MEM05 Metal and Engineering Training Package

Release: 11.1

CONTENTS

Preliminary Information	34
MEM05v11.1 - Mapping of Changes	37
MEM05v11 - Mapping of Changes	37
MEM05v10.1 - Mapping of Changes	38
MEM05v10 - Mapping of Changes	40
MEM05v9 - Mapping of Changes.....	41
MEM05v8 - Mapping of Changes.....	68
MEM05v7 - Mapping of Changes.....	83
MEM05v6 - Mapping of Changes.....	85
MEM05v5 - Mapping of Changes.....	90
MEM05v4 - Mapping of Changes.....	97
MEM05v3 - Mapping of Changes.....	106
Summary of AQF Qualifications in this Package.....	152
List of MEM05v11 Units within Training Package.....	154
Certificate III Trade Specialisation Units	154
List of Imported units in MEM Training Package.....	154
Overview	155
Qualifications Frame work.....	160
MEM05 Qualification Pathways	165
MEM05 Qualification Pathways Diagram	170
Skill Sets	173
Historical and General Information	173
Employability Skills.....	179
Examples from this Training Package of Employability Skills	182
Assessment Guidelines.....	183
MEM05 Assessment Advice.....	196
MEM05 Licensing requirements	197
Competency Standards	197
Competency Standards - MEM05 Industry Contextualisation	202
Appendix 1: MEM05 Units, pre requisites, points and weighting	203
0300 Assembly.....	203
0400 Casting and moulding	204
0500 Fabrication.....	212
0600 Forging.....	229
0700 Machine and Processing.....	231
0800 Surface Finishing.....	248
0900 Drawing, drafting and design.....	253
1000 Installation and commissioning	261
1100 Materials handling	272
1200 Measurement.....	276
1300 OHS	278
1400 Planning	279
1500 Quality	283
1600 Communication.....	288
1700 Training	290
1800 Maintenance and diagnostics (Page 1).....	290
1800 Maintenance and diagnostics (Page 2).....	299
1800 Maintenance and diagnostics (Page 3).....	308
1800 Maintenance and diagnostics (Page 4).....	319

1800 Maintenance and diagnostics (Page 5).....	328
1900 Jewellery Horological.....	336
2000 Locksmithing.....	345
2100 Horology.....	348
2200 Management and Organisation.....	354
2300 Engineering Science.....	355
2340 Engineering Practice.....	366
2400 Non destructive testing.....	370
2500 Marine Craft Construction.....	373
2600 Composites.....	378
3000 Engineering Technician.....	380
5000 Boating services.....	383
Pre-employment.....	384
Appendix 2: Certificate III Trade Specialisation Units.....	385
Appendix 3: Imported units of competency and points weighting.....	403
MEM10105 Certificate I in Engineering.....	413
MEM10205 Certificate I in Boating Services.....	421
MEM20105 Certificate II in Engineering.....	426
MEM20205 Certificate II in Engineering - Production Technology.....	439
MEM20305 Certificate II in Boating Services.....	455
MEM20413 Certificate II in Engineering Pathways.....	460
MEM30105 Certificate III in Engineering - Production Systems.....	466
MEM30205 Certificate III in Engineering - Mechanical Trade.....	488
MEM30305 Certificate III in Engineering - Fabrication Trade.....	503
MEM30405 Certificate III in Engineering - Electrical/Electronic Trade.....	516
MEM30505 Certificate III in Engineering - Technical.....	528
MEM30605 Certificate III in Jewellery Manufacture.....	535
MEM30705 Certificate III in Marine Craft Construction.....	542
MEM30805 Certificate III in Locksmithing.....	549
MEM30905 Certificate III in Boating Services.....	555
MEM31010 Certificate III in Watch and Clock Service and Repair.....	561
MEM31112 Certificate III in Engineering - Composites Trade.....	569
MEM40105 Certificate IV in Engineering.....	577
MEM40205 Certificate IV in Boating Services.....	611
MEM40311 Certificate IV in Advanced Jewellery Manufacture.....	619
MEM40412 Certificate IV in Engineering Drafting.....	631
MEM50105 Diploma of Engineering - Advanced Trade.....	640
MEM50212 Diploma of Engineering - Technical.....	670
MEM50311 Diploma of Jewellery and Object Design.....	686
MEM60112 Advanced Diploma of Engineering.....	695
MEM60211 Advanced Diploma of Jewellery and Object Design.....	712
MEM80112 Vocational Graduate Diploma of Engineering.....	723
MEMSS00001 Non Destructive Testing - Level 2 NDT practitioner.....	734
MEM03001B Perform manual production assembly.....	736
MEM03002B Perform precision assembly.....	743
MEM03003B Perform sheet and plate assembly.....	750
MEM03004B Perform electronic/electrical assembly (production).....	757
MEM03005B Rework and repair (electrical/electronic production).....	764
MEM03006B Set assembly stations.....	771
MEM04001B Operate melting furnaces.....	778
MEM04002B Perform gravity die casting.....	786
MEM04003B Operate pressure die casting machine.....	794
MEM04004B Prepare and mix sand for metal moulding.....	802

MEM04005C Produce moulds and cores by hand (jobbing)	808
MEM04006B Operate sand moulding and core making machines.....	818
MEM04007B Pour molten metal	825
MEM04008B Fettle and trim metal castings/forgings.....	832
MEM04010B Develop and manufacture wood patterns.....	839
MEM04011B Produce polymer patterns.....	848
MEM04012B Assemble plated patterns.....	855
MEM04013B Develop and manufacture polystyrene patterns.....	862
MEM04014B Develop and manufacture production patterns.....	869
MEM04015B Develop and manufacture vacuum forming moulds and associated equipment.....	878
MEM04016C Develop and manufacture precision models.....	886
MEM04017B Develop and manufacture gear, conveyor screw and propeller patterns ...	895
MEM04018B Perform general woodworking machine operations	902
MEM04019B Perform refractory installation and repair	909
MEM04020A Supervise individual ferrous melting and casting operation	916
MEM04021A Supervise individual non ferrous melting and casting operation.....	927
MEM04022A Examine appropriateness of methoding for mould design.....	937
MEM04023A Undertake prescribed tests on foundry related materials	945
MEM05001B Perform manual soldering/desoldering - electrical/electronic components	955
MEM05002B Perform high reliability soldering and desoldering.....	963
MEM05003B Perform soft soldering	971
MEM05004C Perform routine oxy acetylene welding.....	978
MEM05005B Carry out mechanical cutting	985
MEM05007C Perform manual heating and thermal cutting.....	993
MEM05006C Perform brazing and or silver soldering.....	1000
MEM05008C Perform advanced manual thermal cutting, gouging and shaping	1007
MEM05009C Perform automated thermal cutting.....	1014
MEM05010C Apply fabrication, forming and shaping techniques	1021
MEM05011D Assemble fabricated components.....	1031
MEM05012C Perform routine manual metal arc welding	1042
MEM05013C Perform manual production welding.....	1049
MEM05014C Monitor quality of production welding/fabrications	1055
MEM05015D Weld using manual metal arc welding process.....	1063
MEM05016C Perform advanced welding using manual metal arc welding process.....	1072
MEM05017D Weld using gas metal arc welding process	1079
MEM05018C Perform advanced welding using gas metal arc welding process	1088
MEM05019D Weld using gas tungsten arc welding process.....	1095
MEM05020C Perform advanced welding using gas tungsten arc welding process.....	1104
MEM05022C Perform advanced welding using oxy acetylene welding process	1111
MEM05023C Weld using submerged arc welding process.....	1119
MEM05024B Perform welding supervision	1126
MEM05025C Perform welding/fabrication inspection.....	1133
MEM05026C Apply welding principles	1141
MEM05027A Perform aluminothermic welding.....	1150
MEM05036C Repair/replace/modify fabrications	1157
MEM05037C Perform geometric development.....	1167
MEM05038B Perform advanced geometric development - cylindrical/rectangular	1176
MEM05039B Perform advanced geometric development - conical.....	1185
MEM05040B Perform advanced geometric development - transitions	1194
MEM05041B Weld using powder flame spraying.....	1203
MEM05042B Perform welds to code standards using flux core arc welding process	1210
MEM05043B Perform welds to code standards using gas metal arc welding process ...	1218

MEM05044B Perform welds to code standards using gas tungsten arc welding process	1226
MEM05045B Perform pipe welds to code standards using manual metal arc welding process	1234
MEM05046B Perform welds to code standards using manual metal arc welding process	1242
MEM05047B Weld using flux core arc welding process	1250
MEM05048B Perform advanced welding using flux core arc welding process	1257
MEM05049B Perform routine gas tungsten arc welding	1264
MEM05050B Perform routine gas metal arc welding	1271
MEM05051A Select welding processes	1278
MEM05052A Apply safe welding practices	1285
MEM05053A Set and edit computer controlled thermal cutting machines	1295
MEM05054A Write basic NC/CNC programs for thermal cutting machines	1303
MEM06001B Perform hand forging	1311
MEM06002B Perform hammer forging	1318
MEM06003C Carry out heat treatment	1325
MEM06004B Select heat treatment processes and test finished product	1332
MEM06005B Perform drop and upset forging	1339
MEM06006C Repair springs	1346
MEM06007B Perform basic incidental heat/queenching, tempering and annealing	1353
MEM06008A Hammer forge complex shapes	1361
MEM06009A Hand forge complex shapes	1368
MEM07001B Perform operational maintenance of machines/equipment	1375
MEM07002B Perform precision shaping/planing/slotting operations	1381
MEM07003B Perform machine setting (routine)	1389
MEM07004B Perform machine setting (complex)	1396
MEM07005C Perform general machining	1405
MEM07006C Perform lathe operations	1415
MEM07007C Perform milling operations	1424
MEM07008D Perform grinding operations	1433
MEM07009B Perform precision jig boring operations	1442
MEM07010B Perform tool and cutter grinding operations	1449
MEM07011B Perform complex milling operations	1456
MEM07012B Perform complex grinding operations	1463
MEM07013B Perform machining operations using horizontal and/or vertical boring machines	1470
MEM07014B Perform electro-discharge (EDM) machining operations	1477
MEM07015B Set computer controlled machines/processes	1484
MEM07016C Set and edit computer controlled machines/processes	1492
MEM07018C Write basic NC/CNC programs	1501
MEM07019C Program NC/CNC machining centre	1510
MEM07020C Program multiple spindle and/or multiple axis NC/CNC machining centre	1518
MEM07021B Perform complex lathe operations	1527
MEM07022C Program CNC wire cut machines	1535
MEM07023C Program and set up CNC manufacturing cell	1544
MEM07024B Operate and monitor machine/process	1552
MEM07025B Perform advanced machine/process operation	1560
MEM07026B Perform advanced plastic processing	1569
MEM07027B Perform advanced press operations	1577
MEM07028B Operate computer controlled machines/processes	1586
MEM07029B Perform routine sharpening/maintenance of production tools and cutters	1594
MEM07030C Perform metal spinning lathe operations (basic)	1602
MEM07031C Perform metal spinning lathe operations (complex)	1610
MEM07032B Use workshop machines for basic operations	1617

MEM07033B Operate and monitor basic boiler	1624
MEM07034A Operate and monitor intermediate class boiler.....	1632
MEM07039A Write programs for industrial robots	1642
MEM07040A Set multistage integrated processes.....	1650
MEM07041A Perform production machining	1657
MEM07042A Undertake corrections and basic maintenance to aluminium extrusion dies and die support systems	1668
MEM07043A Identify causes of faulty aluminium extrusions	1680
MEM07044A Test a new aluminium extrusion die	1691
MEM08001B Perform wire, jig and barrel load/unload work	1701
MEM08002C Pre-treat work for subsequent surface coating	1708
MEM08003C Perform electroplating operations	1715
MEM08004B Finish work using wet, dry and vapour deposition methods	1722
MEM08005B Prepare and produce specialised coatings.....	1730
MEM08006B Produce clear and/or coloured and/or sealed anodised films on aluminium.....	1737
MEM08007B Control surface finish production and finished product quality.....	1744
MEM08008B Operate and control surface finishing waste treatment process	1751
MEM08009C Make up solutions.....	1758
MEM08010B Manually finish/polish materials.....	1765
MEM08011B Prepare surfaces using solvents and/or mechanical means.....	1772
MEM08012B Prepare surfaces by abrasive blasting (basic)	1780
MEM08013B Prepare surfaces by abrasive blasting (advanced).....	1787
MEM08014B Apply protective coatings (basic).....	1794
MEM08015B Apply protective coatings (advanced)	1805
MEM08016B Control blast coating by-products, materials and emissions	1815
MEM08018B Electroplate engineering coatings	1822
MEM08019B Electroplate protective finishes	1830
MEM08020B Electroplate decorative finishes	1840
MEM09002B Interpret technical drawing	1849
MEM09003B Prepare basic engineering drawing	1856
MEM09004B Perform electrical/electronic detail drafting	1864
MEM09005B Perform basic engineering detail drafting.....	1871
MEM09006B Perform advanced engineering detail drafting	1878
MEM09007B Perform advanced mechanical detail drafting	1885
MEM09008B Perform advanced structural detail drafting	1892
MEM09009C Create 2D drawings using computer aided design system.....	1899
MEM09010C Create 3D models using computer aided design system.....	1908
MEM09011B Apply basic engineering design concepts	1915
MEM09021B Interpret and produce curved 3-dimensional shapes	1922
MEM09022A Create 2D code files using computer aided manufacturing system	1930
MEM09023A Create 3D code files using computer aided manufacturing system	1937
MEM09143A Represent aeronautical engineering designs	1943
MEM09144A Represent avionic engineering designs.....	1950
MEM09153A Apply computer-aided modelling and data management techniques to aeronautical engineering designs	1957
MEM09154A Apply computer-aided modelling and data management techniques to avionic engineering designs	1964
MEM09155A Prepare mechanical models for computer-aided engineering (CAE)	1971
MEM09156A Prepare mechatronic models for computer-aided engineering (CAE)	1982
MEM09157A Perform mechanical engineering design drafting	1992
MEM09158A Perform mechatronics engineering design drafting	2002
MEM09201A Work effectively in an engineering drafting workplace	2012
MEM09202A Produce free hand sketches	2021

MEM09203A Measure and sketch site information	2031
MEM09204A Produce basic engineering detail drawings	2040
MEM09205A Produce electrical schematic drawings	2049
MEM09206A Produce drawings for mechanical services	2058
MEM09207A Produce drawings for reticulated services	2069
MEM09208A Detail fasteners and locking devices in mechanical drawings.....	2078
MEM09209A Detail bearings, seals and other componentry in mechanical drawings...	2089
MEM09210A Create 3-D solid models using computer-aided design (CAD) system....	2098
MEM09211A Produce drawings or models for industrial piping.....	2107
MEM09212A Produce detailed drawings of steel to non-steel connections	2114
MEM09213A Produce schematic drawings for hydraulic and pneumatic fluid power systems.....	2123
MEM09214A Perform advanced engineering detail drafting.....	2132
MEM09215A Supervise detail drafting projects	2144
MEM09216A Interpret and produce curved 3-D shapes and patterns	2152
MEM09217A Prepare plans for pipe and duct fabrication	2158
MEM09218A Participate in drafting projects for building services	2166
MEM09219A Prepare drawings for fabricated sheet metal products	2173
MEM09220A Apply surface modelling techniques to 3-D drawings	2180
MEM09221A Create 3-D model assemblies using computer-aided design (CAD) system	2189
MEM09222A Interpret and maintain or restore original drawings	2198
MEM10001C Erect structures.....	2207
MEM10002B Terminate and connect electrical wiring.....	2215
MEM10003B Install and test electrical wiring and circuits up to 1000 volts a.c. and 1500 volts d.c.....	2223
MEM10004B Enter and change programmable controller operational parameters	2231
MEM10005B Commission programmable controller programs	2238
MEM10006B Install machine/plant	2245
MEM10007C Modify control systems.....	2253
MEM10008B Undertake commissioning procedures for plant and/or equipment.....	2267
MEM10009B Install refrigeration and air conditioning plant and equipment.....	2277
MEM10010B Install pipe work and pipe work assemblies.....	2287
MEM10011B Terminate and connect specialist cables.....	2294
MEM10013A Install split air conditioning systems and associated pipework	2302
MEM11001C Erect/dismantle scaffolding and equipment.....	2310
MEM11002C Erect/dismantle complex scaffolding and equipment.....	2317
MEM11003B Coordinate erection/dismantling of complex scaffolding/equipment.....	2326
MEM11004B Undertake dogging	2335
MEM11005B Pick and process order.....	2342
MEM11006B Perform production packaging.....	2349
MEM11007B Administer inventory procedures	2356
MEM11008B Package materials (stores and warehouse).....	2362
MEM11009B Handle/move bulk fluids/gases.....	2369
MEM11010B Operate mobile load shifting equipment	2376
MEM11011B Undertake manual handling	2383
MEM11012B Purchase materials	2390
MEM11013B Undertake warehouse receipt process	2397
MEM11014B Undertake warehouse dispatch process	2404
MEM11015B Manage warehouse inventory system.....	2411
MEM11016B Order materials	2418
MEM11017B Organise and lead stocktakes.....	2424
MEM11018B Organise and maintain warehouse stock receipt and/or dispatch system	2431
MEM11019B Undertake tool store procedures.....	2438

MEM11020B Perform advanced warehouse computer operations	2445
MEM11021B Perform advanced operation of load shifting equipment	2452
MEM11022B Operate fixed/moveable load shifting equipment	2459
MEM11023A Operate a bridge and gantry crane	2466
MEM11024A Undertake basic rigging.....	2478
MEM11025A Operate a non-slewing mobile crane of greater than three tonnes capacity	2490
MEM12001B Use comparison and basic measuring devices	2502
MEM12002B Perform electrical/electronic measurement.....	2508
MEM12003B Perform precision mechanical measurement	2516
MEM12004B Perform precision electrical/electronic measurement	2524
MEM12005B Calibrate measuring equipment.....	2531
MEM12006C Mark off/out (general engineering).....	2539
MEM12007D Mark off/out structural fabrications and shapes.....	2548
MEM12019B Measure components using coordinate measuring machines	2557
MEM12020B Set and operate coordinate measuring machines	2565
MEM12021B Program coordinate measuring machines.....	2573
MEM12022B Program coordinate measuring machines (advanced).....	2581
MEM12023A Perform engineering measurements	2589
MEM12024A Perform computations	2597
MEM12025A Use graphical techniques and perform simple statistical computations ..	2605
MEM13001B Perform emergency first aid	2612
MEM13002B Undertake occupational health and safety activities in the workplace	2618
MEM13003B Work safely with industrial chemicals and materials.....	2625
MEM13004B Work safely with molten metals/glass	2633
MEM13006B Collect and evaluate occupational health and safety data for an enterprise or section of an enterprise	2640
MEM13007B Maintain water treatment systems for cooling towers.....	2647
MEM13010A Supervise occupational health and safety in an industrial work environment.	2654
MEM13013B Work safely with ionizing radiation.....	2662
MEM13014A Apply principles of occupational health and safety in the work environment	2672
MEM14001B Schedule material deliveries	2682
MEM14002B Undertake basic process planning.....	2689
MEM14003B Undertake basic production scheduling	2695
MEM14004A Plan to undertake a routine task.....	2702
MEM14005A Plan a complete activity.....	2709
MEM14065A Plan and design aeronautical engineering projects	2717
MEM14066A Plan and design avionic engineering projects	2727
MEM14083A Apply aeronautical engineering fundamentals to support design/development of engineering projects	2737
MEM14084A Apply avionic engineering fundamentals to support design and development of engineering projects.....	2748
MEM14085A Apply mechanical engineering analysis techniques.....	2759
MEM14086A Apply mechatronic engineering analysis techniques	2768
MEM14087A Apply manufactured product design techniques.....	2778
MEM14088A Apply maintenance engineering techniques to equipment and component repairs and modifications	2788
MEM14089A Integrate mechanical fundamentals into an engineering task	2799
MEM14090A Integrate mechatronic fundamentals into an engineering task	2807
MEM14091A Integrate manufacturing fundamentals into an engineering task.....	2815
MEM14092A Integrate maintenance fundamentals into an engineering task	2825
MEM15001B Perform basic statistical quality control.....	2834
MEM15002A Apply quality systems.....	2841
MEM15003B Use improvement processes in team activities.....	2849

MEM15004B Perform inspection	2856
MEM15005B Select and control inspection processes and procedures.....	2863
MEM15007B Conduct product and/or process capability studies.....	2870
MEM15008B Perform advanced statistical quality control.....	2877
MEM15010B Perform laboratory procedures	2883
MEM15011B Exercise external quality assurance	2891
MEM15012B Maintain/supervise the application of quality procedures.....	2898
MEM15015B Examine trading practices	2905
MEM15016B Inspect pre-packed articles.....	2912
MEM15017B Use and maintain reference standards	2920
MEM15018B Investigate consumer complaints	2929
MEM15019B Conduct a field inspection.....	2937
MEM15020C Perform verification/certification or in-service inspection.....	2947
MEM15021C Conduct audits of servicing licensees and public weighbridge licensees ..	2955
MEM15022B Verify reference standards	2963
MEM15024A Apply quality procedures	2970
MEM16001B Give formal presentations and take part in meetings	2975
MEM16002C Conduct formal interviews and negotiations.....	2982
MEM16003B Provide advanced customer service	2989
MEM16004B Perform internal/external customer service	2996
MEM16005A Operate as a team member to conduct manufacturing, engineering or related activities.....	3003
MEM16006A Organise and communicate information.....	3011
MEM16007A Work with others in a manufacturing, engineering or related environment	3018
MEM16008A Interact with computing technology	3025
MEM16009A Research and analyse engineering information.....	3032
MEM16010A Write reports	3039
MEM16011A Communicate with individuals and small groups	3047
MEM16012A Interpret technical specifications and manuals	3056
MEM16013A Operate in a self-directed team.....	3064
MEM16014A Report technical information.....	3073
MEM17001B Assist in development and deliver training in the workplace	3081
MEM17002B Conduct workplace assessment.....	3088
MEM17003A Assist in the provision of on the job training.....	3096
MEM18001C Use hand tools	3102
MEM18002B Use power tools/hand held operations.....	3109
MEM18003C Use tools for precision work	3116
MEM18004B Maintain and overhaul mechanical equipment	3124
MEM18005B Perform fault diagnosis, installation and removal of bearings	3133
MEM18006C Repair and fit engineering components	3142
MEM18007B Maintain and repair mechanical drives and mechanical transmission assemblies	3154
MEM18008B Balance equipment	3162
MEM18009B Perform levelling and alignment of machines and engineering components	3169
MEM18010C Perform equipment condition monitoring and recording	3176
MEM18011C Shut down and isolate machines/equipment	3184
MEM18012B Perform installation and removal of mechanical seals	3191
MEM18013B Perform gland packing	3198
MEM18014B Manufacture press tools and gauges	3204
MEM18015B Maintain tools and dies.....	3215
MEM18016B Analyse plant and equipment condition monitoring results	3225
MEM18017C Modify mechanical systems and equipment.....	3233
MEM18018C Maintain pneumatic system components	3243

MEM18019B Maintain pneumatic systems.....	3250
MEM18020B Maintain hydraulic system components.....	3260
MEM18021B Maintain hydraulic systems.....	3267
MEM18022B Maintain fluid power controls.....	3277
MEM18023B Modify fluid power system operation.....	3287
MEM18024B Maintain engine cooling systems.....	3297
MEM18025B Service combustion engines.....	3305
MEM18026C Test compression ignition fuel systems.....	3313
MEM18027C Overhaul engine fuel system components.....	3320
MEM18028B Maintain engine lubrication systems.....	3328
MEM18029B Tune diesel engines.....	3336
MEM18030B Diagnose and rectify low voltage electrical systems.....	3345
MEM18031B Diagnose and rectify low voltage starting systems.....	3355
MEM18032B Maintain induction/exhaust systems.....	3363
MEM18033B Perform engine bottom-end overhaul.....	3371
MEM18034B Perform engine top-end overhaul.....	3379
MEM18035B Diagnose and rectify braking systems.....	3387
MEM18037B Diagnose and rectify low voltage charging systems.....	3395
MEM18038B Maintain wheels and tyres.....	3404
MEM18039B Diagnose and rectify track type undercarriage.....	3412
MEM18040B Maintain suspension systems.....	3419
MEM18041B Maintain steering systems.....	3426
MEM18042C Diagnose and rectify manual transmissions.....	3434
MEM18043C Diagnose and rectify automatic transmissions.....	3442
MEM18044C Diagnose and rectify drive line and final drives.....	3450
MEM18045B Fault find/repair electrical equipment/components up to 250 volts single phase supply.....	3458
MEM18046B Fault find/repair electrical equipment/components up to 1000 volts a.c./1500 volts d.c.....	3466
MEM18047B Diagnose and maintain electronic controlling systems on mobile plant.....	3475
MEM18048B Fault find and repair/rectify basic electrical circuits.....	3484
MEM18049C Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.....	3491
MEM18050C Disconnect/reconnect fixed wired equipment over 1000 volts a.c./1500 volts d.c.....	3501
MEM18051B Fault find and repair/rectify complex electrical circuits.....	3510
MEM18052B Maintain fluid power systems for mobile plant.....	3518
MEM18053B Modify fluid power control systems.....	3527
MEM18054B Fault find, test and calibrate instrumentation systems and equipment.....	3536
MEM18055B Dismantle, replace and assemble engineering components.....	3546
MEM18056B Diagnose and repair analog equipment and components.....	3555
MEM18057B Maintain/service analog/digital electronic equipment.....	3564
MEM18058C Modify electronic equipment.....	3573
MEM18059B Modify electronic systems.....	3581
MEM18060B Maintain, repair control instrumentation - single and multiple loop control systems.....	3589
MEM18061B Maintain/calibrate complex control systems.....	3600
MEM18062B Install, maintain and calibrate instrumentation sensors, transmitters and final control elements.....	3616
MEM18063B Terminate signal and data cables.....	3628
MEM18064B Maintain instrumentation system components.....	3636
MEM18065B Diagnose and repair digital equipment and components.....	3644
MEM18066B Diagnose and repair microprocessor-based equipment.....	3653

MEM18067B Tune control loops - multi controller or multi element systems.....	3662
MEM18069B Maintain, repair instrumentation process control analysers.....	3672
MEM18070C Modify complex electrical circuits and systems	3683
MEM18071B Connect/disconnect fluid conveying system components	3691
MEM18072B Manufacture fluid conveying conductor assemblies.....	3700
MEM18073A Perform advanced equipment testing and diagnostics on mobile plant and equipment.....	3708
MEM18084A Commission and decommission split air conditioning systems.....	3717
MEM18085A Install, service and repair domestic air conditioning and refrigeration appliances	3727
MEM18086B Test, recover, evacuate and charge refrigeration systems	3736
MEM18087B Service and repair domestic and light commercial refrigeration and air conditioning equipment	3744
MEM18088B Maintain and repair commercial air conditioning systems and components	3752
MEM18089B Maintain and repair central air handling systems	3760
MEM18090B Maintain and repair industrial refrigeration systems and components...	3769
MEM18091B Maintain and repair multi stage, cascade and/or ultra-cold industrial refrigeration systems.....	3778
MEM18092B Maintain and repair commercial and/or industrial refrigeration and/or air conditioning controls.....	3788
MEM18093B Maintain and repair integrated industrial refrigeration and/or large air handling system controls.....	3798
MEM18094B Service and repair commercial refrigeration	3807
MEM18095A Maintain and repair cooling towers/evaporative condensers and associated equipment.....	3817
MEM18096A Maintain, repair/replace and adjust refrigerant flow controls and associated equipment.....	3827
MEM18097A Manufacture cavity dies	3835
MEM18098A Prepare to perform work associated with fuel system installation and servicing.....	3846
MEM19001B Perform jewellery metal casting	3853
MEM19002B Prepare jewellery illustrations.....	3860
MEM19003B Handle gem materials	3867
MEM19004B Handle and examine gemstone materials	3875
MEM19005B Produce three-dimensional precision items.....	3883
MEM19006B Replace watch batteries	3890
MEM19007B Perform gemstone setting	3898
MEM19008B Prepare jewellery designs	3906
MEM19009B Perform investment procedures for lost wax casting process	3915
MEM19010B Produce rubber moulds for lost wax casting process	3922
MEM19011B Perform wax injection of moulds for lost wax casting process	3929
MEM19012B Produce jewellery wax model.....	3936
MEM19013B Produce jewellery metal masters	3943
MEM19014B Perform hand engraving.....	3952
MEM19015B Perform jewellery enamelling	3959
MEM19016B Construct jewellery components.....	3967
MEM19017B Fabricate jewellery items.....	3974
MEM19018B Repair jewellery items	3982
MEM19020B Fault-find and maintain micro-mechanisms	3991
MEM19021B Diagnose and service micro-mechanisms	3999
MEM19022B Perform precision micro-mechanism diagnosis and servicing.....	4007
MEM19023A Apply drawing and rendering techniques to jewellery or object design..	4015
MEM19024A Use CAD to create and display 3D jewellery and object models	4021

MEM19025A Create and present designs for jewellery and other 3D objects.....	4027
MEM19026A Investigate quality and application of jewellery materials	4036
MEM19027A Produce life drawings for presenting jewellery and object designs	4043
MEM19028A Select materials and new technologies for jewellery and 3D object design applications.....	4048
MEM19029A Produce a professional jewellery design and 3D object portfolio	4056
MEM19030A Research and design sustainable objects.....	4062
MEM19031A Produce renderings and technical drawings for jewellery and object design construction.....	4069
MEM19032A Design and implement mechanisms in jewellery items.....	4076
MEM19033A Create silversmithing objects.....	4084
MEM19034A Apply chain manufacture process.....	4091
MEM19035A Plan and apply casting techniques for jewellery and object designs.....	4098
MEM19036A Use specialised techniques to produce jewellery and objects.....	4105
MEM19037A Plan and implement chain fabrication process	4113
MEM19038A Apply traditional techniques to jewellery and 3D object production	4120
MEM19039A Plan, conduct and supervise a jewellery and object exhibition.....	4127
MEM19040A Create and manufacture jewellery or object design prototypes for the mass market.....	4135
MEM19041A Experiment with jewellery or object designs	4144
MEM19042A Render images using computer graphics software	4152
MEM19043A Oversee jewellery or object design production	4159
MEM19044A Repair and restore antique jewellery.....	4167
MEM19045A Set gems in channel style settings.....	4174
MEM19046A Apply grain setting techniques	4182
MEM19047A Set gems in claw and bezel style settings.....	4190
MEM19048A Develop and apply complex borders and decorations for hand engraving.....	4198
MEM19049A Develop and apply heraldic designs for hand engraving.....	4206
MEM19050A Hand carve engraving work	4214
MEM19051A Construct multiple stone settings.....	4221
MEM19052A Produce complex objects using silversmithing techniques	4228
MEM19053A Create complex findings and mechanisms for jewellery items	4236
MEM19054A Fabricate platinum jewellery items.....	4244
MEM20001A Produce keys	4252
MEM20002A Assemble and test lock mechanisms.....	4260
MEM20003A Install and upgrade locks and hardware.....	4267
MEM20004A Gain entry	4277
MEM20005A Install and maintain door control devices/systems	4284
MEM20006A Maintain and service mechanical locking devices.....	4294
MEM20007A Plan and prepare a masterkey system	4305
MEM20008A Develop and implement a masterkey system.....	4313
MEM20009A Gain entry and reinstate fire and security containers	4322
MEM20010A Gain entry and reinstate automotive locking systems	4333
MEM20011A Service and repair fire and security containers.....	4342
MEM20012A Service and repair mechanical automotive locking systems	4352
MEM20013A Service automotive transponder systems	4361
MEM20014A Perform a site security survey	4370
MEM21001A Replace watch batteries, capacitors and bands.....	4380
MEM21002A Perform watch movement exchange	4390
MEM21003A Perform watch case servicing, repair and refurbishment	4398
MEM21004A Clean watch and clock components	4408
MEM21005A Diagnose faults in quartz watches.....	4415
MEM21006A Service quartz watches	4423

MEM21007A Service complex quartz watches	4431
MEM21008A Service mechanical watches	4439
MEM21009A Inspect, diagnose, adjust and repair mechanical watches	4449
MEM21010A Service watch power generating systems	4457
MEM21011A Service calendar and other dial indication mechanisms for watches.....	4465
MEM21012A Service and repair mechanical watch oscillating systems.....	4473
MEM21013A Service, test and adjust watch escapements	4482
MEM21014A Service mechanical chronograph watches.....	4490
MEM21015A Perform precision watch timing and adjustment.....	4498
MEM21016A Install and set up clocks.....	4507
MEM21017A Service and repair clock time pieces	4515
MEM21018A Service clock escapements and oscillating systems.....	4526
MEM21019A Service and repair clock striking mechanisms	4533
MEM21020A Service and repair clock chiming mechanisms.....	4542
MEM21021A Restore clockwork mechanisms	4552
MEM21022A Manufacture watch and clock components	4560
MEM21023A Plan, set up and operate horological workshop or service centre.....	4567
MEM22001A Perform engineering activities	4575
MEM22002A Manage self in the engineering environment	4583
MEM22007A Manage environmental effects of engineering activities	4591
MEM22012A Coordinate resources for an engineering project or operation.....	4599
MEM22013A Coordinate engineering projects.....	4609
MEM22014A Coordinate engineering-related manufacturing operations	4618
MEM22015A Source and estimate engineering materials requirements	4628
MEM22017A Coordinate continuous improvement and technical development.....	4637
MEM22018A Coordinate sales and promotion of engineering-related products or services	4646
MEM23003A Operate and program computers and/or controllers in engineering situations.....	4655
MEM23004A Apply technical mathematics	4662
MEM23005A Apply statistics and probability techniques to engineering tasks	4668
MEM23006A Apply fluid and thermodynamics principles in engineering.....	4675
MEM23007A Apply calculus to engineering tasks	4684
MEM23008A Apply advanced algebra and numerical methods to engineering tasks ...	4691
MEM23052A Apply basic electro and control scientific principles and techniques in aeronautical engineering.....	4698
MEM23063A Select and test mechanical engineering materials	4703
MEM23064A Select and test mechatronic engineering materials.....	4712
MEM23073A Select and apply aeronautical engineering methods, processes and construction techniques	4721
MEM23074A Select and apply avionic engineering methods, processes and construction techniques.....	4729
MEM23084A Apply scientific principles and techniques in aeronautical engineering situations.....	4738
MEM23086A Apply scientific principles and techniques in avionic engineering situations	4746
MEM23095A Apply aeronautical system design principles and techniques in aeronautical engineering situations	4754
MEM23096A Apply avionic system design principles and techniques in avionic engineering situations	4760
MEM23097A Apply automated systems principles and techniques in aeronautical engineering situations	4766
MEM23098A Apply automated systems principles and techniques in avionic engineering situations.....	4774
MEM23109A Apply engineering mechanics principles.....	4782

MEM23111A Select electrical equipment and components for engineering applications	4791
MEM23112A Investigate electrical and electronic controllers in engineering applications	4801
MEM23113A Evaluate hydrodynamic systems and system components	4809
MEM23114A Evaluate thermodynamic systems and components	4818
MEM23115A Evaluate fluid power systems	4826
MEM23116A Evaluate programmable logic controller and related control system component applications	4834
MEM23117A Evaluate microcontroller applications	4843
MEM23118A Apply production and service control techniques	4852
MEM23119A Evaluate continuous improvement processes	4861
MEM23120A Select mechanical machine and equipment components	4870
MEM23121A Analyse loads on frames and mechanisms	4879
MEM23122A Evaluate computer integrated manufacturing systems	4888
MEM23123A Evaluate manufacturing processes	4897
MEM23124A Measure and analyse noise and vibration	4908
MEM23125A Evaluate maintenance systems	4919
MEM23126A Evaluate industrial robotic applications	4930
MEM23129A Evaluate thermal loads for heating, ventilation, air conditioning and refrigeration	4940
MEM23130A Coordinate servicing and fault-finding of HVACR control systems	4950
MEM23131A Evaluate rapid prototyping applications	4961
MEM23132A Evaluate rapid manufacturing processes	4970
MEM23133A Evaluate rapid tooling applications	4980
MEM23134A Evaluate jigs and fixtures	4990
MEM23135A Evaluate moulding tools and processes	5000
MEM23136A Evaluate stamping and forging tools	5011
MEM23137A Evaluate rolling tools and processes	5020
MEM23138A Evaluate suitability of materials for engineering-related applications	5031
MEM23139A Design a basic single zone duct distribution system	5039
MEM23140A Determine operational parameters for building HVAC hydronic systems	5047
MEM23141A Complete a building thermal performance survey	5055
MEM23142A Determine psychrometric processes and system performance	5063
MEM23143A Apply energy management principles	5070
MEM23144A Contribute to the design of a commercial refrigeration system	5078
MEM23145A Apply codes and regulations to air conditioning designs	5086
MEM23146A Contribute to the design of industrial refrigeration systems	5093
MEM23147A Contribute to the design of hydronic systems	5099
MEM23148A Develop energy management solutions	5106
MEM23149A Contribute to the design of commercial and industrial exhaust systems	5112
MEM23150A Contribute to the design of heating systems	5120
MEM23151A Commission and optimise performance of HVACR systems	5128
MEM23152A Apply principles of refrigeration food storage technology	5136
MEM23153A Contribute to the design of heat exchanger systems	5144
MEM23154A Analyse and service HVACR systems	5151
MEM234001A Plan and manage engineering-related projects or operations	5159
MEM234002A Integrate engineering technologies	5168
MEM234003A Design machines and ancillary equipment	5177
MEM234004A Design for engineering-related noise and vibration mitigation	5184
MEM234005A Design hydrodynamic pumping systems	5193
MEM234006A Evaluate and select thermodynamic systems or subsystems	5202
MEM234007A Design fluid power systems	5211
MEM234008A Design plant using computer simulations	5220
MEM234009A Design computer-integrated manufacturing systems	5229

MEM234010A Design microcontroller applications	5239
MEM234011A Design programmable logic controller applications	5247
MEM234012A Design integrated maintenance management systems	5256
MEM234013A Plan and design engineering-related manufacturing processes	5267
MEM234014A Design a robotic system	5277
MEM234015A Design hydronic heat exchanger systems	5286
MEM234016A Design refrigeration systems	5294
MEM234017A Design exhaust, ventilation and dust collection systems	5301
MEM234018A Design heating, ventilation, air conditioning and refrigeration control systems	5310
MEM234019A Apply finite element analysis in engineering design	5320
MEM234020A Coordinate small lot manufacture using rapid manufacture processes	5328
MEM234021A Apply statistics to technology problems	5335
MEM234022A Apply advanced calculus to technology problems	5343
MEM234023A Apply differential equations to technology problems	5350
MEM234024A Apply advanced mathematics in technology problems	5357
MEM234025A Apply numerical methods to technology problems	5365
MEM234026A Develop and coordinate engineering-related contingency plans	5372
MEM234027A Plan and manage materials supply for an engineering project or manufacturing operation	5380
MEM234028A Produce and manage technical documentation	5390
MEM234029A Produce and manage technical publications	5397
MEM234030A Provide specialised technical and engineering guidance to other technical employees	5406
MEM234031A Manage installation, commissioning or modification of machines and equipment	5414
MEM234032A Manage fluid power related technologies in an enterprise	5422
MEM234033A Lead engineering-related quality operations in an enterprise	5431
MEM234034A Manage heating, ventilation, air conditioning and refrigeration systems or projects	5440
MEM234035A Maintain and apply technical and engineering skills	5449
MEM234036A Apply configuration management procedures in engineering project management	5459
MEM234037A Perform maintenance-related integrated logistic support management activities	5468
MEM234038A Apply systems engineering procedures to engineering design project management	5476
MEM24001B Perform basic penetrant testing	5484
MEM24002B Perform penetrant testing	5493
MEM24003B Perform basic magnetic particle testing	5501
MEM24004B Perform magnetic particle testing	5509
MEM24005B Perform basic eddy current testing	5518
MEM24006B Perform eddy current testing	5526
MEM24007B Perform ultrasonic thickness testing	5535
MEM24008B Perform ultrasonic testing	5544
MEM24009B Perform basic radiographic testing	5553
MEM24010B Perform radiographic testing	5562
MEM24011B Establish non-destructive tests	5572
MEM24012C Apply metallurgy principles	5581
MEM25001B Apply fibre-reinforced materials	5590
MEM25002B Form and integrate fibre-reinforced structures	5598
MEM25003B Set up marine vessel structures	5606
MEM25004B Fair and shape surfaces	5614

