Materials for fastening, joining and sealing are selected and used according to job specifications and requirements. 3.3.Assembly and fastening sequence is determined. 3.4.Material preservation requirements are carried out, if required. 3.5.Components are assembled to specified line markings and positions. 3.6.Assembled component meets specifications. 3.7.Component assembly is cleaned/prepared to suit job requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

REQUIRED SKILLS AND KNOWLEDGE

- interpreting specifications, drawings, instructions and procedures
- identifying job structure, templates, material types, construction detail and assembly practices
- using tools and equipment
- selecting and using templates for construction
- cutting, sizing, preparing and forming timber
- checking final form/shape of component
- assembling support jigs
- positioning and assembling components
- selecting and using fastening methods
- finishing and applying preservation materials
- cleaning excess material wastage
- undertaking waste disposal in accordance with legislative requirements

Required knowledge

Look for evidence that confirms knowledge of:

- component types/materials/templates and their uses
- characteristics, properties, specifications and uses of species, including durability, strength and appearance
- types, specification and uses of fasteners
- applicable codes and regulations
- methods used to take off measurements, mark out, construct and assemble components
- effect on access, rigidity, strength, buoyancy and resistance to stresses encountered at sea
- hand tools, power tools and workshop machinery to suit construction applications
- practices for cutting/dressing/sizing/shaping material
- measuring and marking out techniques using graduated devices, battens, templates, etc.
- procedures used in checking final form/shape
- clamping and shoring methods and the use of jigs
- procedures, codes and regulations used in applying relevant fastenings to suit assembly
- methods of cleaning, preserving and finishing components, their uses and safety precautions
- waste disposal obligations and regulations

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to construct and assemble marine vessel timber components. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, i.e. the candidate is not in productive work, an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with constructing and assembling marine vessel timber components or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to tools, equipment, materials and documentation required and must be permitted to refer to relevant workplace procedures/product and manufacturing specifications/codes/standards/manuals/reference materials.</p>

MEM25006B Undertake marine sheathing operations

Modification History

Release 2 - Prerequisite unit code corrected MEM25004B

Unit Descriptor

Unit descriptor	This unit covers applying sheathing to marine structures (sheathing operations). Basic composite sheathing operations are covered by Unit MEM25001B (Apply fibre-reinforced materials).
------------------------	---

Application of the Unit

Application of the unit	<p>This unit covers the application of sheathing to marine structures. Work is undertaken autonomously, in a team environment or a combination of both. Predetermined standards of quality and safety are observed and work is carried out to standard operational procedures.</p> <p>Tasks may be carried out on prepared new and old surface areas. Sealing may involve various materials to ensure a watertight seal on a variety of components.</p> <p>Where application of marine coatings is undertaken, Unit MEM08002C (Pre-treat work for subsequent surface coating) and/or Unit MEM08004B (Finish work using wet, dry and vapour deposition methods) should also be selected. Basic sheathing operations are covered by Unit MEM25001B (Apply fibre-reinforced materials).</p> <p>Where materials and chemicals subject to codes and regulations are stored, Unit MEM13003B (Work safely with industrial chemicals and materials) should also be considered.</p> <p>Band: A</p> <p>Unit Weight: 2</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify job requirements	1.1. Job specifications are identified from written and verbal instructions as appropriate. 1.2. Surface materials are identified from specification or verbal instructions. 1.3. Application schedules are identified.
2. Observe safety practices	2.1. Application material is prepared in accordance with manufacturer specifications. 2.2. Work area is made safe in accordance with organisational and legislative requirements. 2.3. Safety practices are observed and appropriate protective clothing is worn.
3. Prepare surface areas and apply materials	3.1. Surface area is prepared to suit job application. 3.2. Surface contaminants are removed using appropriate method. 3.3. Where applicable, non-contact surface areas are protected. 3.4. Measures to prevent external contamination are applied in accordance with organisational procedures. 3.5. Appropriate equipment is used to calibrate mixing quantities. 3.6. Hand tools for mixing and application are selected to suit job requirements
4. Prepare application materials	4.1. Materials are prepared/mixed in accordance with manufacturer specification. 4.2. Material quantities are calculated and cut to produce minimum wastage.
5. Apply materials	5.1. Application tools are selected and used correctly. 5.2. Application procedures are carried out in accordance with manufacturer specification. 5.3. Where applicable, job materials are held securely in place until curing process is achieved. 5.4. Excess material is removed. 5.5. Application tools are cleaned up and stored. 5.6. Job area is cleaned up to maximise safe working conditions.
6. Seal fabricated components	6.1. Surface preparation is completed as per manufacturer specification.

ELEMENT	PERFORMANCE CRITERIA
	<p>6.2. Sealant is applied to components and secured as per specifications and/or drawings.</p> <p>6.3. Excess sealant is cleaned off and tested/checked to ensure water tightness.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- identifying and clarifying sheathing application, material and other relevant specifications
- identifying surface materials
- preparing materials
- measuring sheathing material lengths to produce minimal wastage
- preparing site
- using personal protection
- mixing solutions in correct ratios
- preparing surface area, including the removal of contaminants
- selecting tools
- shielding surface areas not being sheathed
- applying materials
- minimising waste
- securing matting/cloth and waste overhang
- removing excess materials to produce minimum sanding/finishing requirements
- cleaning and storing tools
- sanding/re-coating sheathed surface area
- securing components/fittings
- cleaning and structurally testing fittings

Required knowledge

Look for evidence that confirms knowledge of:

- sheathing material specifications, properties and uses
- surface types, specifications, cleaning and preparation techniques
- site preparation and safe working practices

REQUIRED SKILLS AND KNOWLEDGE

- sheathing preparation and safe working practices
- sealant types, specifications and uses
- masking procedures
- bonding/impregnating/reinforcing material specifications, properties and uses
- use of tools for sizing, measuring, mixing, applying sheathing and bonding/impregnating/reinforcing mixtures and finishing
- sealant application and finishing techniques
- sheathing application
- waste minimisation techniques
- securing materials and waste overhang
- removal of excess resin
- waste disposal obligations and regulations
- cleaning and storage of tools
- sanding/re-coating
- water testing techniques

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Inspect vessel and identify maintenance/repair requirements	1.1.Sectors, surfaces and fittings requiring inspection are identified. 1.2.Condition of sectors/surfaces and fittings is established. 1.3.Appropriate cosmetic maintenance/repair requirements and methods are established.
2. Clean and prepare vessel sectors and surfaces	2.1.Correct cleaning tools, equipment and materials are selected and used safely. 2.2.Fittings are cleaned and prepared for maintenance. 2.3.Surfaces and sectors are cleaned free of contaminants. 2.4.Safety practices are applied in accordance with organisational and legislative requirements.
3. Perform cosmetic maintenance/repair	3.1.Surfaces are correctly prepared, filled and faired ready for finishing. 3.2.Compatibility of re-coating materials is confirmed. 3.3.Material coatings are selected and applied correctly. 3.4.Fittings are maintained/replaced as appropriate. 3.5.Tools and equipment are cleaned and stored correctly.
4. Finish surfaces	4.1.Where applicable, surfaces are re-coated. 4.2.Where applicable, surfaces are sanded and buffed/polished to specification.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- implementing written and verbal instruction and specification
- recognising structure and components
- identifying surface coating and toxicity status of different sectors
- detecting faults, flaws and breakdowns in surface integrity

REQUIRED SKILLS AND KNOWLEDGE

- preparing site to job, safety and environmental requirements
- selecting tools and equipment
- selecting cleaning/etching/cutting solutions and compounds, etc.
- using personal protective equipment (PPE)
- removing fittings, where required
- preparing parts/sections in need of repair
- acquiring, preparing and applying fillers, caulking compounds, sealants, adhesives, gel-coats, etc., where required
- preparing surfaces in readiness for application of surface finishing and protective coatings, where required
- applying/restoring surface finishes and or protective coatings
- reinstalling/replacing fittings
- disposing of waste, and general housekeeping

Required knowledge

Look for evidence that confirms knowledge of:

- structure, component, and surface type identification
- written and verbal instruction and specification
- range of cleaning/etching/cutting solutions and compounds, etc.
- protective and preservative coatings
- fault and blemish identification
- types of fillers, caulking, sealants, adhesives and their uses
- operation of hand and mechanical tools including high- pressure cleaning devices
- safety measures, safe working procedures and personal protection
- methods of cleaning, performing cosmetic repair and surface preparation, finishing and preservation
- environmental impact of run-off and waste
- waste disposal obligations and regulations

MEM25008B Repair marine vessel surfaces and structures

Modification History

Release 2 - Prerequisite unit code corrected MEM25004B

Unit Descriptor

Unit descriptor	This unit covers repairing marine structures and surfaces, including fibre reinforced plastics, timber and metal surfaces. Cosmetic maintenance/repair of surfaces is covered by Unit MEM25007C (Maintain marine vessel surfaces).
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to repair of marine structures and surfaces. Work is undertaken autonomously, in a team environment or a combination.</p> <p>All practices may be applied to timber, fibre reinforced plastics, polycarbonates, acrylics, glass and metal materials.</p> <p>Repairs may relate to hull, superstructure and decks. Chosen repair methods must take account of stresses encountered by vessels at sea including but not limited to hogging, sagging, wracking, sheering, panting.</p> <p>A range of tools/equipment and materials is used to suit specified job requirements.</p> <p>All work is carried out observing all safety aspects of structural integrity. All work and work practices are undertaken to regulatory and legislative requirements.</p> <p>Where sheathing applications are required, Unit MEM25006B (Undertake marine sheathing operations) should also be selected.</p> <p>Where interpretation of technical drawings is required, Unit MEM09002B (Interpret technical drawing) should also be selected.</p> <p>Where location/erection of structures is required, Unit MEM25003B (Set up marine vessel structures) should also be selected.</p> <p>Where mechanical systems/components/fittings are to be replaced, Unit MEM18055B (Dismantle, replace and assemble engineering components) should be selected.</p> <p>Where slipping is required, or when working on a slipped craft, Unit MEM25014B (Perform marine slipping operations) should also be selected.</p>
--------------------------------	---

	<p>Relevant units related to specific applications and materials should also be selected as required.</p> <p>Band: A</p> <p>Unit Weight: 4</p>

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine nature and extent of damage and subsequent repair requirements 2. Remove damaged sectors 3. Repair damaged sectors	3.1.Damaged structural areas/sectors are identified and extent of damage is determined.
	3.2.Repair requirements are determined.
	3.3.Where applicable, damaged sector is reinforced/supported.
	3.4.Damaged sector is removed.
	3.5.Method of component replacement is determined.
	3.6.Damaged components are repaired/constructed to specification.
	3.7.Components are fastened using appropriate fastening practices.
	3.8.Repaired surface area is prepared and re-coated to specifications.
	3.9.Repairs are cleaned in accordance with delivery requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- implementing written and verbal instruction
- recognising structure and components
- identifying type and extent of structural damage area/sector
- selecting suitable repair method and materials
- selecting and using tools/equipment
- preparing site to job, safety and environmental requirements
- preparing materials to affect repairs
- using personal protection
- sourcing and applying correct fastening methods
- disassembling components, where required
- repairing damage to timber, fibre reinforced plastics and metal surfaces and structures
- reassembling and or replacing components
- reconnecting/refitting through-hull fittings
- preparing surface in readiness for application of surface finishes and protective coatings, where required
- applying surface finishes and protective coatings, matching colours and textures, where required
- testing and re-establishing watertight integrity, where required
- disposing of waste, and general housekeeping

Required knowledge

Look for evidence that confirms knowledge of:

- structure, component, surface, core identification
- effect of damage in relation to the integrity of the hull and structures and the capacity of the vessel to withstand stresses encountered at sea
- repair methods and materials for timber, fibre reinforced plastics and metal surfaces and structures
- characteristics of chosen materials
- affect on structural and or watertight integrity
- tools/equipment, their specification and application

REQUIRED SKILLS AND KNOWLEDGE

- techniques for reinforcement/shoring/support
- methods for re-constructing damaged components
- fastening methods and application procedure
- procedures used in preparing, re-finishing or re-coating
- types and applications of coatings
- colour and texture matching techniques
- safe work procedures
- methods of testing and re-establishing watertight integrity
- procedures for pre-delivery clean up of damaged sector

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Repairs

- Foreign contact damage such as reef, jetty collision; environmental problems such as fungi, marine and insect effects on timber; variants of severe corrosion in metals, such as electrolysis and galvanic corrosion and with fibre reinforced plastics construction, such as osmosis
- Structural repair includes impediments to structural and watertight integrity, for example, holed hull, star-cracking in fibre reinforced plastics, replacement of hull and deck
- Planking, replacement of cracked hatch tops and portlight 'windows', hull penetration causing ingress of water

Unit Descriptor

Unit descriptor	This unit covers forming solid timber shapes using hot processes. Laminating by cold processes is covered by Unit MEM25005B (Construct and assemble marine vessel timber components).
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to typical applications in the construction of marine vessels including forming and shaping of structural and decorative components.</p> <p>Application and forming operations are conducted within a mould, existing structure or over a former assembly.</p> <p>Predetermined standards of quality and safety are observed and work is carried out following standard operational procedures.</p> <p>All work and work practices are undertaken to regulatory and legislative requirements.</p> <p>Where straightforward construction and assembly of marine timber components is undertaken, including laminating by cold processes, Unit MEM25005B (Construct and assemble marine vessel timber components) should be selected.</p> <p>Where complex forming is required, Unit MEM09021B (Interpret and produce curved 3-dimensional shapes) should also be considered.</p> <p>Band: A</p> <p>Unit Weight: 2</p>
--------------------------------	---

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Specifications are identified from drawings and instructions. 1.2. Appropriate bending process is selected and components are identified. 1.3. Construction sequence is determined. 1.4. Tools and equipment are selected and used appropriate to job requirements.
2. Prepare jigs and templates	2.1. Standard jigs/templates are selected to suit job application. 2.2. Jigs/templates are constructed to suit required shape.
3. Form timber shapes	3.1. Components are constructed to specifications using hot processes. 3.2. Where applicable, laminating/heating equipment is set up according to standard operating procedures, and safety practices are observed. 3.3. Components are constructed and shaped to specifications. 3.4. Final components conform to specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- selecting jig/template or fastening method relevant to form application
- using personal protection and applying safety precautions.
- selecting timber to specification and identifying faults
- preparing and operating heating/steaming equipment
- loading and unloading timber for heating/steaming.
- using tools, jigs, moulds and templates
- bending, shaping, assembling and or positioning timber components for clamping or fastening
- fixing clamps or fastenings

REQUIRED SKILLS AND KNOWLEDGE

- checking component size

Required knowledge

Look for evidence that confirms knowledge of:

- relevant job specifications
- safe working practice
- forming and component assembly practices
- heating/steaming equipment types and application
- heating times, temperatures and humidity requirements, where appropriate
- timber types, specifications and characteristics
- fault identification in material, such as twist, shakes, sloping grain
- forming and component assembly practice
- jig/templates types and their application
- jig/template construction process to suit specified shape
- bending and forming processes used for constructing components
- relevant laminating/heating equipment, their use and safety procedures
- heating, construction and shaping of components
- checking specified component size

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to form timber shapes using hot processes. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with forming timber shapes using hot processes, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Drawings are identified and checked for accuracy. 1.2. Specified job requirements are identified from fitout plans and procedures. 1.3. Materials for fitout are identified from fitout plans and procedures.
2. Construct fitout components	2.1. Take-off quantities are checked and cutting list is produced, if applicable. 2.2. Material is machined to suit job scantling sizes, strength and appearance requirements, where applicable. 2.3. Materials are marked/cut out to specification. 2.4. Components requiring assembly are clearly identified and the sequence of assembly is determined.
3. Assemble fitout components	3.1. Method of assembling and fastening components is identified. 3.2. Components are assembled to specifications. 3.3. Waste materials are removed in accordance with work practices and relevant legislation. 3.4. Surface area of assembled components is sanded for installation, where applicable. 3.5. Component surface is pre-coated for preservation, where applicable, according to standard specification and procedure.
4. Install components	4.1. Surface area is marked for layout installation, where applicable. 4.2. Fitting and levelling practices are applied. 4.3. Fastenings are selected to suit job requirements. 4.4. Components are fixed to meet specified job requirements. 4.5. Clean work practices are applied for coating and adhesive applications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- employing safe work practices
- selecting and checking drawings
- identifying job fixing methods, fitout components, scantling sizes, patterns and materials from fitout plans and procedures
- identifying component structure, materials and assembly procedure
- determining quantities and producing cutting list
- preparing site
- selecting and using tools/equipment
- marking out materials
- assembling, fitting, adjusting and fixing equipment and components
- checking assemblies against specifications for correct sizing and construction standard
- disposing of waste in accordance with legislative requirements
- selecting component parts for sanding
- treating surface areas
- testing for watertight integrity
- fixing structures
- preparing fitout structures for coating and adhesive applications

Required knowledge

Look for evidence that confirms knowledge of:

- safe work practice
- procedures used for drawing identification and accuracy
- common structures used in boat fitout
- job fixing methods, fitout components, materials and use of patterns
- procedures used for constructing and assembling component
- typical sizing, common species, strength and appearance requirements
- practice used for machining of material
- material characteristics in terms of species, strength, appearance grade
- marking and cutting procedures
- practices used in identification and assembly sequence
- assembly and fastening methods
- safe work practices and personal protective equipment
- waste disposal obligations and regulations
- surface preservation pre-coating and application method

REQUIRED SKILLS AND KNOWLEDGE

- practices used for fitting and levelling
- type of fastenings and material species
- method of fixing/fastening applications
- watertight integrity testing methods and their application

Unit Descriptor

Unit descriptor	<p>This unit covers the installing and testing engine/plant and ancillary equipment relevant to propulsion, stability, steering and fuel systems for mechanically powered marine vessels.</p> <p>Straightforward installation only is covered by Unit MEM25015A (Assemble and install equipment and accessories/ancillaries).</p>
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to practices for the installation and testing of engine/plant and ancillary equipment relevant to propulsion, stability, steering and fuel systems for mechanically powered marine vessels.</p> <p>Application may apply to drive systems such as inboard/outboard, water jet and side thrusting units (excluding outboard motor installation).</p> <p>Site locations may include new or existing external and internal locations for foundations, footings, beds and frameworks etc. completed prior to installation and commissioning.</p> <p>All specifications are applied using engineering drawings, written and verbal instructions. Straightforward modifications are of a minor nature not requiring specification changes or technical recording. Testing should be undertaken in accordance with manufacturer specifications, guidelines, requirements and limitations.</p> <p>Testing procedures may include engineering practices for determining correct operational function of mechanical, fluid power systems, equipment, components and associated items.</p> <p>Tasks may be undertaken in a workshop/site, moored or in a sea-trial situation. Work may be undertaken autonomously or as part of a team. All work and work practices shall be undertaken to regulatory, legislative and manufacturer requirements.</p> <p>Where installation only is required, Unit MEM25015A (Assemble and install equipment and accessories/ancillaries) should be selected.</p>
--------------------------------	---

	<p>Where technical drawings are interpreted, Unit MEM09002B (Interpret technical drawing) should also be considered.</p> <p>Where load shifting equipment, such as ride on forklifts/pallet trucks, is used, Unit MEM11010B (Operate mobile load shifting equipment) should also be considered.</p> <p>Where moveable and fixed load shifting equipment, such as pendant cranes, travelling overhead cranes, monorail hoists and chain blocks etc., is used, Unit MEM11022B (Operate fixed/moveable load shifting equipment) should also be considered.</p> <p>Band: A</p> <p>Unit Weight: 8</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare installation site	1.1.Site features are checked using appropriate measuring equipment. 1.2.Non-compliance with specification is reported to appropriate authority. 1.3.Modifications are undertaken with approval of appropriate authority. 1.4.Installation site and components are prepared.
2. Install marine engines/plant	2.1.All work is carried out safely, in accordance with site procedures and relevant Australian standards. 2.2.Engine/plant components and ancillary equipment are prepared for correct sequential installation. 2.3.Engine/plant is installed in accordance with manufacturer's site specifications. 2.4.Engine/plant is checked for conformance to specifications, and modifications/adjustments are undertaken to standard operating procedure. 2.5.Engine/plant is installed in accordance with specifications. 2.6.Site conditions are finalised in accordance with OHS requirements and standard procedures. 2.7.Documentation is completed to required specifications.
3. Test engine/plant systems and ancillary equipment	3.1.Work/test requirements for engine/plant and ancillary equipment are identified. 3.2.Engine/plant and ancillary equipment is tested for correct operation using instruments appropriate to the testing task. 3.3.Operational function is assessed and verified.
4. Collect data and localise fault conditions	4.1.Drawings/diagrams and operational specifications are used to identify and localise fault conditions. 4.2.Built-in fault indicators and error codes are examined and interpreted, and results are recorded to standard procedures. 4.3.Fault condition is localised to major component level.
5. Analyse and report test results	5.1.Test results are analysed/verified against operational specifications and localised faults are confirmed. 5.2.Potential and actual faults are reported according to standard procedures.

ELEMENT	PERFORMANCE CRITERIA
	5.3. Corrective action is planned. 5.4. Action plan is recorded/documented.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting relevant drawings, specifications and instructions
- checking site for correct location, dimensions and levels
- preparing site
- preparing surfaces, materials and components for installation
- checking machine/plant for compliance
- following safety measures
- installing and fixing components
- levelling, aligning, coupling and connecting engine/plant (excluding electrical connections)
- restoring site
- disposing of waste in accordance with legislative requirements
- completing reports and other documents
- interpreting operational data of engine/plant and ancillary equipment
- selecting and using test equipment
- testing and verifying engine/plant and ancillary equipment operation
- identifying faults from built-in fault indicators, error codes
- analysing test results against specifications for faults

Required knowledge

Look for evidence that confirms knowledge of:

- safe working practices
- equipment used to check various site features and their use
- marine systems, specifications, applications and non-compliance procedures
- applicable safety equipment and personal protective equipment
- relevant codes, standards
- fixing/fastening methods components
- levelling, alignment, coupling and connection requirements

REQUIRED SKILLS AND KNOWLEDGE

- relevant person(s) for making electrical connections
- cleaning and clearing requirements
- waste disposal obligations and regulations
- reporting and recording requirements
- operational requirements/specifications of engine/plant and ancillary equipment
- testing procedures and principles
- normal operating characteristics of engine/plant and ancillary equipment
- faults and malfunctions
- error indications in built-in devices
- methods of determining fault condition
- procedures for reporting faults
- causes/faults in engine/plant and ancillary equipment
- procedures for recording/documenting corrective maintenance activity

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Job requirements are established from plans, specifications, verbal instructions or visual inspections. 1.2. Installation materials are identified. 1.3. Compatibility of surface and fitting materials is identified. 1.4. Installation site of system is identified.
2. Select auxiliary system	2.1. Auxiliary system is selected in accordance with job requirements. 2.2. Material structure and installation procedures are identified. 2.3. Associated installation/assembly, plans/instruction are identified and verified.
3. Install auxiliary system	3.1. Appropriate tools for specified installation are selected. 3.2. Where applicable, structural area is cut to suit installation requirements. 3.3. Where applicable, structural reinforcement is fitted to suit job requirement. 3.4. Structural area is prepared for surface preparation. 3.5. Coating sealants and/or isolation materials are applied to suit job requirements. 3.6. Fastening methods are applied to suit job application. 3.7. Installation procedures are applied in accordance with job specification. 3.8. Clean work practices are applied.
4. Test operation of auxiliary system	4.1. Pre-test checks are applied and verified before standard testing procedures are actioned. 4.2. Test operation procedures are identified and verified. 4.3. Where required, test equipment is correctly set up and used in accordance with testing practice. 4.4. System is tested in accordance with specified operational procedures. 4.5. Faults are recorded/reported to appropriate authorities. 4.6. Faults are rectified and re-tested for correct operation. 4.7. Final test operation is recorded and documented

ELEMENT	PERFORMANCE CRITERIA
	according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- identifying material species such as metals, timber, resin and glass reinforcements from plans/drawing
- establishing compatibility of component material and structural surface
- identifying systems such as bilge, freshwater, plumbing
- selecting and using specific tools
- selecting and applying sealants, coatings/isolation materials, such as sikaflex, paints, flowcoat, nylon etc.
- selecting fastening method and type/materials species
- modifying structural components without compromising structural and watertight integrity
- assembling and installing systems in accordance with plans/verbal instruction
- maintaining/restoring watertight integrity
- disposing of waste materials
- testing and verifying correct system operation
- recording fault diagnosis information
- rectifying faults

Required knowledge

Look for evidence that confirms knowledge of:

- role of plans/specification used for installation of identified components
- species/types of materials and their uses
- compatibility of species/types of construction materials of component and surface
- material species/types of structure/system and installation process
- plans/instruction relevant to installation and assembly of selected system
- tools associated with system installation and their uses
- effects of sea-going stresses on structure and components
- practices used in modifying structural components, to suit system applications
- procedures for applying the reinforcement to structural section

REQUIRED SKILLS AND KNOWLEDGE

- method of sanding for surface preparation
- sealant coatings and/or isolation materials
- waste disposal obligations and regulations
- standard pre-testing checks
- role, function and set-up procedure of test equipment
- practice used in testing operation of installed system
- recording procedures for fault diagnosis and identification
- methods used for rectifying faults and re-testing of system operations
- test operation checklist and recording procedure for final test clearance

MEM25013B Produce three-dimensional plugs/moulds

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers manufacturing three dimensional plugs and, where applicable, solid and/or split moulds constructions used in marine vessel construction.
------------------------	---

Application of the Unit

Application of the unit	<p>Work may be undertaken autonomously or as part of a team. Predetermined standards of quality and safety are observed and work is carried out following standard operating procedures relevant to industry standards.</p> <p>Tasks may include the use of hand and mechanical lay-up practices for plug/mould construction.</p> <p>Hand tools/ power tools and workshop machinery/equipment can also be used in conjunction with construction practices.</p> <p>This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V).</p> <p>Band: A</p> <p>Unit Weight: 12</p>
--------------------------------	--

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units		
Path 1	MEM04018B	Perform general woodworking machine operations
	MEM09002B	Interpret technical drawing
	MEM12007D	Mark off/out structural fabrications and shapes
	MEM12023A	Perform engineering measurements
	MEM18001C	Use hand tools
	MEM18002B	Use power tools/hand held operations
	MEM25002B	Form and integrate fibre-reinforced structures
	MEM25003B	Set up marine vessel structures

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine plug requirements	1.1.Plug specifications are established from drawings, relevant documentation and client discussion, as appropriate. 1.2.Plug construction materials are selected in accordance with job requirements and specifications. 1.3.Plug coating materials are selected to meet specifications in accordance with organisational procedures. 1.4.Appropriate tooling and machinery are selected.
2. Construct plug	2.1.Plug material/s are accurately marked out in accordance with plug construction requirements. 2.2.Where applicable, plug release angles/taper, flanges and rounding/concaving of corners are carried out. 2.3.Appropriate tools, machine/s and construction practices are used to construct plug.
3. Finish plug	3.1.Plug is checked for compliance with specifications/drawing. 3.2.Where applicable, final finish coating/s is applied to plug where required to comply with specifications. 3.3.Where applicable, plug is prepared for mould manufacturing in accordance with specifications or standard operating procedures.
4. Determine mould requirements	4.1.Mould construction specifications and drawings are interpreted. 4.2.Mould construction materials are selected in accordance with specifications. 4.3.Appropriate tools and machinery/equipment are selected for job application.
5. Produce mould	5.1.Tooling coat is applied to plug in accordance with standard application procedures. 5.2.Construction materials are applied to plug in accordance with appropriate lay-up sequence and procedure. 5.3.Where applicable, stiffening/bracing materials are applied in accordance with job requirements. 5.4.Where applicable, mould is prepared for production run/s.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- identifying materials, such as timber, plywood, fastenings, fillers etc. from specifications/drawings
- selecting and using hand tools, hand held power tools and workshop machinery to suit plug/mould construction
- marking out dimensions relevant to plug/mould components
- selecting and assembling materials
- constructing plugs and moulds
- modifying plugs/moulds through the addition of release angles/tapers, flanges, beads and rounding/concaving
- fitting reinforcement components and or materials
- checking external/internal dimensions against specification/drawings
- applying final finish coating/s
- sanding, buffing/polishing to preparing plug for mould lay-up
- removing and disposing of waste

Required knowledge

Look for evidence that confirms knowledge of:

- plug/mould construction materials, characteristics, applications
- plug/mould coating materials, characteristics, applications - including tooling coats
- correct dimensions and application procedures for marking out
- release angles/tapers, flanges, rounding/concaving of corner sections
- hand tools/hand held power tools and workshop machinery and their uses
- plug/mould construction methods
- if applicable, methods used to apply stiffening/bracing/reinforcement
- method of application and sequence of final finish coating
- procedures for sanding/buffing/polishing plug/mould
- fault identification and rectification
- waste removal and disposal procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to produce three-dimensional plugs/moulds. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, i.e. the candidate is not in productive work, an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with producing three-dimensional plugs/moulds, or other units requiring the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Set up slipping facilities	1.1. Set-up of slipping facility is determined to suit vessel in accordance with organisational and legislative requirements. 1.2. Where applicable, measurements to suit hull structure are taken. 1.3. Where applicable, hull support bearers are safely positioned to suit hull structure.
2. Perform hauling out procedures	2.1. Slipping facilities are positioned to suit slipping application. 2.2. Vessel is positioned to suit slipping set-up. 2.3. Vessel retaining ropes are selected and secured correctly, in accordance with slipping facility and vessel retaining requirements. 2.4. Vessel is grounded/levelled for positioning of hull support. 2.5. Hull support mechanics are correctly positioned. 2.6. Safety checks of vessel stability are carried out.
3. Perform launching procedures	3.1. Vessel support and slip devices are checked for safety. 3.2. Pre-launch safety checks for vessel seaworthiness are applied. 3.3. Launch practices are carried out according to standard procedure and organisational requirements. 3.4. Hull support devices are re-positioned to prevent obstruction during vessel removal. 3.5. Where applicable, vessel is moored using appropriate restraints.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- identifying measurements relevant to positioning of hull structure on slipping

REQUIRED SKILLS AND KNOWLEDGE

- facilities from plans/verbal instruction
- setting slip to accommodate vessel according to design, dimensions and weight
 - providing/positioning relevant support bearer/blocks and arms according to design, dimensions and vessel weight
 - operating slip and slipping machinery
 - manoeuvring vessel in accordance with set-up of slipping facility
 - securing vessel in preparation for slipping
 - inspecting vessel when slipped to ensure adequacy of hull support
 - adjusting and fixing support mechanisms as required
 - clearing site and preparing vessel for launching
 - performing safety checks to ensure vessel stability and watertight integrity
 - positioning hull supports, such as arms, slings, to allow clear passage for removal of vessel
 - mooring vessel in accordance with requirements of mooring facility

Required knowledge

Look for evidence that confirms knowledge of:

- types of slipways and operational procedures
- interpretation of ships/boats drawings, slipping specifications or instructions
- safety and legislative requirements for slipping and launching vessels
- different types of hull structures, dimensions, vessel weights and appropriate slipping arrangements
- methods of supporting/securing vessel ready for slipping
- methods of supporting hull during and after slipping
- procedures for operating slipway and slipway machinery
- procedures for positioning slip and manoeuvring vessels
- techniques for trimming and final securing of slipped vessel and disengaging slipway machinery
- knots, lashings and their applications
- pre-launch preparation requirements
- safety checks to be performed
- checks to ensure stability and watertight integrity
- procedures used in launching vessels
- mooring methods
- procedures for recovering and securing slip

MEM25015A Assemble and install equipment and accessories/ancillaries

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers assembling and installing equipment and ancillaries/accessories.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to installation to predetermined positions/locations using drawings, instructions etc. It does not cover installation requiring substantial modification to the existing site or where components are replaced by the same or similar type. Typical applications may include marine vessel manufacture.</p> <p>Work is undertaken using new external and internal locations and sites. Foundations, footings, beds and framework are completed prior to installation practices. All specifications are applied via engineering drawings, written or verbal instructions.</p> <p>Where positions are determined, alignments are undertaken, testing within manufacturer specifications is required, Unit MEM25012B (Install and test operations of marine auxiliary systems) should be selected.</p> <p>Where installation requires substantial modification to the existing site, and is being replaced by the same or similar type, Unit MEM10006B (Install machine/plant), Unit MEM18006C (Repair and fit engineering components) should also be selected.</p> <p>Unit MEM18009B (Perform levelling and alignment of machines and engineering components) and Unit MEM18055B (Dismantle, replace and assemble engineering components) should be accessed.</p> <p>For production-related assembly work, Unit MEM03002B (Undertake precision assembly) should be selected. This unit should not be selected if Unit MEM03002B (Undertake precision assembly) has already been selected.</p> <p>Where load shifting equipment, such as ride on forklifts/pallet trucks, is used, Unit MEM11010B (Operate mobile load shifting equipment) should also be considered.</p> <p>Band: A</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Inspect and prepare the installation site	1.1.Site is checked for location, dimension, levels, etc. using appropriate measuring equipment. 1.2.Non-compliance with specification is reported to appropriate authority. 1.3.Alteration and correction is undertaken with approval of appropriate authority. 1.4.All surfaces, materials and components are prepared for use.
2. Install machinery/plant and equipment	2.1.Work is carried out safely and in accordance with site procedures, standard operating procedures and legislative requirements. 2.2.Machine/equipment components are prepared for correct sequential installation. 2.3.Machinery/plant or equipment is installed in accordance with manufacturer and site specifications. 2.4.Routine modification/alterations are undertaken to operating procedures, where required. 2.5.Machine/equipment is levelled, aligned, connected or coupled where required (excluding electrical connections). 2.6.Site is cleaned and cleared of all debris and left in safe state.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task-related information
- checking site and taking dimensions and measurements

REQUIRED SKILLS AND KNOWLEDGE

- reporting non-compliance
- performing alterations or corrections
- preparing surfaces, materials and components for use
- checking component parts against specification
- working safely and in accordance with manufacturer, site and legislative requirements
- preparing machinery/plant or equipment to specifications and established procedures
- installing machinery/plant or equipment
- performing modifications/alterations
- undertake numerical operations within the scope of unit
- levelling, aligning, connecting and coupling machine/equipment to specifications
- packing/sealing through-hull fittings
- cleaning site

Required knowledge

Look for evidence that confirms knowledge of:

- appropriate levelling and measuring equipment and benefits of choice
- procedural standards
- non-compliance and the impact of such
- preparatory requirements and processes
- legislative requirements
- sequence of installation of parts
- installation procedures
- reasons for modifications/alterations and impact of modifications/alterations
- procedures for levelling and aligning
- impacts of misalignment
- cleaning procedures
- hazards and control measures associated with assembling and installing equipment and accessories/ancillaries, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

MEM26001A Lay up composites using open moulding techniques

Modification History

Release 1 New unit

Unit Descriptor

This unit of competency covers the skills and knowledge required to fabricate composites using hand lay-up and/or chopper gun and/or other open moulding techniques.

Application of the Unit

This unit covers one of the fundamental techniques for fabricating a composite product – open moulding techniques. These are the traditional methods of composite fabrication and provide great flexibility in application. Open moulding may be undertaken by an individual or a fabrication team. It may be undertaken in a workshop or factory environment or in the field and may be used to manufacture new products, prototypes and samples, or to make repairs. This unit is one of three units covering the basic composite fabrication techniques, the other two being MEM26002A Lay up composites using vacuum closed moulding techniques and MEM26003A Lay up composites using pressure closed moulding techniques, which together are intended to ensure the composite tradesperson can undertake a basic fabrication using these methods.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|----------------------------|-----|--|
| 1 | Select process | 1.1 | Identify product requirements |
| | | 1.2 | Select open moulding technique most appropriate to product requirements |
| | | 1.3 | Identify or develop required procedures to make product using selected process |
| 2 | Set up equipment/workplace | 2.1 | Select required items of equipment and ancillary equipment |
| | | 2.2 | Prepare equipment and ancillary equipment, as required |
| | | 2.3 | Assemble all equipment ready for use as required by procedure |
| 3 | Prepare materials | 3.1 | Identify required reinforcing/reinforcing system |
| | | 3.2 | Determine quantity of reinforcing required |
| | | 3.3 | Prepare reinforcing as required |
| | | 3.4 | Identify required resin system |
| | | 3.5 | Identify and control hazards |
| | | 3.6 | Determine quantity of resin components required |
| | | 3.7 | Check adequate quantities are available |
| | | 3.8 | Mix resin |
| | | 3.9 | Minimise waste |

- 3.10 Test resin
- 4 Fabricate and adjust equipment and materials, as required
 - 4.1 Apply gel coat, as required
 - 4.2 Apply resin and reinforcing, as required
 - 4.3 Ensure required resin distribution
 - 4.4 Cure product
 - 4.5 Remove product from mould when ready
 - 4.6 Perform final verification of meeting product requirements
- 5 Clean up and maintain equipment
 - 5.1 Clean all moulding and mixing equipment
 - 5.2 Undertake minor maintenance, as required
 - 5.3 Prepare for next use or storage, as required
 - 5.4 Inspect equipment for faults and take appropriate corrective action
 - 5.5 Store equipment, as required
 - 5.6 Minimise waste
 - 5.7 Dispose of waste, as appropriate
 - 5.8 Complete required logs and reports

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting specifications and instructions
- calculation of material quantities
- working safely and using personal protective equipment
- removing included air
- using rollers, brushes and/or chopper gun
- performing vacuum leak testing
- doing minor maintenance to chopper guns and/or pump systems (reciprocating airless pumps with air support)
- operating and maintaining solvent cleaner (filter)
- undertaking mechanically assisted movement of large parts (e.g. chain hoist)
- assembling, cleaning and preparing simple and complex moulds
- releasing product from simple and complex moulds (using jacks, air and water)
- applying release systems (wax)
- ensuring compliance to specifications

Required knowledge

Required knowledge includes:

- preparation schedules, terminology and information relevant to standard work instructions
- applicable codes and regulations
- safe work practices and correct use of personal protective equipment
- release agents surface tension
- managing lay-up teams
- gel coat application
- reinforcement lay-up
- resin types and applications
- common tools/equipment and their maintenance
- correct laminating techniques and finishing off (e.g. detail consolidation/rolling, check consistency and evenness of resin/glass, remove air entrapment and check with light)
- managing post-cure requirements (e.g. air cure and oven cure)
- production environment variables, such as effect of humidity (e.g. epoxy backbone), temperature, ultraviolet (UV) light and contamination from other processes

- managing hazardous environments (e.g. styrene levels)
- function of catalysts, accelerators and promoters
- control of overspray
- storage of moulds
- housekeeping
- waste disposal

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessment for this unit of competency will occur on the job.</p> <p>It is essential that the process and equipment be understood and that the importance of critical material properties, settings and readings is known. Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action.</p> <p>Consistent performance should be demonstrated. In particular look to see that:</p> <ul style="list-style-type: none"> • waste is minimised • product is made efficiently and to standard • tools and equipment are appropriately maintained. <p>Competence must be demonstrated in the operation of all ancillary equipment to the level required for this unit of competency.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessment will require the fabrication of suitable objects using open moulding techniques.</p> <p>Assessment will occur over a range of situations which will include disruptions to normal, smooth operation.</p>
<p>Method of assessment</p>	<p>Typically, persons engaged in composites trade work are required to apply their skills and techniques across a range of jobs and specifications.</p> <p>A single assessment event is not appropriate. On the job assessment must be included as part of the assessment process. Assessment judgements must consider evidence of the candidate's performance in a productive work</p>

	<p>environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Procedures	<p>Procedures may be written, verbal, computer-based or in some other form, and may include:</p> <ul style="list-style-type: none"> • all work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. Responsible Care) and government regulations
Open moulding techniques	<p>Open moulding techniques may include:</p> <ul style="list-style-type: none"> • hand lay-up

	<ul style="list-style-type: none"> • chopper gun • filament winding
Requirements of product	<p>Requirements of product may be determined from various sources, including:</p> <ul style="list-style-type: none"> • drawings • product specifications • customer requests • descriptions of required use of product
Equipment	<p>Equipment includes:</p> <ul style="list-style-type: none"> • moulds and mould components • resin application and dispersion tools
Preparing reinforcing	<p>Preparing reinforcing includes:</p> <ul style="list-style-type: none"> • cutting to size/shape, as required • any pre-treatment required
Logs and reports	<p>Logs and reports may include:</p> <ul style="list-style-type: none"> • paper or electronic based • verbal reports • items found which require action
Appropriate action	<p>Appropriate action includes:</p> <ul style="list-style-type: none"> • determining problems needing action • determining possible fault causes • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to designated person
Typical problems	<p>Typical problems may include:</p> <ul style="list-style-type: none"> • contamination • air entrapment • resin rich • uneven distribution of resin • difficult mould shapes • resin curing too quickly • resin curing too slowly • failure to release
Health, safety and environment (HSE)	<p>All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed</p>

	through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence

MEM26002A Lay up composites using vacuum closed moulding techniques

Modification History

Release 1 New unit

Unit Descriptor

This unit of competency covers the skills and knowledge required to fabricate composites using a vacuum infusion processing (VIP) or other vacuum closed mould technique.

Application of the Unit

This unit covers one of the fundamental techniques for fabricating a composite product – vacuum closed moulding techniques. There are many closed moulding techniques and this unit includes an awareness of all common forms of vacuum closed moulding and competence in at least one vacuum technique. Closed moulding may be undertaken by an individual or by a fabrication team. It may be undertaken in a workshop or factory environment or in the field and may be used to manufacture new products, prototypes and samples, or to make repairs. This unit is one of three units covering the basic composite fabrication techniques, the other two being MEM26001A Lay up composites using open moulding techniques and MEM26003A Lay up composites using pressure closed moulding techniques, which together are intended to ensure the composite tradesperson can undertake a basic fabrication using these methods.

Licensing/Regulatory Information

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|------------------------|-----|--|
| 1 | Select process | 1.1 | Identify product requirements |
| | | 1.2 | Select vacuum closed mould technique most appropriate to product requirements |
| | | 1.3 | Identify or develop required procedures to make product using selected process |
| 2 | Set up mould equipment | 2.1 | Select required items of equipment and ancillary equipment |
| | | 2.2 | Prepare equipment and ancillary equipment, as required |
| | | 2.3 | Pack mould according to procedures/laminate schedule |
| | | 2.4 | Assemble all equipment ready for use as required by procedure |
| 3 | Prepare materials | 3.1 | Identify required reinforcing/reinforcing system |
| | | 3.2 | Determine quantity of reinforcing required |
| | | 3.3 | Prepare reinforcing, as required |
| | | 3.4 | Identify required resin system |
| | | 3.5 | Determine quantity of resin components required |
| | | 3.6 | Check adequate quantities are available |
| | | 3.7 | Mix resin |
| | | 3.8 | Minimise waste |

- 3.9 Test resin
- 4 Fabricate and adjust equipment and materials, as required
 - 4.1 Identify and control hazards
 - 4.2 Apply gel coat as required
 - 4.3 Introduce resin to mould
 - 4.4 Ensure air is vented, as required
 - 4.5 Ensure required resin distribution
 - 4.6 Cure product
 - 4.7 Remove product from mould when ready
- 5 Clean up and maintain tools and equipment
 - 5.1 Clean all moulding and mixing equipment
 - 5.2 Undertake minor maintenance, as required
 - 5.3 Prepare for next use or storage, as required
 - 5.4 Inspect equipment and take appropriate action
 - 5.5 Store equipment, as required
 - 5.6 Minimise waste
 - 5.7 Dispose of waste, as appropriate

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- resin infusion:
 - applying tack tape
 - applying bag (pleats, sits well, and so on)
 - inlet and outlet plumbing (connect/disconnect)
 - managing flow medium (e.g. cloth)
 - managing cores, as required
 - managing flow and gel times (relationship to positioning and spacing of lines)
 - managing and monitoring vacuum pressure
 - monitoring cure cycles
 - checking for leaks
- accessing and operating relevant computer programs
- vacuum bagging:
 - see infusion + protect bag from contamination
 - applying breather cloth/films
 - applying of peel ply
- achieving correct ply location and orientation
- using release processes

Required knowledge

Required knowledge includes:

- reinforcement and lay-up schedules (e.g. layers of reinforcement, direction and darts)
- release systems and processes
- tool sealing
- gel coating
- sealing of mould (use of tack tape (e.g. butyl (or other) mastic and mechanical seals and clamps)
- vacuum and vacuum systems, adjustment and measurement, and vacuum control (e.g. switches, controls and regulators)
- resin systems applicable to process (e.g. vacuum infusion or vacuum bagging – polyester and epoxy)

- gel times and working times
- initiator/catalyst or hardener rates to temperature (hot/cold)
- free amine/amine blushes
- heat curing requirements and how it is done (e.g. ovens, hot bonders (blankets), and autoclaves)
- heat curves
- TG (glass transition)
- understand design briefs (e.g. tool design and part lines)
- Darcy's Law and its application to the flow of resins through porous media (e.g. reinforcing and cores)

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessment for this unit of competency will be on the job.</p> <p>It is essential that the process and equipment be understood and that the importance of critical material properties, settings and readings is known. Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action.</p> <p>Consistent performance should be demonstrated. In particular look to see that:</p> <ul style="list-style-type: none"> • waste is minimised • product is made efficiently and to standard • tools and equipment are appropriately maintained. <p>Competence must be demonstrated in the operation of all ancillary equipment to the level required for this unit of competency.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessment will require the fabrication of suitable objects using closed mould techniques.</p> <p>Assessment will occur over a range of situations which will include disruptions to normal, smooth operation.</p>
<p>Method of assessment</p>	<p>Typically, persons engaged in composites trade work are required to apply their skills and techniques across a range of jobs and specifications.</p>

	<p>A single assessment event is not appropriate. On the job assessment must be included as part of the assessment process. Assessment judgements must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Procedures	<p>Procedures may be written, verbal, computer-based or in some other form, and may include:</p> <ul style="list-style-type: none"> • all work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. Responsible Care)
-------------------	---

	and government regulations
Requirements of product	<p>Requirements of product may be determined from various sources, including:</p> <ul style="list-style-type: none"> • drawings • product specifications • customer requests • descriptions of required use of product
Closed moulding techniques	<p>Closed moulding techniques include techniques which may have several names, including:</p> <ul style="list-style-type: none"> • resin infusion under flexible tooling (RIFT) • vacuum bagging <p>This may also be applied to other closed moulding techniques</p>
Mould equipment	<p>Mould equipment includes major items and ancillary items and may also include consumable equipment, such as:</p> <ul style="list-style-type: none"> • airlines • catchpots • moulds and mould components • infusion system for laminate
Prepare reinforcing	<p>Preparing reinforcing includes:</p> <ul style="list-style-type: none"> • cutting to size/shape, as required • any pre-treatment required
Logs and reports	<p>Logs and reports may include:</p> <ul style="list-style-type: none"> • paper or electronic based • verbal reports • items found which require action
Appropriate action	<p>Appropriate action includes:</p> <ul style="list-style-type: none"> • determining problems needing action • determining possible fault causes • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to designated person
Typical problems	<p>Typical problems may include:</p> <ul style="list-style-type: none"> • dead spots trapping air

	<ul style="list-style-type: none">• resin curing too quickly• resin curing too slowly
Health, safety and environment (HSE)	All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence

MEM26003A Lay up composites using pressure closed moulding techniques

Modification History

Release 1 New unit

Unit Descriptor

This unit of competency covers the skills and knowledge required to fabricate composites using a resin transfer moulding (RTM – resin under pressure), or other pressure closed mould technique.

Application of the Unit

This unit covers one of the fundamental techniques for fabricating a composite product – pressure closed moulding techniques. There are many closed moulding techniques and this unit includes an awareness of all common forms of pressure closed moulding and competence in at least one pressure technique. Closed moulding may be undertaken by an individual or by a fabrication team. It may be undertaken in a workshop or factory environment or in the field and may be used to manufacture new products, prototypes and samples, or to make repairs. This unit is one of three units covering the basic composite fabrication techniques, the other two being MEM26001A Lay up composites using open moulding techniques and MEM26002A Lay up composites using vacuum closed moulding techniques, which together are intended to ensure the composite tradesperson can undertake a basic fabrication using these methods.

 - 5.5 Store equipment, as required
 - 5.6 Minimise waste
 - 5.7 Dispose of waste, as appropriate

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- managing tools
- using release agents
- applying gel coats/surface finishes
- using catalyst systems for different resins and techniques
- achieving correct ply location and orientation
- applying mastic tape and sealing bag for resin infusion
- checking for bag sealing leaks
- connecting resin plumbing – inlet/outlet points
- accessing and operating computer programs
- monitoring curing cycles

Required knowledge

Required knowledge includes:

- reinforcement and lay-up schedules (e.g. layers of reinforcement, direction and darts)
- release systems
- gel coating
- sealing of mould
- tool sealing
- resin systems applicable to process (polyester and epoxy)
- pressure systems and process monitoring
- gel times and working times
- initiator/catalyst or hardener rates to temperature (hot/cold)
- free amine/amine blushes
- heat curing requirements and how it is done (e.g. ovens, hot bonders (blankets), and autoclaves)
- heat curves
- TG (glass transition)
- understand design briefs (e.g. tool design and part lines)
- Darcy's Law and its application to the flow of resins through porous media (e.g. reinforcing and cores)

MEM26004A Make basic plugs for composites fabrication

Modification History

Release 1 New unit

Unit Descriptor

This unit of competency covers the skills and knowledge required to make plugs for composites for routine or one-off production.

Application of the Unit

This unit covers the fundamental techniques for making basic plugs. These are required to fabricate composite products and simple plugs may be made by the composites tradesperson. Plug making may be undertaken by an individual or by a team. It will typically require liaison with a wide range of stakeholders. It would typically be undertaken in a workshop or factory environment and may be used to manufacture new products, prototypes and samples, or to make repairs.

This unit does not cover the making of the plugs which require specialist patternmaking trade skills. See the relevant metals and engineering units of competency for these situations.

Licensing/Regulatory Information

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--------------------------------|-----|--|
| 1 | Interpret product requirements | 1.1 | Determine requirements of final product |
| | | 1.2 | Determine features of plug required |
| | | 1.3 | Identify or develop procedure to make plug |
| | | 1.4 | Select tooling required to make plug |
| | | 1.5 | Select materials for plug |
| 2 | Prepare for work | 2.1 | Prepare personal work plan |
| | | 2.2 | Liaise with mould maker in relation to suitable plug |
| | | 2.3 | Determine plug features |
| | | 2.4 | Set up equipment/workplace |
| 3 | Prepare materials | 3.1 | Calculate surface area and required resin volume |
| | | 3.2 | Develop cutting list for solid materials |
| | | 3.3 | Mark out and cut out sheet materials, as required |
| | | 3.4 | Calculate resin content |
| | | 3.5 | Develop batch scale formulae for resin system |
| | | 3.6 | Prepare non-composite materials to be used |
| | | 3.7 | Measure resin components, as appropriate |
| | | 3.8 | Minimise waste |

- 4 Make plug
 - 4.1 Identify and control hazards
 - 4.2 Mix resin system
 - 4.3 Fabricate plug
 - 4.4 Detail plug

- 5 Clean up and maintain equipment
 - 5.1 Label and store plug for future use
 - 5.2 Clean and replace tools ready for next use
 - 5.3 Undertake any required minor maintenance of tools/equipment
 - 5.4 Clean work area and leave ready for next use

6	Anticipate common problems	6.1	Recognise problem/potential problem and take appropriate actions
---	----------------------------	-----	--

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- using computer-aided design (CAD)/computer-aided manufacturing (CAM) applications
- using hand skills
- interpreting drawings
- using a range of machines (e.g. computer numeric control (CNC) and power routers)
- developing templates
- communicating with relevant personnel

Required knowledge

Required knowledge includes:

- finishing resins
- tooling materials
- tooling resins
- parting lines
- design criteria/brief
- reverse engineering
- shrinkage
- cure values
- correct release agent
- thermal expansion
- open/closed mould (e.g. flange width and draft)
- resin transfer moulding (RTM) - metal vs composite mould
- closed mould (e.g. A/B side, bag it and silicon blanket)
- corners
- undercuts

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that the process and equipment be understood and that the importance of critical material properties, settings and readings is known. Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action.</p> <p>Consistent performance should be demonstrated. In particular look to see that:</p> <ul style="list-style-type: none"> • plug functions as intended • plug allows for efficient fabrication of product. <p>Competence must be demonstrated in the operation of all ancillary equipment to the level required for this unit of competency.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessment will require the fabrication of suitable plugs using appropriate techniques.</p> <p>Assessment will occur over a range of situations which will include disruptions to normal, smooth operation.</p>
<p>Method of assessment</p>	<p>A single assessment event is not appropriate. On-the-job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Procedures	Procedures may be written, verbal, computer-based or in some other form, and may include: <ul style="list-style-type: none"> • all work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions • product drawings and/or specifications) • any similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. Responsible Care) and government regulations
Requirements of final product	Requirements of final product may be determined from various sources, including: <ul style="list-style-type: none"> • drawings • product specifications • customer requests • descriptions of required use of product
Pug features	Plug features include: <ul style="list-style-type: none"> • relief • parting lines • efficient lay-up
Suitability of plug	Suitability of plug includes: <ul style="list-style-type: none"> • release angles • parting lines

Detail plug	<p>Detail plug includes:</p> <ul style="list-style-type: none"> • buff • fill • get ready for production
Routine faults	<p>Typical routine faults may include:</p> <ul style="list-style-type: none"> • gel coat sag • slow curing rates • blistering • wrinkles • pinholes • brush marks • poor surface finish
Non-routine faults	<p>Non-routine faults, which may have multiple causes, may include:</p> <ul style="list-style-type: none"> • release agents failure • mould release failure • warping or cracking after moulding
Typical process and product problems	<p>Typical process and product problems may include:</p> <ul style="list-style-type: none"> • structural strength, rigidity and stability of the tooling • dimensional accuracy of the tooling • allowances in the design for shrinkage, deformations and alterations in the process from tooling to mould to finished composite product • placement of flanges, closures, fitments, supports, struts and stiffeners • variations in materials and/or contamination of materials
Logs and reports	<p>Logs and reports may include:</p> <ul style="list-style-type: none"> • paper or electronic based • verbal reports • items found which require action
Appropriate action	<p>Appropriate action includes:</p> <ul style="list-style-type: none"> • determining problems needing action • determining possible fault causes • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to

	designated person
Health, safety and environment (HSE)	All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- using computer-aided design (CAD)/computer-aided manufacturing (CAM) applications
- using hand skills
- interpreting drawings
- operating a range of machine (e.g. computer numeric control (CNC) and power routers)
- developing templates (e.g. for hand moulds)
- communicating with relevant personnel

Required knowledge

Required knowledge includes:

- finishing resins
- tooling materials
- tooling resins
- parting lines
- design criteria/brief
- reverse engineering
- shrinkage
- cure values
- correct release agent
- thermal expansion
- open/closed mould (e.g. flange width and draft)
- resin transfer moulding (RTM) - metal vs composite mould
- closed mould (e.g. A/B side, bag it and silicon blanket)
- corners
- undercuts

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that the process and equipment be understood and that the importance of critical material properties, settings and readings is known. Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action.</p> <p>Consistent performance should be demonstrated. In particular look to see that:</p> <ul style="list-style-type: none"> • mould functions as intended • mould allows for efficient fabrication of product. <p>Competence must be demonstrated in the operation of all ancillary equipment to the level required for this unit of competency.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessment will require the fabrication of suitable moulds using appropriate techniques.</p> <p>Assessment will occur over a range of situations which will include disruptions to normal, smooth operation.</p>
<p>Method of assessment</p>	<p>A single assessment event is not appropriate. On-the-job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Procedures	Procedures may be written, verbal, computer-based or in some other form, and may include: <ul style="list-style-type: none"> • all work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions • product drawings and/or specifications • any similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. Responsible Care) and government regulations
Requirements of final product	Requirements of final product may be determined from various sources, including: <ul style="list-style-type: none"> • drawings • product specifications • customer requests • descriptions of required use of product
Mould features	Mould features include: <ul style="list-style-type: none"> • relief, • parting lines • efficient lay-up
Suitability of plug	Suitability of plug includes: <ul style="list-style-type: none"> • release angles • parting lines

Prepare plug	<p>Prepare plug includes:</p> <ul style="list-style-type: none"> • cleaning • repairing surface blemishes • applying release systems
Detail mould	<p>Detail mould includes:</p> <ul style="list-style-type: none"> • buff • fill • get ready for production
Routine faults	<p>Typical routine faults may include:</p> <ul style="list-style-type: none"> • gel coat sag • slow curing rates • blistering • wrinkles • pinholes • brush marks • poor surface finish
Non-routine faults	<p>Non-routine faults, which may have multiple causes, may include:</p> <ul style="list-style-type: none"> • release agents failure • mould release failure • warping or cracking after moulding
Typical process and product problems	<p>Typical process and product problems may include:</p> <ul style="list-style-type: none"> • structural strength, rigidity and stability of the tooling • dimensional accuracy of the tooling • allowances in the design for shrinkage, deformations and alterations in the process from tooling to mould to finished composite product • placement of flanges, closures, fitments, supports, struts and stiffeners • variations in materials and/or contamination of materials
Logs and reports	<p>Logs and reports may include:</p> <ul style="list-style-type: none"> • paper or electronic based • verbal reports • items found which require action
Appropriate action	<p>Appropriate action includes:</p> <ul style="list-style-type: none"> • determining problems needing action • determining possible fault causes

	<ul style="list-style-type: none"> • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to designated person
Health, safety and environment (HSE)	All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence

MEM26006A Mark and cut out sheets for composite use

Modification History

Release 1 New unit

Unit Descriptor

This unit of competency covers the skills and knowledge required to orient, mark out, create templates/lay flats for reinforcing, including woven, non-woven, pre-preg, cores, filler material, and so on.