MEM25005B Construct and assemble marine vessel timber components.....	5622
MEM25006B Undertake marine sheathing operations	5630
MEM25007B Maintain marine vessel surfaces	5639
MEM25008B Repair marine vessel surfaces and structures	5647
MEM25009B Form timber shapes using hot processes	5656
MEM25010B Perform fitout procedures	5664
MEM25011B Install marine systems	5674
MEM25012B Install and test operations of marine auxiliary systems.....	5684
MEM25013B Produce three-dimensional plugs/moulds	5693
MEM25014B Perform marine slipping operations	5700
MEM25015A Assemble and install equipment and accessories/ancillaries	5708
MEM26001A Lay up composites using open moulding techniques.....	5716
MEM26002A Lay up composites using vacuum closed moulding techniques.....	5724
MEM26003A Lay up composites using pressure closed moulding techniques.....	5732
MEM26004A Make basic plugs for composites fabrication	5740
MEM26005A Make basic moulds for composites fabrication	5748
MEM26006A Mark and cut out sheets for composite use.....	5756
MEM26007A Select and use reinforcing appropriate for product.....	5764
MEM26008A Select and use resin systems appropriate for product.....	5772
MEM26009A Select and use cores and fillers appropriate for product.....	5780
MEM26010A Store and handle composite materials	5788
MEM26011A Determine materials and techniques for a composite component or product.....	5795
MEM26012A Record and trial work processes for one-off composite products.....	5804
MEM26013A Select and use composite processes or systems appropriate for product.....	5811
MEM26014A Adjust resin chemicals for current conditions	5819
MEM26015A Select and apply repair techniques	5827
MEM26016A Select and use joining techniques.....	5835
MEM26017A Prepare composite or other substrate surfaces	5843
MEM26018A Organise composite trials	5850
MEM26019A Finish a composite product.....	5858
MEM26020A Identify and interpret required standards for composites	5864
MEM30005A Calculate force systems within simple beam structures	5870
MEM30006A Calculate stresses in simple structures.....	5877
MEM30007A Select common engineering materials.....	5884
MEM30008A Apply basic economic and ergonomic concepts to evaluate engineering applications.....	5893
MEM30009A Contribute to the design of basic mechanical systems.....	5900
MEM30010A Set up basic hydraulic circuits.....	5908
MEM30011A Set up basic pneumatic circuits.....	5916
MEM30012A Apply mathematical techniques in a manufacturing engineering or related environment.....	5922
MEM30013A Assist in the preparation of a basic workplace layout.....	5929
MEM30014A Apply basic just in time systems to the reduction of waste.....	5936
MEM30015A Develop recommendations for basic set up time improvements.....	5944
MEM30016A Assist in the analysis of a supply chain	5951
MEM30017A Use basic preventative maintenance techniques and tools.....	5958
MEM30018A Undertake basic process planning	5965
MEM30019A Use resource planning software systems in manufacturing.....	5971
MEM30020A Develop and manage a plan for a simple manufacturing related project.....	5979
MEM30021A Prepare a simple production schedule	5986
MEM30022A Undertake supervised procurement activities.....	5994
MEM30023A Prepare a simple cost estimate for a manufactured product.....	6002
MEM30024A Participate in quality assurance techniques.....	6009

MEM30025A Analyse a simple electrical system circuit.....	6016
MEM30026A Select and test components for simple electronic switching and timing circuits	6024
MEM30027A Prepare basic programs for programmable logic controllers.....	6031
MEM30028A Assist in sales of technical products/systems	6038
MEM30029A Use workshop equipment and processes to complete an engineering project	6045
MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements	6055
MEM30032A Produce basic engineering drawings.....	6063
MEM30033A Use computer-aided design (CAD) to create and display 3-D models.....	6070
MEM50001B Classify recreational boating technologies and features	6076
MEM50002B Work safely on marine craft	6083
MEM50003B Follow work procedures to maintain the marine environment.....	6091
MEM50004B Maintain quality of environment by following marina codes	6099
MEM50005B Refuel vessels	6106
MEM50006B Check operational capability of marine craft.....	6114
MEM50007B Check operational capability of sails and sail operating equipment.....	6122
MEM50008B Carry out trip preparation and planning	6130
MEM50009B Safely operate a mechanically powered recreational boat.....	6139
MEM50010B Respond to boating emergencies and incidents	6149
AURVTN2002 Carry out panel repairs	6157
BSBADM408A Prepare financial reports	6184
BSBCMM401A Make a presentation.....	6193
BSBCMN406A Maintain business technology	6201
BSBCRT401A Articulate, present and debate ideas	6219
BSBCRT402A Collaborate in a creative process	6227
BSBCRT501A Originate and develop concepts	6236
BSBCRT601A Research and apply concepts and theories of creativity	6248
BSBDES402A Interpret and respond to a design brief	6257
BSBDES502A Establish, negotiate and refine a design brief.....	6266
BSBDES601A Manage design realisation	6275
BSBDES602A Research global design trends	6283
BSBDES701A Research and apply design theory	6291
BSBIPR401A Use and respect copyright	6299
BSBIPR501A Manage intellectual property to protect and grow business.....	6310
BSBLED705A Plan and implement a mentoring program	6322
BSBLED706A Plan and implement a coaching strategy.....	6334
BSBLED710A Develop human capital.....	6346
BSBPMG522A Undertake project work.....	6355
BSBREL701A Develop and cultivate collaborative partnerships and relationships	6364
BSBRKG301A Control records	6379
BSBSMB403A Market the small business.....	6391
BSBSMB405B Monitor and manage small business operations	6399
BSBSMB406A Manage small business finances.....	6406
CPCCLDG3001A Licence to perform dogging	6414
CPCCLRG3001A Licence to perform rigging basic level	6425
CPCCLSF2001A Licence to erect, alter and dismantle scaffolding basic level.....	6439
CPCCLSF3001A Licence to erect, alter and dismantle scaffolding intermediate level..	6452
CPCCOHS1001A Work safely in the construction industry	6464
CPCPCM4002A Estimate and cost work.....	6476
CPPBDN5013A Develop and collaborate on building information models for small-scale building design projects	6485
CUFIND201A Develop and apply creative arts industry knowledge.....	6493

CUFRES401A Conduct research.....	6503
CUVACD304A Make scale models	6513
CUVACD504A Research and apply light and colour.....	6524
CUVACD506A Refine 2-D design ideas and processes	6530
CUVACD507A Refine 3-D design ideas and processes	6538
CUVACD512A Work with photomedia in creative practice	6546

omissions and clarifications

Airconditioning and Refrigeration units of competency

To meet new licensing requirements for installers of split air conditioning systems and domestic air conditioning and refrigeration systems, one existing unit has been modified and two new units included in the elective banks of MEM05:

Modified unit

MEM10013A Install split air conditioning systems and associated pipework to include aspects of evacuation, testing and pipework.

This unit replaces and is not equivalent to MEM10012A Install split air conditioning systems. MEM10012A will be discontinued.

New units

MEM18084A Commission and decommission split air conditioning systems

MEM18085A Install, service and repair domestic air conditioning and refrigeration appliances

The new and modified units are intended to be available for licensing purposes in MEM20105 Certificate II in Engineering. Due to the flexible and open design of the training package, the units are also available as electives in other qualifications such as those listed below. Discretion should be applied when deciding if the units are suitable for selection within a specific qualification.

MEM20105	Certificate II in Engineering
MEM20205	Certificate II in Engineering - Production Technology
MEM30105	Certificate III in Engineering - Production Systems
MEM30205	Certificate III in Engineering - Mechanical Trade
MEM30305	Certificate III in Engineering - Fabrication Trade
MEM30405	Certificate III in Engineering - Electrical/Electronic Trade
MEM30705	Certificate III in Marine Craft Construction

Version Release Date **Comments**

MEM40105	Certificate IV in Engineering
MEM50105	Diploma of Engineering - Advanced Trade

1.01	October 2006	Decimal points in all MEM05 codes replaced with zero to enable loading to NTIS. Refer to schedule below.
1.00	December 2005	Primary release.

Version 3

Refer to mapping for details on changes to qualifications and replacement imported units.

Corrections/Category 1 changes

A range of minor corrections including typographical errors, omissions and clarifications. Inconsistencies corrected in the units and prerequisites listing in Volume 1.

Points weighting listed incorrectly in three units:

- MEM12007D corrected from 8 to 4 points – points listed in qualifications remains as 4
- MEM20001A corrected from 6 to 4 points – points listed in qualifications remains as 4
- MEM20010A corrected from 2 to 4 points – points listed in qualifications remains as 4.

Prerequisite listed in MEM25008B corrected to MEM25007B (not 25008C).

Inclusion of metallurgy units in Certificate III Trade Specialisation list

MEM04020A	Supervise individual ferrous melting and casting operation
MEM04021A	Supervise individual non ferrous melting and casting operation
MEM04022A	Examine appropriateness of methoding for mould design
MEM04023A	Undertake prescribed tests on foundry related materials

Following eight units added to Fabrication Trade stream units in MEM30305

MEM06001B	Perform hand forging
MEM06002B	Perform hammer forging
MEM06003C	Carry out heat treatment
MEM06004B	Select heat treatment processes and test finished product
MEM06005B	Perform drop and upset forging
MEM06006C	Repair springs
MEM06008A	Hammer forge complex shapes
MEM06009A	Hand forge complex shapes

Following 12 units added to Electives Group B in MEM60105

MSACMT280A	Undertake root cause analysis
MSACMT421A	Facilitate a Just in Time (JIT) system
MSACMT430A	Improve cost factors in work practices
MSACMT432A	Analyse manual handling processes
MSACMT440A	Lead 5S in a manufacturing environment
MSACMT450A	Undertake process capability improvements
MSACMT451A	Mistake proof a production process
MSACMT452A	Apply statistics to processes in manufacturing
MSACMT460A	Facilitate the use of planning software systems in manufacturing
MSACMT461A	Facilitate SCADA systems in a manufacturing team or work area
MSACMT481A	Undertake proactive maintenance analyses
MSACMT482A	Assist in implementing a proactive maintenance strategy

Updated imported units

Competitive Manufacturing unit codes updated from MCM to MSACM.

PMB units updated to B versions.

References to units from relevant qualifications updated to current qualification codes.

(Note: all replacement units are equivalent).

MEM05v2.2

Flexibility changes

Importation allowances increased and qualifications reworded to include choice from accredited courses. Elective banks include units approved for selection from other qualifications in MEM.

MEM10105	Certificate I in Engineering	Importation allowance increased from 5 to 7 points
MEM20105	Certificate II in Engineering	Importation allowance increased from 6 to 8 points
MEM20205	Certificate II in Engineering - Production Technology	Importation allowance increased from 11 to 14 points
MEM50205	Diploma of Engineering - Technical	Importation allowance increased from 2 to 3 units
MEM60105	Advanced Diploma of Engineering	Importation allowance increased from 4 to 5 units

MEM05v2

New MEM units of competency

MEM04020A	Supervise individual ferrous melting and casting operation
MEM04021A	Supervise individual non ferrous melting and casting operation
MEM04022A	Examine appropriateness of methoding for mould design
MEM04023A	Undertake prescribed tests on foundry related materials

New imported unit

MSATCM304A	Interpret binary phase diagrams
------------	---------------------------------

Revised existing MEM units

MEM05v1.02	MEM05v2	Unit title	Comment
		Metallurgy	
MEM24012B	MEM24012C	Apply metallurgy principles	Minor edits to include reference to alloys.
		Critical Trade Units	

MEM04005B	MEM04005C	Produce moulds and cores by hand (jobbing)	Redefined and updated Evidence Guides

MEM05011C	MEM05011D	Assemble fabricated components	Redefined and updated Evidence Guides
MEM05015C	MEM05015D	Weld using manual metal arc welding process	Redefined and updated Evidence Guides
MEM05017C	MEM05017D	Weld using gas metal arc welding process	Redefined and updated Evidence Guides
MEM05019C	MEM05019D	Weld using gas tungsten arc welding process	Redefined and updated Evidence Guides
MEM05026B	MEM05026C	Apply welding principles	Redefined and updated Evidence Guides
MEM05037B	MEM05037C	Perform geometric development	Redefined and updated Evidence Guides
MEM07005B	MEM07005C	Perform general machining	Redefined and updated Evidence Guides
MEM07006B	MEM07006C	Perform lathe operations	Redefined and updated Evidence Guides
MEM07007B	MEM07007C	Perform milling operations	Redefined and updated Evidence Guides
MEM07008C	MEM07008D	Perform grinding operations	Redefined and updated Evidence Guides
MEM12006B	MEM12006C	Mark off/out (general engineering)	Redefined and updated Evidence Guides
MEM12007C	MEM12007D	Mark off/out structural fabrications and shapes	Redefined and updated Evidence Guides
MEM18006B	MEM18006C	Repair and fit engineering components	Redefined and updated Evidence Guides
		Circuit testing	

MEM18049B	MEM18049C	Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.	Redefined skills and knowledge for circuit testing - equivalent
MEM18050B	MEM18050C	Disconnect/reconnect fixed wired equipment over 1000 volts a.c./1500 volts d.c.	Redefined skills and knowledge for circuit testing - equivalent

Qualifications affected

MEM05v2	Qualification name	Comment
MEM40105	Certificate IV in Engineering	Addition of four metallurgy units to Specialisation Group 1 electives and one imported unit added to Specialisation Group 2 electives.
MEM30205	Certificate III in Engineering -Mechanical	Expanded qualification descriptor
MEM30305	Certificate III in Engineering -Fabrication	Expanded qualification descriptor
MEM30405	Certificate III in Engineering - Electrical/Electronic Trade	Expanded qualification descriptor
MEM40105	Certificate IV in Engineering	Expanded qualification descriptor
MEM50105	Diploma of Engineering -Advanced Trade	Expanded qualification descriptor

Preliminary Information

Important Note to Users

Training Packages are not static documents; they are amended periodically to reflect the latest industry practices and are version controlled. It is essential that the latest version is always used.

Check the version number before commencing training or assessment

This Training Package is Version 11.1 - check whether this is the latest version by going to training.gov.au and locating information about the Training Package. Alternatively, contact Manufacturing Skills Australia (MSA) at <http://www.mskills.com.au> to confirm the latest version number.

Explanation of version number conventions

The primary release Training Package is Version 1. When changes are made to a Training Package, sometimes the version number is changed and sometimes it is not, depending on the extent of the change. When a Training Package is reviewed it is considered to be a new Training Package for the purposes of version control, and is Version 1. Do not confuse the version number with the Training Packages national code (which remains the same during its period of endorsement).

Copyright Statement

Release Date: <5 June 2014>

MEM05v11.1 - Mapping of Changes

MEM05 version 11.1 – summary of changes

Component	Release #	Comment
MEM234001A Plan and manage engineering-related projects or operations	2	Replacement of text missing from Element 3 PCs. Equivalent.
MEM50212 Diploma of Engineering – Technical	4	Removal of superseded unit from Group B electives (MEM14082A replaced in V9 by MEM14090A). Equivalent.

MEM05v11 - Mapping of Changes

Qualifications

MEM05v10	MEM05v11	Title	Comment
	MEM20413	Certificate II in Engineering Pathways	New qualification - Release 1.

New MEM units of competency

Unit code	Unit title	Comment
MEMPE001A	Use engineering workshop machines	New unit – Release 1
MEMPE002A	Use electric welding machines	New unit – Release 1
MEMPE003A	Use oxy-acetylene and soldering equipment	New unit – Release 1
MEMPE004A	Use fabrication equipment	New unit – Release 1
MEMPE005A	Develop a career plan for the engineering and manufacturing industry	New unit – Release 1
MEMPE006A	Undertake a basic engineering project	New unit – Release 1
MEMPE007A	Pull apart and re-assemble engineering mechanisms	New unit – Release 1

ISC Upgrade

MEM60112	Advanced Diploma in Engineering	Release 2 - Code correction in Avionic stream to updated unit MEM23086A
----------	---------------------------------	---

MEM05v10.1 - Mapping of Changes

ISC upgrades

MEM07004B Release 2 reinstated due to TGA transfer error.

Updated imported elective units of competency:

MEM05v10	MEM05v10.1	Qualifications affected	Comment
AURV225908A	AURVTN2002 Carry out panel repairs	MEM30105 MEM40105 MEM50105	No change in outcomes

BSBPMG510A	BSBPMG522A Undertake project work	MEM50311 MEM60211	No change in outcomes
BSBSMB405A	BSBSMB405B Monitor and manage small business operations	MEM40311 MEM50311 MEM60211	No change in outcomes
SIRXSLS001A	SIRXSL201 Sell products and services	MEM50311 MEM60211	No change in outcomes
UEPMNT419A	UEPMNT419B Perform civil drafting	MERM40412 MEM50212	No change in outcomes

MEM05v10 - Mapping of Changes

Qualifications

MEM05v9	MEM05v10	Title	Comment
MEM30105	MEM30105	Certificate III in Engineering - Productions Systems	Equivalent - addition of three new electives (available in Groups A and B)
MEM50212	MEM50212	Diploma of Engineering - Technical	ISC correction - MEM09141A and MEM09142A removed from packaging rules (units superseded and replaced in version 9)

New units of competency

Unit code and title	Points	Prerequisites	Comment
MEM07042A Undertake corrections and basic maintenance to aluminium extrusion dies and die support systems	4	MEM07001B MEM07003B MEM07004B MEM07024B MEM07025B MEM07032B MEM07041A MEM07043A MEM09002B MEM12023A MEM18001C MEM18002B MEM18003C MEM18055B	New units – release 1
MEM07043A Identify causes of faulty aluminium extrusions	6	MEM09002B MEM12023A MEM12024A	

		MEM15002A MEM15024A MEM16006A MEM18001C MEM18002B	
MEM07044A Test a new aluminium extrusion die	4	MEM07043A MEM09002B MEM12023A MEM12024A MEM18001C MEM18002B	

New Skill Set

MEMSS00001 Non Destructive Testing - Level 2 NDT practitioner

ISC upgrades

- ISC correction to MEM50212
- ISC code correction in Trade Specialisation Units list to MEM05006C Perform brazing and/or silver soldering (descriptor and range clarified to include braze welding)
- Change to numbering of Appendices with the reintroduction of MEM05 Units, prerequisites, points and weighting.
 - Appendix 1: MEM05 Units, prerequisites, points and weighting.
 - Appendix 2: Trade Specialisation units
 - Appendix 3: Imported units of competency and points and weighting
 -

MEM05v9 - Mapping of Changes

Qualifications updated and endorsed in MEM05 version 9

MEM05v8 qualification	MEM05v9 qualification	Comment/ equivalence
MEM50211 Diploma of Engineering – Technical	MEM50212 Diploma of Engineering – Technical	Suite of new elective units added – overall outcomes remain equivalent
MEM60111 Advanced Diploma of Engineering	MEM60112 Advanced Diploma of Engineering	Suite of new elective units added – overall outcomes remain equivalent

MEM05v8 qualification	MEM05v9 qualification	Comment/ equivalence
MEM80111 Vocational Graduate Diploma of Engineering	MEM80112 Vocational Graduate Diploma of Engineering	Range of new elective units added – overall outcomes remain equivalent

ISC upgrades to existing qualifications

MEM05v8 qualification	MEM05v9 qualification	Comment/ equivalence
MEM20305	Certificate II in Boating Services	One unit title corrected
MEM30905	Certificate III in Boating Services	One unit title corrected
MEM40205	Certificate IV in Boating Services	One unit title corrected
MEM40412 Certificate IV in Engineering Drafting	MEM40412 Certificate IV in Engineering Drafting	MSACM units replaced by competitive systems and practices units Equivalent
MEM20205 Certificate II in Engineering – Production Technology	MEM20205 Certificate II in Engineering – Production Technology	New elective unit added Equivalent
MEM30105 Certificate III in Engineering – Production Systems	MEM30105 Certificate III in Engineering – Production Systems	New elective unit added Equivalent
MEM50311 Diploma of Jewellery and Object Design	MEM50311 Diploma of Jewellery and Object Design	One elective unit replaced Equivalent
MEM60211 Advanced Diploma of Jewellery and Object Design	MEM60211 Advanced Diploma of Jewellery and Object Design	One elective unit replaced Equivalent

MEM05v9 Mapping of new technician units to MEM05v8

Notes

1. This table shows new/revised units for the technician qualifications in the Metal and Engineering Training Package (prerequisites are listed in *italics*)

2. The new units relate to the following engineering disciplines (as indicated in the discipline column):
- Manufacturing
 - Mechanical
 - Mechatronic
 - Maintenance
 - Heating, ventilation and cooling/refrigeration (HVAC/R)
1. The units are packaged as electives in the MEM qualifications as shown in the packaging column.

MEM05v8 unit	MEM05v9 unit code	Comment/ equivalence	Packaging	Discipline
	MEM07041A Perform production machining <i>MEM09002B Interpret technical drawing</i> <i>MEM12023A Perform engineering measurements</i> <i>MEM18001C Use hand tools</i>	New unit	MEM20205 MEM30105	

MEM05v8 unit	MEM05v9 unit code	Comment/ equivalence	Packaging	Discipline
MEM09151A Apply computer aided modelling and data management techniques to mechanical engineering designs	MEM09155A Prepare mechanical models for computer-aided engineering (CAE) <i>MM23004A Apply technical mathematics</i> <i>MEM23109A Apply engineering mechanics principles</i>	Not equivalent	MEM60112 MEM50212	Mechanical Drafting
MEM09152A Apply CAD modelling and data management techniques to mechatronic engineering designs	MEM09156A Prepare mechatronic models for computer-aided engineering (CAE) <i>MEM23004A Apply technical mathematics</i> <i>MEM23109A Apply engineering mechanics principles</i> <i>MEM23111A Select electrical equipment and components for engineering applications</i> <i>MEM23112A Investigate electrical and electronic controllers in engineering applications</i>	Not equivalent	MEM60112 MEM50212	Mechatronic Drafting

MEM30032A Produce basic engineering drawings	X	X	X		X	
MEM30033A Use computer-aided design (CAD) to create and display 3-D models	X	X	X		X	

Mapping of new CAD units to previous CAD units

Note: These changes only apply to the following qualifications:

- MEM30505 Certificate III in Engineering – Technical
- MEM50211 Diploma of Engineering – Technical
- MEM50311 Diploma of Jewellery and Object Design
- MEM60111 Advanced Diploma of Engineering
- MEM60211 Advanced Diploma of Jewellery and Object Design

Existing units remain packaged in the following qualifications:

- MEM30705 Certificate III in Marine Craft Construction
- MEM40105 Certificate IV in Engineering
- MEM50105 Diploma of Engineering – Advanced Trade

MEM05v8 - NEW UNITS	MEM05 PREVIOUS UNITS	COMMENTS
MEM09201A Work effectively in an engineering drafting workplace		New unit. Covers skills related to working in drafting and understanding the role of drafting across industries and in various applications.
MEM09202A Produce freehand sketches		New unit. Covers freehand sketching skills and standard drawing conventions and techniques.
MEM09203A Measure and sketch site information		New unit. Covers skills to take onsite measurements, perform calculations and sketch site information to inform drafting work.
MEM09204A Produce basic engineering detail drawings <u>Prerequisite:</u> MEM09002B Interpret technical drawing	MEM09003B Prepare basic engineering drawing	Not equivalent. This unit is aimed at general detail drafting across all sectors and forms the base level detail drafting skill upon which further drafting specialisation or advanced drafting skills are developed. Covers preparation of detail 2-D drawings to AS 1100.
MEM09205A Produce electrical schematic drawings <u>Prerequisites:</u> MEM09002B	MEM09004B Perform electrical/electronic detail drafting	Not equivalent. This unit targets specialist electrical detail drafting skills. Unit more comprehensively details electrical/electronic schematic drawing skills than MEM09004B.

MEM05v8 - NEW UNITS	MEM05 PREVIOUS UNITS	COMMENTS
Interpret technical drawing MEM09204A Produce basic engineering detail drawings		
MEM09206A Produce drawings for mechanical services <u>Prerequisites:</u> MEM09002B Interpret technical drawing MEM09204A Produce basic engineering detail drawings		New unit. Covers specialised detail drafting skills for mechanical services.
MEM09207A Produce drawings for reticulated services <u>Prerequisites:</u> MEM09205A Produce basic engineering detail drawings MEM09002B Interpret technical drawing		New unit. Covers specialised detail drafting skills for reticulated services. Unit also covers selecting pipe and duct fabrication methods
MEM09208A Detail fasteners and locking devices in mechanical drawings <u>Prerequisites:</u> MEM09002B Interpret technical drawing MEM09205A Produce basic		New unit. Covers specialised detail drafting skills.

MEM05v8 - NEW UNITS	MEM05 PREVIOUS UNITS	COMMENTS
engineering detail drawings

Covers introductory 3-D modelling skills.

Existing MEM units not carried forward

MEM30001A Use computer aided drafting systems to produce basic engineering drawings	Replaced by MEM30031A
MEM30002A Produce basic engineering graphics	Not carried forward. Content covered in MEM30032A.
MEM30003A Produce detailed engineering drawings	Not carried forward. Content covered in MEM30032A.
MEM30004A Use CAD to create and display 3D models	Replaced by MEM30033A.

Additional imported units of competency

Unit code	Unit title
CPCCOHS1001A	Work safely in the construction industry
CPCPCM4002A	Estimate and cost work
CPPBDN5013A	Develop and collaborate on building information models for small-scale building design projects
FDFOP2005A	Work in a socially diverse environment

LMTGN4002A	Participate in product engineering
MSACMS201A	Sustain process improvements
MSACMT251A	Apply quality standards
MSATCS301A	Interpret architectural and design specifications for structural steel detailing
MSATCS302A	Detail bolts and welds for structural steelwork connections
MSATCS501A	Detail standardised structural connections
MSATCS502A	Detail structural steel members
MSATCS503A	Incorporate structural steel detailing into fabrication and construction project management
MSATCS504A	Detail ancillary steelwork
UEPMNT419A	Perform Civil Drafting

Imported units of competency - version changes

MEA105B Apply quality standards applicable to aviation maintenance processes	Replaced by MEA105C Apply quality standards applicable to aviation maintenance processes - equivalent
MEA272A Apply basic scientific principles and techniques in avionic engineering situations	Replaced by MEA272B Apply basic scientific principles and techniques in avionic engineering situations - equivalent
MEA349A Apply basic scientific principles and techniques in aeronautical engineering situations	Replaced by MEA349B Apply basic scientific principles and techniques in aeronautical engineering situations - equivalent

New Units of competency

Unit code	Unit title	Quals affected
<i>Composites</i>		
MEM26001 A	Lay up composites using open moulding techniques	MEM30105, 30205 & 30305
MEM26002 A	Lay up composites using vacuum closed moulding techniques	As above
MEM26003 A	Lay up composites using pressure closed moulding techniques	As above
MEM26004 A	Make basic plugs for composites fabrication	As above
MEM26005 A	Make basic moulds for composites fabrication	As above
MEM26006 A	Mark and cut out sheets for composite use	As above
MEM26007 A	Select and use reinforcing appropriate for product	As above, plus MEM20105
MEM26008 A	Select and use resin systems appropriate for product	As above, plus MEM20105
MEM26009 A	Select and use cores and fillers appropriate for product	As above, plus MEM20105
MEM26010 A	Store and handle composite materials	MEM30105, 30205 & 30305
MEM26011 A	Determine materials and techniques for a composite component or product*	As above

New Units of competency

Unit code	Unit title	Quals affected
<i>Composites</i>		
MEM26001 A	Lay up composites using open moulding techniques	MEM30105, 30205 & 30305
MEM26012 A	Record and trial work processes for one-off composite products	As above
MEM26013 A	Select and use composite processes or systems appropriate for product	As above
MEM26014 A	Adjust resin chemicals for current conditions	As above
MEM26015 A	Select and apply repair techniques	As above
MEM26016 A	Select and use joining techniques	As above
MEM26017 A	Prepare composite or other substrate surfaces	As above
MEM26018 A	Organise composite trials	As above
MEM26019 A	Finish a composite product	As above
MEM26020 A	Identify and interpret required standards for composites	As above
<i>Aluminothermic welding</i>		
MEM05027 A	Perform aluminothermic welding	MEM20105, 20205, 30105, 30205, 30305

MEM234017A	Design exhaust, ventilation and dust collection systems	
MEM234018A	Design heating, ventilation, air conditioning and refrigeration control systems	
MEM234019A	Apply finite element analysis in engineering design	
MEM234020A	Coordinate small lot manufacture using rapid manufacture processes	

MEM234021A	Apply statistics to technology problems	
MEM234022A	Apply advanced calculus to technology problems	
MEM234023A	Apply differential equations to technology problems	
MEM234024A	Apply advanced mathematics in technology problems	
MEM234025A	Apply numerical methods to technology problems	
MEM234026A	Develop and coordinate engineering-related contingency plans	
MEM234027A	Plan and manage materials supply for an engineering project or manufacturing operation	
MEM234028A	Produce and manage technical documentation	
MEM234029A	Produce and manage technical publications	
MEM234030A	Provide specialised technical and engineering guidance to other technical employees	
MEM234031A	Manage installation, commissioning or modification of machines and equipment	
MEM234032A	Manage fluid power related technologies in an enterprise	
MEM234033A	Lead engineering-related quality operations in an enterprise	
MEM234034A	Manage heating, ventilation, air conditioning and refrigeration systems or projects	
MEM234035A	Maintain and apply technical and engineering skills	

New imported units

Unit code	Unit title	Prerequisites
BSBLED705A	Plan and implement a mentoring program	
BSBLED706A	Plan and implement a coaching strategy	
BSBLED710A	Develop human capital	
BSBREL701A	Develop and cultivate collaborative partnerships and relationships	
MSACMG700A	Review continuous improvement processes	
MSACMG701A	Prepare for and implement change	
MSACMG702A	Review manufacturing practice tools and techniques	
MSACMG703A	Analyse process changes	
MSACMG704A	Facilitate improvements in the internal value chain	
MSACMG705A	Undertake a qualitative review of a process change	
MSACMG706A	Build relationships between teams in a manufacturing environment	
MSACMG707A	Respond to a major non-conformance	
MSACMG708A	Capture learning from daily activities in a manufacturing organisation	
MSACMG709A	Facilitate improvements in the external value chain	
MSACMG710A	Improve visual management in the workplace	
MSACMG711A	Manage benchmarking studies	
MSACMG712A	Lead a problem solving process to determine and solve root cause	
MSACMG800A	Analyse data for relevance to organisational learning	

MSACMG801A	Develop the competitive manufacturing approach	
MSACMG802A	Audit the use of competitive tools	
MSACMG803A	Develop models of future state manufacturing practice	
MSACMG804A	Develop the value chain	
MSACMG805A	Develop the learning processes of the manufacturing organisation	
MSACMG806A	Develop and refine systems for continuous improvement in manufacturing organisations	
MSACMG807A	Develop problem solving capability of a manufacturing organisation	
MSACMS606A	Introduce competitive manufacturing to a small or medium enterprise	
MSACMT620A	Develop quick changeover procedures	
MSACMT622A	Design a process layout	
MSACMT623A	Develop a levelled pull system of manufacturing	
MSACMT632A	Analyse cost implications of maintenance strategy	
MSAENV672B	Develop workplace policy and procedures for sustainability	
MSL976003A	Evaluate and select appropriate test methods and procedures

Code	Title	Comment
MEM50311	Diploma of Jewellery and Object Design	New qualification
MEM60211	Advanced Diploma of Jewellery and Object Design	New qualification

Units of competency (MEM50311 and MEM60211)

P = prerequisites

E = existing MEM unit

N = new MEM unit

NI = new imported unit (*where marked with an asterisk, unit to be endorsed in CUV11)

EI = existing imported unit

MEM05v5		MEM05v4		Relationship to previous version
MEM05006C	Perform brazing and/or silver soldering	MEM05006B	Perform brazing and/or silver soldering	Corrections to descriptor and range to clarify inclusion of 'braze welding' - equivalent

Unit code	Unit title	P	Status	Diploma	Advanced Diploma
MEM05006C	Perform brazing and/or silver soldering		E	Y	Y
MEM06007B	Perform basic incidental heat/quenching, tempering and annealing		E	Y	Y
MEM08010B	Manually finish/polish materials	MEM18001C	E	Y	Y
MEM09002B	Interpret technical drawing		E	Y	Y
MEM12023A	Perform engineering measurements		E	Y	Y
MEM12024A	Perform computations		E	Y	Y
MEM13003B	Work safely with industrial chemicals and materials		E	Y	Y
MEM13004B	Work safely with molten metals/glass		E	Y	Y
MEM13014A	Apply principles of occupational health and safety in the work environment		E	Y	Y
MEM16006A	Organise and communicate		E	Y	Y

	information				
MEM16008A	Interact with computing technology		E	Y	Y
MEM18001C	Use hand tools		E	Y	Y
MEM18002B	Use power tools/hand held operations		E	Y	Y
MEM18003C	Use tools for precision work	MEM12023A MEM18001C MEM18002B	E	Y	Y
MEM19001B	Perform jewellery metal casting	MEM13004B	E	Y	Y
MEM19012B	Produce jewellery wax model	MEM18001C MEM18002B MEM18003C	E	Y	Y
MEM19013B	Produce jewellery metal masters	MEM08010B MEM13004A MEM16006A MEM19001B	E	Y	Y
MEM19023A	Apply drawing and rendering techniques to jewellery or object design		N	Y	Y
MEM19024A	Use CAD to create and display 3D jewellery and object models		N	Y	Y
MEM19025A	Create and present designs for jewellery and other 3D objects		N	Y	Y
MEM19026A	Investigate quality and application of jewellery materials		N	Y	Y
MEM19027A	Produce life drawings for presenting jewellery and object designs	MEM19023A	N	Y	Y

MEM19028A	Select materials and new technologies for jewellery and 3D object design applications		N	Y	Y
MEM19029A	Produce a professional jewellery design and 3D object portfolio		N	Y	Y
MEM19030A	Research and design sustainable objects		N	Y	Y
MEM19031A	Produce renderings and technical drawings for jewellery and object design construction		N	Y	Y
MEM19032A	Design and implement mechanisms in jewellery items		N	Y	Y
MEM19033A	Create silversmithing objects		N	Y	Y
MEM19034A	Apply chain manufacture process		N	Y	Y
MEM19035A	Plan and apply casting techniques for jewellery and object designs		N	Y	Y
MEM19036A	Use specialised techniques to produce jewellery and objects		N	Y	Y
MEM19037A	Plan and implement chenier fabrication process		N	Y	Y
MEM19038A	Apply traditional techniques to jewellery and 3D object production		N		Y
MEM19039A	Plan, conduct and supervise a jewellery and object exhibition		N		Y
MEM19040A	Create and manufacture jewellery or object design prototypes for the mass		N		Y

	market				
MEM19041A	Experiment with jewellery or object designs		N		Y
MEM19042A	Render images using computer graphics software	MEM19024A	N	Y	Y
MEM19043A	Oversee jewellery or object design production		N		Y
MEM22006A	Source and estimate materials		E	Y	Y
MEM30001A	Use computer aided drafting systems to produce basic engineering drawings	MEM16006A MEM16008A	E	Y	Y

Imported units					
BSBCMM401A	Make a presentation		NI	Y	Y
BSBCRT401A	Articulate, present and debate ideas		NI	Y	Y
BSBCRT402A	Collaborate in a creative process		NI	Y	Y
BSBCRT501A	Originate and develop concepts		NI	Y	Y
BSBCRT601A	Research and apply concepts and theories of creativity		NI		Y
BSBDES402A	Interpret and respond to a design brief		NI	Y	Y
BSBDES502A	Establish, negotiate and refine a design brief		NI	Y	Y
BSBDES601A	Manage design realisation		NI		Y

MEM05v4 - Mapping of Changes

Qualifications mapping

Revised qualifications

MEM05v3		MEM05v4		Comment
---------	--	---------	--	---------

MEM50205	Diploma of Engineering - Technical	MEM50211	Diploma of Engineering - Technical	Addition of new stream - RTOs will be required to extend scope if they wish to deliver the new aeronautical and avionic units of competency. All other outcomes remain equivalent.
MEM60105	Advanced Diploma of Engineering	MEM60111	Advanced Diploma of Engineering	Addition of new stream - RTOs will be required to extend scope if they wish to deliver the new aeronautical and avionic units of competency. All other outcomes remain equivalent.