Application of the Unit

The marking out/cutting out of sheets used for composites can be significantly different to the marking out/cutting out of other materials, such as metals. Sheets used in composite fabrication often have significant directionality which must be considered. As a result of this composite design often includes different physical properties in one direction to another and so sheets must be marked and cut to align the required directional properties of the product with those of the sheets used in the fabrication.

Marking out/cutting out may be undertaken by an individual or a team. The mark out/cut out may be for use by the composites tradesperson themselves or they may be doing it to support production personnel. It may be undertaken in a workshop or factory environment or in the field and may be used to manufacture new products, prototypes and samples, or to make repairs.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--|-----|--|
| 1 | Interpret product requirements | 1.1 | Determine requirements of final products |
| | | 1.2 | Determine requirements of sheet material to be used |
| | | 1.3 | Identify process to be used to fabricate product |
| 2 | Develop geometric shape, as required | 2.1 | Develop lay flats for regular solid rectilinear shapes |
| | | 2.2 | Develop lay flats for regular curved/circular shapes |
| | | 2.3 | Develop lay flats for transition pieces |
| | | 2.4 | Develop lay flats for complex 3-D shapes |
| 3 | Orient required shape to suit directional differences of sheet | 3.1 | Identify directional properties in sheet |
| | | 3.2 | Identify sheet-related directional requirements of product |
| | | 3.3 | Identify orientations and alignments of lay flats with sheet |
| 4 | Mark out and cut sheet, as required | 4.1 | Identify and control hazards |
| | | 4.2 | Place lay flat on sheet as required |
| | | 4.3 | Arrange lay flats to minimise waste |
| | | 4.4 | Prevent lay flat moving while in use |
| | | 4.5 | Mark sheet, if required, using lay flat |
| | | 4.6 | Cut sheet to meet requirements |

- 5 Store templates/lay flats, as required
 - 5.1 Clean lay flats after use, as required
 - 5.2 Label lay flat using identification protocol
 - 5.3 Record required directionality information with lay flat
 - 5.4 Store lay flats according to procedures
 - 5.5 Complete logs and reports, as required

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting drawings and procedures
- using hand tools and power tools
- operating computer numeric controlled (CNC) machines
- measuring and marking out
- communicating with appropriate people
- performing basic computations

Required knowledge

Required knowledge includes:

- orientation of plies/reinforcing
- direction of fibres (e.g. unidirectional, quad directional and on bias)
- weaves (e.g. plain, twill and satin)
- use for curves and compound curves
- creating patterns for a lay flat
- 3-D development of shapes

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that the process and equipment be understood and that the importance of critical material properties, settings and readings is known. MEM26007A Select and use reinforcing appropriate for product

Modification History

Release 1 New unit

Unit Descriptor

This unit of competency covers the skills and knowledge required to select specified reinforcement for a nominated job from what is normally used by organisation, as well as what is available commercially. It includes the science of reinforcing.

Application of the Unit

This unit does not cover the selection of reinforcing for a structurally designed composite, although it may include working with a person undertaking a structural design. It may cover the redesign of an existing product (e.g. using a different process) or the design of a new product similar to an existing product.

This unit does not include the selection of a suitable resin system. Where the resin system also needs to be chosen refer to MEM26008A Select and use resin systems appropriate for product.

Reinforcing selection may typically be undertaken by an individual in liaison with relevant stakeholders or it may undertaken by a team. Selection may be undertaken in an office environment or at the worksite.

Use of the reinforcing will be part of a fabrication and may be undertaken by an individual or a team. It may be undertaken in a workshop or factory environment or in the field and may be used to manufacture new products, prototypes and samples, or to make repairs.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Interpret product requirements	1.1	Determine requirements of final products
		1.2	Determine requirements of reinforcing
		1.3	Select appropriate process to be used to fabricate product
2	Select most appropriate reinforcing for job	2.1	Compile specification of required reinforcing properties
		2.2	Compare required properties with specifications of available reinforcing
		2.3	Select most appropriate reinforcing
3	Evaluate selected reinforcement	3.1	Fabricate a sample using the selected reinforcing and nominated resin system
		3.2	Conduct/organise for relevant tests
		3.3	Evaluate process evaluation test (PET) results
		3.4	Review match of PET results with product requirements
		3.5	Review fabrication process
		3.6	Make any required changes to reinforcing or process
4	Fabricate product	4.1	Identify and control hazards
		4.2	Prepare selected reinforcing, as required
		4.3	Lay reinforcing in correct direction, as appropriate

- 4.4 Mix nominated resin system, as required
- 4.5 Fabricate product using selected process
- 4.6 Minimise waste
- 4.7 Review product compared to requirements
- 4.8 Review reinforcing selection and fabrication process
- 4.9 Identify areas for improvement and take appropriate actions
- 4.10 Complete any required documentation/reporting

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting quality control and quality assurance requirements
- interpreting specifications

Required knowledge

Required knowledge includes:

- coloured fibres
- fibre types, costs and source (e.g. country/company)
- life cycle assessment
- types of weave
- types of material
- non-woven reinforcing (e.g. unidirectional, milled and chopped)
- how you buy reinforcing (e.g. toe, strands, gsm, width and weight in product)
- how the reinforcing is arranged
- exotic and hybrid reinforcing

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that the process and equipment be understood and that the importance of critical material properties, settings and readings is known. Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action.</p> <p>Consistent performance should be demonstrated. In particular look to see that:</p> <ul style="list-style-type: none"> • all reasonably available reinforcing has been
--	--

	<p>considered</p> <ul style="list-style-type: none"> • an appropriate reinforcing has been chosen • the reasons for choosing the reinforcing are sound • the product meets its required performance. <p>Competence must be demonstrated in the operation of all ancillary equipment to the level required for this unit of competency.</p>
Context of and specific resources for assessment	<p>Assessment will require the selection and use of appropriate reinforcing for specified composite jobs.</p> <p>Assessment will occur over a range of situations which will include disruptions to normal, smooth operation.</p>
Method of assessment	<p>A single assessment event is not appropriate. On-the-job assessment should be included as part of the assessment process wherever possible. MEM26008A Select and use resin systems appropriate for product

Modification History

Release 1 New unit

Unit Descriptor

This unit of competency covers the skills and knowledge required to select appropriate resins and resin systems for a job from what is normally used by organisation, as well as what is available commercially. It includes the chemistry of resins.

Application of the Unit

This unit may cover the redesign of an existing product (e.g. using a different process) or the design of a new product similar to an existing product.

This unit does not include the selection of a suitable reinforcing system. Where the reinforcing system also needs to be chosen refer to MEM26007A Select and use reinforcing appropriate for product.

Resin selection may typically be undertaken by an individual in liaison with relevant stakeholders or it may undertaken by a team. Selection may be undertaken in an office environment or at the worksite.

Use of the resin will be part of a fabrication and may be undertaken by an individual or a team. It may be undertaken in a workshop or factory environment or in the field and may be used to manufacture new products, prototypes and samples, or to make repairs.

Licensing/Regulatory Information

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Interpret product requirements	1.1	Determine requirements of final products
		1.2	Determine requirements of resin system
		1.3	Select appropriate process to be used to fabricate product
2	Select most appropriate resin/resin system for job	2.1	Determine performance outcomes required from resin
		2.2	Interpret specifications of available resins
		2.3	Compare required properties with specifications of available resin systems
		2.4	Interpret material safety data sheets (MSDS) for possible resin systems
		2.5	Select most appropriate resin
3	Evaluate selected resin system	3.1	Identify current conditions impacting on resin chemistry
		3.2	Identify adjustments which may be made to meet current conditions
		3.3	Make allowable adjustments and monitor result
		3.4	Fabricate a sample using the selected resin system and nominated reinforcing
		3.5	Conduct/organise for relevant tests
		3.6	Evaluate process evaluation test (PET) results
		3.7	Review match of PET results with product requirements

- 3.8 Review fabrication process
- 3.9 Make any required changes to resin system or process
- 4 Fabricate product
 - 4.1 Identify and control hazards
 - 4.2 Prepare nominated reinforcing, as required
 - 4.3 Lay reinforcing in correct direction, as appropriate
 - 4.4 Make any appropriate adjustments to the resin system recipe
 - 4.5 Mix selected resin system, as required
 - 4.6 Fabricate product using selected process
 - 4.7 Minimise waste
 - 4.8 Review product compared to requirements
 - 4.9 Review reinforcing selection and fabrication process
 - 4.10 Identify areas for improvement and take appropriate actions
 - 4.11 Complete any required documentation/reporting

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting quality control and quality assurance requirements
- interpreting specifications
- interpreting product/technical data sheets and MSDS

Required knowledge

Required knowledge includes:

- physical and chemical properties of resins
- resin types, cost and source
- catalyst types and systems (e.g. polyester and vinyl ester)
- hardener types (e.g. epoxy and phenolic)
- fillers and thickeners (e.g. mineral extenders, milled and cut fibre)
- catalyst hazards (e.g. self-accelerating decomposition temperature (SADTs))

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that the process and equipment be understood and that the importance of critical material properties, settings and readings is known. Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action.</p> <p>Consistent performance should be demonstrated. In particular look to see that:</p> <ul style="list-style-type: none"> • all reasonably available resin systems have been considered • an appropriate resin system has been chosen
--	---

	<ul style="list-style-type: none"> the reasons for choosing the resin system are sound the product meets its required performance. <p>Competence must be demonstrated in the operation of all ancillary equipment to the level required for this unit of competency.</p>
Context of and specific resources for assessment	<p>Assessment will require the selection and use of appropriate resin and resin systems for specified composite jobs.</p> <p>Assessment will occur over a range of situations which will include disruptions to normal, smooth operation.</p>
Method of assessment	<p>A single assessment event is not appropriate. On-the-job assessment should be included as part of the assessment process wherever possible. MEM26009A Select and use cores and fillers appropriate for product

Modification History

Release 1 New unit

Unit Descriptor

This unit of competency covers the skills and knowledge required to select and use appropriate cores and fillers for a job from what is normally used by organisation, as well as what is available commercially. It includes purposes of cores and fillers, typical applications of core materials, strengths and weaknesses, and fabrication processes. Some industry usage includes cores as a subset of reinforcing, but they are separated in this qualification for purposes of clarity.

Application of the Unit

This unit may cover the redesign of an existing product (e.g. using a different process) or the design of a new product similar to an existing product.

This unit does not include the selection of a suitable resin system. Where the resin system also needs to be chosen refer to MEM2626008A Select and use resin systems appropriate for product.

This unit does not cover the selection of suitable reinforcing. Where reinforcing also needs to be chosen refer to MEM26007A Select and use reinforcing appropriate for product.

Core and filler selection and use may typically be undertaken by an individual in liaison with relevant stakeholders or it may undertaken by a team. Selection may be undertaken in an office environment or at the worksite.

Use of the core and filler will be as part of a fabrication and may be undertaken by an individual or a team. It may be undertaken in a workshop or factory environment or in the field and may be used to manufacture new products, prototypes and samples, or to make repairs.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Interpret product requirements	1.1	Determine requirements of final products
		1.2	Determine requirements of core and/or filler
		1.3	Select appropriate process to be used to fabricate product
2	Select most appropriate core and/or fillers for job	2.1	Compile specification of required composite properties relevant to the core and/or filler
		2.2	Compare required properties with specifications of available cores and/or fillers
		2.3	Select most appropriate core and/or filler
3	Evaluate selected core and/or filler	3.1	Fabricate a sample using the selected core and/or filler and nominated resin and reinforcing system
		3.2	Conduct/organise for relevant tests
		3.3	Evaluate process evaluation test (PET) results
		3.4	Review match of PET results with product requirements
		3.5	Review fabrication process
		3.6	Make any required changes to core, filler or process

- 4 Fabricate product
 - 4.1 Identify and control hazards
 - 4.2 Prepare selected core and/or filler, as required
 - 4.3 Lay core in correct direction, as appropriate
 - 4.4 Prepare nominated reinforcing, as required
 - 4.5 Lay reinforcing in correct direction, as appropriate
 - 4.6 Mix nominated resin system, as required
 - 4.7 Prepare and incorporate core and/or filler, as required
 - 4.8 Fabricate product using selected process
 - 4.9 Minimise waste
 - 4.10 Review product compared to requirements
 - 4.11 Review core and/or filler selection and fabrication process
 - 4.12 Identify areas for improvement and take appropriate actions
 - 4.13 Complete any required documentation/reporting

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- using relevant hand and power tools
- fabricating composite products using appropriate techniques
- interpreting quality control and quality assurance requirements
- interpreting specifications
- interpreting product/technical data sheets and material safety data sheets (MSDS)

Required knowledge

Required knowledge includes:

- types of cores
- chemical makeup of cores, including urethane, polyvinyl chloride (PVC), styrene acrylonitrile (SAN) (e.g. Corefell), polymethacrylimide (PMI) (e.g. Rohacell), wood (e.g. end grain balsa), cellulose (e.g. phenolic coated paper), polypropylene (PP), polyethylene (PE), aluminium honeycomb and aramid honeycomb (e.g. Nomex)
- types of fillers
- machining techniques
- function of cores and fillers
- bonding of cores and fillers
- wettability of cores and fillers by the resin
- properties of cores and fillers and their contributions to the properties of the composite
- interrelationship between cores, fillers and matrix
- modes of core failure

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate	It is essential that the process and equipment be understood and that the importance of critical material
---	---

<p>competency in this unit</p>	<p>properties, settings and readings is known. Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action.</p> <p>Consistent performance should be demonstrated. In particular look to see that:</p> <ul style="list-style-type: none"> • all reasonably available cores and/or fillers have been considered • an appropriate core/filler has been chosen • the reasons for choosing the core and/or filler are sound • the product meets its required performance. <p>Competence must be demonstrated in the operation of all ancillary equipment to the level required for this unit of competency.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessment will require the selection and use of appropriate cores and fillers for specified composite jobs.</p> <p>Assessment will occur over a range of situations which will include disruptions to normal, smooth operation.</p>
<p>Method of assessment</p>	<p>A single assessment event is not appropriate. On-the-job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
<p>Guidance information for assessment</p>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Procedures	Procedures may be written, verbal, computer-based or in some other form, and may include: <ul style="list-style-type: none"> • all work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. Responsible Care) and government regulations
Cores	Core is used to include: <ul style="list-style-type: none"> • materials used to provide thickness and so rigidity (and perhaps thermal and acoustic insulation) to a laminate, but not significant structural strength, which is provided by reinforcing
Fillers	Fillers include: <ul style="list-style-type: none"> • particulate materials which may be added to the composite matrix to vary the bulk, stiffness, density or other properties of the final composite
Requirements of final product	Requirements of final product may be determined from various sources, including: <ul style="list-style-type: none"> • drawings • product specifications • customer requests • descriptions of required use of product
Requirements of core	Requirements of core include: <ul style="list-style-type: none"> • stiffness/flexibility • directionality • density

	<ul style="list-style-type: none"> • shear strength • insulating properties • operating temperature
Most appropriate core/filler	<p>Most appropriate core/filler refers to that core/filler which has:</p> <ul style="list-style-type: none"> • compliance with product requirements • greatest ease of use in manufacture • best financial return • greatest sustainability contribution
Sustainability	<p>Sustainability incorporates the three aspects of:</p> <ul style="list-style-type: none"> • survival of the ecology/physical environment – which means that an enterprise needs to manage the impact of the business to ensure the survival of the physical environment • economic viability – efficiency, cost and waste reduction and competitiveness to support survival of the business • social sustainability – an enterprise needs to manage the impact of the business to ensure its continued survival within the community and the survival of the community, including occupational health and safety (OHS)
Preparing core	<p>Preparing core includes:</p> <ul style="list-style-type: none"> • cutting to size/shape, as required • tapering edges, as required • any pre-treatment required (e.g. dehumidifying and priming)
Preparing reinforcing	<p>Preparing reinforcing includes:</p> <ul style="list-style-type: none"> • cutting to size/shape, as required, • packaging into kits, as required • any pre-treatment required
Preparing filler	<p>Preparing filler may include:</p> <ul style="list-style-type: none"> • weighing • mixing with resin to required viscosity • any other required preparation <p>Fillers may include:</p> <ul style="list-style-type: none"> • fillers, such as syntactic foam
Core direction	<p>Core direction includes considerations such as:</p> <ul style="list-style-type: none"> • directional properties

Reinforcing direction	Reinforcing direction includes considerations such as: <ul style="list-style-type: none"> • fibre orientation • fibre pre-forming
Logs and reports	Logs and reports may include: <ul style="list-style-type: none"> • paper or electronic based • verbal reports • items found which require action
Appropriate action	Appropriate action includes: <ul style="list-style-type: none"> • determining problems needing action • determining possible fault causes • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to designated person
Typical problems	Typical problems may include: <ul style="list-style-type: none"> • cost/benefit of different core/filler systems • air/vapour entrapment • bonding/delaminating • contamination • selecting a core/filler suited to the fabrication process
Health, safety and environment (HSE)	All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence

MEM26010A Store and handle composite materials

Modification History

Release 1 New unit

Unit Descriptor

This unit of competency covers the skills and knowledge required to recognise hazards, shelf life, commercial and other issues controlling appropriate storage and handling of materials used to make composites and storing and handling materials in accordance with work procedures.

Application of the Unit

Storage of materials used to make composites is subject to a range of influences, including:

- chemical hazards (e.g. fire)
- physical hazards (e.g. manual handling)
- cost hazards (e.g. economic purchasing quantity vs shelf life)
- efficiency hazards (e.g. having the material where you need it when you need it)

This unit covers the determining of appropriate storage and handling protocols and procedures as well as storing and handling materials in accordance with these procedures.

Determining storage and handling requirements may typically be undertaken by an individual in liaison with relevant stakeholders or it may be undertaken by a team. This decision making may be undertaken in an office environment or at the worksite.

Storing and handling of materials in accordance with the procedures should be followed by all relevant personnel.

Licensing/Regulatory Information

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---|-----|--|
| 1 | Identify properties and characteristics of materials used | 1.1 | List all materials used on site |
| | | 1.2 | Interpret material safety data sheet (MSDS) for each material |
| | | 1.3 | Identify relevant manual handling issues |
| | | 1.4 | Identify environmental hazards for each material |
| | | 1.5 | Define the hazards for each material |
| | | 1.6 | Categorise materials into groups based on their hazards |
| | | 1.7 | Determine appropriate hazard controls |
| 2 | Identify key factors effecting storage and handling | 2.1 | Identify requirements for dangerous goods licence |
| | | 2.2 | Identify environmental regulation requirements |
| | | 2.3 | Identify occupational health and safety (OHS) requirements |
| | | 2.4 | Identify usage patterns and frequencies |
| | | 2.5 | Identify cost sensitivity to volume purchased |
| | | 2.6 | Identify shelf life |
| 3 | Determine appropriate storage and handling protocols | 3.1 | Check manufacturer's storage and handling recommendations/requirements |
| | | 3.2 | Check MSDS |
| | | 3.3 | Check dangerous goods/environment protection agency |

- (EPA)/OHS requirements
- 3.4 Check company usage requirements
 - 3.5 Resolve conflicts between different requirements
 - 3.6 Prepare storage and handling procedure for materials
- 4 Store and handle materials in accordance with protocols
- 4.1 Identify and control hazards
 - 4.2 Use required handling aids
 - 4.3 Move material in accordance with procedures
 - 4.4 Store materials in accordance with procedures
 - 4.5 Monitor storage and handling of materials
 - 4.6 Take appropriate action

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- manual handling
- using mechanical handling devices

Required knowledge

Required knowledge includes:

- MSDS and product data sheets
- material registers (e.g. set up hazardous goods register, maintain it and use it)
- personal protective equipment required (e.g. for reinforcement, resins and catalyst/hardener)
- bunding
- ventilation
- handling and storage and impact on product
- contamination (e.g. from water)
- storage temperature (e.g. low temperature for catalyst)

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that the process and equipment be understood and that the importance of critical material properties, settings and readings is known. Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action.</p> <p>Consistent performance should be demonstrated. In particular look to see that:</p> <ul style="list-style-type: none"> • all hazards are appropriately identified • appropriate hazard controls are determined • appropriate storage and handling procedures are developed

MEM26011A Determine materials and techniques for a composite component or product

Modification History

Release 1 New unit

Unit Descriptor

This unit of competency covers the skills and knowledge required to select and use resin system/reinforcing combinations for a composite product. It includes the science of reinforcing, and core and resin interactions. It also includes basic design of a composite component/product but does not include structural design.

Application of the Unit

This unit focuses in particular on the interactions between a resin system and the reinforcing, and also includes interactions with any core. Flow of fluid in porous media is described by Darcy's Law and this will need to be applied in this unit.

This unit builds on the units covering the selection and use of reinforcing and resins and in particular covers the interactions between resins and reinforcement.

This unit would typically be undertaken by an individual in liaison with relevant stakeholders or it may be undertaken by a team. Determining materials and techniques may be undertaken in an office or laboratory environment or at the worksite.

The completion of the job will be part of a fabrication and may be undertaken by an individual or a team. It may be undertaken in a workshop or factory environment or in the field and may be used to manufacture new products, prototypes and samples, or to make repairs.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM26007A	Select and use reinforcing appropriate for product
MEM26008A	Select and use resin systems appropriate for product
MEM26009A	Select and use cores appropriate for product
MEM09002B	Interpret technical drawing

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Interpret product requirements	1.1	Determine requirements of final products
		1.2	Determine requirements of resin systems
		1.3	Determine requirements of reinforcing
		1.4	Determine requirements of cores
		1.5	Select appropriate process to be used to fabricate product
2	Identify suitable resin/reinforcement/core systems	2.1	Examine previous laminate schedules for similar requirements
		2.2	Short list suitable resin systems
		2.3	Short list suitable reinforcing/reinforcing combinations

- 2.4 Short list suitable cores

- 3 Evaluate properties of different resin/ reinforcement/core combinations
 - 3.1 Determine interactions between resin systems and reinforcing and cores
 - 3.2 Select most appropriate combination of resin systems, reinforcing and cores
 - 3.3 Develop a laminate schedule to meet all requirements
 - 3.4 Fabricate a sample of the most appropriate combination
 - 3.5 Conduct/organise for relevant tests
 - 3.6 Evaluate process evaluation test (PET) results
 - 3.7 Review match of PET results with product and sustainability requirements
 - 3.8 Review selection and fabrication process
 - 3.9 Make any required changes to appropriate combination or process

- 4 Use selected combination for product
 - 4.1 Identify and control hazards
 - 4.2 Prepare selected reinforcing, as required
 - 4.3 Lay reinforcing in correct direction, as appropriate
 - 4.4 Prepare selected core, as required
 - 4.5 Lay core in correct direction, as appropriate
 - 4.6 Make any appropriate adjustments to the resin system recipe
 - 4.7 Mix selected resin system, as required
 - 4.8 Fabricate product using selected process
 - 4.9 Minimise waste
 - 4.10 Review product compared to requirements
 - 4.11 Review material selection and fabrication process

- 4.12 Identify areas for improvement and take appropriate actions
- 4.13 Complete any required documentation/reporting

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- making choices and justifying decisions
- interpreting design brief
- fabrication skills required to make product
- working unsupervised

Required knowledge

Required knowledge includes:

- cost against known processes, including labour and machine output
- principles of adhesion and substrate/resin interactions
- bonding within and between composites:
 - inter-laminar delamination
 - secondary bonding delamination
- resin/reinforcement compatibility
- resin penetration
- permeability of reinforcement
- Darcy's Law and its application to the flow of resins through porous media (e.g. reinforcing and cores)

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that the process and equipment be understood and that the importance of critical material properties, settings and readings is known. Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in</p>
--	--

	<p>implementing appropriate corrective action.</p> <p>Consistent performance should be demonstrated. In particular look to see that:</p> <ul style="list-style-type: none"> • all reasonably available combinations of resin systems, reinforcing and cores have been considered • an appropriate combination has been chosen • the reasons for choosing the combination are sound • the product meets its required performance. <p>Competence must be demonstrated in the operation of all ancillary equipment to the level required for this unit of competency.</p>
Context of and specific resources for assessment	<p>Assessment will require the designing and fabricating appropriate composite products or components.</p> <p>Assessment will occur over a range of situations which will include disruptions to normal, smooth operation.</p>
Method of assessment	<p>A single assessment event is not appropriate. On-the-job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Procedures	<p>Procedures may be written, verbal, computer-based or in some other form, and may include:</p> <ul style="list-style-type: none"> • all work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. Responsible Care) and government regulations
Most appropriate combination	<p>Most appropriate combination refers to that combination of resin systems, reinforcing/reinforcing combination and cores which has:</p> <ul style="list-style-type: none"> • compliance with product requirements • greatest ease of manufacture • best financial return • greatest sustainability contribution
Sustainability	<p>Sustainability incorporates the three aspects of:</p> <ul style="list-style-type: none"> • survival of the ecology/physical environment – which means that an enterprise needs to manage the impact of the business to ensure the survival of the physical environment • economic viability – efficiency, cost and waste reduction and competitiveness to support survival of the business • social sustainability – an enterprise needs to manage the impact of the business to ensure its continued survival within the community and the survival of the community, including occupational health and safety (OHS)
Cores	<p>Core is used to cover:</p> <ul style="list-style-type: none"> • materials used to provide thickness and so rigidity (and perhaps thermal insulation) to a laminate, but

	not significant structural strength, which is provided by reinforcing
Requirements of final product	Requirements of final product may be determined from various sources, including: <ul style="list-style-type: none"> • drawings • product specifications • customer requests • descriptions of required use of product
Requirements of core	Requirements of core include: <ul style="list-style-type: none"> • stiffness/flexibility • directionality • density • operating temperature
Preparing core	Preparing core includes: <ul style="list-style-type: none"> • cutting to size/shape, as required • any pre-treatment required
Preparing reinforcing	Preparing reinforcing includes: <ul style="list-style-type: none"> • cutting to size/shape, as required, • any pre-treatment required
Core direction	Core direction includes considerations such as: <ul style="list-style-type: none"> • directional properties
Reinforcing direction	Reinforcing direction includes considerations such as: <ul style="list-style-type: none"> • fibre orientation • fibre pre-forming
Requirements of resin system	Requirements of resin system include: <ul style="list-style-type: none"> • strength • flexibility/rigidity • surface finish and colour • chemical/ultraviolet (UV)/environmental resistance • operating temperature • recyclability
Resin system adjustments	Adjustments to the resin system chemistry may be as a result of: <ul style="list-style-type: none"> • temperature • humidity • required cure time Adjustments may only be made within the allowable

	limits of the system being used
Logs and reports	<p>Logs and reports may include:</p> <ul style="list-style-type: none"> • paper or electronic based • verbal reports • items found which require action
Appropriate action	<p>Appropriate action includes:</p> <ul style="list-style-type: none"> • determining problems needing action • determining possible fault causes • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to designated person
Typical problems	<p>Typical problems may include:</p> <ul style="list-style-type: none"> • cost/benefit of different combinations • selecting a combination suited to the fabrication process • maximising sustainability
Health, safety and environment (HSE)	<p>All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. MEM26012A Record and trial work processes for one-off composite products

Modification History

Release 1 New unit

Unit Descriptor

This unit of competency covers the skills and knowledge required to take a one-off/prototype product or a new product/process from an internal or external developer and turn this into a standard manufacturing process which works and can be used in the plant. Refer also to MEM26018A Organise composite trials.

This unit can be used for recording composite materials and processing steps for one-off and prototype production.

Application of the Unit

This unit covers the drafting of appropriate procedures for use in routine production or repair situations. It also requires the examination of a process and the comparison of it with standard practice in the workplace so that a workable procedure can be developed. The procedures are drafted from a developing process and are evaluated as part of this unit.

This unit would typically be undertaken by an individual in liaison with relevant stakeholders and by working closely with personnel developing the prototype.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--|-----|---|
| 1 | Identify proposed benefits/outcomes of new product/process | 1.1 | Confirm deliverables expected by customer |
| | | 1.2 | Confirm benefits expected by organisation |
| | | 1.3 | Identify any existing products with similar expectations |
| | | 1.4 | Note any relevant issues with existing similar products |
| 2 | Sketch a process map/flow chart of proposed process | 2.1 | Determine processes to be used |
| | | 2.2 | Identify order of process steps |
| | | 2.3 | Draw process map/flow chart of proposed process |
| | | 2.4 | Annotate key resources to map/flow chart |
| | | 2.5 | Examine map/flow chart for possible improvements |
| | | 2.6 | Redraw map/flow chart, as appropriate |
| 3 | Compare proposed process with current standard processes | 3.1 | Identify processes which will be new to/changed from/deleted from existing similar process used by the organisation |
| | | 3.2 | Identify materials which will be new to/changed from/deleted from existing similar process or the organisation |
| | | 3.3 | Identify areas of improvement in the existing similar process |
| | | 3.4 | Identify hazards and appropriate hazard controls |
| | | 3.5 | Develop procedures for new/modified steps |

- | | | | |
|---|---|-----|--|
| 4 | Draft procedures for new product/process | 4.1 | Locate appropriate template for procedures |
| | | 4.2 | Observe and record prototype |
| | | 4.3 | Draft procedures from successful prototype steps in appropriate format |
| 5 | Evaluate draft procedures | 5.1 | Keep tally of resources used |
| | | 5.2 | Compare production to procedures |
| | | 5.3 | Compare outcomes with expectations |
| | | 5.4 | Identify any required changes |
| | | 5.5 | Take appropriate action |
| 6 | Draft new procedures and obtain authorisation | 6.1 | Draft workable procedures |
| | | 6.2 | Obtain authorisation of new procedures, as required |
| | | 6.3 | Standardise procedures |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills includes:

- writing
- developing procedures
- evaluating outcomes
- following authorisation procedures
- communicating with relevant personnel

Required knowledge

Required knowledge includes:

- use of production tools (e.g. one-off or multiple products)
- limits of size which suggest easiest/most cost effective way to produce product
- fibre/resin ratio

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that the process and equipment be understood and that the importance of critical material properties, settings and readings is known. Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action.</p> <p>Consistent performance should be demonstrated. In particular look to see that:</p> <ul style="list-style-type: none"> • a set of workable procedures have been developed • procedures have taken account of process mapping.
--	--

	Competence must be demonstrated in the operation of all ancillary equipment to the level required for this unit of competency.
Context of and specific resources for assessment	<p>Assessment will require the development of new manufacturing specifications/procedures for composite products or components.</p> <p>Assessment will occur over a range of situations which will include disruptions to normal, smooth operation.</p>
Method of assessment	<p>A single assessment event is not appropriate. On-the-job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Procedures	<p>Procedures may be written, verbal, computer-based or in some other form, and may include:</p> <ul style="list-style-type: none"> • all work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. Responsible Care) and government regulations
Deliverables expected by customer	<p>Deliverables expected by customer may include:</p> <ul style="list-style-type: none"> • technical specification • aesthetic requirements • other quality expectations • cost/price expectations • quantity and delivery schedules
Key resources	<p>Key resources include:</p> <ul style="list-style-type: none"> • materials • labour • time • money
Process map improvements	<p>Improvements made from process maps are typically a reduction in wastes (muda) as defined by</p> <ul style="list-style-type: none"> • over-production • delay • transportation • over-processing • excess inventory/work in progress (WIP) • excess motion • defects • untapped human potential
Logs and reports	<p>Logs and reports may include:</p> <ul style="list-style-type: none"> • paper or electronic based • verbal reports • items found which require action
Appropriate action	<p>Appropriate action includes:</p> <ul style="list-style-type: none"> • determining problems needing action

	<ul style="list-style-type: none"> • determining possible fault causes • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to designated person
Typical problems	<p>Typical problems may include:</p> <ul style="list-style-type: none"> • multiple ways of doing the same job • waste built into procedures • aligning procedures with good practice
Health, safety and environment (HSE)	<p>All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence</p>

MEM26013A Select and use composite processes or systems appropriate for product

Modification History

Release 1 New unit

Unit Descriptor

This unit of competency covers the skills and knowledge required to select the one most appropriate process for a job from all common composite processes.

Application of the Unit

This unit covers the selection of processes or systems for the redesign of an existing product (e.g. using a different process) or the design of a new product similar to an existing product. This unit does not include the selection of suitable materials. Where materials also need to be chosen refer to MEM26011A Determine materials and techniques for a composite component or product.

Process/system selection may typically be undertaken by an individual in liaison with relevant stakeholders or it may be undertaken by a team. Selection may be undertaken in an office environment or at the worksite.

Use of the process/system will be part of a fabrication and may be undertaken by an individual or a team. It may be undertaken in a workshop or factory environment or in the field and may be used to manufacture new products, prototypes and samples, or to make repairs.

Licensing/Regulatory Information

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | |
|---|--|---|
| 1 | Identify process requirements of product | 1.1 Determine physical characteristics of product |
| | | 1.2 Determine chemical characteristics of product |
| | | 1.3 Determine aesthetic characteristics of product |
| | | 1.4 Determine production volume and delivery schedule |
| | | 1.5 Determine regulatory requirements |
| 2 | Select most appropriate process/system | 2.1 Identify processes which can deliver requirements of product |
| | | 2.2 Determine the capability of the organisation to meet the requirements and use the processes |
| | | 2.3 Evaluate each process against the requirements |
| | | 2.4 Select most appropriate process |
| | | 2.5 Fabricate a sample using most appropriate process |
| | | 2.6 Conduct/organise for relevant tests |
| | | 2.7 Evaluate process evaluation test (PET) results |
| | | 2.8 Review match of PET results with product and sustainability requirements |
| | | 2.9 Review selected fabrication process |
| | | 2.10 Make any required changes to process |

- 3 Use process to make product
 - 3.1 Identify and control hazards
 - 3.2 Fabricate product using selected process
 - 3.3 Minimise waste
 - 3.4 Review product compared to requirements
 - 3.5 Review fabrication process
 - 3.6 Identify areas for improvement and take corrective actions
 - 3.7 Complete any required documentation/reporting

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating technical information
- making decisions
- identifying product characteristics
- using relevant equipment

Required knowledge

Required knowledge includes:

- cost analysis for each process to select best process
- technical standards/suitability
- mechanical stresses
- life cycle assessment for each process
- ease of manufacture
- testing criteria
- failure modes effects analysis (FMEA)
- typical applications of each major type of process, strengths and weaknesses
- grid analysis

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that the process and equipment be understood and that the importance of critical material properties, settings and readings is known. Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action.
---	---

	<p>Consistent performance should be demonstrated. In particular look to see that:</p> <ul style="list-style-type: none"> • all reasonably available processes have been considered • an appropriate process has been selected • the reasons for choosing the process are sound • the product meets its required performance. <p>Competence must be demonstrated in the operation of all ancillary equipment to the level required for this unit of competency.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessment will require the selection and use of appropriate composite processes or making the required products or components.</p> <p>Assessment will occur over a range of situations which will include disruptions to normal, smooth operation.</p>
<p>Method of assessment</p>	<p>A single assessment event is not appropriate. On-the-job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
<p>Guidance information for assessment</p>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Procedures	<p>Procedures may be written, verbal, computer-based or in some other form. They include:</p> <ul style="list-style-type: none"> • all work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. Responsible Care) and government regulations
Sustainability	<p>Sustainability incorporates the three aspects of:</p> <ul style="list-style-type: none"> • survival of the ecology/physical environment – which means that an enterprise needs to manage the impact of the business to ensure the survival of the physical environment • economic viability – efficiency, cost and waste reduction and competitiveness to support survival of the business • social sustainability – an enterprise needs to manage the impact of the business to ensure its continued survival within the community and the survival of the community, including occupational health and safety (OHS)
Physical characteristics of product	<p>Physical characteristics of product include:</p> <ul style="list-style-type: none"> • size • shape • weight • requiring one/two part mould • light weight • high strength • erosion resistant
Chemical characteristics of product	<p>Chemical characteristics of product include:</p>

	<ul style="list-style-type: none"> • corrosion resistant • fire retardant • ultraviolet (UV) resistant
Aesthetic characteristics of product	<p>Aesthetic characteristics of product include:</p> <ul style="list-style-type: none"> • finish (e.g. gloss, buffed and matt) • colour
Regulatory requirements	<p>Regulatory requirements include:</p> <ul style="list-style-type: none"> • dangerous goods • OHS • environment protection agency (EPA)
Appropriate	<p>Appropriate includes:</p> <ul style="list-style-type: none"> • technical • practical • cost • sustainability criteria
Logs and reports	<p>Logs and reports may include:</p> <ul style="list-style-type: none"> • paper or electronic based • verbal reports • items found which require action
Appropriate action	<p>Appropriate action includes:</p> <ul style="list-style-type: none"> • determining problems needing action • determining possible fault causes • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to designated person
Typical problems	<p>Typical problems may include:</p> <ul style="list-style-type: none"> • cost/benefit of different processes • selecting a process suited to the customer needs • selecting a process within the organisation capability • maximising sustainability
Health, safety and environment (HSE)	<p>All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. MEM26014A Adjust resin chemicals for current conditions

Modification History

Release 1 New unit

Unit Descriptor

This unit of competency covers the knowledge of resin chemistry, particularly catalysis and resin curing, to make adjustments to the chemistry to suit current requirements caused by weather, job specifications or other factors. It also requires knowing the limits of these adjustments and having discussions with suppliers/manufacturers regarding resin chemistry.

Application of the Unit

This unit applies to situations where the fabricator has the ability to make limited modifications to the resin composition in order to make a better product. This unit includes knowing the limits that can be made to adjustments and also when no adjustments can be made.

This unit may cover existing products, repairs or the development of new products. Decisions regarding resin chemistry adjustment may typically be undertaken by an individual in liaison with relevant stakeholders or it may be undertaken by a team and will typically occur at the worksite.

Use of the adjusted chemistry will be part of a fabrication and may be undertaken by an individual or a team. It may be undertaken in a workshop or factory environment or in the field and may be used to manufacture new products, prototypes and samples, or to make repairs.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---|------|---|
| 1 | Identify current conditions impacting on resin chemistry | 1.1 | Identify variables for the chemistry of resin types |
| | | 1.2 | Identify impacts on resin chemistry of environmental changes |
| | | 1.3 | Observe current environmental conditions |
| | | 1.4 | Predict impact of current conditions on resin chemistry |
| 2 | Identify adjustments which may be made to meet current conditions | 2.1 | Determine impact on resin chemistry of changing resin composition |
| | | 2.2 | Select resin composition changes to counteract impact of current conditions |
| | | 2.3 | Compare selected composition changes with adjustments allowed by manufacturer of resin system |
| | | 2.4 | Select most appropriate resin composition changes |
| | | 2.5 | Identify alternative process changes to adjust for conditions |
| | | 2.6 | Fabricate a sample using the selected adjustment |
| | | 2.7 | Conduct/organise for relevant tests |
| | | 2.8 | Evaluate process evaluation test (PET) results |
| | | 2.9 | Review match of PET results with product requirements |
| | | 2.10 | Review resin composition changes |
| | | 2.11 | Take appropriate action |

- 3 Fabricate product using adjusted composition/ conditions
 - 3.1 Identify and control hazards
 - 3.2 Make any appropriate adjustments to the resin system recipe
 - 3.3 Prepare materials, as required
 - 3.4 Prepare tools and equipment, as required
 - 3.5 Minimise waste
 - 3.6 Review product compared to requirements
 - 3.7 Review chemistry modification process
 - 3.8 Identify areas for improvement and take appropriate actions
 - 3.9 Complete any required documentation/reporting

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- mixing resins
- interpreting weather/environment characteristics
- interpreting catalyst temperature
- communicating with relevant personnel
- completing documentation
- reporting outcomes

Required knowledge

Required knowledge includes:

- summer/winter catalyst
- resin chemistry
- curing/cross linking chemistry
- basic chemistry of resin manufacture
- effects of temperature (workplace and materials), humidity, air flow (wind) and concentration
- effect of adjustments in the workplace (and why)
- adjustments available from supplier

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that the process and equipment be understood and that the importance of critical material properties, settings and readings is known. Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in</p>

	<p>implementing appropriate corrective action.</p> <p>Consistent performance should be demonstrated. In particular look to see that:</p> <ul style="list-style-type: none"> • environmental conditions are correctly interpreted • impact on resin chemistry is understood • appropriate adjustments are made • the reasons for selecting the adjustments are sound • the product meets its required performance. <p>Competence must be demonstrated in the operation of all ancillary equipment to the level required for this unit of competency.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessment will require the adjusting of resin chemistry to meet particular requirements, the justification of those changes and making products with the adjusted chemistry.</p> <p>Assessment will occur over a range of situations which will include disruptions to normal, smooth operation.</p>
<p>Method of assessment</p>	<p>A single assessment event is not appropriate. On-the-job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
<p>Guidance information for assessment</p>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Procedures	<p>Procedures may be written, verbal, computer-based or in some other form, and may include:</p> <ul style="list-style-type: none"> • all work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. Responsible Care) and government regulations
Resin chemistry	<p>Resin chemistry includes:</p> <ul style="list-style-type: none"> • process of curing/cross linking of resins • rate of cure and change of properties over cure time • changes in viscosity and other flow properties during progress of cure • final properties of resin post-cure
Environmental changes	<p>Environmental changes may include:</p> <ul style="list-style-type: none"> • temperature • humidity • air flow/wind • solar/ultraviolet (UV) insolation
Resin composition	<p>Resin composition includes:</p> <ul style="list-style-type: none"> • resin/catalyst ratio • resin/promoter ratio • resin/catalyst/promoter ratios • changing temperature of resin components (e.g. using chilled catalyst or resin) • ratios of other resin system components
Most appropriate resin composition	Most appropriate resin composition changes refers to

changes	<p>those resin system changes which:</p> <ul style="list-style-type: none"> • comply with product requirements • adjust for the current conditions • have greatest ease of use in manufacture • have best financial return • have greatest sustainability contribution
Appropriate action	<p>Appropriate action may include, but is not limited to:</p> <ul style="list-style-type: none"> • making any required changes to resin composition changes • deferring the fabrication until more suitable conditions prevail
Sustainability	<p>Sustainability incorporates the three aspects of:</p> <ul style="list-style-type: none"> • survival of the ecology/physical environment – which means that an enterprise needs to manage the impact of the business to ensure the survival of the physical environment • economic viability – efficiency, cost and waste reduction and competitiveness to support survival of the business • social sustainability – an enterprise needs to manage the impact of the business to ensure its continued survival within the community and the survival of the community, including occupational health and safety (OHS)
Alternative process changes	<p>Alternative process changes may include:</p> <ul style="list-style-type: none"> • controlling the environmental conditions • moving the timing of the job to when conditions are more favourable (e.g. at night) • moving the location of the job to where conditions are more favourable (e.g. in plant, different site and in shade)
Logs and reports	<p>Logs and reports may include:</p> <ul style="list-style-type: none"> • paper or electronic based • verbal reports • items found which require action
Appropriate action	<p>Appropriate action includes:</p> <ul style="list-style-type: none"> • determining problems needing action • determining possible fault causes • rectifying problem using appropriate solution within area of responsibility

	<ul style="list-style-type: none"> • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to designated person
Typical problems	<p>Typical problems may include:</p> <ul style="list-style-type: none"> • unusually hot/cold workplace/weather • extreme humidity • very tight/unusual specification of properties required of product • high/low air flow/wind
Health, safety and environment (HSE)	<p>All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence</p>

MEM26015A Select and apply repair techniques

Modification History

Release 1 New unit

Unit Descriptor

This unit of competency covers the skills and knowledge required to select and apply appropriate repair techniques.

Application of the Unit

This unit cover the diagnosis of an area needing repair and selecting the appropriate repair techniques and then making the repair. It includes any incidental design which may be relevant to the repair. It may not be appropriate in situations where repair techniques are highly specified and controlled.

This unit does not include the selection of a suitable resin system, refer to MEM26008A Select and use resin systems appropriate for product.

Repair technique selection may typically be undertaken by an individual in liaison with relevant stakeholders or it may undertaken by a team. Selection may be undertaken partially in an office environment or at the worksite.

Use of the repair technique and may be undertaken by an individual or a team. It may be undertaken in a workshop or factory environment or in the field.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--|-----|--|
| 1 | Diagnose the item needing repair | 1.1 | Clean out damaged area |
| | | 1.2 | Determine accessibility of area to be repaired |
| | | 1.3 | Inspect damaged area |
| | | 1.4 | Identify original materials of construction |
| | | 1.5 | Determine cause of failure to the extent possible |
| 2 | Determine requirements of the repair | 2.1 | Check insurance status |
| | | 2.2 | Confirm intended usage of composite |
| | | 2.3 | Determine extent of repair required (e.g. structural or cosmetic) |
| | | 2.4 | Undertake appropriate incidental design |
| | | 2.5 | Agree on scope of repair |
| 3 | Select most appropriate repair technique for job | 3.1 | Check the availability of standard repair kits/components and techniques |
| | | 3.2 | Short list suitable repair techniques and materials |
| | | 3.3 | Evaluate suitability of possible repair techniques and materials |
| | | 3.4 | Select appropriate repair process |
| | | 3.5 | Select appropriate materials for repair |
| | | 3.6 | Conduct process evaluation tests (PET), as appropriate |

- 4 Undertake repair
 - 4.1 Identify and control hazards
 - 4.2 Create necessary access to damaged area
 - 4.3 Prepare area requiring repair
 - 4.4 Prepare tools and equipment required for repair
 - 4.5 Prepare materials required for repair
 - 4.6 Undertake required repair
 - 4.7 Minimise waste
 - 4.8 Review repaired product compared to requirements
 - 4.9 Review material selection and fabrication process
 - 4.10 Identify areas for improvement and take appropriate actions
 - 4.11 Complete any required documentation/reporting

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- hand moulding
- hand lay-up skills
- applying resin infusion techniques
- applying taper sanding techniques
- applying syringe techniques
- using ultraviolet (UV) curable resin systems
- using other open and closed mould techniques

Required knowledge

Required knowledge includes:

- different repair techniques (e.g. patch repair, honeycomb repair and resin surface repair), uses and limitations
- dedicated repair materials
- blocking techniques
- hot bonders
- temporary moulds
- repairing internal or external surfaces
- repairing against a mould
- mixing and using gel coat and gel coat additives (e.g. filler, wax, catalyst and pigment)
- laminate defects, such as air entrapment, moisture entrapment, osmosis and delamination

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate	It is essential that the process and equipment be understood and that the importance of critical material

-------------------	--

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Procedures	<p>Procedures may be written, verbal, computer-based or in some other form, and may include:</p> <ul style="list-style-type: none"> • all work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. Responsible Care) and government regulations
Appropriate repair process	<p>Appropriate repair process refers to that combination of materials and fabrication techniques which has:</p> <ul style="list-style-type: none"> • compliance with product requirements • greatest ease of execution • best financial return • greatest sustainability contribution
Sustainability	<p>Sustainability incorporates the three aspects of:</p> <ul style="list-style-type: none"> • survival of the ecology/physical environment – which means that an enterprise needs to manage the impact of the business to ensure the survival of the physical environment • economic viability – efficiency, cost and waste reduction and competitiveness to support survival of the business • social sustainability – an enterprise needs to manage the impact of the business to ensure its continued survival within the community and the survival of the community, including occupational health and safety

	(OHS)
Incidental design	<p>Incidental design includes minor design which is incidental to conducting a repair and which:</p> <ul style="list-style-type: none"> • improves on an original design weakness (e.g. such as might be shown up by the failure being repaired) • changes the original design to incorporate current techniques, materials or practices • better meets customer needs
Preparing materials	<p>Preparing materials includes:</p> <ul style="list-style-type: none"> • cutting to size and shape, as required • any pre-treatment required • calculating amount of resin and resin components required • mixing resin systems
Logs and reports	<p>Logs and reports may include:</p> <ul style="list-style-type: none"> • paper or electronic based • verbal reports • items found which require action
Appropriate action	<p>Appropriate action includes:</p> <ul style="list-style-type: none"> • determining problems needing action • determining possible fault causes • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to designated person
Typical problems	<p>Typical problems may include:</p> <ul style="list-style-type: none"> • cost/benefit of different repair techniques and materials • customer wants more improvement than is technically feasible • customer wants more improvements than insurance will pay for
Health, safety and environment (HSE)	<p>All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence</p>

MEM26016A Select and use joining techniques

Modification History

Release 1 New unit

Unit Descriptor

This unit of competency covers the skills and knowledge required to join composites to other composite components or other materials, either as part of manufacturing or for a repair. The join will need to conform to the requirements of the job and so may need to be rigid or flexible, water, ultraviolet (UV), chemical or fire resistant, or have other properties, as well as the required strength.

Application of the Unit

This unit covers joining which may include:

- bonding (e.g. adhesive, gluing, methacrylate, sikaflex and epoxy)
- using composite materials (e.g. Probond, Divelett, K-Lite and Eurmere)
- secondary bonding (e.g. cured composite to cured composite)
- using mechanical fasteners (e.g. bolts and rivets).

Selection of the joining technique may typically be undertaken by an individual in liaison with relevant stakeholders or it may be undertaken by a team. Selection may be undertaken in an office environment or at the worksite.

Use of the joining technique may be undertaken by an individual or a team. It may be undertaken in a workshop or factory environment or in the field and may be used to manufacture new products, prototypes and samples, or to make repairs.

Licensing/Regulatory Information

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--|------|---|
| 1 | Determine characteristics required of the join | 1.1 | Determine finished application properties |
| | | 1.2 | Develop required technical specifications of join |
| | | 1.3 | Identify properties of surfaces to be joined |
| 2 | Select most appropriate joining system | 2.1 | Short list suitable joining techniques and materials |
| | | 2.2 | Compare technical properties of different joining systems with requirements |
| | | 2.3 | Check material safety data sheets (MSDS) of joining materials |
| | | 2.4 | Determine preparation required of surfaces to be joined |
| | | 2.5 | Select most appropriate joining system |
| | | 2.6 | Make sample join using the system |
| | | 2.7 | Conduct/organise for relevant tests |
| | | 2.8 | Evaluate process evaluation test (PET) results |
| | | 2.9 | Review match of PET results with product requirements |
| | | 2.10 | Review fabrication process |
| | | 2.11 | Make any required changes to system |
| 3 | Complete the required join | 3.1 | Identify and control hazards |
| | | 3.2 | Prepare surface, as required |

- 3.3 Prepare tools and equipment required for join
- 3.4 Prepare materials required for join
- 3.5 Undertake required join
- 3.6 Minimise waste
- 3.7 Review joined product compared to requirements
- 3.8 Review materials and techniques selected
- 3.9 Identify areas for improvement and take appropriate actions
- 3.10 Complete any required documentation/reporting

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- preparing surfaces
- using hand and power tools
- applying assembly techniques
- applying bonding techniques
- applying joiner

Required knowledge

Required knowledge includes:

- adhesives (e.g. plexus – methylmethacrylate)
- sealants (e.g. sikaflex – silicon or butyl mastic)
- mechanical joining
- substrates and interactions with joiner
- surface preparation of substrate
- application methods
- clamping forces (minimum and maximum)
- adhesive/sealant thickness
- primers
- design rules around fastening (e.g. minimum area for pop rivets, rivet spacing and rivet patterns)
- edge finish of pilot holes
- quality requirements with the hole preparation
- quality requirements with the installation of fasteners
- radius of edge of laminate
- effect of flatness and smoothness of joining surfaces
- substrate composition in joining area

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that the process and equipment be understood and that the importance of critical material properties, settings and readings is known. Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action.</p> <p>Consistent performance should be demonstrated. In particular look to see that:</p> <ul style="list-style-type: none"> • all reasonably available joining techniques and materials were considered • appropriate techniques and materials have been selected • the reasons for choosing the technique and materials are sound • the product meets its required performance. <p>Competence must be demonstrated in the operation of all ancillary equipment to the level required for this unit of competency.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessment will require the selection of joining methods, justifying the selection made and making a number of joints using both mechanical and adhesive joining techniques.</p> <p>Assessment will occur over a range of situations which will include disruptions to normal, smooth operation.</p>
<p>Method of assessment</p>	<p>A single assessment event is not appropriate. On-the-job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p>

	The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Procedures	<p>Procedures may be written, verbal, computer-based or in some other form, and may include:</p> <ul style="list-style-type: none"> • all work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. Responsible Care) and government regulations
Joining system	<p>Joining system includes techniques and materials, such as:</p> <ul style="list-style-type: none"> • bonding (e.g. adhesive, gluing, ethacrylates, sikaflex and epoxy) • using composite materials (e.g. Probond, Divelett, K-Lite and Eurmere) • secondary bonding – cured composite to cured composite • using mechanical fasteners (e.g. bolts and rivets)
Finished application properties	<p>Finished application properties include:</p> <ul style="list-style-type: none"> • permanent/removable

	<ul style="list-style-type: none"> • waterproof/chemical resistant • structural rigidity • strength (tensile, compressive, shear and torsional) • aesthetic
Properties of surfaces to be joined	<p>Properties of surfaces to be joined include:</p> <ul style="list-style-type: none"> • materials of construction • physical properties (e.g. strength and rigidity) • surface properties (e.g. surface finish and surface treatment/coatings) • size and shape
Preparation of surfaces	<p>Preparation of surfaces to be joined may include:</p> <ul style="list-style-type: none"> • solvent or other chemical cleaning • chemical etching • mechanical preparation such as blasting, buffing • surface smoothing (e.g. machining) • making of holes or other physical locking features
Most appropriate joining system	<p>Most appropriate system refers to that system which has:</p> <ul style="list-style-type: none"> • compliance with product requirements • greatest ease of joining • best financial return • greatest sustainability contribution
Sustainability	<p>Sustainability incorporates the three aspects of:</p> <ul style="list-style-type: none"> • survival of the ecology/physical environment – which means that an enterprise needs to manage the impact of the business to ensure the survival of the physical environment • economic viability – efficiency, cost and waste reduction and competitiveness to support survival of the business • social sustainability – an enterprise needs to manage the impact of the business to ensure its continued survival within the community and the survival of the community, including occupational health and safety (OHS)
Logs and reports	<p>Logs and reports may include:</p> <ul style="list-style-type: none"> • paper or electronic based • verbal reports • items found which require action
Appropriate action	<p>Appropriate action includes:</p>

	<ul style="list-style-type: none"> • determining problems needing action • determining possible fault causes • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to designated person
Typical problems	<p>Typical problems may include:</p> <ul style="list-style-type: none"> • incompatible requirements • hazardous materials/preparation methods • non-uniform join
Health, safety and environment (HSE)	<p>All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence</p>

MEM26017A Prepare composite or other substrate surfaces

Modification History

Release 1 New unit

Unit Descriptor

This unit of competency covers the skills and knowledge required to prepare, by abrasive or chemical means, a composite surface prior to bonding or coating. It includes the preparation of composite surfaces and other surfaces which are used in conjunction with composites (e.g. metal surfaces).

Application of the Unit

This unit includes preparation of composite surfaces either as a finish or in preparation for further work, such as coating or joining.

Surface preparation may be undertaken by an individual or a team. It may be undertaken in a workshop or factory environment or in the field and may be used to manufacture new products, prototypes, samples or to make repairs.

This unit complements MEM26016A Select and use joining techniques.

Licensing/Regulatory Information

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---|-----|--|
| 1 | Determine characteristics required of substrate | 1.1 | Identify the chemistry of materials to be applied to the surface |
| | | 1.2 | Identify the surface chemistry of the substrate |
| | | 1.3 | Determine any chemical treatments needed to make the substrate compatible with the materials to be applied |
| | | 1.4 | Interpret material safety data sheets (MSDS) for materials which may be used |
| | | 1.5 | Identify the current physical state of the substrate |
| | | 1.6 | Identify possible required physical states of the substrate |
| 2 | Select most appropriate preparation technique for job | 2.1 | Compile specification for required substrate preparation |
| | | 2.2 | Compare possible substrate preparation methods with specification |
| | | 2.3 | Select most appropriate substrate preparation |
| | | 2.4 | Conduct and evaluate process evaluation test (PET), as appropriate |
| | | 2.5 | Review selection and substrate preparation |
| | | 2.6 | Make any required changes to substrate preparation |
| 3 | Prepare substrate | 3.1 | Identify and control hazards |
| | | 3.2 | Prepare substrate, as required |
| | | 3.3 | Minimise waste |

- 3.4 Review result compared to requirements
- 3.5 Review substrate preparation process
- 3.6 Identify areas for improvement and take appropriate actions
- 3.7 Clean up and perform any routine maintenance required on equipment
- 3.8 Complete any required documentation/reporting

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills includes:

- controlling blasting equipment
- operating abrasive equipment by hand
- using chemical treatment equipment

Required knowledge

Required knowledge includes:

- methods of abrasive cleaning
- purposes for abrasive cleaning
- types of abrasives and their applications (e.g. sand, bead, shot, soda and grit)
- protection of non-blasted surfaces
- waste control, reuse and disposal
- occupational health and safety (OHS) issues
- environmental considerations
- surface preparation standards (e.g. surface measurement and surface finish)
- types of chemical cleaning (e.g. etching and solvents)
- aniline preparation of aluminium

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that the process and equipment be understood and that the importance of critical material properties, settings and readings is known. MEM26018A Organise composite trials

Modification History

Release 1 New unit

Unit Descriptor

This unit of competency covers the skills and knowledge required to trial new materials and processes and make prototypes. The source of these trials may arise from internal improvements or new products/processes from external sources. Regardless, trials need to be conducted to 'prove' it in an industrial environment, to translate research and development into practical processes and to provide appropriate records and metrics.

Application of the Unit

This unit does not cover the selection of materials or processes but does cover the organising and analysing of trials to prove proposed new materials or processes in the production environment.

Trials may be undertaken by others, with this unit applying to the person organising the trials, or the same person may organise and undertake the trial. Organising the trial may typically be undertaken by an individual in liaison with relevant stakeholders or it may be undertaken by a team. Organising of trials may be undertaken partially in an office environment or at the worksite. The trial itself may be undertaken by an individual or a team. It may be undertaken in a workshop or factory environment or in the field and may be used to manufacture new products, prototypes and samples, or to make repairs.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Determine expected outcomes from new/revised product/process	1.1	Identify risks to be controlled
		1.2	Identify novel parts of process/materials/properties
		1.3	Compare data from past work/trials
		1.4	Obtain data for novel part of process/material
		1.5	Develop procedures which should produce the required result
2	Determine required metrics from trials	2.1	Determine required process properties
		2.2	Determine required business measures
		2.3	Determine required sustainability measures
3	Compare proposed process with existing and predict problem areas	3.1	Compare proposed process with existing similar processes
		3.2	Identify points of difference
		3.3	Identify weaknesses with existing process
		3.4	Predict possible problems with trial process/materials
4	Organise appropriate trials	4.1	Determine scale of trial
		4.2	Ensure availability of adequate resources
		4.3	Organise for the preparation of equipment/materials
		4.4	Conduct trial

- 4.5 Monitor trial and record key observations and metrics
- 5 Select appropriate manufacturing procedure
 - 5.1 Compare outcome with requirements
 - 5.2 Modify procedure and repeat trial, as required
 - 5.3 Determine procedure which will yield desired results
 - 5.4 Record procedure in appropriate form
 - 5.5 Complete all required reporting and recording

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- writing
- communicating
- interpreting computer-aided design (CAD) model
- interpreting data
- interpreting design brief
- analysing trial results
- preparing reports

Required knowledge

Required knowledge includes:

- intended outcome of product
- design of documents for the floor
- design of trials
- design test requirements for trial

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that the process and equipment be understood and that the importance of critical material properties, settings and readings is known. MEM26019A Finish a composite product

Modification History

Release 1 New unit

Unit Descriptor

This unit of competency covers the skills and knowledge required to mechanically finish a composite product. There are a range of mechanical techniques used and the appropriate technique needs to be selected for a job and then used.

Application of the Unit

This unit covers the selection and use of the appropriate mechanical finishing technique for a composite product. This unit does not cover gel coating or similar but may include gel coat repairs, moulding imperfection repairs, repairs to moulds and detailing.

Finishing technique selection may typically be undertaken by an individual in liaison with relevant stakeholders or it may undertaken by a team. Selection may be undertaken in an office environment or at the worksite.

Use of the finishing technique will be part of a fabrication and may be undertaken by an individual or a team. It may be undertaken in a workshop or factory environment or in the field and may be used to manufacture new products, prototypes and samples, or to make repairs.

Licensing/Regulatory Information

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Interpret product requirements	1.1	Determine requirements of final products
		1.2	Determine finish requirements
2	Select most appropriate finishing for job	2.1	Compare required finish with results of different finishing methods
		2.2	Select most appropriate finishing method
		2.3	Conduct a process evaluation test (PET), where appropriate, and review finishing method, as required
3	Finish product	3.1	Identify and control hazards
		3.2	Prepare finishing equipment, tools and materials, as required
		3.3	Finish product using selected process
		3.4	Minimise waste
		3.5	Review finished product compared to requirements
		3.6	Identify areas for improvement and take appropriate actions
		3.7	Complete any required documentation/reporting

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- using hand tools
- using power tools and machine tools
- observing finished surfaces
- interpreting and applying procedures
- reporting, as required

Required knowledge

Required knowledge includes:

- deburring
- sanding
- surface preparation
- preparing cut edges
- drill bits and sizes
- measurement of tools and relationship to finished size
- choice of tool
- gel coat repair, metal flake, dual colour and touch up chips

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that the process and equipment be understood and that the importance of critical material properties, settings and readings is known. Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action.</p>
--	--

	<p>Consistent performance should be demonstrated. In particular look to see that:</p> <ul style="list-style-type: none"> • all reasonably appropriate finishing methods have been considered • an appropriate finishing procedure has been chosen • the reasons for choosing the finishing process are sound • the product finish meets its requirements. <p>Competence must be demonstrated in the operation of all ancillary equipment to the level required for this unit of competency.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessment will require the selection of mechanical finishing methods, justifying those choices and finishing products using those methods.</p> <p>Assessment will occur over a range of situations which will include disruptions to normal, smooth operation.</p>
<p>Method of assessment</p>	<p>A single assessment event is not appropriate. On-the-job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
<p>Guidance information for assessment</p>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Procedures	<p>Procedures may be written, verbal, computer-based or in some other form, and may include:</p> <ul style="list-style-type: none"> • all work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. Responsible Care) and government regulations
Techniques	<p>Techniques might include:</p> <ul style="list-style-type: none"> • trimming • forming holes (drilling, hole saw or other penetration) using hand, power or machine tools • using jigs and fixtures • removing burrs
Finishing	<p>Finishing may include:</p> <ul style="list-style-type: none"> • machining • polishing • buffing • blasting • etching • making holes
Requirements of final product	<p>Requirements of final product may be determined from various sources, including:</p> <ul style="list-style-type: none"> • drawings • product specifications • customer requests • descriptions of required use of product
Logs and reports	<p>Logs and reports may include:</p> <ul style="list-style-type: none"> • paper or electronic based

	<ul style="list-style-type: none"> • verbal reports • items found which require action
Appropriate action	<p>Appropriate action includes:</p> <ul style="list-style-type: none"> • determining problems needing action • determining possible fault causes • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to designated person
Typical problems	<p>Typical problems may include:</p> <ul style="list-style-type: none"> • damage to laminate from finishing process
Health, safety and environment (HSE)	<p>All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence</p>

MEM26020A Identify and interpret required standards for composites

Modification History

Release 1 New unit

Unit Descriptor

This unit of competency covers the skills and knowledge required to identify a relevant standard for a job, such as an agreed quality assurance/quality control external standard, and take actions required to produce a product which complies with the standard. This can be more important for 'specials' where there is no agreed, standardised work process designed to deliver the required standard.

Application of the Unit

This unit covers the identification and selection of relevant standards for a job as may be relevant to the redesign of an existing product (e.g. using a different process), the design of a new product similar to an existing product, or the undertaking of a repair.

Standard selection may typically be undertaken by an individual in liaison with relevant stakeholders or it may undertaken by a team. Selection may be undertaken in an office environment or at the worksite.

Use of the standard will be part of a fabrication and may be undertaken by an individual or a team. It may be undertaken in a workshop or factory environment or in the field and may be used to manufacture new products, prototypes and samples, or to make repairs.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--|-----|---|
| 1 | Identify relevant standard | 1.1 | Review available standards |
| | | 1.2 | Identify standard which may have relevance to the job |
| | | 1.3 | Select the appropriate standard |
| 2 | Determine requirements to meet standard | 2.1 | Interpret standard |
| | | 2.2 | Identify application of standard to job |
| | | 2.3 | Compile specifications which will ensure job meets standard |
| 3 | Undertake required work | 3.1 | Ensure procedures will produce a product which meets standard |
| | | 3.2 | Ensure any required testing/metrics gathering is undertaken |
| | | 3.3 | Monitor production to ensure it complies with the procedures |
| | | 3.4 | Minimise waste |
| 4 | Check conformance to standard, as required | 4.1 | Check final product complies with the standard, as required |
| | | 4.2 | Identify areas for improvement and take appropriate actions |
| | | 4.3 | Complete any required documentation/reporting |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- creating documents to support quality control
- reading technical documentation
- interpreting technical documentation and applying to job
- developing required work procedures to conform to standard

Required knowledge

Required knowledge includes:

- relevant standards
- interpretation of standards
- evidence to support meeting of standard
- accessing standards
- copyright of Australian Standards
- using standards

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that the process and equipment be understood and that the importance of critical material properties, settings and readings is known. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine the resultant and equilibrant of systems of coplanar forces	1.1. Calculate the magnitude and direction of the resultant and equilibrant of coplanar force systems. 1.2. Calculate the line of action of a resultant using the principle of Moment.
2. Determine nominal sizes for a simple horizontal beam subject to a combination of uniform and point loading	2.1. Support reactions for a simply supported horizontal beam using the equations of equilibrium and including the moment effect of a couple are calculated. 2.2. The possible types of failure that need to be considered are determined. 2.3. Shear force and bending moment diagrams are drawn. 2.4. Bending stress is determined. 2.5. Calculations are completed to determine the nominal size for the beam. 2.6. Factors of safety are applied to finalise nominal size of beam.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- calculating and using trigonometry, transposition, algebraic formula
- drawing shear force and bending moment diagrams

Required knowledge

Look for evidence that confirms knowledge of:

- force and gravity
- the concept of force
- characteristics of force
- rectangular components of force
- graphical addition of forces

REQUIRED SKILLS AND KNOWLEDGE

- mathematical addition of forces
- weight as force
- moment and torque
- moment of force
- addition of moments
- equilibrium of moments
- torque
- equivalent force moment systems
- statics
- equilibrium of coplanar forces
- conditions of equilibrium
- calculation of beam reactions (simply supported, point load, uniformly distributed load (UDL), self-weight)
- simple beams
- shear force and bending moment diagrams
- bending stress
- deflection by formulae
- stress and strain
- shear stress and strain
- allowable stress
- factors of safety

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to calculate force systems within simple beam structures. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with calculating force systems within simple structures, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine stresses in simple structures and mechanical components	1.1.The shear stresses in simple bolted connections are determined. 1.2.The nominal weld size or length of weld required on simple welded connections is determined to meet load requirements. 1.3.Torque distribution diagrams are drawn and used to calculate torsional shear stress and angle of twist on threaded bolts subjected to torques.
2. Verify stress levels using appropriate reference material	2.1.Appropriate reference materials are used to verify that stress loading is acceptable and in accordance with standard operational procedures. 2.2.Verification results are reported according to standard operational procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting drawings and graphical representations
- calculating stresses using given formulas
- construction of torque distribution diagrams
- accessing relevant codes and reference material
- interpreting results against reference materials

Required knowledge

Look for evidence that confirms knowledge of:

- stress and strain:
 - normal stress and strain
 - modules of elasticity
 - deformation
 - Poisson's Ratio
 - shear stress and strain

REQUIRED SKILLS AND KNOWLEDGE

- modulus of rigidity
- yield stress, ultimate stress, proportional limit, factor of safety, allowable stress
- centrally loaded connections
- bolted connections
- shear, tensile, torque and bearing stresses
- centrally loaded welded connections
- fillet and butt welds, method of failure
- size and length of weld
- effect of hole punching
- longitudinal stress
- how to access and use relevant codes and reference material

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify common engineering materials by their principal properties	1.1.The principal properties of ferrous and non-ferrous metals are identified. 1.2.The principal properties of thermosetting and thermoplastic polymers are identified. 1.3.The principal properties of ceramics and composite materials are identified. 1.4.The effects of different types of bonding in materials are identified. 1.5.The effects of mechanical and thermal processes on the principal properties of materials are identified.
2. Select materials for specific applications	2.1.The engineering requirement for the specific application is determined in consultation with others. 2.2.Material is selected based on the requirement and consideration of principal properties and further processing. 2.3.Selection is confirmed according to standard operating procedures.
3. Verify selected material as fit for purpose	3.1.Appropriate tests for the required properties are identified. 3.2.Testing of materials is arranged with appropriate persons, if necessary. 3.3.Test results are analysed and material choices are confirmed or modified as appropriate.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • undertaking research • selecting/carrying out tests appropriate to the material • communicating • documenting • planning and sequencing operations

REQUIRED SKILLS AND KNOWLEDGE

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents

Required knowledge

Look for evidence that confirms knowledge of:

- classification of materials:
 - metals and non-metals
 - ferrous and non-ferrous metals
 - polymers (thermoplastics, thermosetting and elastomers)
 - ceramics
 - composite materials
- structure of materials
- physical properties of materials:
 - electrical conductivity/resistivity
 - specific gravity/density
 - thermal conductivity/expansion
 - specific heat
 - melting/boiling points
- magnetic properties
- optical properties
- mechanical properties:
 - strength - yield, tensile, compressive
 - stress/strain data
 - hardness
 - toughness (impact and slow strain)
 - elasticity
 - plasticity
 - ductility
 - malleability
 - fatigue
 - creep
- chemical properties:
 - corrosion of metals, corrosion processes, mechanisms
 - degradation of polymers
- materials testing methods - destructive testing and applications:
 - tensile
 - compressive

REQUIRED SKILLS AND KNOWLEDGE

- shear
- torsion
- hardness
- impact
- fatigue
- creep
- visual
- corrosion testing
- engineering materials
- engineering applications of ferrous metals:
 - cast irons
 - carbon and alloy steels
 - stainless steels
- engineering applications of non-ferrous metals:
 - aluminium and its alloys
 - copper, brass and bronze
 - nickel alloys, zinc, titanium
 - magnesium
 - refractory metals
- engineering applications of polymers:
 - thermosetting polymers
 - thermoplastic polymers
 - ceramics and glasses
- effects of mechanical and thermal processes on the properties of materials:
 - casting
 - forging, rolling and extrusion
 - cold forming
 - powder processes
 - heat treatment
 - joining - fasteners
 - soldering
 - brazing
 - welding
 - adhesives
 - finishing - coatings, metallic and non-metallic
- hazards and control measure associated with selecting common engineering materials, including housekeeping
- safe work practices and procedures

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare required customer requirements from information provided	Criteria for the engineering application are obtained in accordance with standard operating procedures.
2. Verify that customer requirements have been met in the engineering application criteria	Criteria for the engineering application criteria are reviewed against customer requirement and deficiencies are noted. Knowledge of engineering parameters is applied to evaluate the engineering application criteria. Use of appropriate and relevant standards and codes is verified using standard operating procedures or reference to supervisor.
3. Verify specifications in accordance with economic principles	The relationships between quality, cost of production and function are considered and specifications are verified in accordance with policy and procedures.
4. Verify specifications in accordance with ergonomic principles	The specifications are checked and verified for health effects of human/machine interaction in accordance with given policy and procedures.
5. Seek approval of recommendations	All recommendations are referred to a supervisor for approval in accordance with policy and procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> determining customer requirements determining, accessing and using relevant Australian and ISO standards
Required knowledge
Look for evidence that confirms knowledge of:

REQUIRED SKILLS AND KNOWLEDGE

- engineering parameters:
 - safety of personnel, consequences of failure (such as human injury)
 - quality of product consideration
 - material reliability and choice
 - safety factors
 - maintenance, source of spares/service
 - energy consumption
- economic considerations:
 - costs of manufacture, effect of production quantity
 - cost of quality
 - design for manufacture
 - use of standardised components
- ergonomic considerations:
 - safety considerations
 - human capacity - reach, dexterity, strength, human comfort
 - health effects of human/machine interaction, repetitive use injuries
 - aesthetics

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to participate in the application of basic economic, ergonomic concepts to evaluate engineering designs and applications.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying basic economic, ergonomic concepts to engineering designs and applications, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Guidance information for assessment

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Engineering application

For this unit, engineering application includes assisting in engineering processes and applications requiring ergonomic and economic knowledge and skills including design, engineering assessments, supervision of installation and commissioning etc.

Engineering parameters

Includes consideration of safety of personnel, consequences of failure (human injury etc.), economic considerations, production cost, quality of product consideration, material reliability and choice, design safety factors, maintenance, energy consumption, source of spares/service

Standards and codes

Includes access and use of Australian standards (AS): AS 3000, AS 1250, AS 4800, AS 1100, International Standards Organisation (ISO) standards

Economic principles

Includes production quantities (mass/batch), cost of manufacture, ease of manufacture, use of standardised components, human capacity (reach, dexterity, strength, repetitiveness, human comfort), aesthetics, health effects of human/machine interaction, safety

Ergonomic principles

Includes designing, installing or checking things for effective human use, and creating environments that are suitable for human living and work. It includes work methods, equipment,

Not Applicable

Pre-Requisites

Prerequisite units		
Path 1	MEM16008A	Interact with computing technology
	MEM30032A	Produce basic engineering drawings

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research equipment function and operational requirements	1.1.All relevant drawings, specifications, manuals and documentation are obtained in accordance with workplace procedures. 1.2.Appropriate personnel are consulted to determine requirements. 1.3.Information collected is interpreted and draft functional and operational requirements are prepared and verified with supervisor or design team.
2. Prepare a preliminary sketch/drawing/specification	2.1.Appropriate components, assemblies and fasteners are selected to perform the required function. 2.2.Where required, components and/or materials are selected from supplier/manufacturer catalogues. 2.3.Appropriate and relevant codes are applied to the sketch/drawing/specification in accordance with workplace procedures. 2.4.The preliminary sketch/drawing/specification is referred to a higher authority for approval in accordance with policy and procedures.
3. Issue or file completed sketch/drawing/specification list as required	3.1.Approved sketch/drawing/specification is stored and catalogued in accordance with standard operating procedures. 3.2.Approved sketch/drawing/specification is issued in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and interpreting specifications and drawings

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

Look for evidence that confirms knowledge of:

- relevant codes and standards
- basic mechanical components:
 - shafts
 - bearings
 - seals
 - fasteners, thread systems
 - splines
 - cams
- drive components:
 - electric motors
 - IC engines
 - brakes
 - clutches
 - belts and pulleys
 - chains and sprockets
 - gears
 - couplings
 - universal joints
- lifting systems:
 - lifting jacks
 - hoists
 - winch equipment
- pneumatic systems:
 - advantages and disadvantages
 - compressors
 - pneumatic components
 - typical circuits and applications
 - electrical control
- hydraulic systems:
 - advantages and disadvantages
 - power packs
 - pumps and other components
 - typical circuits and applications
 - electrical control
- pumps and piping system:

REQUIRED SKILLS AND KNOWLEDGE

- purpose of pumps and piping systems
- pumps, valves, pipes and other components
- typical piping systems

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine system requirements	1.1. Instructions regarding system requirements are obtained, understood and clarified as necessary. 1.2. Circuit drawings using standard symbols are interpreted correctly.
2. Select components for simple hydraulic circuits	2.1. Suitable fluids are selected for given hydraulic systems from specification charts and in accordance with safety procedures involving fluids. 2.2. Linear actuators and motors are selected to suit system requirements. 2.3. Control valves are selected to suit system requirements.
3. Verify component selection	3.1. Circuits are set up and operated on laboratory benches. 3.2. Operation is analysed and outcomes are verified against system requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting simple hydraulic circuit drawings
- testing operation of simple hydraulic circuits
- assessing performance
- documenting circuit specifications and test results
- applying fluid power principles

Required knowledge

Look for evidence that confirms knowledge of:

- fluid power:
 - definition of the term fluid power
 - differences between pneumatic and hydraulic systems
 - advantages and disadvantages of fluid power compared with mechanical and

REQUIRED SKILLS AND KNOWLEDGE

- electric power systems
- safety procedures when working with fluid power equipment
- basic properties of fluids
- selection and suitability for different applications
- basic properties and units - mass, volume, density, specific volume, relative density, force and weight, pressure (absolute, atmospheric and gauge), temperature (celsius and kelvin), viscosity, surface tension
- introduction to temperature and pressure effects on the basic properties and applications
- precautions to be taken when changing type of fluid in a system
- awareness of different components including:
 - pipes (rigid and flexible)
 - valves, types and functions
 - filters and strainers for liquids
 - gauges and instruments - pressure/temperature gauges, liquid level gauges, thermometers, thermocouples, manometers, piezometers
 - pipe fittings - elbows/bends, enlargement/contractions, coupler/unions, tees
 - tanks and vessels - storage tanks, pressure vessels, header and surge tanks, weirs/dams/reservoirs
 - flow measurement instruments - venturi and orifice meters
 - pumps, motors/turbines
- linear actuators:
 - types, selection and functions
 - methods of supporting linear actuators
 - introduction to calculations related to linear actuators
 - recognition and drawing of standard symbols
 - observation and analysis of performance of linear actuators in laboratory circuits
- control valves (hydraulic and pneumatic):
 - directional controls and functions
 - check valves and functions
 - pressure controls and functions
 - flow controls and functions
 - recognition and drawing of standard symbols for control valves
 - drawing and analysis of typical circuits containing control valves
 - observation and analysis of performance of valves in basic circuits
- circuit design and analysis (single linear actuator):
 - drawing and analysis of circuit diagrams containing basic components
 - setting up and operating circuits on pneumatic and hydraulic benches in a fluid

REQUIRED SKILLS AND KNOWLEDGE

power laboratory

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use concepts of arithmetic in the solution of engineering problems	1.1.Units of physical quantities are converted to facilitate engineering calculations. 1.2.Calculations are performed to solve problems involving rational and irrational numbers. 1.3.Scientific notation is used to represent numbers. 1.4.Calculations are checked for reasonableness using estimating and approximating techniques.
2. Solve engineering problems involving algebraic expressions with one independent variable	2.1.Algebraic expressions are manipulated using mathematical operations in their correct order.
3. Use two-dimensional geometry to solve practical problems	3.1.Angles expressed in degrees are correctly converted to radians and vice versa. 3.2.The perimeter, area, length and angles of a range of two-dimensional figures are correctly calculated. 3.3.The volume and surface area of complex figures are correctly calculated. 3.4.Points identified in terms of cartesian coordinates can be converted to polar coordinates and vice versa.
4. Use trigonometry to solve practical problems	4.1.Basic trigonometry functions are used to calculate the lengths of the sides of right-angled triangles. 4.2.Inverse trigonometry functions are used to determine angles in a right-angled triangle given the lengths of two sides. 4.3.The sine rule is used to determine the lengths of the sides of acute and obtuse angled triangles given one side and two angles. 4.4.The cosine rule is used to determine the lengths of the sides of acute and obtuse angled triangles given two sides and one angle.
5. Graph linear functions	5.1.Linear functions are solved graphically and equations of straight lines are determined from the slope and one point, or two points. 5.2.Two linear functions are solved simultaneously both algebraically and geometrically. 5.3.The length and mid point of a line segment are determined.
6. Solve quadratic	6.1.Quadratic equations are solved.

ELEMENT	PERFORMANCE CRITERIA
equations	6.2. Simultaneous linear and quadratic equations are solved.
7. Perform basic statistical calculations	7.1. Mean, median and mode are calculated from given data. 7.2. Standard deviation is calculated and interpreted employing graphical representation.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- using and applying mathematical formulas:
 - logical thinking
 - problem solving
 - calculating
 - applying statistics
 - using computer numerical methods
 - drawing graphs

Required knowledge

Look for evidence that confirms knowledge of:

- transposing and evaluating formulae
- polynomials
- straight line coordinate geometry
- introduction to indices
- introduction to trigonometry
- circular functions
- trigonometry of oblique triangles
- trigonometric identities
- introduction to functions and their graphs

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify opportunities for workplace layout improvement	1.1. Basic analysis of workplace data is undertaken to determine sources of waste. 1.2. Future capacity requirement is obtained in accordance with policy and procedures. 1.3. Productivity improvement areas are established in accordance with organisational policy and procedures. 1.4. Appropriate productivity measures are established in conjunction with supervisors and other appropriate personnel.
2. Develop basic layout options for workplace improvement	2.1. Operation process charts, flow charts, flow process charts, and string diagrams etc. are used to develop basic layout options. 2.2. Information on ergonomics, health and safety hazards is considered in accordance with policy and procedures. 2.3. Improvements are developed in consultation with users and supervisors and in accordance with policy and procedures. 2.4. Simple economic appraisals for proposed improvements are developed in accordance with policy and procedures. 2.5. Layout options are referred to a higher authority for approval in accordance with policy and procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- communicating
- analysing
- documenting
- reviewing

REQUIRED SKILLS AND KNOWLEDGE

- applying principles of ergonomics
- applying productivity principles

Required knowledge

Look for evidence that confirms knowledge of:

- basic knowledge of workplace layout principles including at a basic level the degree to which workplace layout is affected by:
 - engineering processes and systems
 - materials flow patterns
 - types of production plant and machinery
 - materials handling methods
 - unit loads
 - types of production methods
- productivity:
 - definition and measures of productivity
 - factors affecting productivity
 - productivity and quality
 - value adding
- recording techniques:
 - flow charts
 - activity relationship charts
 - outline process charts
 - flow process charts
 - multipurpose charts
 - string diagrams
 - basic principle of ergonomics
 - the concept of waste and its application to productivity improvements

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to assist in the design of basic workplace layout.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with assisting in the design of basic workplace layout, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Waste	<ul style="list-style-type: none"> Excess production and early production, waiting, materials queuing, not moving, people not working, transporting, double handling, poor process design, inventory, stores, buffers, lot sizes, inefficient performance of a process, reaching, bending, exertion Making defective items, rework, rejects, unnecessary inspection
Information on ergonomics, health and safety hazards	<ul style="list-style-type: none"> Standard references including NOHSC guidelines, any relevant Acts and Regulations, information contained in manufacturers' manuals, standard operating procedures Workplace reports including: incident reports, commissioned studies, advice from relevant leaders/supervisors/workplace committees

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify potential to eliminate waste in the current system	1.1.Value chain members are identified. 1.2.Principles of waste elimination are applied to each step in the value chain. 1.3.Current storage/inventory in value chain is analysed for excesses. 1.4.Production lead time is analysed for all components, sub-assemblies and assemblies subject to JIT including potential for set up time reductions. 1.5.Kanban cards and flow authorisation indicators are analysed for appropriate quantity. 1.6.Workplace layout is analysed for flow and application of housekeeping principles. 1.7.Production process is analysed for excess rework and scrap.
2. Draft workable procedures to implement improvements to JIT system	2.1.Key internal stakeholders are liaised with to develop solutions to JIT issues. 2.2.Key external members of the value chain are liaised with to develop solutions to JIT issues. 2.3.Key measures for improvements are determined. 2.4.The plan is referred to a higher authority for approval in accordance with policy and procedures.
3. Implement the JIT system/improvements	3.1.The JIT system/improvements are implemented according to workplace procedures. 3.2.Key measures of JIT are monitored. 3.3.Regular liaison is conducted with key stakeholders seeking areas for improvement.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- analysing
- communicating

REQUIRED SKILLS AND KNOWLEDGE

- negotiating
- reading/interpreting/following information on written job instructions, specifications, standard operating procedures and other applicable reference documents
- planning and sequencing operations

Required knowledge

Look for evidence that confirms knowledge of:

- JIT manufacturing philosophy
- push and pull systems
- Kanbans
- work cells
- set up time reduction techniques
- group technology
- ABC analysis of inventory
- principles of TQM
- principles of TPM
- hazards and control measures associated with applying basic JIT systems to the reduction of waste
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to apply basic JIT systems to the reduction of waste.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, i.e. the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying basic JIT systems to the reduction of waste or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Value chain	Includes the entire production system, beginning with the customer, and includes the sales outlet, product design, processing and supply
Waste	<ul style="list-style-type: none"> • Includes activities and results to be eliminated within manufacturing • Categories of waste include excess production and early production, waiting, materials queuing, not moving, people not working, transporting, double handling, poor process design, inventory, stores, buffers, lot sizes, inefficient performance of a process, reaching, bending, exertion, making defective items, rework, rejects, unnecessary inspection
JIT	<ul style="list-style-type: none"> • Includes a production scheduling concept that calls for any item needed at a production operation - whether raw material, finished item, or anything in between, to be produced and available precisely when needed • JIT systems may also be known as part of other manufacturing systems such as lean manufacturing, agile manufacturing or similar
Kanban	<ul style="list-style-type: none"> • Includes a card or sheet used to authorise production or movement of an item • Kanban is typically applied to batch type operations and the production is measured in units produced. In continuous manufacturing organisations, production is measured in terms of production rate
Flow authorisation indicator	May include Kanban bin, ticket or similar, or may be some other indicator of demand pull

RANGE STATEMENT	
Housekeeping principles	<p>Principles of 5S which refer to the five Japanese words seiri, seiton, seison, seiketsu, shitsuke. These words are shorthand expressions for principles of maintaining an effective, efficient workplace:</p> <ul style="list-style-type: none"> • seiri - eliminating everything not required for the work being performed • seiton - efficient placement and arrangement of equipment and material • seison - tidiness and cleanliness • seiketsu - ongoing, standardised, continually improving seiri, seiton, seison • shitsuke - discipline with leadership
Key measures	<ul style="list-style-type: none"> • May include inventory levels, lead time, delivery, productivity/ production rate, set up time, other measures of pull through the value chain, quality, rework, scrap rates • Pull system refers to a manufacturing planning system based on actual real-time needs from sales or equivalent - i.e. 'make what we sell'

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify existing set up procedures	1.1. Internal and external set up activities are identified and recorded. 1.2. All waiting time is identified and recorded. 1.3. All adjustment times are identified and recorded. 1.4. Any hazards and risks from all steps in the set up are identified and recorded.
2. Analyse set up procedures to determine opportunities for improvement	2.1. Opportunities for conversion of internal set up activities to external set up are considered. 2.2. Opportunities to reduce/eliminate adjustment times, waiting times and any hazards and risks are considered.
3. Prepare recommendations for operational improvement	3.1. Liaise with relevant people to validate recommendations. 3.2. Recommended improvements are recorded.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- communicating, including preparing reports
- analysing hazards
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures and other applicable reference documents

Required knowledge

Look for evidence that confirms knowledge of:

- principles of set up time reduction including:
 - internal and external set up activities
 - waiting time
 - adjustment times

REQUIRED SKILLS AND KNOWLEDGE

- set up hazards and risks
- planning and sequencing operations:
 - application of ergonomic principles and hierarchy of control in regard to hazards
 - hazards and control measures associated with developing recommendations for basic set up time improvements, including housekeeping
 - safe work practices and procedures

Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Set up procedures

May refer to:

- an exchange of dies/tools or a change between batches
- any quantum equipment/process change to produce a different product

Internal and external set up activities

- Internal set up activities are those that can be done only when the machine or process is not actively engaged in production
- External set up activities are those that can be done concurrently when the machine or process is actively engaged in production

Waiting time

Includes clean up activities, waiting for tools, waiting for materials, waiting for instructions, waiting for approvals, operator training etc.

---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assist in mapping the supply stream for a nominated product/process	1.1.All organisations in the supply stream are identified. 1.2.All relevant steps in own organisation are identified.
2. Assist in assessing the value added at each step	2.1.Value added and contributed by each supplier organisation is identified. 2.2.Value added by each internal step is identified. 2.3.Activities which do not add value to customer benefit/features are identified. 2.4.External/internal supply chain members are liaised with to identify methods to reduce non value adding activities. 2.5.Information is collated and assessed. 2.6.Suggestions for improvements are recorded and submitted for approval.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- communicating
- planning
- assessing
- problem solving
- analysing
- prioritising
- reading and interpreting
- recording

Required knowledge

Look for evidence that confirms knowledge of:

- purpose of supply chain analysis

REQUIRED SKILLS AND KNOWLEDGE

- methods of supply chain analysis
- types of waste, non value adding activities and methods of reducing them
- process used to make own product
- processes employed by other members of the supply chain sufficient to have meaningful dialogue with them
- safe work practices

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Interpret enterprise maintenance strategy	<p>1.1. Objectives and details of enterprise maintenance strategy are obtained in accordance with enterprise procedures.</p> <p>1.2. Major techniques and tools for monitoring are confirmed in consultation with key stakeholders and supervisor.</p>
2. Use preventative maintenance techniques and tools	<p>2.1. Techniques and tools are selected and confirmed in consultation with key stakeholders and supervisor in accordance with enterprise requirements.</p> <p>2.2. Key information and performance indicators required are identified in consultation with key stakeholders and supervisor.</p> <p>2.3. Data collection is undertaken as required.</p>
3. Interpret results	<p>3.1. Actual information/performance indicators are compared with target levels set by supervisors and/or equipment manufacturers.</p> <p>3.2. Required adjustments are developed in consultation with key stakeholders and supervisor.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- conducting root cause analysis
- identifying mean time between failures
- basic analysis of the effects of failures
- conducting condition monitoring
- analysing
- assessing
- communicating
- problem solving
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other

REQUIRED SKILLS AND KNOWLEDGE

applicable reference documents

- planning and sequencing operations
- checking for conformance to specifications
- checking and clarifying task-related information

Required knowledge

Look for evidence that confirms knowledge of:

- characteristics and strengths of different types of strategies
- characteristics and strengths of different types of techniques and tools
- principles of process equipment and how to improve its reliability
- resources required and how to obtain them
- hazard and control measures associated with using basic preventative maintenance techniques and tools, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assist in determination of a process sequence	1.1. A basic analysis of process specifications using relevant job instructions, drawings, cost objectives, and operational procedures is undertaken. 1.2. An operation or process sheet is prepared based on analysis. 1.3. The process steps are clearly documented and approved in accordance with standard operating procedures. 1.4. Flow charts, based on analysis, are produced where required. 1.5. Material and parts lists are prepared, based on analysis, for the production process in accordance with standard operating procedures. 1.6. Tooling and/or equipment requirements are determined in conjunction with supervisor and other expert personnel. 1.7. All requirements are documented in accordance with standard operating procedures.
2. Prepare and submit new/revised operation sheet/flow chart/parts list as required	2.1. New/revised operation sheet/flow chart/parts list is prepared in accordance with standard operating procedures. 2.2. New/revised operation requirements are submitted in accordance with enterprise approval procedures.
3. Issue or file approved operation sheet/flow chart/parts list as required	3.1. Approved drawings and or parts lists are stored and catalogued or issued in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- communicating

REQUIRED SKILLS AND KNOWLEDGE

- prioritising

ELEMENT	PERFORMANCE CRITERIA
1. Use software interface	1.1.Keyboards, track ball/mouse and monitor and/or other peripherals are used to access system. 1.2.The system and the screens are navigated. 1.3.Messages are acknowledged. 1.4.Information is processed in the required format.
2. Access information	2.1.Relevant data and information is obtained from the system. 2.2.The status of items in the system is identified. 2.3.Historical data and information are accessed. 2.4.Information is interpreted and actions are prioritised.
3. Take appropriate actions	3.1.Actions are taken in response to resource planning information. 3.2.Follow-up is conducted as appropriate to ensure anticipated results have occurred. 3.3.Adjustments and variations are recorded according to procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- using basic computer functions
- analysing
- communicating
- undertaking production planning and control
- prioritising
- reading and interpreting
- recording

Required knowledge

Look for evidence that confirms knowledge of:

REQUIRED SKILLS AND KNOWLEDGE

- technical knowledge and skills needed to operate process
- hierarchy of ERP, MRP or similar systems and operation
- information available from and business activities exercised by/through the ERP, MRP system
- closed loop manufacturing system basics
- business planning, demand, resources
- Master Production Scheduling (MPS)
- Materials Requirement Planning (MRP)
- Capacity Requirement Planning (CRP)
- system inputs:
 - bills of material
 - need for accuracy
 - inventory statistics
 - planning data
 - introduction to capacity management
 - production activity control
- system outputs:
 - planned orders
 - order action
 - firm/tentative
- Just in Time (JIT)
 - techniques
 - production smoothing
 - single unit flow
 - Kanban
 - set up time reduction (SMED)
 - lead time reduction
- production control methods:
 - types
 - master schedules
 - control by exception
 - computer control
 - visual control
 - combination MRP2/Kanban system
 - shop floor - day-to-day - Kanban
- scheduling:
 - techniques
 - order release

REQUIRED SKILLS AND KNOWLEDGE

- policies
- centralised
- decentralised
- inventory control:
 - raw
 - work-in-process
 - finished goods
 - lean manufacture and inventory
 - inventory costs
 - procurement
 - material control techniques
 - ABC (Pareto) Analysis
 - Economic Order Quantity (EOQ)
 - Min-Max systems
 - Kanban - Just in Time
 - cycle counting

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to use ERP, MRP planning software systems in manufacturing. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and to be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with using ERP, MRP planning software systems in manufacturing, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and to be capable of applying the competency in new and different situations and contexts. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate will have access to all tools, equipment, materials and</p>

EVIDENCE GUIDE	
	documentation required. The candidate will be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
System	Includes ERP, MRP or similar software programs
Appropriate actions	Appropriate actions are actions in regard to production schedules, materials management, purchasing and ordering, transport and logistics that are needed as a result of information obtained from resource planning software
Resource planning information	May include information from ERP, MRP or similar systems that provide information on master production schedule, materials requirement plan, capacity requirement plan, bills of material, inventory control and statistics, order action, schedules

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select appropriate project management tools and develop project plan	1.1.A working knowledge of project management tools is used to develop a plan for a simple manufacturing related project and schedule of activities to meet project outcomes. 1.2.The plan is referred to a supervisor for approval in accordance with policy and procedures.
2. Implement planned activities	2.1.Plan is implemented according to schedule. 2.2.All affected personnel are communicated with regarding project implementation. 2.3.Supply and/or allocation of required resources including materials and equipment is organised. 2.4.Project progress is regularly reported in relation to agreed milestones to provide a measure of performance throughout the life of the plan. 2.5.Progress is discussed in consultation with other staff and contractors to ensure effective outcomes.
3. Review project plan and schedule	3.1.Project outcomes, performance standards and project objectives are monitored and analysed against specifications and the results are reported in accordance with procedures. 3.2.Variations in keeping to plan are discussed with supervisors and are resolved in accordance with enterprise policy and procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • using computing skills • using interpersonal communication skills • negotiating • report writing • reading, interpreting and following information on written job instructions,

REQUIRED SKILLS AND KNOWLEDGE

specifications, standard operating procedures and other applicable reference documents

- planning and sequencing operations
- checking and clarifying task-related information

Required knowledge

Look for evidence that confirms knowledge of:

- understanding of applicable regulations and standards
- appropriate software
- Gantt charts
- critical path method (CPM)
- bar charts
- work breakdown structures
- program evaluation and review technique (PERT)
- basic quality assurance techniques
- knowledge of availability of resources
- safe work practices and procedures
- a basic knowledge of:
 - the project life cycle and the relationship between project phases
 - planning and control procedures, resource management and risk management

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify production requirements	1.1.The production processes to be used are identified from instructions and specifications provided. 1.2.Customer requirements in terms of volume, delivery time and arrangements and quality are obtained from supervisor or other appropriate sources. 1.3.Customer and process requirements are analysed to determine production requirements.
2. Develop an activity plan production requirements	2.1.Production requirements are divided into activity elements. 2.2.A network diagram is constructed. 2.3.The critical path is determined. 2.4.The latest start/earliest finish and slack time are determined for activity elements to meet requirements. 2.5.Assistance and approval from supervisor is obtained.
3. Prepare the production schedule	3.1.A production schedule is prepared which lists: <ul style="list-style-type: none"> 3.1.1. customer requirements 3.1.2. time constraints 3.1.3. production requirements 3.1.4. machine availability and capability 3.1.5. inventory requirements 3.1.6. procurements 3.1.7. supply capacities 3.1.8. contingency analysis. 3.2.A simple bill of materials required is prepared to assist in control of materials. 3.3.Schedule is depicted using a Gantt chart or similar graphical display. 3.4.Schedule allows for future changes to improve performance. 3.5.Assistance and approval from supervisor is obtained.
4. File and issue the schedule	4.1.The schedule is reviewed and tested with appropriate personnel. 4.2.The schedule is referred to appropriate personnel for implementation. 4.3.All supporting documents are provided for implementation. 4.4.The schedule is filed/issued according to workplace

ELEMENT	PERFORMANCE CRITERIA
	procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- prioritising
- communicating
- managing time
- organising
- documenting
- using project management tools
- analysing
- calculating
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task-related information

Required knowledge

Look for evidence that confirms knowledge of:

- basic knowledge of:
 - types of production
 - jobbing production
 - batch production
 - process production
 - Just in Time procedures
 - cellular manufacture
 - scheduling
 - interpreting customer requirements
 - machine capability and selection
 - Gant charts

REQUIRED SKILLS AND KNOWLEDGE

- contingency plans
- introduction to project planning techniques
- introduction to PERT/CPM diagrams
- introduction to critical path networks
- hazards and control measures associated with preparing a simple production schedule, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to prepare a simple production schedule.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and to be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with preparing a simple production schedule, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Simple production schedule

- Applies to the preparation of a schedule for the manufacture of a single component or single assembly function; or to operations for a single small production work unit or production cell
- The schedule will involve only a small number of constraints or variables

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan procurement activities	1.1.The procurement requirements and outcomes are interpreted, understood and, where necessary, clarified. 1.2.Instructions for procedures to manage standard contract in accordance with legislation, policy and procedures are obtained. 1.3.Supplier is selected in accordance with workplace procedures.
2. Establish contractual arrangements	2.1.Method of requesting and receiving offers is in accordance with organisational policy and procedures. 2.2.Evaluation and selection of offer is made in consultation and in accordance with policy and procedures. 2.3.Contractual arrangements are submitted for approval and formalised in accordance with policy and procedures. 2.4.Notification of successful and unsuccessful suppliers occurs in accordance with organisational policy and procedures.
3. Follow up on contracts	3.1.Start-up or transition arrangements are confirmed and monitored in accordance with policy and procedures. 3.2.Communication strategies are implemented to ensure effective relationship with contractor/s is managed in accordance with policy and procedures. 3.3.Contractual obligations to contractors are met in accordance with policy and procedures. 3.4.Contractor performance is monitored to ensure contractual obligations are being met. 3.5.Approvals are obtained for any contract variations in accordance with organisational and contractual requirements. 3.6.Disputes/complaints procedures are followed and implemented in accordance with contractual requirements. 3.7.Records are maintained in accordance with organisational and legal requirements to provide an audit trail and for other organisational purposes.
4. Complete contractual	4.1.Goods or services received are verified as meeting

ELEMENT	PERFORMANCE CRITERIA
arrangements	<p>outcomes required.</p> <p>4.2.Contracts are finalised, cancelled or terminated in accordance with organisational and contractual requirements.</p> <p>4.3.Records are maintained in accordance with organisational requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- planning and evaluating
- using numeracy skills for developing and using a budget and contractual timeframes
- effectively consulting and negotiating with suppliers involving oral and written exchanges
- using writing skills for procurement specification in unambiguous terms
- reading contractual agreements which may include complexity of language and style
- undertaking ongoing communication with contractor which may involve explanation or clarification of written and oral information; note-taking at meetings; active listening; checking for understanding and recording
- using numeracy skills for scheduling activities, and planning activities and timeframes

Required knowledge

Look for evidence that confirms knowledge of:

- applicable Commonwealth/State/Territory government legislation
- procurement policies and practices
- method of requesting and receiving offers
- procurement approval procedures
- evaluation and selection of offer
- procedures to manage the contract in accordance with legislation, policy and procedures
- procedures for receipt and payment of goods or services

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to undertake supervised procurement activities.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with undertaking supervised procurement activities, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Standard contract	Covers contracts where deliverables and conditions desired from the supplier have already been determined by the company and where there are pre-existing procedures for requesting and receiving offers
Method of requesting and receiving offers	May include request for quotation, request for offer, direct purchases using existing supply agreements such as standing offers, common use arrangements, oral quotations, written quotations, direct purchase from retail or wholesale outlets, electronic commerce
Evaluation	May include price comparison, timing, suitability
Contractual arrangements	May include verbal and written orders, purchase order, credit card, petty cash, memoranda of understanding/ memoranda of agreement, in-house service level agreements, contracts, common use arrangements/ standing offers
Records	May include purchase requests and orders, invoices and payment requests, statements and petty cash vouchers, offer and contract documents, evaluation process documentation, records of authorised officers' decisions, records of supplier performance

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Obtain tender/cost estimate requirements	1.1.Tender/cost estimate brief is obtained within established organisational framework, procedures and routines. 1.2.Key requirements are identified. 1.3.Assistance/approval from supervisor is obtained.
2. Prepare a simple cost estimate	2.1.Relevant costing data is identified and interpreted from the tender/cost estimate documents. 2.2.Organisational production costs are obtained. 2.3.Cost estimates are prepared according to established organisational framework, procedures and routines. 2.4.Assistance/approval from supervisor is obtained.
3. Verify cost estimate	3.1.Actual cost information is sourced from a completed tender/cost estimate project. 3.2.Actual costs are compared with estimated cost to identify deviations. 3.3.A report is prepared for supervisors to explain deviations according to established organisational framework, procedures and routines. 3.4.Assistance/approval from supervisor is obtained.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures and other applicable reference documents
- undertaking simple report writing
- planning and sequencing operations
- checking and clarifying task-related information

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

Look for evidence that confirms knowledge of:

- overview of the impact on cost estimates of:
 - product manufacture
 - demand vs. capability
 - make-or-buy
 - market-demand-price-competition
 - cost control
 - product costs
 - materials
 - resource consumption (water, power, etc.)
 - labour
 - standard time/usage
 - margins, profit/loss
 - using proforma estimate sheets
 - using estimates as targets
 - impact of value adding non value adding activities
- lead times associated with:
 - raw material availability
 - equipment, tool design and commissioning
 - prototypes and trial builds
 - estimating processes
 - use of contract documents - drawings, specifications
 - consideration of general conditions and any special conditions
 - application of resources costs - hourly rates (labour, plant, material, subcontractors)
 - contingency costs
 - allowance for contract variations
- hazards and control measures associated with preparing a simple cost estimate for a manufactured product, including allowing for housekeeping, safe work practices and procedures

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Simple cost estimate

- Based on known production and material costs
- Cost can be estimated using a limited number of variables
- Estimate relates to a discrete product with a limited number of operations for manufacture

Tender/cost estimate brief

May include project guidelines and instructions, internal or external requirements, information from tender/contract documents, drawing specifications

Key requirements

May include timing, budget, resources, output, special conditions

Deviations

Reported as fractions or percentages, does not include standard deviations, six sigma etc.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Interpret and apply quality standards and procedures	1.1. Quality standards and procedures are interpreted and applied to individual and teamwork in accordance with standard operating procedures.
2. Monitor and report on quality	2.1. Quality of all received, in-work and finished materials and products is monitored as required in accordance with standard operating procedures. 2.2. Designated process improvement tools are used either individually or in a team to identify and solve design, development and production quality problems. 2.3. Designated analytical tools are used to evaluate principal causes of process variation in consultation with the team or other subject experts. 2.4. Further action to improve quality is recommended, where required, using standard operating procedures.
3. Assist in implementing approved improvement strategy or strategies	3.1. Key indicators and performance measures are established and agreed in consultation with the team or other subject experts. 3.2. Process, product output is measured against key indicators in consultation with the team or other subject experts. 3.3. Steps are taken to lock in improvements in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • undertaking problem solving • undertaking basic arithmetic calculations • interpreting known data • using standard texts and references • undertaking simple report writing

REQUIRED SKILLS AND KNOWLEDGE

- reading and interpreting engineering specifications

Required knowledge

Look for evidence that confirms knowledge of:

- the importance of quality
- the key principles of quality improvement programs
- the influence of variation
- use and application of Australian standards/ ISO 9000 etc.
- quality policy
- quality manuals
- quality procedures
- quality definitions
- purpose of quality audits
- simple sampling techniques and possible sources of sampling error and bias
- simple statistical tools
- problem solving techniques including:
 - process flow charts, interpretation and construction of simple case
 - cause and effect diagrams, fault trees etc.
 - root cause analysis
 - Pareto diagrams

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to participate in quality assurance techniques - basic. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with participating in quality assurance techniques - basic, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

EVIDENCE GUIDE

Guidance information for assessment	
--	--

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality standards and procedures	Includes quality programs such as TQC, six sigma etc., quality policy, quality manuals, ISO 9000 and associated quality standards
Process improvement tools	Includes process flow charts, cause and effect diagrams, brainstorming sessions, Pareto diagrams, check sheets, run chart, scatter diagrams etc.
Analytical tools	Can include statistical analysis, critical incident analysis, root cause analysis etc.