Allocation of new electives to existing qualifications

Code	Title	Change - units added to the elective choice
MEM20205	Certificate II in Engineering - Production Technology	MEM11023A Operate a bridge and gantry crane MEM11024A Undertake basic rigging MEM11025A Operate a non-slewing mobile crane of greater than three tonnes capacity MEM18098A Prepare to perform work associated with fuel system installation and servicing TLILIC2001A Licence to operate a forklift truck TLILIC2002A Licence to operate an order picking forklift truck TLILIC3003A Licence to operate a bridge and gantry crane TLILIC3006A Licence to operate a non-slewing mobile crane (greater than 3 tonnes capacity) TLILIC0012A Licence to operate a vehicle loading crane (capacity 10 metre tonnes and above) CPCCLDG3001A Licence to perform dogging CPCCLRG3001A Licence to perform rigging basic level CPCCLSF2001A Licence to erect, alter and dismantle scaffolding basic CPCCLSF3001A Licence to erect, alter and dismantle scaffolding intermediate
MEM20305	Certificate II in Boating Services	TLILIC2001A Licence to operate a forklift truck TLILIC0012A Licence to operate a vehicle loading crane (capacity 10 metre tonnes and above)

MEM30105	Certificate III in Engineering - Production Systems	MEM11023A Operate a bridge and gantry crane MEM11024A Undertake basic rigging MEM11025A Operate a non-slewing mobile crane of greater than three tonnes capacity MEM18098A Prepare to perform work associated with fuel system installation and servicing TLILIC2001A Licence to operate a forklift truck TLILIC2002A Licence to operate an order picking forklift truck TLILIC3003A Licence to operate a bridge and gantry crane TLILIC3006A Licence to operate a non-slewing mobile crane (greater than 3 tonnes capacity) TLILIC0012A Licence to operate a vehicle loading crane (capacity 10 metre tonnes and above) CPCCLDG3001A Licence to perform dogging CPCCLRG3001A Licence to perform rigging basic level CPCCLSF2001A Licence to erect, alter and dismantle scaffolding basic level CPCCLSF3001A Licence to erect, alter and dismantle scaffolding intermediate level
MEM30205	Certificate III in Engineering - Mechanical Trade	MEM18098A Prepare to perform work associated with fuel system installation and servicing
MEM30305	Certificate III in Engineering - Fabrication Trade	MEM18098A Prepare to perform work associated with fuel system installation and servicing
MEM30405	Certificate III in Engineering - Electrical Trade	MEM18098A Prepare to perform work associated with fuel system installation and servicing
MEM30905	Certificate III in Boating Services	TLILIC2001A Licence to operate a forklift truck TLILIC0012A Licence to operate a vehicle loading crane (capacity 10 metre tonnes and above)
MEM40105	Certificate IV in Engineering	MEM18098A Prepare to perform work associated with fuel system installation and servicing TLILIC2001A Licence to operate a forklift truck TLILIC0012A Licence to operate a vehicle loading crane (capacity 10 metre tonnes and above)
MEM50105	Diploma of Engineering -	MEM18098A Prepare to perform work associated with fuel system installation and servicing

	Advanced Trade	<p>TLILIC2001A Licence to operate a forklift truck</p> <p>TLILIC0012A Licence to operate a vehicle loading crane (capacity 10 metre tonnes and above)</p>
		<p>The following units have also been added to the Certificate III Trade Specialisation Units list for use if required in the qualifications listed below:</p> <p>TLILIC2001A Licence to operate a forklift truck</p> <p>TLILIC0012A Licence to operate a vehicle loading crane (capacity 10 metre tonnes and above).</p> <ul style="list-style-type: none"> ▶ MEM30205 Certificate III in Engineering – Mechanical Trade ▶ MEM30305 Certificate III in Engineering – Fabrication Trade ▶ MEM30405 Certificate III in Engineering – Electrical/Electronic Trade ▶ MEM30605 Certificate III in Jewellery Manufacture ▶ MEM30705 Certificate III in Marine Craft Construction ▶ MEM30805 Certificate III in Locksmithing

MEM05v4 - New units and additional imported units of competency

High risk rigging	
MEM11023A	Operate a bridge and gantry crane
MEM11024A	Undertake basic rigging
MEM11025A	Operate a non-slewing mobile crane of greater than three tonnes capacity
Fuel system installation and service	
MEM18098A	Prepare to perform work associated with fuel system installation and servicing
Aerospace	
MEM09143A	Represent aeronautical engineering designs
MEM09144A	Represent avionic engineering designs
MEM09153A	Apply computer-aided modelling and data management techniques to aeronautical engineering designs
MEM09154A	Apply computer-aided modelling and data management techniques to avionic engineering designs
MEM14065A	Plan and design aeronautical engineering projects
MEM14066A	Plan and design avionic engineering projects
MEM14083A	Apply aeronautical engineering fundamentals to support design and development of engineering projects
MEM14084A	Apply avionic engineering fundamentals to support design and development of engineering projects
MEM23052A	Apply basic electro and control scientific principles and techniques in aeronautical engineering situations
MEM23073A	Select and apply aeronautical engineering methods, processes and construction techniques
MEM23074A	Select and apply avionic engineering methods, processes and construction techniques
MEM23084A	Apply scientific principles and techniques in aeronautical engineering

	situations
MEM23085A	Apply scientific principles and techniques in avionic engineering situations
MEM23095A	Apply aeronautical system design principles and techniques in aeronautical engineering situations
MEM23096A	Apply avionic system design principles and techniques in avionic engineering situations
MEM23097A	Apply automated systems principles and techniques in aeronautical engineering situations
MEM23098A	Apply automated systems principles and techniques in avionic engineering situations
Imported units	
	MEA units
MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA105B	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
MEA270A	Lay out avionic systems
MEA271A	Lay out avionic flight management systems
MEA272A	Apply basic scientific principles and techniques in avionic engineering situations
MEA273A	Select and test avionic engineering materials
MEA340A	Lay out and set up aircraft systems
MEA341A	Apply basic aircraft design characteristics
MEA342A	Apply basic aircraft power plant design characteristics
MEA349A	Apply basic scientific principles and techniques in aeronautical engineering situations
MEA350A	Select and test aeronautical engineering materials
	High Risk Licensing

CPCCLDG3001A	Licence to perform dogging
CPCCLRG3001A	Licence to perform rigging basic level
CPCCLSF2001A	Licence to erect, alter and dismantle scaffolding basic level
CPCCLSF3001A	Licence to erect, alter and dismantle scaffolding intermediate level
TLILIC0012A	Licence to operate a vehicle loading crane (capacity 10 metre tonnes and above)
TLILIC2001A	Licence to operate a forklift truck
TLILIC2002A	Licence to operate an order picking forklift truck
TLILIC3003A	Licence to operate a bridge and gantry crane
TLILIC3006A	Licence to operate a non-slewing mobile crane (greater than 3 tonnes capacity)

MEM05v3 - Mapping of Changes

Qualifications – summary of changes

Note:

- All qualifications have been adjusted to include sustainability units of competency and to comply with the 1/3 elective and 1/6 importation requirements.
- MSAENV sustainability units added to core and/or electives – all qualifications. MSAENV472B has been included in the Certificate III Trade Specialisation list of units.
- Points allocated to MSAENV units: MSAENV272B = 3, MSAENV472B = 4.
- For points based qualifications, where MSAENV272B has been added to core units, the total elective points required have been reduced by three to accommodate inclusion of the extra unit in the core. Similarly, other qualifications have had the elective choice reduced by one unit. Note that all MEM qualifications already exceeded the requirement that at least 1/3 of the total must be electives.
- **Total points to achieve a qualification have been based on points required in industrial instruments and have not been altered.***
- All qualification outcomes remain equivalent.

Code	Title	MSAENV unit/s	MEM05v2 elective points/units required	MEM05v3 elective points/units required	*Total points or units	1/3 elective requirement	1/6 import requirement	Comments
MEM10105	Certificate I in Engineering	MSAENV 272B (electives)	24 pts	24 pts	24 pts	8 pts	4 pts	Import allowance reverts to 5 points as in MEM05v2 (incorrectly changed to 7 points June 2010, based on wrong points calculations).

		472B and 672B (electives)						choice reduced to 23. Import allowance = 5 units (no change from MEM05v2.2 version, June 2010). Addition of 12 Competitive Manufacturing units to Elective Group B.

MEM05v3 - new units

Unit code	Unit title	Points
MEM21001A	Replace watch batteries, capacitors and bands	2
MEM21002A	Perform watch movement exchange	2
MEM21003A	Perform watch case servicing, repair and refurbishment	4
MEM21004A	Clean watch and clock components	2
MEM21005A	Diagnose faults in quartz watches	2

MEM21006A	Service quartz watches	4
MEM21007A	Service complex quartz watches	4
MEM21008A	Service mechanical watches	4
MEM21009A	Inspect, diagnose, adjust and repair mechanical watches	4
MEM21010A	Service watch power generating systems	2
MEM21011A	Service calendar and other dial indication mechanisms for watches	4
MEM21012A	Service and repair mechanical watch oscillating systems	4
MEM21013A	Service, test and adjust watch escapements	4
MEM21014A	Service mechanical chronograph watches	6
MEM21015A	Perform precision watch timing and adjustment	6
MEM21016A	Install and set up clocks	2
MEM21017A	Service and repair clock timepieces	6
MEM21018A	Service clock escapements and oscillating systems	4
MEM21019A	Service and repair clock striking mechanisms	4
MEM21020A	Service and repair clock chiming mechanisms	6
MEM21021A	Restore clockwork mechanisms	6
MEM21022A	Manufacture watch and clock components	6
MEM21023A	Plan, set up and operate horological workshop or service centre	4

MEM05v2 Qualifications mapping V1.02 to V2

MEM05v1.02	MEM05v2	Qualification name	Comment
MEM40105	MEM40105	Certificate IV in Engineering	Addition of four metallurgy units to Specialisation Group 1 electives and one imported unit added to Specialisation Group 2

			electives.
MEM30205	MEM30205	Certificate III in Engineering-Mechanical	Expanded qualification descriptor - equivalent
MEM30305	MEM30305	Certificate III in Engineering-Fabrication	Expanded qualification descriptor - equivalent
MEM30405	MEM30405	Certificate III in Engineering-Electrical/Electronic Trade	Expanded qualification descriptor - equivalent
MEM40105	MEM40105	Certificate IV in Engineering	Expanded qualification descriptor - equivalent
MEM50105	MEM50105	Diploma of Engineering-Advanced Trade	Expanded qualification descriptor - equivalent

MEM05 Qualifications mapping V1.01 to V1.02

Following is a summary list of qualification codes for the MEM05 V1.02 Metal and Engineering Training Package. Qualifications have been mapped to show their relationship to the previous version MEM05 V1.01

V1.02	V1.01	Nature of relationship	Change to qualification outcome
MEM10105	MEM10105	Equivalent qualification	No change
MEM10205	MEM10205	Equivalent qualification	No change
MEM20105	MEM20105	Equivalent qualification	No change
MEM20205	MEM20205	Equivalent qualification	No change
MEM20305	MEM20305	Equivalent qualification	No change
MEM30105	MEM30105	Equivalent qualification	No change
MEM30205	MEM30205	Equivalent qualification	No change
MEM30305	MEM30305	Equivalent qualification	No change
MEM30405	MEM30405	Equivalent qualification	No change
MEM30505	MEM30505	Equivalent qualification	No change
MEM30605	MEM30605	Equivalent qualification	No change

MEM30705	MEM30705	Equivalent qualification	No change
MEM30805	MEM30805	Equivalent qualification	No change
MEM30905	MEM30905	Equivalent qualification	No change
MEM40105	MEM40105	Equivalent qualification	No change
MEM40205	MEM40205	Equivalent qualification	No change
MEM50105	MEM50105	Equivalent qualification	No change
MEM50205	MEM50205	Equivalent qualification	No change
MEM60105	MEM60105	Equivalent qualification	No change

Unit mapping MEM05 V2 to V1.02

The letter 'Y' in the prerequisite column (labeled P) of the mapping table below indicates that a unit of competency has one or more prerequisites. Refer to Appendix 1 for details of pre-requisite units.

MEM05v1.02	MEM05v2	Unit title	P	Comment
		Metallurgy		
	MEM04020A	Supervise individual ferrous melting and casting operation	Y	New unit
	MEM04021A	Supervise individual non ferrous melting and casting operation	Y	New unit
	MEM04022A	Examine appropriateness of methoding for mould design	Y	New unit
	MEM04023A	Undertake prescribed tests on foundry related materials	Y	New unit
MEM24012B	MEM24012C	Apply metallurgy principles		Minor edits to include reference to alloys. Equivalent.
		Critical trade		

MEM04005B	MEM04005C	Produce moulds and cores by hand (jobbing)	Y	Redefined and updated Evidence Guides. Equivalent.
MEM05010B	MEM05010C	Apply fabrication, forming and shaping techniques	Y	Redefined and updated Evidence Guides. Equivalent.
MEM05011C	MEM05011D	Assemble fabricated components	Y	Redefined and updated Evidence Guides. Equivalent.
MEM05015C	MEM05015D	Weld using manual metal arc welding process	Y	Redefined and updated Evidence Guides. Equivalent.
MEM05017C	MEM05017D	Weld using gas metal arc welding process	Y	Redefined and updated Evidence Guides. Equivalent.
MEM05019C	MEM05019D	Weld using gas tungsten arc welding process	Y	Redefined and updated Evidence Guides. Equivalent.
MEM05026B	MEM05026C	Apply welding principles		Redefined and updated Evidence Guides. Equivalent.
MEM05037B	MEM05037C	Perform geometric development	Y	Redefined and updated Evidence Guides. Equivalent.
MEM07005B	MEM07005C	Perform general machining	Y	Redefined and updated Evidence Guides. Equivalent.
MEM07006B	MEM07006C	Perform lathe operations	Y	Redefined and updated Evidence Guides. Equivalent.
MEM07007B	MEM07007C	Perform milling operations	Y	Redefined and updated Evidence Guides. Equivalent.
MEM07008C	MEM07008D	Perform grinding operations	Y	Redefined and updated Evidence Guides. Equivalent.

MEM12006B	MEM12006C	Mark off/out (general engineering)	Y	Redefined and updated Evidence Guides. Equivalent.
MEM12007C	MEM12007D	Mark off/out structural fabrications and shapes	Y	Redefined and updated Evidence Guides. Equivalent.
MEM18006B	MEM18006C	Repair and fit engineering components	Y	Redefined and updated Evidence Guides. Equivalent.
		Circuit testing		
MEM18049B	MEM18049C	Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.	Y	Redefined skills and knowledge for circuit testing – equivalent
MEM18050B	MEM18050C	Disconnect/reconnect fixed wired equipment over 1000 volts a.c./1500 volts d.c.	Y	Redefined skills and knowledge for circuit testing – equivalent

Unit mapping MEM05 V1.01 to V1.02

The letter ‘Y’ in the prerequisite column (labeled P) of the mapping table below indicates that a unit of competency has one or more prerequisites. Refer to Appendix 1 for details of pre-requisite units.

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
MEM03001B	Perform manual production assembly		No change. Equivalent unit
MEM03002B	Perform precision assembly	Y	No change. Equivalent unit
MEM03003B	Perform sheet and plate assembly	Y	Corrected title of MEM05003B in pre req pathway. Cat 1 change. Unit equivalent.
MEM03004B	Perform electronic/electrical assembly (production)		No change. Equivalent unit
MEM03005B	Rework and repair (electrical/electronic)	Y	No change. Equivalent

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
	production)		unit
MEM03006B	Set assembly stations	Y	No change. Equivalent unit
MEM04001B	Operate melting furnaces	Y	No change. Equivalent unit
MEM04002B	Perform gravity die casting	Y	No change. Equivalent unit
MEM04003B	Operate pressure die casting machine	Y	No change. Equivalent unit
MEM04004B	Prepare and mix sand for metal moulding		No change. Equivalent unit
MEM04005B	Produce moulds and cores by hand (jobbing)	Y	No change. Equivalent unit
MEM04006B	Operate sand moulding and core making machines		No change. Equivalent unit
MEM04007B	Pour molten metal	Y	No change. Equivalent unit
MEM04008B	Fettle and trim metal castings/forgings	Y	No change. Equivalent unit
MEM04010B	Develop and manufacture wood patterns	Y	No change. Equivalent unit
MEM04011B	Produce polymer patterns	Y	No change. Equivalent unit
MEM04012B	Assemble plated patterns	Y	No change. Equivalent unit
MEM04013B	Develop and manufacture polystyrene patterns	Y	No change. Equivalent unit
MEM04014B	Develop and manufacture production patterns	Y	No change. Equivalent unit
MEM04015B	Develop and manufacture vacuum forming moulds and associated	Y	No change. Equivalent unit

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
	equipment		
MEM04016C	Develop and manufacture precision models	Y	No change. Equivalent unit
MEM04017B	Develop and manufacture gear, conveyor screw and propeller patterns	Y	No change. Equivalent unit
MEM04018B	Perform general woodworking machine operations	Y	No change. Equivalent unit
MEM04019B	Perform refractory installation and repair	Y	No change. Equivalent unit
MEM05001B	Perform manual soldering/desoldering – electrical/electronic components		No change. Equivalent unit
MEM05002B	Perform high reliability soldering and desoldering	Y	No change. Equivalent unit
MEM05003B	Perform soft soldering		No change. Equivalent unit
MEM05004C	Perform routine oxy acetylene welding		No change. Equivalent unit
MEM05005B	Carry out mechanical cutting	Y	No change. Equivalent unit
MEM05006B	Perform brazing and/or silver soldering		No change. Equivalent unit
MEM05007C	Perform manual heating and thermal cutting		Correction to unit title Correction to PC numbering Cat 1 change. Cat 1 change. Unit equivalent.
MEM05008C	Perform advanced manual thermal cutting, gouging and shaping	Y	No change. Equivalent unit
MEM05009C	Perform automated thermal cutting	Y	No change. Equivalent unit
MEM05010B	Apply fabrication, forming and shaping techniques	Y	No change. Equivalent unit

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
MEM05011C	Assemble fabricated components	Y	No change. Equivalent unit
MEM05012C	Perform routine manual metal arc welding		No change. Equivalent unit
MEM05013C	Perform manual production welding		No change. Equivalent unit
MEM05014C	Monitor quality of production welding/fabrications	Y	No change. Equivalent unit
MEM05015C	Weld using manual metal arc welding process	Y	No change. Equivalent unit
MEM05016C	Perform advanced welding using manual metal arc welding process	Y	No change. Equivalent unit
MEM05017C	Weld using gas metal arc welding process	Y	No change. Equivalent unit
MEM05018C	Perform advanced welding using gas metal arc welding process	Y	Application and range statement clarified. Cat 1 change. Unit equivalent.
MEM05019C	Weld using gas tungsten arc welding process	Y	No change. Equivalent unit
MEM05020C	Perform advanced welding using gas tungsten arc welding process	Y	No change. Equivalent unit
MEM05022C	Perform advanced welding using oxy acetylene welding process	Y	No change. Equivalent unit
MEM05023C	Weld using submerged arc welding process	Y	Deleted incorrect references in knowledge list. Cat 1 change. Unit equivalent.
MEM05024B	Perform welding supervision	Y	No change. Equivalent unit
MEM05025C	Perform welding/fabrication inspection	Y	No change. Equivalent unit
MEM05026B	Apply welding principles		No change. Equivalent

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
			unit
MEM05036C	Repair/replace/modify fabrications	Y	No change. Equivalent unit
MEM05037B	Perform geometric development	Y	No change. Equivalent unit
MEM05038B	Perform advanced geometric development - cylindrical/rectangular	Y	Application statement clarified. Cat 1 change. Unit equivalent.
MEM05039B	Perform advanced geometric development - conical	Y	Application statement clarified. Cat 1 change. Unit equivalent.
MEM05040B	Perform advanced geometric development - transitions	Y	Application statement clarified. Cat 1 change. Unit equivalent.
MEM05041B	Weld using powder flame spraying	Y	
MEM05042B	Perform welds to code standards using flux core arc welding process	Y	Corrected missing pre-requisite. Cat 1 change. Unit equivalent.
MEM05043B	Perform welds to code standards using gas metal arc welding process	Y	No change. Equivalent unit
MEM05044B	Perform welds to code standards using gas tungsten arc welding process	Y	No change. Equivalent unit
MEM05045B	Perform pipe welds to code standards using manual metal arc welding process	Y	No change. Equivalent unit
MEM05046B	Perform welds to code standards using manual metal arc welding process	Y	No change. Equivalent unit
MEM05047B	Weld using flux core arc welding process	Y	Corrected missing pre-requisite. Cat 1 change. Unit equivalent.
MEM05048B	Perform advanced welding using flux core arc welding process	Y	Corrected missing pre-requisite. Cat 1 change. Unit equivalent.

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
MEM05049B	Perform routine gas tungsten arc welding		No change. Equivalent unit
MEM05050B	Perform routine gas metal arc welding		No change. Equivalent unit
MEM05051A	Select welding processes		No change. Equivalent unit
MEM05052A	Apply safe welding practices		No change. Equivalent unit
MEM05053A	Set and edit computer controlled thermal cutting machines	Y	No change. Equivalent unit
MEM05054A	Write basic NC/CNC programs for thermal cutting machines	Y	No change. Equivalent unit
MEM06001B	Perform hand forging	Y	No change. Equivalent unit
MEM06002B	Perform hammer forging		No change. Equivalent unit
MEM06003C	Carry out heat treatment		No change. Equivalent unit
MEM06004B	Select heat treatment processes and test finished product	Y	No change. Equivalent unit
MEM06005B	Perform drop and upset forging	Y	No change. Equivalent unit
MEM06006C	Repair springs	Y	No change. Equivalent unit
MEM06007B	Perform basic incidental heat/quenching, tempering and annealing		No change. Equivalent unit
MEM06008A	Hammer forge complex shapes	Y	No change. Equivalent unit
MEM06009A	Hand forge complex shapes	Y	No change. Equivalent unit
MEM07001B	Perform operational maintenance of	Y	No change. Equivalent unit

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
	machines/equipment		unit
MEM07002B	Perform precision shaping/planing/slotting operations	Y	No change. Equivalent unit
MEM07003B	Perform machine setting (routine)	Y	No change. Equivalent unit
MEM07004B	Perform machine setting (complex)	Y	No change. Equivalent unit
MEM07005B	Perform general machining	Y	Application statement clarified. Cat 1 change. Unit equivalent.
MEM07006B	Perform lathe operations	Y	No change. Equivalent unit
MEM07007B	Perform milling operations	Y	No change. Equivalent unit
MEM07008C	Perform grinding operations	Y	No change. Equivalent unit
MEM07009B	Perform precision jig boring operations	Y	No change. Equivalent unit
MEM07010B	Perform tool and cutter grinding operations	Y	No change. Equivalent unit
MEM07011B	Perform complex milling operations	Y	No change. Equivalent unit
MEM07012B	Perform complex grinding operations	Y	No change. Equivalent unit
MEM07013B	Perform machining operations using horizontal and/or vertical boring machines	Y	No change. Equivalent unit
MEM07014B	Perform electro-discharge machining operations (EDM)	Y	No change. Equivalent unit
MEM07015B	Set computer controlled machines/processes	Y	No change. Equivalent unit

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
MEM07016C	Set and edit computer controlled machines/processes	Y	No change. Equivalent unit
MEM07018C	Write basic NC/CNC programs	Y	No change. Equivalent unit
MEM07019C	Program NC/CNC machining centre	Y	No change. Equivalent unit
MEM07020C	Program multiple spindle and/or multiple axis NC/CNC machining centre	Y	No change. Equivalent unit
MEM07021B	Perform complex lathe operations	Y	No change. Equivalent unit
MEM07022C	Program CNC wire cut machines	Y	No change. Equivalent unit
MEM07023C	Program and set up CNC manufacturing cell	Y	No change. Equivalent unit
MEM07024B	Operate and monitor machine/process		No change. Equivalent unit
MEM07025B	Perform advanced machine/process operation	Y	No change. Equivalent unit
MEM07026B	Perform advanced plastic processing	Y	No change. Equivalent unit
MEM07027B	Perform advanced press operations	Y	No change. Equivalent unit
MEM07028B	Operate computer controlled machines/processes	Y	No change. Equivalent unit
MEM07029B	Perform routine sharpening/maintenance of production tools and cutters	Y	No change. Equivalent unit
MEM07030C	Perform metal spinning lathe operations (basic)	Y	No change. Equivalent unit
MEM07031C	Perform metal spinning lathe operations (complex)	Y	Corrected title of MEM05003B in pre req pathway. Cat 1 change. Unit equivalent.

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
MEM07032B	Use workshop machines for basic operations	Y	No change. Equivalent unit
MEM07033B	Operate and monitor basic boiler		No change. Equivalent unit
MEM07034A	Operate and monitor intermediate class boiler	Y	No change. Equivalent unit
MEM07039A	Write programs for industrial robots	Y	No change. Equivalent unit
MEM07040A	Set multistage integrated processes	Y	No change. Equivalent unit
MEM08001B	Perform wire, jig and barrel load/unload work		No change. Equivalent unit
MEM08002C	Pre-treat work for subsequent surface coating	Y	No change. Equivalent unit
MEM08003C	Perform electroplating operations	Y	No change. Equivalent unit
MEM08004B	Finish work using wet, dry and vapour deposition methods	Y	No change. Equivalent unit
MEM08005B	Prepare and produce specialised coatings	Y	No change. Equivalent unit
MEM08006B	Produce clear and/or coloured and/or sealed anodised films on aluminium	Y	No change. Equivalent unit
MEM08007B	Control surface finish production and finished product quality		No change. Equivalent unit
No change. Equivalent unit MEM08008B	Operate and control surface finishing waste treatment process	Y	No change. Equivalent unit
MEM08009C	Make up solutions	Y	No change. Equivalent unit
MEM08010B	Manually finish/polish materials	Y	No change. Equivalent unit

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
MEM08011B	Prepare surfaces using solvents and/or mechanical means	Y	No change. Equivalent unit
MEM08012B	Prepare surfaces by abrasive blasting (basic)	Y	No change. Equivalent unit
MEM08013B	Prepare surfaces by abrasive blasting (advanced)	Y	No change. Equivalent unit
MEM08014B	Apply protective coatings (basic)	Y	No change. Equivalent unit
MEM08015B	Apply protective coatings (advanced)	Y	No change. Equivalent unit
MEM08016B	Control blast coating by-products, materials and emissions	Y	No change. Equivalent unit
MEM08018B	Electroplate engineering coatings	Y	No change. Equivalent unit
MEM08019B	Electroplate protective finishes	Y	No change. Equivalent unit
MEM08020B	Electroplate decorative finishes	Y	No change. Equivalent unit
MEM09002B	Interpret technical drawing		No change. Equivalent unit
MEM09003B	Prepare basic engineering drawing	Y	No change. Equivalent unit
MEM09004B	Perform electrical/electronic detail drafting	Y	No change. Equivalent unit
MEM09005B	Perform basic engineering detail drafting	Y	No change. Equivalent unit
MEM09006B	Perform advanced engineering detail drafting	Y	No change. Equivalent unit
MEM09007B	Perform advanced mechanical detail drafting	Y	No change. Equivalent unit
MEM09008B	Perform advanced structural detail	Y	No change. Equivalent unit

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
	drafting		unit
MEM09009C	Create 2D drawings using computer aided design system	Y	No change. Equivalent unit
MEM09010C	Create 3D models using computer aided design system	Y	No change. Equivalent unit
MEM09011B	Apply basic engineering design concepts	Y	No change. Equivalent unit
MEM09021B	Interpret and produce curved 3-dimensional shapes		No change. Equivalent unit
MEM09022A	Create 2D code file using computer aided manufacturing system	Y	Correction to unit title Cat 1 change. Unit equivalent.
MEM09023A	Create 3D code files using computer aided manufacturing system	Y	Correction to MEM09022 unit title in pre-req pathway. Cat 1 change. Unit equivalent.
MEM09141A	Represent mechanical engineering designs	Y	No change. Equivalent unit
MEM09142A	Represent mechatronic engineering designs	Y	No change. Equivalent unit
MEM09151A	Apply computer aided modelling and data management techniques to mechanical engineering designs	Y	No change. Equivalent unit
MEM09152A	Apply computer aided modelling and data management techniques to mechatronic engineering designs	Y	No change. Equivalent unit
MEM10001C	Erect structures	Y	No change. Equivalent unit
MEM10002B	Terminate and connect electrical wiring	Y	No change. Equivalent unit
MEM10003B	Install and test electrical wiring and circuits up to 1000 volts a.c. and 1500 volts d.c.	Y	No change. Equivalent unit

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
MEM10004B	Enter and change programmable controller operational parameters	Y	No change. Equivalent unit
MEM10005B	Commission programmable controller programs	Y	No change. Equivalent unit
MEM10006B	Install machine/plant	Y	No change. Equivalent unit
MEM10007C	Modify control systems	Y	No change. Equivalent unit
MEM10008B	Undertake commissioning procedures for plant and/or equipment	Y	No change. Equivalent unit
MEM10009B	Install refrigeration and air conditioning plant and equipment	Y	No change. Equivalent unit
MEM10010B	Install pipework and pipework assemblies	Y	No change. Equivalent unit
MEM10011B	Terminate and connect specialist cables	Y	No change. Equivalent unit
MEM10012A	Install split air conditioning system	Y	Deleted unit.
MEM10013A	Install split air conditioning systems and associated pipework	Y	New unit. Replaces and is not equivalent to MEM10012A
MEM11001C	Erect/dismantle scaffolding and equipment	Y	No change. Equivalent unit
MEM11002C	Erect/dismantle complex scaffolding and equipment	Y	No change. Equivalent unit
MEM11003B	Coordinate erection/dismantling of complex scaffolding/equipment	Y	No change. Equivalent unit
MEM11004B	Undertake dogging	Y	No change. Equivalent unit
MEM11005B	Pick and process order		No change. Equivalent unit
MEM11006B	Perform production packaging		No change. Equivalent

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
			unit
MEM11007B	Administer inventory procedures		No change. Equivalent unit
MEM11008B	Package materials (stores and warehouse)		No change. Equivalent unit
MEM11009B	Handle/move bulk fluids/gases		No change. Equivalent unit
MEM11010B	Operate mobile load shifting equipment		No change. Equivalent unit
MEM11011B	Undertake manual handling		No change. Equivalent unit
MEM11012B	Purchase materials		No change. Equivalent unit
MEM11013B	Undertake warehouse receival process	Y	No change. Equivalent unit
MEM11014B	Undertake warehouse dispatch process	Y	No change. Equivalent unit
MEM11015B	Manage warehouse inventory system	Y	No change. Equivalent unit
MEM11016B	Order materials		No change. Equivalent unit
MEM11017B	Organise and lead stocktakes	Y	No change. Equivalent unit
MEM11018B	Organise and maintain warehouse stock receival and/or dispatch system	Y	No change. Equivalent unit
MEM11019B	Undertake tool store procedures	Y	No change. Equivalent unit
MEM11020B	Perform advanced warehouse computer operations	Y	No change. Equivalent unit
MEM11021B	Perform advanced operation of load shifting equipment	Y	No change. Equivalent unit

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
MEM11022B	Operate fixed/moveable load shifting equipment		No change. Equivalent unit
MEM12001B	Use comparison and basic measuring devices		No change. Equivalent unit
MEM12002B	Perform electrical/electronic measurement		No change. Equivalent unit
MEM12003B	Perform precision mechanical measurement	Y	No change. Equivalent unit
MEM12004B	Perform precision electrical/electronic measurement		No change. Equivalent unit
MEM12005B	Calibrate measuring equipment	Y	No change. Equivalent unit
MEM12006B	Mark off/out (general engineering)	Y	No change. Equivalent unit
MEM12007C	Mark off/out structural fabrications and shapes	Y	No change. Equivalent unit
MEM12019B	Measure components using coordinate measuring machines		Minor correction to unit title and descriptor. Cat 1 change. Unit equivalent.
MEM12020B	Set and operate coordinate measuring machines		Minor correction to unit title and descriptor. Cat 1 change. Unit equivalent.
MEM12021B	Program coordinate measuring machines	Y	Minor correction to unit title and descriptor. Cat 1 change. Unit equivalent.
MEM12022B	Program coordinate measuring machines (advanced)	Y	Minor correction to unit title and descriptor. Cat 1 change. Unit equivalent.

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
MEM12023A	Perform engineering measurements		No change. Equivalent unit
MEM12024A	Perform computations		No change. Equivalent unit
MEM12025A	Use graphical techniques and perform simple statistical computations	Y	No change. Equivalent unit
MEM13001B	Perform emergency first aid		No change. Equivalent unit
MEM13002B	Undertake occupational health and safety activities in the workplace		No change. Equivalent unit
MEM13003B	Work safely with industrial chemicals and materials		No change. Equivalent unit
MEM13004B	Work safely with molten metals/glass		No change. Equivalent unit
MEM13006B	Collect and evaluate occupational health and safety data for an enterprise or section of an enterprise		No change. Equivalent unit
MEM13007B	Maintain water treatment systems for cooling towers	Y	No change. Equivalent unit
MEM13010A	Supervise occupational health and safety in an industrial work environment.	Y	No change. Equivalent unit
MEM13013B	Work safely with ionizing radiation		No change. Equivalent unit
MEM13014A	Apply principles of occupational health and safety in the work environment		No change. Equivalent unit
MEM14001B	Schedule material deliveries		No change. Equivalent unit
MEM14002B	Undertake basic process planning		No change. Equivalent unit
MEM14003B	Undertake basic production scheduling		No change. Equivalent unit

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
MEM14004A	Plan to undertake a routine task		No change. Equivalent unit
MEM14005A	Plan a complete activity		No change. Equivalent unit
MEM14061A	Plan and design mechanical engineering projects	Y	No change. Equivalent unit
MEM14062A	Plan and design mechatronic engineering projects	Y	No change. Equivalent unit
MEM14063A	Plan and design manufacturing engineering projects	Y	No change. Equivalent unit
MEM14064A	Plan and design maintenance engineering projects	Y	No change. Equivalent unit
MEM14081A	Apply mechanical engineering fundamentals to support design and development of projects	Y	No change. Equivalent unit
MEM14082A	Apply mechatronics fundamentals to support design and development of engineering projects	Y	No change. Equivalent unit
MEM15001B	Perform basic statistical quality control		No change. Equivalent unit
MEM15002A	Apply quality systems		No change. Equivalent unit
MEM15003B	Use improvement processes in team activities	Y	No change. Equivalent unit
MEM15004B	Perform inspection		No change. Equivalent unit
MEM15005B	Select and control inspection processes and procedures	Y	No change. Equivalent unit
MEM15007B	Conduct product and/or process capability studies	Y	No change. Equivalent unit
MEM15008B	Perform advanced statistical quality control	Y	No change. Equivalent unit

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
MEM15010B	Perform laboratory procedures		No change. Equivalent unit
MEM15011B	Exercise external quality assurance	Y	No change. Equivalent unit
MEM15012B	Maintain/supervise the application of quality procedures	Y	No change. Equivalent unit
MEM15015B	Examine trading practices	Y	No change. Equivalent unit
MEM15016B	Inspect pre-packed articles	Y	No change. Equivalent unit
MEM15017B	Use and maintain reference standards	Y	No change. Equivalent unit
MEM15018B	Investigate consumer complaints	Y	No change. Equivalent unit
MEM15019B	Conduct a field inspection	Y	No change. Equivalent unit
MEM15020C	Perform verification/certification or in-service inspection	Y	No change. Equivalent unit
MEM15021C	Conduct audits of servicing licensees and public weighbridge licensees	Y	No change. Equivalent unit
MEM15022B	Verify reference standards	Y	No change. Equivalent unit
MEM15024A	Apply quality procedures		No change. Equivalent unit
MEM16001B	Give formal presentations and take part in meetings		No change. Equivalent unit
MEM16002C	Conduct formal interviews and negotiations		No change. Equivalent unit
MEM16003B	Provide advanced customer service		Correction to PC numbering. Cat 1 change. Unit equivalent.