MEM30025A Analyse a simple electrical system circuit

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers analysing a simple circuit by identifying the function and operation of the circuit and circuit components contained within approved manufactured products.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to all manufacturing environments. It covers analysis of existing circuits against specifications only and does not extend to determining modifications to circuits.</p> <p>This unit does not cover the skills involved in direct measuring of values requiring connecting or disconnecting of circuits and components covered by licensing requirements. Where such values are required they are to be obtained through the assistance of appropriately licensed personnel or through undertaking the specified training for the appropriate licence.</p> <p>Work is conducted in accordance with regulatory and legislative requirements in each State and Territory</p> <p>Work is carried out under supervision.</p> <p>Band: 0</p> <p>Unit Weight: 0</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish function and purpose of selected circuit	1.1.All relevant drawings, specifications, manuals and documentation are obtained and interpreted in accordance with workplace procedures. 1.2.Circuit and component installation is observed where required to establish function and purpose. 1.3.Safety procedures to be followed are determined in conjunction with supervisors and in accordance with legislative and regulatory requirements. 1.4.Appropriate personnel are consulted with to establish job requirements.
2. Extract a circuit diagram from existing drawings and documentation	2.1.Appropriate components and assemblies are identified. 2.2.Where required, components and/or materials are identified from supplier/manufacturer catalogues. 2.3.Circuit diagram is extracted. 2.4.Drawing conventions and symbols are used in the diagram in accordance with codes and workplace procedures.
3. Analyse the circuit for electrical characteristics	3.1.Functions of the circuit and components are compared against design characteristics and operational specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- calculating
- reading and interpreting specifications and drawings
- drawing to scale
- analysing
- planning and sequencing operations
- checking and clarifying task-related information
- checking for conformance to specifications

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

Look for evidence that confirms knowledge of:

- safe work practices and procedures
- hazard and control measures associated with analysing the function of a simple electrical system circuit
- dangers and safety precautions:
 - electrical hazards
 - earthing and insulation
- The function of the following components:
- resistors:
 - fixed (composition and wire wound)
 - variable (rheostats, potentiometers and trimmers)
 - non-linear (thermistors)
- capacitors:
 - fixed (ceramic, plastic and electrolytic)
 - variable
 - magnetic
 - transformers (AF, RF and power)
 - chokes
 - relays
 - contactors
 - rectifiers
 - smoothing filters
 - voltage regulators and feedback
- basic physics:
 - conductors
 - insulators
 - semiconductors
 - current flow
 - voltage
 - resistance
 - colour code
 - power rating
 - Ohm's Law
 - electrical units
 - power in electrical circuits
- protection methods:

REQUIRED SKILLS AND KNOWLEDGE

- fuses
- circuit breaking
- safety interlocks
- earthing - personnel safety
- a.c. circuits:
 - series and parallel a.c. circuits
 - power in a.c. circuits
- power supplies:
 - transformers
 - rectifiers
 - smoothing filters
 - voltage regulators and feedback
 - function and operation of a simple low voltage d.c. power supply
 - function and operation of the transformer in a simple low voltage d.c. power supply, including the significance of the turns ratio
 - function in a simple low voltage d.c. power supply of rectifiers including the significance of the diode characteristics, for both half and full wave types
 - operation of smoothing filters in a simple low voltage d.c. power supply
 - operation of simple zener diode type voltage regulators in a simple low voltage d.c. power supply
 - feedback

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Perform basic electronic calculations	1.1. Calculations are performed for a given circuit voltage, current, resistance and d.c. power. 1.2. The period, frequency, RMS, peak and peak-to-peak voltages are calculated for a given repetitive waveform. 1.3. Waveform calculations are verified using an oscilloscope.
2. Select, test and use simple electronic switching circuits	2.1. Transistors required for simple switching applications are selected. 2.2. The circuit is wired up and tested using suitable prototyping equipment. 2.3. Calculations are verified.
3. Select, test and use simple electronic timing circuits	3.1. The appropriate timing circuit is selected and the time constant is calculated. 3.2. The circuit is wired up and tested using suitable prototyping equipment. 3.3. Calculations are verified.
4. Select common power supplies and power control devices	4.1. Appropriate rectification is selected. 4.2. Appropriate power control devices are selected.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- using a multimeter to measure a.c. and d.c. voltages, resistance and capacitance
- setting an oscillator/signal generator to a specified frequency and amplitude
- using an oscilloscope to record wave shapes and to measure the peak-to-peak voltage and the period of any repetitive waveform
- identifying sine waves, cosine waves, square waves, triangular waves and sawtooth waves
- communicating

REQUIRED SKILLS AND KNOWLEDGE

- planning
- assessing
- problem solving
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures and other applicable reference documents
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit
- checking for conformance to specifications
- checking and clarifying task related information

Required knowledge

Look for evidence that confirms knowledge of:

- electronic concepts and units
- voltage
- current
- resistance and capacitance
- power
- frequency and period
- common electronic instruments
- multimeters
- power supplies
- signal generators
- oscilloscopes
- timing circuits and oscillators
- semiconductor devices
- diodes (power, zener, LEDs)
- transistors
- linear integrated circuits
- power control devices (triacs, SCRs)
- power supplies
- hazards and control measure associated with selecting and test components for simple electronic switching and timing circuits, including housekeeping
- safe work practices and procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Write and test basic programs using a hand program loader	1.1. Programs are written in accordance with programming rules. 1.2. Programs are loaded into a PLC. 1.3. Programs are verified with a supervisor. 1.4. The operation of programs is tested with assistance from a supervisor.
2. Edit and monitor basic programs using a hand program loader	2.1. The monitoring function is used to verify circuit conditions and check the current values of timers and counters. 2.2. Editing features are used to make minor program changes.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- communicating
- planning
- assessing
- problem solving
- analysing
- reading and interpreting engineering specifications, standard operating procedures and other applicable reference documents
- organising information
- using numeral operations, geometry and calculations/formulae within the scope of this unit
- checking for conformance to specifications
- planning and sequencing operations
- checking and clarifying task-related information

Required knowledge

Look for evidence that confirms knowledge of:

REQUIRED SKILLS AND KNOWLEDGE

- hazards and control measures associated with preparing basic programs for PLC, including housekeeping
- safe work practices and procedures
- General knowledge of programmable controllers including:
 - basic PLC operation: definitions, terminology and block diagrams; scan cycle
 - basic programming rules; addressing for I/O; halt; run
 - programming (using a hand programmer): flowcharts/steps to use when programming; clearing of memory; ladder format
 - Boolean/mnemonic/statement list format; series circuits; parallel circuits; latching circuits; stack register operation; combination series/parallel circuits; inversion elements; timers
 - counters; monitoring of discrete I/O and timer/counter values; edit (insert and delete elements)
- connection of discrete input and output devices to a PLC

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop product knowledge in a nominated area	1.1.Product purpose/s and use/s are identified 1.2.Key features of the product are identified. 1.3.Product features are identified. 1.4.The strengths and weaknesses of competitors' products are established from available sources.
2. Assist in identification of sales prospects	2.1.Assist in identification of potential clients from available sources in accordance with company procedures 2.2.Assist in targeting present, previous and new clients through nominated prospecting methods as required.
3. Apply product knowledge to client requirements	3.1.Assist in the development and presentation of product/system promotional information. 3.2.Provide information on the technical product/process to meet the client's requirements.
4. Assist in closing the sale	4.1.Conditions of the agreement are negotiated. 4.2.Process and completion of the sales transaction comply with organisational requirements.
5. Assist in providing after sales service	5.1.Assist in matching client's need and identifying opportunities for improvement/s. 5.2.Assist in training clients in applying technical products. 5.3.Review and report on client's feedback.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • communicating • literacy skills to interpret legal requirements, product labelling and description and organisational requirements • sales data interpretation skills • information management skills, including the ability to summarise information

REQUIRED SKILLS AND KNOWLEDGE

verbally and non-verbally

- ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities
- use of internet and other technology to locate prospect information
- interpretation of numerical data associated with prospects
- use of technology to store and manage prospect information
- ability to apply analytical skills in relating products to prospects' requirements
- negotiation skills

Required knowledge

Look for evidence that confirms knowledge of:

- basic product knowledge in a specific nominated area
- buying and selling processes
- organisational requirements, including policy and procedures
- key competitors and their products
- industry trends and developments
- legislative and regulatory requirements relevant to the product/s in regard to occupational health and safety and environmental issues
- range of prospecting methods, and prospect information management strategies
- prospecting as a key component of the overall sales process
- familiarity with range of buyer motives
- sales closure techniques, and situations in which it is appropriate to attempt closure
- safe work practices and procedures

MEM30029A Use workshop equipment and processes to complete an engineering project

Modification History

Release 1 (MEM05v9)

Unit Descriptor

This unit of competency covers the identification and use of a range of common workshop equipment and processes to complete a simple engineering project. It also focuses on developing and applying basic workshop skills and developing knowledge about equipment and processes and relating it to typical technical work requirements.

Application of the Unit

This unit applies to technical employees undertaking projects or operations requiring processes, techniques and workshop practices to produce items or components. The unit is broad-based and aims to assist technical workers to better integrate their roles into a manufacturing or engineering environment through exposure to basic, practical engineering workshop equipment and processes.

The unit is intended for technical workers, where practical workshop skills do not form a major part of the work role.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

- | | | | |
|---|--|-----|---|
| 1 | Research common engineering workshop equipment and processes | 1.1 | Identify sources of professional, technical and trade assistance |
| | | 1.2 | Identify common processes and techniques for working, shaping and joining metal, alloys and others materials |
| | | 1.3 | Identify common engineering hand and power tools and their applications |
| | | 1.4 | Identify common workshop equipment and applications |
| 2 | Identify resources required to manufacture a simple engineered item | 2.1 | Interpret design information from drawings and instructions |
| | | 2.2 | Select processes and techniques appropriate to task and level of skill |
| | | 2.3 | Identify required tools, equipment, material and services |
| | | 2.4 | Prepare a simple work plan showing operational sequences, work priorities and optimal use of time and resources |
| 3 | Use workshop equipment and processes to manufacture a simple engineered item | 3.1 | Correctly prepare materials and equipment for the required operations |
| | | 3.2 | Use tools and machines safely and correctly |
| | | 3.3 | Follow work health and safety (WHS) procedures, standard operating procedures and supervisor instructions are correctly |

- 3.4 Obtain assistance from appropriate persons in the event of problems and difficulties
 - 3.5 Follow safe work practices and procedures
 - 3.6 Implement hazard control measures, where practicable
 - 3.7 Complete item manufacturing and check against specifications and work plan
 - 3.8 Clear work area of scrap and waste
 - 3.9 Clean work and secure equipment and work area according to standard procedures
-
- 4 Assess workshop equipment and processes to technical engineering activities and engineering design process
 - 4.1 Justify selected workshop processes in terms of design criteria
 - 4.2 Assess selected tools and equipment for process safety and efficiency
 - 4.3 Evaluate task and workshop processes against typical technician work activities

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- reading, confirming and following information on written job instructions, manufacturer specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- identifying hazards and applying safe work practices and risk control measures
- communicating with appropriate persons
- following oral instruction and standard procedures
- applying numeracy, calculations and measurements within the scope of this unit
- accurately transferring dimensions to work pieces
- planning and sequencing tasks
- safely operating machines, hand tools and power tools
- setting up machines and tooling for basic operations

Required knowledge

Required knowledge includes:

- task planning and sequencing of operations
- marking out tools, techniques and media
- common measurement tools and techniques
- allowances and tolerances
- common engineering materials
- common hand tools and their applications
- common fixed and portable power tools and their applications
- common engineering machine operation
- common workshop techniques, such as hand and machine cutting, drilling, tapping, grinding, machining, welding, bending and shaping, and assembly
- workshop and machine safety, hazard identification and hazard control
- work holding methods
- basic tooling identification
- speeds and feeds
- machine set-up and operation
- cutting fluids and basic operational maintenance of machines
- assembly and fixing techniques, tools and accessories

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to plan and safely and efficiently undertake the manufacture a simple item using a range of hand and power tools and workshop machinery.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • prepare a basic work plan • identify and prepare selected materials and equipment • apply manual workshop techniques using a range of hand and power tools • use common engineering workshop equipment and machinery to complete individual parts of a project • assemble the component parts of a given project using a range of joining techniques • complete work requirements to specification • follow WHS procedures and hazard control strategies at all times.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. • The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of

	<p>workplace relevant contexts) together with application of underpinning knowledge.</p> <ul style="list-style-type: none">• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.• Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Appropriate persons</p>	<p>Appropriate persons will vary according to the nature of assistance and advice required and may include:</p> <ul style="list-style-type: none"> • supervisor • leading hand • foreman • trainer/coach • technicians • tradespersons • engineers
<p>Engineering processes and techniques</p>	<p>Engineering processes and techniques include:</p> <ul style="list-style-type: none"> • hand and machine cutting • drilling • tapping • grinding • machining • welding • bending and shaping • assembly using a variety of fasteners and hand tools
<p>Hand and power tools</p>	<p>Hand and power tools may include:</p> <ul style="list-style-type: none"> • screwdriver • spanners • hammers • files • jigs • cutting tools • scribes • chisels • centre punches • measurement instruments • gauges • portable drills • pedestal or bench grinder
<p>Workshop cutting and machining</p>	<p>Workshop machining and cutting equipment may</p>

<p>equipment</p>	<p>include:</p> <ul style="list-style-type: none"> • cut-off machines • surface grinders • drills • lathes • mills • planers • fuel gas cutting torch
<p>Fabrication equipment</p>	<p>Fabrication equipment may include:</p> <ul style="list-style-type: none"> • nibblers • metal shears • guillotines • pedestal drills • power saws • rivet fastening equipment • pan brake • press brake • universal metal working machine
<p>Welding equipment</p>	<p>Welding equipment includes:</p> <ul style="list-style-type: none"> • hoses, welding leads, gas shrouds, gas regulators, liners and contact tips – gas metal arc welding (GMAW) • welding leads, welding machines and electrode holder – manual metal arc welding (MMAW) • fuel gas and handheld thermal cutting equipment (thermal cutting)
<p>Preparation of materials and equipment</p>	<p>Preparation of materials and equipment may include:</p> <ul style="list-style-type: none"> • marking out • preheating • cleaning • setting up jigs and fixtures • clamping • tooling preparation, including basic sharpening • machine settings
<p>Safe work practices and procedures</p>	<p>Safe work practices and procedures include:</p> <ul style="list-style-type: none"> • relevant legislation • personal protective equipment • material safety management systems, including use of material safety data sheets (MSDS) • hazardous substances and dangerous goods code

	<ul style="list-style-type: none"> • local safe operating procedures • correct disposal of: <ul style="list-style-type: none"> • liquid waste • solid waste • minimisation, suppression and venting of gas, fume, vapour, smoke emissions, including fugitive emissions, as appropriate • avoiding excessive energy and water use • avoiding excessive noise • awareness of safe proximity limits and shielding procedures to other personnel • working safely around machinery • working safely with tools and equipment • risk and hazard recognition • emergency procedures • awareness of electrical hazards • first aid sources and procedures for the workplace
<p>Standard operating procedures</p>	<p>Standard operating procedures may include:</p> <ul style="list-style-type: none"> • the use of tools and equipment • instructions, including job sheets, cutting lists, plans, drawings and designs • reporting and communication • manufacturer specifications and operational procedures • emergency procedures
<p>Elements of the engineering project</p>	<p>Elements of the engineering job may include:</p> <ul style="list-style-type: none"> • tool and equipment selection • sequencing of operations • techniques and processes • conformance to specifications • material types • quantities produced
<p>Technical work activities</p>	<p>Technical work activities may include:</p> <ul style="list-style-type: none"> • design • production • quality assurance • product testing • purchasing • commissioning • scheduling

	<ul style="list-style-type: none">• planning• drafting

MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers the skills and knowledge required to apply functions of computer-aided design (CAD) software programs that are typically used in the production of detail drawings.

Application of the Unit

This unit is suitable for those working within a CAD or drafting work environment and may be applied across engineering and manufacturing environments. It covers competent use of a CAD program to perform basic drawing tasks used in the development of detail drawings.

Drawings may include plans, diagrams, charts, circuits, systems or schematics.

This unit includes using computer equipment and selecting software functions in order to generate basic drawing elements.

Work is conducted under supervision.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---------------------------------------|-----|---|
| 1 | Confirm drawing requirements | 1.1 | Confirm purpose, scope, and information and presentation requirements for drawing |
| | | 1.2 | Review available information relevant to project and work requirements, and identify and address further information needs |
| | | 1.3 | Identify computing equipment and software used in the organisation |
| | | 1.4 | Identify work flow and procedures for work supervision |
| | | 1.5 | Examine requirements for presentation of drawings |
| 2 | Identify key features of CAD software | 2.1 | Describe types of CAD software used for detail drafting, their key features and suitability for producing specific drawing outcomes |
| | | 2.2 | Describe types of CAD software used for design drafting, their key features and suitability for producing specific drawing outcomes |
| | | 2.3 | Identify differences in CAD process to generate 2-D drawings and 3-D models, and reasons for each presentation |
| | | 2.4 | Identify differences in CAD process to generate single and multiple view drawings, and reasons for each presentation |
| | | 2.5 | Identify CAD software used in the organisation and confirm compatibility with other software programs and peripheral equipment |
| | | 2.6 | Identify software features for linked specifications, |

catalogues or materials ordering

- | | | | |
|---|---|-----|--|
| 3 | Access software and set up for drawing work | 3.1 | Open software and navigate organisational filing and library system |
| | | 3.2 | Identify organisational and software templates and determine uses |
| | | 3.3 | Identify organisational symbols, codes and standards to be applied in drafting work and how these are accessed and applied |
| | | 3.4 | Apply workplace procedures to retrieve and manipulate required information and navigate computing technology |
| | | 3.5 | Set up working environment |
| 4 | Produce basic drawing elements | 4.1 | Use CAD functions to produce basic drawing elements |
| | | 4.2 | Use editing and transfer tools and methods to modify drawing elements |
| | | 4.3 | Apply dimensions, text and symbols to drawing elements |
| | | 4.4 | Import and export files into/out of working space |
| | | 4.5 | Generate different views and perspectives |
| | | 4.6 | Organise presentation of work |
| 5 | Complete CAD operations | 5.1 | Save and file drawing elements according to organisational procedures |
| | | 5.2 | Print drawing elements and evaluate presentation |
| | | 5.3 | Evaluate work and identify areas for improvement |
| | | 5.4 | Close applications, perform CAD housekeeping and maintain organisational filing system |

Required Skills and Knowledge

Required skills

Required skills include:

- literacy skills sufficient to read instructions for drawings work
- using computer technologies and navigating software
- numeracy skills sufficient to interpret technical information and determine scaling and layout issues
- navigating software to:
 - manipulate drawing entities
 - modify dimension styles
 - create and use layers
 - manipulate the drawing origin
 - define and utilise symbol libraries
 - utilise grids/grid snaps and object snaps
 - display views at multiple scales
 - add title blocks/frame to layout a drawing for printing
 - prepare advanced drawings in plane orthogonal or equivalent
 - set up prototype drawings
 - define and extract attribute data
 - create bills of materials (BOM) utilising attribute data and third-party application software

Required knowledge

Required knowledge includes:

- general knowledge of different approaches to drawing
- awareness of copyright and intellectual property issues and legislation in relation to drawing
- environmental and occupational health and safety (OHS) issues associated with the tools and materials used for drawing
- quality assurance procedures
- CAD program capabilities and processes

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to use CAD software to produce graphics commonly used in drafting work.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Specifically the candidate must be able to:</p> <ul style="list-style-type: none"> • work within typical site/teamwork structures and methods • apply worksite communication procedures • comply with organisational policies and procedures, including quality requirements • participate in work meetings • comply with quality requirements • use industry terminology • apply appropriate safety procedures • identify drawing work requirements and determine appropriate software functions and features • identify features and uses of CAD software used in detail and design drafting • access and use computing equipment and CAD software functions to produce drawing elements.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics</p>

	<p>and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with drafting or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement

CAD software	CAD software may include: <ul style="list-style-type: none">• AutoCAD• Inventor• Revit• Solidworks• ProSteel• XSteel• other programs
Key features	Key features may include: <ul style="list-style-type: none">• 2-D• 3-D modelling• built-in specifications• file import/export• save• undo• scale
Specific drawing outcomes	Specific drawing outcomes may include <ul style="list-style-type: none">• 2-D• 3-D modelling• drawings for specific engineering applications• orthographic/isometric/perspectives/schematics
Basic drawing elements	Basic drawing elements may include: <ul style="list-style-type: none">• points, line angles, circles, arcs, planes, figures and solids• squares, rectangles and triangles• bisected lines and dividing lines• polygon, ellipse, spline, dimension and hatch
Editing and transfer tools and methods	Editing and transfer tools and methods may include: <ul style="list-style-type: none">• delete, fillet, chamfer, erase, trim/extend, break, undo and redo commands• zooming and panning• moving, copying, rotating and mirroring• polar and rectangular duplication• object snaps• dimensions• selecting entities• dividing• scaling

MEM30032A Produce basic engineering drawings

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers producing drawings or similar graphical representations where the critical dimensions and associated tolerances and design specifications are predetermined.

Application of the Unit

This unit applies to any of the full range of engineering disciplines. All work is carried out under supervision and all specifications, dimensions and tolerances are predetermined. The unit covers application of introductory drafting skills to select and apply drawing protocols. Manual drafting or computer-aided design (CAD) drawing equipment may be used.

If CAD skills are required, MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements, should be selected.

Drawings are completed to Australian Standard (AS) 1100.101–1992 Technical drawing – General principles.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | |
|---|-------------------------------|--|
| 1 | Identify drawing requirements | <p>1.1 Identify information requirements for work and obtain all relevant job requirements and design specifications in accordance with workplace procedures</p> <p>1.2 Identify, interpret and analyse drawing requirements, specifications and relevant workplace information</p> <p>1.3 Interpret and apply industry terminology for drawing work</p> <p>1.4 Confirm communication practices required during drawing work</p> <p>1.5 Estimate time requirements for completing work</p> |
| 2 | Select drawing features | <p>2.1 Set up drawing list or register</p> <p>2.2 Determine level of detail and numbers of drawings required for work</p> <p>2.3 Plan presentation and layout, and determine drawing sheets, text style and size, and scales, appropriate for drawing work</p> <p>2.4 Identify features and applications of line types and thicknesses and select for drawing work</p> <p>2.5 Establish datums and dimensions</p> |
| 3 | Prepare and detail drawings | <p>3.1 Prepare drawings in plane orthogonal, isometric projection or equivalent</p> <p>3.2 Detail drawings in third angle projection, including auxiliary views, sections and assemblies</p> |

- 3.3 Draw sections through engineering components incorporating correct use of cutting plane symbols and conventions
 - 3.4 Include appropriate symbols for limits and fits, surface texture and geometric tolerances
 - 3.5 Resolve problems in consultation with a supervisor
 - 3.6 Check drawing compliance with work instructions and specifications
- 4 Select physical dimensions and produce engineering parts list
 - 4.1 Where required, select components and/or materials from supplier/manufacturer catalogues using predetermined design specifications
 - 4.2 Produce an engineering parts list in accordance with workplace procedures
- 5 Complete drawing documentation
 - 5.1 Obtain approval for drawings and/or parts list
 - 5.2 Store approved drawings and/or parts lists
 - 5.3 Catalogue and issue drawing and documentation in accordance with workplace procedures

Required Skills and Knowledge

Required skills

Required skills include:

- correctly using and maintaining equipment, including CAD
- manual drafting, filing and printing
- reading and interpreting specifications
- communicating with supervisor to confirm work requirements and outcomes
- visualising components
- preparing a drawing in plane orthogonal, isometric projection or equivalent
- determining drawing protocols required to complete drawing to industry standard
- selecting and locating text to support presentation
- establishing datums and dimensions for drawings
- drawing sections through an engineering component incorporating correct use of cutting plane symbols and conventions

Required knowledge

Required knowledge includes:

- drafting media, including cartridge paper, tracing paper, drafting film and plain printing paper
- layout conventions
- effective use of blank space, location of notes and symbols
- sectioning
- overview of graphical techniques
- assembly drawings and explosion drawings
- schematics/line drawings, graphs and pictorials
- standard engineering drawing symbols, references and terminology
- application of surface finish symbols to drawings
- uses of different scales in industry applications
- uses and types of line weights
- uses and types of drawing sheets
- type of information provided with drawings

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to produce basic engineering drawings to AS 1100.101–1992 Technical drawing – General principles.</p>

MEM30033A Use computer-aided design (CAD) to create and display 3-D models

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers using a computer-aided design (CAD) program to produce and plot basic 3-D view drawings.

Application of the Unit

This unit applies to the production of 3-D models using CAD software and associated equipment. This will include the use of region and solid modelling techniques, section views and pre-drawn library files. Work also includes extraction of properties and application of basic rendering techniques.

All work is conducted under supervision.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Confirm drawing requirements	1.1	Confirm purpose, scope and information and presentation requirements for drawing
		1.2	Identify, interpret and analyse available information relevant to project and work requirements, and identify and address further information needs
		1.3	Identify computing equipment and software used in the organisation
		1.4	Identify work flow and procedures for work supervision and confirm communication requirements through project
		1.5	Examine requirements for presentation of drawings
2	Create and display 3-D views	2.1	Set up a 3-D environment on the screen to allow multiple viewing
		2.2	Create 3-D views on the screen by manipulation of drawing planes and insertion of 3-D geometric shapes
		2.3	Draw on any plane of the 3-D view
		2.4	Use editing functions to modify 3-D geometric shapes in creating 3-D views
		2.5	Produce wire line, surface and solid face displays in isometric, perspective and orthographic projections
3	Detail 3-D model	3.1	Extract the mass and surface area of a given solid model made from a nominated material
		3.2	Apply basic rendering techniques to render solid model

to a specified set of criteria

- | | | | |
|---|--|-----|--|
| 4 | Save completed drawing file in various formats | 4.1 | Save file in an appropriate format to enable retrieval and use in a CAD system |
| | | 4.2 | Save file in other formats to enable retrieval in other software applications |

Required Skills and Knowledge

Required skills

Required skills include:

- reading and interpreting engineering specifications
- organising information
- using computer and peripherals
- using CAD program
- saving 3-D models in various file formats
- preparing drawings in plane orthogonal, isometric projection or equivalent

Required knowledge

Required knowledge includes:

- region modelling techniques
- solid modelling techniques
- development of sectioned models
- use of cutting plane
- use of cross hatching
- use of pre-drawn library files and primitives to produce a 3-D model
- use of third level software to produce 3-D models
- how to extract mass and area properties
- how to extract area properties from region models
- application of basic rendering techniques to a 3-D model

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

Unit Descriptor

Unit descriptor	This unit covers recognising vessel features, fittings and fixtures; correctly identifying power and transmission systems; describing system operating purpose; and using appropriate terminology.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to the identification of vessel types and to the classification of vessels according to their main features. It relates to recreational vessels and covers engine and sail powered as well as rowed vessels.</p> <p>The depth of knowledge required is sufficient to be able to identify one vessel from another and to be able to describe its method of propulsion where applicable. Detailed features of hulls, power plants, trailers etc. are covered by other competencies.</p> <p>All work and work practices are undertaken to regulatory and legislative requirements.</p> <p>Band: E</p> <p>Unit Weight: 0</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify vessel configurations used in boating applications	1.1.Hull forms and superstructure features are identified. 1.2.Hull designs are matched to normal vessel application. 1.3.Construction materials are identified.
2. Identify and describe the functions of the major systems of a recreational vessel and trailer	2.1.Systems used for vessel propulsion, steering, navigation, communication, services and appliances are identified and functions are explained. 2.2.Trailer components including winching, coupling, load securing, braking, suspension and electrical systems are identified and functions are explained.
3. Use identification information to confirm vessel origins	3.1.Vessel identification plates and registration tags are located. 3.2.Engine number, model designation and other details are located and recorded. 3.3.Identification data is used to confirm vessel year of manufacture, refurbishment (and/or registration).
4. Identify configuration of motorised propulsion systems	4.1.Vessel power plant(s) are located and categorised for fuel system, number and configuration of cylinders. 4.2.Engine cooling and control systems are identified and categorised. 4.3.Engine lubricating systems are identified and categorised. 4.4.Vessel propulsion (transmission) system is categorised for type and operation. 4.5.Operating cycles and cylinder configuration for 2 stroke, 4 stroke, diesel and petrol powered engines are described.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- discerning differences in hull shapes and types as well as construction materials,

REQUIRED SKILLS AND KNOWLEDGE

propulsion and steering systems, power plants, ancillary systems, fittings and fastenings

- reading and interpreting information on identification and compliance plates, registration tags, engine and other component identification numbers
- identifying different types of power plants, engine cooling and lubrication systems and transmission types

Required knowledge

Look for evidence that confirms knowledge of:

- typical hull shapes and design features of recreational sail, powered and non-powered craft including but not limited to hard chine, round bilge, planing hulls, multi-hulls, inflatables, rigid and swing keel, centre board
- typical superstructure configurations and general deck layouts of recreational sail, powered and non-powered craft including but not limited to fully open, flush decks, bow riders, half cabins, fly bridges
- typical sail and mast arrangements for recreational sailing craft including but not limited to mast configurations, basic rigging arrangements and sail types such as mainsail, genoa, spinnaker etc.
- construction materials such as glass reinforced plastics and composite materials, aluminium and steel and timber. Timber construction may include clinker, carvel, cold moulded and plywood sheeted etc.
- types of internal combustion engines used for inboard and outboard propulsion systems including two and four cycle, different cylinder layouts, different fuel types including petrol and diesel, liquid or air cooling, starting systems, lubrication methods
- propulsion systems including but not limited to single and multi-screw, jet drives, clutches and gearboxes including stern drives and outboard drives as well as vee drives, bow thrusters
- steering systems including tillers, rods/chains/cable drives, hydraulic, rudder types
- features and functions of attached navigation and communication devices such as navigational lighting, compass, global positioning system, radar, depth sounder, logs, radios, audible alarms
- features and functions of trailer components including winches, couplings, load securing, braking, suspension and electrical systems
- use of information on identification and compliance plates, registration tags, engine and other component identification numbers

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to classify recreational boating technologies and features through the recognition of vessel features/fittings/fixtures, the correct identification of power and transmission systems, and be able to describe system operating purposes and use appropriate terminology.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling associated with a marine environment, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes,</p>

EVIDENCE GUIDE	
	standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify safe access methods and working platforms	1.1. Appropriate access methods are used to gain access to the work location. 1.2. Work platforms are inspected to confirm that they are appropriate for the purpose, are correctly located and comply with any regulatory controls.
2. Move around vessels safely	2.1. Risks and hazards are identified from observation, including confined spaces, and workplace approved risk controls are identified. 2.2. Appropriate engineering controls and personal protection equipment for work with recreational vessels are used. 2.3. Appropriate warning signs and signals are used.
3. Work safely on recreational vessels	3.1. Work methods and tools are selected appropriate for the task. 3.2. Appropriate engineering controls and personal protection equipment are identified from workplace procedures, and are selected and used. 3.3. Work residues are minimised, controlled and disposed of following approved procedures. 3.4. Work site is maintained in a clean and tidy state, following approved workplace housekeeping methods.
4. Follow emergency procedures for incidents in the marine environment	4.1. Appropriate responses are used in reaction to incidents and accidents. 4.2. Communication systems and methods are used to convey emergency messages. 4.3. Drills are followed for fire, explosion, toxic/dangerous spills and leakage, personal illness or injury, man overboard, collision or vessel damage.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms skills in:

- undertaking risk assessment
- communicating with others
- performing proper manual handling techniques
- interpreting safety signage, labelling and placarding

Required knowledge

Look for evidence that confirms knowledge of marine environment-specific:

- dangerous goods classification and labelling/placarding
- testing, use and maintenance of PPE
- inherent hazardous properties of the chemicals used
- interpretation of the relevant MSDS
- basic fire fighting procedures
- site-specific emergency plan procedures
- spill confinement procedures
- dangerous occurrence (near miss) reporting procedures
- hierarchy of control

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to work safely in and on marine craft by identifying any risks, moving and working safely and following emergency procedures.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, i.e. the candidate is not in productive work, an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling associated with a marine environment, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

EVIDENCE GUIDE**assessment****Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Access to the work location

Includes:

- gang planks
- hatches
- access ladders
- bosun's chairs
- rigging

Work platforms

Work platforms include:

- purpose built work platforms
- mobile and prefabricated scaffold
- elevated work platforms

Engineering controls

These include:

- ventilation and extraction systems
- dust control devices
- screens

Personal protection equipment (PPE)

PPE includes:

- goggles/face shields
- masks or respirators
- air supplied or self-contained helmets
- appropriate footwear, gloves and appropriate garments
- hearing protection
- fall arrest devices
- UV protection

RANGE STATEMENT	
Workplace housekeeping methods	Relevant housekeeping methods include: <ul style="list-style-type: none"> • covering/protecting surfaces prior to starting work • returning materials/equipment to storage area • sweeping and cleaning • containment and mopping of spills • appropriate disposal of waste products
Communication systems and methods	These include: <ul style="list-style-type: none"> • direct voice • megaphone • flares • radio • hand signals • telephone • flags • computer • EPIRB

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify from work procedures and personal observation activities that may impact on the environment	<p>1.1. Workplace environment and health and safety procedures are located and used to identify approved work procedures.</p> <p>1.2. Workplace is observed noting location of drains and interceptors; banded work and storage areas; recyclable, solid and hazardous waste storage; emergency equipment and spill kits; areas where work may impact on the environment; and equipment and practices used to minimise environmental damage and legally dispose of waste.</p>
2. Complete assigned housekeeping duties	<p>2.1. Assigned housekeeping duties are completed following workplace procedures ensuring that waste is correctly removed to appropriate location; any damaged equipment is tagged for maintenance and notified to appropriate personnel; and schedules and records for housekeeping duties are maintained.</p> <p>2.2. Housekeeping duties are carried out following workplace approved safe work practices and procedures.</p>
3. Follow spill clean-up procedures	<p>3.1. Source of spill is identified and stopped if possible and notification is made to appropriate personnel.</p> <p>3.2. Appropriate materials are identified to contain spills including booms, portable bunding, absorbent materials and drain blocks.</p> <p>3.3. Spills are cleaned up following workplace procedures.</p> <p>3.4. Waste is disposed of in appropriate locations and containers.</p>
4. Assist the business to maintain the quality of the environment	<p>4.1. Business environment policy is followed.</p> <p>4.2. Excessive idling and revving of engines is avoided.</p> <p>4.3. Noisy activities are located away from neighbours where possible.</p> <p>4.4. Noise suppression procedures are used where available.</p> <p>4.5. Dust control and waste containment measures are used.</p> <p>4.6. Waste is appropriately collected and disposed.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- locating and interpreting relevant workplace procedures
- assessing work activities that may impact on the environment
- correct use and handling of materials such as fuels, oils, protective coatings, cleaning products
- identifying sources of potential pollution
- minimising risks of pollution
- containing pollution

Required knowledge

Look for evidence that confirms knowledge of:

- identification of pollutants
- procedures to minimise risk of pollution
- procedures for containment of pollution
- overview of applicable environmental legislation

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to conduct work on vessels using sound work practices without adversely affecting the quality of the marine environment.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling associated with a marine environment, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. ---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess the environmental implications of the tasks to be conducted	1.1.Tasks to be conducted are listed or work instructions are consulted to establish work requirements. 1.2.Vessel to be maintained is visually inspected to establish any particular potential pollutants. 1.3.Potential pollutants that may be produced as a result of the work are identified.
2. Select work area and method	2.1.Possible work areas are identified for the work and selected to conform with marina/slipway codes and local environmental regulations and to minimise risk of pollution. 2.2.Work method, equipment and materials are selected to minimise impact on the environment. 2.3.Pollution control measures are identified and implemented.
3. Dispose of potential pollutants	3.1.Potential pollutants are classified, separated and collected appropriate to the recycling, treatment or storage system adopted by the business. 3.2.Collected pollutants are disposed of in accordance with regulatory requirements and workplace procedures.
4. Support implementation of marina and slipway environment management plans	4.1.Workplace designated procedures for marina and slipway management are followed. 4.2.Observations of management plan effects and possible implementation improvements are identified and communicated to appropriate personnel. 4.3.Active, positive involvement in implementation of the environment management plan is consistently applied.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Match fuels and additives to marine applications	1.1. Fuels are selected to match the engine or appliance. 1.2. Alternative fuel applications are considered. 1.3. Fuel additives and lubricants are selected based on vessel/appliance use and manufacturer requirements.
2. Identify fuel handling risk, precautions and regulatory requirements	2.1. Personal protection for contact with fuels is identified and used. 2.2. Dangers of volatile fuel liquids and vapours are identified. 2.3. Precautions for minimising risks associated with volatile liquids are identified in workplace procedures. 2.4. Procedures to prevent build up of volatile vapours and gases are identified. 2.5. Regulatory requirements for refilling portable fuel containers are identified.
3. Identify safety and environmental requirements for fuel refill areas	3.1. Correct locations for refuelling activities are used. 3.2. The workplace strategies/procedures to limit danger from static electricity and other sources of ignition are applied. 3.3. Protection systems that provide physical barriers to minimise accidental collision with fuelling facilities are identified and used to prevent spills entering drains or the water environment. 3.4. Appropriate ventilation is used. 3.5. Signage for public safety needs and Hazchem requirements is identified. 3.6. Emergency stops and shut-off devices are identified and activation methods are described.
4. Refill fuel containers	4.1. Portable liquid fuel tanks and appliances are refilled. 4.2. Gas cylinders are refilled. 4.3. On-board fuel tanks are refilled. 4.4. Fuel levels are checked for each method of storage. 4.5. Emergency procedures for leaks, spills and fire are identified.
5. Replace gas cylinders	5.1. Appliances and pilot lights are turned off. 5.2. Gas lines are safely vented after closing gas valves. 5.3. Fittings are leak tested after fitting cylinders. 5.4. Bottle restraining devices are fitted and adjusted.

ELEMENT	PERFORMANCE CRITERIA
	5.5. Emergency procedures for leaks and fire are identified.
6. Contain and clean up spills	6.1. Potential for spills is identified. 6.2. Procedures for notification of spills are followed. 6.3. Workplace procedures are followed to contain spill and minimise any environment or safety dangers. 6.4. Clean up equipment is identified and used.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- identifying correct fuel for the application
- identifying correct lubricant for the application
- selecting appropriate protective equipment
- sourcing and interpreting Hazchem (or similar) requirements
- safely working with fuels and lubricants
- refilling fuel containers and tanks
- checking fuel levels using gauges, dipsticks, sight tubes
- refilling and replacing gas cylinders
- leak testing gas cylinders

Required knowledge

Look for evidence that confirms knowledge of:

- different fuels and their applications
- personal and environmental dangers associated with fuels and refuelling/filling
- risk minimisation
- use of appropriate personal protective equipment associated with fuels
- selection of appropriate fire fighting equipment
- reduction of vapours
- correct handling of gas cylinders including condition and lifespan
- dealing with spills
- emergency procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to safely refuel marine vessels with the correct fuels, minimise any spills and clean up. They will also be able to replace and refill portable gas cylinders as well as any other fuelled appliances. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling associated with a marine environment, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes,</p>

EVIDENCE GUIDE	
	standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Fuels	<p>Fuels include all of the hydrocarbon-based fuels such as:</p> <ul style="list-style-type: none"> • petrol (gasoline) including premixed two stroke fuel • diesel (distillate) • kerosene • methylated spirits • lighter fluid/white spirits • liquefied petroleum gas (LPG)
Engine or appliance	<p>May include:</p> <ul style="list-style-type: none"> • internal combustion engines used for propulsion or auxiliary power • stoves • refrigerators • heaters • lights
Personal protection	<p>Personal protective equipment can include:</p> <ul style="list-style-type: none"> • goggles/face shields • masks or respirators • gloves and appropriate clothes/garments
Contain spill	<p>Spill containment and clean up can include:</p> <ul style="list-style-type: none"> • bunding and drain covers

RANGE STATEMENT

	<ul style="list-style-type: none"> • chemical dispersal agents • absorptive materials • containment booms and portable bunding

MEM50006B Check operational capability of marine craft

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers conducting basic checks on the operational condition of vessels in or out of the water.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to checking engine or sail powered recreational vessels in both land and water environments. It relates to workplaces in which vessels are built, repaired, stored, sold and transported.</p> <p>The scope of the unit is limited to identifying and reporting that a vessel is not of its 'normal' appearance at rest on its mooring or berth, or after being brought out of the water. It includes basic operational checks similar to those routinely performed by machinery or vehicle operators. It does not include an assessment of seaworthiness or durability but it does cover watertight integrity. The information would be reported to a supervisor or manager who would determine any further action.</p> <p>All work and work practices are undertaken to regulatory and legislative requirements.</p> <p>Operational checking of sails and sails systems is covered by Unit MEM50007B (Check operational capability of sails and sail operating equipment).</p> <p>Band: E</p> <p>Unit Weight: 0</p>
--------------------------------	---

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Inspect hull and fittings	1.1.Hull bungs and sea cocks are inspected for security and integrity. 1.2.Hull condition is checked for holes, cracks and deterioration, and extent of marine growth. 1.3.Fittings and mountings are checked for security and excessive corrosion. 1.4.Reports of hull and fitting condition are completed on (any) approved workplace documentation and/or reported verbally.
2. Inspect safety equipment	2.1.Vessel safety equipment availability is checked against identified requirements. 2.2.Condition of safety equipment is determined and reported if required.
3. Check operating systems	3.1.Propulsion, electrical power, steering, cable and line handling and domestic systems are checked for correct fluid levels, fuel state, lubrication, and visually for mechanical condition and leaks. 3.2.Communication equipment is checked for operational status.
4. Inspect cabin and domestic systems	4.1.Cabin fittings are inspected for security and integrity. 4.2.Cabin and fittings are checked for holes, cracks and deterioration. 4.3.Fittings and mountings are checked for security and condition. 4.4.Domestic systems are operated to ensure serviceability. 4.5.Reports of cabin and fittings condition are completed on (any) approved workplace documentation and/or reported verbally.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms skills in:

- identifying the general condition of hulls, decks and cabins
- identifying the general condition of fittings and fixtures
- identifying the general condition of safety equipment
- checking engines and other equipment for fluid leaks
- performing visual inspections on lead/acid batteries
- providing simple checklist and verbal reports

Required knowledge

Look for evidence that confirms knowledge of:

- general methods of determining condition of hulls, decks, cabins, fittings and fixtures and safety equipment
- methods of determining condition of engines in terms of whether they operate or not
- inspection of lead/acid batteries
- information collation methods to provide a verbal report

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to conduct basic checks on the operational condition of vessels in or out of the water to the extent of providing a simple report to a supervisor or manager. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling associated with a marine environment, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hull and fittings	Surface finish and general condition of the hull inside and out as well as any fittings both above and below the water line where visible
Safety equipment	Flotation devices, communication systems including lights, flares, pumps and bailers, anchor, halyards and chains, EPIRBs, fire extinguishers, torches, life lines
Identified (safety equipment) requirements	Vessel safety equipment requirements are to be provided by the manufacturer or other authoritative source
Operating systems	Mechanical propulsion systems, communication systems, steering systems, pumping systems, winches and cable handling equipment, ultra low voltage electrical systems operating at 12 or 24 volts d.c.
Domestic systems	Water supply and heating, airconditioning and heating, lighting, cooking, refrigeration, sewage and sullage, entertainment systems

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Inspect mast(s), boom(s), spars and fittings	1.1.Masts, booms and spars are inspected for security and integrity. 1.2.Fixed rigging is inspected for security and excessive corrosion. 1.3.Fittings and mountings are checked for security and excessive corrosion. 1.4.Reports of masts, booms, spars, rigging and fittings condition are completed on (any) approved workplace documentation and/or reported verbally.
2. Inspect sail condition	2.1.Sails are inspected for tears, rot and deterioration. 2.2.Sail runners, cleats and reinforcing points are inspected. 2.3.Reports of sails and fittings condition are completed on (any) approved workplace documentation and/or reported verbally. 2.4.Sails are correctly stowed after inspection. 2.5.Reports of sail condition are completed on (any) approved workplace documentation and/or reported verbally.
3. Check halyards, sheets, ropes and winches	3.1.Halyards, sheets, ropes, cables and winches are inspected for security and integrity. 3.2.Halyards, sheets, ropes and cables are secured and/or stowed correctly. 3.3.Winches and capstans are checked for operation, lubrication and condition. 3.4.Fittings and mountings are checked for security and condition. 3.5.Reports of sail control system condition are completed on (any) approved workplace documentation and/or reported verbally.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms skills in:

- identifying the general condition of masts, booms and spars
- identifying the general condition of sails
- identifying the general condition of sail hoisting and trimming equipment
- correctly stowing sails and ropes
- providing simple checklist and verbal reports

Required knowledge

Look for evidence that confirms knowledge of:

- general methods of determining condition of masts, booms and spars
- methods of determining condition of sails and hoisting/trimming equipment in terms of whether they operate or not, are frayed or showing signs of distress etc.
- information collation methods to provide a verbal report

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain the boat and safety equipment	1.1. Boat is maintained/serviced on a regular basis. 1.2. Safety equipment complies with relevant legislation. 1.3. Safety equipment is serviceable and accessible, and its location is identified and securely and appropriately stowed.
2. Maintain mooring and berthing apparatus	2.1. Mooring and berthing apparatus is maintained/serviced on a regular basis. 2.2. Mooring apparatus is appropriate to the vessel and location.
3. Plan trip	3.1. Weather conditions, vessel and personnel are checked for suitability for planned trip. 3.2. Trip activity plan takes into account area and type of operation and emergency contact. 3.3. Adequate provisions, including fuel, for trip are carried out. 3.4. Trip details are communicated to appropriate person. 3.5. Check is made to ensure the number of passengers does not exceed boat design limitations and/or legislative requirements. 3.6. Check is made to ensure equipment, stores and personal items are securely stowed and do not adversely affect the boat's stability. 3.7. Appropriate person is informed of safe return from the activity.

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Boat is maintained/serviced	Oil levels and mix, belts, spark plugs, regular running and flushing of cooling system where appropriate, manual starting, raw water intake filters, fuel lines, fillers and tanks, hoses, maintenance history and compliance with maker recommendations, electrical wiring, battery and master switch/Dead Man's switch, steerage, propeller and shaft condition
Safety equipment	Life jackets, bailers, dinghy/life raft, paddles/oars, bilge pumps, bucket and line, first aid kit, fire extinguisher, distress signalling equipment, marine radio, waterproof torch, charts, anchor/sea anchor, lifebuoy, compass, sound signal, drinking water, towing harness, isolating switches, tow rope, local emergency procedures book, sounding equipment, EPIRB, GPS, divers flag, suitable clothing, alternative means of propulsion
Mooring and berthing apparatus is maintained/serviced	Appropriateness of mooring/berthing, regularity of checks, services by recognised contractor, serviceable mooring and berthing lines, fenders, anchors and ground tackle
Weather conditions	Current forecast, wind, latest weather and conditions information, source of weather information, tides (flood and ebb tides), rips and bars, wave height, visibility, day/night
Area and type of operation	Hazards, local knowledge, rules and protocols,

RANGE STATEMENT	
	events, emergency response, access and exit points, safe havens, launching ramps, destination port
Adequate provisions	Suitability of the vessel for the activity, adequate fuel for the distance, water, food, ice, sun protection, wet weather gear, first aid kit, personal medications, batteries, gas, emergency (reserve) fuel and method of fuel transfer
Trip details	Trip departure and return time, number of people in the boat, area and nature of operation, way points, radio used and frequency, call signs, details of vessel including description and registration number, shore contact details, fuel capacity and usage, trailer registration number
Appropriate person	Family member or relative, neighbour(s), police - water or local, marine rescue services, club or organisation, harbour master, costal radio station, note in car (if appropriate)
Pre-start check	Fuel is connected, battery is charged and connected, kill switch, fumes, petrol, fuel and water leaks, open hatches/windows/doors, ventilation, sea-cock opening, secure loose gear, turn on marine radio, check bilge water levels, navigation lights, raise radio aerials

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Manoeuvre and handle the boat	1.1. A pre-start check is undertaken. 1.2. Motor is prepared and started. 1.3. Boat is manoeuvred safely according to conditions and in accordance with water traffic regulations. 1.4. Performance of the boat and personnel is monitored at all times. 1.5. Impact of boat use on others and the environment is considered. 1.6. Safety equipment is used, stowed and, if required, worn in accordance with legislation and recognised regulations and rules.
2. Navigate safely	2.1. Aids to small craft navigation are identified. 2.2. Collision avoidance techniques are applied when required in accordance with relevant legislation, recognised regulations and rules. 2.3. Operation of the boat is carried out at all times in accordance with relevant legislation, recognised regulations and rules. 2.4. Navigational aids and landmarks are used to determine and monitor boat position. 2.5. Hazards and conditions are taken into account in navigating the boat.
3. Anchor the boat	3.1. Anchorage site is selected in accordance with prevailing and forecast conditions and in accordance with legislation. 3.2. Type of anchor used is suitable for location. 3.3. Anchor is lowered, set and monitored according to prevailing conditions. 3.4. Anchor is retrieved and securely stowed.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms skills in:

- adequately preparing and checking
- manoeuvring and handling a boat safely and accurately
- monitoring performance and being aware
- navigating safely and taking hazards into account
- anchoring techniques

Required knowledge

Look for evidence that confirms knowledge of:

- boating and other relevant legislation, rules and regulations
- legislative requirements regarding the use of safety equipment
- area of activity hazards and prevailing conditions
- boating information resources
- environmental awareness

Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Pre-start check

Pre-start check may include:

- fuel is connected
- battery is charged and connected
- kill switch
- fumes, petrol
- fuel and water leaks
- hatches/windows/doors are open
- ventilation
- sea-cock opening
- loose gear is secured
- marine radio is turned on and radio aerials raised
- bilge water levels checked
- navigation lights

Manoeuvred safely according to conditions

- Manoeuvring conditions may include:
 - from or to a ramp, pontoon, wharf, mooring, anchor, confined areas such as narrow channels, marinas, moorings, obstructions
 - sea-states such as bars, waves, rips, high seas, tidal surges, choppy conditions, wakes
 - low speed/high speed
 - poor visibility
 - effect of wind
 - large vessels
- Safe manoeuvring may include:
 - steer straight line

RANGE STATEMENT	
	<ul style="list-style-type: none"> • astern • figure-eight • right of way • port-starboard • throttle control • emergency stop • trim and stability of vessel • towing or being towed • berthing • standing-on/stemming the tide • retrieval of person overboard
Monitored	<p>Monitoring may include:</p> <ul style="list-style-type: none"> • cooling system • bilge • portholes and hatches • location and welfare of persons on board • oil, fuel and water • radio • position of boat • other water users • battery and electrical systems
Environment	<p>Impact of boat use on others/environment may include:</p> <ul style="list-style-type: none"> • noise • wake • safety of others • disturbance or injury to wildlife • disposal of waste and bilge water • effects of detergent and anti-foul • fuelling arrangements
Aids to small craft navigation	<p>Aids to navigation may include:</p> <ul style="list-style-type: none"> • IALA Buoyage System 'A' • charts • compasses • GPS • sounder • tide tables • passage plan

RANGE STATEMENT	
	<ul style="list-style-type: none"> • marine references • notices to mariners • radio navigational warnings
Relevant legislation, recognised regulations and rules	<ul style="list-style-type: none"> • Collision regulations such as: <ul style="list-style-type: none"> • navigating in narrow channels • giving way to other vessels • overtaking, proper lookout • sound signals • lights and shapes • responsibilities and duty of care • use of buoyage system • speed • recognition of lights and markers • rules of road • recognition of operation areas • specific activity rules, e.g. PWCs, water skis, equipment requirements • accident/incident reporting • Marine regulations such as: <ul style="list-style-type: none"> • safety regulations • licensing and registration • speed limit restrictions • distance off requirements • port limits/rules • marine incident reporting • carrying capacity • drug and alcohol limits/effects • age of operators • Environmental and wildlife regulations as relevant and applicable to the operation of boats
Hazards and conditions	<p>Hazards and conditions may include:</p> <ul style="list-style-type: none"> • weather • set and drift • effect of wind, tide and currents • submerged objects • other boats and wash • restricted waters

RANGE STATEMENT	
	<ul style="list-style-type: none"> • crossing bars
Type of anchor	<ul style="list-style-type: none"> • Types of anchor may include: <ul style="list-style-type: none"> • Danforth • Grapnel/Reef • Bruce • Plough • Admiralty • Sarca • sea anchor • Anchoring systems may include: <ul style="list-style-type: none"> • multiple anchors • bow and stern anchors • mooring buoy

It also includes raising alarms and dealing with on-board emergencies.</p> <p>This unit was developed by the National Marine Safety Committee (NMSC).</p>
------------------------	---

Application of the Unit

Application of the unit	<p>This unit is one of three core competencies that have been adopted by all government marine safety authorities to contribute to and promote the safe use of waterways and awareness of boating safety. The unit applies to all recreational boats including personal watercraft.</p> <p>All work and work practices are undertaken to regulatory and legislative requirements.</p> <p>Unit MEM50008B (Carry out trip preparation and planning) and Unit MEM50009B (Safely operate a mechanically powered recreational boat) are the other two NMSC core units.</p> <p>Band: E</p> <p>Unit Weight: 0</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use safety equipment	1.1.Nature, type, location, accessibility and serviceability of safety equipment is known and understood by all personnel on board. 1.2.Briefing of personnel is conducted before departure. 1.3.Safety equipment is used in a manner appropriate to the emergency or incident. 1.4.Safety equipment is used for the purpose for which it was designed.
2. Raise alarms	2.1.Nature of emergency is identified. 2.2.Alarm is communicated to on-board personnel. 2.3.Recognised distress signals are used to indicate need of assistance.
3. Deal with on-board emergency	3.1.On-board personnel are informed of actions required to deal with the emergency. 3.2.Procedures are implemented to combat emergency and protect persons on board. 3.3.Position is identified, recorded and communicated. 3.4.Injured persons are provided with assistance. 3.5.Communication with rescuers is maintained. 3.6.Preparation for abandoning the boat is undertaken, if required. 3.7.Cessation of emergency is communicated to appropriate personnel.
4. Assist others in distress	4.1.Distress signals from others are recognised. 4.2.Nature of assistance required is identified. 4.3.Capability to safely assist or relay emergency is determined taking into account own safety and physical proximity to the emergency incident. 4.4.Appropriate response to the emergency is prepared for and implemented. 4.5.Cessation of emergency incident is communicated to appropriate personnel.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- correctly using safety equipment
- delegating skills
- communicating
- using leadership skills
- applying first aid

Required knowledge

Look for evidence that confirms knowledge of:

- range of safety equipment
- common emergency actions
- types of boating emergency incidents and situations
- boating legislation, regulations and rules

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to deal with boating emergencies and incidents including the use of safety equipment, raising alarm and assisting others in distress.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling associated with a marine environment, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for	

EVIDENCE GUIDE**assessment****Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Briefing

Briefing information may include:

- vessel operation
- personnel assessment such as swimming skills, boating knowledge, medication and dietary requirements
- location and use of safety equipment
- emergency procedures
- abandoning procedures

Emergency

Emergencies may include:

- fire (smoke or heat)
- grounding
- person overboard
- person retrieval from water
- capsize
- swamping
- sinking
- engine/motor breakdown or malfunction
- fouled propeller
- anchoring
- flooding
- lost
- injuries/illness
- hypothermia
- lack of fuel
- contaminated fuel

RANGE STATEMENT	
Distress signals	Distress signals may include: <ul style="list-style-type: none"> • pyrotechnic distress flares • flags • radio • hand signals • dye markers • International Code Signal of Distress • sound signal including voice • EPIRB • V-sheet • reflective mirror • light signals • mobile phone
Preparation for abandoning	Preparation for abandoning includes: <ul style="list-style-type: none"> • brief on-board personnel • take drinking water • don of life jackets • identify location of vessel • communicate to rescuers actions taken or to be taken • assess and ensure readiness of life rafts/life rings • activate EPIRB • identify and collect emergency equipment, provisions and clothing • deploy anchor or sea anchor

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including quality, material, equipment and quantities. 1.2. Job specifications are read and interpreted. 1.3. Workplace health and safety (WHS) requirements, including breathing protection, personal protection needs, are observed throughout the work. 1.4. Material for application is selected and inspected for quality. 1.5. Hand and power tooling are identified and checked for safe use. 1.6. Products are determined to minimise waste material. 1.7. Procedures are identified for maximising energy efficiency while completing job.
2. Carry out panel repairs	2.1. Information is accessed and interpreted from manufacturer/component supplier specifications. 2.2. Components are repaired using approved methods and equipment in accordance with manufacturer/component supplier specifications. 2.3. Where repair of components includes disturbance to electrical, mechanical, air conditioning systems or trim, authorised assistance is sought where required. 2.4. Repairs are carried out to pre-paint condition. 2.5. Repair activities are carried out according to industry regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies.
3. Carry out repairs using body fillers	3.1. Information is accessed and interpreted from manufacturer/component supplier specifications. 3.2. Components are repaired using approved methods and equipment in accordance with manufacturer/component supplier specifications. 3.3. Repairs are carried out to pre-paint condition. 3.4. Repair activities are carried out according to industry regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies.
4. Clean up work area and Maintain equipment	4.1. Material that can be reused is collected and stored. 4.2. Waste and scrap is removed following workplace procedures. 4.3. Equipment and work area are cleaned and inspected for serviceable conditions in accordance with

ELEMENT	PERFORMANCE CRITERIA
	<p>workplace procedures.</p> <p>4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures.</p> <p>4.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures.</p> <p>4.6. Tooling is maintained in accordance with workplace procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- collect, organise and understand information related to body repairs and work orders, plans and safety procedures for panel repairs
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and wastage
- use mathematical ideas and techniques to complete measurements and estimate material requirements required for the work
- use workplace technology related to completing small repairs to panels, including use of specialist tooling, measuring equipment, use of communication devices and reporting/ documenting of results

Required knowledge

Required knowledge includes:

- WHS regulations/requirements, equipment, material and personal safety requirements
- types of body fillers and applications
- types of adhesives
- types of abrasives
- equipment maintenance procedures
- basic body filler repair procedure
- basic panel beating
- workplace guidelines regarding tolerance levels
- procedures for reporting faults and material defects
- work organisation and planning processes
- enterprise quality processes

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:</p> <ul style="list-style-type: none"> • observing safety procedures and requirements • communicating effectively with others involved in or affected by the work • selecting methods and techniques appropriate to the circumstances • completing preparatory activity in a systematic manner • reading and interpreting job sheets and filler material safety data sheets to prepare for work • identifying and selecting material used in the work process • identifying, setting up, operating and maintaining panel repair equipment and procedures to complete the following: <ul style="list-style-type: none"> • small panel repairs • application of fillers • application of protective coatings.
Context of, and specific resources for assessment	<ul style="list-style-type: none"> • Application of competence is to be assessed in the workplace or simulated worksite. • Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints. • Assessment is to comply with regulatory requirements, including Australian standards. • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • material relevant to completing small repairs to panels • equipment, hand and power tooling appropriate to completing small repairs to panels • activities covering mandatory task requirements • specifications and work instructions.

EVIDENCE GUIDE	
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy endorsed Assessment Guidelines of the Automotive Industry Retail, Service and Repair Training Package. • Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. • Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce integration of key competencies. • Assessment may be applied under project-related conditions and require evidence of process. • Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements. • Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Repairs	Repairs of body panels in this unit are limited to small repairs to accident damage, including dents

RANGE STATEMENT	
Repair methods	<p>Repair methods are to include:</p> <ul style="list-style-type: none"> • panel and trim removal • heating, welding, filling and finishing • preparation of panels to pre-paint condition
WHS	<p>WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include:</p> <ul style="list-style-type: none"> • protective clothing and equipment • use of tooling and equipment • workplace environment and safety • handling of material • use of firefighting equipment • enterprise first aid • hazard control and hazardous material and substances
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices</p>
Safe operating procedures	<p>Safe operating procedures are to include, but are not limited to:</p> <ul style="list-style-type: none"> • operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors
Emergency procedures	<p>Emergency procedures related to this unit are to include, but are not limited to:</p> <ul style="list-style-type: none"> • emergency shutdown and stopping of equipment • extinguishing fires • enterprise first aid requirements • worksite evacuation
Environmental requirements	<p>Environmental requirements are to include, but are not limited to:</p> <ul style="list-style-type: none"> • waste management, noise, dust and clean-up management

RANGE STATEMENT	
Quality requirements	<p>Quality requirements are to include, but are not limited to:</p> <ul style="list-style-type: none"> • regulations, including Australian standards • internal company quality policies and standards • enterprise operations and procedures
Statutory/regulatory authorities	<p>Statutory/regulatory authorities may include:</p> <ul style="list-style-type: none"> • federal, state/territory and local authorities administering applicable Acts, regulations and codes of practice
Tooling and equipment	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> • hand and power tooling • vehicle protection • templates • welding and heating equipment • specialist tooling and lifting equipment
Materials	<p>Materials may include:</p> <ul style="list-style-type: none"> • fillers, adhesives, abrasives, primers and cleaning materials
Communications	<p>Communications are to include, but are not limited to:</p> <ul style="list-style-type: none"> • verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
Information/documents	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> • verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches • safe work procedures related to completing small repairs to panels • regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules • engineer's design specifications and instructions

RANGE STATEMENT

	<ul style="list-style-type: none">• workplace specifications and requirements• instructions issued by authorised enterprise or external persons• Australian standards

Modification History

Not Available

INTRODUCTION

This Unit covers the maintenance of trust monies related to specific files, under the instruction of a legal practitioner.

Note: It may be illegal for a person without a current legal practice certificate to provide legal advice, to sign off on legal work and receive trust account monies. The use of trust account monies is subject to legislative control. Accordingly work carried out in regard to trust account monies occurs under the instruction of a legal practitioner and is of a complex but specified nature. Therefore the position of this unit at AQF Level 4 is in relation to the level of responsibility and technical complexity required in the tasks involved.

This unit can be assessed alone or in combination with other units making up a job role.

Element

Performance Criteria

Check that trust funds are adequate

- Relevant sources are checked for information regarding disbursements and costs
- Estimated disbursements and costs are calculated and reconciled with available trust funds
- Instructing legal practitioner is notified where there are inadequate available funds
- Client is notified that further funds are required, where necessary, according to a firm's policies and procedures

Draw cheque/s against the trust account

- Appropriate requisition form is completed
- Authorisation is gained from instructing legal practitioner according to a firm's policies and procedures
- Cheque/s are inspected for accurate amount and correct account source
- Instructing legal practitioner is organised to verify and sign cheques
- Accurate records are kept of all file related disbursements and costs

Prepare documentation upon completion of legal matter

- Relevant information/documentation from file is collated
- Monies remaining in trust account are reconciled
- Discrepancies/irregularities are investigated promptly and appropriate follow up action is taken

RANGE OF VARIABLES

Relevant information sources may include:

- information from open file
- monies received into the trust account
- transactions on the trust account
- petty cash vouchers
- petty cash book
- purchase requisitions and orders
- invoices and receipts
- delivery dockets
- credit notes
- statements
- cheques
- deposit books
- bank statements

Disbursements may include:

- filing fees
- photocopying
- postage
- cost of duty stamps
- court costs
- telephone charges

Trust account procedures may include:

- arrangements with banks to prevent the following deductions from trust accounts
 - FID Tax
 - BAD Tax
 - Bank charges
- reporting to state law society/institute as required by law

Methods for maintaining trust accounts may include:

- hard copy
- standard books of account
- specialised software

Details to be completed on requisition form include:

- file/matter number
- amount
- description of reason for cheque or receipt
- authorisation/signatures of designated person

Recording mechanisms/systems may:

- be paper-based
- be electronic

- vary according to a firm's accounting system
- vary according to bank requirements

A firm's accounting system may:

- be paper-based
 - cash books
 - journals
- be electronic
 - commercial software package
 - customised software package
- vary according to a firm's accounting system
- vary according to bank requirements

Financial documentation for clients may include:

- statement of accounts
- calculation of fees
- copies of receipts

A firm's policies and procedures may include:

- bank procedures and policies
- notifying client when further funds are required
- keeping records of disbursements
- following up discrepancies and irregularities
- information sources
- accessing accounting system
- security/confidentiality/privacy procedures
- verifying and authorising information
- recording information
- handling monies
- liaising with financial institutions
- legal bookkeeping

The area of law may include*:

- commercial law
- corporate law
- criminal law
- family law
- industrial relations/employment law
- property law
- tax law
- litigation
- wills and probate

* These are nine common areas of law. The area of

law is not restricted to this list; other areas of law may be applicable.

Legislative requirements may relate to:

- relevant State/Territory/Commonwealth legislation
- Governing legal practice Acts in each State/Territory
- the client and a firm (eg. Consumer Credit Code, Privacy Act, secrecy laws, Codes of Practice, common law and Statutory Duties of Care involving financial relationships)
- the area of law
- schedules of fees and duties payable
- establishing a trust account
- taxation and banking requirements
- tort, equity and statute law
- Australian Taxation Office regulations

Relevant State/Territory/Commonwealth legislation may include:

- Trade Practices Act
- Small Debts Act
- Bills of Exchange Act
- Financial Transactions Report Act
- various state's conduct acts, eg. Legal Practice Act

EVIDENCE GUIDE

- Critical aspects:
- understanding of scope of own responsibility is demonstrated
 - an understanding of trust accounting principles and practices within the limits of the employee's responsibilities is demonstrated
 - an understanding of a firm's trust and general accounting procedures is demonstrated
 - correct usage of different types of documents is demonstrated
 - documentation is filled out correctly and presented to instructing legal practitioner within agreed timelines
 - records of disbursements are accurate and up-to-date, according to a firm's policies and procedures
 - evidence of knowledge of the type of discrepancies and irregularities which could arise and standard resolutions
 - discrepancies and irregularities are resolved within scope of own responsibility and those outside of own responsibility are referred immediately to instructing legal practitioner, eg. files with inadequate funds
 - calculations and reconciliations are checked for accuracy
 - numerical information is checked
 - contact with client regarding inadequacy of funds is handled sensitively and according to a firm's policies and procedures
 - legal actions, legislative requirements and invoicing procedures are explained to client in simple language, where appropriate
 - check for written authorisation from client and instructing legal practitioner is obtained when moving trust account money into interest bearing account
 - documentation prepared at the completion of a legal matter is complete and accurate
 - file/matter number is attached to all relevant documentation and such documentation is filed appropriately
 - a firm's trust accounting procedures, legislative and regulatory requirements are complied with
 - non-disclosable information is not communicated and where any doubt exists as to the information's status it is not disclosed
 - activities, actions and outcomes are documented and time is recorded
 - honesty and integrity are demonstrated in all financial dealings
 - all work is conducted within accepted codes of conduct including those relating to: maintaining confidentiality, use of company property, duty of care, ethical behaviours, privacy, non-discriminatory practice, conflict of interests and compliance with reasonable direction
 - reports in relation to trust monies are compiled and reviewed in line with firm's policies and procedures

Resource implications:	<p>The assessor must have access to appropriate documentation and resources normally found in the work environment and required to allow the job or task to be properly performed. These may include:</p> <ul style="list-style-type: none">• appropriate legislation and regulations relevant to assisting clients, maintaining business accounts, maintaining trust accounts and transferring trust monies• workplace manuals and reference materials such as company policy, procedural manuals and checklists• appropriate technology such as computers with relevant software calculators, adding machines and imprinters
Consistency in performance:	<p>This unit of competency will require evidence to be collected across a range of events, eg. dealing with trust account requirements, and over a period of time to ensure that situational variables are consistently achieved.</p>
Context of assessment:	<p>Evidence of competency can be met in different situations, including:</p> <ul style="list-style-type: none">• on the job assessment• off the job assessment• placement in an enterprise• participation in a New Apprenticeship (traineeship) arrangement• use of a Practice Firm or simulated work environment• flexible delivery methods used by training providers to cater for distance education students• Recognition of Prior Learning, Recognition of Current Competencies (in skill areas where there has been no significant change to work practice in recent times). <p>Evidence gathering methods may include:</p> <ul style="list-style-type: none">• demonstration• questioning• workplace performance• role-play• simulation• projects/assignments• written tests• skills portfolio• third party reports
Underpinning knowledge and	<p>Knowledge</p>

skills

- a firm's general and trust accounting policies, procedures and systems
 - bank procedures and policies/requirements
 - relevant current legislation (see Range of Variables)
 - legal terminology in relation to trust accounting and the matter at hand
 - procedures for authorising cheques against the trust account
 - preparing cheques
 - security/confidentiality/privacy
- Australian Standards Association Code of Practice and Accounting Standards
- Australian Accounting and Auditing Standards
 - Australian Taxation Office regulations
 - establishing a trust account
 - transferring assets
 - statutory charges, taxes, and other fees applicable to institutions

Skills

- literacy: follows written or verbal sequenced instructions about a complex legal matter
- numeracy: knowledge of mathematical procedures in relation to trust accounting, financial calculations and bookkeeping; interprets, compares, calculates and checks for accuracy with money in legal context
- interpersonal skills in relation to co-workers and clients
- use of accounting records system
- communication: listens to clear instructions; questions to clarify information

KEY COMPETENCIES

Utilisation of the Key Competencies required in the performance of this unit

Communicating ideas and information	Collecting, analysing and organising information	Planning and organising activities	Working with others in a team	Using mathematical ideas and techniques	Solving problems	Using technology
1	3	1	2	2	2	2

Performance Levels:

Level 1	Level 2	Level 3
<ul style="list-style-type: none"> carries out established processes makes judgements of quality using given criteria 	<ul style="list-style-type: none"> manages processes selects the criteria for the evaluation process 	<ul style="list-style-type: none"> establishes principles and processes evaluates and reshapes processes establishes criteria for evaluation of processes

Modification History

Not Available

INTRODUCTION

Unit Descriptor This unit covers design and development of business documents using complex technical features of word processing and/or desktop publishing software.

This unit is related to BSBADM304A Design and develop text documents and BSBADM506A Manage business document design and development.

Competency Field Business Administration Services

Element

Performance Criteria

- | | |
|----------------------------------|--|
| 1. Use safe work practices | <ul style="list-style-type: none"> 1.1 Workspace, furniture and equipment are adjusted to suit the ergonomic requirements of the user 1.2 Work organisation meets organisational and statutory requirements for computer operation 1.3 Energy and resource conservation techniques are used to minimise wastage in accordance with organisational and statutory requirements |
| 2. Analyse document requirements | <ul style="list-style-type: none"> 2.1 Organisational and task requirements are identified prior to document design 2.2 Complex technical functions of the software are evaluated for their usefulness in fulfilling the requirements of the task 2.3 Document requirements are matched with software functions to provide efficient production of documents |
| 3. Design complex documents | <ul style="list-style-type: none"> 3.1 Document structure and layout are designed to suit the purpose, audience and information requirements of the task 3.2 Document is designed to enhance readability and appearance and meet organisational and task requirements for style and layout 3.3 Complex software functions are used to enable efficient manipulation of information and other material and ensure consistency of design and layout 3.4 Manuals, user documentation and on-line help are used to overcome problems with document design and production |
| 4. Produce documents | <ul style="list-style-type: none"> 4.1 Complex operations used in development of documents achieve required results 4.2 Documents are previewed, adjusted and printed in accordance with |

organisational and task requirements

4.3 Documents are named and stored, in accordance with organisational requirements and the application exited without information loss/damage.

4.4 Documents are prepared within designated timelines and organisational requirements for speed and accuracy.

RANGE STATEMENT

The Range Statement provides advice to interpret the scope and context of this unit of competency, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment. The following variables may be present for this particular unit:

Legislation, codes and national standards relevant to the workplace which may include:

- award and enterprise agreements and relevant industrial instruments
- relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- relevant industry codes of practice

Complex documents may include:

- long documents
- multiple sections
- multiple headers and footers
- different odd and even pages
- master documents
- subdocuments
- primary mail merge documents
- mail merge data documents
- templates
- multiple users
- hyperlinks
- concordance files
- document protection
- linked and/or embedded objects
- captions
- call outs
- drawing
- WordArt
- forms with fields

Software may include:

- wordprocessing
- advanced desktop publishing

Organisational policy and procedures may include:

- log-on procedures
- password protection

- storage / location of data
 - standard formats
 - author's instructions
 - use of templates
- Ergonomic requirements may include:
- workstation height and layout
 - chair height, seat and back adjustment
 - footrest
 - screen position
 - keyboard and mouse position
 - document holder
 - posture
 - avoiding radiation from computer screens
 - lighting
 - noise minimisation
- Work organisation may include:
- mix of repetitive and other activities
 - rest periods
 - exercise breaks
- Conservation techniques may include:
- double-sided paper use
 - re-used paper for rough drafts (observing confidentiality requirements)
 - recycling used and shredded paper
 - utilising power-save options for equipment
- Organisational requirements may include:
- consistent corporate image
 - company logo
 - company colour scheme
 - established guidelines and procedures for document production
 - 'house styles'
 - content restrictions
 - templates
 - organisation name, time, date, document title, filename, etc in header / footer
 - observing copyright legislation
- Complex technical functions
- table of contents

may include:

- index
- importing
- exporting
- linking
- embedding
- merge criteria
- fields
- form fields
- formulae
- sort criteria
- macros
- templates
- display features
- data transfer

Structure and layout may include:

- white space
- typeface
- graphics
- photographs
- drawing
- boxes
- colour
- page layout
- headings
- columns
- letter and memo conventions

Design choices may include:

- simplicity
- diversity
- balance
- typography
- text flow
- relative positioning of graphics and headings

Consistency of design and layout may include:

- indentations
- spacings
- page numbers
- typeface styles and point size
- captions

- bullet/ number lists
- footnotes/endnotes
- annotated references
- borders
- consistency with other business documents

Printing may include:

- with drawing objects
- with comments
- with hidden text
- with field codes
- to fit specific number of pages
- print to file
- print merge
-

Naming and storage of documents may include:

- file names which are easily identifiable in relation to the content
- file/directory names which identify the operator, author, section, date etc
- file names according to organisational procedure eg numbers rather than names
- storage in folders / sub-folders
- storage on hard/floppy disk drives, CD ROM, tape backup
- organisation policy for backing up files
- organisation policy for filing hard copies of documents
- filing locations
- security
- authorised access

Designated timelines may include:

- timeline agreed with supervisor/person requiring spreadsheet
- timeline agreed with internal/external client
- organisation timeline eg deadline requirements

EVIDENCE GUIDE

The Evidence Guide identifies the critical aspects, underpinning knowledge and skills to be demonstrated to confirm competence for this unit. This is an integral part of the assessment of competence and should be read in conjunction with the Range Statement.

- | | |
|------------------------------|--|
| Critical Aspects of Evidence | <ul style="list-style-type: none">• Integrated demonstration of all elements of competency and their performance criteria• Knowledge and application of complex software functions |
| Underpinning Knowledge* | <ul style="list-style-type: none">• Relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination• Advanced functions of wordprocessing and/or desktop publishing software applications• Impact of formatting and design on the presentation and readability of documents• Organisational policies and procedures |
| Underpinning Skills | <ul style="list-style-type: none">• Literacy skills to interpret and evaluate the purposes and objectives of various types of software; consider aspects of context, purpose and audience when generating and formatting texts; display logical organisation of written information through the use of coherently linked paragraphs; use a variety of strategies for planning and reviewing own work; demonstrate drafting techniques; use simple and complex syntactic structures; select vocabulary to create nuances of meaning in particular contexts• Proofreading and editing skills to ensure clarity of meaning and conformity to organisational requirements; check for accuracy and consistency of information by consulting additional resources• Problem solving skills to use processes flexibly and interchangeably• Numeracy skills to collate and present data; graphs and annotated references• Communication skills to follow complex oral instructions when using technology; listen to and interpret complex sequenced instructions• Keyboarding skills• Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities |

- Resource Implications
- The learner and trainer should have access to appropriate documentation and resources normally used in the workplace which may include:
 - Workplace references such as computer user manuals, organisational policies and procedures and workplace procedural manuals
 - Computer equipment including relevant software, printer
 - Guide/examples of 'house style'
 - Equipment (eg paper and other materials)
- Consistency of Performance
- In order to achieve consistency of performance, evidence should be collected over a set period of time which is sufficient to include dealings with an appropriate range and variety of situations
- Context/s of Assessment
- Competency is demonstrated by performance of all stated criteria, including paying particular attention to the critical aspects and the knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statement
 - Assessment must take account of the endorsed assessment guidelines in the Business Services Training Package
 - Assessment of performance requirements in this unit should be undertaken in an actual workplace or simulated environment
 - Assessment should reinforce the integration of the key competencies and the business services common competencies for the particular AQF level. Refer to the Key Competency Levels at the end of this unit

KEY COMPETENCY LEVELS

NB: These levels do not relate to the Australian Qualifications Framework. They relate to the seven areas of generic competency that underpin effective workplace practices.

Collect, analyse and organise information	Communicate ideas and information	Plan and organise activities	Work with others and in teams	Use mathematical ideas and techniques	Solve problems	Use technology
Level 2	Level 1	Level 1	Level 1	Level 1	Level 2	Level 2

Three levels of performance denote level of competency required to perform a task.

1. Perform 2. Administer 3. Design

- Collecting, analysing and organising information – to determine document requirements
- Communicating ideas and information – through well-designed business documents
- Planning and organising activities – to meet designated timelines
- Working with teams and others – to determine document purpose and audience
- Using mathematical ideas and techniques – to determine design requirements
- Solving problems – using manuals and on-line help
- Using technology – to produce complex business documents

Please refer to the Assessment Guidelines for advice on how to use the Key Competencies

BSBADM408A Prepare financial reports

Modification History

Not applicable.

Unit Descriptor

This unit covers recording general journal adjustment entries and preparing end-of-period financial reports such as revenue statements and balance sheets for a non-reporting entity.

This unit is related to BSBADM310A Maintain a general ledger.

Elements and Performance Criteria

Elements and Performance Criteria

Element	Performance Criteria
1 Maintain asset register	<p>1.1 A register of property, plant and equipment is prepared from fixed asset transactions in accordance with organisational policy and procedures</p> <p>1.2 Method of calculating depreciation is determined in accordance with organisational requirements</p> <p>1.3 Asset register and associated depreciation schedule are maintained in accordance with organisational policy and procedures and accounting requirements</p>
2 Record general journal entries for balance day adjustments	<p>2.1 Depreciation of non-current assets and disposal of fixed assets are recorded in accordance with organisational policy and procedures</p> <p>2.2 Expense and revenue accounts are adjusted for prepayments and accruals in accordance organisational policy and procedures and accounting requirements</p> <p>2.3 Bad and doubtful debts are recorded in accordance with organisational policy and procedures and accounting requirements</p> <p>2.4 Ledger accounts are adjusted for inventories, if required, and transferred to final accounts in accordance with organisational policy and procedures and accounting requirements</p>
3 Prepare final general ledger accounts	<p>3.1 General journal entries for balance day adjustments are entered in general ledger system in accordance with organisational policy and procedures and accounting requirements</p> <p>3.2 Revenue and expense account balances are posted to final general ledger accounts system in accordance with organisational policy and procedures and accounting requirements</p> <p>3.3 Final general ledger accounts are prepared to reflect gross and net profits for reporting period in accordance with organisational policy and</p>

- procedures and accounting requirements
- 4 Prepare end-of-period financial reports
 - 4.1 Revenue statement is prepared in accordance with organisational requirements to reflect operating profit for reporting period
 - 4.2 Balance sheet is prepared in accordance with organisational requirements to reflect financial position of business at end of reporting period
 - 4.3 Errors are identified and corrected, or referred for resolution in accordance with organisational policy and procedures

Required Skills and Knowledge

Not applicable.

Evidence Guide

The Evidence Guide identifies the critical aspects, underpinning knowledge and skills to be demonstrated to confirm competence for this unit. This is an integral part of the assessment of competence and should be read in conjunction with the Range Statement.

Critical Aspects of Evidence

Integrated demonstration of all elements of competency and their performance criteria

Adherence to Australian Accounting and Auditing Standards

Adherence to double-entry principles

Systematic tracing of errors

Underpinning Knowledge

* At this level the learner must demonstrate understanding of a broad knowledge base incorporating some theoretical concepts.

Relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination

Knowledge of organisation's policies, procedures and accounting requirements

Knowledge of organisation's accounting systems

Double-entry bookkeeping principles

General journal and general ledger entries

Underpinning Skills

Literacy skills to identify financial information, to follow Australian Accounting and Auditing Standards and the organisation's accounting procedures

Communication skills including questioning, clarifying, reporting

Numeracy skills in relation to calculation of percentages, simple addition and subtraction

Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Resource Implications

The learner and trainer should have access to appropriate documentation and resources normally used in the workplace which may include:

Australian Accounting and Auditing Standards

Organisational accounting procedures

Consistency of Performance

In order to achieve consistency of performance, evidence should be collected over a set period of time which is sufficient to include dealings with an appropriate range and variety of situations

Context/s of Assessment

Competency is demonstrated by performance of all stated criteria, including paying particular attention to the critical aspects and the knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statement

Assessment must take account of the endorsed assessment guidelines in the Business Services Training Package

Assessment of performance requirements in this unit should be undertaken in an actual workplace or simulated environment

Assessment should reinforce the integration of the key competencies and the business services common competencies for the particular AQF level. Refer to the Key Competency Levels at the end of this unit

Key Competency Levels

Collecting, analysing and organising information (Level 2)- to prepare an asset register

Communicating ideas and information (Level 1)- through revenue statements and balance sheets

Planning and organising activities (Level 1)- to prepare end-of-period financial reports

Working with teams and others (Level 1)- to correct or refer errors for resolution

Using mathematical ideas and techniques (Level 2)- to calculate depreciation

Solving problems (Level 2)- to ensure accounts balance

Using technology (Level 2)- to prepare or generate financial reports as required

Please refer to the Assessment Guidelines for advice on how to use the Key Competencies

Range Statement

The Range Statement provides advice to interpret the scope and context of this unit of competence, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment. The following variables may be present for this particular unit:

Legislation, codes and national standards relevant to the workplace which may include:

award and enterprise agreements and relevant industrial instruments
relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
relevant industry codes of practice

Calculation of depreciation may include:

straight-line method
reducing balance method

Expense accounts may include:

rent paid
insurance
rates
wages and salaries
freight inward/outward
interest paid
distribution expenses
electricity
telephone/fax

Revenue accounts may include:

interest received
commission received
rent received

Prepayments and accruals may include:

prepaid expenses
prepaid revenue
accrued expenses
accrued revenue

Bad and doubtful debts may include:

writing off bad debts against provision for doubtful debts
calculation of provision for doubtful debts

Inventories may include:

goods for resale
stationery/office supplies

Final accounts may include:

Trading
profit and loss

Revenue statement comprises:

cost of goods sold if applicable
unclassified adjusted expenses and revenue
gross profit
operating net profit

Reporting period may include:

financial year
as determined in organisational procedures

Balance sheet comprises:

narrative or T format
unclassified assets and liabilities

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare a presentation	1.1. Plan and document presentation approach and intended outcomes 1.2. Choose <i>presentation strategies, format and delivery methods</i> that match the <i>characteristics</i> of the target audience, location, resources and personnel needed 1.3. Select <i>presentation aids, materials and techniques</i> that suit the format and purpose of the presentation, and will enhance audience understanding of key concepts and central ideas 1.4. Brief others involved in the presentation on their roles/responsibilities within the presentation 1.5. Select <i>techniques to evaluate presentation effectiveness</i>
2. Deliver a presentation	2.1. Explain and discuss desired outcomes of the presentation with the target audience 2.2. Use presentation aids, materials and examples to support target audience understanding of key concepts and central ideas 2.3. Monitor non-verbal and verbal communication of participants to promote attainment of presentation outcomes 2.4. Use persuasive communication techniques to secure audience interest 2.5. Provide opportunities for participants to seek clarification on central ideas and concepts, and adjust the presentation to meet participant needs and preferences 2.6. Summarise key concepts and ideas at strategic points to facilitate participant understanding
3. Review the presentation	3.1. Implement <i>techniques to review the effectiveness</i> of the presentation 3.2. Seek and discuss reactions to the presentation from participants or from key personnel involved in the presentation 3.3. Utilise feedback from the audience or from key personnel involved in the presentation to make changes to central ideas presented

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities
- facilitation and presentation skills to communicate central ideas of a message in an informative and engaging manner, and to utilise verbal and non-verbal techniques to sustain participant engagement
- literacy skills to prepare presentation information and to write in a range of styles for different target audiences.

Required knowledge

- data collection methods that will support review of presentations
- industry, product/service
- key provisions of relevant legislation from all forms of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - environmental issues
 - occupational health and safety
- principles of effective communication
- range of presentation aids and materials available to support presentations.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • preparation, delivery and evaluation of the effectiveness of at least two presentations related to the candidate's occupation or area of interest • knowledge of the principles of effective communication.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to an actual workplace or simulated environment • access to office equipment, documentation and resources.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • demonstration of preparation, delivery and evaluation of a presentation • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • observation of presentations • review of selected presentation aids, materials and techniques • review of briefing provided for others involved in the presentation • evaluation of techniques implemented to review the effectiveness of the presentation.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • other general administration units.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Presentation strategies</i> may involve:</p>	<ul style="list-style-type: none"> • case studies • demonstration • discussion • group and/or pair work • oral presentations • questioning • simulations and role-play
<p><i>Presentation format and delivery methods</i> may include:</p>	<ul style="list-style-type: none"> • advertising copy • audio • direct marketing copy • individual presentation • public relations copy • scripts • storyboards • team presentation • verbal presentation • video • visuals
<p><i>Characteristics</i> may include:</p>	<ul style="list-style-type: none"> • age • cultural and language background • educational background or general knowledge • gender • language, literacy and numeracy needs • physical ability • previous experience with the topic
<p><i>Presentation aids and materials</i> may include:</p>	<ul style="list-style-type: none"> • computer simulations and presentations • diagrams, charts and posters • models • overhead projector • paper-based materials • video and audio recordings • whiteboard

RANGE STATEMENT	
<i>Presentation techniques</i> may include:	<ul style="list-style-type: none"> • animation • comparative advertising • live action • music • signature elements such as: <ul style="list-style-type: none"> • slogans • logotypes • packaging • sound effects • use of a guest speaker • use of black and white • use of colour • use of humour
<i>Techniques to evaluate presentation effectiveness</i> may include:	<ul style="list-style-type: none"> • action research • critical friends • focus group interviews • one-on-one interviews with participants and other personnel involved in the presentation • written feedback provided by participants

Elements and Performance Criteria

Elements and Performance Criteria

Element	Performance Criteria
1 Maintain performance of hardware and software	<p>1.1 Systems effectiveness is monitored and evaluated to ensure it meets organisational and system requirements</p> <p>1.2 Operating system, drive and disk structure, reports and files are used to identify performance problems</p> <p>1.3 Disk drives and peripherals are maintained according to manufacturers' and organisational requirements</p> <p>1.4 Consumables are replaced in accordance with the manufacturers' and organisational requirements</p> <p>1.5 Software applications are installed and operated in accordance with developers' and organisational requirements</p>
2 Provide basic system administration	<p>2.1 System back up procedure is carried out at regular intervals according to organisational and system requirements</p> <p>2.2 Security access procedures are maintained in line with organisational requirements</p> <p>2.3 Licence for use of software is used, checked and recorded in accordance with organisational requirements</p> <p>2.4 Virus systems are maintained and updated on a regular basis in accordance with organisational requirements</p>
3 Identify future technology requirements	<p>3.1 Sources of information about new technology are accessed to maintain knowledge in current technology</p> <p>3.2 Feedback from clients and colleagues is used to identify and develop improved technology systems</p> <p>3.3 Existing technology is assessed against newly available technology to determine future needs and priorities</p>

- 3.4 New technologies are identified and selected to achieve and maintain continuous organisational development
- 3.5 Management and budget approval is obtained for new technologies identified and selected

Required Skills and Knowledge

Not applicable.

Evidence Guide

The Evidence Guide identifies the critical aspects, underpinning knowledge and skills to be demonstrated to confirm competency for this unit. This is an integral part of the assessment of competency and should be read in conjunction with the Range Statement.

Critical Aspects of Evidence

Evaluating and mapping network operations

Reviewing compliance with system protocols

Installing software and hardware

Organising and accessing software, materials and consumables

Maintaining virus, backup and security systems in line with organisational requirements

Identifying new technologies which match the future needs of the organisation

Underpinning Knowledge*

* At this level the learner must demonstrate understanding of a broad knowledge base incorporating some theoretical concepts.

The relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination

Knowledge of the costs and benefits of technology maintenance strategies

Knowledge of organisation's operating systems, including knowledge of networks

Principles of developing a maintenance schedule for a network

Knowledge of back up and security procedures, maintenance and diagnostic procedures, licensing and installation and purchasing procedures

Understanding current industry accepted hardware and software products including knowledge of general features and capabilities

Understanding organisational business plans, goals and directions

Understanding methods and processes to prepare budget and cost analysis

Knowledge of access protocols (eg. internet, TP/TCP)

Underpinning Skills

Literacy skills to interpret and evaluate the purposes and objectives of various uses of technology; display logical organisation of written information

Research and analysis skills to analyse and identify organisation's future technology requirements

Problem solving skills for common network problems

Report writing skills to organise information from a range of sources to form recommendations

Analytical skills in relation to systems administration

Diagnostic skills in relation to identifying problems or faults

Decision making skills for purchasing of new technology

Interpersonal skills for cooperating with others on system use

Presentation skills for explaining the operation of technology in a business environment

Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Resource Implications

The learner and trainer should have access to appropriate documentation and resources normally used in the workplace

Consistency of Performance

In order to achieve consistency of performance, evidence should be collected over a set period of time which is sufficient to include dealings with an appropriate range and variety of situations

Context/s of Assessment

Competency is demonstrated by performance of all stated criteria, including paying particular attention to the critical aspects and the knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statement

Assessment must take account of the endorsed assessment guidelines in the Business Services Training Package

Assessment of performance requirements in this unit should be undertaken in an actual workplace or simulated environment

Assessment should reinforce the integration of the key competencies and the Business Services Common Competencies for the particular AQF Level. Refer to the Key Competency Levels at the end of this unit

Key Competency Levels

Collecting, analysing and organising information - (Level 3) to formulate recommendations

Communicating ideas and information - (Level 2) with members of the work team

Planning and organising activities - (Level 2) to maintain business technology

Working with teams and others - (Level 2) in completing scheduled tasks

Using mathematical ideas and techniques - (Level 2) as an aid to measure and schedule tasks

Solving problems - (Level 2) to identify future technology requirements

Using technology - (Level 3) to complete allocated tasks

The Evidence Guide identifies the critical aspects, underpinning knowledge and skills to be demonstrated to confirm competency for this unit. This is an integral part of the assessment of competency and should be read in conjunction with the Range Statement.

Range Statement

The Range Statement provides advice to interpret the scope and context of this unit of competency, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment. The following variables may be present for this particular unit:

Legislation, codes and national standards relevant to the workplace which may include:

award and enterprise agreements and relevant industrial instruments
relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
relevant industry codes of practice

Organisational and system requirements may include:

quality assurances and/or procedures manuals
back up procedures
security and confidentiality procedures
legal and organisational policy/guidelines and requirements
storage retrieval and type of product licenses
storage of information technology documentation
register of licenses
Occupational Health and Safety policies, procedures and programs
code of conduct
ethical standards

maintenance of customised software
updating of virus protection systems

Disk drives and peripherals maintenance may include:

creating more free space on the hard disk
reviewing programs
deleting unwanted files
cleaning dust from internal and external surfaces
backing up files before major maintenance
checking hard drive for errors
defragmenting the hard disk
using up-to-date anti-virus programs

Consumables may include:

printer ribbons and cartridges
print heads
disks
magnetic tape and cassettes
print media

Software may include:

word processing applications
spreadsheet applications
accounting applications
database applications
presentation applications
internet/intranet/extranet related programs

Information sources on new technology may include:

industry associations
seminars, workshops and training sessions
the internet
computer magazines and journals
trade fairs
computer software designers
computer hardware manufacturers
internal/external clients
retail outlets

Technology may include:

computers
modems
software
client services
data transfer devices
scanners
photocopiers
printers

Improved technology systems may include:

access protocols
cable data transmissions
delivery and installation systems
maintenance options
multi-media
networking options
resource usage monitoring

print heads

disks

magnetic tape and cassettes

print media

Software may include:

word processing applications

spreadsheet applications

accounting applications

database applications

presentation applications

internet/intranet/extranet related programs

Information sources on new technology may include:

industry associations

seminars, workshops and training sessions

the internet

computer magazines and journals

trade fairs

computer software designers

computer hardware manufacturers

internal/external clients

retail outlets

Technology may include:

computers

modems

software

client services

data transfer devices

scanners

photocopiers

printers

Improved technology systems may include:

access protocols

cable data transmissions

delivery and installation systems

maintenance options

multi-media

networking options
resource usage monitoring

INTRODUCTION

Unit Descriptor This unit covers the reporting of financial activity for business both in response to client requests and to meet statutory requirements such as the completion of statutory requirement reports.

This unit is related to BSBCM308A Maintain financial records.

Competency Field Common

Element

Performance Criteria

- | | |
|---|--|
| 1. Compile financial information and data | 1.1 Current financial data is collected, evaluated and coded to ensure consistency, quality and accuracy in accordance with organisational requirements
1.2 Conversion and consolidation procedures are used to compile analysis in accordance with organisational requirements
1.3 Asset and liability valuations are made, recorded and disclosed in accordance with organisational requirements
1.4 Discrepancies, unusual features or queries are identified, resolved or referred to the appropriate authority |
| 2. Prepare statutory requirement reports | 2.1 Income and expenditure is correctly recorded to ensure compliance with statutory requirements
2.2 Liabilities for tax are calculated in accordance with current legislation and revenue gathering practices
2.3 Relevant receipts, revenue documentation and payments are identified correctly
2.4 Statements and claims take full advantage of available benefits and allowances in accordance with statutory requirements
2.5 Statutory requirement reports are submitted to appropriate authorities within stated deadlines |
| 3. Provide financial business recommendations | 3.1 Recommendations are logically derived and supported by evidence in report
3.2 Recommendations propose constructive actions to enhance the effectiveness and efficacy of functions and services
3.3 Recommendations are concise and facilitate direction and |

control of organisation's operations

3.4 Significant issues in statements including comparative financial performances are identified and prioritised for review and decision-making

RANGE STATEMENT

The Range Statement provides advice to interpret the scope and context of this unit of competency, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment. The following variables may be present for this particular unit:

- Legislation, codes and national standards relevant to the workplace which may include:
- award and enterprise agreements and relevant industrial instruments
 - relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
 - relevant industry codes of practice
- Financial data may include:
- budgets and forecasts
 - financial/operational statements and reports (eg. expenditures and receipts, profit and loss statements)
 - market valuations
 - budget variances
 - cash flow/profit reports
 - Australian Bureau of Statistics (ABS) economic data
 - financial markets monitoring services (eg. Reuters)
- Organisational requirements may include:
- quality assurances and/or procedures manuals
 - price and exchange parameters
 - reporting requirements
 - legal and organisational policy/guidelines and requirements
 - financial analysis assessments
 - Occupational Health and Safety policies, procedures and programs
 - recording and filing systems
 - standard financial analysis techniques
 - financial management manuals
- Conversion and consolidation procedures may include:
- spreadsheets
 - standardised variables
 - moving averages
 - unit costs

- trend analysis
- Discrepancies may include:
- expenditure report mismatches
 - incorrect payments
 - absence of auditable trail
 - inappropriate authorisations
 - variances from budget and phasings
 - unreconciled cash flows and operating statements
 - incorrect report formats
- Statutory requirements may include:
- reporting periods
 - taxation payment timings
 - delegated authorities
 - internal control procedures
- Revenue gathering practices may include:
- sales
 - leasing
 - investments
 - billing schedules
 - lending and financing
 - fees and charges
- Revenue documentation may include:
- invoices
 - declarations
 - bills
 - sales proceeds
 - cash received
 - debit notes
- Available benefits and allowances may include:
- depreciation
 - donations
 - sales tax deductions
 - interest payments
- Stated deadlines may include:
- monthly returns
 - annual reports
 - lodgement dates
 - payment schedules

Recommendations may relate to:

- profit
- loss
- expenses
- consolidation
- write-offs
- cash flow

Evidence may include:

- budgetary analysis
- forecasts and estimates
- returns on investments
- order and supplier documentation
- taxation and statutory returns

Significant issues may include:

- profitability
- losses and returns
- cost structures
- suppliers
- internal controls
- statutory obligations

Format of reports may include:

- cash flow statements
- statutory forms
- financial year reports
- balance sheets
- operating statements
- spreadsheets
- electronic forms

EVIDENCE GUIDE

The Evidence Guide identifies the critical aspects, underpinning knowledge and skills to be demonstrated to confirm competency for this unit. This is an integral part of the assessment of competency and should be read in conjunction with the Range Statement.

Critical Aspects of Evidence	<ul style="list-style-type: none">• Organising financial data to highlight relevant features• Presenting of information in comprehensive formats• Completing of Business Activity Statements• Interpreting and identifying applications of statutory requirements• Referring discrepancies outside scope of own responsibility to the appropriate persons
Underpinning Knowledge*	<ul style="list-style-type: none">• The relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination• Knowledge of organisational policies and procedures relating to maintaining financial data, reporting, preparing statutory returns• Principles of double entry bookkeeping and accrual accounting• Knowledge of techniques for forecasting and analysis• Understanding methods to present financial data• Knowledge of State and Federal Government taxes and charges• Knowledge of financial legislation• Knowledge of options, methods and practices for deductions, benefits and depreciations• Principles and practices for auditing and reporting
Underpinning Skills	<ul style="list-style-type: none">• Literacy skills to identify financial information, to follow Australian Accounting and Auditing Standards and the organisation's accounting procedures• Research skills to analyse the organisations financial and business status• Proof reading skills to check accuracy and consistency of information by consulting additional resources• Problem solving skills for a defined range of predictable problems

* At this level the learner must demonstrate understanding of a broad knowledge base incorporating some theoretical concepts.

- Report writing skills to assess information for relevance and accuracy from a range of sources
- Decision making skills in a limited range of options
- Numeracy skills for calculating data, reconciling figures
- Planning skills for timetabling and scheduling reports and lodgements
- Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Resource Implications

The learner and trainer should have access to appropriate documentation and resources normally used in the workplace

Consistency of Performance

In order to achieve consistency of performance, evidence should be collected over a set period of time which is sufficient to include dealings with an appropriate range and variety of situations

Context/s of Assessment

- Competency is demonstrated by performance of all stated criteria, including paying particular attention to the critical aspects and the knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statement
- Assessment must take account of the endorsed assessment guidelines in the Business Services Training Package
- Assessment of performance requirements in this unit should be undertaken in an actual workplace or simulated environment
- Assessment should reinforce the integration of the key competencies and the Business Services Common Competencies for the particular AQF Level. Refer to the Key Competency Levels at the end of this unit

KEY COMPETENCY LEVELS

NB: These levels do not relate to the Australian Qualifications Framework. They relate to the seven areas of generic competency that underpin effective workplace practices.

Collect, analyse and organise information	Communicate ideas and information	Plan and organise activities	Work with others and in teams	Use mathematical ideas and techniques	Solve problems	Use technology
Level 3	Level 2	Level 2	Level 2	Level 3	Level 2	Level 2

Three levels of performance denote level of competency required to perform a task.

1. Perform 2. Administer 3. Design

- Collecting, analysing and organising information – to forecast and provide recommendations
- Communicating ideas and information – with members of the work team
- Planning and organising activities – for completion of statutory returns and reports
- Working with teams and others – in completing scheduled tasks
- Using mathematical ideas and techniques – in reconciling financial documents
- Solving problems – to identify discrepancies and errors
- Using technology – to complete allocated tasks

Please refer to the Assessment Guidelines for advice on how to use the Key Competencies

BSBCRT401A Articulate, present and debate ideas

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to articulate, present and debate ideas.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to individuals who need to present and debate ideas in a work or broader life context.</p> <p>While the unit shares some similarities with units such as BSBCMM401A Make a presentation or BSBRES401A Analyse and present research information, the focus is quite different.</p> <p>This unit focuses on the creative ways in which ideas can be presented to provoke response, reaction and critical debate. Risk taking, storytelling and participation in critical debate are key features of the unit. Ideas might be quite complex in nature and relate to new products, services, creative works or new ways of doing things.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse ideas for communication to others	1.1. Distil <i>key themes, messages and positions</i> to aid in clarity of thought and presentation 1.2. Reflect on <i>different ways of communicating ideas</i> for different purposes and to different people 1.3. Identify the enabling skills and attributes of <i>individuals</i> who can effectively participate in discussions about ideas
2. Provoke response and reaction	2.1. Explore and use <i>different techniques to engage, fascinate and involve others</i> in the process of communication and exchange 2.2. Explore the ways that storytelling can be used to communicate ideas 2.3. Create <i>innovative approaches to different communication challenges</i> 2.4. Be prepared to take <i>risks</i> in the way ideas are presented 2.5. Identify <i>specific ways to provoke and encourage response</i> in particular individuals or groups
3. Debate and discuss ideas	3.1. Present and argue <i>substantiated positions</i> on ideas 3.2. Be open to critical analysis of own ideas and to the ideas of others 3.3. Identify and participate in conversations that challenge and explore different concepts and approaches, and generate new ideas 3.4. Respond to questions about ideas with confidence and relevant information 3.5. Reflect on and appraise the views of others, and use to refine ideas and to embrace new ideas

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to present ideas in ways that engage and provoke response, and to debate and discuss potentially complex concepts
- creative thinking skills to develop responses and new ideas in response to feedback
- learning and self-management skills to actively seek feedback and to learn from others
- literacy skills to develop and interpret information dealing with complex ideas.

Required knowledge

- creative and different ways of expressing and communicating ideas, and of making an opportunity pitch
- different ways in which individuals receive and respond to ideas and information, and what influences their response
- nature and role of risk taking in the presentation and debate of ideas
- role of storytelling in communicating ideas and key storytelling techniques
- techniques to tailor comments to particular audiences.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • creative and articulate presentations that provoke interest and response • active and confident participation in critical debate and discussion of ideas.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • presentations to others about ideas • discussion and debate with others about ideas.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • direct observation of candidate participation in presentations and debates • evaluation of candidate's skills in responding to new and different communication situations • evaluation of candidate telling a story, making a pitch or presenting ideas to complete strangers in 'different' environments (e.g. in a restaurant, in the corridor, on a bus, in a lift).
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Key themes, messages and positions</i> may relate to:</p>	<ul style="list-style-type: none"> • essence of the idea • influences on the idea • relationship of idea to established tradition or practice • relationship of idea to new and emerging technology • problems and challenges with the idea • reasons why the idea should be supported • selling a creative team • selling creative ideas • selling self as a creative person • way the idea was developed • who had developed the idea and why
<p><i>Different ways of communicating ideas</i> may be:</p>	<ul style="list-style-type: none"> • aural • group presentation/pitch • in a forum • in elevators • one-on-one discussion • on planes • oral • remote (e.g. video conferencing) • visual
<p><i>Individuals</i> may be:</p>	<ul style="list-style-type: none"> • colleagues • community members • friends • gallery owners • interviewers (media) • investors • mentors • panels • peers • students • supervisors or managers

RANGE STATEMENT	
<i>Different techniques to engage, fascinate and involve others</i> may include:	<ul style="list-style-type: none"> • blogging • media releases • multimedia presentations • music • photography • storytelling • viral marketing • visual depictions
<i>Innovative approaches to communication challenges</i> may involve ability to:	<ul style="list-style-type: none"> • get across all key messages in a short time • present on unfamiliar topic • respond to impromptu situations • structure information quickly and effectively
<i>Specific ways to provoke and encourage response</i> may include:	<ul style="list-style-type: none"> • use of engaging objects to explain idea
<i>Risks</i> may involve:	<ul style="list-style-type: none"> • acknowledging own limits and difficulties • asking for help • breaking out of accepted norms • divulging personal information or vulnerabilities • failing and learning from it • incorporating humour • taking a fun approach with a potentially serious audience
<i>Substantiated positions</i> may be positions which are:	<ul style="list-style-type: none"> • grounded in appropriate research • result of rational and logical thought • subjected to the analysis of others (e.g. peer review) • supported by relevant information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Enter into a collaborative creative process	1.1. Adopt a <i>personal philosophy of trustworthy and ethical behaviour</i> 1.2. Maximise the possibilities of sustaining creative partnerships through trustworthy and ethical behaviour 1.3. Use <i>professional discretion and judgement</i> in dealing with others 1.4. Acknowledge and respect the <i>different ways that different people may contribute</i> to the creative process 1.5. Acknowledge and work within the legal framework that applies to creative content as part of individual commitment to an ethical approach 1.6. Respect collaborative efforts by relinquishing individual ownership of ideas
2. Engage in a collaborative creative process	2.1. Maintain a <i>belief in personal ideas</i> , combined with a willingness to move on as ideas are discarded and others evolve 2.2. Be prepared to let go of own vanity and ego to allow new ideas to emerge 2.3. Use <i>language</i> and adopt a <i>demeanour</i> that demonstrates respect and trust for others 2.4. Listen to, value, respect and trust the contributions of others as material to work with rather than positions to argue against 2.5. Challenge, test and share ideas in a supportive way as part of the creative process 2.6. Move on from initial positions and preconceptions to accept and embrace new and unpredictable ideas as they emerge during the creative process 2.7. Play a role that encourages the <i>movement and shift of ideas</i> within the group towards a well-conceived solution
3. Reflect on own role in the collaborative creative process	3.1. Reflect on own level of participation, relationships with others and personal behaviour in the collaborative process 3.2. Identify ways to do better next time and follow up on any issues that need to be resolved 3.3. Identify and seek opportunities to refine and expand own skills and knowledge, including learning from

ELEMENT	PERFORMANCE CRITERIA
	failing

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to nurture trust, to model open and supportive communication, and to articulate potentially complex ideas
- creative thinking skills to generate and explore ideas
- learning and self-management skills to reflect on and enhance own ability to contribute effectively to a collaborative creative process
- problem-solving skills to continually be evaluating and challenging ideas and moving them forward towards solutions.