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
MEM16004B	Perform internal/external customer service		No change. Equivalent unit
MEM16005A	Operate as a team member to conduct manufacturing, engineering or related activities		No change. Equivalent unit
MEM16006A	Organise and communicate information		No change. Equivalent unit
MEM16007A	Work with others in a manufacturing, engineering or related environment		No change. Equivalent unit
MEM16008A	Interact with computing technology		No change. Equivalent unit
MEM16009A	Research and analyse engineering information	Y	No change. Equivalent unit
MEM16010A	Write reports	Y	No change. Equivalent unit
MEM16011A	Communicate with individuals and small groups	Y	No change. Equivalent unit
MEM16012A	Interpret technical specifications and manuals		No change. Equivalent unit
MEM16013A	Operate in a self-directed team	Y	No change. Equivalent unit
MEM16014A	Report technical information	Y	No change. Equivalent unit
MEM17001B	Assist in development and deliver training in the workplace		No change. Equivalent unit
MEM17002B	Conduct workplace assessment		No change. Equivalent unit
MEM17003A	Assist in the provision of on the job training		No change. Equivalent unit
MEM18001C	Use hand tools		No change. Equivalent unit

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
MEM18002B	Use power tools/hand held operations		No change. Equivalent unit
MEM18003C	Use tools for precision work	Y	No change. Equivalent unit
MEM18004B	Maintain and overhaul mechanical equipment	Y	Correction to PC numbering. Cat 1 change. Unit equivalent.
MEM18005B	Perform fault diagnosis, installation and removal of bearings	Y	No change. Equivalent unit
MEM18006B	Repair and fit engineering components	Y	No change. Equivalent unit
MEM18007B	Maintain and repair mechanical drives and mechanical transmission assemblies	Y	No change. Equivalent unit
MEM18008B	Balance equipment	Y	No change. Equivalent unit
MEM18009B	Perform levelling and alignment of machines and engineering components	Y	No change. Equivalent unit
MEM18010C	Perform equipment condition monitoring and recording	Y	No change. Equivalent unit
MEM18011C	Shut down and isolate machines/equipment		No change. Equivalent unit
MEM18012B	Perform installation and removal of mechanical seals	Y	No change. Equivalent unit
MEM18013B	Perform gland packing	Y	No change. Equivalent unit
MEM18014B	Manufacture press tools and gauges	Y	No change. Equivalent unit
MEM18015B	Maintain tools and dies	Y	No change. Equivalent unit
MEM18016B	Analyse plant and equipment condition monitoring results	Y	No change. Equivalent unit

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
MEM18017C	Modify mechanical systems and equipment	Y	No change. Equivalent unit
MEM18018C	Maintain pneumatic system components	Y	No change. Equivalent unit
MEM18019B	Maintain pneumatic systems	Y	No change. Equivalent unit
MEM18020B	Maintain hydraulic system components	Y	No change. Equivalent unit
MEM18021B	Maintain hydraulic systems	Y	No change. Equivalent unit
MEM18022B	Maintain fluid power controls	Y	No change. Equivalent unit
MEM18023B	Modify fluid power system operation	Y	No change. Equivalent unit
MEM18024B	Maintain engine cooling systems	Y	No change. Equivalent unit
MEM18025B	Service combustion engines	Y	No change. Equivalent unit
MEM18026C	Test compression ignition fuel systems	Y	No change. Equivalent unit
MEM18027C	Overhaul engine fuel system components	Y	No change. Equivalent unit
MEM18028B	Maintain engine lubrication systems	Y	No change. Equivalent unit
MEM18029B	Tune diesel engines	Y	No change. Equivalent unit
MEM18030B	Diagnose and rectify low voltage electrical systems	Y	No change. Equivalent unit
MEM18031B	Diagnose and rectify low voltage starting systems	Y	No change. Equivalent unit
MEM18032B	Maintain induction/exhaust systems	Y	No change. Equivalent unit

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
			unit
MEM18033B	Perform engine bottom-end overhaul	Y	No change. Equivalent unit
MEM18034B	Perform engine top-end overhaul	Y	No change. Equivalent unit
MEM18035B	Diagnose and rectify braking systems	Y	No change. Equivalent unit
MEM18037B	Diagnose and rectify low voltage charging systems	Y	No change. Equivalent unit
MEM18038B	Maintain wheels and tyres	Y	No change. Equivalent unit
MEM18039B	Diagnose and rectify track type undercarriage	Y	No change. Equivalent unit
MEM18040B	Maintain suspension systems	Y	No change. Equivalent unit
MEM18041B	Maintain steering systems	Y	No change. Equivalent unit
MEM18042C	Diagnose and rectify manual transmissions	Y	No change. Equivalent unit
MEM18043C	Diagnose and rectify automatic transmissions	Y	No change. Equivalent unit
MEM18044C	Diagnose and rectify drive line and final drives	Y	No change. Equivalent unit
MEM18045B	Fault find/repair electrical equipment/components up to 250 volts single phase supply	Y	No change. Equivalent unit
MEM18046B	Fault find/repair electrical equipment/components up to 1000 volts a.c./1500 volts d.c.	Y	No change. Equivalent unit
MEM18047B	Diagnose and maintain electronic controlling systems on mobile plant	Y	No change. Equivalent unit

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
MEM18048B	Fault find and repair/rectify basic electrical circuits	Y	No change. Equivalent unit
MEM18049B	Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.	Y	No change. Equivalent unit
MEM18050B	Disconnect/reconnect fixed wired equipment over 1000 volts a.c./1500 volts d.c.	Y	Minor title correction. Cat 1 change. Unit equivalent.
MEM18051B	Fault find and repair/rectify complex electrical circuits	Y	No change. Equivalent unit
MEM18052B	Maintain fluid power systems for mobile plant	Y	No change. Equivalent unit
MEM18053B	Modify fluid power control systems	Y	No change. Equivalent unit
MEM18054B	Fault find, test and calibrate instrumentation systems and equipment	Y	No change. Equivalent unit
MEM18055B	Dismantle, replace and assemble engineering components	Y	No change. Equivalent unit
MEM18056B	Diagnose and repair analog equipment and components	Y	No change. Equivalent unit
MEM18057B	Maintain/service analog/digital electronic equipment	Y	No change. Equivalent unit
MEM18058C	Modify electronic equipment	Y	No change. Equivalent unit
MEM18059B	Modify electronic systems	Y	No change. Equivalent unit
MEM18060B	Maintain, repair control instrumentation - single and multiple loop control systems	Y	No change. Equivalent unit
MEM18061B	Maintain/calibrate complex control systems	Y	No change. Equivalent unit
MEM18062B	Install, maintain and calibrate instrumentation sensors, transmitters and	Y	No change. Equivalent unit

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
	final control elements		
MEM18063B	Terminate signal and data cables	Y	No change. Equivalent unit
MEM18064B	Maintain instrumentation system components	Y	No change. Equivalent unit
MEM18065B	Diagnose and repair digital equipment and components	Y	No change. Equivalent unit
MEM18066B	Diagnose and repair microprocessor-based equipment	Y	No change. Equivalent unit
MEM18067B	Tune control loops - multi controller or multi element systems	Y	No change. Equivalent unit
MEM18069B	Maintain, repair instrumentation process control analysers	Y	No change. Equivalent unit
MEM18070C	Modify complex electrical circuits and systems	Y	No change. Equivalent unit
MEM18071B	Connect/disconnect fluid conveying system components	Y	No change. Equivalent unit
MEM18072B	Manufacture fluid conveying conductor assemblies	Y	No change. Equivalent unit
MEM18073A	Perform advanced equipment testing and diagnostics on mobile plant and equipment	Y	No change. Equivalent unit
MEM18084A	Commission and decommission split air conditioning systems	Y	New unit. No equivalent.
MEM18085A	Install, service and repair domestic air conditioning and refrigeration appliances	Y	New unit. No equivalent.
MEM18086B	Test, recover, evacuate and charge refrigeration systems	Y	No change. Equivalent unit
MEM18087B	Service and repair domestic and light commercial refrigeration and air conditioning equipment	Y	No change. Equivalent unit

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
MEM18088B	Maintain and repair commercial air conditioning systems and components	Y	No change. Equivalent unit
MEM18089B	Maintain and repair central air handling systems	Y	No change. Equivalent unit
MEM18090B	Maintain and repair industrial refrigeration systems and components	Y	No change. Equivalent unit
MEM18091B	Maintain and repair multi stage, cascade and/or ultra-cold industrial refrigeration systems	Y	No change. Equivalent unit
MEM18092B	Maintain and repair commercial and/or industrial refrigeration and/or air conditioning controls	Y	No change. Equivalent unit
MEM18093B	Maintain and repair integrated industrial refrigeration and/or large air handling system controls	Y	No change. Equivalent unit
MEM18094B	Service and repair commercial refrigeration	Y	No change. Equivalent unit
MEM18095A	Maintain and repair cooling towers/evaporative condensers and associated equipment	Y	No change. Equivalent unit
MEM18096A	Maintain, repair/replace and adjust refrigerant flow controls and associated equipment	Y	No change. Equivalent unit
MEM18097A	Manufacture cavity dies	Y	No change. Equivalent unit
MEM19001B	Perform jewellery metal casting	Y	No change. Equivalent unit
MEM19002B	Prepare jewellery illustrations	Y	No change. Equivalent unit
MEM19003B	Handle gem materials		No change. Equivalent unit
MEM19004B	Handle and examine gemstone materials	Y	No change. Equivalent unit

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
MEM19005B	Produce three-dimensional precision items	Y	No change. Equivalent unit
MEM19006B	Replace watch batteries	Y	No change. Equivalent unit
MEM19007B	Perform gemstone setting	Y	No change. Equivalent unit
MEM19008B	Prepare jewellery designs	Y	No change. Equivalent unit
MEM19009B	Perform investment procedures for lost wax casting process	Y	No change. Equivalent unit
MEM19010B	Produce rubber moulds for lost wax casting process		No change. Equivalent unit
MEM19011B	Perform wax injection of moulds for lost wax casting process		No change. Equivalent unit
MEM19012B	Produce jewellery wax model	Y	No change. Equivalent unit
MEM19013B	Produce jewellery metal masters	Y	No change. Equivalent unit
MEM19014B	Perform hand engraving	Y	No change. Equivalent unit
MEM19015B	Perform jewellery enamelling	Y	No change. Equivalent unit
MEM19016B	Construct jewellery components	Y	No change. Equivalent unit
MEM19017B	Fabricate jewellery items	Y	No change. Equivalent unit
MEM19018B	Repair jewellery items	Y	No change. Equivalent unit
MEM19020B	Fault-find and maintain micro-mechanisms	Y	No change. Equivalent unit
MEM19021B	Diagnose and service micro-mechanisms	Y	No change. Equivalent unit

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
			unit
MEM19022B	Perform precision micro-mechanism diagnosis and servicing	Y	No change. Equivalent unit
MEM20001A	Produce keys		No change. Equivalent unit
MEM20002A	Assemble and test lock mechanisms	Y	No change. Equivalent unit
MEM20003A	Install and upgrade locks and hardware	Y	No change. Equivalent unit
MEM20004A	Gain entry	Y	No change. Equivalent unit
MEM20005A	Install and maintain door control devices/systems	Y	No change. Equivalent unit
MEM20006A	Maintain and service mechanical locking devices	Y	No change. Equivalent unit
MEM20007A	Plan and prepare a masterkey system	Y	Pre-requisite correction. Cat 1 change. Unit equivalent.
MEM20008A	Develop and implement a masterkey system	Y	Pre-requisite correction. Cat 1 change. Unit equivalent.
MEM20009A	Gain entry and reinstate fire and security containers	Y	No change. Equivalent unit
MEM20010A	Gain entry and reinstate automotive locking systems	Y	No change. Equivalent unit
MEM20011A	Service and repair fire and security containers	Y	No change. Equivalent unit
MEM20012A	Service and repair mechanical automotive locking systems	Y	No change. Equivalent unit
MEM20013A	Service automotive transponder systems	Y	No change. Equivalent unit

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
MEM20014A	Perform a site security survey		No change. Equivalent unit
MEM22001A	Perform engineering activities	Y	No change. Equivalent unit
MEM22002A	Manage self in the engineering environment	Y	No change. Equivalent unit
MEM22003A	Manage engineering resources	Y	No change. Equivalent unit
MEM22004A	Manage engineering projects	Y	No change. Equivalent unit
MEM22005A	Manage engineering operations	Y	No change. Equivalent unit
MEM22006A	Source and estimate materials	Y	No change. Equivalent unit
MEM22007A	Manage environmental effects of engineering activities	Y	No change. Equivalent unit
MEM22008A	Manage change and technical development	Y	No change. Equivalent unit
MEM22009A	Manage technical sales and promotion	Y	No change. Equivalent unit
MEM23001A	Apply advanced mathematical techniques in a manufacturing engineering or related environment	Y	No change. Equivalent unit
MEM23002A	Apply calculus in engineering situations	Y	No change. Equivalent unit
MEM23003A	Operate and program computers and/or controllers in engineering situations	Y	No change. Equivalent unit
MEM23041A	Apply basic scientific principles and techniques in mechanical engineering situations		No change. Equivalent unit
MEM23051A	Apply basic electro and control scientific principles and techniques in mechanical		No change. Equivalent unit

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
	and manufacturing engineering situations		
MEM23061A	Select and test mechanical engineering materials		Updated reference to National Measurement Institute. Cat 1 change. Unit equivalent.
MEM23062A	Select and test mechatronic engineering materials		Updated reference to National Measurement Institute. Cat 1 change. Unit equivalent.
MEM23071A	Select and apply mechanical engineering methods, processes and construction techniques		No change. Equivalent unit
MEM23072A	Select and apply mechatronic engineering methods, processes and construction techniques		No change. Equivalent unit
MEM23081A	Apply scientific principles and techniques in mechanical engineering situations	Y	No change. Equivalent unit
MEM23082A	Apply scientific principles and techniques in mechatronic engineering situations	Y	No change. Equivalent unit
MEM23083A	Apply industrial engineering principles and techniques in competitive manufacturing engineering situations	Y	No change. Equivalent unit
MEM23091A	Apply mechanical system design principles and techniques in mechanical engineering situations	Y	No change. Equivalent unit
MEM23092A	Apply automated systems principles and techniques in engineering situations	Y	Corrected "automotive" to "automated" Cat 1 change. Unit equivalent.
MEM23093A	Apply plant and process design principles and techniques in engineering situations	Y	Corrected reference to "no" prerequisites. Cat 1 change. Unit equivalent.
MEM23094A	Apply maintenance systems principles and techniques in engineering situations	Y	No change. Equivalent unit
MEM24001B	Perform basic penetrant testing	Y	No change. Equivalent

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
			unit
MEM24002B	Perform penetrant testing	Y	No change. Equivalent unit
MEM24003B	Perform basic magnetic particle testing	Y	No change. Equivalent unit
MEM24004B	Perform magnetic particle testing	Y	No change. Equivalent unit
MEM24005B	Perform basic eddy current testing	Y	No change. Equivalent unit
MEM24006B	Perform eddy current testing	Y	No change. Equivalent unit
MEM24007B	Perform ultrasonic thickness testing	Y	No change. Equivalent unit
MEM24008B	Perform ultrasonic testing	Y	No change. Equivalent unit
MEM24009B	Perform basic radiographic testing	Y	No change. Equivalent unit
MEM24010B	Perform radiographic testing	Y	No change. Equivalent unit
MEM24011B	Establish non-destructive tests	Y	No change. Equivalent unit
MEM24012B	Apply metallurgy principles		No change. Equivalent unit
MEM25001B	Apply fibre-reinforced materials	Y	No change. Equivalent unit
MEM25002B	Form and integrate fibre-reinforced structures	Y	No change. Equivalent unit
MEM25003B	Set up marine vessel structures	Y	No change. Equivalent unit
MEM25004B	Fair and shape surfaces	Y	No change. Equivalent unit

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
MEM25005B	Construct and assemble marine vessel timber components	Y	No change. Equivalent unit
MEM25006B	Undertake marine sheathing operations	Y	No change. Equivalent unit
MEM25007B	Maintain marine vessel surfaces	Y	No change. Equivalent unit
MEM25008B	Repair marine vessel surfaces and structures	Y	No change. Equivalent unit
MEM25009B	Form timber shapes using hot processes	Y	No change. Equivalent unit
MEM25010B	Perform fitout procedures	Y	No change. Equivalent unit
MEM25011B	Install marine systems	Y	No change. Equivalent unit
MEM25012B	Install and test operations of marine auxiliary systems	Y	No change. Equivalent unit
MEM25013B	Produce three-dimensional plugs/moulds	Y	No change. Equivalent unit
MEM25014B	Perform marine slipping operations	Y	No change. Equivalent unit
MEM25015A	Assemble and install equipment and accessories/ancillaries		No change. Equivalent unit
MEM30001A	Use computer aided drafting systems to produce basic engineering drawings	Y	No change. Equivalent unit
MEM30002A	Produce basic engineering graphics	Y	No change. Equivalent unit
MEM30003A	Produce detailed engineering drawings	Y	No change. Equivalent unit
MEM30004A	Use CAD to create and display 3D models	Y	Corrected pre-requisite. Cat 1 change. Unit equivalent.

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
MEM30005A	Calculate force systems within simple beam structures	Y	No change. Equivalent unit
MEM30006A	Calculate stresses in simple structures	Y	No change. Equivalent unit
MEM30007A	Select common engineering materials		No change. Equivalent unit
MEM30008A	Apply basic economic and ergonomic concepts to evaluate engineering applications		No change. Equivalent unit
MEM30009A	Contribute to the design of basic mechanical systems	Y	No change. Equivalent unit
MEM30010A	Set up basic hydraulic circuits		No change. Equivalent unit
MEM30011A	Set up basic pneumatic circuits		No change. Equivalent unit
MEM30012A	Apply mathematical techniques in a manufacturing, engineering or related environment		No change. Equivalent unit
MEM30013A	Assist in the preparation of a basic workplace layout		No change. Equivalent unit
MEM30014A	Apply basic just in time systems to the reduction of waste		No change. Equivalent unit
MEM30015A	Develop recommendations for basic set up time improvements		No change. Equivalent unit
MEM30016A	Assist in the analysis of a supply chain		No change. Equivalent unit
MEM30017A	Use basic preventative maintenance techniques and tools		No change. Equivalent unit
MEM30018A	Undertake basic process planning		No change. Equivalent unit
MEM30019A	Use resource planning software systems in manufacturing	Y	No change. Equivalent unit

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
MEM30020A	Develop and manage a plan for a simple manufacturing related project		No change. Equivalent unit
MEM30021A	Prepare a simple production schedule		No change. Equivalent unit
MEM30022A	Undertake supervised procurement activities		No change. Equivalent unit
MEM30023A	Prepare a simple cost estimate for a manufactured product		No change. Equivalent unit
MEM30024A	Participate in quality assurance techniques	Y	No change. Equivalent unit
MEM30025A	Analyse a simple electrical system circuit	Y	No change. Equivalent unit
MEM30026A	Select and test components for simple electronic switching and timing circuits	Y	No change. Equivalent unit
MEM30027A	Prepare basic programs for programmable logic controllers		No change. Equivalent unit
MEM30028A	Assist in sales of technical products/systems		No change. Equivalent unit
MEM50001B	Classify recreational boating technologies and features		No change. Equivalent unit
MEM50002B	Work safely on marine craft		No change. Equivalent unit
MEM50003B	Follow work procedures to maintain the marine environment		No change. Equivalent unit
MEM50004B	Maintain quality of environment by following marina codes	Y	No change. Equivalent unit
MEM50005B	Refuel vessels	Y	No change. Equivalent unit
MEM50006B	Check operational capability of marine craft	Y	No change. Equivalent unit
MEM50007B	Check operational capability of sails and	Y	No change. Equivalent unit

MEM05 Unit code	MEM05 Unit title	P	Relationship to previous training package version
	sail operating equipment		unit
MEM50008B	Carry out trip preparation and planning		No change. Equivalent unit
MEM50009B	Safely operate a mechanically powered recreational boat		No change. Equivalent unit
MEM50010B	Respond to boating emergencies and incidents		No change. Equivalent unit

Explanation of the review date

The review date (shown on the title page and in the header of each page) indicates when the Training Package is expected to be reviewed in the light of changes such as changing technologies and circumstances. The review date is not an expiry date. Endorsed Training Packages and their components remain current until they are reviewed or replaced.

Summary of AQF Qualifications in this Package

AQF Qualifications in MEM05v11

MEM10105	Certificate I in Engineering
MEM10205	Certificate I in Boating Services
MEM20105	Certificate II in Engineering
MEM20205	Certificate II in Engineering - Production Technology
MEM20305	Certificate II in Boating Services
MEM20413	Certificate II in Engineering Pathways
MEM30105	Certificate III in Engineering - Production Systems
MEM30205	Certificate III in Engineering - Mechanical Trade
MEM30305	Certificate III in Engineering - Fabrication Trade
MEM30405	Certificate III in Engineering - Electrical/Electronic Trade
MEM30505	Certificate III in Engineering - Technical
MEM30605	Certificate III in Jewellery Manufacture
MEM30705	Certificate III in Marine Craft Construction
MEM30805	Certificate III in Locksmithing
MEM30905	Certificate III in Boating Services
MEM31010	Certificate III in Watch and Clock Service and Repair
MEM31112	Certificate III in Engineering (Composites Trade)
MEM40105	Certificate IV in Engineering
MEM40205	Certificate IV in Boating Services
MEM40311	Certificate IV in Advanced Jewellery Manufacture
MEM40412	Certificate IV in Engineering Drafting
MEM50105	Diploma of Engineering - Advanced Trade
MEM50212	Diploma of Engineering - Technical
MEM50311	Diploma of Jewellery and Object Design
MEM60112	Advanced Diploma of Engineering

MEM60211	Advanced Diploma of Jewellery and Object Design
MEM80112	Vocational Graduate Diploma of Engineering

List of MEM05v11 Units within Training Package

Refer to Appendix 1: MEM05 Units, prerequisites, points and weighting

Certificate III Trade Specialisation Units

Refer Appendix 2: Certificate III Trade Specialisation Units

List of Imported units in MEM Training Package

Refer to Appendix 3: Imported units of competency and points and weighting

Overview

What is a Training Package?

A Training Package is an integrated set of nationally endorsed competency standards, assessment guidelines and Australian Qualifications Framework (AQF) qualifications for a specific industry, industry sector or enterprise.

Each Training Package:

- provides a consistent and reliable set of components for training, recognising and assessing people's skills, and may also have optional support materials
- enables nationally recognised qualifications to be awarded through direct assessment of workplace competencies
- encourages the development and delivery of flexible training which suits individual and industry requirements
- encourages learning and assessment in a work-related environment which leads to verifiable workplace outcomes.

How do Training Packages fit within the National Skills Framework?

The National Skills Framework applies nationally, is endorsed by the Ministerial Council for Vocational and Technical Education, and comprises the Australian Quality Training Framework 2010 (AQTF 2010), and Training Packages endorsed by the National Skills Standards Council (NSSC).

How are Training Packages developed?

Training Packages are developed by Industry Skills Councils or enterprises to meet the identified training needs of specific industries or industry sectors. To gain national endorsement of Training Packages, developers must provide evidence of extensive research, consultation and support within the industry area or enterprise.

How do Training Packages encourage flexibility?

Training Packages describe the skills and knowledge needed to perform effectively in the workplace without prescribing how people should be trained. Training Packages acknowledge that people can achieve vocational competency in many ways by emphasising what the learner can do, not how or where they learned to do it. For example, some experienced workers might be able to demonstrate competency against the units of competency, and even gain a qualification, without completing a formal training program.

With Training Packages, assessment and training may be conducted at the workplace, off-the-job, at a training organisation, during regular work, or through work experience, work placement, work simulation or any combination of these.

Who can deliver and assess using Training Packages?

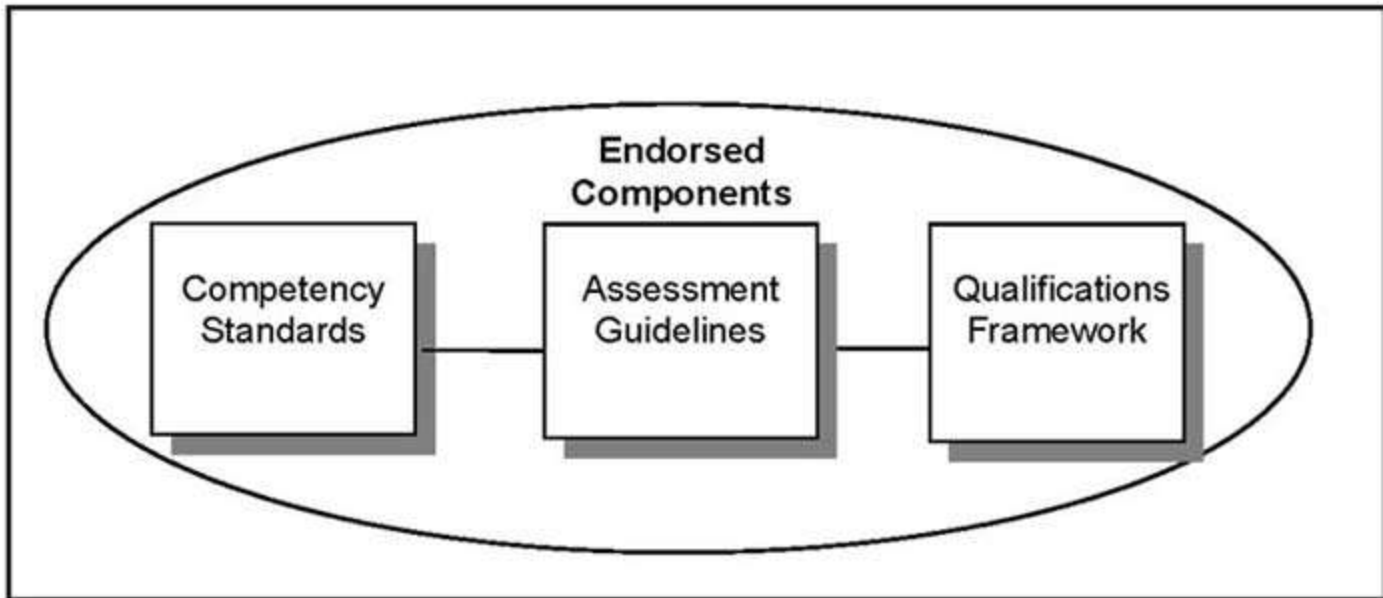

Training and assessment using Training Packages must be conducted by a Registered Training Organisation (RTO) that has the qualifications or specific units of competency on its scope of registration, or that works in partnership with another RTO, as specified in the AQTF 2010.

Training Package Components

Training Packages are made up of mandatory components endorsed by the NQC, and optional support materials.

Training Package Endorsed Components

The nationally endorsed components include the Competency Standards, Assessment Guidelines and Qualifications Framework. These form the basis of training and assessment in the Training Package and, as such, they must be used.

Competency Standards

Each unit of competency identifies a discrete workplace requirement and includes the knowledge and skills that underpin competency as well as language, literacy and numeracy; and occupational health and safety requirements. The units of competency must be adhered to in training and assessment to ensure consistency of outcomes.

Assessment Guidelines

The Assessment Guidelines provide an industry framework to ensure all assessments meet industry needs and nationally agreed standards as expressed in the Training Package and the AQTF 2010. The Assessment Guidelines must be followed to ensure the integrity of assessment leading to nationally recognised qualifications.

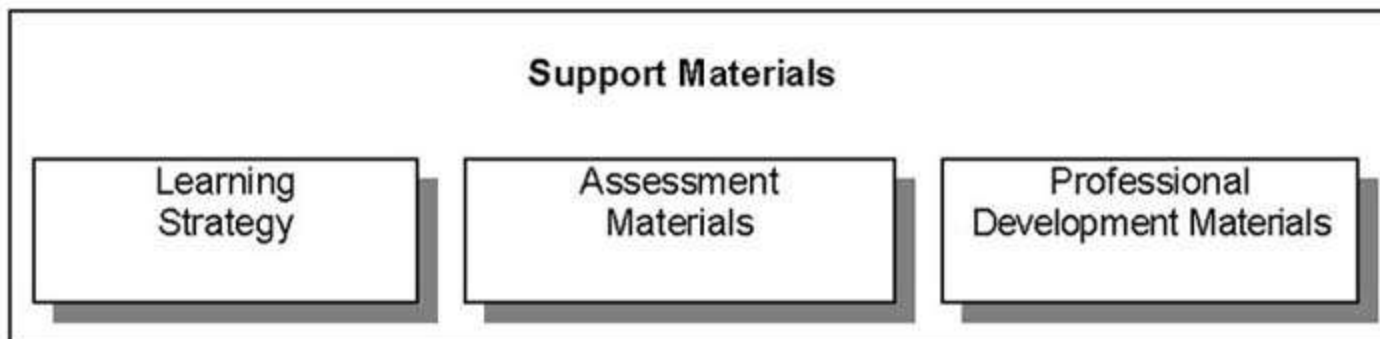

Qualifications Framework

Each Training Package provides details of those units of competency that must be achieved to award AQF qualifications. The rules around which units of competency can be combined to make up a valid AQF qualification in the Training Package are referred to as the "packaging rules". The packaging rules must be followed to ensure the integrity of nationally recognised qualifications issued.

Training Package Support Materials

The endorsed components of Training Packages are complemented and supported by optional support materials that provide for choice in the design of training and assessment to meet the needs of industry and learners.

Training Package support materials can relate to single or multiple units of competency, an industry sector, a qualification or the whole Training Package. They tend to fall into one or more of the categories illustrated below.

Training Package support materials are produced by a range of stakeholders, such as RTOs, individual trainers and assessors, private and commercial developers and government agencies.

Training Package, Qualification and Unit of Competency Codes

There are agreed conventions for the national codes used for Training Packages and their components. Always use the correct codes, exactly as they appear in the Training Package, **and with the code always before the title.**

Training Package Codes

Each Training Package has a unique five-character national code assigned when the Training Package is endorsed, for example MEM05. The first three characters are letters identifying the Training Package industry coverage and the last two characters are numbers identifying the year of endorsement.

Qualification Codes

Within each Training Package, each qualification has a unique eight-character code, for example MEM10105. Qualification codes are developed as follows:

- the first three letters identify the Training Package;
- the first number identifies the qualification level (noting that, in the qualification titles themselves, arabic numbers are **not** used);
- the next two numbers identify the position in the sequence of the qualification at that level; and
- the last two numbers identify the year in which the qualification was endorsed. (Where qualifications are added after the initial Training Package endorsement, the last two numbers may differ from other Training Package qualifications as they identify the year in which those particular qualifications were endorsed.)

Unit of Competency Codes

Within each Training Package, each unit of competency has a unique code. Unit of competency codes are assigned when the Training Package is endorsed, or when new units of competency are added to an existing endorsed Training Package. Unit codes are developed as follows:

- a typical code is made up of 12 characters, normally a mixture of uppercase letters and numbers, as in MEM04020A;
- the first three characters signify the Training Package - MEM05 - in the above example and up to eight characters, relating to an industry sector, function or skill area, follow;
- the last character is always a letter and identifies the unit of competency version. An "A" at the end of the code indicates that this is the original unit of competency. "B", or another incremented version identifier means that minor changes have been made. Typically this would mean that wording has changed in the range statement or evidence guide, providing clearer intent; and
- where changes are made that alter the outcome, a new code is assigned and the title is changed.

Training Package, Qualification and Unit of Competency Titles

There are agreed conventions for titling Training Packages and their components. Always use the correct titles, exactly as they appear in the Training Package, and with the code always placed before the title.

Training Package Titles

The title of each endorsed Training Package is unique and relates the Training Packages broad industry coverage.

Qualification Titles

The title of each endorsed Training Package qualification is unique. Qualification titles use the following sequence:

- first, the qualification is identified as either Certificate I, Certificate II, Certificate III, Certificate IV, Diploma, Advanced Diploma, Vocational Graduate Certificate, or Vocational Graduate Diploma;
- this is followed by the words "in" for Certificates I to IV, and "of" for Diploma, Advanced Diploma, Vocational Graduate Certificate and Vocational Graduate Diploma;
- then, the industry descriptor, for example Telecommunications;
- and then, if applicable, the occupational or functional stream in brackets, for example (Computer Systems).

For example:

- MEM10105 Certificate I in Engineering

Unit of Competency Titles

Each unit of competency title is unique. Unit of competency titles describe the competency outcome concisely, and are written in sentence case.

For example:

- MEM03001B Perform manual production assembly

The revised MEM05 Metal and Engineering Training Package

The MEM05 Metal and Engineering Training Package was developed to replace the MEM98 Metal and Engineering Training Package. The Training Package is designed to meet the training and skills recognition needs of the Australian engineering industry sector. It covers the competencies used by people employed in the manufacturing, engineering and related services industries.

It also provides access to the apprenticeship streams provided by the National Metal and Engineering Industry Competency Standards leading to national qualifications, with traineeship pathways also available. It also enables further career advancement beyond trade apprenticeship and technical traineeship, with progression to Advanced Diploma.

New qualifications for technical workers were added to MEM05 to more accurately reflect the nature of their work. These qualifications make a distinction between technical work and that of tradespersons. In particular, a new Diploma and Advanced Diploma of Engineering were developed to meet the needs of technical workers and para-professionals in the engineering field. For the current Training Package, four disciplines were selected as priority areas. These disciplines are as follows:

- Mechanical
- Mechatronics
- Maintenance
- Manufacturing

Other disciplines will be added to the qualifications over the life of the Training Package. There occurred a simplification of some of the qualification titles, as well as changes to the list of qualification descriptors that may be added by RTOs.

The bank of units of competency was revised and extended. Part of the revision included bringing all units to the current approved format. Further information was added to each unit to assist users.

Qualifications Framework

The Australian Qualifications Framework

What is the Australian Qualifications Framework?

A brief overview of the Australian Qualifications Framework (AQF) follows. For a full explanation of the AQF, see the *AQF Implementation Handbook*.

http://www.aqf.edu.au/Portals/0/Documents/Handbook/AQF_Handbook_07.pdf

The AQF provides a comprehensive, nationally consistent framework for all qualifications in post-compulsory education and training in Australia. In the vocational education and training (VET) sector it assists national consistency for all trainees, learners, employers and providers by enabling national recognition of qualifications and Statements of Attainment.

Training Package qualifications in the VET sector must comply with the titles and guidelines of the AQF. Endorsed Training Packages provide a unique title for each AQF qualification which must always be reproduced accurately.

Qualifications

Training Packages can incorporate the following eight AQF qualifications.

- Certificate I in ...
- Certificate II in ...
- Certificate III in ...
- Certificate IV in ...
- Diploma of ...
- Advanced Diploma of ...
- Vocational Graduate Certificate of ...
- Vocational Graduate Diploma of ...

On completion of the requirements defined in the Training Package, a Registered Training Organisation (RTO) may issue a nationally recognised AQF qualification. Issuance of AQF qualifications must comply with the advice provided in the *AQF Implementation Handbook* and the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

Statement of Attainment

A Statement of Attainment is issued by a Registered Training Organisation when an individual has completed one or more units of competency from nationally recognised qualification(s)/courses(s). Issuance of Statements of Attainment must comply with the advice provided in the current *AQF Implementation Handbook* and the *AQTF 2010 Essential Standards for Initial and Continuing Registration*.

Under the AQTF 2010, RTOs must recognise the achievement of competencies as recorded on a qualification or Statement of Attainment issued by other RTOs. Given this, recognised competencies can progressively build towards a full AQF qualification.

AQF Guidelines and Learning Outcomes

The *AQF Implementation Handbook* provides a comprehensive guideline for each AQF qualification. A summary of the learning outcome characteristics and their distinguishing features for each VET related AQF qualification is provided below.

Certificate I

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and skills would prepare a person to perform a defined range of activities most of which may be routine and predictable.

Applications may include a variety of employment related skills including preparatory access and participation skills, broad-based induction skills and/or specific workplace skills. They may also include participation in a team or work group.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate knowledge by recall in a narrow range of areas;
- demonstrate basic practical skills, such as the use of relevant tools;
- perform a sequence of routine tasks given clear direction
- receive and pass on messages/information.

Certificate II

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and skills would prepare a person to perform in a range of varied activities or knowledge application where there is a clearly defined range of contexts in which the choice of actions required is usually clear and there is limited complexity in the range of operations to be applied.

Performance of a prescribed range of functions involving known routines and procedures and some accountability for the quality of outcomes.

Applications may include some complex or non-routine activities involving individual responsibility or autonomy and/or collaboration with others as part of a group or team.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate basic operational knowledge in a moderate range of areas;
- apply a defined range of skills;
- apply known solutions to a limited range of predictable problems;
- perform a range of tasks where choice between a limited range of options is required;
- assess and record information from varied sources;
- take limited responsibility for own outputs in work and learning.

Certificate III

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and competencies would cover selecting, adapting and transferring skills and knowledge to new environments and providing technical advice and some leadership in resolution of specified problems. This would be applied across a range of roles in a variety of contexts with some complexity in the extent and choice of options available.

Performance of a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Applications may involve some responsibility for others. Participation in teams including group or team co-ordination may be involved.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate some relevant theoretical knowledge
- apply a range of well-developed skills
- apply known solutions to a variety of predictable problems
- perform processes that require a range of well-developed skills where some discretion and judgement is required
- interpret available information, using discretion and judgement
- take responsibility for own outputs in work and learning
- take limited responsibility for the output of others.

Certificate IV

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and competencies would cover a broad range of varied activities or application in a wider variety of contexts most of which are complex and non-routine. Leadership and guidance are involved when organising activities of self and others as well as contributing to technical solutions of a non-routine or contingency nature. Performance of a broad range of skilled applications including the requirement to evaluate and analyse current practices, develop new criteria and procedures for performing current practices and provision of some leadership and guidance to others in the application and planning of the skills. Applications involve responsibility for, and limited organisation of, others.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate understanding of a broad knowledge base incorporating some theoretical concepts
- apply solutions to a defined range of unpredictable problems
- identify and apply skill and knowledge areas to a wide variety of contexts, with depth in some areas
- identify, analyse and evaluate information from a variety of sources
- take responsibility for own outputs in relation to specified quality standards
- take limited responsibility for the quantity and quality of the output of others.

Diploma

Characteristics of Learning Outcomes

Breadth, depth and complexity covering planning and initiation of alternative approaches to skills or knowledge applications across a broad range of technical and/or management requirements, evaluation and co-ordination.

The self directed application of knowledge and skills, with substantial depth in some areas where judgment is required in planning and selecting appropriate equipment, services and techniques for self and others.

Applications involve participation in development of strategic initiatives as well as personal responsibility and autonomy in performing complex technical operations or organising others. It may include participation in teams including teams concerned with planning and evaluation functions. Group or team co-ordination may be involved.

The degree of emphasis on breadth as against depth of knowledge and skills may vary between qualifications granted at this level.

Distinguishing Features of Learning Outcomes

Do the competencies or learning outcomes enable an individual with this qualification to:

- demonstrate understanding of a broad knowledge base incorporating theoretical concepts, with substantial depth in some areas
- analyse and plan approaches to technical problems or management requirements
- transfer and apply theoretical concepts and/or technical or creative skills to a range of situations
- evaluate information, using it to forecast for planning or research purposes
- take responsibility for own outputs in relation to broad quantity and quality parameters
- take some responsibility for the achievement of group outcomes.

Advanced Diploma

Characteristics of Learning Outcomes

Breadth, depth and complexity involving analysis, design, planning, execution and evaluation across a range of technical and/or management functions including development of new criteria or applications or knowledge or procedures.

The application of a significant range of fundamental principles and complex techniques across a wide and often unpredictable variety of contexts in relation to either varied or highly specific functions. Contribution to the development of a broad plan, budget or strategy is involved and accountability and responsibility for self and others in achieving the outcomes is involved.

Applications involve significant judgement in planning, design, technical or leadership/guidance functions related to products, services, operations or procedures.

The degree of emphasis on breadth as against depth of knowledge and skills may vary between qualifications granted at this level.

Distinguishing Features of Learning Outcomes

Do the competencies or learning outcomes enable an individual with this qualification to:

- demonstrate understanding of specialised knowledge with depth in some areas
- analyse, diagnose, design and execute judgements across a broad range of technical or management functions
- generate ideas through the analysis of information and concepts at an abstract level

- demonstrate a command of wide-ranging, highly specialised technical, creative or conceptual skills
- demonstrate accountability for personal outputs within broad parameters
- demonstrate accountability for personal and group outcomes within broad parameters.

Vocational Graduate Certificate

Characteristics of competencies or learning outcomes

- The self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Substantial breadth and complexity involving the initiation, analysis, design, planning, execution and evaluation of technical and management functions in highly varied and highly specialised contexts.
- Applications involve making significant, high-level, independent judgements in major broad or planning, design, operational, technical and management functions in highly varied and specialised contexts. They may include responsibility and broad-ranging accountability for the structure, management and output of the work or functions of others.
- The degree of emphasis on breadth, as opposed to depth, of knowledge and skills may vary between qualifications granted at this level.

Distinguishing features of learning outcomes

- Demonstrate the self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Initiate, analyse, design, plan, execute and evaluate major broad or technical and management functions in highly varied and highly specialised contexts.
- Generate and evaluate ideas through the analysis of information and concepts at an abstract level.
- Demonstrate a command of wide-ranging, highly specialised technical, creative or conceptual skills in complex contexts.
- Demonstrate responsibility and broad-ranging accountability for the structure, management and output of the work or functions of others.

Vocational Graduate Diploma

Characteristics of competencies or learning outcomes

- The self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Substantial breadth, depth and complexity involving the initiation, analysis, design, planning, execution and evaluation of major functions, both broad and highly specialised, in highly varied and highly specialised contexts.
- Further specialisation within a systematic and coherent body of knowledge.
- Applications involve making high-level, fully independent, complex judgements in broad planning, design, operational, technical and management functions in highly varied and highly specialised contexts. They may include full responsibility and accountability for all aspects of work and functions of others, including planning, budgeting and strategy development.

- The degree of emphasis on breadth, as opposed to depth, of knowledge and skills may vary between qualifications granted at this level.

Distinguishing features of learning outcomes

Demonstrate the self-directed development and achievement of broad and highly specialised areas of knowledge and skills, building on prior knowledge and skills.

- Initiate, analyse, design, plan, execute and evaluate major functions, both broad and within highly varied and highly specialised contexts.
- Generate and evaluate complex ideas through the analysis of information and concepts at an abstract level.
- Demonstrate an expert command of wide-ranging, highly specialised, technical, creative or conceptual skills in complex and highly specialised or varied contexts.
- Demonstrate full responsibility and accountability for personal outputs.
- Demonstrate full responsibility and accountability for all aspects of the work or functions of others, including planning, budgeting and strategy.
-

MEM05 Qualification Pathways

The following pathways charts are provided to show the types of pathways into and from qualifications that are possible with this Training Package. For more information about qualifications and pathways contact Manufacturing Industry Skills Council (<http://www.mskills.com.au>)

Approved occupational or functional pathway descriptors for use in qualification titles are listed in the section below - Qualification titles - additional descriptors.

Reference to other occupational or functional pathways may be included on any qualification statement that is issued. This could be achieved by adding a pathway descriptor below the formal title of the qualification as shown in example 1 or by an additional sentence as shown in example 2 below.

Example 1

Certificate III in Engineering - Production Systems
CNC machine operations pathway

Example 2

Certificate III in Engineering - Production Systems
Achieved through the CNC machine operations pathway

Competency 'fields' may give some guidance when selecting units of competency to suit a particular qualification industry descriptor and/or occupational or functional descriptor. For instance, the Maintenance and Diagnostics field contains units that may be suitable for the qualification in the above example focussing on Mechanical Trade (Refrigeration and Air-conditioning).

Note that fields do not set up barriers to accessing the various qualifications. Units may be drawn from a number of fields to form a qualification. More information on competency fields can be found in the section Competency standards overview.

Prerequisite Units and Paths

The prerequisite units section within a unit of competency indicates whether other specific competencies are required to support those competencies included in that particular unit. For example: A person must have the competencies included in the unit MEM13004B Work safely with molten metals/glass before they can acquire the competencies required by a number of other units in the Casting and Moulding field, such as MEM04001B Operate melting furnaces.

Where there are options within the pre-requisites then separate combinations or paths are shown. Where multiple paths (path 1, path 2 etc.) are shown then the most appropriate path should be chosen.

Qualification Pathways

There are many ways in which a person can gain a national qualification. Existing employees, trainees, apprentices, or pre-employment students may obtain qualifications. The achievement of competence is what matters, not the way in which it is achieved.

Possible pathways may include:

- assessment only pathway
- combination of on-the-job and institution-based training
- institution-based training programs
- on-the-job training

Skills recognition pathways including New Apprenticeships

The Metal and Engineering Training Package provides national qualification outcomes based on recognition of competency achievement. These qualifications can be accessed through traineeship and apprenticeship pathways available under the New Apprenticeship System.

These qualifications may also be achieved through other pathways which do not involve a contract of training, such as recognition of prior learning.

However in all cases, achievement or recognition of competence is necessary in all of the required units of competency to be awarded a national qualification.

Customisation of qualifications

Selection and use of Units of Competency

All qualifications in the Metal and Engineering Training Package have the capacity for customisation to suit the needs of enterprises and learners. Options for selecting units of competency are included to enable customised training pathways to be followed and recognised by a qualification. In addition, the Range of Variables in the units of competency are designed to provide sufficient scope for the application of the units across the spectrum of work performed in Metal and Engineering and related industries.