Required knowledge

- concept of shared intellectual property from collaborative creativity
- concepts of trust and ethical behaviour in the context of creative endeavour
- different roles people may play in a collaborative creative process and how this contributes to the overall effort
- how the creative process works in different situations (e.g. as an individual, as part of a group)
- how the potential for creativity can be maximised within a team
- legal framework that affects copyright, moral rights and intellectual property issues
- what stops creativity in a group environment.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • positive and full participation in a collaborative creative process that generates, expands and develops ideas into a well-conceived solution • communication and creative-thinking skills that make a positive contribution to the collaborative effort • knowledge and understanding of the ethical framework in which any type of creative endeavour operates.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • involvement of a team of people in the collaborative creative process.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • direct observation of the candidate participating in collaborative creative activity • interviews with others participating in the process to determine the nature and quality of the candidate's participation and interactions • evaluation of candidate presentation (verbal or written) on the collaborative process, including challenges, benefits and key learning for the future • oral or written questioning to assess knowledge of concepts of trust and ethical behaviour in the context of creative endeavour.
Guidance information for assessment	<p>A collaborative creative effort always occurs in a specific context. Therefore holistic assessment with other units relevant to the industry sector, workplace and job role is highly recommended. Assessors must, however, retain a strong focus on the key aspects of collaboration and</p>

EVIDENCE GUIDE	
	creativity detailed in this unit. Combined assessment with the following unit would also be appropriate: <ul style="list-style-type: none">• BSBCRT301A Develop and extend critical and creative thinking skills.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Personal philosophy of trustworthy and ethical behaviour</i> may relate to:</p>	<ul style="list-style-type: none"> • acknowledging discomfort or anger • being prepared to fully participate • communicating in an open way • honesty • honouring commitments • sensitivity to social, cultural, personal situations and dynamics • showing respect • understanding of the consequences of actions
<p><i>Professional discretion and judgement</i> may relate to:</p>	<ul style="list-style-type: none"> • assessing when to keep quiet • being aware of and responding to different personality types • knowing when it is appropriate or inappropriate to share information • knowing with whom information should be shared
<p><i>Different ways that different people may contribute</i> may relate to:</p>	<ul style="list-style-type: none"> • different approaches to expressing opinions or ideas • inclinations to lead or follow • influence with others • interpersonal skills • networks • past experience • technical skills and expertise
<p><i>Belief in personal ideas</i> may be demonstrated by:</p>	<ul style="list-style-type: none"> • backing ideas up with information and rationale • being prepared to argue for own ideas • confidence in own ability to create many ideas • confidence to share ideas • confident articulation of ideas • spending time developing and refining own ideas
<p><i>Language</i> that demonstrates</p>	<ul style="list-style-type: none"> • acknowledging new ideas and effort

RANGE STATEMENT	
respect for others may involve:	<ul style="list-style-type: none"> • avoiding negative words • avoiding personal negatives like 'you cannot' or 'you should not' • choosing words wisely • listening • making differentiations between ideas and people • managing tone • speaking at a level appropriate to the listener
<i>Demeanour</i> that demonstrates respect for others may relate to:	<ul style="list-style-type: none"> • avoiding intellectual bullying • encouraging others to express ideas • facial expression • keeping a positive mindset • listening before speaking • physical position • refraining from blame or accusation • other non-verbal behaviour • understanding the balance between constructive comment and attention seeking
<i>Movement and shift of ideas</i> may involve:	<ul style="list-style-type: none"> • building in 'what if' scenarios • encouraging a stocktake before moving forward • making connections between seemingly disparate ideas • refining ideas that seem positive • returning to earlier ideas • returning to key objectives • suggesting new processes • turning ideas 'on their head' to resolve blockages

Co-requisite units	

BSBCRT501A Originate and develop concepts

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to originate and develop concepts for products, programs, processes or services to an operational level. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to individuals who originate and develop concepts of some complexity and progress that concept to the point where it can be implemented. Individuals may be employed by organisations, be sub contractors or consultants brought in by companies to work on specific projects, or be individuals or part of a team working independently.</p> <p>Concepts could be developed for any business or community activity or process such as marketing campaigns, staff development programs, information technology and communication systems. This unit is also highly relevant to practitioners in the creative industries who develop products such advertising campaigns, radio and television programs, entertainment events, films, exhibitions and digital media products.</p> <p>A person undertaking this role would operate with a high degree of autonomy and at a senior level if working within an organisation. However, the process of generating concepts and ideas is collaborative in nature.</p> <p>Skills associated with writing proposals to support concept development are covered in BSBWRT401A Write complex documents.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate and explore needs and opportunities	<p>1.1. Research and evaluate <i>existing information that informs new concept development</i></p> <p>1.2. Where appropriate, identify and use gaps in current range of <i>products, programs, processes or services</i> as the catalyst for generating new ideas or concepts</p> <p>1.3. Expand the potential of new ideas through <i>exploration of opportunities beyond the obvious</i></p> <p>1.4. Identify <i>factors</i> that could have an impact on ideas or concepts to be developed, including potential for commercialisation</p> <p>1.5. Determine whether other players are filling identified gaps or investigating similar opportunities</p> <p>1.6. Develop preliminary ideas on innovative and different ways to address needs and opportunities</p> <p>1.7. In consultation with <i>relevant stakeholders</i>, agree on broad parameters for developing ideas and concepts to meet market requirements</p>
2. Develop a range of creative approaches	<p>2.1. Use a range of <i>creative thinking techniques</i> to generate innovative and creative concepts to address identified needs</p> <p>2.2. Challenge, test and experiment with different concepts and ideas as part of a collaborative process</p> <p>2.3. Evaluate concepts in terms of their suitability for the target audience or purpose, their feasibility and their commercial potential</p> <p>2.4. Take account of social, ethical and environmental issues as concepts and ideas are generated and discussed</p> <p>2.5. Identify <i>resources</i> required to achieve desired creative and innovative outcomes</p> <p>2.6. Evaluate the effectiveness of different strategies for achieving desired outcomes</p> <p>2.7. Select concepts or approaches that achieve required outcomes in an innovative and feasible way</p> <p>2.8. Present proposed concepts or approaches in an appropriate <i>format</i></p>
3. Refine concepts	<p>3.1. Ensure concept development process is open to ongoing refinement and testing</p> <p>3.2. Seek input and feedback on concepts from relevant stakeholders</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.3. Seek specialist advice on creative and technical aspects of proposals as required</p> <p>3.4. Compare concepts with best practice examples of similar products, programs, processes or services</p> <p>3.5. Use a range of <i>creative and practical criteria</i> to determine the advantages and disadvantages of different concepts</p> <p>3.6. Evaluate <i>constraints</i> on the realisation of concepts or ideas</p> <p>3.7. Refine proposals based on analysis and feedback</p>
4. Develop concepts to an operational level	<p>4.1. Use refined concepts as the basis for developing detailed <i>implementation specifications</i></p> <p>4.2. Present specifications to relevant parties for approval, funding or endorsement</p> <p>4.3. Reflect on methodology used to generate concepts and ideas and note ways of improving this in the future</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication and teamwork skills to work collaboratively on ideas and to articulate the rationale for concepts in ways that promote constructive discussion with others
- creative thinking skills to generate a range of innovative concepts and ideas, to use lateral thinking and to take a visionary approach to developing concepts and ideas
- initiative and enterprise skills to pro-actively identify market requirements
- planning and organising skills to take account of practical issues for concept implementation
- self-management skills to meet deadlines.

Required knowledge

- broad context in which concepts are being developed
- cultural, social and environmental issues and impacts to be considered in developing new concepts
- issues and requirements to commercialise the concept
- legal requirements that affect work in a given industry context
- practical and operational issues to be considered in a specific work or community context
- range of broad practical and operational issues that determine whether a concept can be implemented (in any context)
- techniques for generating creative ideas and solutions, and for translating these ideas into workable concepts.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • development of at least two concepts, substantiated and supported with sufficient information to allow for implementation to occur • generation of concepts and ideas that provide innovative solutions to identified issues • knowledge of legal requirements that affect work in a given industry context.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to the full range of background information required to evaluate the operational factors that will affect the implementation of concepts • interaction with others to reflect the collaborative nature of the concept development process.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • evaluation of concepts generated by the candidate, of the processes used to generate and test the ideas and the material developed to support the concept • debate and discussion with the candidate to assess knowledge of the operational context and the broader factors that impact on concept development • evaluation of presentation or 'pitch' made by the candidate in relation to a particular concept • oral or written questioning to assess knowledge of cultural, social and environmental issues and impacts to be considered in developing new concepts.
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Existing information that informs new concept development</i> may include:</p>	<ul style="list-style-type: none"> • creative brief • market research • organisational vision • personal vision and creative aspiration
<p><i>Products, programs, processes or services</i> may include:</p>	<ul style="list-style-type: none"> • art and craft works • advertising campaigns • business services and processes • designs • festivals • films • interactive digital media products • live entertainment productions or events • manufactured products • marketing and promotional campaigns • museum and gallery exhibitions • photoimaging services • radio or television programs
<p><i>Exploration of opportunities beyond the obvious</i> may involve:</p>	<ul style="list-style-type: none"> • challenging existing assumptions and preconceptions • considering radical change to the way things are done • exploring practice in a totally different industry context • investigating the use of new media • making connections between seemingly unrelated activities
<p><i>Factors</i> may include:</p>	<ul style="list-style-type: none"> • codes of practice • content • cost effectiveness • features of interactive digital media products: <ul style="list-style-type: none"> • delivery platform • level of interactivity

RANGE STATEMENT	
	<ul style="list-style-type: none"> • look and feel • navigation • Indigenous laws and protocols • length of program or film • level of skill and understanding required for implementation • nature and size of target audience • organisational charter and policies • purpose: <ul style="list-style-type: none"> • advertising or marketing • commercial • educational • entertainment • game • information • relevant legislation, such as: <ul style="list-style-type: none"> • copyright and intellectual property • privacy • results of market research • revenue raised by existing market share • technical feasibility
<i>Relevant stakeholders</i> may include:	<ul style="list-style-type: none"> • administrative staff • clients/customers • designers and other creative personnel • directors • external suppliers • information technology personnel • management • program producers • technical specialists • writers
<i>Creative thinking techniques</i> may include:	<ul style="list-style-type: none"> • brainstorming: <ul style="list-style-type: none"> • bulletin board • buzz session • computer-aided • sequencing • stop and go • Edward de Bono's six thinking hats • ego alter or heroes

RANGE STATEMENT	
	<ul style="list-style-type: none"> • graphic organisers: <ul style="list-style-type: none"> • concept fans • visual maps • webbing • lateral thinking games • making associations • mind mapping • morphological analysis • sub-culture surfing • trigger words • use of metaphors and analogies • vision circles • word salads • visualisation
<i>Resources</i> may include:	<ul style="list-style-type: none"> • computer hardware and software • facilities • printed material • specialist equipment • specialist staff • training
<i>Formats</i> may include:	<ul style="list-style-type: none"> • application forms to funding bodies or sponsors • briefs for consultants • concept maps • electronic presentations to promote the concept • in-house proposal forms
<i>Creative and practical criteria</i> may include:	<ul style="list-style-type: none"> • cost-effectiveness • evaluation against competing priorities • fit with personal vision and aspirations • fit with strategic directions of organisation • fit with target market needs • how innovative the concept is • level of risk • potential benefits • technical feasibility • time to realise the concept
<i>Constraints</i> may include:	<ul style="list-style-type: none"> • availability of resources and equipment • availability of skilled experts and personnel • cost

RANGE STATEMENT	
	<ul style="list-style-type: none"> • level of technical difficulty • limited funding sources • limited potential for commercialisation • time
<i>Implementation specifications</i> may include:	<ul style="list-style-type: none"> • briefs for work • detailed specification of concept including purpose and content • operational plan with responsibilities and time lines • resources breakdown (financial, human and physical)

Co-requisite units

Co-requisite units	

BSBCRT601A Research and apply concepts and theories of creativity

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to undertake research into different concepts and theories of creativity, and to apply those to a particular field of endeavour.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to individuals who use sophisticated research and critical analysis skills in the exploration of creativity and its application to work and life practice. This research may be related specifically to fields of practice traditionally considered as 'creative', such as the arts, but may equally relate to much broader fields of human activity and endeavour.</p> <p>The scope of the research activity has both significant depth and breadth. A broader, more general approach to the ideas and history surrounding creativity is found in BSBCRT403A Explore the history and social impact of creativity.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research concepts and theories of creativity	1.1. Use a range of <i>research techniques</i> to source information about creativity 1.2. Identify and explore potential <i>new, emerging and alternative sources of ideas and thinking</i> about creativity 1.3. Expand own knowledge and understanding of creativity through review and <i>critical analysis</i> of information 1.4. Analyse, compare and contrast a <i>range of theoretical perspectives and thinking</i> on creativity 1.5. Identify and explore the transmigration of creative thought to innovative output
2. Apply theories of creativity to practice	2.1. Evaluate the relevance and application of different theories and practices of creativity based on analysis of <i>own work and life experience</i> 2.2. Analyse the ways in which different aspects of history, theory and other influences are applied, adapted or challenged in practice 2.3. Assess the ways in which theories, thinking and practices about creativity may be applied that provide <i>benefits to individuals, businesses and the community</i>
3. Develop, articulate and debate own perspectives theories and practices of creativity	3.1. Take a critical approach to different theories and reflect on own ideas and responses 3.2. Develop own <i>substantiated positions</i> in response to research and analysis 3.3. Articulate own positions in a manner which demonstrates <i>clarity of thought and conceptual understanding</i> of different theories and thinking 3.4. Debate own positions on creativity showing belief in own ideas and a willingness to remain open to new perspectives

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- critical thinking skills to analyse complex information and to develop and substantiate own positions and responses to theories and thinking around creativity
- communication skills to articulate and debate complex concepts
- literacy and problem solving skills to research information dealing with complex concepts and theories of creativity
- self-management skills to develop and substantiate own views and ideas.

Required knowledge

- different theories and concepts of creativity, including different historical perspectives and current and emerging thinking
- potential and actual benefits of creativity for individuals, businesses and communities
- relationship between theories of creativity and creativity in practice (in a particular work or broader social context).

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • conduct of at least one research project into past, current and emerging theories of creativity • development of substantiated positions on creativity and its application in response to own analysis and research • knowledge of different theories and thinking on creativity and its application in different social and work contexts.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • use of current and emerging sources of information and thinking on creativity.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • evaluation of research undertaken by the candidate into theories and application of creativity • observation of the candidate participating in discourse and debate on theories of creativity and on the candidate's own positions and ideas.
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Research techniques may include:

- analysis of consumer trends
- desk research
- finding style leaders
- informal discussions
- internet search
- interviews
- literature reviews
- observation of creative workers processes and behaviours
- personal experience
- tracking trendsetters

New, emerging and alternative sources of ideas and thinking may include:

- component resourcing
- consumer trends
- current business theories
- emerging government policy
- emerging research
- fashion/design trends
- grazing hardware, electronics, junk, second hand goods etc.
- individuals in any fields of endeavour
- innovative organisations
- international trends
- new products and sub assembly components
- social trends

Critical analysis may involve:

- adapting
- analysing and evaluating actions and policies
- challenging
- clarifying issues, values and standards
- comparing analogous situations
- comparing and contrasting ideals with practice
- comparing and evaluating beliefs, interpretations and theories
- critical path process

RANGE STATEMENT	
	<ul style="list-style-type: none"> • debate and discussion • developing criteria for evaluation • distinguishing relevant from irrelevant facts • examining and evaluating assumptions • exploring implications and consequences • generating and assessing solutions • ideational connecting of unrelated information • judging • leap of faith • making interdisciplinary connections • making plausible inferences and predictions • noting significant similarities and differences • obtuse connections • openness • questioning • reading and listening critically • reflecting
<i>Range of theoretical perspectives and thinking</i> may be:	<ul style="list-style-type: none"> • economic • environmental • geographic • heritage • historical • local, national, international • political • philosophical • social/cultural • style/design
<i>Own work and life experience</i> may include:	<ul style="list-style-type: none"> • evaluation of contexts in which creativity has flourished • observation of nature • observation of the man-made environment • observations of the ways people interrelate • reflection on own creative thinking and endeavours • reflection on own experience with any type of creative endeavour or creative thinking • workplace experience
<i>Benefits to individuals, businesses and the community</i> may include:	<ul style="list-style-type: none"> • adaptability • better individual and business relationships • capacity for innovation and invention

RANGE STATEMENT	
	<ul style="list-style-type: none"> • curiosity • environmentally sustainable practices • greater social cohesion • high degree of value adding • improved productivity and profit • nimbleness of thought • psychological wellbeing of individuals and communities
<i>Substantiated positions</i> may be positions which are:	<ul style="list-style-type: none"> • grounded in appropriate research • result of rational and logical thought • supported by relevant information • subjected to the analysis of others (e.g. peer review)
<i>Clarity of thought and conceptual understanding</i> may be demonstrated by:	<ul style="list-style-type: none"> • ability to exchange and debate ideas with others • appropriate distillation of ideas to suit the required purpose • audience understanding • clear articulation of ideas

Co-requisite units

Co-requisite units	

BSBDES402A Interpret and respond to a design brief

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to interpret and creatively respond to a design brief through the production of work.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to individuals working in any industry or design context where work is prescribed by a commissioning agent/client in the form of a brief. The unit is holistic in nature and focuses on the integration of the creative, communication and planning processes that support effective response to a design brief.</p> <p>In practice, this unit supports and is supported by other units describing the specialist skills and knowledge required by specific design disciplines.</p> <p>Work is carried out independently, although guidance would be available if required. Skills involving the more complex process of negotiating and refining a design brief, or managing the production process are found in BSBDES502A Establish, negotiate and refine a design brief and BSBDES601A Manage design realisation.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Interpret design brief	1.1. Correctly interpret the <i>specifications</i> of the <i>design brief</i> 1.2. Establish and clarify user or client for the proposed product/service to inform design decisions 1.3. Identify and clarify specifications, <i>parameters or constraints</i> of the design brief in consultation with relevant colleagues 1.4. Source and evaluate <i>information pertinent to design brief</i>
2. Explore and develop design concept	2.1. Generate ideas for design concept through research, exploration and experimentation 2.2. Develop initial design concept consistent with design brief parameters 2.3. Evaluate and explore options for refining the concept to best meet design brief parameters 2.4. Refine options and select the approach which best meets design brief requirements
3. Liaise with client	3.1. Agree on communication process and frequency of communication with the client 3.2. Present <i>concepts for work</i> at appropriate stages during design process as required 3.3. Present and explore different options and creative ideas with client when appropriate 3.4. Pro-actively seek and act on client feedback 3.5. Reach <i>agreement on concept</i> for work which complies with design brief
4. Plan production of work	4.1. Assess specific design production risks 4.2. Identify all components required to produce a prototype 4.3. Assess technical requirements for production against specified guidelines 4.4. Identify and consult with <i>support services</i> required for production 4.5. Produce a prototype and evaluate against design brief requirements 4.6. Analyse prototype and determine any further adjustments to production requirements 4.7. Finalise production specifications supported by accurate and complete <i>documentation</i>

ELEMENT	PERFORMANCE CRITERIA
5. Complete production of work	5.1. Collect and/or organise required components for the work 5.2. Produce or monitor the production of work ensuring all parameters of design brief are met 5.3. Accurately document work progress in a format appropriate to the nature of the design and requirements of design brief 5.4. Seek client approval for work where appropriate

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with clients and colleagues on design concepts, and to effectively present potentially complex ideas
- creative thinking skills to generate and explore a range of possible responses to design brief requirements
- critical thinking and problem-solving skills to work out different ways of meeting different design and production challenges
- Research, literacy and analytical skills to interpret a brief and to source and evaluate information pertinent to the brief
- planning and organisational skills to integrate and coordinate creative, communication and planning issues into the work process
- self-management skills to take pro-active responsibility for all the elements involved in responding to a design brief.

Required knowledge

- copyright, moral rights and intellectual property issues and legislation relevant to the ways design concepts are developed and presented
- different ways of presenting, communicating and documenting design concepts (as relevant to the context of work)
- format of design brief typically used in the relevant industry or design context
- principles and key features of project management relevant to a design project
- specific project management factors that apply to a design project
- terminology typically used in a range of design briefs.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • effective response to the requirements of at least two design briefs, including interpretation, concept development, communication and production planning • knowledge of copyright, moral rights and intellectual property issues and legislation relevant to the ways design concepts are developed and presented.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to the materials resources and equipment needed to interpret design brief, source information pertinent to design brief and to respond to design brief within its parameters • interaction with others to reflect the communication and collaboration aspects of this unit.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • evaluation of design documentation and completed work undertaken by the candidate • oral or written questioning to assess knowledge of typical parameters and constraints for work in a given context, including practical production issues • evaluation of presentation made by the candidate to present concepts and to articulate the creative and other processes that lead to the development of final design concept.
Guidance information for assessment	<p>The design process does not occur in isolation. Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Specifications</i> may refer to:	<ul style="list-style-type: none"> • budget • location • materials • media • quantity • scope of work • site • size • target group • timeframes
<i>Design brief</i> may be:	<ul style="list-style-type: none"> • written • diagrammatic • visual • verbal
<i>Parameters or constraints</i> may refer to:	<ul style="list-style-type: none"> • budgeting and financing arrangements • cost of production • legislative and regulatory requirements • outlets • number of items • purpose of item • timeframes
<i>Information pertinent to design brief</i> may be about:	<ul style="list-style-type: none"> • current trends in the application of materials, techniques, tools and equipment • design standards • health and safety • industry standards • legal, contractual, ethical and copyright considerations • material characteristics and capabilities • new technology and innovation • stylistic considerations
<i>Concepts for work</i> would usually	<ul style="list-style-type: none"> • computer generated text or diagrams, for

RANGE STATEMENT	
be in written format and may include:	example MS Word PowerPoint presentation <ul style="list-style-type: none"> • diagrams • drawings • photographs or digital images • text • video
<i>Agreement on the concept</i> may involve:	<ul style="list-style-type: none"> • development of an artist statement • discussion with client • discussion with other specialists (e.g. technical or production) • formal contract for the work • negotiation
<i>Support services</i> may involve:	<ul style="list-style-type: none"> • agencies • digital services • engineers • fabricators, for example for models, props, sets • hire studios and/or equipment • other specialists, for example make-up, stylists • production facilities • work assistants
<i>Documentation</i> may include:	<ul style="list-style-type: none"> • charts/diagrams • CD • data sheets with notes • drawings/sketches • illustrations • material samples • photographs or digital images • slides • specifications for fabricators • storyboard and text • video or DVD • written rationale or description

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish design requirements	1.1. Identify and make appropriate contact with <i>relevant stakeholders</i> for the design project, in addition to the client 1.2. Identify and source <i>information and references relevant to the design project</i> 1.3. Undertake <i>critical analysis</i> of sources and extract key information to inform the design project 1.4. Liaise with client and other key stakeholders to determine <i>overall objectives and parameters</i> for the design project 1.5. Pro-actively seek, review and act upon information needed to inform constructive communication with client 1.6. Build trust and respect between self and client through effective use of communication skills and demonstration of professional integrity
2. Develop and refine design brief	2.1. Develop concepts and ideas for inclusion in design brief that take account of overall objectives and parameters 2.2. Undertake own analysis of concept and challenge ideas and approaches taken to ensure responsiveness to project needs 2.3. Present ideas in an <i>appropriate format/medium</i> and seek feedback from key stakeholders 2.4. Use effective communication techniques to generate discussion, debate and critical analysis 2.5. Re-evaluate and refine options based on own analysis and discourse with others 2.6. Establish and agree on final nature and scope of design brief with client and accurately document details
3. Negotiate terms and conditions	3.1. Negotiate and agree <i>terms and conditions</i> of the brief in accordance with relevant <i>organisational and professional standards</i> 3.2. Clarify, agree and document roles and responsibilities of those involved in the project 3.3. Confirm agreements in writing in accordance with <i>organisational requirements</i> 3.4. Identify the need for and seek specialist advice in developing, formal agreements or contracts where

ELEMENT	PERFORMANCE CRITERIA
	appropriate

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication, presentation and negotiation skills to work with clients to establish and refine design briefs
- creative thinking skills to generate and develop concepts and ideas for the design brief, including responses to situations where parameters may be quite broad and open or very restrictive
- literacy skills to research and evaluate a wide range of source materials for the development of ideas and concepts
- numeracy skills to develop realistic costings for realisation of design concept
- planning and organisational skills to guide and coordinate the process of negotiating and finalising a design brief
- problem-solving skills to pro-actively identify and develop effective solutions to complex challenges of a varied and unpredictable nature
- self-management skills to take responsibility for driving and guiding the brief negotiation process.

Required knowledge

- copyright, moral rights and intellectual property issues and legislation that impact on design in the relevant work context
- legal issues that affect negotiations and contracts in the relevant work context
- scope, nature and potential variations within design briefs relevant to a specific context
- sources of information that inform the development of design concepts within a specific industry context.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • practical demonstration of skills through the development and finalisation of at least two design briefs for a specific industry purpose • effective collaboration and communication skills to work with others to develop and refine a design brief • knowledge of the design process within the specific industry context/design discipline.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to appropriate equipment and media to communicate and present ideas and concepts • access to sources of information relevant to the industry context • interaction with and involvement of others to reflect the collaborative nature of the work, and the communication and negotiation skills required.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • evaluation of a design brief in which the candidate has played a significant development role • evaluation of reports prepared by the candidate detailing the processes undertaken for establishing and refining the design brief, including challenges faced and lessons learned for the future • observation of discussions and negotiations with client and other stakeholders • oral or written questioning to assess knowledge of the process and issues surrounding legislation, industry context, sources of information • evaluation of candidate response to different

EVIDENCE GUIDE	
	scenarios to assess ability to adapt approach to different client requirements and contexts.
Guidance information for assessment	<p>The design process does not occur in isolation. Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none">• any specialised design unit.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Relevant stakeholders</i> in addition to the client may include:</p>	<ul style="list-style-type: none"> • authorities such as local council for outdoor event design • creative specialists • other designers • others involved in the project • production teams • technical specialists • venue managers
<p><i>Information and references relevant to the design project</i> may include:</p>	<ul style="list-style-type: none"> • environment • financial information • legislative and regulatory requirements • music and/or film/video • oral history • organisational information • photographs and other artworks • project team members • promotional material • technical reports/data • texts and other written references • work of other designers/artists
<p><i>Critical analysis</i> may involve:</p>	<ul style="list-style-type: none"> • considering how ideas may be adapted • considering how ideas may be challenged • drawing links between references and potential designs • evaluating work of other designers • making judgements about potential ideas in relation to the budget and available resources • making judgements about relevance of information and ideas
<p><i>Overall objectives and parameters</i> may relate to:</p>	<ul style="list-style-type: none"> • audience • availability of materials, tools, equipment and human resources • budget constraints

RANGE STATEMENT	
	<ul style="list-style-type: none"> • conflicting competing demands • environmental sustainability • organisational vision • presentation venue/context • sponsorship • timeframe • triple bottom line (people, planet, profit)
<i>Appropriate format/medium</i> for presentation of ideas may include:	<ul style="list-style-type: none"> • checklists • digital presentation • drawings • electronic presentations • graphic formats • models • paintings • photographs • plans • prototypes • verbal description/oral presentation • video • visual diagrams
<i>Terms and conditions</i> may relate to:	<ul style="list-style-type: none"> • conceptual parameters • contracts • deliverables • legal and financial issues such as processes to be used • ownership and copyright • reporting • technical requirements • time lines
<i>Organisational and professional standards</i> may include:	<ul style="list-style-type: none"> • industry-accepted fee schedules • industry standards for written agreements • requirements for written agreements
<i>Organisational requirements</i> for confirming agreements may include:	<ul style="list-style-type: none"> • approval and ongoing communication processes

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan realisation of the design	1.1. Collect, analyse and maintain <i>relevant information on the design</i> 1.2. Discuss and agree on <i>standards of work and monitoring requirements</i> with <i>appropriate stakeholders</i> 1.3. Develop clear plan and schedule for design realisation, including key roles and responsibilities linked to time lines and budget
2. Implement and monitor realisation of the design	2.1. Organise and/or allocate <i>resources</i> to achieve the realisation of design within required standards, timeframes and budget 2.2. Liaise with others involved in design realisation to ensure obligations and quality standards are met within time, budget and technical resources 2.3. Maintain accurate, relevant and complete <i>documentation</i> in accordance with agreed standards 2.4. Monitor process to ensure integrity of design is maintained at all times, including through the process of challenging and interrogating own design work 2.5. Promptly identify <i>difficulties or problems</i> that arise in relation to realisation of the design and take action to rectify the situation
3. Liaise and negotiate with stakeholders	3.1. Establish and maintain appropriate <i>communication channels</i> with relevant stakeholders 3.2. Pro-actively seek and provide information to facilitate effective design realisation 3.3. Adhere to agreed terms and conditions or negotiate appropriate changes in light of changed circumstances 3.4. Negotiate and agree on revisions with relevant parties in a professional manner, to enhance quality of outcome
4. Complete design process	4.1. Finalise design outcomes in accordance with terms and conditions 4.2. Seek feedback from key stakeholders on finished design and make final adjustments as agreed 4.3. Evaluate completed design in relation to own work and overall process, to inform future practice

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication and negotiation skills to lead and participate in effective client/principal, stakeholder and project team liaison during design realisation
- creative thinking skills to generate new or adapted ideas in response to realisation challenges
- literacy skills to research and evaluate a wide range of source materials on design and to complete relevant design documentation
- numeracy skills to manage budgets
- planning and organisational skills to coordinate and lead potentially complex processes involving a range of interrelated factors and challenges
- problem-solving and decision making skills to develop and implement solutions to unpredictable problems.

Required knowledge

- copyright, moral rights, intellectual property issues and legislation that impact on design work in the relevant industry context at a managerial level
- occupational health and safety requirements relevant to the particular work context/design discipline
- production/realisation processes as they apply to designs in a particular industry context or design discipline including materials, tools, equipment and processes
- quality assurance for design concept realisation applicable to the specific industry context/design discipline.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • planning and implementation of design realisation so that finished product or service meets the requirements of design brief • effective communication and negotiation skills in relation to working with others for design realisation • knowledge of the design process in the specific industry context/design discipline.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to resources, tools, materials and equipment for realisation of a design in specific context • access to a design concept that the candidate can take to realisation stage • interaction with and involvement of others to reflect the collaborative nature of the unit and the communication and negotiation skills required.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • evaluation of finished products or services where the candidate has managed the realisation process • evaluation of progress reports or completion reports prepared by the candidate • evaluation of candidate reports on the realisation process highlighting different management techniques used, challenges in the process and how these were addressed.
Guidance information for assessment	<p>The design process does not occur in isolation. Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Relevant information on the design</i> may include:</p>	<ul style="list-style-type: none"> • artwork • brief • checklists • financial data • models • production data • prototypes • specifications • technical data • visual diagrams • working drawings
<p><i>Standards of work and monitoring requirements</i> may relate to:</p>	<ul style="list-style-type: none"> • budget targets • creative issues • legal issues • reporting requirements • technical quality • timeframes
<p><i>Appropriate stakeholders</i> may include:</p>	<ul style="list-style-type: none"> • client • community • others on whom the design will impact, for example technical or production personnel • others working on the design realisation process • supervisor/manager
<p><i>Resources</i> may include:</p>	<ul style="list-style-type: none"> • financial • human • physical
<p><i>Documentation</i> to be maintained may include:</p>	<ul style="list-style-type: none"> • digital records and presentations • financial reports • models • photographs • progress reports

RANGE STATEMENT	
	<ul style="list-style-type: none"> • prototypes • records of work • working drawings
<i>Difficulties or problems</i> may relate to:	<ul style="list-style-type: none"> • budgetary overruns • conceptual issues • legal issues • scheduling problems • technical quality
<i>Communication channels</i> may include:	<ul style="list-style-type: none"> • electronic updates • inspections • project meetings • telephone discussions

Co-requisite units

Co-requisite units		

BSBDES602A Research global design trends

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to research and critically evaluate global design trends.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to individuals who need to maintain a current and comprehensive knowledge of global design trends to inform their own professional practice. Often the individual would be a designer, but the unit may also be relevant to those who work in related management, marketing and production areas.</p> <p>The unit focuses on research and analysis of information and ideas at a complex level, plus the evaluation and extension of one's own professional skills.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research design trends	1.1. Analyse and select <i>formal and informal research strategies</i> to source <i>information on global design trends</i> 1.2. Identify and explore <i>new and alternative sources</i> 1.3. Evaluate the credibility of information gathered and ensure research scope is sufficiently broad
2. Analyse design trends to inform own practice	2.1. Use information to challenge and extend own perspectives and ways of thinking 2.2. Examine and assess the implications and consequences of design trends on own work 2.3. Use <i>critical analysis</i> to identify creative or commercial opportunities presented by emerging trends and technologies 2.4. Develop systems to identify and respond to future opportunities
3. Develop and articulate positions and ideas	3.1. Develop <i>substantiated positions and ideas</i> in relation to global design trends 3.2. Generate informed discussion, debate and critical analysis with peers and colleagues 3.3. Use debate and feedback as a way of challenging and refining own positions
4. Extend own design skills	4.1. Pro-actively identify and use opportunities presented by research to extend own design skills 4.2. Re-evaluate and refine approaches to work in the context of current and emerging trends 4.3. Use practice, discussion and ongoing evaluation to continuously improve skills

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to articulate and debate conceptual or technical ideas
- critical thinking skills to distil and synthesise information from varied sources and to develop own positions and ideas on a complex range of issues
- literacy skills to research complex, varied and unfamiliar information sources
- planning and organisational skills to undertake the research process.

Required knowledge

- broad global design trends that apply to all design disciplines
- business implications/consequences of adopting trends and emergent technologies
- copyright/moral/intellectual property issues associated with research and with design more broadly
- design industry networks and professional development opportunities - local, national and international
- research methodologies and options
- sources of information on global design, design trends and broader references that may inform emerging and innovative design practice
- specific current and emerging design technologies and trends (at a global level) in at least one area of design.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> conducting research on a complex range of design issues, trends and ideas analysing, critiquing and synthesising complex sources to develop own positions and ideas design research knowledge of copyright/moral/intellectual property issues associated with research and with design more broadly.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> use of a current and varied range of familiar and unfamiliar information sources.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate evaluation of research undertaken by the candidate in terms of scope, depth and the level of critical thinking applied direct observation of candidate debating issues arising from research into global design trends oral or written questioning to assess knowledge of global design trends in terms of depth and complexity.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><i>Formal and informal research strategies</i> may include:</p>	<ul style="list-style-type: none"> • formal study • participating actively in relevant industry associations • participating in, and contributing to, discussion through conferences, meetings, seminars, courses and journals • participating in professional development and other learning opportunities • reading current literature, including specialist journals and industry magazines • web research
<p><i>Information on global design trends</i> may relate to:</p>	<ul style="list-style-type: none"> • best practice examples • emerging and future technology • history • philosophy • role of design in the broader social, economic and political environment • sustainability
<p><i>New and alternative sources</i> may include:</p>	<ul style="list-style-type: none"> • inspirations from nature • work from other areas of community or business activity for example: <ul style="list-style-type: none"> • artists • authors • business people • entertainers • film makers • historians • philosophers • photographers • scientists
<p><i>Critical analysis</i> may include:</p>	<ul style="list-style-type: none"> • analysing and evaluating actions and policies • clarifying issues, values and standards

RANGE STATEMENT	
	<ul style="list-style-type: none"> • comparing analogous situations • comparing and contrasting ideals with practice • comparing and evaluating beliefs, interpretations and theories • developing criteria for evaluation • distinguishing relevant from irrelevant facts • examining and evaluating assumptions • exploring implications and consequences • generating and assessing solutions • making interdisciplinary connections • making plausible inferences and predictions • noting significant similarities and differences • reading and listening critically
<i>Substantiated positions and ideas</i> may be those which are:	<ul style="list-style-type: none"> • grounded in appropriate research • result of rational and logical thought • subjected to the analysis of others • supported by relevant information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research design theory	1.1. Use a range of <i>research techniques</i> to source information about design theory 1.2. Identify and explore <i>new, emerging and alternative sources of ideas and thinking</i> about design 1.3. Expand own knowledge and understanding of design through review and <i>critical analysis</i> of information 1.4. Analyse, compare and contrast a range of <i>theoretical perspectives and thinking</i> on design
2. Apply theories of design to professional practice	2.1. Evaluate the relevance and application of different theories of design based on analysis of <i>own professional and personal experience</i> 2.2. Analyse the ways in which different aspects of history, theory and other influences are applied, adapted or challenged in practice 2.3. Assess the ways in which theories and thinking about design may be applied in ways that provide <i>benefits to individuals, businesses and communities</i>
3. Develop, articulate and debate own perspectives on theories of design	3.1. Take a critical approach to different theories and reflect on own ideas and responses 3.2. Develop own <i>substantiated positions</i> in response to research and analysis 3.3. Articulate own positions in a manner which demonstrates <i>clarity of thought and conceptual understanding</i> of different theories and thinking 3.4. Debate own positions on design showing belief in own and ideas and a willingness to remain open to new perspectives

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to articulate and debate complex concepts
- critical thinking skills to analyse complex information, and to develop and substantiate own positions and responses to theories and thinking around design
- literacy skills to research information dealing with complex concepts and theories
- self-management skills to develop and substantiate own views and ideas.

Required knowledge

- different theories of design, including different historical perspectives and current and emerging thinking
- relationship between theories of design and design in practice (in a particular work or broader social context)
- relationships, similarities and differences at a conceptual and practical level between the concepts of design, innovation and creativity
- systemic impacts on design - social, economic, political and environmental.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • research into past, current and emerging theories of design • development of substantiated positions on design and its application in response to own analysis and research • knowledge of different theories and thinking on design and its application in different social and work contexts.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • use of current and emerging sources of information and thinking on design.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • evaluation of research undertaken by the candidate into design theory and its application • evaluation of candidate's participation in discussion and debate on theories of design
Guidance information for assessment	The design process does not occur in isolation. Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Research techniques</i> may include:</p>	<ul style="list-style-type: none"> • desk research • informal discussions • internet • interviews • literature reviews
<p><i>New, emerging and alternative sources of ideas and thinking</i> may include:</p>	<ul style="list-style-type: none"> • current business theories • government policy • individual in any field of endeavour • innovative organisations • international trends
<p><i>Critical analysis</i> may involve:</p>	<ul style="list-style-type: none"> • adapting • analysing and evaluating actions and policies • challenging • clarifying issues, values and standards • comparing analogous situations • comparing and contrasting ideals with practice • comparing and evaluating beliefs, interpretations and theories • developing criteria for evaluation • distinguishing relevant from irrelevant facts • examining and evaluating assumptions • exploring implications and consequences • generating and assessing solutions • debating and discussing • judging • making interdisciplinary connections • making plausible inferences and predictions • noting significant similarities and differences • questioning • reading and listening critically • reflecting
<p><i>Theoretical perspectives and</i></p>	<ul style="list-style-type: none"> • economic

RANGE STATEMENT	
<i>thinking</i> may be:	<ul style="list-style-type: none"> • environmental • historical • local, national and international • political • social/cultural
<i>Own professional and personal experience</i> may include:	<ul style="list-style-type: none"> • evaluation of contexts in which creativity has flourished • evaluation of different attitudes to design and the role of designers • observations of the ways people interrelate with the design process, of the ways people use and adapt designs in daily life • reflection on current political, social and cultural trends • reflection on own experience with any type design process • workplace experience
<i>Benefits to individuals, businesses and communities</i> may include:	<ul style="list-style-type: none"> • better individual and business relationships • capacity for innovation and invention • greater social cohesion • improved productivity and profit • psychological wellbeing of individuals and communities
<i>Substantiated positions</i> may be positions which are:	<ul style="list-style-type: none"> • grounded in appropriate research • result of rational and logical thought • subjected to the analysis of others • supported by relevant information
<i>Clarity of thought and conceptual understanding</i> may be demonstrated by:	<ul style="list-style-type: none"> • ability to exchange and debate ideas with others • appropriate distillation of ideas to suit the required purpose • audience understanding • clear articulation of ideas

BSBIPR401A Use and respect copyright

Modification History

Not applicable.

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to use and respect copyright. It covers maintaining control over the copyright owner's work, commercialising copyright material, preventing the unauthorised use of an original work, and using other party's original work legitimately.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.</p>
-------------------------------	--

Application of the Unit

<p>Application of the unit</p>	<p>This unit applies to people who may be authors, creators or other owners of works covered by copyright. It also applies to employees who have a role in ensuring that their organisation's copyright is protected and/or that their organisation uses others' copyright appropriately to benefit the organisation without infringing the rights of copyright owners. These people may work in a wide range of industry and business contexts.</p>
---------------------------------------	--

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify extent of copyright protection for original works	1.1. Research <i>copyright</i> and its application to original works 1.2. Identify <i>legislative requirements</i> governing copyright 1.3. Determine the <i>copyright owner</i> of original works within or used by the organisation 1.4. Research the <i>rights of the copyright owner</i> , including <i>moral rights</i> 1.5. Determine whether a <i>copyright notice</i> is required 1.6. Identify <i>sources of information and advice</i> regarding copyright issues and use copyright professionals where required
2. Ensure that copyright protection is effective when using original works	2.1. Identify material within the organisation that may attract copyright 2.2. Identify and review organisation <i>policies and procedures</i> to ensure that own and others' original works are protected against <i>direct</i> or <i>indirect infringement</i> of copyright 2.3. Implement policies and procedures to protect the organisation's copyright, recognising exceptions that allow the legitimate use of own copyright material by others 2.4. Provide advice to relevant personnel about the legal and economic <i>implications of copyright infringement</i> 2.5. Evaluate and make recommendations for the <i>commercialisation potential</i> of copyright material 2.6. Research issues that need to be considered when licensing or selling copyright rights, including the use of <i>copyright collection societies</i>
3. Monitor policies and procedures for use of own copyright materials by other parties	3.1. Monitor policies and procedures to ensure that the organisation's copyright is respected <i>locally</i> and <i>internationally</i> 3.2. Create and maintain documentation in relation to copyright agreements where established 3.3. Implement <i>procedures to limit or deter infringement</i> of organisation's copyright and/or encourage the proper use of the organisation's copyright 3.4. Make recommendations to appropriate personnel when real or potential infringements of organisation's

ELEMENT	PERFORMANCE CRITERIA
	copyright may require <i>further action</i>
4. Monitor policies and procedures for legitimate use of others' copyright materials	<p>4.1. Research when permission is needed to use copyright material belonging to others</p> <p>4.2. Advise appropriate personnel about <i>restrictions</i> on and licensing requirements for the use of others' copyright material, and implement training if required</p> <p>4.3. Advise appropriate personnel of legislative exceptions that allow use of copyright material without permission</p> <p>4.4. Monitor policies and procedures covering organisational use of others' copyright material to ensure it is to the benefit of the organisation</p> <p>4.5. Monitor organisational use of others' copyright material to reduce the risk of infringement</p> <p>4.6. Take action to minimise damage if infringement of others' copyright material occurs</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- research skills to identify a range of issues and information relating to copyright ownership and use
- organisational skills to review and maintain policies and procedures
- communication skills to provide relevant advice to others about copyright protection
- problem solving skills to monitor copyright policies and procedures and make recommendations for action if required
- technology skills to research copyright information

Required knowledge

- principal features of legislative framework for copyright and its application to the organisation:
 - Australia
 - Copyright Act 1968 and Copyright Regulations 1969
 - internationally
 - WIPO Treaties, in particular the Berne Convention, the WIPO Copyright Treaty and the WIPO Performances and Phonograms Treaty
 - International Trade Agreements, in particular the WTO TRIPS Agreement and the impact of free trade agreements to which Australia is a party (including AUSFTA)
- what works are protected by copyright and how long copyright lasts
- rights of copyright owners
- sources of information and advice on copyright
- methods for preventing unauthorised use of copyright material and action to take if infringement of copyright occurs
- when authorisation for use of copyright materials is needed and how to obtain it
- licensing and the role of collecting societies
- open source copyright licences, such as creative commons, AEShareNet, NEALS, GPL and other similar licences for copyright material
- impact of the internet on copyright

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • identification of issues for the use, management and protection of original works with copyright • implementation of policies and procedures for the use, management and protection of original works with copyright and legitimate use of others' original material
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to relevant information on the individual or organisation's copyright requirements and procedures • access to reliable and appropriate explanatory material and guidelines • access to appropriate computer resources for establishment and maintenance of policies and procedures
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolio of evidence • oral or written questioning to assess knowledge of copyright and its implications for the organisation • development of action plans for implementation of copyright policies and procedures, and commercialisation of original works • analysis of case studies around copyright issues, with recommendations for action
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • other units from BSB07 including other units relating to intellectual property

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Copyright refers to:

- the protection of the original expression of ideas from copying and certain other uses, but not the ideas themselves
- a large range of works, including:
 - works of art and design, and graphic representations, e.g. drawings, maps, community art
 - literature and other written material, e.g. reports, manuals, guides
 - music, e.g. tunes, lyrics
 - sound recordings
 - films and other moving images
 - drama and dance
 - broadcasts
 - computer programs, software, games
 - online or digital content
 - traditional knowledge

Legislative requirements may include:

- Copyright Act 1968
- Copyright Regulations 1969

Copyright owner may be:

- creator of the work
- employer where the employee creates a work in the course of employment as part of their usual duties, or is contracted to create the work for the employer
- person to whom copyright has been assigned
- person who arranged for a film or sound recording to be made
- person who commissioned design work on a commercial basis
- State, Territory or Federal Government for material created under their direction or control

RANGE STATEMENT	
	<ul style="list-style-type: none"> Note: there could be more than one owner of copyright
<p><i>Rights of the copyright owner</i> may include:</p>	<ul style="list-style-type: none"> the exclusive right to reproduce, publish, communicate to the public, publicly perform and adapt material assigning their rights to others so that another party becomes the owner or exclusive licensee of the rights licensing their rights, giving another party the permission to use the copyright material but not own the rights licensing of rights associated with derivative works of copyright material, including: <ul style="list-style-type: none"> exact copies enhancements supplementary works compilations <p>(For example license to use computer software programs - specialist legal advice should be obtained)</p> <p>Note: different rights attach to different types of copyright and the term of copyright may also differ</p>
<p><i>Moral rights:</i></p>	<ul style="list-style-type: none"> refer to the personal legal rights of individual creators in the copyright works they have created. They are separate from the economic rights of the copyright owner and may be held by different people include the right of creators: <ul style="list-style-type: none"> to be attributed not to have their work falsely attributed not to have their work treated in a derogatory way
<p><i>Copyright notice</i> may refer to:</p>	<ul style="list-style-type: none"> the copyright symbol © name of the copyright owner year of creation or first publication

RANGE STATEMENT	
	Note: a copyright notice is not required to obtain copyright protection in Australia, but is recommended to clearly indicate to others that the work is protected and to identify the copyright owner
<i>Sources of information and advice</i> may include:	<ul style="list-style-type: none"> • IP Australia • Attorney-General's Department • Australian Copyright Council • State and Commonwealth government agencies • lawyers specialising in intellectual property, including trade mark attorneys and patent attorneys • accountants • business advisors • marketing consultants • branding consultants • copyright collecting societies, e.g. CAL, PPCA, MIPI, APRA, AMCOS • publications • websites, Internet • databases, e.g. local and international trade mark databases
<i>Policies and procedures</i> may relate to:	<ul style="list-style-type: none"> • information technology and computer usage • computer security measures • employment contracts, including responsibility for intellectual property • confidentiality agreements within the organisation or among people who may need to know about the copyright material, so as to keep the copyright secret prior to commercialisation
<i>Direct infringement</i> of copyright may include:	<ul style="list-style-type: none"> • when a person, without the copyright owner's permission: <ul style="list-style-type: none"> • reproduces the work (or a substantial portion thereof) in a material form • publishes the work • communicates the work to the public • in the case of literary, dramatic and musical works, performs the work in public

RANGE STATEMENT	
	<ul style="list-style-type: none"> • adapts the work
<i>Indirect infringement</i> of copyright may include:	<ul style="list-style-type: none"> • when a person authorises or facilitates another person to infringe copyright, including through 'inactivity' or 'indifference' • when a person, without the copyright owner's permission, imports certain articles into Australia, e.g. to sell, distribute, exhibit or hire, when the article if made in Australia would have been an infringement of copyright
<i>Implications of copyright infringement</i> may include:	<ul style="list-style-type: none"> • legal and economic implications of not complying with copyright legislation • legal and economic implications of others infringing the individual or organisation's copyright
<i>Commercialisation potential</i> could include:	<ul style="list-style-type: none"> • licensing or transferring use of original work • profiting from the sale of the original work • developing a product or creative work under a government grant or other funding source and taking it to a commercial product stage
<i>Copyright collection societies</i> refer to:	<ul style="list-style-type: none"> • societies that license, collect and distribute royalties on behalf of the copyright owners they represent
<i>Locally</i> refers to:	<ul style="list-style-type: none"> • copyright protection within Australia which, under the Copyright Act 1968, exists automatically when something is written down or recorded in accordance with the requirements of the copyright legislation
<i>Internationally</i> refers to:	<ul style="list-style-type: none"> • copyright protection in other countries. Copyright is protected by national laws of each country, usually based on international conventions
<i>Procedures to limit or deter infringement</i> may include:	<ul style="list-style-type: none"> • making sure there is a copyright notice on all work • statement on works outlining preferred licensing arrangements • access codes in software • encrypting • express agreements on copyright ownership, particularly when work is outsourced
<i>Further action</i> could include:	<ul style="list-style-type: none"> • seeking legal advice • contacting publisher if the work is published • civil actions, including informal negotiations

RANGE STATEMENT	
	<p>and letters of cease and desist</p> <ul style="list-style-type: none"> • court order, including: <ul style="list-style-type: none"> • order to seize infringing goods • injunctions • monetary damages/compensation
<i>Restrictions</i> may include:	<ul style="list-style-type: none"> • not using others' copyright material without authorisation from the copyright owner <p>Note: there are some limited exceptions:</p> <ul style="list-style-type: none"> • fair dealing for the specific purposes of research or study, criticism or review, and news reporting • reproduction of computer programs, e.g. in the technical processes of running the program, for back-up copy, to correct errors • copying industrial products

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to protect, secure and effectively use intangible assets of value to an organisation. It focuses on establishing and maintaining systems to protect and exploit an organisation's intellectual property to ensure business growth. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.
------------------------	--

Application of the Unit

Application of the unit	This unit applies to managers or coordinators who take an active role in recognising, securing and commercialising intangible assets which contribute to the organisation's profitability, productivity, product or service delivery, and market leadership. These managers and coordinators may work in a range of industry or other contexts and may have responsibility for managing people, systems or processes.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Identify the organisation's intellectual property assets and rights</p>	<p>1.1. Identify the <i>intangible assets</i> residing within the organisation and how they can be protected</p> <p>1.2. Identify the <i>sections of the organisation</i> in which <i>intellectual property</i> is created, procured or transferred and for which management is required</p> <p>1.3. Research <i>intellectual property rights</i> appropriate to the organisation according to <i>legislative requirements</i></p> <p>1.4. Identify and access <i>sources of information and advice</i> for protection of the organisation's intellectual property</p> <p>1.5. Conduct a cost-benefit analysis of protecting intellectual property and determine risks</p> <p>1.6. Identify and use appropriate intellectual property professionals to initiate processes to protect intellectual property, according to the type of intellectual property protection required</p>
<p>2. Create a strategy to manage the organisation's intellectual property</p>	<p>2.1. Review or create an organisational strategy, and review or develop policies and procedures for protection, management and use of intellectual property as part of the organisation's business strategy</p> <p>2.2. Plan and implement an <i>intellectual property audit</i> and establish or review the value and use of the organisation's <i>intangible assets</i> inventory</p> <p>2.3. Plan and make recommendations for implementation of a strategy for business growth through use of organisation's intellectual property</p> <p>2.4. Plan and implement <i>strategies</i> to ensure employees, partners and contractors protect the organisation's and others' intangible assets</p> <p>2.5. Establish or review procedures to securely record and store <i>documentation</i> related to the organisation's intangible assets</p>
<p>3. Monitor and maintain organisational strategies for the protection and use of intellectual property</p>	<p>3.1. Monitor and review strategies, policies and procedures for the identification, protection and use of intellectual property regularly to ensure they are working effectively, and make changes if required</p> <p>3.2. Manage the identification of potential <i>infringement</i> of organisation's intellectual property rights, and ensure appropriate action is taken</p>

ELEMENT	PERFORMANCE CRITERIA
	3.3.Promote a culture of <i>compliance</i> and respect for other organisations' and individuals' intellectual property rights
4. Manage the commercialisation of the organisation's intellectual property to ensure business growth	<p>4.1.Research the role intellectual property will play in the strategic plans of the organisation</p> <p>4.2.Contribute to the implementation of the <i>commercialisation</i> of the organisation's intellectual property</p> <p>4.3.Manage the review of the activities of existing or potential competitors and assess their impact on the organisation's intangible assets</p> <p>4.4.Access and effectively use others' intellectual property within legal guidelines for business advantage</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication and analytical skills to conduct audits and make recommendations for compliance and commercialisation of intellectual property
- interpersonal skills to foster a positive culture of compliance within the organisation
- marketing skills to contribute to the commercialisation of the organisation's intellectual property
- problem solving skills to address intellectual property compliance issues
- research skills to find and interpret relevant legislation in relation to the particular types of intellectual property

Required knowledge

- types of intellectual property protection and time restraints on protection
- relevant legislation and regulations relating to intellectual property rights
- potential sources of information and advice about intellectual property
- business and marketing advantages of intellectual property protection
- strategic and business planning
- options for commercialisation

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • identification of the types of intellectual property within the organisation and the relevant legislation protecting them • establishment or review of strategies, policies and procedures for the management and use of own and others' intellectual property • identification of commercialisation potential of an organisation's intellectual property
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to relevant organisational strategies, policies and procedures; or access to information to allow for the design of these policies and procedures • access to relevant legislation and regulations as they relate to intellectual property • access to appropriate computer resources for online search and report preparation
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • analysis of data collected on intangible assets and their compliance requirements within an organisation • direct questioning combined with review of portfolio of evidence and third party workplace reports of on-the-job performance by the candidate, to demonstrate the establishment of strategies, policies and procedures to manage an organisation's intellectual property • third party reports to demonstrate how the candidate promoted a culture of respect for the intellectual property of others • presentation to appropriate personnel on the commercialisation of a range of intellectual property within the organisation • oral or written questioning about relevant legislation

EVIDENCE GUIDE	
	as it relates to the organisation's intellectual property
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none">• BSBR501A Manage risk• other management units from BSB07

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Intangible assets may include:

- brand
- business name
- customer/client list
- computer systems software
- confidential information
- copyrights
- core technology
- database/customer list
- design
- distribution agreements
- domain name
- employees' specialist knowledge
- goodwill
- ideas
- innovation
- invention
- logo
- packaging
- patent
- practical application of a good idea
- process
- product
- promotional materials
- secret recipe, process, formula
- standard of service/unique service technique
- trade mark
- trade secret
- training manuals

Sections of the organisation may include:

- any section of the organisation that creates products or services that may be protected by intellectual property rights, or that is responsible for the management of intellectual property, including:

RANGE STATEMENT	
	<ul style="list-style-type: none"> • design department • marketing department • research and development department • product development group • human resource department • production, administration or service delivery • legal services unit
<i>Intellectual property</i> refers to:	<ul style="list-style-type: none"> • the output of the mind or intellect rather than tangible objects. It includes: <ul style="list-style-type: none"> • copyright • trade marks • patents • designs • plant breeder's rights • circuit layout rights • confidential information/trade secrets
<i>Intellectual property rights</i> may refer to:	<ul style="list-style-type: none"> • the exclusive rights associated with the relevant intangible asset • the right to prevent use by others of the intangible asset
<i>Legislative requirements</i> may include:	<ul style="list-style-type: none"> • Business Names legislation • Copyright Act 1968 • Designs Act 2003 • Patents Act 1990 • Trade Marks Act 1995 • Trade Practices Act 1974 and State/Territory fair trading legislation
<i>Sources of information and advice</i> may include:	<ul style="list-style-type: none"> • IP Australia • Attorney-General's Department • Australian Copyright Council • State and Commonwealth government agencies • lawyers specialising in intellectual property • trade mark attorneys and patent attorneys • accountants • business advisors • marketing consultants • branding consultants

RANGE STATEMENT	
	<ul style="list-style-type: none"> • copyright collecting societies, e.g. CAL, PPCA, MIPI, APRA, AMCOS • publications • websites, Internet • databases, e.g. local and international trade mark databases
<i>Intellectual property audit</i> may involve:	<ul style="list-style-type: none"> • a systematic review of the intellectual property owned, used or acquired by a person or organisation, including: <ul style="list-style-type: none"> • products or services that are key to the organisation • intangible assets and the legal rights that constitute them in relation to the goods or services • what market advantage these rights give the organisation • rights under which the organisation uses intellectual property • gaps or weaknesses in the organisation's intellectual property and rights • the valuation and recording of such intangible assets in accordance with accepted accounting standards
<i>Intangible assets</i> refer to:	<ul style="list-style-type: none"> • registered forms of intellectual property, such as patents and trade marks • unregistrable forms of intellectual property, such as copyright, client lists, know how, staff and training programs
<i>Strategies</i> may include:	<ul style="list-style-type: none"> • preparation of employer, contractor and supplier contracts which protect the organisation's intellectual property, so that: <ul style="list-style-type: none"> • the organisation's intellectual property is not introduced into other organisations • ownership of the intellectual property is established, e.g. external contractors designing training materials for an organisation • licensing, assignment or transfer of the organisation's intellectual property to other parties for the benefit of the organisation or its stakeholders • conducting appropriate clearance searches and

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan a mentoring program	1.1. Determine benefits of and need for, a <i>mentoring program</i> 1.2. Define <i>mentoring program purpose and objectives</i> 1.3. Develop a <i>mentoring program plan</i> with appropriate <i>outcomes</i> in consultation with <i>key stakeholders</i> 1.4. Establish <i>relevant management structures</i> and wider support requirements 1.5. Determine <i>mentoring program modes and methods</i> 1.6. Determine methods and resources required to report on mentoring program outcomes
2. Develop tools and materials to support a mentoring program	2.1. Develop a range of <i>tools and resources</i> appropriate to mentoring program modes and methods 2.2. Establish <i>mentor</i> and <i>mentee</i> selection criteria, procedures and tools 2.3. Establish <i>formal requirements for the mentor-mentee relationship</i> and communicate these requirements to all parties 2.4. Establish rules, procedures and requirements that encompass key <i>accountabilities and responsibilities</i> 2.5. Develop the means to report and collate outcomes from the mentor-mentee relationship
3. Coordinate mentor and mentee relationships	3.1. Implement strategies for recruiting and accurately <i>matching</i> mentors with mentees 3.2. Induct mentors and mentees into the program 3.3. Ensure plans required for personal growth are developed by mentors and mentees 3.4. Cultivate rapport, mutual trust and teamwork in the mentoring relationship 3.5. Consider and address cultural differences and diversity issues in all mentor-mentee communications 3.6. Use <i>data and reporting tools</i> supporting the program to monitor the mentor-mentee relationship
4. Evaluate a mentoring program	4.1. Complete <i>mentoring record keeping and reporting</i> requirements using agreed technology, reporting processes and procedures 4.2. Evaluate mentoring program against agreed outcomes and report through relevant management

ELEMENT	PERFORMANCE CRITERIA
	structures 4.3.Document improvement opportunities for future mentoring programs based on program evaluation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - maintain appropriate relationships with colleagues and individuals in the mentoring program
 - establish trust
 - value and be open to, the opinions of others
 - work as part of a team
 - use active listening techniques
 - negotiate
 - encourage and accept feedback
- language skills to:
 - communicate organisational ideas, policies and procedures
 - encourage participation across all levels of personnel and clients
 - seek opinions and elicit feedback from a range of stakeholders
- planning and organising skills to plan a mentoring program and to schedule mentor-mentee interviews and sessions
- problem-solving skills to select and screen applicants for mentoring program, and to assist with resolution of issues that might arise during the program
- self management skills to evaluate personal effectiveness and to manage own time and resources
- teamwork skills to conduct mentor and mentee selection, and to monitor the progress of mentoring program in a team context
- technology skills to undertake record keeping and reporting using agreed technology, and to complete electronic communication and data sharing.