There is further scope for customisation of each qualification through the inclusion of units of competency drawn from other endorsed Training Packages. RTOs should exercise care to ensure that those units do not duplicate existing MEM05 units. The packaging rules for each qualification provide further information on how much of each qualification can be comprised of non-MEM05 units of competency. The selection of the units of competency applies where the non-MEM05 units are available for inclusion at the same qualification level.

NOTE:

MEM05 also contains "imported" units of competency. These units are formally introduced by MSA into MEM05 from other training packages. Imported units form part of the bank of available units in selected qualifications. They do not relate to the customisation guidelines in the preceding paragraph.

It is the responsibility of the RTO to determine the relative points value of any units drawn from other Training Packages. When determining the equivalent points value of non-MEM05 units the following factors should be considered:

- the complexity of the skill
- the amount of required knowledge and experience needed
- the amount of on and off the job training required
- the 'size' of the unit in terms of its use in the source qualification
- the relative 'value' of the unit in comparison with other units selected.

Recognition of a person's existing competencies is accommodated through the relevant processes described in the Assessment Guidelines section of this Training Package.

Qualification titles - additional descriptors

An additional descriptor may be added to some qualification titles to illustrate a particular skills profile. This may be achieved by the addition of an occupational/functional pathway descriptor after the qualification title as shown on the qualification and/or transcript. This additional descriptor must be drawn from the approved list provided for each qualification and must be shown in brackets. For example, Certificate III in Engineering - Mechanical Trade (Refrigeration and Air-conditioning). There are no specific requirements associated with the use of these descriptors other than their use should reflect the choice of units of competency in the qualification. No other changes may be made to the qualification titles. Note that the addition of one of these descriptors to a qualification does not change the qualification's formal title or unique national code.

Reference to other occupational or functional pathways may be included on any qualification statement that is issued. This could be achieved by adding a pathway descriptor or sentence below the formal title of the qualification.

A summary of approved additional descriptors for qualification titles is shown below.

Summary of approved additional descriptors for qualification titles

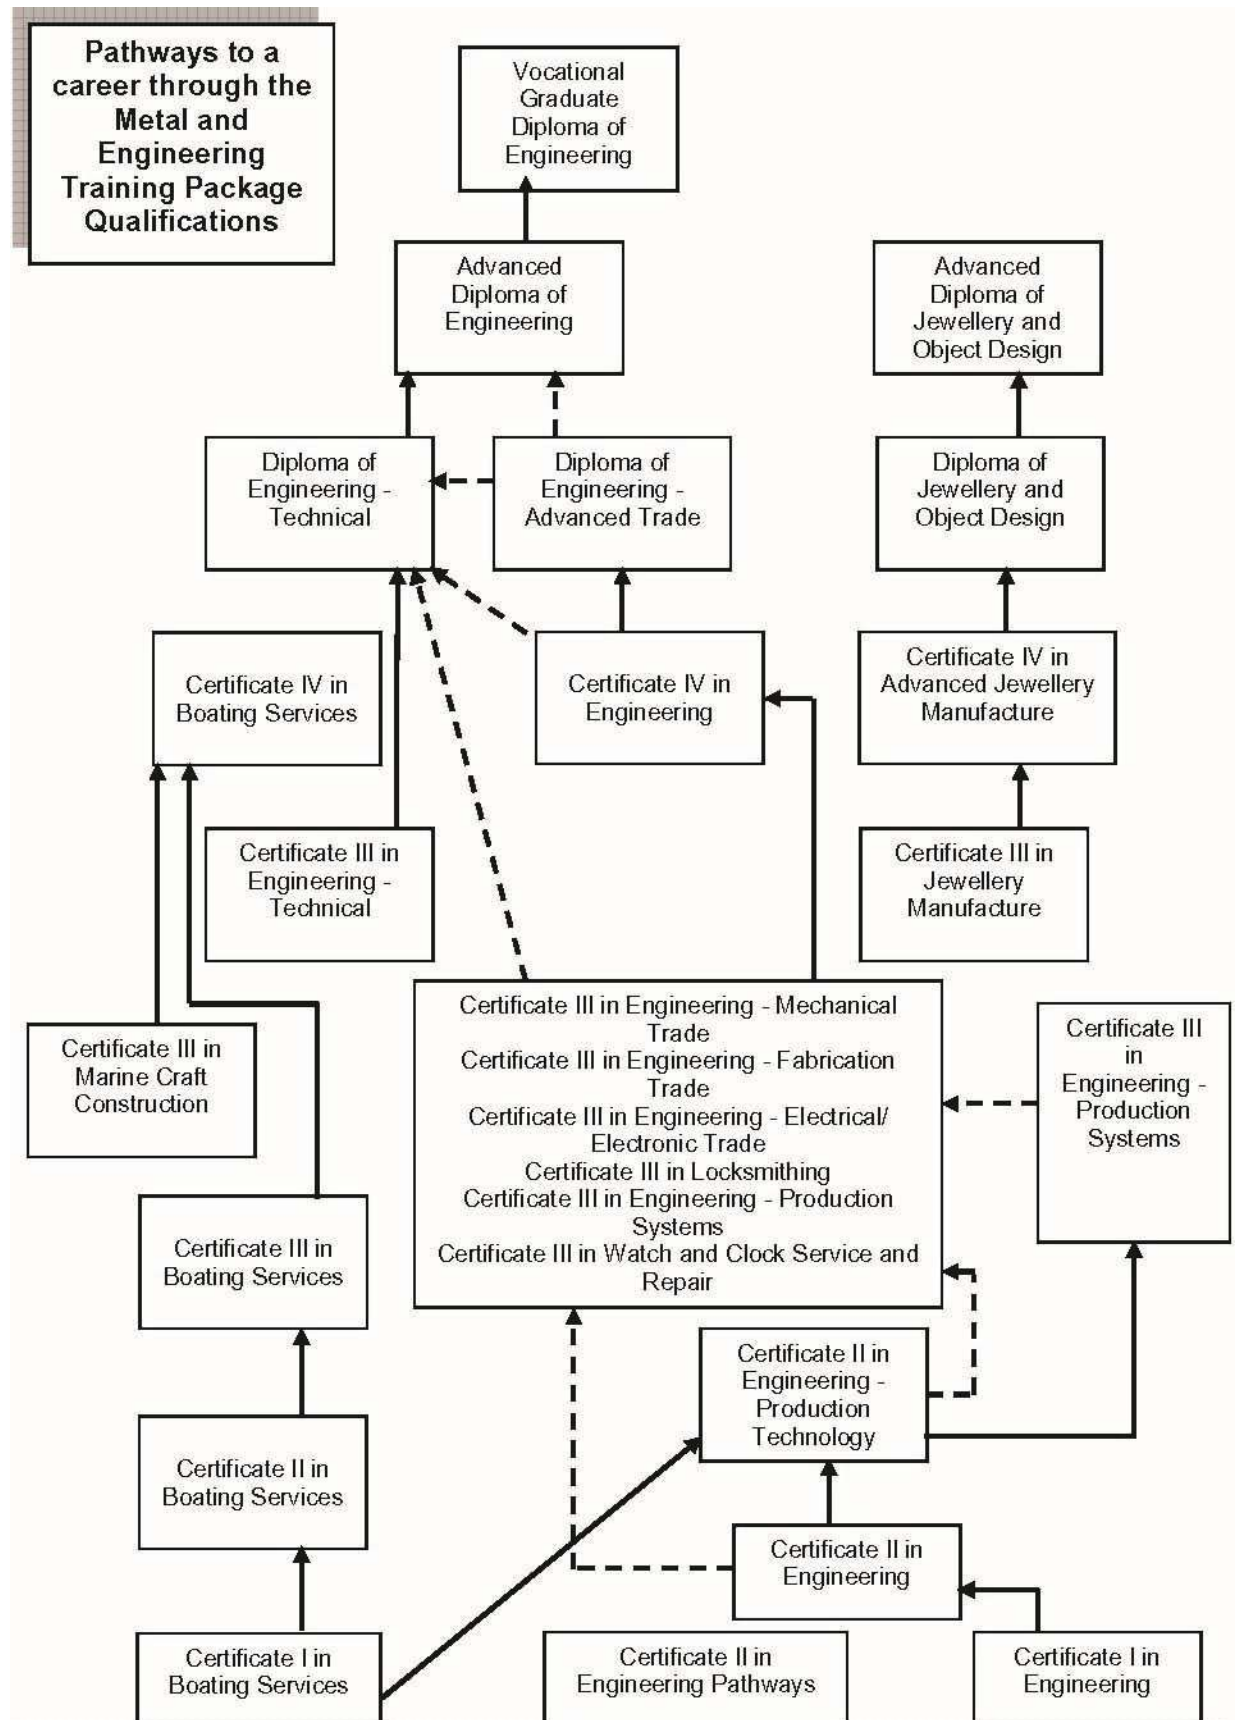

Code	Title	Approved additional descriptors
------	-------	---------------------------------

MEM10105	Certificate I in Engineering	There are no approved additional descriptors for this qualification
MEM10205	Certificate I in Boating Services	There are no approved additional descriptors for this qualification
MEM20105	Certificate II in Engineering	Marine craft manufacturing; Surface finishing.
MEM20205	Certificate II in Engineering - Production Technology	Marine craft manufacturing; Surface finishing, Marine Craft Surface Finishing
MEM20305	Certificate II in Boating Services	There are no approved additional descriptors for this qualification
MEM20413	Certificate II in Engineering Pathways	There are no approved additional descriptors for this qualification
MEM30105	Certificate III in Engineering - Production Systems	Surface finishing, Marine Craft Surface Finishing
MEM30205	Certificate III in Engineering - Mechanical Trade	Refrigeration and Air-conditioning; Instrumentation; Maintenance; Patternmaking, Toolmaking; Watchmaking Machining.
MEM30305	Certificate III in Engineering - Fabrication Trade	Casting and Moulding; Heavy Fabrication; Light Fabrication; Maintenance; Patternmaking; Surface Finishing; Welding.
MEM30405	Certificate III in Engineering - Electrical/Electronic Trade	Refrigeration and Air-conditioning; Instrumentation; Maintenance; Marine Electronics.
MEM30505	Certificate III in Engineering - Technical	There are no approved additional descriptors for this qualification
MEM30605	Certificate III in Jewellery Manufacture	There are no approved additional descriptors for this qualification
MEM30705	Certificate III in Marine Craft Construction	There are no approved additional descriptors for this qualification
MEM30805	Certificate III in Locksmithing	There are no approved additional descriptors for this qualification
MEM30905	Certificate III in Boating Services	There are no approved additional

		descriptors for this qualification
MEM31010	Certificate III in Watch and Clock Service and Repair	There are no approved additional descriptors for this qualification
MEM31112	Certificate III in Engineering (Composites Trade)	There are no approved additional descriptors for this qualification
MEM40105	Certificate IV in Engineering	Refrigeration and Air-conditioning; Casting and Moulding; CNC programming; Fluid Power; Heavy Fabrication; Instrumentation; Maintenance; Marine Electronics; Mechatronics; Patternmaking; Robotics; Toolmaking; Welding, Watch and Clock Service and Repair
MEM40205	Certificate IV in Boating Services	There are no approved additional descriptors for this qualification
MEM40311	Certificate IV in Advanced Jewellery Manufacture	There are no approved additional descriptors for this qualification
MEM40412	Certificate IV in Engineering Drafting	There are no approved additional descriptors for this qualification
MEM50105	Diploma of Engineering - Advanced Trade	Refrigeration and Air conditioning; Casting and Moulding; CNC programming; Fluid Power; Heavy Fabrication; Instrumentation; Maintenance; Marine Electronics; Mechatronics; Metrology; Non-Destructive Testing; Patternmaking; Robotics; Toolmaking; Welding, Watch and Clock Service and Repair
MEM50212	Diploma of Engineering - Technical	Mechanical, Mechatronics, Manufacturing, Maintenance, Aeronautical, Avionic
MEM50311	Diploma of Jewellery and Object Design	There are no approved additional descriptors for this qualification
MEM60112	Advanced Diploma of Engineering	Mechanical, Mechatronics, Manufacturing, Maintenance, Aeronautical, Avionic
MEM60211	Advanced Diploma of Jewellery and	There are no approved additional

	Object Design	descriptors for the qualification
MEM80112	Vocational Graduate Diploma of Engineering	There are no approved additional descriptors for the qualification

MEM05 Qualification Pathways Diagram

**NOTES:**

- The arrows signify normal progression pathways
- All qualifications allow for direct entry
- Most qualifications allow for credit – according to units completed
- Dashed lines are progression pathways between major occupational groupings in the workforce e.g. production to trade or trade to technician. These pathways may require additional training depending on previous electives completed.

Skill Sets

Definition

Skill sets are defined as single units of competency, or combinations of units of competency from an endorsed Training Package, which link to a licence or regulatory requirement, or defined industry need.

Wording on Statements of Attainment

Skill sets are a way of publicly identifying logical groupings of units of competency which meet an identified need or industry outcome. Skill sets are not qualifications.

Where skill sets are identified in a Training Package, the Statement of Attainment can set out the competencies a person has achieved in a way that is consistent and clear for employers and others. This is done by including the wording "these competencies meet [insert skill set title or identified industry area] need" on the Statement of Attainment. This wording applies only to skill sets that are formally identified as such in the endorsed Training Package. See the 2010 edition of the AQF Implementation Handbook for advice on wording on Statements of Attainment. http://www.aqf.edu.au/Portals/0/Documents/Handbook/AQF_Handbook_07.pdf

Skill Sets in this Training Package

MEMSS00001 Non Destructive Testing - Level 2 NDT practitioner

Historical and General Information

The Metal and Engineering Industry

The various sectors of the metal and engineering industry comprise about 50% of Australia's manufacturing industry in terms of value added share. In general, 85% of these industry sectors are comprised of small to medium enterprises. Each sector is involved in the manufacture, service and repair, and maintenance of products, tooling and equipment, as well as processes.

Engineering installation, repair and maintenance is also applied across most Australian industries. This aspect of applied engineering includes significant numbers of workers. Workforce numbers counted by industry and occupational classifications alone are misleading and unreliable. The current estimate of numbers of workers across Australian industries who are using engineering and manufacturing-engineering skills is approximately 650,000. The majority of these workers are not clearly identified in industry data and many are recorded as workers in other industries such as hospitals, retail etc.

MEM05v11

Background to development of MEM30413 Certificate II in Engineering Pathways

The new Certificate II in Engineering Pathways is designed to develop both skills that are essential to seek employment and skills that relate directly to a manufacturing and engineering workplace. This Certificate is intended to provide the student with a set of competencies that collectively open up pathways into employment and/or partial credit towards an apprenticeship.

The new certificate has been developed to apply to a learning and assessment environment where access to structured on the job learning may either not be available or is minimal. It is envisaged that delivery will be supplemented by work placement when available.

The qualification is intended for people interested in exposure to an engineering or related working environment with a view to entering into employment in that area. The learners could be at school or students undertaking the qualification through another registered training organisation. The content has been developed to be fit for purpose, using existing MEM units where considered appropriate and ensuring any gaps are filled with new pathways units.

This certificate is consistent with the AQF level II as defined in the AQF Implementation Handbook. It will ensure that graduates of the course:

- demonstrate basic operational knowledge in a range of engineering tasks in machining, fabrication, assembly and tooling;
- apply basic skills to engineering tasks such as machining, fabrication and assembly;
- apply known solutions and techniques to given standard engineering tasks;
- perform engineering tasks where a choice between a limited number of alternative is required;
- assess and record information in relation to the operation of an engineering workplace; take limited responsibility for their work output and learning.
-

MEM05v9

The Metal and Engineering Training Package qualifications for engineering technicians and paraprofessionals were first endorsed in 2005, and cover the four engineering disciplines of mechanical, mechatronic, manufacturing and maintenance engineering.

Since endorsement of MEM05 Metal and Engineering Training Package, technology has advanced and it was identified in the MSA Continuous Improvement Plan in 2009 that there was a need to develop new units and update many individual units in the technician/paraprofessional qualifications. As well, MSA received requests to develop units in additional areas of technology, such as rapid manufacturing and heating, ventilation, air conditioning and refrigeration (HVAC/R).

The new units have been included as additional electives, with no change to the packaging rules. All the MEM05 Metal and Engineering Training Package qualifications will be reviewed in 2013 as part of the MEM05 review/streamlining project which commenced August 2012.

In addition to the 73 new technician units, one new unit of competency has been developed in response to an approach from Sutton Tools (Maryborough in Victoria) in conjunction with Bendigo TAFE in 2011, to address the need for a new unit of competency for developing production machining skills for training existing workers in complex machine setting skills. Sutton Tools is one of the world's largest independent family owned cutting tool companies producing high-quality precision cutting tools for the industrial, trade and DIY markets. Sutton Tools is one of three companies chosen to feature in this year's Australian Made, Australian Grown (AMAG) 'Keep Australians Working' campaign. This new unit of competency will typically apply to senior operators undertaking volume production who have responsibility for machine set up to defined parameters, selection of materials and lubricants, establishment of datum points and basic marking out, as well as setting speeds, feeds and other machining parameters. This unit will be a new elective in the MEM20205 Certificate II in Engineering - Production Technology and MEM30105 Certificate III in Engineering - Production Systems and other qualifications requiring production machining skills.

MEM05v8

Project background

Drafting skills are widely used in many industry sectors within engineering and manufacturing and vary from basic entry of information into computer-aided design/drafting (CAD) files to participation in engineering design and the development of highly complex sets of drawings. The growth of CAD has seen a major change in drafting practice as manual drafting skills have become less standard. Most enterprises now use CAD software as the preferred means of generating design or detail drawings.

While the production of detail drawings is important to many sectors with MSA's coverage, for example, furnishing and textiles, clothing and footwear, this project was focused on the occupational outcomes of detail drafter, as well as CAD and drafting skills that are required by occupations covered by the MEM05 Metal and Engineering Training Package. The CAD skills of other industries in MSA's coverage will be addressed in the continuous improvement work being conducted for each sector.

The review and development of CAD skills was undertaken as part of a broader project to review the current MEM Diploma and Advanced Diploma engineering qualifications. This reflects the greater underpinning engineering skills and knowledge required for CAD which makes it less feasible to review design drafting as a separate activity.

The key industry drivers for change include:

- Changes to drafting software and hardware technology and consequent changes to skill application in the development of detail drawings.
- A requirement for more specific detail drawing skills for specialised industry sectors, for example, mechanical services, where current skill and knowledge coverage was not seen to be adequately addressed through more generic CAD units.
- Feedback since the MEM 2005 Review that changes in work roles and technology were leading to difficulty in accessing enough appropriate CAD units to package a well targeted qualification to meet a variety of industry applications.

- Inconsistency of AQF alignment and approach to delivering CAD training across Australia, with both Training Package and state/territory accredited training available at different times in a number of states/territories. In particular, the draft qualifications and units of competency covered by this submission will replace a state accredited course in NSW at the Certificate III level.

MEM05v7 Background

Composites trade certificate

Background

Manufacturing Skills Australia (MSA) were approached in 2009 by Composites Australia (CA), representing the composites sector, as well as the Queensland Department of Employment, Economic Development and Innovation seeking assistance in having the sector gain trade recognition by developing a trade Certificate III for the composites sector.

The composites sector is currently growing in importance as an employer as well as a supplier of fabricated component and products. Its reach goes from marine to aerospace as well as covering a wide range of everyday products. Composites are steadily replacing many traditional materials as well as allowing movement into areas where traditional materials would not be suitable. It is expanding into traditional metal fabrication and construction areas. The development of a qualification to support a trade required wide national consultation with industry and the industrial parties. MSA contracted Total Training and Performance Solutions (TaPS) to undertake work on this project.

Industry drivers for change

The major industry drivers for the development of this qualification are outlined below:

- Industry and relevant agencies have requested assistance in having the sector gain trade recognition by developing a trade Certificate III for the composites sector.
- This is a sector which is growing and expanding into traditional metal fabrication and construction areas

While there are currently qualifications recognising production skills for this sector, there are no qualifications recognising the need for trade skills. The increasing technical sophistication of this sector is a further justification for the development of a trade qualification.

Aluminothermic welding

Background

Early in 2011 MSA was approached by members of the Hydrocarbons Assessor Network to assist with developing a unit of competency to meet the skills needs of employees and contractors who undertake aluminothermic welding in a field/remote environment.

MSA supported the development of a new unit of competency for this application and commissioned Total Training and Performance Solutions to undertake the work.

Industry drivers for change

The industry reported to MSA that:

- aluminothermic welding is undertaken by process workers and contractors working in this sector

- the only existing unit available is specific to welding of rail and not applicable to this application
- there are safety and environmental issues in undertaking aluminothermic welding in this environment, as well as issues regarding consistency of training and assessment arising from the lack of a relevant endorsed unit of competency.

Industry representatives and RTOs advise that the addition of the new unit of competency to existing MEM qualifications will provide the basis for ensuring adequately skilled workers are undertaking this work, often in remote locations, in a developing sector.

MEM05v6 Background

Vocational Graduate Diploma of Engineering

Project Background

The project to develop the Vocational Graduate Diploma of Engineering was initiated in response to a request from the Manufacturing and Engineering Skills Advisory Board of Victoria for a Training Package based qualification to replace the current State accredited Advanced Diploma of Engineering - Principal Technical Officer qualification.

The development work for the qualification was undertaken by Richard Jenkins & Associates in conjunction with industry technical advisors. The project was overseen by the MSA MEM Board Sub-Committee. Consultations with industry organisations and Engineers Australia indicated national support for the development of a national qualification that would align to the accepted industry occupation of Principal Technical Officer.

Meeting Industry Needs

Paraprofessional engineering personnel are employed in many sectors and areas of manufacturing. The major Training Package covering the work of these paraprofessionals in manufacturing industry is the MEM05 Metal and Engineering Training Package. However, this Training Package has not had vocational qualifications aligned to all of the accepted skill levels for paraprofessional work especially those levels requiring a mixture of technical and technical leadership positions. In particular there has not been a national qualification to match the Principal Technical Officer level in industry. This level is recognised in relevant Awards and Agreements, including in some cases, variations of the Principal Technical Officer title. The MEM80111 Vocational Graduate Diploma of Engineering which is now being submitted for endorsement will be the first national qualification to align to the Principal Technical Officer occupation.

The MEM80111 Vocational Graduate Diploma of Engineering also meets the needs of industry for a vocational qualification to align to the internationally accepted designation of Engineering Technologist. This level is recognised through an Accord of Engineering Associations known as the Sydney Accord. The signatory body in Australia is Engineers Australia which has given support for the endorsement of the MEM80111 Vocational Graduate Diploma of Engineering. Engineers Australia has also offered to assist MSA in promoting the MEM80111 Vocational Graduate Diploma of Engineering and in developing promotional and explanatory material.

Certificate IV in Advanced Jewellery Manufacture

Project background

The MEM40311 Certificate IV in Advanced Jewellery Manufacture has been specifically developed to be delivered to people who are existing jewellery tradespersons or delivered to apprentices in a jewellery-related trade who choose to study at a higher level during their apprenticeship. The qualification packaging has been developed on an assumption that competency will be developed through a combination of on and off the job learning strategies. The qualification may also be achieved through formal skills recognition processes.

Meeting industry needs

The jewellery design and manufacture industry in Australia generates approximately \$889.5 million in revenue, contributing an estimated \$227.1 million to the Australian GDP while employing about 4,191 people. (*IBISWorld Industry Report C2941 Jewellery Manufacturing in Australia, December 2009 Raghu Rajakumar*).

Employees within the industry design and manufacture a range of jewellery and object products, including custom-made, one-off designs, mass produced designs, costume jewellery, mint coins, badges, medals and church ware. Typically workers work with silverware, precious or semi-precious metal and stones. Industry operators may also be involved with designing, manufacturing, engraving, chasing or etching jewellery or precious metal, and selling these products to wholesalers or in certain instances, directly to retailers. Current coverage within the MEM05 Metal and Engineering Training Package targets the Certificate III trade level outcome which provides the essential technical skills for jewellery manufacturers. This new Certificate IV qualification addresses industry need for more extensive and specialised skills in areas such as engraving and gem setting, and covers skills required to work with a greater range of materials and more complex items. It builds upon trade level skills and encompasses some design units to support a well-rounded outcome for those providing custom-made items.

The revised MEM05 Metal and Engineering Training Package

The MEM05 Metal and Engineering Training Package was developed to replace the MEM98 Metal and Engineering Training Package. The Training Package is designed to meet the training and skills recognition needs of the Australian engineering industry sector. It covers the competencies used by people employed in the manufacturing, engineering and related services industries.

It also provides access to the apprenticeship streams provided by the National Metal and Engineering Industry Competency Standards leading to national qualifications, with traineeship pathways also available. It also enables further career advancement beyond trade apprenticeship and technical traineeship, with progression to Advanced Diploma. New qualifications for technical workers were added to MEM05 to more accurately reflect the nature of their work. These qualifications make a distinction between technical work and that of tradespersons. In particular, a new Diploma and Advanced Diploma of Engineering were developed to meet the needs of technical workers and para-professionals in the engineering field. For the current Training Package, four disciplines were selected as priority areas. These disciplines are as follows:

- Mechanical
- Mechatronics
- Maintenance
- Manufacturing

Other disciplines will be added to the qualifications over the life of the training package.

There occurred a simplification of some of the qualification titles, as well as changes to the list of qualification descriptors that may be added by RTOs.

The bank of units of competency was revised and extended. Part of the revision included bringing all units to the current approved format. Further information was added to each unit to assist users.

Employability Skills

Employability Skills replacing Key Competency information from 2006

In May 2005, the approach to incorporate Employability Skills within Training Package qualifications and units of competency was endorsed. As a result, from 2006 Employability Skills will progressively replace Key Competency information in Training Packages.

Background to Employability Skills

Employability Skills are also sometimes referred to as generic skills, capabilities or Key Competencies. The Employability Skills discussed here build on the Mayer Committee's Key Competencies, which were developed in 1992 and attempted to describe generic competencies for effective participation in work.

The Business Council of Australia (BCA) and the Australian Chamber of Commerce and Industry (ACCI), produced the *Employability Skills for the Future* report in 2002 in consultation with other peak employer bodies and with funding provided by the Department of Education, Science and Training (DEST) and the Australian National Training Authority (ANTA). Officially released by Dr Nelson (Minister for Education, Science and Training) on 23 May 2002, copies of the report are available from the DEST website at: http://www.dest.gov.au/archive/ty/publications/employability_skills/index.htm.

The report indicated that business and industry now require a broader range of skills than the Mayer Key Competencies Framework and featured an Employability Skills Framework identifying eight Employability Skills*:

- communication
- teamwork
- problem solving
- initiative and enterprise
- planning and organising
- self-management
- learning
- technology.

The report demonstrated how Employability Skills can be further described for particular occupational and industry contexts by sets of facets. The facets listed in the report are the aspects of the Employability Skills that the sample of employers surveyed identified as being important work skills. These facets were seen by employers as being dependent both in their nature and priority on an enterprise's business activity.

*Personal attributes that contribute to employability were also identified in the report but are not part of the Employability Skills Framework.

Employability Skills Framework

The following table contains the Employability Skills facets identified in the report *Employability Skills for the Future*.

Skill	Facets
-------	--------

	Aspects of the skill that employers identify as important. The nature and application of these facets will vary depending on industry and job type.
Communication that contributes to productive and harmonious relations across employees and customers	<ul style="list-style-type: none"> • listening and understanding • speaking clearly and directly • writing to the needs of the audience • negotiating responsively • reading independently • empathising • using numeracy effectively • understanding the needs of internal and external customers • persuading effectively • establishing and using networks • being assertive • sharing information • speaking and writing in languages other than English
Teamwork that contributes to productive working relationships and outcomes	<ul style="list-style-type: none"> • working across different ages irrespective of gender, race, religion or political persuasion • working as an individual and as a member of a team • knowing how to define a role as part of the team • applying teamwork to a range of situations e.g. futures planning and crisis problem solving • identifying the strengths of team members • coaching and mentoring skills, including giving feedback
Problem solving that contributes to productive outcomes	<ul style="list-style-type: none"> • developing creative, innovative and practical solutions • showing independence and initiative in identifying and solving problems • solving problems in teams • applying a range of strategies to problem solving • using mathematics, including budgeting and financial management to solve problems • applying problem-solving strategies across a range of areas • testing assumptions, taking into account the

	<p>context of data and circumstances</p> <ul style="list-style-type: none"> • resolving customer concerns in relation to complex project issues
Initiative and enterprise that contribute to innovative outcomes	<ul style="list-style-type: none"> • adapting to new situations • developing a strategic, creative and long-term vision • being creative • identifying opportunities not obvious to others • translating ideas into action • generating a range of options • initiating innovative solutions
Planning and organising that contribute to long and short-term strategic planning	<ul style="list-style-type: none"> • managing time and priorities - setting time lines, coordinating tasks for self and with others • being resourceful • taking initiative and making decisions • adapting resource allocations to cope with contingencies • establishing clear project goals and deliverables • allocating people and other resources to tasks • planning the use of resources, including time management • participating in continuous improvement and planning processes • developing a vision and a proactive plan to accompany it • predicting - weighing up risk, evaluating alternatives and applying evaluation criteria • collecting, analysing and organising information • understanding basic business systems and their relationships
Self-management that contributes to employee satisfaction and growth	<ul style="list-style-type: none"> • having a personal vision and goals • evaluating and monitoring own performance • having knowledge and confidence in own ideas and visions • articulating own ideas and visions • taking responsibility
Learning that contributes to ongoing improvement and expansion in employee and company operations and outcomes	<ul style="list-style-type: none"> • managing own learning • contributing to the learning community at the workplace • using a range of mediums to learn -

	<p>mentoring, peer support and networking, IT and courses</p> <ul style="list-style-type: none"> • applying learning to technical issues (e.g. learning about products) and people issues (e.g. interpersonal and cultural aspects of work) • having enthusiasm for ongoing learning • being willing to learn in any setting - on and off the job • being open to new ideas and techniques • being prepared to invest time and effort in learning new skills • acknowledging the need to learn in order to accommodate change
<p>Technology that contributes to the effective carrying out of tasks</p>	<ul style="list-style-type: none"> • having a range of basic IT skills • applying IT as a management tool • using IT to organise data • being willing to learn new IT skills • having the OHS knowledge to apply technology • having the appropriate physical capacity

Employability Skills Summary

An Employability Skills Summary exists for each qualification. Summaries provide a lens through which to view Employability Skills at the qualification level and capture the key aspects or facets of the Employability Skills that are important to the job roles covered by the qualification. Summaries are designed to assist trainers and assessors to identify and include important industry application of Employability Skills in learning and assessment strategies. The following is important information for trainers and assessors about Employability Skills Summaries.

- Employability Skills Summaries provide examples of how each skill is applicable to the job roles covered by the qualification.
- Employability Skills Summaries contain general information about industry context which is further explained as measurable outcomes of performance in the units of competency in each qualification.
- The detail in each Employability Skills Summary will vary depending on the range of job roles covered by the qualification in question.
- Employability Skills Summaries are not exhaustive lists of qualification requirements or checklists of performance (which are separate assessment tools that should be designed by trainers and assessors after analysis at the unit level).
- Employability Skills Summaries contain information that may also assist in building learners' understanding of industry and workplace expectations.
-

Examples from this Training Package of Employability Skills

Unit component	Example of embedded Employability Skill
Unit Title	Manufacture watch and clock components
Unit Descriptor	This unit competency covers manufacturing watch and clock components using a range of general and specialist machines and engineering techniques.
Element	Plan and organise the project
Performance Criteria	Select appropriate equipment and tools to undertake process Plan suitable method of production Undertake measurements to task tolerances
Range Statement	Working drawings may include sketch or illustration by hand, including dimensions Replacement parts may include wheels and pinions, arbors and pivots, click springs, ratchet wheel, setting lever springs.
Required Skills and Knowledge	Interpreting watch and clock drawings, manuals and other documentation that provide information of part design and tolerances Performing milling operations using milling attachment on a watch and clockmaker's lathe or a bench mill. Knowledge of typical materials used in watch and clock making Selecting and preparing cutting tools.
Evidence Guide	Manufacture, finish and fit replacement watch or clock components to original tolerances. Select and use appropriate hand tools.

Assessment Guidelines

Introduction

These Assessment Guidelines provide the endorsed framework for assessment of units of competency in this Training Package. They are designed to ensure that assessment is consistent with the *Australian Quality Training Framework (AQTF) Essential Standards for Initial and Continuing Registration*. Assessments against the units of competency in this Training Package must be carried out in accordance with these Assessment Guidelines.

Assessment System Overview

This section provides an overview of the requirements for assessment when using this Training Package, including a summary of the AQTF requirements; licensing/registration requirements; and assessment pathways.

Quality assessment underpins the credibility of the vocational education and training sector. The Assessment Guidelines of a Training Package are an important tool in supporting quality assessment.

Assessment within the National Skills Framework is the process of collecting evidence and making judgements about whether competency has been achieved to confirm whether an individual can perform to the standards expected in the workplace, as expressed in the relevant endorsed unit of competency.

Assessment must be carried out in accordance with the:

- benchmarks for assessment
- specific industry requirements
- principles of assessment
- rules of evidence
- assessment requirements set out in the AQTF.

Benchmarks for Assessment

The endorsed units of competency in this Training Package are the benchmarks for assessment. As such, they provide the basis for nationally recognised Australian Qualifications Framework (AQF) qualifications and Statements of Attainment issued by Registered Training Organisations (RTOs).

Principles of Assessment

All assessments carried out by RTOs are required to demonstrate compliance with the principles of assessment:

- validity
- reliability
- flexibility
- fairness
- sufficiency

These principles must be addressed in the:

- design, establishment and management of the assessment system for this Training Package
- development of assessment tools
- conduct of assessment.

Validity

Assessment is valid when the process is sound and assesses what it claims to assess. Validity requires that:

- (a) assessment against the units of competency must cover the broad range of skills and knowledge that are essential to competent performance
- (b) assessment of knowledge and skills must be integrated with their practical application

- (c) judgement of competence must be based on sufficient evidence (that is, evidence gathered on a number of occasions and in a range of contexts using different assessment methods). The specific evidence requirements of each unit of competency provide advice on sufficiency

Reliability

Reliability refers to the degree to which evidence presented for assessment is consistently interpreted and results in consistent assessment outcomes. Reliability requires the assessor to have the required competencies in assessment and relevant vocational competencies (or to assess in conjunction with someone who has the vocational competencies). It can only be achieved when assessors share a common interpretation of the assessment requirements of the unit(s) being assessed.

Flexibility

To be flexible, assessment should reflect the candidate's needs; provide for recognition of competencies no matter how, where or when they have been acquired; draw on a range of methods appropriate to the context, competency and the candidate; and support continuous competency development.

Fairness

Fairness in assessment requires consideration of the individual candidate's needs and characteristics, and any reasonable adjustments that need to be applied to take account of them. It requires clear communication between the assessor and the candidate to ensure that the candidate is fully informed about, understands and is able to participate in, the assessment process, and agrees that the process is appropriate. It also includes an opportunity for the person being assessed to challenge the result of the assessment and to be reassessed if necessary.

Sufficiency

Sufficiency relates to the quality and quantity of evidence assessed. It requires collection of enough appropriate evidence to ensure that all aspects of competency have been satisfied and that competency can be demonstrated repeatedly. Supplementary sources of evidence may be necessary. The specific evidence requirements of each unit of competency provide advice on sufficiency. Sufficiency is also one of the rules of evidence.

Rules of Evidence

The rules of evidence guide the collection of evidence that address the principles of validity and reliability, guiding the collection of evidence to ensure that it is valid, sufficient, current and authentic.

Valid

Valid evidence must relate directly to the requirements of the unit of competency. In ensuring evidence is valid, assessors must ensure that the evidence collected supports demonstration of the outcomes and performance requirements of the unit of competency together with the knowledge and skills necessary for competent performance. Valid evidence must encapsulate the breadth and depth of the unit of competency, which will necessitate using a number of different assessment methods.

Sufficient

Sufficiency relates to the quality and quantity of evidence assessed. It requires collection of enough appropriate evidence to ensure that all aspects of competency have been satisfied and that competency can be demonstrated repeatedly. Supplementary sources of evidence may be necessary. The specific evidence requirements of each unit of competency provide advice on sufficiency.

Current

In assessment, currency relates to the age of the evidence presented by a candidate to demonstrate that they are still competent. Competency requires demonstration of current performance, so the evidence collected must be from either the present or the very recent past.

Authentic

To accept evidence as authentic, an assessor must be assured that the evidence presented for assessment is the candidate's own work.

Assessment Requirements of the Australian Quality Training Framework

Assessment leading to nationally recognised AQF qualifications and Statements of Attainment in the vocational education and training sector must meet the requirements of the AQTF as expressed in the AQTF 2010 *Essential Standards for Registration*.

The AQTF 2010 *Essential Standards for Initial and Continuing Registration* can be downloaded from < www.training.com.au >.

The following points summarise the assessment requirements.

Registration of Training Organisations

Assessment must be conducted by, or on behalf of, an RTO formally registered by a State or Territory Registering Body in accordance with the AQTF. The RTO must have the specific units of competency and/or AQF qualifications on its scope of registration.

Quality Training and Assessment

Each RTO must provide quality training and assessment across all its operations. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*, Standard 1.

Assessor Competency Requirements

Each person involved in training, assessment or client service must be competent for the functions they perform. AQTF 2010 *Essential Standards for Initial and Continuing Registration*, Standard 1 for assessor (and trainer) competency requirements. See also the AQTF 2010 *Users Guide to the Essential Standards for Registration* Appendix 2.

Assessment Requirements

The RTOs assessments, including RPL, must meet the requirements of the relevant endorsed Training Package. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

Assessment Strategies

Each RTO must have strategies for training and assessment that meet the requirements of the relevant Training Package or accredited course and are developed in consultation with industry stakeholders. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

National Recognition

Each RTO must recognise the AQF qualifications and Statements of Attainment issued by any other RTO. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

Access and Equity and Client Outcomes

Each RTO must adhere to the principles of access and equity and maximise outcomes for its clients. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

Monitoring Assessments

Training and/or assessment provided on behalf of the RTO must be monitored to ensure that it is in accordance with all aspects of the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

Recording Assessment Outcomes

Each RTO must manage records to ensure their accuracy and integrity. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

Issuing AQF Qualifications and Statements of Attainment

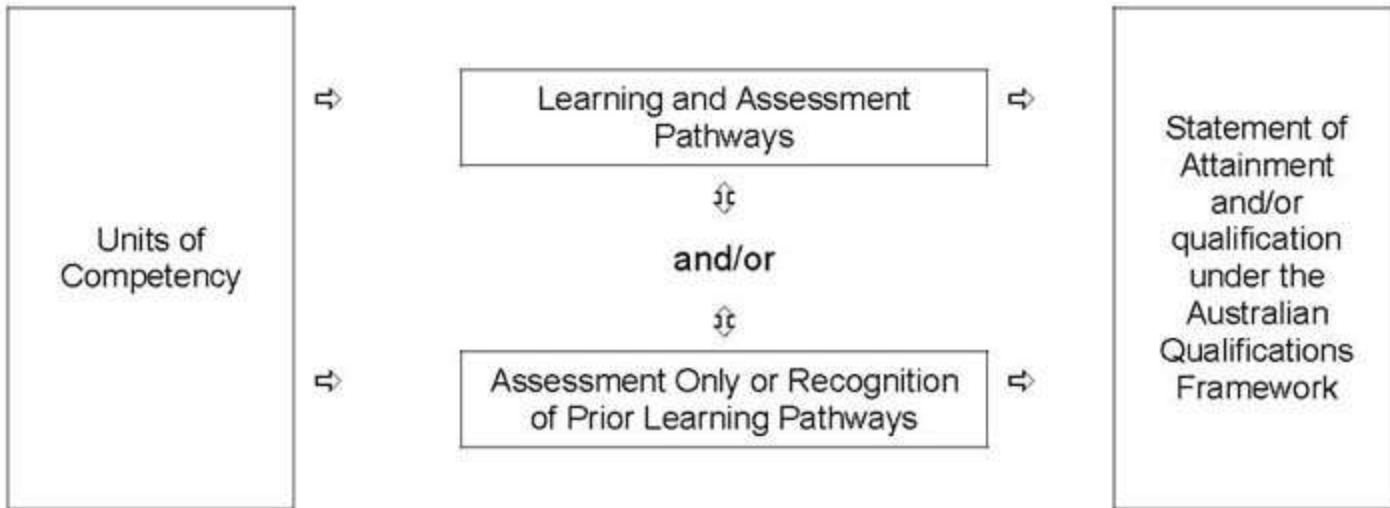

Each RTO must issue AQF qualifications and Statements of Attainment that meet the requirements of the current AQF Implementation Handbook and the endorsed Training Packages within the scope of its registration. An AQF qualification is issued once the full requirements for a qualification, as specified in the nationally endorsed Training Package are met. A Statement of Attainment is issued when an individual has completed one or more units of competency from nationally recognised qualification(s)/courses(s). See the AQTF and the edition of the AQF Implementation Handbook-available on the AQF Council website < www.aqf.edu.au>.