Required knowledge

- content and data reporting and storage options
- how to complete the required data collection
- legislation, regulations, codes and policies relevant to the organisation's operations and methods for mentoring
- mentoring program design principles
- relevant communication processes and methods
- reporting methods
- requirements for mentoring tools
- screening techniques, and confidentiality and privacy issues.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • developing mentoring program plan in consultation with others • working within the relevant management structure to gain executive support for mentoring program • facilitating mentor and mentee selection process • knowledge of relevant legislation specifically in relation to confidentiality and privacy.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to an actual workplace or simulated environment • competence is consistently demonstrated over time, and over a range and variety of mentoring programs.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • completion of applied projects or learning activities • direct observation of application of skills in context • oral or written questioning to assess knowledge of mentoring program design principles • review of mentoring program plan.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • BSBLED702A Lead learning strategy implementation • BSBLED706A Plan and implement a coaching strategy • BSBREL701A Develop and cultivate collaborative partnerships and relationships

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop coaching strategy	1.1. Research and review the need for and role of, coaching within an organisation 1.2. Establish a framework for the coaching strategy based on organisational context and needs 1.3. Determine roles, responsibilities and outcomes for key individuals involved in the coaching strategy 1.4. Develop time lines for coaching strategy implementation in consultation with stakeholders 1.5. Obtain organisational support for coaching strategy in accordance with organisational procedures
2. Prepare for coaching strategy implementation	2.1. Plan the coaching program and coaching models to suit the coaching strategy and the organisation's worker and employer issues 2.2. Design induction and training requirements 2.3. Design tools and resources for coaches and trainees 2.4. Analyse legal, regulatory and organisational compliance requirements for coaches 2.5. Establish recruitment processes for coaches and trainees
3. Implement coaching strategy	3.1. Promote coaching program 3.2. Recruit and select coaches and trainees 3.3. Establish tools, mechanisms and procedures for matching and managing the coach-trainee relationship 3.4. Induct, match and brief coaches and trainees
4. Monitor and support coaching strategy	4.1. Ensure coaching strategy is implemented consistent with work practices and operational requirements 4.2. Provide coaches with access to professional development and support necessary to acquit their role effectively and efficiently 4.3. Design techniques and practices for resolving differences and problems in coaching relationships 4.4. Monitor coaching relationships to ensure they are in accordance with organisational policies and procedures 4.5. Recognise and acknowledge the positive contribution individuals make to coaching activities
5. Review and report on coaching strategy	5.1. Collect, analyse and report data in relation to coaching outcomes at individual or group level, in

ELEMENT	PERFORMANCE CRITERIA
	line with organisational context and needs 5.2. Identify and promote ongoing opportunities for coaching in accordance with individual and organisational context and needs 5.3. Evaluate coaching strategy, document findings and present recommendations for improvement to relevant others

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - maintain appropriate relationships with colleagues and individuals involved in coaching
 - establish trust
 - value and be open to, the opinions of others
 - work as part of a team
 - use active listening techniques
 - negotiate
 - encourage and accept feedback
- learning skills to:
 - develop a learning strategy based on applied research
 - design coaching tools and resources
 - conduct induction processes
- planning and organising skills to:
 - plan coaching program
 - frame a coaching strategy within available resources
 - schedule coaching sessions
- problem-solving skills to:
 - select and screen applicants for a coaching program
 - assist with resolution of issues that might arise during the program
 - conduct needs assessments
- teamwork skills to select and match coaches and trainees, and to consult with and influence a team to effectively deploy coaching strategies
- technology skills to communicate electronically with stakeholders and coaches, and to use technology to facilitate coaching.

Required knowledge

- basic coaching techniques
- coaching program design principles
- communication processes and methods
- data collection methods
- human psychological development
- legislation, regulations, policies, procedures and guidelines relating to workplace coaching
- reporting methods

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Coaching is:

- a defined relationship designed to enhance performance
- an activity requiring good interpersonal relations
- an activity which emphasises action or improved performance in a specific area
- focussed on the acquisition of job skills and knowledge, and is generally short-term
- frequently identified in personal learning and development plans
- not necessarily managed in a hierarchical relationship (such as being coached by one's supervisor)
- results oriented
- performance or goal directed
- provided by a coach who:
 - maintains confidentiality
 - monitors performance
 - provides learning opportunities
 - provides constructive feedback
 - may have undertaken training or development for the role

Coaching strategy may include:

- administration
- amount of material support
- application in the workplace
- content and resources
- expected outcomes
- facilities and location
- method or mode of interaction (i.e. physical or electronic)
- preferred learning style of person being coached
- roles and responsibilities for key individuals

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify human capital	1.1. Analyse and evaluate the principles of <i>human capital</i> theory and concepts 1.2. Assess the factors involved in the formation of human capital 1.3. Determine the <i>capital asset value</i> of human resources in an organisation, an industry or a region 1.4. Determine the relationship between human capital and <i>organisational requirements</i>
2. Consult on the advantages of human capital development	2.1. Develop and prioritise strategies for deploying human capital development strategies to support the <i>organisation training needs profile</i> in consultation with <i>key stakeholders</i> 2.2. Negotiate with key stakeholders on opportunities for collaborative human capital development projects
3. Develop and monitor human capital development	3.1. Complete <i>human capital needs analysis</i> and development planning according to organisational requirements 3.2. Analyse and interpret <i>information and data</i> on human capital gaps and forecasts 3.3. Implement <i>options</i> and strategies to develop, attract and retain <i>talent</i> 3.4. Implement options and actions to optimise asset value of human resources in relation to organisational strategic imperatives 3.5. Determine talent and develop the potential of human capital required to meet organisational requirements 3.6. Promote the <i>capacity</i> of the organisation, team and individual employees to achieve strategic and personal advantage through effort to develop human capabilities

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - research and analyse data
 - communicate ideas and organisational policies and procedures
 - seek opinions and to elicit feedback from a range of stakeholders
 - maintain appropriate relationships with colleagues and production staff
 - value and be open to, the opinions of others
 - work as part of a team
 - use active listening techniques
 - negotiate
- planning and organising skills to prepare and consult on a human capital development plan
- problem-solving, initiative and enterprise skills to:
 - evaluate talent and human capital requirements
 - undertake integrative thinking
 - conceptualise and synthesise complex concepts
- self-management and learning skills to maintain records on talent and human capital for a work group or operational area
- technology skills to complete online research or data collection, and to develop and monitor human capital value using basic computer applications.

Required knowledge

- communication processes and methods
- data collection methods
- human capital audit and assessment
- human capital development planning methodologies
- methods to value human capital
- organisational knowledge assets and capital reporting processes
- relationship of human capital to knowledge management and reporting
- relevant legislation, codes and by-laws that affect business operations, especially in regard to occupational health and safety (OHS) and environmental issues, equal opportunity, industrial relations and anti-discrimination.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • accurate assessment of human capital value in an organisation through human capital analysis and measurement • documentation relating to data collection, and analysis of human capital and relationship to an organisation's knowledge management and human capital strategy • documentary evidence of human capital audit and production of a talent development plan • input from a wide range of sources providing evidence in respect to a broad range of activities and situations • knowledge of human capital audit and assessment.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to an actual workplace or simulated environment • competence is consistently demonstrated over time, and over a range and variety of situations • access to appropriate documentation and resources normally used in the workplace.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • completion of applied projects or learning activities - such as examining the relationship between human capital and human resource development; knowledge and organisational learning; talent attraction and development; and human capital and organisational agility • completion of an action research project isolating the relationship of human capital to an organisation's

EVIDENCE GUIDE	
	<p>intellectual and knowledge capital</p> <ul style="list-style-type: none"> • direct observation of contextual application of skills • oral or written questioning to assess knowledge of methods to value human capital.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • BSBFIM701A Manage financial resources • BSBLED702A Lead learning strategy implementation • PSPHR616A Manage performance management system • PSPMNGT614A Facilitate knowledge management.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><i>Human capital</i> is the:</p>	<ul style="list-style-type: none"> capital asset value of knowledge vested in the individual that can be deployed to maximise organisational and industry competitiveness
<p><i>Capital asset value</i> is the:</p>	<ul style="list-style-type: none"> determination of the value a business may derive from any stock of assets it owns, which can be deployed to create income, or from which interest and future value can be derived
<p><i>Organisational requirements</i> may include:</p>	<ul style="list-style-type: none"> access and equity principles and practices business and performance plans collaborative partnerships and arrangements confidentiality requirements defined resource parameters ethical standards goals, objectives, plans, systems and processes legal and organisational policies, guidelines and requirements OHS policies, procedures and programs organisational sociocultural circumstances and issues (for example, within Indigenous organisations) quality and continuous improvement processes and standards quality assurance and procedures manuals recording and reporting procedures
<p><i>Organisation training needs profile</i> may include:</p>	<ul style="list-style-type: none"> areas where staff may require further development linked to the organisation's goals and reflect: <ul style="list-style-type: none"> age profile composition - full-time, part-time, casual formal education and training backgrounds gender ratio language and cultural backgrounds occupational groups

RANGE STATEMENT	
	<ul style="list-style-type: none"> • organisational change programs • roster and shiftwork arrangements
Key stakeholders may include:	<ul style="list-style-type: none"> • customers • instructional designers • instructors • learners • management and staff • members of the public • peers • public agencies, especially regulators • suppliers and learning partners
Human capital needs analysis is the:	<ul style="list-style-type: none"> • determination of the gap between the human capital an individual, group, organisation or wider grouping (e.g. society or industry) requires as opposed to what is currently available
Information and data analysis will usually occur through deployment of:	<ul style="list-style-type: none"> • business technology • software applications able to assess human capital • analysis methods such as: <ul style="list-style-type: none"> • data sampling • feedback on results • peer review • qualitative and quantitative processes • review of previous research • statistical analysis
Options for the purposes of human capital development planning may include:	<ul style="list-style-type: none"> • availability of resources, such as financial resources, and information technology and systems • consultancy services • developing in-house capacity to meet identified needs • identifying training or assessment organisations to meet needs • identifying specific units of competency, Australian Qualifications Framework (AQF) qualifications or skill sets to meet needs • time lines • urgency
Talent concerns the:	<ul style="list-style-type: none"> • total potential an individual brings to an

RANGE STATEMENT	
	organisation within both current and future contexts
<i>Capacity</i> includes:	<ul style="list-style-type: none"> all innate and explicit competencies and capabilities able to be deployed to achieve desired outcomes in both current and future contexts

Co-requisite units		

BSBPMG522A Undertake project work

Modification History

Release	Comments
Release 1	<p>This version first released with <i>BSB07 Business Services Training Package Version 8.0</i>.</p> <p>Replaces BSBPMG510A Manage projects.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to undertake a straightforward project or a section of a larger project. This unit addresses the management of projects, including developing a project plan, administering and monitoring the project, finalising the project, and reviewing the project to identify lessons learned for application to future projects.

Application of the Unit

The unit focuses on the application of project-management skills and the requirement to meet timelines, quality standards, budgetary limits and other requirements set for the project.

The unit does not apply to specialist project managers. For specialist project managers, the other units of competency in the project management field (BSBPMG) will be applicable.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Define project	<p>1.1 Access <i>project scope and other relevant documentation</i></p> <p>1.2 Define project stakeholders</p> <p>1.3 Seek clarification from <i>delegating authority</i> of issues related to project and <i>project parameters</i></p> <p>1.4 Identify limits of own responsibility and reporting requirements</p> <p>1.5 Clarify relationship of project to other projects and to the organisation's objectives</p> <p>1.6 Determine and access available resources to undertake project</p>
2. Develop project plan	<p>2.1 Develop <i>project plan</i> in line with the project parameters</p> <p>2.2 Identify and access appropriate <i>project-management tools</i></p> <p>2.3 Formulate risk-management plan for project, including work health and safety (WHS)</p> <p>2.4 Develop and approve project budget</p> <p>2.5 Consult team members and take their views into account in planning the project</p> <p>2.6 Finalise project plan and gain necessary approvals to commence project according to documented plan</p>
3. Administer and monitor project	<p>3.1 Take action to ensure project team members are clear about their responsibilities and the project requirements</p> <p>3.2 Provide <i>support for project team members</i>, especially with regard to specific needs, to ensure that the quality of the expected outcomes of the project and documented time lines are met</p> <p>3.3 Establish and maintain <i>required record-keeping systems</i> throughout the project</p> <p>3.4 Implement and monitor plans for managing project finances, <i>resources</i> and quality</p> <p>3.5 Complete and forward project reports as required to stakeholders</p> <p>3.6 Undertake <i>risk management</i> as required to ensure project outcomes are met</p> <p>3.7 Achieve project deliverables</p>
4. Finalise project	<p>4.1 Complete financial record keeping associated with project and check for accuracy</p> <p>4.2 Ensure transition of staff involved in project to new roles or reassignment to previous roles</p>

	4.3 Complete project documentation and obtain <i>necessary sign-offs</i> for concluding project
5. Review project	<p>5.1 Review project outcomes and processes against the project scope and plan</p> <p>5.2 Involve team members in the project review</p> <p>5.3 Document lessons learned from the project and report within the organisation</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication and negotiation skills to work with team members and other stakeholders to maintain project schedules
- communication skills to relate to people with diverse abilities and from diverse backgrounds in a culturally appropriate way
- literacy skills to read, write and review a range of documentation
- numeracy skills to:
 - analyse data
 - compare time lines and promotional costs against budgets
- planning and organising skills to develop, monitor and maintain implementation schedules.

Required knowledge

- organisation's mission, goals, objectives and operations and how the project relates to them
- organisational structure, and lines of authority and communication in the organisation
- relevant legislation and codes from all levels of government that may affect aspects of business operations, including:
 - anti-discrimination legislation
 - codes of practice
 - environmental issues
 - ethical principles
 - WHS
 - privacy laws.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • developing a project plan • examples of monitoring arrangements and evaluation of the efficacy of the project plan in addressing project time lines and budget • knowledge of relevant legislation.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to workplace project documentation • demonstration of all required skills, knowledge and performance in a workplace-based project.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third-party workplace reports of on-the-job performance by the candidate • observation of presentations • oral or written questioning to assess knowledge of the organisation's mission, goals, objectives and operations and how the project relates to them • review of project risk-management plan and project plan • evaluation of project reports forwarded to stakeholders • analysis of documentation reviewing project outcomes and processes against the project scope and plan • evaluation of documentation outlining lessons learned from the project.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • other project management units.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Project scope and other relevant documentation</i> may include:	<ul style="list-style-type: none"> • contract or other agreement • project brief • project plan or summary • other documents outlining: <ul style="list-style-type: none"> • expected outcomes of the project • inclusions and exclusions from project • project resources • quality standards for project • timeframes for project.
<i>Stakeholders</i> may include:	<ul style="list-style-type: none"> • clients or customers (internal and external) • funding bodies • management, employees and relevant key personnel (internal and external) with special responsibilities • project sponsor.
<i>Delegating authority</i> may include:	<ul style="list-style-type: none"> • customer or client • funding body • manager or management representative • project sponsor.
<i>Project parameters</i> may include:	<ul style="list-style-type: none"> • project finances or budget • integration of project within organisation • legislative and quality standards • physical, human and technical resources available or required for project • procurement requirements associated with project • reporting requirements • risks associated with project, including WHS • scope of project • time lines.
<i>Project plan</i> may include:	<ul style="list-style-type: none"> • details of how the project will be managed • roles and responsibilities • time lines • work breakdown structure.
<i>Project management</i>	<ul style="list-style-type: none"> • cost schedule control system

tools may include:	<ul style="list-style-type: none"> • Critical Path Method • Gantt and bar charts • life cycle cost analysis • logistics support analysis • PERT charts • project management software • risk and issues logs • spreadsheets • technical resources required for the project, for example WHS management-system tools.
Support for project team members may include:	<ul style="list-style-type: none"> • additional physical, human and technical resources (within allocated budget) if and as required • encouragement • feedback • learning and development • regular project team meetings • supervision, mentoring and coaching.
Required record-keeping systems may include systems for:	<ul style="list-style-type: none"> • correspondence • financial data, including costs, expenditure, income generated and purchases • project outcomes • quality data, including any test results • recording of time spent on project and progress in completing project • samples, prototypes and models.
Resources may include:	<ul style="list-style-type: none"> • human • physical • technical.
Risk management may include:	<ul style="list-style-type: none"> • changing roles and responsibilities in project team • negotiating an extension of deadline, or redefining completion or quantity or quality of outcomes • outsourcing some aspects of the project • reducing costs • researching and applying more efficient methods for completing project tasks • seeking further resources to meet deadline • sharing ideas to gain improvements to work undertaken in the project.
Necessary sign-offs may be required by:	<ul style="list-style-type: none"> • clients • funding body • management • project sponsor.

Unit Sector(s)

Management and Leadership – Project Management

BSBREL701A Develop and cultivate collaborative partnerships and relationships

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to establish collaborative partnerships and relationships with business and industry stakeholders to promote and advance learning programs.</p> <p>The unit also covers communicating to influence others, cultivating new and existing partnerships, establishing positive collaborative relationships, leading the establishment of a partnership program and establishing reporting mechanisms.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to leaders or managers working in either an educational organisation or a non educational enterprise where learning is used to build capabilities. It includes forming partnerships or other collaborative arrangements to achieve improved learner, community, career, or work outcomes.</p> <p>Educational leaders gain the respect of colleagues, contacts, clients and the community through demonstrating professionalism in all aspects of their work; this professionalism is underpinned by their educational expertise and effective interpersonal and communication skills. In the vocational education and training sector, learning leaders and managers must build partnerships and lead in a collaborative manner to ensure learning has a strategic role in the ever changing context, and in the face of complex influences that affect learning.</p>
--------------------------------	--

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Communicate to influence relevant individuals and stakeholders	1.1. Generate trust, confidence and support from <i>relevant individuals</i> , other <i>stakeholders</i> and <i>potential learners</i> by demonstrating a high standard of personal performance and conduct 1.2. Implement <i>communication strategies</i> to represent the organisation positively to media, local community and stakeholders 1.3. Make decisions in consultation with relevant stakeholders and relevant individuals where appropriate 1.4. Use a range of <i>influencing strategies</i> to increase commitment from staff and stakeholders to achieve organisational requirements and to contribute to desired culture 1.5. Undertake selected community and/or professional engagements that project a positive image of the organisation to the broader community and stakeholders
2. Cultivate new and existing partnerships with stakeholders	2.1. Establish outcomes to be achieved from a learning <i>partnership</i> 2.2. Analyse models for effective consultation and collaboration within a partnership 2.3. Cultivate <i>collaborative communities</i> and partnerships through application of a range of learning and communication solutions 2.4. Forge relationships, collaborative communities or partnerships between a <i>training and assessment organisation</i> and a <i>public or private sector enterprise</i> 2.5. Consult stakeholders to establish vocational education and training <i>partnership learning programs</i>
3. Establish positive collaborative relationships	3.1. Establish processes that contribute to the creation and maintenance of a positive culture that embraces collaboration 3.2. Establish processes to <i>resolve conflict in a fair, equitable and collaborative manner</i> 3.3. Organise and allocate work activities in a cost effective and equitable manner with clear, quantifiable and agreed <i>performance standards</i> 3.4. Encourage staff to embrace a learning culture and to

ELEMENT	PERFORMANCE CRITERIA
	<p>undertake activities that develop their personal competence and performance</p> <p>3.5. Empower individuals to develop their own ways of working within agreed boundaries of competence, cultural, <i>diversity</i> and <i>organisational and legal requirements</i></p> <p>3.6. Establish <i>indicators</i> and <i>feedback processes</i> that can be used to evaluate the health of the work environment</p>
4. Lead establishment of a partnership program	<p>4.1. Identify and address <i>relevant organisational policies and procedures</i> in partnership learning program plans</p> <p>4.2. Identify and incorporate relevant legal requirements into planning of learning programs established in a community or partnership setting</p> <p>4.3. Form partnership learning programs in collaborative and consultative processes involving public or private sector enterprises</p> <p>4.4. Plan and allocate <i>resource requirements</i> to accomplish a partnership learning program</p> <p>4.5. Establish relevant organisational policies and procedures relating to partnerships, and training and assessment services</p>
5. Establish reporting mechanisms for partnership program	<p>5.1. Establish <i>reporting systems</i> for <i>reporting results</i>, that meet <i>reporting requirements</i>, against planned partnership outcomes</p> <p>5.2. Implement <i>reporting systems</i> to map learner progress against partnership outcomes</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analysis and interpretation skills to:
 - evaluate organisational information management systems, policies and procedures
 - select relevant evaluation information and documentation
 - identify any potential and current non-compliance
 - access and interpret organisation's standards and values
 - analyse records or notes of the evaluation process
- initiative and enterprise skills to establish collaborative partnerships and relationships
- interpersonal and communication skills to negotiate, to question, to listen and investigate, to network and clarify issues
- planning and organising skills to:
 - research and evaluate validation processes, and to determine and implement improvements to these processes
 - develop and establish agreement to plans
- problem-solving skills to review feedback and to plan improvements
- teamwork skills to lead and motivate a team in establishing productive networks, partnerships and other relationships.

Required knowledge

- relevant legislation that affects the business operation, especially in regard to OHS and environmental issues, equal opportunity and anti-discrimination, industrial relations
- organisation mission, purpose and values
- organisation objectives, plans and strategies
- leadership styles
- personal development planning methodologies
- data collection methods
- external environment scanning relating to social, political, economic and technological developments
- emotional intelligence and its relationship to individual and team effectiveness
- organisational transformation and the management of the stages of change
- organisational design and building in responsiveness of operations to change in customer or market conditions.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • demonstrated capacity to foster learning partnerships, conduct stakeholder consultation and use strategic and personally enhancing communication skills • developing collaborative approaches to enhance individual, team and organisational outcomes • initiating and implementing learning program partnerships in line with relevant regulatory, employment and organisational requirements • knowledge of relevant policy, legislation, codes of practice and national standards.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • competence is consistently demonstrated over time, and over a range and variety of situations • access to required assessment facilities and resources.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • review of applied projects or learning activities, especially relating to formation of professional networks and stakeholder consultation in relation to forming partnerships for vocational education and training programs • direct observation of contextual application of skills • submission of a portfolio of evidence including previous work forging partnerships • oral or written questioning to assess knowledge of development of industry learning partnerships.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p>

Unit Descriptor

This unit describes the work required to classify, register, and track records and information about records within a business or records system.

Linkages outside these National Competency Standards

ISO DIS 15489 - Draft International Standard on Records Management

The work described in this unit is linked to the work described in the following unit(s):

Previous Business Qualification(s)

Nil

The Same Business Qualification:

BSBRKG302A Undertake disposal

This unit represents a progression of skills described in other units. It is recommended, then, that the following units are achieved prior to the achievement of this unit:

BSBRKG303A Retrieve information from information

BSBRKG304A Maintain business records

Subsequent Business Qualification(s):

BSBRKG401A Review the status of a record

BSBRKG402A Provide information from and about the records

BSBRKG403A Set up a business or records system for a small office

BSBRKG501A Determine business or records system specifications

BSBRKG503A Develop and maintain a classification scheme

BSBRKG604A Determine security and access rules and procedures

This unit describes the work required to classify, register, and track records and information about records within a business or records system.

Elements and Performance Criteria

Elements and Performance Criteria

Element	Performance Criteria
1 Identify records for capture	<p>1.1 Incoming material is categorised for records capture in accordance with organisational procedures</p> <p>1.2 Activity documented by the record is identified from the elements of the record in accordance with organisational procedures</p> <p>1.3 Area or action officer to which the record needs to be forwarded is identified from elements of the record, or its content, and in accordance with organisational procedures</p> <p>1.4 Incoming material is assessed against organisational checklist for determining what material needs to be captured.</p> <p>1.5 Material which does not need to be registered is dealt with in accordance with organisational procedures</p> <p>1.6 Records on which action is complete are located, removed, or copied from the active business or records system, in accordance with organisational</p>

procedures

- 1.7 Where required by organisation procedures, the format/media of the record is modified in accordance with organisation requirements and procedures
- 2 Classify record(s)
 - 2.1 The identified transaction/action/activity documented by the record is matched to the organisation's classification scheme
 - 2.2 The full classification and sentencing of the record is selected in accordance with the system's rules and organisational procedures
 - 2.3 The classified/sentenced record is linked to other records in the business or records system in accordance with the system's rules and organisational procedures
 - 2.4 Indexing points (cross reference terms) are selected for the record in accordance with the system's rules and organisational procedures
 - 3 Register record(s)
 - 3.1 Unique identifier is selected for record in accordance with organisational procedures and business or records system rules
 - 3.2 Record is registered into business or records system with title, description, details of record creator, immediate location and any other control information to fulfil the system requirements in accordance with organisational procedures and business or records system rules
 - 3.3 Any physical dependencies or format of a record that will assist with its management over time are recorded in accordance with business or records system rules
 - 3.4 Access and security status are determined in accordance with organisational procedures and documented in accordance with business or records system rules
 - 3.5 Disposal class and status of the record is determined and recorded in accordance with the business or records system's rules, and organisational procedures and schedules

- 3.6 Record is forwarded to its appropriate location, which is recorded, in accordance with the system rules and organisational procedures
 - 3.7 The items identified for immediate destruction are separated from the rest of the body of records
- 4 Track record(s)
 - 4.1 Unique identifier of record to be located is determined from request or instructions
 - 4.2 Location of record is obtained from business or records system in accordance with system rules and organisational procedures
 - 4.3 History of record location is obtained from business or records system in accordance with system rules and organisational procedures
 - 4.4 Information about record is obtained from business or records system in accordance with system rules and organisational procedures
 - 4.5 Information about the record is updated and amended in accordance with organisational procedures
 - 4.6 All transactions on the business or records system are completed within the designated timeframe
- 5 Audit records against predetermined criteria
 - 5.1 Records are located with action officer and in storage areas in accordance with supervisors instructions
 - 5.2 Records are audited against predetermined criteria in accordance with organisational procedures and quality program
 - 5.3 Any discrepancies found are noted, and reported, in accordance with organisational procedures

Required Skills and Knowledge

Not applicable.

Evidence Guide

The Evidence Guide identifies the critical aspects, knowledge and skills to be demonstrated to confirm competence for this unit. This is an integral part of the assessment of competence and should be read in conjunction with the Range Statement.

Critical Aspects of Evidence

Demonstrate ability to:

Understand the processes of capture, classification, registration and tracking the location of records

Identify activities documented by records and apply classifications schemes

Record metadata accurately

Underpinning Knowledge

At this level the learner must demonstrate some relevant theoretical knowledge.

Relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination

Recordkeeping principles and processes

Concepts of, and reasons for, effective records and archives management

Knowledge and understanding of organisation's business, functions, structure, and culture

Organisation's policies, strategies and procedures, particularly those relating to records access and security

Organisational recordkeeping environments and culture including locations and nature of transactions

Organisation's recordkeeping and information (including classification) systems

Underpinning Skills

Explaining and clarifying procedures

Understanding and interpreting instructions

Listening to, questioning, and clarifying information requests

Managing own activities within a timeframe

Records management system and operation including access and security for vital records

Systematic approach to work

Using judgement and discretion with confidential information

Working systematically with accuracy and attention to detail

Reading and comprehending/interpreting nature of record content

Interpreting retention and disposal schedules

Interpreting and applying relevant access and security rules and conditions

Accurately recording metadata

Writing reports where precise meaning is required

Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Resource Implications

The learner and trainer should have access to appropriate documentation and resources normally used in the workplace

Consistency of Performance

In order to achieve consistency of performance, evidence should be collected over a set period of time which is sufficient to include dealings with an appropriate range and variety of situations

Context/s of Assessment

Competency is demonstrated by performance of all stated criteria, including paying particular attention to the critical aspects and the knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statement

Assessment must take account of the endorsed assessment guidelines in the Business Services Training Package

Assessment of performance requirements in this unit should be undertaken in an actual workplace or simulated environment

Assessment should reinforce the integration of the key competencies and the business services common competencies for the particular AQF level. Refer to the Key Competency Levels at the end of this unit

Key Competency Levels

Collecting, analysing and organising information (Level 1) - to register, track and record the record within the guidelines of the organisation

Communicating ideas and information (Level 1) - in documenting the location of records

Planning and organising activities(Level 1) - in planning the classification and registration activities

Working with teams and others -

Using mathematical ideas and techniques (Level 1) - in following a logical process to classify, register and track the records

Solving problems (Level 1) - presented by discrepancies between actual and nominal record locations

Using technology (Level 1) - to register and track the records within the organisation's systems

Please refer to the Assessment Guidelines for advice on how to use the Key Competencies

The Evidence Guide identifies the critical aspects, knowledge and skills to be demonstrated to confirm competence for this unit. This is an integral part of the assessment of competence and should be read in conjunction with the Range Statement.

Range Statement

The Range Statement provides advice to interpret the scope and context of this unit of competence, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment.

The following variables may be present for this particular unit:

Legislation, codes and national standards relevant to the workplace which may include:

award and enterprise agreements and relevant industrial instruments
relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
relevant industry codes of practice

Access status of records may be:

confidential
high security (restricted)
open

Appropriate level may be:

item level
chronological group
series
business or records system

Quality assurance audit may be of part of, or all of, an organisation

Operating environment may be:

under supervision
a team effort
solo

Record information to be updated may come from:

supervisor
user
file transfer slips
action officers
results of quality assurance audit
requests

Record media may be:

electronic
paper-based
microform
graphic
mainframe
PC-based applications

Records may be registered (captured) into:

current business or records systems
archival control systems
business systems
storage facilities systems

Records may be subject to special access conditions, arising from agreement with records creator or depositor, privacy or confidentiality considerations

Standard reports prepared from the business or records system may include:

statistics

resubmits for following day

over due action reports

daily correspondence

Storage may be:

centralised or decentralised

off-line or off-site

in-house or out-sourced

commercial storage service or government repository

CD storage

imaging systems

microform

audio-visual/multimedia formats

Storage environment may be:

temperature controlled

dust free

air conditioned

fire secure

intrusion secure

Location of record may be:

on a server

on a remote drive

physical

digital

Disposal actions may include:

retention

destruction

conversion to other record formats

transfer

Criteria for audit may include:

location

unique identifier

content

titling

compliance with recordkeeping metadata standards / requirements

Discrepancies may be reported to:

colleague

supervisor

manager

Form of reporting may be:

written

oral

reconciliation statement

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop marketing strategies	1.1. Analyse the business and its key products or services to determine the focus of marketing activities, in accordance with the objectives of the business plan 1.2. Evaluate the customer base and target market for the small business as a basis for the <i>marketing objectives and strategies</i> 1.3. Determine marketing objectives and strategies that are ethically and culturally appropriate, in consultation with <i>relevant people</i> and in accordance with the business plan
2. Determine a marketing mix for the business	2.1. Balance product mix, volumes and pricing to optimise sales and profit 2.2. Evaluate the costs and benefits of using different <i>distribution channels</i> and/or providing different <i>levels of customer service</i> and consider the results in determining the <i>marketing mix</i> 2.3. Determine promotional activities to suit the target market 2.4. Consider customer needs and preferences in determining the marketing mix 2.5. Determine the marketing mix according to market and business needs
3. Implement marketing strategies	3.1. Brief persons involved in the marketing effort on their roles and responsibilities, to ensure the success of marketing strategies 3.2. Plan and implement <i>promotional activities</i> , in accordance with marketing objectives and budgetary requirements
4. Monitor and improve marketing performance	4.1. Monitor marketing activities and evaluate business performance according to the objectives and targets of the business plan 4.2. Analyse <i>performance gaps</i> and take corrective action or set new targets 4.3. Encourage all relevant people to propose ways to improve marketing performance 4.4. Seek and analyse <i>customer reaction</i> to all aspects of the marketing mix, using culturally appropriate processes, to improve targeting and outcomes 4.5. Conduct ongoing research of customer requirements to identify opportunities for change and

ELEMENT	PERFORMANCE CRITERIA
	improvement 4.6. Monitor and investigate changes in the market for new opportunities to aid business development

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to question, clarify and report
- literacy and numeracy skills to research information, to analyse data and to interpret market data.

Required knowledge

- industry market trends
- methods of analysing costs and benefits of marketing strategies
- methods of developing marketing objectives and marketing mix
- methods of monitoring customer satisfaction
- relevant market analysis and research
- relevant marketing concepts and methods.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> developing a marketing strategy and choosing a marketing mix for the small business that are culturally appropriate and that complement the business plan implementing and monitoring the marketing strategy/plan to optimise the chances of small business success knowledge of relevant marketing concepts and methods.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> access to relevant documentation candidate's individual circumstances and work in the context of running a small business, are the basis for assessment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> portfolio of evidence including marketing strategy and monitoring of marketing performance oral or written questioning to assess knowledge of industry market trends review of analysis of performance gaps and corrective action taken or new targets set review of promotional activities implemented.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> BSBSMB404A Undertake small business planning.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Marketing objectives and strategies</i> may include:</p>	<ul style="list-style-type: none"> • achieving lower costs of production and distribution than competitors • creating a very different product line or service so that the business becomes a class leader in the industry • distribution • pricing, presentation and display of products/services • product design and packaging • product range and mix • promotion and advertising • pursuing cost leadership and/or product differentiation within a specialist market segment
<p><i>Relevant people</i> may include:</p>	<ul style="list-style-type: none"> • accountant or other specialist services • family members, work team members, sub-contractors, community members • franchise agency • financial backers, clients • owner/operator, partners, directors, shareholders • regulatory bodies • trade or industry associations
<p><i>Distribution channels</i> may include:</p>	<ul style="list-style-type: none"> • dealer, re-seller, franchisee • distributor, delivery service, mail order, telesales • self-access, wholesale, retail
<p><i>Levels of customer service</i> may include:</p>	<ul style="list-style-type: none"> • after sales service • one-on-one personal service • sales assistance for problems/queries only
<p><i>Marketing mix</i> may include:</p>	<ul style="list-style-type: none"> • distribution • level of service • pricing

RANGE STATEMENT	
	<ul style="list-style-type: none"> • promotion • quality, range • safety features • technical features, design
<i>Promotional activities</i> may include:	<ul style="list-style-type: none"> • advertising in national, suburban or local newspapers • advertising on radio or television • canvassing • development of networks and strategic alliances • display posters • exhibitions, in-store promotions • involvement in community projects • mail drops • professional/industry journals • sponsorship • staff development programs to enhance customer service orientation • website • word of mouth, referral, testimonials
<i>Performance gaps</i> may include:	<ul style="list-style-type: none"> • over achievement of performance targets • under achievement of performance targets
<i>Customer reaction</i> may be determined through:	<ul style="list-style-type: none"> • customer meetings, focus groups • identification of new business opportunities • informal discussion • sales to contact ratio • survey/other feedback mechanisms • trend analysis

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to develop criteria and targets for the business plan
- communication skills to question, clarify and report
- literacy skills to interpret legal requirements, company policies and procedures
- numeracy skills to manage performance information and to control the finances
- technology skills to use relevant business equipment.

Required knowledge

- methods for developing and maintaining networks
- methods for implementing operation and revenue control systems
- methods for monitoring performance and implementing improvements
- OHS responsibilities and procedures for managing hazards
- principles of risk management relevant to the business, including risk assessment
- quality system principles and methods
- relevant industry codes of practice
- relevant marketing, sales and financial concepts
- relevant performance measures
- role of innovation
- systems to manage staff, stock, expenditure, services and customer service
- environmentally sustainable business practice and operation
- technical or specialist skills relevant to the business operation.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • developing strategies and procedures to successfully manage the operation of the business • making appropriate adjustments to the business operations as required • knowledge of quality system principles and methods.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to relevant documentation • candidate's individual circumstances and work in the context of running a small business, are the basis for assessment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • portfolio of evidence including operational strategies and procedures • oral or written questioning to assess knowledge of principles of risk management relevant to the business, including risk assessment • review of analysis of operating problems (establishing causes and implementing changes as required as part of the business quality system) • review of records proposing changes to the business operations.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • BSBSMB406A Manage small business finances • BSBSMB407A Manage a small team.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Operational strategies and procedures</i> may be determined by:</p>	<ul style="list-style-type: none"> • business premises (size, location, layout) • financial control systems and procedures • management and administrative systems and procedures • methods/techniques/technology • physical and natural resources • plant and equipment , including OHS requirements • premises, plant and equipment, which may be new or previously owned • purchase (sole or shared ownership) or leasing • raw materials • requirements, which may be one-off requirements or recurrent requirements (such as equipment maintenance) specific to the nature of the business • technology • environmentally sustainable principles of business operation • use of existing, new and emerging technologies including e-commerce.
<p><i>Business goals and objectives</i> may include:</p>	<ul style="list-style-type: none"> • customer needs/marketing projections • family or community benefits • financial projections • goals, objectives, plans, systems and processes • lifestyle issues • proposed size and scale of the business, market focus of the business • short-, medium- or long-term goals • social responsibility.
<p><i>Occupational health and safety and environmental issues</i> must include:</p>	<ul style="list-style-type: none"> • controls, which may include instructions to workplace personnel concerning site hazards and controls, material safety data sheets, use of personal protective equipment, vehicle access, signs and barricades, traffic control, outside contractors • establishment and maintenance of procedures for assessing and controlling risks • establishment and maintenance of procedures for

	<ul style="list-style-type: none"> identifying risks to health and safety • environmentally sustainable purchase and supply of goods and services • waste and by-products.
<i>Quality system</i> may include:	<ul style="list-style-type: none"> • manual or computer quality control systems • quality assurance/management approaches • random inspections and assessments of goods and services against predetermined standards • random inspections and assessments of processes against predetermined standards • random sampling and follow-up of customers.
<i>Operational targets</i> may include:	<ul style="list-style-type: none"> • external targets, which may relate to market share and positioning and may involve exploring new markets, building national or international trade links • internal targets, which may relate to size, quality, quantity and diversity, wages to sales, sales to area/stock levels/stock turnover/average debtor payment periods and levels • staffing level and skills mix • targets, which may be short-, medium- or long-term.
<i>Technical standards</i> may include:	<ul style="list-style-type: none"> • current and generally agreed descriptions of what the product/service is, how it should be produced/delivered and the environmental sustainability, quality, safety, efficiency or other measures to determine the activity is done effectively.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Implement financial plan	<p>1.1. Identify <i>financial information</i> requirements and obtain <i>specialist services</i>, as required, to profitably operate and extend the business in accordance with the business plan</p> <p>1.2. Produce financial budgets/projections, including <i>cash flow</i> estimates, as required for each forward period, and distribute to <i>relevant people</i> in accordance with legal requirements</p> <p>1.3. Negotiate, secure and manage business capital to best enable implementation of the business plan and to meet the requirements of <i>financial backers</i></p> <p>1.4. Develop and maintain strategies to enable adequate financial provision for taxation in accordance with legal requirements</p> <p>1.5. Develop, monitor and maintain client <i>credit policies</i>, including contingencies for debtors in default, to maximise cash flow</p> <p>1.6. Select key performance indicators to enable ongoing monitoring of financial performance</p> <p>1.7. Record and communicate financial procedures to relevant people to facilitate implementation of the business plan</p>
2. Monitor financial performance	<p>2.1. Regularly monitor and report on financial performance targets and analyse data to establish the extent to which the <i>financial plan</i> has been met</p> <p>2.2. Monitor marketing and operational strategies for their effects on the financial plan</p> <p>2.3. Calculate and evaluate <i>financial ratios</i> according to own/industry benchmarks</p> <p>2.4. Assess financial plan to determine whether variations or alternative plans are needed, and change as required</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to interpret financial data
- communication skills to negotiate capital and to report on performance
- literacy skills to interpret legal requirements and financial reports
- numeracy skills to calculate costs, prices, profit and other financial information.

Required knowledge

The following knowledge must be assessed as part of this unit:

- benchmarking
- financial decision making relevant to the business
- financial indicators
- purpose of financial reports
- preparation and interpretation of budget/actual reports
- principles for preparation of balance sheets and their interpretation
- principles for preparation of profit and loss statements and their interpretation
- stock records/stock control relevant to the business.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • development, implementation and review of strategies for the ongoing management of finance • maintenance of day-to-day financial management of the business as well as implementation of broad financial strategies • knowledge of purpose of financial reports.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to relevant documentation • candidate's individual circumstances and work in the context of establishing or running a small business, are the basis for assessment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • portfolio of evidence including financial reports • preparation and review of financial ratios • review of cash flow projections • analysis of development, monitoring and maintenance of client credit policies • oral or written questioning to assess knowledge of principles for preparation of balance sheets and their interpretation.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • BSBSMB402A Plan small business finances • BSBSMB405A Monitor and manage small business operations.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Financial plan may include:

- analysis of sales by product/service, identifying where they were sold and to whom
- cash flow estimates for each forward period
- current financial state of the enterprise (or owner/operator)
- estimates of profit and loss projections for each forward period
- financial performance to date (if applicable)
- likely return on investment
- monthly, quarterly or annual returns
- non-recurrent assets calculations
- profit, turnover, capital and equity targets
- projected profit targets, pricing strategies, margins
- projections of likely financial results (budgeting)
- projections, which may vary depending on the importance of such information and the stage in the life of the business
- resources required to implement the proposed marketing and production strategies (staff, materials, plant and equipment)
- review of financial inputs required (sources and forms of finance)
- risks and measures to manage or minimise risks
- working, fixed, debt and equity capital
- working in conjunction with external consultants e.g. investment analysts, accountants, financiers

Financial information may include:

- accrual of staff leave/entitlements
- asset management strategies which may include:
 - owning, leasing, sharing, syndicating
 - maintaining and deploying assets
- asset registers
- balance sheets
- bookkeeping/accounting/stock/job costing records

RANGE STATEMENT	
	<ul style="list-style-type: none"> • business activity statements • business capital • cash book • cash flow forecasts • financial budgets • financial indicators, which may be short-, medium- and/or long-term • payroll records, superannuation entitlements • profit and loss statements • ratios for profitability, liquidity/efficiency/financial structure • risk management • statements/forecasts • taxation returns including goods and services tax
<i>Specialist services</i> may include:	<ul style="list-style-type: none"> • accountants • business brokers/business consultants • government agencies • industry/trade associations • lawyers and providers of legal advice • mentors • online gateways • providers of training in accounting software
<i>Cash flow</i> may include:	<ul style="list-style-type: none"> • anticipated payments • anticipated receipts • customer credit policy/debt recovery • taxation provisions
<i>Relevant people</i> may include:	<ul style="list-style-type: none"> • family members • financial backers • franchise agency • owner/operator • partners • regulatory bodies • trade or industry associations
<i>Financial backers</i> may include:	<ul style="list-style-type: none"> • financiers/banks/lending institutions • leasing and hire purchase financiers • providers of venture capital • shareholders/partners/owners/family/friends
<i>Credit policies</i> may include:	<ul style="list-style-type: none"> • collateral • credit limits • credit references

RANGE STATEMENT	
	<ul style="list-style-type: none"> • debt collection • payment options • proof of Indigenous identity • trading terms
<i>Financial ratios</i> may include:	<ul style="list-style-type: none"> • current ratio • days debtors outstanding • days stock on hand • expense percentages • gross profit percentage • liquid ratio • net profit percentage • proprietary/debt ratio • return on investment/return on total assets • staff productivity measures • stock turn rates

Co-requisite units

Co-requisite units	

CPCCLDG3001A Licence to perform dogging

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit specifies the outcomes required to perform slinging techniques, including the selection and inspection of lifting gear and/or the directing of the crane operator in the movement of the load when the load is out of view of the crane/ operator for licensing purposes.

Application of the Unit

Application of the unit This unit covers the scope of work to demonstrate competency in the application of slinging techniques, selection and inspection of lifting gear and/or the directing of the crane/ operator in the movement of the load.

This unit is based upon the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

Licensing/Regulatory Information

Refer to Unit Descriptor

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan job.	<p>1.1. <i>Site information</i> is obtained and related to the task.</p> <p>1.2. <i>Hazard</i> s and potential hazards associated with the slinging and directing of loads are identified.</p> <p>1.3. <i>Hazard control measures</i> consistent with <i>appropriate standards</i> are identified to ensure the safety of personnel and equipment.</p> <p>1.4. The weight, dimensions and centre of gravity of the load are identified and assessed.</p> <p>1.5. Suitable lifting/slinging points on the load are identified.</p> <p>1.6. Appropriate <i>lifting equipment</i> needs are assessed.</p> <p>1.7. Appropriate <i>communication methods</i> are assessed with <i>crane/</i> operators and other <i>appropriate personnel</i>.</p> <p>1.8. Manufacturer's specifications/information is obtained for special loads where necessary.</p>
2. Select and inspect equipment.	<p>2.1. Lifting equipment appropriate to the task is selected.</p> <p>2.2. Lifting equipment is inspected for serviceability.</p> <p>2.3. Damaged or excessively worn lifting equipment is identified, labelled and rejected.</p> <p>2.4. Appropriate communication methods for the crane/operator and appropriate personnel are selected.</p> <p>2.5. Appropriate <i>communication equipment</i> is selected and its serviceability is checked.</p> <p>2.6. Appropriate <i>personal protective equipment</i> (PPE) is selected and checked.</p>
3. Prepare site and equipment.	<p>3.1. Hazard prevention/control measures are applied consistent with appropriate standards to ensure the safety of personnel and equipment.</p> <p>3.2. Appropriate slinging method is selected.</p> <p>3.3. Lifting equipment is prepared and assembled where appropriate.</p> <p>3.4. Load destination is prepared.</p>
4. Perform task.	<p>4.1. Lifting equipment is attached and secured to the lifting hook using appropriate techniques.</p> <p>4.2. Lifting hook is positioned over the load centre of gravity.</p> <p>4.3. Lifting equipment is attached and secured to the load</p>

ELEMENT**PERFORMANCE CRITERIA**

	in an appropriate manner.
	4.4.Tag line is attached and secured where appropriate.
	4.5.Test lift is conducted to ensure security of load.
	4.6.Load is moved maintaining stability and control at all times.
	4.7.Appropriate communication methods and <i>communication signals</i> are applied to safely coordinate the load movement both within sight and out-of-sight of crane operator.
	4.8.The load is landed to ensure that it is stable and secure from movement.
	4.9.Lifting equipment is removed or disconnected from load and prepared for next task or storage.
5. Shut down job and clean up.	5.1.Unserviceable lifting equipment inspected and rejected.
	5.2. <i>Defective equipment</i> is isolated and tagged.
	5.3.Lifting equipment is stored in accordance with procedures and appropriate standards.
	5.4.Hazard prevention/control measures are removed where appropriate.
	5.5.Excess materials from the work area are removed (where applicable).
	5.6.Defects are reported and recorded according to procedures and appropriate action is taken.

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication techniques in the workplace including whistles, hand signals and use of fixed channel two-way radios
- communication skills at a level sufficient to communicate with other site personnel
- calculate rated capacity of lifting equipment
- apply different methods for making temporary connections to loads using fibre and synthetic ropes

REQUIRED SKILLS AND KNOWLEDGE

- ability to interpret rated capacity and working load limit tags
- hazard identification and control
- slinging techniques
- selection and inspection of lifting equipment
- directing crane operators in the moving of loads in a safe manner, using a slewing crane
- inspection and care of a wide range of lifting equipment to appropriate Australian Standards and/or manufacturer's specifications.

Required knowledge

Required knowledge for this unit is:

- appropriate mathematical procedures for estimation and measurement of loads
- basic knowledge of types of cranes and their functions
- Commonwealth, state or territory OHS legislation, standards and codes of practice relevant to the full range of techniques for undertaking dogging activities
- load stability and safety factors in line with manufacturer's specifications
- types of lifting equipment and slinging techniques for use, and their limitations and performance in a wide range of conditions (including but not limited to slings, beams, accessories, clamps, work-boxes, bins and pallets)
- understanding of the hierarchy of control.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment of this unit which have been endorsed by the national body responsible for OHS matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with Commonwealth, state or territory OHS legislation, standards relevant to safe dogging and crane operations.
- communicate and work safely with others in the work area.
- apply Hazard prevention and control measures consistent with appropriate standards.
- apply to move loads in conjunction with cranes including, the reading of tags, slinging, loading, directing and landing loads with a slewing mobile crane with a telescopic boom and a winch, in and out of sight of the crane/operator, moving four loads of varying shapes, sizes and weights.
- use fibre and/or synthetic rope as tag lines, and connecting to loads using clove hitch, rolling hitch, bowline and single sheetbend.
- conduct pre and post operational checks of the lifting equipment.
- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the national OHS endorsed Assessment Instrument
- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting

Context of and specific resources for assessment

EVIDENCE GUIDE

- Assessors must ensure that the assessment in the workplace is organised through a workplace supervisor to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace
- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment is to comply with the requirements of any relevant Standards or operating procedures for dogging activities
- Applicants must have access to:
 - personal protective equipment (PPE) for the purpose of the performance assessment.
 - four different loads as prescribed in the endorsed assessment instrument
 - lifting and associated equipment
 - suitable slewing crane
 - communication equipment (eg. fixed channel, two-way radios) as applicable.