Pathways

The competencies in this Training Package may be attained in a number of ways including through:

- formal or informal education and training
- experiences in the workplace
- general life experience, and/or
- any combination of the above.

Assessment under this Training Package leading to an AQF qualification or Statement of Attainment may follow a learning and assessment pathway, an assessment-only or recognition pathway, or a combination of the two as illustrated in the following diagram.

Each of these assessment pathways leads to full recognition of competencies held - the critical issue is that the candidate is competent, not how the competency was acquired. Assessment, by any pathway, must comply with the assessment requirements set out in the Assessment Guidelines of the Training Package, and the AQTF, where relevant, the Australian Qualifications Framework.

Learning and Assessment Pathways

Usually, learning and assessment are integrated, with assessment evidence being collected and feedback provided to the candidate at any time throughout the learning and assessment process.

Learning and assessment pathways may include structured programs in a variety of contexts using a range of strategies to meet different learner needs. Structured learning and assessment programs could be: group-based, work-based, project-based, self-paced, action learning-based; conducted by distance or e-learning; and/or involve practice and experience in the workplace.

Learning and assessment pathways to suit Australian Apprenticeships have a mix of formal structured training and structured workplace experience with formative assessment activities through which candidates can acquire and demonstrate skills and knowledge from the relevant units of competency.

Credit Pathways

Credit is the value assigned for the recognition of equivalence in content between different types of learning and/or qualifications which reduces the volume of learning required to achieve a qualification.

Credit arrangements must be offered by all RTOs that offer Training Package qualifications. Each RTO must have a systematic institutional approach with clear, accessible and transparent policies and procedures.

Competencies already held by individuals can be formally assessed against the units of competency in this Training Package, and should be recognised regardless of how, when or where they were acquired, provided that the learning is relevant to the unit of competency outcomes.

Recognition of Prior Learning

Recognition of Prior Learning (RPL) is an assessment process which determines the credit outcomes of an individual application for credit.

The availability of RPL provides all potential learners with access to credit opportunities.

The recognition of prior learning pathway is appropriate for candidates who have previously attained skills and knowledge and who, when enrolling in qualifications, seek to shorten the duration of their training and either continue or commence working. This may include the following groups of people:

existing workers; individuals with overseas qualifications; recent migrants with established work histories; people returning to the workplace; and people with disabilities or injuries requiring a change in career.

As with all assessment, RPL assessment should be undertaken by academic or teaching staff with expertise in the subject, content of skills area, as well as knowledge of and expertise in RPL assessment policies and procedures.

Assessment methods used for RPL should provide a range of ways for individuals to demonstrate that they have met the required outcomes and can be granted credit. These might include:

- questioning (oral or written) consideration of a portfolio and review of contents
- consideration of third party reports and/or other documentation such as documentation such as articles, reports, project material, papers, testimonials or other products prepared by the RPL applicant that relate to the learning outcomes of the relevant qualification
- component mapping of learning outcomes from prior formal or non-formal learning to the relevant qualification components
- observation of performance, and participation in structured assessment activities the individual would normally be required to undertake if they were enrolled in the qualification component/s.

In a RPL pathway, the candidate provides current, quality evidence of their competency against the relevant unit of competency. This process may be directed by the candidate and verified by the assessor. Where the outcomes of this process indicate that the candidate is competent, structured training is not required. The RPL requirements of the AQTF must be met.

As with all assessment, the assessor must be confident that the evidence indicates that the candidate is currently competent against the endorsed unit of competency. This evidence may take a variety of forms and might include certification, references from past employers, testimonials from clients, work samples and/or observation of the candidate. The onus is on candidates to provide sufficient evidence to satisfy assessors that they currently hold the relevant competencies. In judging evidence, the assessor must ensure that the evidence of prior learning is:

- authentic (the candidate's own work);
- valid (directly related to the current version of the relevant endorsed unit of competency);
- reliable (shows that the candidate consistently meets the endorsed unit of competency);
- current (reflects the candidate's current capacity to perform the aspect of the work covered by the endorsed unit of competency); and
- sufficient (covers the full range of elements in the relevant unit of competency and addresses the four dimensions of competency, namely task skills, task management skills, contingency management skills, and job/role environment skills).

Credit Transfer

Credit transfer is a process which provides learners with agreed and consistent credit outcomes based on equivalences in content between matched qualifications.

This process involves education institutions:

- mapping, comparing and evaluating the extent to which the defined learning outcomes and assessment requirements of the individual components of one qualification are equivalent to the learning outcomes and assessment requirements of the individual components of another qualification
- making an educational judgment of the credit outcomes to be assigned between the matched components of the two qualifications
- setting out the agreed credit outcomes in a documented arrangement or agreement, and publicising the arrangement/agreement and credit available.

Combination of Pathways

Credit may be awarded on the basis of a combination of credit transfer plus an individual RPL assessment for additional learning. Once credit has been awarded on the basis of RPL, subsequent credit transfer based on these learning outcomes should not include revisiting the RPL assessment but should be based on credit transfer or articulation or other arrangements between providers.

Where candidates for assessment have gained competencies through work and life experience and gaps in their competence are identified, or where they require training in new areas, a combination of pathways may be appropriate.

In such situations, the candidate may undertake an initial assessment to determine their current competency. Once current competency is identified, a structured learning and assessment program ensures that the candidate acquires the required additional competencies identified as gaps.

Assessor Requirements

This section identifies the specific requirements on the vocational competence and experience for assessors, to ensure that they meet the needs of industry and their obligations under AQTF, and clarifies how others may contribute to the assessment process where one person alone does not hold all the required competencies.

Assessor Competencies

The AQTF specifies mandatory competency requirements for assessors. For information, Element 1.4 from the AQTF 2007 *Essential Standards for Registration* follows:

- 1.4 Training and assessment is delivered by trainers and assessors who:
- a) have the necessary training and assessment competencies as determined by the National Quality Council or its successors, and
 - b) have the relevant vocational competencies at least to the level being delivered or assessed, and
 - c) can demonstrate current industry skills directly relevant to the training/assessment being undertaken, and
 - d) continue developing their Vocational Education and Training (VET) knowledge and skills as well as their industry currency and trainer/assessor competence.

* See AQTF 2010 *Users Guide to the Essential Standards for Registration* Appendix 2

Designing Assessment Tools

This section provides an overview on the use and development of assessment tools.

Use of Assessment Tools

Assessment tools provide a means of collecting the evidence that assessors use in making judgments about whether candidates have achieved competency.

There is no set format or process for the design, production or development of assessment tools. Assessors may use prepared assessment tools, such as those specifically developed to support this Training Package, or they may develop their own.

Using Prepared Assessment Tools

If using prepared assessment tools, assessors should ensure these relate to the current version of the relevant unit of competency. The current unit of competency can be checked on the National Register < www.training.gov.au >.

Developing Assessment Tools

When developing assessment tools, assessors must ensure that they:

- are benchmarked against the relevant unit or units of competency
- are reviewed as part of the continuous improvement of assessment strategies as required under Standard 1 of the AQTF 2007
- meet the assessment requirements expressed in Standard 1 of the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

A key reference for assessors developing assessment tools is TAE10 Training and Education Training Package.

Language, Literacy and Numeracy

The design of assessment tools must reflect the language, literacy and numeracy competencies required for the performance of a task in the workplace and not exceed these expectations.

Conducting Assessment

This section details the mandatory assessment requirements and provides information on equity in assessment including reasonable adjustment.

Mandatory Assessment Requirements

Assessments must meet the criteria set out in the 2010 *Essential Standards for Initial and Continuing Registration*. For information, the mandatory assessment requirements from Standard 1 from the AQTF 2010 *Essential Standards for Initial and Continuing Registration* are as follows:

1.5 Assessment, including Recognition of Prior Learning:

- a) meets the requirements of the relevant Training Package or accredited course,
- b) is conducted in accordance with the principles of assessment and the rules of evidence, and
- c) meets workplace and, where relevant, regulatory requirements.
- d) is systematically validated.

Assessment of Employability Skills

Employability Skills are integral to workplace competency. As such they must be considered in the design, customisation, delivery and assessment of vocational education and training programs in an integrated and holistic way, as represented diagrammatically below.

Employability Skills are embedded and explicit within each unit of competency, and an Employability Skills Summary is available for each qualification. Training providers must use Employability Skills information in order to design valid and reliable training and assessment strategies. This analysis could include:

- reviewing units of competency to locate relevant Employability Skills and determine how they are applied within the unit
- analysing the Employability Skills Summary for the qualification in which the unit or units are packaged to help clarify relevant industry and workplace contexts and the
- application of Employability Skills at that qualification outcome
- designing training and assessment to address Employability Skills requirements.

The National Quality Council has endorsed a model for assessing and reporting Employability Skills, which contains further suggestions about good practice strategies in teaching, assessing, learning and reporting Employability Skills. The model is available from <<http://www.training.com.au/>>.

The endorsed approach includes learners downloading qualification specific Employability Skills Summaries for Training Package qualifications from an online repository at <<http://employabilityskills.training.com.au>>

For more information on Employability Skills in Manufacturing Industry Skills Council Training Packages go to the Manufacturing Industry Skills Council website at <http://www.mskills.com.au>.

Employability Skills are reported on each qualification using the following statement on the qualification testamur: "A summary of the Employability Skills developed through this qualification can be downloaded from <http://employabilityskills.training.com.au> "

Access and Equity

An individual's access to the assessment process should not be adversely affected by restrictions placed on the location or context of assessment beyond the requirements specified in this Training Package: training and assessment must be bias-free.

Under the rules for their development, Training Packages must reflect and cater for the increasing diversity of Australia's VET clients and Australia's current and future workforce. The flexibilities offered by Training Packages should enhance opportunities and potential outcomes for all people so that we can all benefit from a wider national skills base and a shared contribution to Australia's economic development and social and cultural life.

Reasonable adjustments

It is important that education providers take meaningful, transparent and reasonable steps to consult, consider and implement reasonable adjustments for students with disability. Under the *Disability Standards for Education 2005*, education providers must make reasonable adjustments for people with disability to the maximum extent that those adjustments do not cause that provider unjustifiable hardship. While "reasonable adjustment" and "unjustifiable hardship" are different concepts and involve different considerations, they both seek to strike a balance between the interests of education providers and the interests of students with and without disability.

An adjustment is any measure or action that a student requires because of their disability, and which has the effect of assisting the student to access and participate in education and training on the same basis as students without a disability. An adjustment is reasonable if it achieves this purpose while taking into account factors such as the nature of the student's disability, the views of the student, the potential effect of the adjustment on the student and others who might be affected, and the costs and benefits of making the adjustment.

An education provider is also entitled to maintain the academic integrity of a course or program and to consider the requirements or components that are inherent or essential to its nature when assessing whether an adjustment is reasonable. There may be more than one adjustment that is reasonable in a given set of circumstances; education providers are required to make adjustments that are reasonable and that do not cause them unjustifiable hardship. The Training Package Guidelines provides more information on reasonable adjustment, including examples of adjustments. *Go to* <http://www.deewr.gov.au/tpdh/Pages/home.aspx>.

Further Sources of Information

The section provides a listing of useful contacts and resources to assist assessors in planning, designing, conducting and reviewing of assessments against this Training Package.

Assessment Resources

Registered training organisations (RTOs) are at the forefront of vocational education and training (VET) in Australia. They translate the needs of industry into relevant, quality, client-focussed training and assessment.

RTOs should strive for innovation in VET teaching and learning practices and develop highly flexible approaches to assessment which take cognisance of specific needs of learners, in order to improve delivery and outcomes of training.

Resources can be purchased or accessed from TVET Australia provides an integrated service to enable users of the national training system to identify and acquire training materials, identify copyright requirements and enter licenses for use of that material consistent with the scope and direction of the NQC. <http://www.productservices.tvetaustralia.com.au/>

MEM05 Assessment Advice

It is important that assessors are familiar with the use of the Metal and Engineering Competency Standards and the agreed industrial processes for their implementation in workplaces. Manufacturing Skills Australia can provide a list of approved organisations that provide an Implementing Competency Standards Program that will assist assessors.

Advice on integrated assessment

The Metal and Engineering Training Package is comprised of units of competency that will rarely be used in isolation. All units will form part of a person's job role. No single unit of competency can be acquired in isolation and therefore opportunities for integrated learning and assessment activities should always be explored. Careful consideration of the profile of competencies will identify groups of units where integrated assessment (or co-assessment) can be applied.

Adoption of integrated assessment can provide significant savings in time, cost and effort of assessors and candidates. Assessment tools should be designed so that assessment evidence can be gathered for a group of units and the outcomes identified with those units. This approach can be quite adequately used to also deal with prerequisites.

Advice on assessment of Prerequisite Units

The Metal and Engineering Training Package units of competency are built on a structure of accumulated skills and knowledge. This means that there are hierarchies of skills and knowledge that are built up from a range of competencies. Any units of competency that underpin others are listed as prerequisites.

The use of the term 'prerequisite' has been used for many years in the Metal and Engineering units of competency. In terms of training delivery and assessment, the term 'prerequisite' means that a person cannot be deemed 'competent' in the higher level unit until they are deemed competent in the prerequisite units. An RTO may choose an integrated assessment approach (see above). In this case the actual assessment of prerequisites may occur concurrently with other units.

MEM05 Licensing requirements

Specific licenses may be required in some jobs. The local regulations should be checked for details. The industry is generally subject to a range of regulatory control. These vary with the nature of the work and to some extent on its location as most regulations are State based and some are enforced by local government. This Training Package allows for these differences without mandating them to specific units of competency which would not be appropriate.

Selected units of competency and qualifications in this Training Package have been designed to satisfy or partly satisfy the licensing requirements of various industry sectors.

This Metal and Engineering Training Package publication provides advisory information based on discussions with representatives of industry and regulators. All possible care has been taken in the preparation of this material, however, persons should not rely solely on this publication on matters involving industry specific current or proposed licensing requirements or arrangements.

Competency Standards

What is competency?

The broad concept of industry competency concerns the ability to perform particular tasks and duties to the standard of performance expected in the workplace. Competency requires the application of specified skills, knowledge and attitudes relevant to effective participation in an industry, industry sector or enterprise.

Competency covers all aspects of workplace performance and involves performing individual tasks; managing a range of different tasks; responding to contingencies or breakdowns; and, dealing with the responsibilities of the workplace, including working with others. Workplace competency requires the ability to apply relevant skills, knowledge and attitudes consistently over time and in the required workplace situations and environments. In line with this concept of competency Training Packages focus on what is expected of a competent individual in the workplace as an outcome of learning, rather than focussing on the learning process itself.

Competency standards in Training Packages are determined by industry to meet identified industry skill needs. Competency standards are made up of a number of units of competency each of which describes a key function or role in a particular job function or occupation. Each unit of competency within a Training Package is linked to one or more AQF qualifications.

Contextualisation of Units of Competency by RTOs

Registered Training Organisation (RTOs) may contextualise units of competency to reflect local outcomes required. Contextualisation could involve additions or amendments to the unit of competency to suit particular delivery methods, learner profiles, specific enterprise equipment requirements, or to otherwise meet local needs. However, the integrity of the overall intended outcome of the unit of competency must be maintained.

Any contextualisation of units of competency in this endorsed Training Package must be within the bounds of the following advice. In contextualising units of competency, RTOs:

- must not remove or add to the number and content of elements and performance criteria
- may add specific industry terminology to performance criteria where this does not distort or narrow the competency outcomes
- may make amendments and additions to the range statement as long as such changes do not diminish the breadth of application of the competency and reduce its portability, and/or
- may add detail to the evidence guide in areas such as the critical aspects of evidence or resources and infrastructure required where these expand the breadth of the competency but do not limit its use.

Components of Units of Competency

The components of units of competency are summarised below, in the order in which they appear in each unit of competency.

Unit Title

The unit title is a succinct statement of the outcome of the unit of competency. Each unit of competency title is unique, both within and across Training Packages.

Unit Descriptor

The unit descriptor broadly communicates the content of the unit of competency and the skill area it addresses. Where units of competency have been contextualised from units of competency from other endorsed Training Packages, summary information is provided. There may also be a brief second paragraph that describes its relationship with other units of competency, and any licensing requirements.

Employability Skills statement

A standard Employability Skills statement appears in each unit of competency. This statement directs trainers and assessors to consider the information contained in the Employability Skills Summary in which the unit of competency is packaged.

Prerequisite Units (optional)

If there are any units of competency that must be completed before the unit, these will be listed.

Application of the Unit

This sub-section fleshes out the unit of competency's scope, purpose and operation in different contexts, for example, by showing how it applies in the workplace.

Competency Field (Optional)

The competency field either reflects the way the units of competency are categorised in the Training Package or denotes the industry sector, specialisation or function. It is an optional component of the unit of competency.

Sector (optional)

The industry sector is a further categorisation of the competency field and identifies the next classification, for example an elective or supervision field.

Elements of Competency

The elements of competency are the basic building blocks of the unit of competency. They describe in terms of outcomes the significant functions and tasks that make up the competency.

Performance Criteria

The performance criteria specify the required performance in relevant tasks, roles, skills and in the applied knowledge that enables competent performance. They are usually written in passive voice. Critical terms or phrases may be written in bold italics and then defined in range statement, in the order of their appearance in the performance criteria.

Required Skills and Knowledge

The essential skills and knowledge are either identified separately or combined. Knowledge identifies what a person needs to know to perform the work in an informed and effective manner. Skills describe the application of knowledge to situations where understanding is converted into a workplace outcome.

Range Statement

The range statement provides a context for the unit of competency, describing essential operating conditions that may be present with training and assessment, depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts. As applicable, the meanings of key terms used in the performance criteria will also be explained in the range statement.

Evidence Guide

The evidence guide is critical in assessment as it provides information to the Registered Training Organisation (RTO) and assessor about how the described competency may be demonstrated. The evidence guide does this by providing a range of evidence for the assessor to make determinations, and by providing the assessment context. The evidence guide describes:

- conditions under which competency must be assessed including variables such as the assessment environment or necessary equipment
- relationships with the assessment of any other units of competency
- suitable methodologies for conducting assessment including the potential for workplace simulation
- resource implications, for example access to particular equipment, infrastructure or situations
- how consistency in performance can be assessed over time, various contexts and with a range of evidence, and expectations at the AQF qualification level involved

Employability Skills in units of competency

The detail and application of Employability Skills facets will vary according to the job-role requirements of each industry. In developing Training Packages, industry stakeholders are consulted to identify appropriate facets of Employability Skills which are incorporated into the relevant units of competency and qualifications.

Employability Skills are not a discrete requirement contained in units of competency (as was the case with Key Competencies). Employability Skills are specifically expressed in the context of the work outcomes described in units of competency and will appear in elements, performance criteria, range statements and evidence guides. As a result, users of Training Packages are required to review the entire unit of competency in order to accurately determine Employability Skills requirements.

How Employability Skills relate to the Key Competencies

The eight nationally agreed Employability Skills now replace the seven Key Competencies in Training Packages. Trainers and assessors who have used Training Packages prior to the introduction of Employability Skills may find the following comparison useful.

Employability Skills	Mayer Key Competencies
Communication	Communicating ideas and information
Teamwork	Working with others and in teams
Problem solving	Solving problems Using mathematical ideas and techniques
Initiative and enterprise	
Planning and organising	Collecting, analysing and organising information Planning and organising activities
Self-management	
Learning	
Technology	Using technology

When analysing the above table it is important to consider the relationship and natural overlap of Employability Skills. For example, using technology may involve communication skills and combine the understanding of mathematical concepts.

Explicitly embedding Employability Skills in units of competency

This Training Package seeks to ensure that industry-endorsed Employability Skills are explicitly embedded in units of competency. The application of each skill and the level of detail included in each part of the unit will vary according to industry requirements and the nature of the unit of competency.

Employability Skills must be both explicit and embedded within units of competency. This means that Employability Skills will be:

- embedded in units of competency as part of the other performance requirements that make up the competency as a whole
- explicitly described within units of competency to enable Training Packages users to identify accurately the performance requirements of each unit with regards to Employability Skills.

This Training Package also seeks to ensure that Employability Skills are well-defined and written into units of competency so that they are apparent, clear and can be delivered and assessed as an essential component of unit work outcomes.

The following table contains examples of embedded Employability Skills for each component of a unit of competency. Please note that in the examples below the bracketed skills are provided only for clarification and will not be present in units of competency within this Training Package.

Example Employability Skills unit

Unit component	Example of embedded Employability Skill
Unit Title	Manufacture watch and clock components
Unit Descriptor	This unit competency covers manufacturing watch and clock components using a range of general and specialist machines and engineering techniques.
Element	Plan and organise the project
Performance Criteria	Select appropriate equipment and tools to undertake process Plan suitable method of production Undertake measurements to task tolerances
Range Statement	Working drawings may include sketch or illustration by hand, including dimensions Replacement parts may include wheels and pinions, arbors and pivots, click springs, ratchet wheel, setting lever springs.
Required Skills and Knowledge	Interpreting watch and clock drawings, manuals and other documentation that provide information of part design and tolerances Performing milling operations using milling attachment on a watch and clockmaker's lathe or a bench mill.
	Knowledge of typical materials used in watch and clock making Selecting and preparing cutting tools.

Evidence Guide	<p>Manufacture, finish and fit replacement watch or clock components to original tolerances.</p> <p>Select and use appropriate hand tools.</p>
-----------------------	--

Competency Standards - MEM05 Industry Contextualisation

Prerequisite Units and Prerequisite Pathways – MEM05

The Metal and Engineering Training Package units of competency are built on a structure of accumulated skills and knowledge. This means that there are hierarchies of skills and knowledge that are built up from a range of competencies. This may have an impact on training and assessment delivery strategies.

Any units of competency that underpin others are listed as prerequisites. In some cases there are options within the prerequisites. These combinations reflect the fact that different "skill paths" may be taken to reach a unit of competency. Where multiple paths (path 1, path 2, etc.) are shown, then the most appropriate path should be chosen. Unless indicated otherwise, the prerequisite units should be counted in the total number of units (and points) that contribute towards the qualification.

Competency Field

The competency standards are divided into 'fields' as convenient groupings of units to assist the organisation of the standards and to help users in the selection of relevant competency standards. The fields do not set up barriers to accessing any competency units in a field, or between fields.

Application of the Competency

This sub-section describes more of the unit of competency's scope and limitation as well as purpose and operation in different contexts, for example, by showing how it applies in the workplace.

Related units

This section provides an indication of other units that may also be required in particular circumstances as well as indications of alternatives.

Band

Many of the units of competency are also divided into 'bands', with some overlap between them. The allocation of units to different bands recognises the inherent differences in the level of difficulty of skills used in the industry. For example, band B skills are more difficult than band A skills. At the same time the large range of units in each band allows enterprises a wide choice. Band E units are independent units developed for the boating services qualifications. Some units are regarded as both band A and band B units. Use of these dual band units is limited. These units are identified in the units themselves by way of a note.

Unit Weight

Many units of competency have an allocated weight shown as 'unit weight'. This weighting is usually referred to as 'points'. These points weightings are used in the packaging rules for some of the qualifications. The units selected for the qualification must have a combined points value no less than the points value specified for the various components of the qualification. These combined points totals also include the points for any prerequisite units involved.

Note that the points for any particular unit can only be counted once in each qualification. For example, if a unit is selected to be part of a qualification and it is also a prerequisite for another selected unit, then the points for that unit can only be counted once.

Notes

Special notes are included in some units, for example, where the unit is a dual band unit.

Appendix 1: MEM05 Units, prerequisites, points and weighting

Not applicable.

0300 Assembly

Unit code	Unit title	P
-----------	------------	---

MEM03001B	Perform manual production assembly	4

MEM05027A	Perform aluminothermic welding	2
-----------	--------------------------------	---

MEM05036C	Repair/replace/modify fabrications	4
-----------	------------------------------------	---

Path: 1 Total Path Weight: 41

MEM05005B	Carry out mechanical cutting	2
MEM05007C	Perform manual heating and thermal cutting	2
MEM05011D	Assemble fabricated components	8
MEM05012C	Perform routine manual metal arc welding	2
MEM05015D	Weld using manual metal arc welding process	4
MEM05051A	Select welding processes	2
MEM05052A	Apply safe welding practices	4
MEM09002B	Interpret technical drawing	4
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2

Path: 2 Total Path Weight: 41

MEM05005B	Carry out mechanical cutting	2
MEM05007C	Perform manual heating and thermal cutting	2
MEM05011D	Assemble fabricated components	8
MEM05017D	Weld using gas metal arc welding process	4
MEM05050B	Perform routine gas metal arc welding	2
MEM05051A	Select welding processes	2
MEM05052A	Apply safe welding practices	4
MEM09002B	Interpret technical drawing	4
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2

Path: 3 Total Path Weight: 43

MEM05004C	Perform routine oxy acetylene welding	2
-----------	---------------------------------------	---

MEM05005B	Carry out mechanical cutting	2
MEM05007C	Perform manual heating and thermal cutting	2
MEM05011D	Assemble fabricated components	8
MEM05022C	Perform advanced welding using oxy acetylene welding	6
MEM05051A	Select welding processes	2
MEM05052A	Apply safe welding practices	4
MEM09002B	Interpret technical drawing	4
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2

Path: 4 Total Path Weight: 41

MEM05005B	Carry out mechanical cutting	2
MEM05007C	Perform manual heating and thermal cutting	2
MEM05011D	Assemble fabricated components	8
MEM05019D	Weld using gas tungsten arc welding process	4
MEM05049B	Perform routine gas tungsten arc welding	2
MEM05051A	Select welding processes	2
MEM05052A	Apply safe welding practices	4
MEM09002B	Interpret technical drawing	4
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2

MEM05037C	Perform geometric development	6
-----------	-------------------------------	---

Path: 1 Total Path Weight: 18

MEM09002B	Interpret technical drawing	4
-----------	-----------------------------	---

MEM12023A	Perform engineering measurements	5
-----------	----------------------------------	---

MEM12024A	Perform computations	3
-----------	----------------------	---

MEM05038B	Perform advanced geometric development - cylindrical/rectangular	2
-----------	--	---

Path: 1 Total Path Weight: 24

MEM05037C	Perform geometric development	6
-----------	-------------------------------	---

MEM09002B	Interpret technical drawing	4
-----------	-----------------------------	---

MEM12023A	Perform engineering measurements	5
-----------	----------------------------------	---

MEM12024A	Perform computations	3
-----------	----------------------	---

MEM30012A	Apply mathematical techniques in a manufacturing engineering or related environment	4
-----------	---	---

MEM05039B	Perform advanced geometric development - conical	2
-----------	--	---

Path: 1 Total Path Weight: 24

MEM05037C	Perform geometric development	6
-----------	-------------------------------	---

MEM09002B	Interpret technical drawing	4
-----------	-----------------------------	---

MEM12023A	Perform engineering measurements	5
-----------	----------------------------------	---

MEM12024A	Perform computations	3
-----------	----------------------	---

MEM30012A	Apply mathematical techniques in a manufacturing engineering or related environment	4
-----------	---	---

MEM05040B	Perform advanced geometric development - transitions	4
-----------	--	---

Path: 1 Total Path Weight: 26

MEM05037C	Perform geometric development	6
MEM09002B	Interpret technical drawing	4
MEM12023A	Perform engineering measurements	5
MEM12024A	Perform computations	3
MEM30012A	Apply mathematical techniques in a manufacturing engineering or related environment	4

MEM05041B	Weld using powder flame spraying	4
-----------	----------------------------------	---

Path: 1 Total Path Weight: 11

MEM05004C	Perform routine oxy acetylene welding	2
MEM12023A	Perform engineering measurements	5

MEM05042B	Perform welds to code standards using flux core arc welding process	6
-----------	---	---

Path: 1 Total Path Weight: 41

MEM05007C	Perform manual heating and thermal cutting	2
MEM05026C	Apply welding principles	4
MEM05047B	Weld using flux core arc welding process	4
MEM05048B	Perform advanced welding using flux core arc welding process	4
MEM05050B	Perform routine gas metal arc welding	2
MEM05051A	Select welding processes	2
MEM05052A	Apply safe welding practices	4
MEM09002B	Interpret technical drawing	4

MEM12023	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2

MEM05043B	Perform welds to code standards using gas metal arc welding process	6
-----------	---	---

Path: 1 Total Path Weight: 41

MEM05007C	Perform manual heating and thermal cutting	2
MEM05017D	Weld using gas metal arc welding process	4
MEM05018C	Perform advanced welding using gas metal arc welding	4
MEM05026C	Apply welding principles	4
MEM05050B	Perform routine gas metal arc welding	2
MEM05051A	Select welding processes	2
MEM05052A	Apply safe welding practices	4
MEM09002B	Interpret technical drawing	4
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2

MEM05044B	Perform welds to code standards using gas tungsten arc welding process	6
-----------	--	---

Path: 1 Total Path Weight: 41

MEM05007C	Perform manual heating and thermal cutting	2
MEM05019D	Weld using gas tungsten arc welding process	4
MEM05020C	Perform advanced welding using gas tungsten arc welding process	4

MEM05026C	Apply welding principles	4
MEM05049B	Perform routine gas tungsten arc welding	2
MEM05051A	Select welding processes	2
MEM05052A	Apply safe welding practices	4
MEM09002B	Interpret technical drawing	4
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2

MEM05045B	Perform pipe welds to code standards using manual metal arc welding process	6
-----------	---	---

Path: 1 Total Path Weight: 41

MEM05007C	Perform manual heating and thermal cutting	2
MEM05012C	Perform routine manual metal arc welding	2
MEM05015D	Weld using manual metal arc welding process	4
MEM05016C	Perform advanced welding using manual metal arc welding process	4
MEM05026C	Apply welding principles	4
MEM05051A	Select welding processes	2
MEM05052A	Apply safe welding practices	4
MEM09002B	Interpret technical drawing	4
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2

MEM05046B	Perform welds to code standards using manual metal arc welding process	6
-----------	--	---

Path: 1 Total Path Weight: 41

MEM05007C	Perform manual heating and thermal cutting	2
MEM05012C	Perform routine manual metal arc welding	2
MEM05015D	Weld using manual metal arc welding process	4
MEM05016C	Perform advanced welding using manual metal arc welding process	4
MEM05026C	Apply welding principles	4
MEM05051A	Select welding processes	2
MEM05052A	Apply safe welding practices	4
MEM09002B	Interpret technical drawing	4
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2

MEM05047B	Weld using flux core arc welding process	4
-----------	--	---

Path: 1 Total Path Weight: 21

MEM05050B	Perform routine gas metal arc welding	2
MEM05051A	Select welding processes	2
MEM05052A	Apply safe welding practices	4
MEM12023	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2

MEM05048B	Perform advanced welding using flux core arc welding process	4
-----------	--	---

Path: 1 Total Path Weight: 31

MEM05007C	Perform manual heating and thermal cutting	2
MEM05047B	Weld using flux core arc welding process	4
MEM05050B	Perform routine gas metal arc welding	2
MEM05051A	Select welding processes	2
MEM05052A	Apply safe welding practices	4
MEM09002B	Interpret technical drawing	4
MEM12023	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2

MEM05049B	Perform routine gas tungsten arc welding	2
-----------	--	---

MEM05050B	Perform routine gas metal arc welding	2
-----------	---------------------------------------	---

MEM05051A	Select welding processes	2
-----------	--------------------------	---

MEM05052A	Apply safe welding practices	4
-----------	------------------------------	---

MEM05053A	Set and edit computer controlled thermal cutting machines	4
-----------	---	---

Path: 1 Total Path Weight: 21

MEM05007C	Perform manual heating and thermal cutting	2
MEM05008C	Perform advanced manual thermal cutting, gouging and	2
MEM05009C	Perform automated thermal cutting	2

MEM09002B	Interpret technical drawing	4
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2

MEM05054A	Write basic NC/CNC programs for thermal cutting machines	4
-----------	--	---

Path: 1 Total Path Weight: 25

MEM05007C	Perform manual heating and thermal cutting	2
MEM05008C	Perform advanced manual thermal cutting, gouging and	2
MEM05009C	Perform automated thermal cutting	2
MEM05053A	Set and edit computer controlled thermal cutting machines	4
MEM09002B	Interpret technical drawing	4
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2

0600 Forging

Unit code	Unit title	P
MEM06001B	Perform hand forging	4

Path: 1 Total Path Weight: 6

MEM18001C	Use hand tools	2
-----------	----------------	---

MEM06002B	Perform hammer forging	4
-----------	------------------------	---

MEM06003C	Carry out heat treatment	6
-----------	--------------------------	---

MEM06004B	Select heat treatment processes and test finished product	6
-----------	---	---

Path: 1 Total Path Weight: 12

MEM06003C	Carry out heat treatment	6
-----------	--------------------------	---

MEM06005B	Perform drop and upset forging	4
-----------	--------------------------------	---

Path: 1 Total Path Weight: 8

MEM06002B	Perform hammer forging	4
-----------	------------------------	---

MEM06006C	Repair springs	4
-----------	----------------	---

Path: 1 Total Path Weight: 16

MEM06001B	Perform hand forging	4
-----------	----------------------	---

MEM06003C	Carry out heat treatment	6
-----------	--------------------------	---

MEM18001C	Use hand tools	2
-----------	----------------	---

MEM06007B	Perform basic incidental heat/quenching, tempering and annealing	2
-----------	--	---

MEM06008A	Hammer forge complex shapes	4
-----------	-----------------------------	---

Path: 1 Total Path Weight: 8

MEM06002B	Perform hammer forging	4
-----------	------------------------	---

MEM06009A	Hand forge complex shapes	4
-----------	---------------------------	---

Path: 1 Total Path Weight: 8

MEM06001B	Perform hand forging	4
-----------	----------------------	---

0700 Machine and Processing

Unit code	Unit title	P
-----------	------------	---

MEM07001B	Perform operational maintenance of machines/equipment	2
-----------	---	---

Path: 1 Total Path Weight: 4

MEM18001C	Use hand tools	2
-----------	----------------	---

MEM07002B	Perform precision shaping/planing/slotting operations	4
-----------	---	---

Path: 1 Total Path Weight: 25

MEM07005C	Perform general machining	8
-----------	---------------------------	---

MEM09002B	Interpret technical drawing	4
-----------	-----------------------------	---

MEM12003B	Perform precision mechanical measurement	2
-----------	--	---

MEM12023A	Perform engineering measurements	5
-----------	----------------------------------	---

MEM18001C	Use hand tools	2
-----------	----------------	---

MEM07003B	Perform machine setting (routine)	4
-----------	-----------------------------------	---

Path: 1 Total Path Weight: 17

MEM07024B	Operate and monitor machine/process	4
-----------	-------------------------------------	---

MEM12023A	Perform engineering measurements	5
-----------	----------------------------------	---

MEM16006A	Organise and communicate information	2
-----------	--------------------------------------	---

MEM18001C	Use hand tools	2
-----------	----------------	---

MEM07004B	Perform machine setting (complex)	8
-----------	-----------------------------------	---

Path: 1 Total Path Weight: 33

MEM07005C	Perform general machining	8
MEM07006C	Perform lathe operations	4
MEM09002B	Interpret technical drawing	4
MEM12023A	Perform engineering measurements	5
MEM16006A	Organise and communicate information	2
MEM18001C	Use hand tools	2

Path: 2 Total Path Weight: 33

MEM07005C	Perform general machining	8
MEM07007C	Perform milling operations	4
MEM09002B	Interpret technical drawing	4
MEM12023A	Perform engineering measurements	5
MEM16006A	Organise and communicate information	2
MEM18001C	Use hand tools	2

Path: 3 Total Path Weight: 33

MEM07005C	Perform general machining	8
MEM07008D	Perform grinding operations	4
MEM09002B	Interpret technical drawing	4
MEM12023A	Perform engineering measurements	5
MEM16006A	Organise and communicate information	2
MEM18001C	Use hand tools	2

Path: 4 Total Path Weight: 33

MEM07005C	Perform general machining	8
MEM07013B	Perform machining operations using horizontal and/or vertical boring machines	4
MEM09002B	Interpret technical drawing	4
MEM12023A	Perform engineering measurements	5

MEM16006A	Organise and communicate information	2
-----------	--------------------------------------	---

MEM18001C	Use hand tools	2
-----------	----------------	---

Path: 5 Total Path Weight: 37

MEM07001B	Perform operational maintenance of machines/equipment	2
-----------	---	---

MEM07003B	Perform machine setting (routine)	4
-----------	-----------------------------------	---

MEM07024B	Operate and monitor machine/process	4
-----------	-------------------------------------	---

MEM07025B	Perform advanced machine/process operation	6
-----------	--	---

MEM09002B	Interpret technical drawing	4
-----------	-----------------------------	---

MEM12023A	Perform engineering measurements	5
-----------	----------------------------------	---

MEM16006A	Organise and communicate information	2
-----------	--------------------------------------	---

MEM18001C	Use hand tools	2
-----------	----------------	---

Path: 6 Total Path Weight: 37

MEM07001B	Perform operational maintenance of machines/equipment	2
-----------	---	---

MEM07003B	Perform machine setting (routine)	4
-----------	-----------------------------------	---

MEM07024B	Operate and monitor machine/process	4
-----------	-------------------------------------	---

MEM07026B	Perform advanced plastic processing	6
-----------	-------------------------------------	---

MEM09002B	Interpret technical drawing	4
-----------	-----------------------------	---

MEM12023A	Perform engineering measurements	5
-----------	----------------------------------	---

MEM16006A	Organise and communicate information	2
-----------	--------------------------------------	---

MEM18001C	Use hand tools	2
-----------	----------------	---

Path: 7 Total Path Weight: 37

MEM07001B	Perform operational maintenance of machines/equipment	2
-----------	---	---

MEM07003B	Perform machine setting (routine)	4
-----------	-----------------------------------	---

MEM07024B	Operate and monitor machine/process	4
MEM07027B	Perform advanced press operations	6
MEM09002B	Interpret technical drawing	4
MEM12023A	Perform engineering measurements	5
MEM16006A	Organise and communicate information	2
MEM18001C	Use hand tools	2

MEM07005C	Perform general machining	8
-----------	---------------------------	---

Path: 1 Total Path Weight: 19

MEM09002B	Interpret technical drawing	4
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2

MEM07006C	Perform lathe operations	4
-----------	--------------------------	---

Path: 1 Total Path Weight: 23

MEM07005C	Perform general machining	8
MEM09002B	Interpret technical drawing	4
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2

MEM07007C	Perform milling operations	4
-----------	----------------------------	---

Path: 1 Total Path Weight: 23

MEM07005C	Perform general machining	8
MEM09002B	Interpret technical drawing	4
MEM12023A	Perform engineering measurements	5

	MEM09204A	Produce basic engineering detail drawings	
MEM09209A	Detail bearings, seals and other componentry in mechanical drawings		0
	MEM09002B	Interpret technical drawing	
	MEM09204A	Produce basic engineering detail drawings	
MEM09210A	Create 3-D solid models using computer-aided design (CAD) system		0
	MEM09002B	Interpret technical drawing	
	MEM30031A	Operate computer-aided design (CAD) system to produce basic drawing elements	
MEM09211A	Produce drawings or models for industrial piping		0
	MEM09002B	Interpret technical drawing	

MEM09204A	Produce basic engineering detail drawings	
MEM09212A	Produce detailed drawings of steel to non-steel connections	0
MEM09002B	Interpret technical drawing	
MEM09204A	Produce basic engineering detail drawings	
MEM09213A	Produce schematic drawings for hydraulic and pneumatic fluid power systems	0
MEM09002B	Interpret technical drawing	
MEM09204A	Produce basic engineering detail drawings	
MEM09214A	Perform advanced engineering detail drafting	0
MEM09002B	Interpret technical drawing	
MEM09204A	Produce basic engineering detail drawings	
MEM30012A	Apply mathematical techniques in a manufacturing, engineering or related environment	
MEM09215A	Supervise detail drafting projects	0
MEM09002B	Interpret technical drawing	
MEM09204A	Produce basic engineering detail drawings	
MEM09214A	Perform advanced engineering detail drafting	
MEM30012A	Apply mathematical techniques in a manufacturing, engineering or related environment	
MEM30031A	Operate computer-aided design (CAD) system to produce basic drawing elements	

MEM09216A	Interpret and produce curved 3-D shapes and patterns	0
-----------	--	---

MEM09217A	Prepare plans for pipe and duct fabrication	0
-----------	---	---

MEM09002B	Interpret technical drawing	
-----------	-----------------------------	--

MEM09218A	Participate in drafting projects for building services	0
-----------	--	---

MEM09002B	Interpret technical drawing	
-----------	-----------------------------	--

MEM09204A	Produce basic engineering detail drawings	
-----------	---	--

MEM09219A	Prepare drawings for fabricated sheet metal products	0
-----------	--	---

MEM09002B	Interpret technical drawing	
-----------	-----------------------------	--

MEM09220A	Apply surface modelling techniques to 3-D drawings	0
-----------	--	---

MEM09002B	Interpret technical drawing	
-----------	-----------------------------	--

MEM30031A	Operate computer-aided design (CAD) system to produce basic drawing elements	
-----------	--	--

MEM09221A	Create 3-D model assemblies using computer-aided design (CAD) system	0
-----------	--	---

MEM09002B	Interpret technical drawing	
-----------	-----------------------------	--

MEM30031A	Operate computer-aided design (CAD) system to produce basic drawing elements	
-----------	--	--

MEM09222A	Interpret and maintain or restore original drawings	0
-----------	---	---

MEM30032A	Produce basic engineering drawings	
-----------	------------------------------------	--

1000 Installation and commissioning

Unit code	Unit title	P
MEM10001C	Erect structures	4
Path: 1 Total Path Weight: 37		
MEM05007C	Perform manual heating and thermal cutting	2
MEM05012C	Perform routine manual metal arc welding	2
MEM05015D	Weld using manual metal arc welding process	4
MEM05051A	Select welding processes	2
MEM05052A	Apply safe welding practices	4
MEM09002B	Interpret technical drawing	4
MEM12007D	Mark off/out structural fabrications and shapes	4
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
Path: 2 Total Path Weight: 37		
MEM05007C	Perform manual heating and thermal cutting	2
MEM05017D	Weld using gas metal arc welding process	4
MEM05050B	Perform routine gas metal arc welding	2
MEM05051A	Select welding processes	2
MEM05052A	Apply safe welding practices	4
MEM09002B	Interpret technical drawing	4
MEM12007D	Mark off/out structural fabrications and shapes	4

MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2

MEM10002B	Terminate and connect electrical wiring	3
-----------	---	---

Path: 1 Total Path Weight: 11

MEM09002B	Interpret technical drawing	4
MEM12002B	Perform electrical/electronic measurement	2
MEM18001C	Use hand tools	2

MEM10003B	Install and test electrical wiring and circuits up to 1000 volts a.c. and 1500 volts d.c.	12
-----------	---	----

Path: 1 Total Path Weight: 33

MEM09002B	Interpret technical drawing	4
MEM10002B	Terminate and connect electrical wiring	3
MEM12002B	Perform electrical/electronic measurement	2
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM18049C	Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.	3

MEM10004B	Enter and change programmable controller operational parameters	2
-----------	---	---

Path: 1 Total Path Weight: 8

MEM09002B	Interpret technical drawing	4
-----------	-----------------------------	---

MEM16008A	Interact with computing technology	2
-----------	------------------------------------	---

MEM10005B	Commission programmable controller programs	4
-----------	---	---

Path: 1 Total Path Weight: 12

MEM09002B	Interpret technical drawing	4
-----------	-----------------------------	---

MEM10004B	Enter and change programmable controller operational parameters	2
-----------	---	---

MEM16008A	Interact with computing technology	2
-----------	------------------------------------	---

MEM10006B	Install machine/plant	4
-----------	-----------------------	---

Path: 1 Total Path Weight: 34

MEM09002B	Interpret technical drawing	4
-----------	-----------------------------	---

MEM12023A	Perform engineering measurements	5
-----------	----------------------------------	---

MEM18001C	Use hand tools	2

MEM18002B	Use power tools/hand held operations	2
-----------	--------------------------------------	---

MEM18003C	Use tools for precision work	4
-----------	------------------------------	---

MEM18006C	Repair and fit engineering components	6
-----------	---------------------------------------	---

MEM18009B	Perform levelling and alignment of machines and engineering components	4
-----------	--	---

MEM18055B	Dismantle, replace and assemble engineering components	3
-----------	--	---

MEM10007C	Modify control systems	6
-----------	------------------------	---

Path: 1 Total Path Weight: 61

MEM09002B	Interpret technical drawing	4
-----------	-----------------------------	---

MEM10002B	Terminate and connect electrical wiring	3
-----------	---	---

MEM10003B	Install and test electrical wiring and circuits	12
-----------	---	----

	up to 1000 volts a.c. and 1500 volts d.c.	
MEM12002B	Perform electrical/electronic measurement	2
MEM12004B	Perform precision electrical/electronic measurement	4
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM18048B	Fault find and repair/rectify basic electrical circuits	12
MEM18049C	Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.	3
MEM18051B	Fault find repair/rectify complex electrical circuits	6

Path: 2 Total Path Weight: 89

MEM09002B	Interpret technical drawing	4
MEM12002B	Perform electrical/electronic measurement	2
MEM12003B	Perform precision mechanical measurement	2
MEM12023A	Perform engineering measurements	5
MEM12024A	Perform computations	3
MEM12025A	Use graphical techniques and perform simple statistical computations	2
MEM14005A	Plan a complete activity	4
MEM16006A	Organise and communicate information	2
MEM16010A	Write reports	2
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM18003C	Use tools for precision work	4
MEM18006C	Repair and fit engineering components	6

MEM18010C	Perform equipment condition monitoring and recording	4
MEM18016B	Analyse plant and equipment condition monitoring results	4
MEM18018C	Maintain pneumatic system components	4
MEM18019B	Maintain pneumatic systems	4
MEM18020B	Maintain hydraulic system components	4
MEM18021B	Maintain hydraulic systems	4
MEM18022B	Maintain fluid power controls	8
MEM18023B	Modify fluid power system operation	8
MEM18055B	Dismantle, replace and assemble engineering components	3

Path: 3 Total Path Weight: 66

MEM05001B	Perform manual soldering/desoldering – electrical/electronic components	4
MEM09002B	Interpret technical drawing	4
MEM12004B	Perform precision electrical/electronic measurement	4
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM18054B	Fault find, test and calibrate instrumentation systems and equipment	8
MEM18055B	Dismantle, replace and assemble engineering components	3
MEM18057B	Maintain/service analog/digital electronic equipment	6
MEM18060B	Maintain, repair control instrumentation - single and multiple loop control systems	8
MEM18062B	Install, maintain and calibrate	8

	instrumentation sensors, transmitters and final control elements	
MEM18067B	Tune control loops - multi controller or multi element systems	6

Path: 4 Total Path Weight: 65

MEM05001B	Perform manual soldering/desoldering - electrical/electronic components	4
MEM05002B	Perform high reliability soldering and desoldering	4
MEM09002B	Interpret technical drawing	4
MEM12004B	Perform precision electrical/electronic measurement	4
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM18056B	Diagnose and repair analog equipment and components	10
MEM18057B	Maintain/service analog/digital electronic equipment	6
MEM18058C	Modify electronic equipment	4
MEM18059B	Modify electronic systems	4
MEM18065B	Diagnose and repair digital equipment and components	10

Path: 5 Total Path Weight: 38

MEM09002B	Interpret technical drawing	4
MEM12002B	Perform electrical/electronic measurement	2
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2

MEM18055B	Dismantle, replace and assemble engineering components	3
MEM18086B	Test, recover, evacuate and charge refrigeration systems	4
MEM18088B	Maintain and repair commercial air conditioning systems and components	4
MEM18092B	Maintain and repair commercial and/or industrial refrigeration and/or air conditioning controls	6

Path: 6 Total Path Weight: 40

MEM09002B	Interpret technical drawing	4
MEM12002B	Perform electrical/electronic measurement	2
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM18055B	Dismantle, replace and assemble engineering components	3
MEM18086B	Test, recover, evacuate and charge refrigeration systems	4
MEM18090B	Maintain and repair industrial refrigeration systems and components	6
MEM18092B	Maintain and repair commercial and/or industrial refrigeration and/or air conditioning controls	6

Path: 7 Total Path Weight: 48

MEM09002B	Interpret technical drawing	4
MEM12002B	Perform electrical/electronic measurement	2
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2

MEM18055B	Dismantle, replace and assemble engineering components	3
MEM18086B	Test, recover, evacuate and charge refrigeration systems	4
MEM18089B	Maintain and repair central air handling systems	6
MEM18090B	Maintain and repair industrial refrigeration systems and components	6
MEM18093B	Maintain and repair integrated industrial refrigeration and/or large air handling system controls	8

Path: 8 Total Path Weight: 60

MEM09002B	Interpret technical drawing	4
MEM12002B	Perform electrical/electronic measurement	2
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM18054B	Fault find, test and calibrate instrumentation systems and equipment	8
MEM18055B	Dismantle, replace and assemble engineering components	3
MEM18060B	Maintain, repair control instrumentation - single and multiple loop control systems	8
MEM18062B	Install, maintain and calibrate instrumentation sensors, transmitters and final control elements	8
MEM18064B	Maintain instrumentation system components	6
MEM18067B	Tune control loops - multi controller or multi element systems	6

MEM10008B	Undertake commissioning procedures for plant and/or equipment	4
-----------	---	---

Path: 1 Total Path Weight: 38

MEM09002B	Interpret technical drawing	4
MEM10006B	Install machine/plant	4
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM18003C	Use tools for precision work	4
MEM18006C	Repair and fit engineering components	6
MEM18009B	Perform levelling and alignment of machines and engineering components	4
MEM18055B	Dismantle, replace and assemble engineering components	3

Path: 2 Total Path Weight: 32

MEM09002B	Interpret technical drawing	4
MEM12002B	Perform electrical/electronic measurement	2
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM18055B	Dismantle, replace and assemble engineering components	3
MEM18086B	Test, recover, evacuate and charge refrigeration systems	4
MEM18090B	Maintain and repair industrial refrigeration systems and components	6

Path: 3 Total Path Weight: 28

MEM09002B	Interpret technical drawing	4
-----------	-----------------------------	---

MEM12002B	Perform electrical/electronic measurement	2
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM18055B	Dismantle, replace and assemble engineering components	3
MEM18089B	Maintain and repair central air handling systems	6

Path: 4 Total Path Weight: 40

MEM09002B	Interpret technical drawing	4
MEM10002B	Terminate and connect electrical wiring	3
MEM10003B	Install and test electrical wiring and circuits up to 1000 volts a.c. and 1500 volts d.c.	12
MEM12002B	Perform electrical/electronic measurement	2
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM18049C	Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.	3
MEM18055B	Dismantle, replace and assemble engineering components	3

MEM10009B	Install refrigeration and air conditioning plant and equipment	4
-----------	--	---

Path: 1 Total Path Weight: 30

MEM05006C	Perform brazing and/or silver soldering	2
MEM09002B	Interpret technical drawing	4
MEM10010B	Install pipework and pipework assemblies	4

MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM18055B	Dismantle, replace and assemble engineering components	3
MEM18086B	Test, recover, evacuate and charge refrigeration systems	4

MEM10010B	Install pipework and pipework assemblies	4
-----------	--	---

Path: 1 Total Path Weight: 17

MEM09002B	Interpret technical drawing	4
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2

MEM10011B	Terminate and connect specialist cables	3
-----------	---	---

Path: 1 Total Path Weight: 14

MEM09002B	Interpret technical drawing	4
MEM10002B	Terminate and connect electrical wiring	3
MEM12002B	Perform electrical/electronic measurement	2
MEM18001C	Use hand tools	2

MEM10013A	Install split air conditioning systems and associated pipework	6
-----------	--	---

Path: 1 Total Path Weight: 24

MEM05006C	Perform brazing and/or silver soldering	2
MEM09002B	Interpret technical drawing	4
MEM12023A	Perform engineering measurements	5

MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2

1500 Quality

Unit code	Unit title	P
MEM15001B	Perform basic statistical quality control	2
MEM15002A	Apply quality systems	2

MEM15003B	Use improvement processes in team activities	4
-----------	--	---

Path: 1 Total Path Weight: 4

MEM16007A	Work with others in a manufacturing, engineering or related environment	0
-----------	---	---

MEM15004B	Perform inspection	2
-----------	--------------------	---

MEM15005B	Select and control inspection processes and procedures	4
-----------	--	---

Path: 1 Total Path Weight: 6

MEM15004B	Perform inspection	2
-----------	--------------------	---

MEM15007B	Conduct product and/or process capability studies	6
-----------	---	---

Path: 1 Total Path Weight: 15

MEM12024A	Perform computations	3
-----------	----------------------	---

MEM12025A	Use graphical techniques and perform simple statistical computations	2
-----------	--	---

MEM15001B	Perform basic statistical quality control	2
-----------	---	---

MEM15008B	Perform advanced statistical quality control	2
-----------	--	---

MEM15008B	Perform advanced statistical quality control	2
-----------	--	---

Path: 1 Total Path Weight: 9

MEM12024A	Perform computations	3
-----------	----------------------	---

MEM12025A	Use graphical techniques and perform simple statistical computations	2
-----------	--	---

MEM15001B	Perform basic statistical quality control	2
-----------	---	---

MEM15010B	Perform laboratory procedures	8
-----------	-------------------------------	---

MEM15011B	Exercise external quality assurance	6
-----------	-------------------------------------	---

Path: 1 Total Path Weight: 12

MEM15004B	Perform inspection	2
-----------	--------------------	---

MEM15005B	Select and control inspection processes and procedures	4
-----------	--	---

MEM15012B	Maintain/supervise the application of quality procedures	4
-----------	--	---

Path: 1 Total Path Weight: 11

MEM12024A	Perform computations	3
-----------	----------------------	---

MEM12025A	Use graphical techniques and perform simple statistical computations	2
-----------	--	---

MEM15001B	Perform basic statistical quality control	2
-----------	---	---

MEM15015B	Examine trading practices	5
-----------	---------------------------	---

Path: 1 Total Path Weight: 10

MEM12023A	Perform engineering measurements	5
-----------	----------------------------------	---

MEM15016B	Inspect pre-packed articles	8
-----------	-----------------------------	---

Path: 1 Total Path Weight: 10

MEM13003B	Work safely with industrial chemicals and materials	2
-----------	---	---

MEM15017B	Use and maintain reference standards	3
-----------	--------------------------------------	---

Path: 1 Total Path Weight: 26

MEM11011B	Undertake manual handling	2
-----------	---------------------------	---

MEM12003B	Perform precision mechanical measurement	2
MEM12004B	Perform precision electrical/electronic measurement	4
MEM12005B	Calibrate measuring equipment	6
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2

MEM15018B	Investigate consumer complaints	6
-----------	---------------------------------	---

Path: 1 Total Path Weight: 36

MEM11011B	Undertake manual handling	2
MEM12023A	Perform engineering measurements	5
MEM15004B	Perform inspection	2
MEM15005B	Select and control inspection processes and procedures	4
MEM15015B	Examine trading practices	5
MEM15016B	Inspect pre-packed articles	8
MEM16004B	Perform internal/external customer service	2
MEM18001C	Use hand tools	2

MEM15019B	Conduct a field inspection	12
-----------	----------------------------	----

Path: 1 Total Path Weight: 75

MEM09002B	Interpret technical drawing	4
MEM11011B	Undertake manual handling	2
MEM12003B	Perform precision mechanical measurement	2
MEM12004B	Perform precision electrical/electronic measurement	4

MEM12005B	Calibrate measuring equipment	6
MEM12023A	Perform engineering measurements	5
MEM13003B	Work safely with industrial chemicals and materials	2
MEM15004B	Perform inspection	2
MEM15005B	Select and control inspection processes and procedures	4
MEM15015B	Examine trading practices	5
MEM15016B	Inspect pre-packed articles	8
MEM15017B	Use and maintain reference standards	3
MEM15018B	Investigate consumer complaints	6
MEM16002C	Conduct formal interviews and negotiations	4
MEM16004B	Perform internal/external customer service	2
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2

MEM15020C	Perform verification/certification or in-service inspection	12
-----------	---	----

Path: 1 Total Path Weight: 25

MEM09002B	Interpret technical drawing	4
MEM11011B	Undertake manual handling	2
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2

MEM15021C	Conduct audits of servicing licensees and public weighbridge licensees	4
-----------	--	---

Path: 1 Total Path Weight: 14

MEM09002B	Interpret technical drawing	4
-----------	-----------------------------	---

MEM11011B	Undertake manual handling	2
MEM16004B	Perform internal/external customer service	2
MEM18001C	Use hand tools	2

MEM15022B	Verify reference standards	8
-----------	----------------------------	---

Path: 1 Total Path Weight: 21

MEM09002B	Interpret technical drawing	4
MEM12003B	Perform precision mechanical measurement	2
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2

MEM15024A	Apply quality procedures	0
-----------	--------------------------	---

1600 Communication

Unit code	Unit title	P
MEM16001B	Give formal presentations and take part in meetings	2
MEM16002C	Conduct formal interviews and negotiations	4
MEM16003B	Provide advanced customer service	2
MEM16004B	Perform internal/external customer service	2

MEM16005A	Operate as a team member to conduct manufacturing, engineering or related activities	2
MEM16006A	Organise and communicate information	2
MEM16007A	Work with others in a manufacturing, engineering or related environment	0
MEM16008A	Interact with computing technology	2
MEM16009A	Research and analyse engineering information	2
Path: 1 Total Path Weight: 8		
MEM16006A	Organise and communicate information	MEM16006A
MEM16012A	Interpret technical specifications and manuals	MEM16012A
MEM16010A	Write reports	2
Path: 1 Total Path Weight: 6		
MEM14005A	Plan a complete activity	4
MEM16011A	Communicate with individuals and small groups	2
Path: 1 Total Path Weight: 4		
MEM16006A	Organise and communicate information	2
MEM16012A	Interpret technical specifications and manuals	4

MEM16013A	Operate in a self-directed team	2
-----------	---------------------------------	---

Path: 1 Total Path Weight: 2

MEM16007A	Work with others in a manufacturing, engineering or related environment	0
-----------	---	---

MEM16014A	Report technical information	2
-----------	------------------------------	---

Path: 1 Total Path Weight: 4

MEM16006A	Organise and communicate information	2
-----------	--------------------------------------	---

1700 Training

Unit code	Unit title	P
MEM17001B	Assist in development and deliver training in the workplace	2

MEM17002B	Conduct workplace assessment	2
-----------	------------------------------	---

MEM17003A	Assist in the provision of on the job training	2
-----------	--	---

1800 Maintenance and diagnostics (Page 1)

Unit code	Unit title	P
MEM18001C	Use hand tools	2

MEM18002B	Use power tools/hand held operations	2
-----------	--------------------------------------	---

MEM18003C	Use tools for precision work	4
-----------	------------------------------	---

Path: 1 Total Path Weight: 13

MEM12023A	Perform engineering measurements	5
-----------	----------------------------------	---

MEM18001C	Use hand tools	2
-----------	----------------	---

MEM18002B	Use power tools/hand held operations	2
-----------	--------------------------------------	---

MEM18004B	Maintain and overhaul mechanical equipment	4
-----------	--	---

Path: 1 Total Path Weight: 42

MEM09002B	Interpret technical drawing	4
-----------	-----------------------------	---

MEM12023A	Perform engineering measurements	5
-----------	----------------------------------	---

MEM18001C	Use hand tools	2
-----------	----------------	---

MEM18002B	Use power tools/hand held operations	2
-----------	--------------------------------------	---

MEM18003C	Use tools for precision work	4
-----------	------------------------------	---

MEM18005B	Perform fault diagnosis, installation and removal of bearings	4
-----------	---	---

MEM18006C	Repair and fit engineering components	6
-----------	---------------------------------------	---

MEM18007B	Maintain and repair mechanical drives and mechanical transmission assemblies	4
-----------	--	---

MEM18009B	Perform levelling and alignment of machines and engineering components	4
-----------	--	---

MEM18055B	Dismantle, replace and assemble engineering components	3
-----------	--	---

MEM18005B	Perform fault diagnosis, installation and removal of bearings	4
-----------	---	---

Path: 1 Total Path Weight: 30

MEM09002B	Interpret technical drawing	4
-----------	-----------------------------	---

MEM12023A	Perform engineering measurements	5
-----------	----------------------------------	---

MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM18003C	Use tools for precision work	4
MEM18006C	Repair and fit engineering components	6
MEM18055B	Dismantle, replace and assemble engineering components	3

MEM18006C	Repair and fit engineering components	6
-----------	---------------------------------------	---

Path: 1 Total Path Weight: 26

MEM09002B	Interpret technical drawing	4
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM18003C	Use tools for precision work	4
MEM18055B	Dismantle, replace and assemble engineering components	3

MEM18007B	Maintain and repair mechanical drives and mechanical transmission assemblies	4
-----------	--	---

Path: 1 Total Path Weight: 34

MEM09002B	Interpret technical drawing	4
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM18003C	Use tools for precision work	4
MEM18006C	Repair and fit engineering components	6
MEM18009B	Perform levelling and alignment of	4

machines and engineering components

MEM18055B	Dismantle, replace and assemble engineering components	3
-----------	--	---

MEM18008B	Balance equipment	2
-----------	-------------------	---

Path: 1 Total Path Weight: 28

MEM09002B	Interpret technical drawing	4
-----------	-----------------------------	---

MEM12023A	Perform engineering measurements	5
-----------	----------------------------------	---

MEM18001C	Use hand tools	2
-----------	----------------	---

MEM18002B	Use power tools/hand held operations	2
-----------	--------------------------------------	---

MEM18003C	Use tools for precision work	4
-----------	------------------------------	---

MEM18006C	Repair and fit engineering components	6
-----------	---------------------------------------	---

MEM18055B	Dismantle, replace and assemble engineering components	3
-----------	--	---

MEM18009B	Perform levelling and alignment of machines and engineering components	4
-----------	--	---

Path: 1 Total Path Weight: 30

MEM09002B	Interpret technical drawing	4
-----------	-----------------------------	---

MEM12023A	Perform engineering measurements	5
-----------	----------------------------------	---

MEM18001C	Use hand tools	2
-----------	----------------	---

MEM18002B	Use power tools/hand held operations	2
-----------	--------------------------------------	---

MEM18003C	Use tools for precision work	4
-----------	------------------------------	---

MEM18006C	Repair and fit engineering components	6
-----------	---------------------------------------	---

MEM18055B	Dismantle, replace and assemble engineering components	3
-----------	--	---

MEM18010C	Perform equipment condition monitoring and recording	4
-----------	--	---

Path: 1 Total Path Weight: 20

MEM09002B	Interpret technical drawing	4
-----------	-----------------------------	---

MEM12023A	Perform engineering measurements	5
-----------	----------------------------------	---

MEM18001C	Use hand tools	2
-----------	----------------	---

MEM18002B	Use power tools/hand held operations	2
-----------	--------------------------------------	---

MEM18055B	Dismantle, replace and assemble engineering components	3
-----------	--	---

MEM18011C	Shut down and isolate machines/equipment	2
-----------	--	---

MEM18012B	Perform installation and removal of mechanical seals	2
-----------	--	---

Path: 1 Total Path Weight: 28

MEM09002B	Interpret technical drawing	4
-----------	-----------------------------	---

MEM12023A	Perform engineering measurements	5
-----------	----------------------------------	---

MEM18001C	Use hand tools	2
-----------	----------------	---

MEM18002B	Use power tools/hand held operations	2
-----------	--------------------------------------	---

MEM18003C	Use tools for precision work	4

MEM234028A	Produce and manage technical documentation	
------------	--	--

MEM234029A	Produce and manage technical publications	
------------	---	--

MEM234038A	Apply systems engineering procedures to engineering design project management	0
------------	---	---

2400 Non destructive testing

Unit code	Unit title	P
-----------	------------	---

MEM24001B	Perform basic penetrant testing	2
-----------	---------------------------------	---

Path: 1 Total Path Weight: 4

MEM18001C	Use hand tools	2
-----------	----------------	---

MEM24002B	Perform penetrant testing	4
-----------	---------------------------	---

Path: 1 Total Path Weight: 10

MEM18001C	Use hand tools	2
-----------	----------------	---

MEM24012C	Apply metallurgy principles	4
-----------	-----------------------------	---

MEM24003B	Perform basic magnetic particle testing	2
-----------	---	---

Path: 1 Total Path Weight: 4

MEM18001C	Use hand tools	2
-----------	----------------	---

MEM24004B	Perform magnetic particle testing	4
-----------	-----------------------------------	---

Path: 1 Total Path Weight: 10

MEM18001C	Use hand tools	2
-----------	----------------	---

MEM24012C	Apply metallurgy principles	4
-----------	-----------------------------	---

MEM24005B	Perform basic eddy current testing	2
-----------	------------------------------------	---

Path: 1 Total Path Weight: 4

MEM18001C	Use hand tools	2
-----------	----------------	---

MEM24006B	Perform eddy current testing	6
-----------	------------------------------	---

Path: 1 Total Path Weight: 12

MEM18001C	Use hand tools	2
-----------	----------------	---

MEM24012C	Apply metallurgy principles	4
-----------	-----------------------------	---

MEM24007B	Perform ultrasonic thickness testing	2
-----------	--------------------------------------	---

Path: 1 Total Path Weight: 4

MEM18001C	Use hand tools	2
-----------	----------------	---

MEM24008B	Perform ultrasonic testing	6
-----------	----------------------------	---

Path: 1 Total Path Weight: 12

MEM18001C	Use hand tools	2
-----------	----------------	---

MEM24012C	Apply metallurgy principles	4
-----------	-----------------------------	---

MEM24009B	Perform basic radiographic testing	2
-----------	------------------------------------	---

Path: 1 Total Path Weight: 8

MEM13013B	Work safely with ionizing radiation	4
MEM18001C	Use hand tools	2

MEM24010B	Perform radiographic testing	6
-----------	------------------------------	---

Path: 1 Total Path Weight: 16

MEM13013B	Work safely with ionizing radiation	4
MEM18001C	Use hand tools	2
MEM24012C	Apply metallurgy principles	4

MEM24011B	Establish non-destructive tests	12
-----------	---------------------------------	----

Path: 1 Total Path Weight: 50

MEM13013B	Work safely with ionizing radiation	4
MEM16010A	Write reports	2
MEM18001C	Use hand tools	2
MEM24002B	Perform penetrant testing	4
MEM24004B	Perform magnetic particle testing	4
MEM24006B	Perform eddy current testing	6
MEM24008B	Perform ultrasonic testing	6
MEM24010B	Perform radiographic testing	6
MEM24012C	Apply metallurgy principles	4

MEM24012C	Apply metallurgy principles	4
-----------	-----------------------------	---

2500 Marine Craft Construction

Unit code	Unit title	P
MEM25001B	Apply fibre-reinforced materials	2
Path: 1 Total Path Weight: 8		
MEM13003B	Work safely with industrial chemicals and materials	2
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM25002B	Form and integrate fibre-reinforced structures	4
Path: 1 Total Path Weight: 10		
MEM13003B	Work safely with industrial chemicals and materials	2
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM25003B	Set up marine vessel structures	4
Path: 1 Total Path Weight: 21		
MEM09002B	Interpret technical drawing	4
MEM12007D	Mark off/out structural fabrications and shapes	4
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2

MEM25004B	Fair and shape surfaces	2
-----------	-------------------------	---

Path: 1 Total Path Weight: 8

MEM13003B	Work safely with industrial chemicals and materials	2
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2

MEM25005B	Construct and assemble marine vessel timber components	8
-----------	--	---

Path: 1 Total Path Weight:29

MEM04018B	Perform general woodworking machine operations	4
MEM09002B	Interpret technical drawing	4
MEM12007D	Mark off/out structural fabrications and shapes	4
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2

MEM25006B	Undertake marine sheathing operations	2
-----------	---------------------------------------	---

Path: 1 Total Path Weight: 10

MEM13003B	Work safely with industrial chemicals and materials	2
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM25004B	Fair and shape surfaces	2

MEM25007B	Maintain marine vessel surfaces	4
-----------	---------------------------------	---

Path: 1 Total Path Weight: 10

MEM13003B	Work safely with industrial chemicals and materials	2
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2

MEM25008B	Repair marine vessel surfaces and structures	4
-----------	--	---

Path: 1 Total Path Weight: 25

MEM12007D	Mark off/out structural fabrications and shapes	4
MEM12023A	Perform engineering measurements	5
MEM13003B	Work safely with industrial chemicals and materials	2
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM25004B	Fair and shape surfaces	2
MEM25007B	Maintain marine vessel surfaces	4

MEM25009B	Form timber shapes using hot processes	2
-----------	--	---

Path: 1 Total Path Weight: 23

MEM04018B	Perform general woodworking machine operations	4
MEM09002B	Interpret technical drawing	4
MEM12007D	Mark off/out structural fabrications and shapes	4
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2

MEM18002B	Use power tools/hand held operations	2
-----------	--------------------------------------	---

MEM25010B	Perform fitout procedures	4
-----------	---------------------------	---

Path: 1 Total Path Weight: 33

MEM04018B	Perform general woodworking machine operations	4
-----------	--	---

MEM09002B	Interpret technical drawing	4
-----------	-----------------------------	---

MEM12007D	Mark off/out structural fabrications and shapes	4
-----------	---	---

MEM12023A	Perform engineering measurements	5
-----------	----------------------------------	---

MEM18001C	Use hand tools	2
-----------	----------------	---

MEM18002B	Use power tools/hand held operations	2
-----------	--------------------------------------	---

MEM25005B	Construct and assemble marine vessel timber components	8
-----------	--	---

MEM25011B	Install marine systems	8
-----------	------------------------	---

Path: 1 Total Path Weight: 12

MEM18001C	Use hand tools	2
-----------	----------------	---

MEM18002B	Use power tools/hand held operations	2
-----------	--------------------------------------	---

MEM25012B	Install and test operations of marine auxiliary systems	6
-----------	---	---

Path: 1 Total Path Weight: 12

MEM13003B	Work safely with industrial chemicals and materials	2
-----------	---	---

MEM18001C	Use hand tools	2
-----------	----------------	---

MEM18002B	Use power tools/hand held operations	2
-----------	--------------------------------------	---

MEM25013B	Produce three-dimensional plugs/moulds	12
-----------	--	----

Path: 1 Total Path Weight: 41

MEM04018B	Perform general woodworking machine operations	4
MEM09002B	Interpret technical drawing	4
MEM12007D	Mark off/out structural fabrications and shapes	4
MEM12023A	Perform engineering measurements	5
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM25002B	Form and integrate fibre-reinforced structures	4
MEM25003B	Set up marine vessel structures	4

MEM25014B	Perform marine slipping operations	2
-----------	------------------------------------	---

Path: 1 Total Path Weight: 6

MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2

MEM25015A	Assemble and install equipment and accessories/ancillaries	2
-----------	--	---

Path: 1 Total Path Weight: 10

MEM09002B	Interpret technical drawing	4
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2

2600 Composites

Unit code	Unit title	P
MEM26001A	Lay up composites using open moulding techniques	6
MEM26002A	Lay up composites using vacuum closed moulding techniques	6
MEM26003A	Lay up composites using pressure closed moulding techniques	6
MEM26004A	Make basic plugs for composites fabrication	3
MEM26005A	Make basic moulds for composites fabrication	3
MEM26006A	Mark and cut out sheets for composite use	4
MEM26007A	Select and use reinforcing appropriate for product	4
MEM26008A	Select and use resin systems appropriate for product	4
MEM26009A	Select and use cores and filleres appropriate for product	2
MEM26010A	Store and handle composite materials	2
MEM26011A	Determine materials and techniques for a composite component or product	6

Path 1: Total path weight: 20

MEM26007A	Select and use reinforcing appropriate for product	4
MEM26008A	Select and use resin systems appropriate for product	4
MEM26009A	Select and use cores appropriate for product	2
MEM09002B	Interpret technical drawing	4
MEM26012A	Record and trial work processes for one-off composite products	4
MEM26013A	Select and use composite processes or systems appropriate for product	4
MEM26014A	Adjust resin chemicals for current conditions	4
MEM26015A	Select and apply repair techniques	6
MEM26016A	Select and use joining techniques	6
MEM26017A	Prepare composite or other substrate surfaces	4
MEM26018A	Organise composite trials	4
MEM26019A	Finish a composite product	4
MEM26020A	Identify and interpret required standards for composites	2

3000 Engineering Technician

Unit code	Unit title	P
MEM30005A	Calculate force systems within simple beam structures	0
	MEM30012A Apply mathematical techniques in a manufacturing engineering or related environment	
MEM30006A	Calculate stresses in simple structures	0
	MEM30012A Apply mathematical techniques in a manufacturing engineering or related environment	
MEM30007A	Select common engineering materials	0
MEM30008A	Apply basic economic and ergonomic concepts to evaluate engineering applications	0
MEM30009A	Contribute to the design of basic mechanical systems	0
	MEM16008A Interact with computing technology	
	MEM30002A Produce basic engineering graphics	
	MEM30003A Produce detailed engineering drawings	
MEM30010A	Set up basic hydraulic circuits	0
MEM30011A	Set up basic pneumatic circuits	0

MEM30012A Apply mathematical techniques in a manufacturing engineering or related environment 0

MEM30013A Assist in the preparation of a basic workplace layout 0

MEM30014A Apply basic just in time systems to the reduction of waste 0

MEM30015A Develop recommendations for basic set up time improvements 0

MEM30016A Assist in the analysis of a supply chain 0

MEM30017A Use basic preventative maintenance techniques and tools 0

MEM30018A Undertake basic process planning 0

MEM30019A Use resource planning software systems in manufacturing 0

MEM16008A Interact with computing technology

MEM30020A Develop and manage a plan for a simple manufacturing related project 0

MEM30021A Prepare a simple production schedule 0

MEM30022A Undertake supervised procurement activities 0

MEM30023A	Prepare a simple cost estimate for a manufactured product	0
MEM30024A	Participate in quality assurance techniques	0
	MEM15001B Perform basic statistical quality control	
MEM30025A	Analyse a simple electrical system circuit	0
	MEM12024A Perform computations	
MEM30026A	Select and test components for simple electronic switching and timing circuits	0
	MEM12024A Perform computations	
MEM30027A	Prepare basic programs for programmable logic controllers	0
MEM30028A	Assist in sales of technical products/systems	0
MEM30029A	Use workshop equipment and processes to complete an engineering project	0
MEM30031A	Operate computer-aided design (CAD) system to produce basic drawing elements	0
MEM30032A	Produce basic engineering drawings	0
MEM30033A	Use computer-aided design (CAD) to create and display 3-D models	0
	MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements	

5000 Boating services

Unit code	Unit title	P
-----------	------------	---

MEM50001B	Classify recreational boating technologies and features	0
-----------	---	---

MEM50002B	Work safely on marine craft	1
-----------	-----------------------------	---

MEM50003B	Follow work procedures to maintain the marine environment	1
-----------	---	---

MEM50004B	Maintain quality of environment by following marina codes	1
-----------	---	---

Path: 1 Total Path Weight: 2

MEM50003B	Follow work procedures to maintain the marine environment	1
-----------	---	---

MEM50005B	Refuel vessels	
-----------	----------------	--

Path: 1 Total Path Weight: 2

MEM50002B	Work safely on marine craft	1
-----------	-----------------------------	---

MEM50003B	Follow work procedures to maintain the marine environment	1
-----------	---	---

MEM50006B	Check operational capability of marine craft	
-----------	--	--

Path: 1 Total Path Weight: 1

MEM50002B	Work safely on marine craft	1
-----------	-----------------------------	---

MEM50007B Check operational capability of sails and sail operating equipment

Path: 1 Total Path Weight: 1

MEM50002B Work safely on marine craft 1

MEM50008B Carry out trip preparation and planning

MEM50009B Safely operate a mechanically powered recreational boat 2

MEM50010B Respond to boating emergencies and incidents

Pre-employment

Code	Title	P
------	-------	---

MEMPE001A	Use engineering workshop machines	0
-----------	-----------------------------------	---

MEMPE002A	Use electric welding machines	0
-----------	-------------------------------	---

MEMPE003A	Use oxy-acetylene and soldering equipment	0
-----------	---	---

MEMPE004A	Use fabrication equipment	0
-----------	---------------------------	---

MEMPE005A	Develop a career plan for the engineering and manufacturing industry	0
-----------	--	---

MEMPE006A	Undertake a basic engineering project	0
-----------	---------------------------------------	---

MEMPE007A	Pull apart and re-assemble engineering mechanisms	0
-----------	---	---

Appendix 2: Certificate III Trade Specialisation Units

Units from the Trade Specialisation units list below may be selected to bring the total value of Stream and Specialisation units to at least 73 points, including any prerequisites for the following certificates:

MEM30205 Certificate III in Engineering - Mechanical Trade

MEM30305 Certificate III in Engineering - Fabrication Trade

MEM30405 Certificate III in Engineering - Electrical/Electronic Trade

MEM30605 Certificate III in Jewellery Manufacture

MEM30705 Certificate III in Marine Craft Construction

MEM30805 Certificate III in Locksmithing

MEM31010 Certificate III in Watch and Clock Service and Repair

Specialisation units

Unit code	Unit title	P
MEM03001B	Perform manual production assembly	4
MEM03002B	Perform precision assembly	4
MEM03003B	Perform sheet and plate assembly	4
MEM03004B	Perform electronic/electrical assembly (production)	8
MEM03005B	Rework and repair (electrical/electronic production)	8
MEM03006B	Set assembly stations	2
MEM04001B	Operate melting furnaces	4
MEM04002B	Perform gravity die casting	2