Method of assessment

Assessment must be conducted using the national OHS endorsed Assessment Instrument. This Instrument provides instruction on the application of the assessment.

Assessment may be in conjunction with the assessment of other units of competency.

The use of '**simulators**' in the assessment of this unit of competency is **not acceptable**.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Site information may include but not be limited to

- local conditions such as access and egress
- work method statements.

Hazards may include but not limited to:

- ground stability (eg. ground condition, recently filled trenches, slopes)
- overhead hazards (e.g. power lines, service pipes, trees, buildings, etc)
- insufficient lighting
- traffic (e.g. pedestrians, vehicles, plant)
- weather (e.g. wind, lightning, storms)
- other specific hazards (e.g. trip hazards, heights, radio interference, etc).

Hazard prevention/control measures

The systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of controls, including:

1. elimination.
2. substitution.
3. isolation.
4. engineered control measures.
5. safe work practices.
6. personal protective equipment.

Appropriate standard s may include:

- codes of practice
- legislation
- Australian Standards
- manufacturer's specifications
- industry standards.

Lifting Equipment may include but not limited to:

- fibre ropes
- wire ropes
- chain

RANGE STATEMENT

- wire and synthetic slings
 - shackles
 - eyebolts
 - beam clamps
 - plate clamps
 - spreader beams
 - lifting beams
 - pallet forks and cages
 - concrete kibbles
 - personnel boxes.
- Communication Methods*** may include but are not limited to:
- written instructions
 - signage,
 - hand signals
 - listening
 - questioning to confirm understanding
 - appropriate worksite protocol.
- Cranes*** may include but not limited to:
- tower cranes (including self erecting)
 - portal boom cranes
 - vehicle loading cranes
 - slewing mobile cranes
 - non-slewing cranes
 - derrick cranes.
- Appropriate personnel*** may include but are not limited to:
- supervisors
 - colleagues
 - managers who are authorised to take responsibility for the workplace or operations.
- Communication Equipment*** may include but not limited to:
- fixed channel two-way radios
 - whistles
 - bells.
- Personal protective equipment*** (PPE) may include but not limited to:
- hard hat
 - safety boots
 - gloves
 - high visibility clothing
 - reflective vest
 - relevant breathing, hearing, sight, skin and sun protection.
- Load destination*** may include but not limited to:
- ground
 - loading platforms
 - suspended floors
 - vehicles.

RANGE STATEMENT

Communication signals may include but not limited to:

- stop - hand
- stop - whistle
- hoist up - hand
- hoist up - whistle
- hoist down - hand
- hoist down - whistle
- luff boom down - hand
- luff boom down - whistle
- luff boom up - hand
- luff boom up - whistle
- telescope out - hand
- telescope out - whistle
- telescope in - hand
- telescope in - whistle
- slew left - hand
- slew left - whistle
- slew right - hand
- slew right - whistle.

Defective Equipment may include but not limited to:

- excessive wear
- damage
- stretched
- broken wires
- cut/damaged fibres.

Functional area

Functional area

CPCCLRG3001A Licence to perform rigging basic level

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit specifies the outcomes required to perform basic rigging work associated with movement of plant and equipment, steel erections, hoists (including mast climbing hoists), placement of pre-cast concrete, safety nets and static lines, perimeter safety screens and shutters; and cantilever crane loading platforms for licensing purposes.

Application of the Unit

Application of the unit This unit requires the applicant to be able plan the work, select and inspect equipment, set up task, erect structures and plant and dismantle structures and plant.

This unit is based upon the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

This unit has a pre-requisite requirement. This requirement may be met by either the successful completion of the unit *CPCCLDG3001A Licence to perform dogging* or holding a valid licence for dogging.

Licensing/Regulatory Information

Refer to Unit Descriptor

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan job.	<p>1.1.Task to be undertaken is assessed.</p> <p>1.2.Potential workplace <i>hazards</i> are identified.</p> <p>1.3.<i>Hazard control measures</i> are identified consistent with <i>appropriate standards</i> to ensure the safety of personnel and equipment.</p> <p>1.4.Site information is obtained.</p> <p>1.5.All <i>forces and loads</i> associated with erecting and dismantling <i>structures</i> and <i>associated plant</i> are considered in consultation with <i>appropriate personnel</i>.</p> <p>1.6.<i>Rigging equipment</i> and <i>associated equipment</i> are identified in consultation with appropriate personnel according to <i>procedures</i> and site information.</p> <p>1.7.<i>Safety equipment</i> is identified.</p> <p>1.8.Appropriate <i>communication methods</i> are identified with appropriate personnel.</p>
2. Select and inspect equipment.	<p>2.1.Rigging equipment and associated equipment are selected and inspected according to procedures and the appropriate standard.</p> <p>2.2.Safety equipment is selected and inspected according to procedures.</p> <p>2.3.All defective rigging equipment, associated equipment and safety equipment is isolated, reported and recorded according to procedures.</p> <p>2.4.<i>Communication equipment</i> is selected and inspected for serviceability (where applicable).</p>
3. Set up task.	<p>3.1.Appropriate <i>hazard prevention/control measures</i> are applied to the work area according to procedures.</p> <p>3.2.<i>Ground suitability</i> is inspected and checked (where appropriate).</p> <p>3.3.Site information is reviewed, interpreted and communicated to appropriate personnel and <i>appropriate personnel</i>.</p> <p>3.4.All forces and loads associated with erecting and dismantling structures and associated plant are determined in consultation with appropriate personnel.</p> <p>3.5.Safety equipment is fitted and worn correctly (where appropriate).</p> <p>3.6.Rigging equipment and associated plant are</p>

ELEMENT**PERFORMANCE CRITERIA**

	positioned for work application and stability according to procedures.
	3.7. Methods of applying <i>temporary connections</i> using fibre rope are applied according to procedures and the appropriate standard.
4. Erect structures and plant.	4.1. Structures and associated plant are erected according to procedures and site information.
	4.2. Stability of structures and associated plant is maintained during erection according to procedures.
	4.3. Work is conducted safely at heights including safe and effective use of safety equipment.
	4.4. Appropriate communication methods and communication equipment, are used to co-ordinate the tasks.
	4.5. Associated plant and rigging equipment is used according to procedures and the appropriate standard.
	4.6. Temporary guys, ties, propping and shoring, including <i>flexible steel wire rope</i> , and tubing, are connected where required.
	4.7. Associated equipment is used in a safe and appropriate manner.
	4.8. The completed task is inspected according to the appropriate standard.
	4.9. Excess materials are removed from the work area (where applicable).
5. Dismantle structures and plant.	5.1. Structures and associated plant are dismantled according to procedures and the appropriate standard.
	5.2. Work is conducted safely at heights including safe and effective use of safety equipment.
	5.3. Stability of structures and associated plant is maintained during dismantling according to procedures.
	5.4. Rigging equipment, associated equipment, safety equipment and associated plant are inspected for damage and defects.
	5.5. All defective rigging equipment, associated equipment, associated plant and safety equipment are isolated reported and recorded according to procedures.
	5.6. Rigging equipment and associated equipment are

ELEMENT**PERFORMANCE CRITERIA**

stored. according to procedures and the appropriate standard.

5.7.Hazard prevention/control measures are removed (where appropriate).

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to calculate Safe Working Load (SWL) and Working Load Limit (WLL)
- ability to erect and dismantle, level, plumb and stabilise associated plant and structures
- ability to work safely at heights including the correct application of safety equipment.
- accurate interpretation of basic structural charts and structural plans (site information)
- applying methods for making temporary connections of ropes using fibre and synthetic types
- apply methods of splicing and whipping fibre and synthetic ropes
- correct application and use of all rigging and associated equipment
- risk assessment and hazard control strategies
- interpersonal and communication skills at a level sufficient to site/workplace requirements. This includes the relevant communication methods and equipment.
- verify problems and equipment faults and demonstrate appropriate response.

Required knowledge

Required knowledge for this unit is:

- appropriate mathematical procedures for estimation and measurement of loads
- ability to interpret manufacturer's specifications for all plant and equipment use in rigging operations
- knowledge of principles relating to all plant, equipment and structural stability
- knowledge of the types and functions of rigging, safety and associated equipment including an understanding of their limitations.
- organisational and workplace standards, requirements, policies and procedures for rigging

REQUIRED SKILLS AND KNOWLEDGE

- understanding of the hierarchy of hazard identification and control
- relevant Commonwealth, state or territory and local government OHS legislation, standards and codes of practice for undertaking rigging activities
- understanding of inspection and maintenance requirements of a wide range of appropriate plant and equipment in line with Australian Standards or manufacturer's specifications
- estimation of ground bearing pressures of the full range of soil types and associated ground conditions for setting up plant and equipment.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment endorsed by the national body responsible for OHS matters for the assessment of this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS licensing legislation.
- effectively communicate and work safely with others in the work area.
- effectively conduct risk assessment and management procedures.
- effectively complete the following tasks:-
 - inspection of all plant and equipment, and
 - installation of a fall arrest system (Static line), and
 - use of a safety harness / fall arrest system, and
 - installation of crane loading platforms and
 - installation of a safety net, and
 - installation of a shutter and safety screen, and
 - demonstrated ability to work safely at heights, and
 - erection of structural steel, and
 - erection of precast panel, and
 - set up and operation of a winch for load movement, and
 - installation of a materials hoist, or
 - installation of a mast climber.
- effectively demonstrate the following knots,

EVIDENCE GUIDE

bends and hitches:-

- Sheet bend,
- Becket hitch,
- Running bowline,
- Double bowline.
- effectively demonstrate the following splices and whippings:-
 - Eye splice,
 - Back splice,
 - Short splice,
 - Sail makers whipping,
 - Common whipping,
 - West countryman's

Context of and specific resources for assessment

Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the National OHS endorsed Assessment Instrument.

Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.

Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.

Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with the requirements of any relevant Standards or operating procedures for basic rigging.

Applicants must have access to:

- personal protective equipment (PPE) for the purpose of the Performance Assessment.
- appropriate safety equipment in safe condition
- appropriate rigging equipment, associated equipment associated plant in safe condition as described in the endorsed assessment instrument
- communication equipment (e.g. two-way

EVIDENCE GUIDE

radios) where applicable

- appropriate materials as required for safe erection of structures
- appropriate materials for conducting fibre rope slicing, whipping, knots, bends and hitches.

Method of assessment

Assessment must be conducted using the national OHS endorsed Assessment Instruments. These Instruments provide advice on their application.

The use of '**simulators**' in the assessment of this unit of competency is **not acceptable**.

Assessment may be in conjunction with the assessment of other units of competency.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include but are not limited to:

- ground stability (e.g. ground condition, recently filled trenches, slopes)
- overhead hazards (e.g. power lines, service pipes) (**NB**: minimum clearance distance from powerlines or electrical equipment as determined by relevant state authority or

RANGE STATEMENT

electrical supply authority.)

- traffic (e.g. pedestrians, vehicles, other plant)
- insufficient lighting
- environmental conditions (e.g. wind, lightning, storms)
- other specific hazards (e.g. dangerous materials).

Hazard control measures:

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:

- elimination
- substitution
- isolation
- engineering control measures
- using safe work practices
- personal protective equipment.

Appropriate standards may include:

- codes of practice
- legislation
- Australian Standards
- manufacturer's specifications
- industry standards (where applicable).

Site Information may include, but not limited to:

- local conditions such as access and egress,
- work method statements,
- site specific job safety analyses and other site specific documentation as required.
- task plans / Schedules and structural plans.

Forces and Loads may include, but not limited to:

- dead loads
- live loads
- static load
- dynamic loads
- wind loads.

Structures may include but are not limited to:

- structural steel
- precast panels.

Associated plant may include but not limited to:

- static lines
- safety nets
- hoists

RANGE STATEMENT

- Appropriate personnel* may include:
- mast climbers
 - loading platforms.
 - engineers
 - supervisors
 - colleagues
 - managers who are authorised to take responsibility for the workplace or operations.
- Rigging Equipment* may include but is not limited to:
- scaffolds
 - elevated work platforms
 - personnel box
 - cantilevered crane loading platforms
 - mast climbers.
 - safety screens and shutters
 - cranes including but not limited to:
 - non-slewing cranes
 - mobile slewing cranes
 - vehicle loading cranes
 - tower cranes
 - self-erecting tower cranes
 - portal boom cranes
 - derrick cranes
 - bridge and gantry cranes.
- Associated equipment* may include but is not limited to:
- all types of power and manually operated lifting gear
 - fibre ropes
 - flexible steel wire rope (FSWR)
 - chains
 - wire and synthetic slings
 - shackles
 - terminations
 - wedge sockets
 - eye bolts
 - beam clamps
 - plate clamps
 - rope grips
 - turnbuckles
 - rigging screws
 - chain blocks
 - lever blocks
 - lever-action winches

RANGE STATEMENT

- sheaves
 - spreader bars
 - lifting beams
 - jacks
 - levers
 - skates
 - wedges
 - rollers
 - girder trolley
- Procedures* may include but is not limited to:
- manufacturer's guidelines (instructions, specifications or checklists)
 - industry operating procedures, relevant codes of practice
 - workplace procedures (work instructions, operating procedures, checklists).
- Safety Equipment* may include but not limited to:
- safety harness
 - energy absorber
 - lanyard
 - inertia reel
 - static safety lines
 - safety nets.
- Communication Methods* may include but is not limited to:
- verbal and non-verbal language
 - written instructions
 - signage
 - hand signals
 - listening,
 - questioning to confirm understanding, and appropriate worksite protocol.
- NB:** Mobile phones are not to be used for signalling purposes during the rigging process.
- Communication equipment* may include but is not limited to:
- fixed channel two-way radios
- Hazard prevention/control measures* may include but is not limited to:
- safety tags on electrical switches/isolators
 - powerlines are insulated
 - safety observer used inside exclusion zone
 - power disconnected
 - traffic barricades and control
 - pedestrian barricades
 - trench covers

RANGE STATEMENT

- movement of obstructions
 - personal protective equipment
 - adequate illumination
 - safety shutters and screens.
- Ground suitability* may include but is not limited to:
- rough uneven ground
 - backfilled ground
 - soft soils
 - hard compacted soil
 - rock
 - bitumen
 - concrete
 - suspended concrete floors
 - building roofs
 - landings
 - ground bearing pressure.
- Appropriate personnel* may include but not limited to
- other riggers
 - doggers
 - crane operators.
- Temporary connections* may include but not limited to:
- knots
 - bends
 - hitches
 - spicing
 - whipping.
- Flexible Steel Wire Rope (FSWR)* includes:
- identification, uses and connections.
- May include termination for:
- static lines,
 - guys,
 - purchase systems,
 - lashing,
 - cranes,
 - hoist and winch ropes.

CPCCLSF2001A Licence to erect, alter and dismantle scaffolding basic level

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit specifies the outcomes required to erect, alter and dismantle scaffolding at the basic level, consisting of scaffolding work connected with the operation or use of modular or pre-fabricated scaffolds, cantilevered materials hoists with a maximum working load of 500kg, ropes and gin wheels, safety nets and static lines, and bracket scaffolds (tank and formwork) for licensing purposes.

Application of the Unit

Application of the unit This unit covers the scope of work to plan the job, select and inspect equipment, set up task, erect scaffold and scaffold equipment and dismantle scaffold and scaffold equipment.

This unit is based upon the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form it state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan job.	<p>1.1.Task to be undertaken is assessed.</p> <p>1.2.Potential workplace <i>hazards</i> are identified.</p> <p>1.3.<i>Hazard control measures</i> are identified consistent with <i>appropriate standards</i> to ensure the safety of personnel and equipment.</p> <p>1.4.Site information is obtained.</p> <p>1.5.<i>Scaffold, associated equipment and scaffolding equipment</i> are identified from site information and in consultation with <i>appropriate personnel</i> (where applicable).</p> <p>1.6.<i>Safety equipment</i> is identified.</p> <p>1.7.All <i>forces and loads</i> exerted on and by the scaffold and/or scaffolding equipment are determined and calculated.</p> <p>1.8.Appropriate <i>communication methods</i> are identified with appropriate personnel.</p>
2. Select and inspect plant and equipment.	<p>2.1.Scaffold, associated equipment and scaffold equipment are selected and inspected according to <i>procedures</i> and site information.</p> <p>2.2.Safety equipment is selected and inspected according to procedures.</p> <p>2.3.All defective Scaffold, associated equipment, scaffold equipment and safety equipment are isolated according to procedures.</p> <p>2.4.All defective Scaffold, associated equipment, scaffold equipment and safety equipment are reported and recorded according to procedures.</p> <p>2.5.<i>Communication equipment</i> is selected and inspected for serviceability (where applicable).</p>
3. Set up task	<p>3.1.Appropriate <i>hazard prevention/control measures</i> are applied to the work area according to procedures.</p> <p>3.2.Ground suitability is checked.</p> <p>3.3.Appropriate footings are prepared to support scaffold and scaffold equipment according to procedures and the appropriate standard.</p> <p>3.4.Scaffold and scaffold equipment are prepared for erection according to procedures and the appropriate standard.</p> <p>3.5.Safety equipment is fitted and secured according to procedures (where applicable).</p>

ELEMENT	PERFORMANCE CRITERIA
4. Erect scaffold and scaffold equipment.	<p>3.6.Scaffold and scaffold equipment are positioned for work application and <i>stability</i> according to procedures and the appropriate standard.</p> <p>4.1.Scaffold and scaffold equipment are erected according to procedures and the appropriate standard.</p> <p>4.2.Work is conducted safely at heights including safe and effective use of safety equipment.</p> <p>4.3.Scaffold and scaffold equipment are erected consistent with site information.</p> <p>4.4.Appropriate communication methods are used to coordinate the tasks.</p> <p>4.5.Completed tasks are inspected for compliance with the appropriate standard.</p> <p>4.6.Handover certificate is completed as required and handed to appropriate personnel.</p> <p>4.7.Excess materials from the work area are removed (where applicable).</p>
5. Dismantle scaffold and scaffold equipment.	<p>5.1.Scaffold and scaffold equipment are dismantled according to procedures and the appropriate standard.</p> <p>5.2.Work is conducted safely at heights including safe and effective use of safety equipment.</p> <p>5.3.Scaffold, associated equipment and scaffold equipment are inspected for damage and defects.</p> <p>5.4.All damaged and defective scaffold, associated equipment and scaffold equipment are tagged and isolated according to procedures.</p> <p>5.5.Hazard prevention/control measures are removed (where appropriate).</p> <p>5.6.All damaged and defective scaffold, associated equipment and scaffold equipment are reported and recorded according to procedures and appropriate action taken.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- ability to calculate Safe Working Load (SWL) and Working Load Limit (WLL)
- ability to erect scaffold within the scope of the basic scaffolder
- ability to erect, level, plumb and stabilise cantilever hoists and scaffolds
- ability to interpret manufacturer's specifications for plant and equipment
- ability to work safely at heights
- ability to set up fall arrest systems, including safety nets
- ability to work safely in confined spaces
- accurate interpretation of basic structural charts and structural plans
- applying methods for making temporary connection using fibre ropes
- correct application of all scaffolding equipment
- methods for making temporary connection of guy ropes and static lines using Flexible Steel Wire Rope (FSWR)
- verify problems and equipment faults and demonstrate appropriate response.

Required knowledge

Required knowledge for this unit is:

- use of appropriate mathematical procedures for estimation and measurement of loads Commonwealth, state or territory OHS legislation and local government regulations, including standards and codes of practice relevant to the full range of techniques for undertaking basic scaffolding activities
- knowledge of principles relating to plant and equipment stability
- knowledge of types of scaffolding and their application
- knowledge of scaffolding erection and dismantling techniques
- knowledge of types of hoists, plant and equipment associated with basic scaffolding and their use/s
- risk assessment and control, including understanding of the hierarchy of control
- estimation of bearing pressures of the full range of soil types and associated ground conditions for setting up plant and equipment
- load capabilities of different types of scaffolding constructions
- understanding and application of organisational and workplace standards, requirements, policies and procedures for scaffolding
- safety equipment applicable to scaffolding
- understanding and application of the inspection and maintenance requirements for basic scaffold, associated equipment and scaffold equipment
- uses and limitations of tools and equipment, appropriate to scaffolding tasks and activities.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment endorsed by the national body responsible for OHS matters for the assessment of this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS licensing requirements.
- effectively communicate and work safely with others in the work area.
- effectively apply risk assessment and hazard management procedures at a basic scaffolder level.
- effectively complete the planning, erection and dismantling of a scaffolding system, in accordance with procedures, including a minimum of erect and dismantle:
 - Modular Scaffold with return and ladder access and platform brackets (hop-up brackets)
 - Bracket Scaffold
 - Mobile Scaffold
 - gin wheel
 - Cantilever Hoist
 - safety net and static line
 - safety screen

Scaffold to be of a minimum height of at least 5.0 metres above the supporting surface with full edge protection (includes safety screen) for each work platform including toe boards and handrails.

- correctly demonstrate fibre rope bends and hitches.

EVIDENCE GUIDE

Context of and specific resources for assessment

- effectively conduct pre and post operational checks of basic scaffolding.
- complete handover certificate as required.
- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the National OHS endorsed Assessment Instrument
- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting
- Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace
- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints for basic scaffolding
- Applicants must have access to:
 - personal protective equipment (PPE) for the purpose of the Performance Assessment
 - appropriate safety equipment in safe condition
 - appropriate scaffolding and associated scaffolding equipment
 - communication equipment (e.g. fixed channel two way radios) where applicable
 - appropriate personnel to assist with the erecting and dismantling of scaffold and scaffold equipment.

Method of assessment

Assessment must be conducted using the national OHS endorsed Assessment Instruments. These Instruments provide advice on their application.

Assessment may be in conjunction with the assessment of other units of competency.

The use of '**simulators**' in the assessment of this unit of competency is **not acceptable**.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

EVIDENCE GUIDE

Guidance information for assessment

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include but not limited to:

- ground conditions (e.g. ground bearing pressure/s, back filled trenches, underground services, slopes)
- overhead hazards (e.g. power lines, service pipes) (minimum clearance distance from powerlines or electrical equipment as determined by relevant state authority or electrical supply authority)
- traffic (e.g. pedestrians, vehicles, other plant)
- insufficient lighting
- environmental conditions (e.g. wind, lightning, storms)
- other site specific hazards (e.g. hazardous materials).

Hazard control measures:

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:

- elimination

RANGE STATEMENT

<p><i>Appropriate standards</i> may include:</p>	<ul style="list-style-type: none"> • substitution • isolation • engineering control measures • using safe work practices • personal protective equipment. • codes of practice • legislation • Australian Standards • manufacturer's specifications • industry standards (where applicable).

RANGE STATEMENT

- scaffold belts
- podgers
- hammers
- wire nips
- wrenches
- torpedo levels
- shovels
- spanners
- cutters
- hammer drills
- sledge hammers
- wheel barrows and
- relevant maintenance equipment.

Scaffolding equipment may include but not limited to:

- materials hoists
- gin wheels
- safety nets
- static lines and fittings.

Appropriate personnel may include, but are not limited to:

- supervisors
- colleagues
- managers who are authorised to take responsibility for the workplace or operations
- other scaffolders
- other site personnel as applicable.

Safety equipment may include but not limited to:

- safety harness
- energy absorber
- lanyard
- inertia reel.

Forces and Loads may include, but are not limited to:

- dead loads
- live loads
- static load
- dynamic loads
- wind loads.

Communication Methods may include but not limited to:

- verbal and non-verbal language
- written instructions
- signage
- communication signals
- listening
- questioning to confirm understanding, and appropriate worksite protocol.

RANGE STATEMENT

Procedures may include but not limited to:

- manufacturer's guidelines (instructions, specifications or checklists)
- industry operating procedures, relevant codes of practice
- workplace procedures (work instructions, operating procedures, checklists)
- reporting and recording procedures such as e.g. equipment defect/s.

Communication equipment may include but is not limited to:

- fixed frequency two way radios
- mobile phones.

Hazard prevention/control measures may include but not limited to:

- safety tags on electrical switches/isolators
- safety observer used inside exclusion zone (e.g. Spotter), to include the use of power line warning systems (e.g. Tiger tails)
- power disconnected by competent authority where applicable
- traffic and pedestrian barricades and controls
- safe and adequate access / egress is established
- personal protective equipment
- adequate illumination.

Ground suitability may include but not limited to:

- rough uneven ground
- backfilled ground
- soft soils
- hard compacted soil
- rock
- bitumen
- concrete.

Stability may include but is not limited to:

- ground bearing pressure
- sole plates/boards
- screw jacks
- levelling
- ties/guys.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- ability to erect scaffold and scaffolding equipment within the scope of the intermediate scaffolder
- ability to erect, level, plumb and stabilise scaffolds and scaffold equipment within the scope of the intermediate scaffolder
- ability to interpret manufacturer's specifications for plant and equipment
- ability to work safely at heights
- accurate interpretation of basic structural charts and structural plans
- correct application of all scaffolding equipment
- verify problems and equipment faults and demonstrate appropriate response.

Required knowledge

Required knowledge for this unit is:

- use of appropriate mathematical procedures for estimation and measurement of loads
- Commonwealth, state or territory OHS legislation and local government regulations, including standards and codes of practice relevant to the full range of techniques for undertaking intermediate scaffolding activities
- knowledge of principles relating to plant and equipment stability
- knowledge of types of scaffolding and their application
- knowledge of scaffold and scaffold equipment erection and dismantling techniques
- knowledge of types of scaffold and scaffold equipment, associated with intermediate scaffolding and their use/s
- risk assessment and control, including understanding of the hierarchy of control
- load capabilities of different types of scaffolding constructions
- understanding and application of organisational and workplace standards, requirements, policies and procedures for scaffolding
- application of safety equipment applicable to scaffolding
- understanding and application of the inspection and maintenance requirements for intermediate scaffold, associated equipment and scaffold equipment
- uses and limitations of tools and equipment, appropriate to scaffolding tasks and activities.

Evidence Guide

EVIDENCE GUIDE

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment endorsed by the national body responsible for OHS matters for the assessment of this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- Effectively communicate and work safely with others in the work area.
- Effectively apply risk assessment and hazard management procedures at an intermediate scaffolder level.
- Effectively complete the planning, erection and dismantling of scaffolding systems, in accordance with procedures, including a minimum of erect and dismantle the following:
 - Cantilevered and spurred scaffolds
 - Barrow ramps and/ or sloping platforms
 - Tube and coupler scaffolds
 - Cantilevered crane-loading platforms
 - Mast climbers

Cantilevered, spurred and tube and coupler scaffolds to be of a minimum height of 5.0 metres above the supporting surface with full edge protection, for each work platform including toe boards and handrails.

- Apply safety screen to tube and coupler scaffold.
- Effectively conduct compliance inspections of scaffold and scaffold equipment for intermediate scaffolding.
- Complete handover certificate as required.
- Assessment of the safe and effective

Context of and specific

EVIDENCE GUIDE

resources for assessment

application of knowledge and skill to workplace tasks (performance) must be undertaken using the National OHS endorsed Assessment Instrument.

- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.
- Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.
- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints for intermediate scaffolding.
- Applicants must have access to:
 - personal protective equipment (PPE) for the purpose of the Performance Assessment
 - appropriate safety equipment in safe condition
 - appropriate scaffold and scaffold equipment in safe condition
 - site information as described in the mandated assessment instrument
 - communication equipment (e.g. fixed channel two way radios) where applicable
 - appropriate personnel to assist with the erecting and dismantling of scaffold and scaffold equipment.

Method of assessment

Assessment must be conducted using the national OHS endorsed Assessment Instruments. These Instruments provide advice on their application.

Assessment may be in conjunction with the assessment of other units of competency.

The use of '**simulators**' in the assessment of this unit of competency is **not acceptable**.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied

EVIDENCE GUIDE

	under the particular circumstance, but is able to be transferred to other circumstances.
Guidance information for assessment	Further information about endorsed assessment instruments may be obtained from state/territory OHS regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include but not limited to:

- ground conditions (e.g. ground bearing pressure/s, back filled trenches, underground services, slopes)
- overhead hazards (e.g. power lines, service pipes) (minimum clearance distance from powerlines or electrical equipment as determined by relevant state authority or electrical supply authority.)
- traffic (e.g. pedestrians, vehicles, other plant)
- insufficient lighting
- environmental conditions (e.g. wind, lightning, storms)
- other site specific hazards (e.g. hazardous materials).

Hazard control measures:

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:

- elimination
- substitution
- isolation

RANGE STATEMENT

<i>Appropriate standards</i> may include:	<ul style="list-style-type: none">• engineering control measures• using safe work practices• personal protective equipment.• codes of practice• legislation• Australian Standards• manufacturer's specifications• industry standards (where applicable).
<i>Site Information</i> may include, but not limited to:	<ul style="list-style-type: none">• local conditions such as access and egress• work method statements• site-specific job safety analyses and other documentation as required• task plans.
<i>Scaffold</i> may include but not limited to:	<ul style="list-style-type: none">• all scaffolds at the basic level• cantilevered and spurred scaffolds• barrow ramps and sloping platforms• tube and coupler scaffolds (including tube and coupler covered ways and gantries)• cantilever loading platforms.
<i>Associated equipment</i> may include but not limited to:	<ul style="list-style-type: none">• all associated equipment from basic scaffolding level• independent adjustable props.
<i>Scaffold equipment</i> may include but not limited to:	<ul style="list-style-type: none">• all scaffold equipment at the basic level• mast climbers• screen and shutters.
<i>Appropriate personnel</i> may include, but are not limited to:	<ul style="list-style-type: none">• supervisors• colleagues• managers who are authorised to take responsibility for the workplace or operations• other scaffolders• other site personnel as applicable.
<i>Safety equipment</i> may include but not limited to:	<ul style="list-style-type: none">• safety harness• energy absorber• lanyard• inertia reel.
<i>Forces and Loads</i> may include, but are not limited to:	<ul style="list-style-type: none">• dead loads• live loads• static load• dynamic loads• wind loads.

RANGE STATEMENT

Communication Methods may include but not limited to:

- verbal and non-verbal language
- written instructions
- signage
- communication signals
- listening
- questioning to confirm understanding, and appropriate worksite protocol.

Procedures may include but not limited to:

- manufacturer's guidelines (instructions, specifications or checklists)
- industry operating procedures, relevant codes of practice
- workplace procedures (work instructions, operating procedures, checklists)
- reporting and recording procedures such as e.g. scaffold and scaffold equipment defects.

Communication equipment may include but not limited to:

- fixed frequency two way radios
- mobile phones.

Hazard prevention/control measures may include but not limited to:

- safety tags on electrical switches/isolators
- safety observer used inside exclusion zone (e.g. Spotter), to include the use of power line warning systems (e.g. Tiger tails)
- power disconnected by competent authority where applicable.
- traffic and pedestrian barricades and controls
- safe and adequate access / egress is established
- personal protective equipment
- adequate illumination.

Ground suitability may include but not limited to:

- rough uneven ground
- backfilled ground
- soft soils
- hard compacted soil
- rock
- bitumen
- concrete.

Stability may include but not limited to:

- ground bearing pressure
- sole plates/boards
- screw jacks
- levelling
- ties/guys.

CPCCOHS1001A Work safely in the construction industry

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to undertake Occupational Health and Safety (OHS) induction training within the construction industry.

It requires the ability to demonstrate personal awareness of OHS legislative requirements, and the basic principles of risk management and prevention of injury and illness in the construction industry.

Licensing requirements will apply to this unit of competency depending on the regulatory requirements of each jurisdiction.

Application of the Unit

Application of the unit

This unit of competency supports the attainment of the basic OHS knowledge required prior to undertaking designated work tasks within any of the sectors within the construction industry. The unit relates directly to the general induction training program specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Licensing/Regulatory Information

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify OHS legislative requirements.	1.1. Applicable <i>OHS legislative requirements</i> relevant to own work, role and responsibilities are identified and explained. 1.2. Duty of care requirements are identified. 1.3. Own responsibilities to comply with <i>safe work practices</i> are identified and explained.
2. Identify construction hazards and control measures.	2.1. Basic principles of risk management are identified. 2.2. <i>Common construction hazards</i> are identified and discussed. 2.3. <i>Measures for controlling</i> hazards and risks are identified.
3. Identify OHS communication and reporting processes.	3.1. OHS communication processes, information and documentation are identified and discussed. 3.2. Role of <i>designated OHS personnel</i> is identified and explained. 3.3. <i>Safety signs and symbols</i> are identified and explained. 3.4. Procedures and <i>relevant authorities</i> for reporting hazards, <i>incidents</i> and injuries are identified.
4. Identify OHS incident response procedures.	4.1. <i>General procedures</i> for responding to incidents and <i>emergencies</i> are identified and explained. 4.2. Procedures for accessing first aid are identified. 4.3. Requirements for the selection and use of relevant <i>personal protective equipment</i> are identified and demonstrated. 4.4. <i>Fire safety equipment</i> is identified and discussed.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - clarify OHS legislative requirements

REQUIRED SKILLS AND KNOWLEDGE

- verbally report construction hazards and risks
- ask effective questions
- relay information to others
- discuss OHS issues and information
- comprehension skills to:
 - explain the basic OHS legislative requirements which will be applicable to own work
 - explain the meaning of safety signs and symbols
 - identify common construction hazards
 - discuss the basic principles of risk management.

Required knowledge

Required knowledge for this unit is:

- applicable Commonwealth, State or Territory OHS legislation, regulations, standards, codes of practice and industry standards/guidance notes relevant to own work, role and responsibilities
- basic principles of risk management and assessment for construction work
- common construction hazards
- common construction safety signage and its meanings
- general construction emergency response and evacuation procedures
- general construction work activities that require licenses, tickets or certificates of competency
- general first aid response requirements
- general procedures for raising OHS issues
- general procedures for reporting OHS hazards, accidents, incidents, emergencies, injuries, near misses and dangerous occurrences
- general procedures for responding to hazards, incidents and injuries
- general workers' compensation and injury management requirements
- OHS hierarchy of controls
- OHS responsibilities and rights of duty holders, including:
 - persons in control of construction work/projects
 - employers and self-employed persons
 - supervisors
 - employees
 - designers
 - inspectors
 - manufacturers and suppliers
- own responsibilities to comply with safe work practices relating to:
 - housekeeping

REQUIRED SKILLS AND KNOWLEDGE

- identification of hazards
- preventing bullying or harassment
- smoking
- use of amenities
- use of drugs and alcohol
- role of OHS committees and representatives
- types of common personal protective equipment and fire safety equipment
- types of OHS information and documentation.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence must confirm personal awareness of the following:

- applicable OHS legislative and safety requirements for construction work including duty of care
- the range of common construction hazards and procedures for the assessment of risk and application of the hierarchy of control
- OHS communication processes, information and documentation including the role of OHS committees and representatives, the meaning of common safety signs and symbols, and procedures for reporting hazards, incidents and injuries
- general procedures for responding to incidents and emergencies including evacuation, first aid, fire safety equipment and PPE.

Context of and specific resources for assessment

- Resources must be available to support the program including participant materials and other information or equipment related to the skills and knowledge covered by the program.
- It is recommended that the assessment tool designed specifically to support this unit of competency will provide consistency in assessment outcomes.
- Where applicable, physical resources should include equipment modified for people with disabilities
- Access must be provided to appropriate assessment support when required.
- Assessment processes and techniques must be culturally appropriate, and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed
- In all cases where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge.

EVIDENCE GUIDE

Questioning will be undertaken in such a manner as is appropriate to the oracy, language and literacy levels of the operator, any cultural issues that may affect responses to the questions, and reflecting the requirements of the competency and the work being performed.

Method of assessment

Assessment methods may include more than one of the following:

- practical assessment
- oral questioning
- written test
- work-based activities
- simulated project based activity

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS legislative requirements relate to:

- Australian standards
- construction industry OHS standards and guidelines
- duty of care
- health and safety representatives, committees and supervisors
- licences, tickets or certificates of competency
- National Code of Practice for Induction Training for Construction Work
- national safety standards
- OHS and welfare Acts and regulations
- safety codes of practice.

Duty of care requirements relate to:

- legal responsibility under duty of care to do everything reasonably practicable to protect others from harm

RANGE STATEMENT

- Safe work practices*** include:
- own responsibilities to comply with safe work practices, including activities that require licences, tickets or certificates of competency
 - relevant state OHS requirements, including employers and self-employed persons, persons in control of the work site, construction supervisors, designers, manufacturers and suppliers, construction workers, subcontractors and inspectors.
 - access to site amenities, such as drinking water and toilets
 - general requirements for safe use of plant and equipment
 - general requirements for use of personal protective equipment and clothing
 - housekeeping to ensure a clean, tidy and safer work area
 - no drugs and alcohol at work
 - preventing bullying and harassment
 - smoking in designated areas
 - storage and removal of debris.
 - likelihood of a hazard causing injury or harm.
- Risk*** relates to:
- Principles of risk management*** include:
- assessing the risks involved
 - consulting and reporting ensuring the involvement of relevant workers
 - controlling the hazard
 - identifying hazards
 - reviewing to identify change or improvement.
- Hazard*** relates to:
- Common construction hazards*** include:
- confined spaces
 - electrical safety
 - excavations, including trenches
 - falling objects
 - hazardous substances and dangerous goods
 - HIV and other infectious diseases
 - hot and cold working environments
 - manual handling
 - noise
 - plant and equipment

RANGE STATEMENT

Measures for controlling risk to eliminate or minimise hazards in accordance with the hierarchy of control include:

- traffic and mobile plant
- unplanned collapse
- ultraviolet (UV) radiation
- working at heights.

OHS communication processes include:

- elimination
- substitution
- isolation
- engineering control
- administrative control
- personal protective equipment.
- discussions with OHS representatives
- OHS meetings
- OHS notices, newsletters, bulletins and correspondence
- OHS participative arrangements
- processes for raising OHS issues
- toolbox talks
- workplace consultation relating to OHS issues and changes.

OHS information and documentation includes:

- accident and incident reports
- Acts and regulations
- Australian standards
- codes of practice
- construction documentation and plans
- emergency information contact
- evacuation plans
- guidance notes
- job safety analyses
- labels
- material safety data sheets (MSDS)
- proformas for reporting hazards, incidents and injuries
- reports of near misses and dangerous occurrences
- risk assessments
- safe work method statements
- safety meeting minutes
- site safety inspection reports.

Designated OHS personnel includes:

- first aid officers
- OHS committee members

RANGE STATEMENT

- Safety signs and symbols*** include:
- OHS representatives
 - supervisors.
 - emergency information signs (e.g. exits, equipment and first aid)
 - fire signs (e.g. location of fire alarms and firefighting equipment)
 - hazard signs (e.g. danger and warning)
 - regulatory signs (e.g. prohibition, mandatory and limitation or restriction)
 - safety tags and lockout (e.g. danger tags, out of service tags).
- Relevant authorities*** include:
- emergency services (e.g. police, ambulance, fire brigade and emergency rescue)
 - OHS regulatory authority
 - supervisor.
- Incidents*** include:
- accidents resulting in personal injury or damage to property
 - near misses or dangerous occurrences which do not cause injury but may pose an immediate and significant risk to persons or property, and need to be reported so that action can be taken to prevent recurrence, for example:
 - breathing apparatus malfunctioning to the extent that the user's health is in danger
 - collapse of the floor, wall or ceiling of a building being used as a workplace
 - collapse or failure of an excavation more than 1.5 metres deep (including any shoring)
 - collapse or partial collapse of a building or structure
 - collapse, overturning or failure of the load bearing of any scaffolding, lift, crane, hoist or mine-winding equipment
 - damage to or malfunction of any other major plant
 - electric shock.
 - electrical short circuit, malfunction or explosion
 - uncontrolled explosion, fire or escape of gas, hazardous substance or steam
 - any other unintended or uncontrolled incident or event arising from operations carried on at a

RANGE STATEMENT

- General procedures* for responding to incidents and emergencies include:
- workplace.
 - basic emergency response (keep calm, raise alarm, obtain help)
 - evacuation
 - notification of designated OHS personnel and authorities
 - notification of emergency services (e.g. when and how)
 - referring to site emergency plans and documentation.
- Emergencies* include:
- chemical spill
 - fire
 - injury to personnel
 - structural collapse
 - toxic and/or flammable vapours emission
 - vehicle/mobile plant accident.
- Personal protective equipment* includes:
- aprons
 - arm guards
 - eye protection
 - gloves
 - hard hat
 - hearing protection
 - high visibility retro reflective vests
 - protective, well fitting clothing
 - respiratory protection
 - safety footwear
 - UV protective clothing and sunscreen.
- Fire safety equipment* includes:
- breathing apparatus
 - fire blankets
 - firefighting equipment.

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to estimate materials, labour and time requirements and to establish costs for provision of services or products.

The unit covers the gaining of information, the estimation of materials, labour and time, the calculation of costs and the associated documentation.

Application of the Unit

Application of the unit This unit of competency supports the development of estimating and costing skills relevant to minor plumbing jobs.

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units Nil

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather information.	<p>1.1.Details of customer requirements are obtained through discussion with customer or from information supplied.</p> <p>1.2.Plans and specifications are accessed and site is inspected.</p> <p>1.3.Details of products and services to be provided are developed.</p> <p>1.4.Delivery point and methods of transportation are determined where necessary.</p> <p>1.5.Details are recorded in accordance with workplace procedures.</p>
2. Estimate materials, labour and time.	<p>2.1.Work, including preparatory tasks, is planned and sequenced.</p> <p>2.2.Types and quantities of materials required for product work are <i>estimated</i>.</p> <p>2.3.Labour requirements to perform work are estimated.</p> <p>2.4.Time requirements to perform work are estimated.</p>
3. Calculate costs.	<p>3.1.Total materials, labour and overhead costs are calculated in accordance with workplace procedures using appropriate <i>equipment</i>.</p> <p>3.2.Total work cost is calculated, including overheads and mark-up percentages.</p> <p>3.3.Final cost for work is calculated.</p>
4. Document and verify details.	<p>4.1.Details of costs and charges are documented in accordance with workplace procedures.</p> <p>4.2.Costs, calculations and other details are verified in accordance with workplace procedures.</p> <p>4.3.Customer quotation and tender are prepared.</p> <p>4.4.Details are documented for future reference in accordance with workplace procedures and using relevant <i>information</i>.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- communication skills to:
 - complete workplace documentation
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - identify customer requirements
 - prepare quotes and tenders
 - record details, including costs and charges
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- estimating materials and labour required for a work activity
- determining costs for the provision of a quotation or tender in the plumbing and services industry
- numeracy skills to apply calculations.

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- estimating and calculating processes
- impact of time on wages and other costs
- job safety analysis (JSA) and safe work method statements (SWMS)
- process for estimating and costing work
- relevant statutory and authority requirements related to estimating and costing work
- SI system of measurements
- standards applicable to the work to be undertaken
- tendering and contracting processes
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to the estimation and costing of work
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum, the ability to estimate and cost three varied jobs in at least Class 1 buildings, including:
 - estimating quantities of material required
 - determining types and amount of labour required to complete the work
 - estimating time required to complete the work
 - estimating overheads associated with the job
 - providing a written quotation and tender for each of the work requirements
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances

EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Factors for *estimation* and costing include:

- labour
- materials
- overheads.

Equipment may include:

- calculators
- computers running appropriate software to estimate and calculate necessary details
- measuring equipment appropriate to work
- stationery.

Information may include:

- charts and hand drawings
- diagrams or sketches

RANGE STATEMENT

- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards
- safe work procedures relating to estimating and costing work
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Unit Sector(s)

Unit sector Plumbing and services

Co-requisite units

Co-requisite units Nil

Functional area

Functional area

CPPBDN5013A Develop and collaborate on building information models for small-scale building design projects

Modification History

New unit

Unit Descriptor

This unit of competency specifies the outcomes required to develop three-dimensional (3-D) models of small-scale building design projects covered by the Building Code of Australia (BCA), except construction Type A buildings, into true building information models (BIM).

It also covers adding and adjusting values of components of building designs, collaborating with consultants and contractors from other disciplines, working live within the model alongside other disciplines and creating project documentation using modelling software programs.

Application of the Unit

This unit of competency supports building designers who create and use BIMs to optimise productivity and enhance streamlining of the construction process through improved communication and collaboration with consultants and contractors involved in the construction life cycle.

Licensing/Regulatory Information

Work in this area must be completed according to relevant legislative, industry and organisational requirements, including occupational health and safety (OHS) policies and procedures.

Different states and territories may have regulatory mechanisms that apply to this unit. Users are advised to check for regulatory limitations.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--|-----|---|
| 1 | Develop BIM project documentation | 1.1 | BIM project processes and schedules are planned and finalised in consultation with relevant project stakeholders. |
| | | 1.2 | Procedures to provide accurate and reliable exchange of project models are developed according to <i>organisational and project requirements</i> . |
| | | 1.3 | Project documentation is generated according to organisational and project requirements using outputs of appropriate functions of design technology tools. |
| 2 | Develop a BIM project | 2.1 | Information <i>relating to small-scale building design projects</i> is analysed and applied to plans for BIM development. |
| | | 2.2 | 3-D models are created according to organisational and project requirements and software operation instructions using appropriate <i>design technology tools</i> . |
| | | 2.3 | <i>Building design data</i> is embedded in project model <i>objects</i> to allow collaboration, integration and generation of required project documentation. |
| | | 2.4 | BIM is checked and tested according to organisational and project requirements to confirm accuracy and functionality. |
| 3 | Exchange and collaborate on project models | 3.1 | Transfer of BIM files is tested according to organisational procedures to ensure integrity of format and data is retained on receipt. |
| | | 3.2 | BIMs are provided to other consultants or contractors for addition of specialist data according to project |

requirements and data sharing protocols.

- 3.3 BIMs or BIM data provided by other consultants or contractors are imported or linked and checked for integrity according to project and organisational requirements.
- 3.4 BIMs are amended and manipulated live in collaboration with other contractors and consultants operating within the same model.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- administration and management skills to:
 - develop process map, task list and schedule for BIM implementation
 - implement and manage standards
 - manage projects and documents
 - manage time, including planning and prioritising work
- analytical and problem-solving skills to:
 - develop innovative ideas and designs
 - select cost-effective products and materials that contribute to sustainable development
 - work out optimum compliant and cost-effective design solutions
- interpersonal skills to interact with clients and other stakeholders, including planning and regulatory personnel and technical experts
- language, literacy and numeracy skills to:
 - communicate with clients and contacts
 - estimate costs
 - interpret and apply complex information, including legislation, regulations, and codes and standards
 - present design options to clients
- technical skills to:
 - produce accurate design documentation and hand drawings
 - apply compliance requirements, including drawing standards
 - design from a brief
 - plan and carry out design, including visualising spaces, form, shapes and light
- technology skills to use information technology, BIM technologies and relevant software

Required knowledge

- architectural styles and terminology
- basic principles of structural engineering
- building designers' duty of care to ensure quality and safety of designs
- benefits and challenges of adopting a BIM approach to design production and documentation
- contextual and site constraints
- conventional and sustainable construction materials and methods, including their

- application, behaviour, characteristics, performance and interactions with other materials
- design development and approval processes, and implications of changes to design at each stage
- design drawing and representation methods
- design technology’s built-in tools and networking tools required to maintain two or more disciplines in a single project model within a local area network (LAN)
- tools required to manage a project with two or more disciplines across a wide area network (WAN)
- hazards of site, materials, construction practices and building use over life cycle
- key features of building life cycles
- legislation, codes and standards relevant to sustainable design requirements for small-scale building design projects
- organisational scope of business, service levels and fees
- planning processes and requirements
- pricing of resources
- principles of integrated project delivery
- principles of sustainable design
- project management strategies
- scientific and social principles of human interactions with the built environment
- tools required to create a realistic BIM implementation plan that responds to specific staff, financial and schedule constraints

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person should demonstrate the ability to:</p> <ul style="list-style-type: none"> • produce interactive BIM projects for a range of small-scale building design projects in consultation with project team • collaborate on BIM projects with a range of stakeholders, including: <ul style="list-style-type: none"> • integration of imported data • live interoperations.
<p>Context of and specific resources for assessment</p>	<p>Assessment of this unit:</p> <ul style="list-style-type: none"> • must be in the context of the work environment • may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment

	<p>skills</p> <ul style="list-style-type: none"> • must meet relevant compliance requirements. <p>Resource implications for assessment include:</p> <ul style="list-style-type: none"> • access to: <ul style="list-style-type: none"> • suitable assessment venue and equipment • suitable simulated or real opportunities and resources to demonstrate competence • assessment instruments.
<p>Method of assessment</p>	<p>Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods:</p> <ul style="list-style-type: none"> • written and/or oral assessment of the candidates required knowledge for the unit • observed, documented and/or firsthand testimonial evidence of the candidates • implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes • identification of the relevant information and scope of the work required to meet the required outcomes • identification of viable options and the selection of options that best meet the required outcomes • consistently achieving the required outcomes.
<p>Guidance information for assessment</p>	<p>This unit could be assessed on its own or in combination with other units relevant to the job function.</p> <p>Where applicable, physical resources should include equipment modified for people with disabilities.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate,

accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Organisational and project requirements</i> may include:</p>	<ul style="list-style-type: none"> • communications protocols • file exchange formats • reporting requirements • schedule.
<p><i>Small-scale building design projects:</i></p>	<ul style="list-style-type: none"> • include buildings covered by the BCA, except construction Type A buildings • may be residential projects, such as: <ul style="list-style-type: none"> • additions and renovations • heritage restoration • new buildings • may be commercial or industrial projects, such as: <ul style="list-style-type: none"> • factories • motels • offices • restaurants • retail and service outlets • warehouses.
<p><i>Design technology tools</i> may include:</p>	<ul style="list-style-type: none"> • proprietary 3, 4 and 5-D modelling software, such as: <ul style="list-style-type: none"> • Autodesk Architectural Desktop • Autodesk Revit • Bentley Architecture • Graphisoft ArchiCAD • VectorWorks ARCHITECT.
<p><i>Building design data</i> may include:</p>	<ul style="list-style-type: none"> • details of compliance requirements, including those specified in: <ul style="list-style-type: none"> • Australian standards • client requirements • design specifications • legislation and regulations • manufacturer specifications • dimensions • labour costs • material costs • material properties, such as: <ul style="list-style-type: none"> • acoustic values • energy efficiency • fire resistance • R-value and U-value • strength.

Objects may include:	<ul style="list-style-type: none">• customised imports• imports from online object libraries• new objects created by the designer.

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to develop and apply basic industry practices within the creative arts industries.</p> <p>This unit addresses the collection, application and updating of general information relevant to work roles within the creative arts industry sectors, including industry structures and operations, employment obligations and opportunities, the impact of new technology and the identification of industry laws and regulations.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>This unit underpins effective performance within the following industry sectors:</p> <ul style="list-style-type: none"> • Entertainment • Film, Television, Radio and Interactive Media • Museums and Library Services • Music • Visual Arts, Craft and Design. <p>This unit requires a basic application of creative arts industry knowledge. The advanced application of creative arts industry knowledge is addressed in individual units developed for specific job tasks.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Source and apply industry information	<ol style="list-style-type: none"> 1. Seek information on the <i>structure and operation</i> of the <i>creative arts industries</i> using <i>appropriate sources</i> 2. Seek information on <i>employment obligations and opportunities</i> within the creative arts industries using appropriate sources 3. Seek information on <i>new technology</i> affecting the creative arts industries using appropriate sources 4. Comply with copyright requirements when accessing information 5. Apply information in day-to-day work activities to enhance quality of work performance
Identify industry laws and regulations	<ol style="list-style-type: none"> 6. Seek information on <i>laws and regulations</i> affecting the creative arts industries using appropriate sources 7. Identify implications of breaching laws and regulations affecting the creative arts industries 8. Apply information to ensure laws and regulations are not breached in day-to-day work activities
Update and maintain industry knowledge	<ol style="list-style-type: none"> 9. Identify and use a range of opportunities to update knowledge of the creative arts industries 10. Identify <i>current issues of concern</i> to the creative arts industries 11. Share updated knowledge with colleagues 12. Establish and maintain effective contacts in the creative arts industries

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills sufficient to communicate industry information to colleagues
- learning skills sufficient to maintain knowledge of industry information
- literacy skills sufficient to read and understand industry information and terminology
- numeracy skills sufficient to interpret relevant technical data
- planning and organising skills sufficient to identify relevant industry information
- technology skills sufficient to access and download industry information

Required knowledge

- basic understanding of the following areas and how they apply to day-to-day work activities (in relation to the particular creative arts industry sector in which knowledge is being assessed):
 - industry structure and operation
 - employment obligations and opportunities
 - new technology
 - laws and regulations
 - current issues of concern

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • ability to source industry information • ability to seek appropriate assistance to collect industry information • ability to apply industry information to day-to-day work activities to enhance work outcomes • understanding of the ways in which to maintain currency of industry knowledge.
Context of and specific resources for assessment	<p>This unit of competency applies to a range of creative arts industry sectors. The focus of assessment will therefore depend on the industry sector involved. Assessment must be customised to meet the needs of the particular industry sector in which performance is being assessed. Assessment should only address those variable circumstances, listed in the range statement, which apply to the chosen context.</p> <p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to appropriate technology to collect, download and store industry information • access to a range of relevant and current industry information • access to appropriate learning and assessment support when required • use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.
Method of assessment	<p>The following assessment methods are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate collecting and organising industry information • case studies to assess ability to apply knowledge to different industry contexts and situations • written or oral questioning to test knowledge of the

EVIDENCE GUIDE	
	<p>different aspects or distinguishing features of the creative arts industries</p> <ul style="list-style-type: none">• review of portfolios of evidence and third-party workplace reports of on-the-job performance, including authenticated samples of work in collecting and organising industry information.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Structure and operation may include:

- distribution channels for products and services
- industry sectors and their products and services
- key contacts and support networks
- major industry bodies and associations