Unit code	Unit title	P
MEM04003B	Operate pressure die casting machine	4
MEM04004B	Prepare and mix sand for metal moulding	4
MEM04005C	Produce moulds and cores by hand (jobbing)	16
MEM04006B	Operate sand moulding and core making machines	8
MEM04007B	Pour molten metal	4
MEM04008B	Fettle and trim metal castings/forgings	4
MEM04010B	Develop and manufacture wood patterns	20
MEM04011B	Produce polymer patterns	8
MEM04012B	Assemble plated patterns	8
MEM04013B	Develop and manufacture polystyrene patterns	2
MEM04014B	Develop and manufacture production patterns	8
MEM04015B	Develop and manufacture vacuum forming moulds and associated equipment	6
MEM04016C	Develop and manufacture precision models	6
MEM04017B	Develop and manufacture gear, conveyor screw and propeller patterns	4
MEM04018B	Perform general woodworking machine operations	4
MEM04019B	Perform refractory installation and repair	4
MEM04020A	Supervise individual ferrous melting and casting operation	4
MEM04021A	Supervise individual non ferrous melting and casting operation	4
MEM04022A	Examine appropriateness of methoding for mould design	4
MEM04023A	Undertake prescribed tests on foundry related materials	4
MEM05001B	Perform manual soldering/desoldering – electrical/electronic components	4
MEM05002B	Perform high reliability soldering and desoldering	4

Unit code	Unit title	P
MEM05003B	Perform soft soldering	2
MEM05004C	Perform routine oxy acetylene welding	2
MEM05005B	Carry out mechanical cutting	2
MEM05006C	Perform brazing and/or silver soldering	2
MEM05007C	Perform manual heating and thermal cutting	2
MEM05008C	Perform advanced manual thermal cutting, gouging and shaping	2
MEM05009C	Perform automated thermal cutting	2
MEM05010C	Apply fabrication, forming and shaping techniques	8
MEM05011D	Assemble fabricated components	8
MEM05012C	Perform routine manual metal arc welding	2
MEM05013C	Perform manual production welding	2
MEM05014C	Monitor quality of production welding/fabrications	2
MEM05015D	Weld using manual metal arc welding process	4
MEM05016C	Perform advanced welding using manual metal arc welding process	4
MEM05017D	Weld using gas metal arc welding process	4
MEM05018C	Perform advanced welding using gas metal arc welding process	4
MEM05019D	Weld using gas tungsten arc welding process	4
MEM05020C	Perform advanced welding using gas tungsten arc welding process	4
MEM05022C	Perform advanced welding using oxy acetylene welding process	6
MEM05023C	Weld using submerged arc welding process	4
MEM05027A	Perform aluminothermic welding	2
MEM05036C	Repair/replace/modify fabrications	4
MEM05037C	Perform geometric development	6

Unit code	Unit title	P
MEM05038B	Perform advanced geometric development – cylindrical/rectangular	2
MEM05039B	Perform advanced geometric development – conical	2
MEM05040B	Perform advanced geometric development – transitions	4
MEM05041B	Weld using powder flame spraying	4
MEM05047B	Weld using flux core arc welding process	4
MEM05048B	Perform advanced welding using flux core arc welding process	4
MEM05049B	Perform routine gas tungsten arc welding	2
MEM05050B	Perform routine gas metal arc welding	2
MEM05051A	Select welding processes	2
MEM05052A	Apply safe welding practices	4
MEM05053A	Set and edit computer controlled thermal cutting machines	4
MEM05054A	Write basic NC/CNC programs for thermal cutting machines	4
MEM06001B	Perform hand forging	4
MEM06002B	Perform hammer forging	4
MEM06003C	Carry out heat treatment	6
MEM06004B	Select heat treatment processes and test finished product	6
MEM06005B	Perform drop and upset forging	4
MEM06006C	Repair springs	4
MEM06007B	Perform basic incidental heat/quenching, tempering and annealing	2
MEM06008A	Hammer forge complex shapes	4
MEM06009A	Hand forge complex shapes	4
MEM07001B	Perform operational maintenance of machines/equipment	2
MEM07002B	Perform precision shaping/planing/slotting operations	4

Unit code	Unit title	P
MEM07003B	Perform machine setting (routine)	4
MEM07004B	Perform machine setting (complex)	8
MEM07005C	Perform general machining	8
MEM07006C	Perform lathe operations	4
MEM07007C	Perform milling operations	4
MEM07008D	Perform grinding operations	4
MEM07009B	Perform precision jig boring operations	4
MEM07010B	Perform tool and cutter grinding operations	4
MEM07011B	Perform complex milling operations	4
MEM07012B	Perform complex grinding operations	4
MEM07013B	Perform machining operations using horizontal and/or vertical boring machines	4
MEM07014B	Perform electro-discharge (EDM) machining operations	4
MEM07015B	Set computer controlled machines/processes	2
MEM07016C	Set and edit computer controlled machines/processes	4
MEM07018C	Write basic NC/CNC programs	4
MEM07019C	Program NC/CNC machining centre	2
MEM07020C	Program multiple spindle and/or multiple axis NC/CNC machining centre	2
MEM07021B	Perform complex lathe operations	4
MEM07022C	Program CNC wire cut machines	2
MEM07024B	Operate and monitor machine/process	4
MEM07025B	Perform advanced machine/process operation	6
MEM07026B	Perform advanced plastic processing	6
MEM07027B	Perform advanced press operations	6

Unit code	Unit title	P
MEM07028B	Operate computer controlled machines/processes	2
MEM07029B	Perform routine sharpening/maintenance of production tools and cutters	4
MEM07030C	Perform metal spinning lathe operations (basic)	8
MEM07031C	Perform metal spinning lathe operations (complex)	4
MEM07032B	Use workshop machines for basic operations	2
MEM07033B	Operate and monitor basic boiler	6
MEM07034A	Operate and monitor intermediate class boiler	4
MEM07040A	Set multistage integrated processes	6
MEM08001B	Perform wire, jig and barrel load/unload work	4
MEM08002C	Pre-treat work for subsequent surface coating	4
MEM08003C	Perform electroplating operations	6
MEM08004B	Finish work using wet, dry and vapour deposition methods	4
MEM08005B	Prepare and produce specialised coatings	4
MEM08006B	Produce clear and/or coloured and/or sealed anodised films on aluminium	2
MEM08007B	Control surface finish production and finished product quality	4
MEM08008B	Operate and control surface finishing waste treatment process	3
MEM08009C	Make up solutions	2
MEM08010B	Manually finish/polish materials	6
MEM08011B	Prepare surfaces using solvents and/or mechanical means	2
MEM08012B	Prepare surfaces by abrasive blasting (basic)	4
MEM08013B	Prepare surfaces by abrasive blasting (advanced)	4
MEM08014B	Apply protective coatings (basic)	4
MEM08015B	Apply protective coatings (advanced)	4

Unit code	Unit title	P
MEM08016B	Control blast coating by-products, materials and emissions	1
MEM08018B	Electroplate engineering coatings	6
MEM08019B	Electroplate protective finishes	6
MEM08020B	Electroplate decorative finishes	6
MEM09002B	Interpret technical drawing	4
MEM09003B	Prepare basic engineering drawing	8
MEM09005B	Perform basic engineering detail drafting	8
MEM09011B	Apply basic engineering design concepts	6
MEM09021B	Interpret and produce curved 3-dimensional shapes	4
MEM09022A	Create 2D code files using computer aided manufacturing system	4
MEM10001C	Erect structures	4
MEM10002B	Terminate and connect electrical wiring	3
MEM10003B	Install and test electrical wiring and circuits up to 1000 volts a.c. and 1500 volts d.c.	12
MEM10004B	Enter and change programmable controller operational parameters	2
MEM10005B	Commission programmable controller programs	4
MEM10006B	Install machine/plant	4
MEM10009B	Install refrigeration and air conditioning plant and equipment	4
MEM10010B	Install pipework and pipework assemblies	4
MEM10011B	Terminate and connect specialist cables	3
MEM10013A	Install split air conditioning systems and associated pipework	6
MEM11001C	Erect/dismantle scaffolding and equipment	4
MEM11002C	Erect/dismantle complex scaffolding and equipment	4
MEM11003B	Coordinate erection/dismantling of complex	4

Unit code	Unit title	P
	scaffolding/equipment	
MEM11004B	Undertake dogging	4
MEM11005B	Pick and process order	4
MEM11006B	Perform production packaging	2
MEM11007B	Administer inventory procedures	4
MEM11008B	Package materials (stores and warehouse)	2
MEM11009B	Handle/move bulk fluids/gases	4
MEM11010B	Operate mobile load shifting equipment	4
MEM11011B	Undertake manual handling	2
MEM11012B	Purchase materials	6
MEM11013B	Undertake warehouse receipt process	4
MEM11014B	Undertake warehouse dispatch process	4
MEM11015B	Manage warehouse inventory system	6
MEM11016B	Order materials	2
MEM11017B	Organise and lead stocktakes	4
MEM11018B	Organise and maintain warehouse stock receipt and/or dispatch system	6
MEM11019B	Undertake tool store procedures	4
MEM11020B	Perform advanced warehouse computer operations	4
MEM11021B	Perform advanced operation of load shifting equipment	2
MEM11022B	Operate fixed/movable load shifting equipment	4
MEM12001B	Use comparison and basic measuring devices	2
MEM12002B	Perform electrical/electronic measurement	2
MEM12003B	Perform precision mechanical measurement	2
MEM12004B	Perform precision electrical/electronic measurement	4

Unit code	Unit title	P
MEM12006C	Mark off/out (general engineering)	4
MEM12007D	Mark off/out structural fabrications and shapes	4
MEM12019B	Measure components using coordinate measuring machine	4
MEM12020B	Set and operate coordinate measuring machine	2
MEM12021B	Program coordinate measuring machine	4
MEM12022B	Program coordinate measuring machine (advanced)	2
MEM12025A	Use graphical techniques and perform simple statistical computations	2
MEM13001B	Perform emergency first aid	1
MEM13002B	Undertake occupational health and safety activities in the workplace	3
MEM13003B	Work safely with industrial chemicals and materials	2
MEM13004B	Work safely with molten metals/glass	2
MEM13006B	Collect and evaluate occupational health and safety data for an enterprise or section of an enterprise	4
MEM13007B	Maintain water treatment systems for cooling towers	2
MEM13010A	Supervise occupational health and safety in an industrial work environment.	4
MEM13013B	Work safely with ionizing radiation	4
MEM15001B	Perform basic statistical quality control	2
MEM15003B	Use improvement processes in team activities	4
MEM15004B	Perform inspection	2
MEM15005B	Select and control inspection processes and procedures	4
MEM15015B	Examine trading practices	5
MEM15016B	Inspect pre-packed articles	8
MEM15022B	Verify reference standards	8

Unit code	Unit title	P
MEM16001B	Give formal presentations and take part in meetings	2
MEM16002C	Conduct formal interviews and negotiations	4
MEM16004B	Perform internal/external customer service	2
MEM16005A	Operate as a team member to conduct manufacturing, engineering or related activities	2
MEM16011A	Communicate with individuals and small groups	2
MEM16013A	Operate in a self-directed team	2
MEM17001B	Assist in development and deliver training in the workplace	2
MEM17002B	Conduct workplace assessment	2
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM18003C	Use tools for precision work	4
MEM18004B	Maintain and overhaul mechanical equipment	4
MEM18005B	Perform fault diagnosis, installation and removal of bearings	4
MEM18006C	Repair and fit engineering components	6
MEM18007B	Maintain and repair mechanical drives and mechanical transmission assemblies	4
MEM18008B	Balance equipment	2
MEM18009B	Perform levelling and alignment of machines and engineering components	4
MEM18010C	Perform equipment condition monitoring and recording	4
MEM18011C	Shut down and isolate machines/equipment	2
MEM18012B	Perform installation and removal of mechanical seals	2
MEM18013B	Perform gland packing	2
MEM18014B	Manufacture press tools and gauges	8

Unit code	Unit title	P
MEM18015B	Maintain tools and dies	4
MEM18018C	Maintain pneumatic system components	4
MEM18019B	Maintain pneumatic systems	4
MEM18020B	Maintain hydraulic system components	4
MEM18021B	Maintain hydraulic systems	4
MEM18022B	Maintain fluid power controls	8
MEM18024B	Maintain engine cooling systems	2
MEM18025B	Service combustion engines	2
MEM18026C	Test compression ignition fuel systems	4
MEM18027C	Overhaul engine fuel system components	8
MEM18028B	Maintain engine lubrication systems	2
MEM18029B	Tune diesel engines	4
MEM18030B	Diagnose and rectify low voltage electrical systems	8
MEM18031B	Diagnose and rectify low voltage starting systems	2
MEM18032B	Maintain induction/exhaust systems	4
MEM18033B	Perform engine bottom-end overhaul	4
MEM18034B	Perform engine top-end overhaul	8
MEM18035B	Diagnose and rectify braking systems	6
MEM18037B	Diagnose and rectify low voltage charging systems	2
MEM18038B	Maintain wheels and tyres	2
MEM18039B	Diagnose and rectify track type undercarriage	4
MEM18040B	Maintain suspension systems	4
MEM18041B	Maintain steering systems	4
MEM18042C	Diagnose and rectify manual transmissions	4

Unit code	Unit title	P
MEM18043C	Diagnose and rectify automatic transmissions	8
MEM18044C	Diagnose and rectify drive line and final drives	4
MEM18045B	Fault find/repair electrical equipment/components up to 250 volts single phase supply	4
MEM18046B	Fault find/repair electrical equipment/components up to 1000 volts a.c./1500 volts d.c.	10
MEM18047B	Diagnose and maintain electronic controlling systems on mobile plant	4
MEM18048B	Fault find and repair/rectify basic electrical circuits	12
MEM18049C	Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.	3
MEM18050C	Disconnect/reconnect fixed wired equipment over 1000 volts a.c./1500 volts d.c.	3
MEM18051B	Fault find and repair/rectify complex electrical circuits	6
MEM18052B	Maintain fluid power systems for mobile plant	4
MEM18054B	Fault find, test and calibrate instrumentation systems and equipment	8
MEM18055B	Dismantle, replace and assemble engineering components	3
MEM18056B	Diagnose and repair analog equipment and components	10
MEM18057B	Maintain/service analog/digital electronic equipment	6
MEM18058C	Modify electronic equipment	4
MEM18060B	Maintain, repair control instrumentation – single and multiple loop control systems	8
MEM18062B	Install, maintain and calibrate instrumentation sensors, transmitters and final control elements	8
MEM18063B	Terminate signal and data cables	4
MEM18064B	Maintain instrumentation system components	6
MEM18065B	Diagnose and repair digital equipment and components	10

Unit code	Unit title	P
MEM18066B	Diagnose and repair microprocessor-based equipment	6
MEM18067B	Tune control loops – multi controller or multi element systems	6
MEM18071B	Connect/disconnect fluid conveying system components	2
MEM18072B	Manufacture fluid conveying conductor assemblies	4
MEM18084A	Commission and decommission split air conditioning systems	4
MEM18085A	Install, service and repair domestic air conditioning and refrigeration appliances	6
MEM18086B	Test, recover, evacuate and charge refrigeration systems	4
MEM18087B	Service and repair domestic and light commercial refrigeration and air conditioning equipment	6
MEM18088B	Maintain and repair commercial air conditioning systems and components	4
MEM18089B	Maintain and repair central air handling systems	6
MEM18090B	Maintain and repair industrial refrigeration systems and components	6
MEM18091B	Maintain and repair multi stage, cascade and/or ultra-cold industrial refrigeration systems	4
MEM18092B	Maintain and repair commercial and/or industrial refrigeration and/or air conditioning controls	6
MEM18094B	Service and repair commercial refrigeration	6
MEM18095A	Maintain and repair cooling towers/evaporative condensers and associated equipment	4
MEM18096A	Maintain, repair/replace and adjust refrigerant flow controls and associated equipment	6
MEM18097A	Manufacture cavity dies	8
MEM18098A	Prepare to perform work associated with fuel system installation and servicing	2
MEM19001B	Perform jewellery metal casting	6

Unit code	Unit title	P
MEM19002B	Prepare jewellery illustrations	4
MEM19003B	Handle gem materials	2
MEM19004B	Handle and examine gemstone materials	6
MEM19005B	Produce three-dimensional precision items	8
MEM19006B	Replace watch batteries	1
MEM19007B	Perform gemstone setting	6
MEM19008B	Prepare jewellery designs	6
MEM19009B	Perform investment procedures for lost wax casting process	1
MEM19010B	Produce rubber moulds for lost wax casting process	2
MEM19011B	Perform wax injection of moulds for lost wax casting process	2
MEM19012B	Produce jewellery wax model	4
MEM19013B	Produce jewellery metal masters	4
MEM19014B	Perform hand engraving	4
MEM19015B	Perform jewellery enamelling	4
MEM19016B	Construct jewellery components	4
MEM19017B	Fabricate jewellery items	6
MEM19018B	Repair jewellery items	6
MEM19020B	Fault-find and maintain micro-mechanisms	4
MEM19021B	Diagnose and service micro-mechanisms	6
MEM19022B	Perform precision micro-mechanism diagnosis and servicing	6
MEM20001A	Produce Keys	4
MEM20002A	Assemble and test lock mechanisms	6
MEM20003A	Install and upgrade locks and hardware	4
MEM20004A	Gain entry	4

Unit code	Unit title	P
MEM20005A	Install and maintain door control devices/systems	2
MEM20006A	Maintain and service mechanical locking devices	6
MEM20007A	Plan and prepare a masterkey system	4
MEM20008A	Develop and implement a masterkey system	6
MEM20009A	Gain entry and reinstate fire and security containers	4
MEM20010A	Gain entry and reinstate automotive locking systems	4
MEM20011A	Service and repair fire and security containers	6
MEM20012A	Service and repair mechanical automotive locking systems	4
MEM20013A	Service automotive transponder systems	2
MEM20014A	Perform a site security survey	2
MEM21001A	Replace watch batteries, capacitors and bands	2
MEM21002A	Perform watch movement exchange	2
MEM21003A	Perform watch case servicing, repair and refurbishment	4
MEM21004A	Clean watch and clock components	2
MEM21005A	Diagnose faults in quartz watches	2
MEM21006A	Service quartz watches	4
MEM21007A	Service complex quartz watches	4
MEM21008A	Service mechanical watches	4
MEM21009A	Inspect, diagnose, adjust and repair mechanical watches	4
MEM21010A	Service watch power generating systems	2
MEM21011A	Service calendar and other dial indication mechanisms for watches	4
MEM21012A	Service and repair mechanical watch oscillating systems	4
MEM21013A	Service, test and adjust watch escapements	4

Unit code	Unit title	P
MEM21014A	Service mechanical chronograph watches	6
MEM21015A	Perform precision watch timing and adjustment	6
MEM21016A	Install and set up clocks	2
MEM21017A	Service and repair clock timepieces	6
MEM21018A	Service clock escapements and oscillating systems	4
MEM21019A	Service and repair clock striking mechanisms	4
MEM21020A	Service and repair clock chiming mechanisms	6
MEM21021A	Restore clockwork mechanisms	6
MEM21022A	Manufacture watch and clock components	6
MEM21023A	Plan, set up and operate horological workshop or service centre	4
MEM24001B	Perform basic penetrant testing	2
MEM24002B	Perform penetrant testing	4
MEM24003B	Perform basic magnetic particle testing	2
MEM24004B	Perform magnetic particle testing	4
MEM24005B	Perform basic eddy current testing	2
MEM24006B	Perform eddy current testing	6
MEM24007B	Perform ultrasonic thickness testing	2
MEM24008B	Perform ultrasonic testing	6
MEM24009B	Perform basic radiographic testing	2
MEM24010B	Perform radiographic testing	6
MEM24012C	Apply metallurgy principles	4
MEM25001B	Apply fibre-reinforced materials	2
MEM25002B	Form and integrate fibre-reinforced structures	4
MEM25003B	Set up marine vessel structures	4

Unit code	Unit title	P
MEM25004B	Fair and shape surfaces	2
MEM25005B	Construct and assemble marine vessel timber components	8
MEM25006B	Undertake marine sheathing operations	2
MEM25007B	Maintain marine vessel surfaces	4
MEM25008B	Repair marine vessel surfaces and structures	4
MEM25009B	Form timber shapes using hot processes	2
MEM25010B	Perform fitout procedures	4
MEM25011B	Install marine systems	8
MEM25012B	Install and test operations of marine auxiliary systems	6
MEM25013B	Produce three-dimensional plugs/moulds	12
MEM25014B	Perform marine slipping operations	2
MEM25015A	Assemble and install equipment and accessories/ancillaries	2
MEM26001A	Lay up composites using open moulding techniques	0
MEM26002A	Lay up composites using vacuum closed moulding techniques	0
MEM26003A	Lay up composites using pressure closed moulding techniques	0
MEM26004A	Make basic plugs for composites fabrication	0
MEM26005A	Make basic moulds for composites fabrication	0
MEM26006A	Mark and cut out sheets for composite use	0
MEM26007A	Select and use reinforcing appropriate for product	0
MEM26008A	Select and use resin systems appropriate for product	0
MEM26009A	Select and use cores and filleres appropriate for product	0
MEM26010A	Store and handle composite materials	0
MEM26011A	Determine materials and techniques for a composite component or product*	0

Unit code	Unit title	P
MEM26012A	Record and trial work processes for one-off composite products	0
MEM26013A	Select and use composite processes or systems appropriate for product	0
MEM26014A	Adjust resin chemicals for current conditions	0
MEM26015A	Select and apply repair techniques	0
MEM26016A	Select and use joining techniques	0
MEM26017A	Prepare composite or other substrate surfaces	0
MEM26018A	Organise composite trials	0
MEM26019A	Finish a composite product	0
MEM26020A	Identify and interpret required standards for composites	0
MEM30012A	Apply mathematical techniques in a manufacturing engineering or related environment	4
MEM50002B	Work safely on marine craft	1
MEM50003B	Follow work procedures to maintain the marine environment	1
MEM50004B	Maintain quality of environment by following marina codes	1
MEM50009B	Safely operate a mechanically powered recreational boat	2
AURV225908A	Carry out panel repairs	4
ICTTC136B	Install, maintain and modify customer premises communications cabling: ACA Restricted Rule	6
ICTTC137B	Install, maintain and modify customer premises communications cabling: ACA Open Rule	6
MSAENV472B	Implement and monitor environmentally sustainable work practices	4
MSATCM304A	Interpret basic binary phase diagrams	4
PMBPROD291B	Operate resin infusion moulding equipment	2
PMBPROD294B	Operate resin transfer moulding equipment	2

Unit code	Unit title	P
PMBPROD298B	Operate equipment using pre-pregs material	2
PMBPROD391B	Produce composites using resin infusion	4
PMBPROD394B	Produce composites using resin transfer moulding	4
PMBPROD398B	Produce composites using pre-pregs	4
PRSTS202A	Install security equipment/system	4
PRSTS302A	Program security equipment/system	2
PRSTS303A	Test installed security equipment/system	2
PRSTS304A	Commission/decommission security equipment/system	2
PRSTS305A	Identify and diagnose electronic security equipment/ system fault	2
PRSTS307A	Maintain and service security equipment/system	4
PRSTS317A	Provide estimate and quote	4
PRSTS319A	Modify and repair security equipment/system	4
TLILIC2001A	Licence to operate a forklift truck	0
TLILIC0012A	Licence to operate a vehicle loading crane (capacity 10 metre tonnes and above)	1

Appendix 3: Imported units of competency and points weighting

The table below shows imported units of competency and, where applicable, their allocated points weighting. Unit points weightings are shown in the right hand column labelled "P".

Training Package codes for imported units:

AUR05	Automotive Industry Retail, Service and Repair Training Package
BSB07	Business Services Training Package
CPC08	Construction, Plumbing and Services Integrated Framework
CUF07	Screen and Media Training Package
CUV11	Visual Arts, Craft and Design Training Package

ICT02	Telecommunications Training Package
LMF02	Furnishing Training Package
MEA11	Aeroskills Training Package
MSA07	Manufacturing Training Package
MSL09	Laboratory Training Package
PMB07	Plastics, Rubber and Cablemaking Training Package
PRS03	Asset Security Training Package
SIR07	Retail Services Training Package
TLI10	Transport and Logistics Training Package
UEP06	Electricity Supply Industry Training Package

Unit code	Unit title	P
AURV225908A	Carry out panel repairs	4
BSBCMM401A	Make a presentation	
BSBCRT401A	Articulate, present and debate ideas	
BSBCRT402A	Collaborate in a creative process	
BSBCRT501A	Originate and develop concepts	
BSBCRT601A	Research and apply concepts and theories of creativity	
BSBDES402A	Interpret and respond to a design brief	
BSBDES502A	Establish, negotiate and refine a design brief	
BSBDES601A	Manage design realisation	
BSBDES602A	Research global design trends	
BSBDES701A	Research and apply design theory	
BSBIPR401A	Use and respect copyright	
BSBIPR501A	Manage intellectual property to protect and grow business	
BSBLED705A	Plan and implement a mentoring program	
BSBLED706A	Plan and implement a coaching strategy	
BSBLED710A	Develop human capital	
BSBPMG510A	Undertake project work	
BSBREL701A	Develop and cultivate collaborative partnerships and relationships	
BSBSMB403A	Market the small business	4
BSBSMB405B	Monitor and manage small business operations	4
BSBSMB406A	Manage small business finances	4
CPCCLDG3001A	Licence to perform dogging	
CPCCLRG3001A	Licence to perform rigging basic level	

CPCCLSF2001A	Licence to erect, alter and dismantle scaffolding basic level	
CPCCLSF3001A	Licence to erect, alter and dismantle scaffolding intermediate level	
CPCCOHS1001A	Work safely in the construction industry	
CPCPCM4002A	Estimate and cost work	
CPPBDN5013A	Develop and collaborate on building information models for small-scale building design projects	
CUFIND201A	Develop and apply creative arts industry knowledge	
CUFRES401A	Conduct research	
CUVACD304A	Make scale models	
CUVACD504A	Research and apply light and colour	
CUVACD506A	Refine 2-D design ideas and processes	
CUVACD507A	Refine 3-D design ideas and processes	
CUVACD512A	Work with photomedia in creative practice	
CUVACD601A	Extend professional expertise with drawing and other visual representation tools	
CUVDES403A	Research and apply techniques for the design of wearable objects	
CUVDIG401A	Experiment with techniques to enhance digital images	
CUVDIG501A	Refine digital art techniques	
CUVDRA501A	Refine drawing techniques	
CUVDRA502A	Investigate drawing materials and processes	
CUVGRD301A	Prepare files for publication	
CUVJWL401A	Experiment with techniques to produce jewellery	
CUVPHI302A	Capture photographic images	
CUVPHI403A	Apply photo imaging lighting techniques	
CUVPRP403A	Select and organise finished work for storage	

CUVPRP405A	Develop and discuss ideas for own creative work	
CUVPRP501A	Realise a body of creative work	
CUVPRP502A	Prepare for sustainable professional practice	
CUVPRP503A	Present a body of own creative work	
CUVPRP601A	Originate a body of independent creative work	
CUVPRP602A	Collaborate in professional creative projects	
CUVPRP603A	Engage in the business of creative practice	
CUVPRP604A	Publicly present a body of own creative work	
CUVRES502A	Analyse cultural history and theory	
CUVRES601A	Extend cultural research expertise	
FDFOP2005A	Work in a socially diverse environment	
ICTTC136B	Install, maintain and modify customer premises communications cabling: ACA Restricted Rule	6
ICTTC137B	Install, maintain and modify customer premises communications cabling: ACA Open Rule	6
LMFFDT4012A	Produce ideation drawings	
LMTGN4002A	Participate in product engineering	
LMTGN4002A	Participate in product engineering	
MEA101B	Interpret occupational health and safety practices in aviation maintenance	
MEA105C	Apply quality standards applicable to aviation maintenance processes	
MEA107B	Interpret and use aviation maintenance industry manuals and specifications	
MEA108B	Complete aviation maintenance industry documentation	
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance	
MEA270A	Lay out avionic systems	

MEA271A	Lay out avionic flight management systems	
MEA272B	Apply basic scientific principles and techniques in avionic engineering situations	
MEA273A	Select and test avionic engineering materials	
MEA340A	Lay out and set up aircraft systems	
MEA341A	Apply basic aircraft design characteristics	
MEA342A	Apply basic aircraft power plant design characteristics	
MEA349B	Apply basic scientific principles and techniques in aeronautical engineering situations	
MEA350A	Select and test aeronautical engineering materials	
MSAENV272B	Participate in environmentally sustainable work practices	3
MSAENV472B	Implement and monitor environmentally sustainable work practices	4
MSAENV672B	Develop workplace policy and procedures for environmental sustainability	
MSAPCI101A	Adapt to work in industry	
MSAPMSUP106A	Work in a team	
MSATCM304A	Interpret basic binary phase diagrams	4
MSATCS301A	Interpret architectural and design specifications for structural steel detailing	
MSATCS302A	Detail bolts and welds for structural steelwork connections	
MSATCS501A	Detail standardised structural connections	
MSATCS502A	Detail structural steel members	
MSATCS503A	Incorporate structural steel detailing into fabrication and construction project management	
MSATCS504A	Detail ancillary steelwork	
MSL976003A	Evaluate and select appropriate test methods and procedures	
MSS402002A	Sustain process improvements	

MSS402030A	Apply cost factors to work practices	
MSS402051A	Apply quality standards	
MSS402060A	Use planning software systems in operations	
MSS402061A	Use SCADA systems in operations	
MSS402080A	Undertake root cause analysis	
MSS403001A	Implement competitive systems and practices	
MSS403002A	Ensure process improvements are sustained	
MSS403010A	Facilitate change in an organisation implementing competitive systems and practices	
MSS403021A	Facilitate a Just in Time system	
MSS403023A	Monitor a levelled pull system of operations	
MSS403030A	Improve cost factors in work practices	
MSS403032A	Analyse manual handling processes	
MSS403040A	Facilitate and improve implementation of 5S	
MSS403051A	Mistake proof an operational process	
MSS404050A	Undertake process capability improvements	
MSS404052A	Apply statistics to operational processes	
MSS404060A	Facilitate the use of planning software systems in a work area or team	
MSS404061A	Facilitate the use of SCADA systems in a team or work area	
MSS404081A	Undertake proactive maintenance analyses	
MSS404082A	Assist in implementing a proactive maintenance strategy	
MSS405001A	Develop competitive systems and practices for an organisation	
MSS405002A	Analyse and map a value stream	
MSS405003A	Manage a value stream	
MSS405004A	Develop business plans in an organisation implementing	

	competitive systems and practices	
MSS405005A	Manage competitive systems and practices in an organisation responding to individual and unique customer orders	
MSS405007A	Introduce competitive systems and practices to a small or medium enterprise	
MSS405010A	Manage relationships with non-customer external organisations	
MSS405011A	Manage people relationships	
MSS405012A	Manage workplace learning	
MSS405020A	Develop quick changeover procedures	
MSS405021A	Develop a Just in Time system	
MSS405022A	Design a process layout	
MSS405023A	Develop a levelled pull system for operations and processes	
MSS405030A	Optimise cost of product or service	
MSS405031A	Undertake value analysis of a product or process costs in terms of customer requirements	
MSS405032A	Analyse cost implications of maintenance strategy	
MSS405040A	Manage 5S system in an organisation	
MSS405050A	Determine and improve process capability	
MSS405052A	Design an experiment	
MSS405060A	Develop the application of enterprise control systems in an organisation	
MSS405061A	Determine and establish information collection requirements and processes	
MSS405070A	Develop and manage sustainable energy practices	
MSS405075A	Facilitate the development of a new product	
MSS405081A	Develop a proactive maintenance strategy	
MSS407001A	Prepare for and implement change	
MSS407002A	Review operations practice tools and techniques	

MSS407003A	Analyse process changes	
MSS407004A	Facilitate improvements in the internal value stream	
MSS407005A	Undertake a qualitative review of a process change	
MSS407006A	Build relationships between teams in an operations environment	
MSS407007A	Respond to a major non-conformance	
MSS407008A	Capture learning from daily activities in a organisation	
MSS407009A	Facilitate improvements in the external value stream	
MSS407010A	Improve visual management in the workplace	
MSS407011A	Manage benchmarking studies	
MSS407012A	Lead a problem solving process to determine and solve root cause	
MSS407013A	Review continuous improvement processes	
MSS408001A	Develop the competitive systems and practices approach	
MSS408002A	Audit the use of competitive tools	
MSS408003A	Develop models of future state operations practice	
MSS408004A	Develop the value stream	
MSS408005A	Develop the learning processes of the operations organisation	
MSS408006A	Develop and refine systems for continuous improvement in operations	
MSS408007A	Develop problem solving capability of a organisation	
MSS408008A	Analyse data for relevance to organisational learning	
PMBPROD291B	Operate resin infusion moulding equipment	2
PMBPROD294B	Operate resin transfer moulding equipment	2
PMBPROD298B	Operate equipment using pre-pregs material	2
PMBPROD391B	Produce composites using resin infusion	4
PMBPROD394B	Produce composites using resin transfer moulding	4

PMBPROD398B	Produce composites using pre-pregs	4
PRSTS202A	Install security equipment/system	4
PRSTS302A	Program security equipment/system	2
PRSTS303A	Test installed security equipment/system	2
PRSTS304A	Commission/decommission security equipment/system	2
PRSTS305A	Identify and diagnose electronic security equipment/ system fault	2
PRSTS307A	Maintain and service security equipment/system	4
PRSTS317A	Provide estimate and quote	4
PRSTS319A	Modify and repair security equipment/system	4
SIRXSL201	Sell products and services	
TLILIC0012A	Licence to operate a vehicle loading crane (capacity 10 metre tonnes and above)	1
TLILIC2001A	Licence to operate a forklift truck	
TLILIC2002A	Licence to operate an order picking forklift truck	
TLILIC3003A	Licence to operate a bridge and gantry crane	
TLILIC3006A	Licence to operate a non-slewing mobile crane (greater than 3 tonnes capacity)	
UEPMNT419B	Perform civil drafting	

MEM10105 Certificate I in Engineering

Modification History

Correction of training.gov.au transfer error - MSAENV272B added to elective selection.
Updated one unit of competency - MEM05006B to MEM05006C

Description

The minimum requirements for achievement of the Certificate I in Engineering are:

- completion of all of the core units of competency listed below, and
- completion of elective units listed below to the value of at least 24 points.

Points associated with prerequisites count towards the total (refer to units and prerequisites listing in Appendix 2, Volume 1).

Appropriate elective units to the value of 5 points may be chosen from other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate I. Note that the elective units listed below include all of the units that are approved for selection from the MEM Training Package for use qualification. This meets the NQC requirement that one sixth of the total units must be able to be selected from other qualifications in the same Training Package.

Registered Training Organisations must seek a determination from Manufacturing Skills Australia in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses.

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Read and interpret routine information on written job instructions and standard operating procedures. May include simple drawings • Follow verbal instructions • Enter routine and familiar information onto proforma and standard workplace forms • Orally report routine information • Use basic numeracy skills for undertaking comparison measurements
Teamwork	<ul style="list-style-type: none"> • Work alone or as part of a team • Identify work roles, communicate and cooperate with others
Problem-solving	<ul style="list-style-type: none"> • Check material/product for conformance to specification • Identify waste and correct procedures for disposal • Identify routine problems/faults in machine/process/equipment operations and act/report as required
Initiative and enterprise	<ul style="list-style-type: none"> • Be capable of applying skills and knowledge to specified situations and contexts • Identify actual and foreseeable workplace hazards/problems during course of work • Minimise wasteful use of resources including materials and services in own work
Planning and organising	<ul style="list-style-type: none"> • Select, prepare and lay out or assemble materials and equipment correctly • Conduct pre-start checks on machinery/equipment • Plan steps required to complete routine task • Identify sequence of activities/operations
Self-management	<ul style="list-style-type: none"> • Adhere to all safety requirements • Perform work in accordance with job instructions and work procedures
Learning	<ul style="list-style-type: none"> • Clarify tasks and required outcomes with appropriate personnel
Technology	<ul style="list-style-type: none"> • Use dedicated tools, equipment and machines

Packaging Rules

Core units

- select all of the units from this list

Unit code	Unit title
MEM13014A	Apply principles of occupational health and safety in the work environment
MEM14004A	Plan to undertake a routine task
MEM15024A	Apply quality procedures
MEM16007A	Work with others in a manufacturing, engineering or related environment

Elective units

- select units from this list to the value of at least 24 points, including any prerequisites.

Unit code	Unit title	P
MEM03001B	Perform manual production assembly	4
MEM03002B	Perform precision assembly	4
MEM03003B	Perform sheet and plate assembly	4
MEM03004B	Perform electronic/electrical assembly (production)	8
MEM03006B	Set assembly stations	2
MEM04004B	Prepare and mix sand for metal moulding	4
MEM04008B	Fettle and trim metal castings/forgings	4
MEM04018B	Perform general woodworking machine operations	4
MEM05001B	Perform manual soldering/desoldering - electrical/electronic components	4
MEM05003B	Perform soft soldering	2
MEM05004C	Perform routine oxy acetylene welding	2
MEM05005B	Carry out mechanical cutting	2
MEM05006C	Perform brazing and/or silver soldering	2
MEM05007C	Perform manual heating and thermal cutting	2

Unit code	Unit title	P
MEM05012C	Perform routine manual metal arc welding	2
MEM05013C	Perform manual production welding	2
MEM06001B	Perform hand forging	4
MEM06007B	Perform basic incidental heat/quenching, tempering and annealing	2
MEM07001B	Perform operational maintenance of machines/equipment	2
MEM07003B	Perform machine setting (routine)	4
MEM07024B	Operate and monitor machine/process	4
MEM07028B	Operate computer controlled machines/processes	2
MEM07029B	Perform routine sharpening/maintenance of production tools and cutters	4
MEM07030C	Perform metal spinning lathe operations (basic)	8
MEM07032B	Use workshop machines for basic operations	2
MEM08001B	Perform wire, jig and barrel load/unload work	4
MEM08002C	Pre-treat work for subsequent surface coating	4
MEM08004B	Finish work using wet, dry and vapour deposition methods	4
MEM08009C	Make up solutions	2
MEM08010B	Manually finish/polish materials	6
MEM08011B	Prepare surfaces using solvents and/or mechanical means	2
MEM08012B	Prepare surfaces by abrasive blasting (basic)	4
MEM08014B	Apply protective coatings (basic)	4
MEM08016B	Control blast coating by-products, materials and emissions	1
MEM11005B	Pick and process order	4
MEM11006B	Perform production packaging	2
MEM11007B	Administer inventory procedures	4
MEM11008B	Package materials (stores and warehouse)	2

Unit code	Unit title	P
MEM11009B	Handle/move bulk fluids/gases	4
MEM11011B	Undertake manual handling	2
MEM11013B	Undertake warehouse receipt process	4
MEM11016B	Order materials	2
MEM12001B	Use comparison and basic measuring devices	2
MEM12002B	Perform electrical/electronic measurement	2
MEM12023A	Perform engineering measurements	5
MEM12024A	Perform computations	3
MEM13001B	Perform emergency first aid	1
MEM13002B	Undertake occupational health and safety activities in the workplace	3
MEM13003B	Work safely with industrial chemicals and materials	2
MEM13004B	Work safely with molten metals/glass	2
MEM14005A	Plan a complete activity	4
MEM15001B	Perform basic statistical quality control	2
MEM15002A	Apply quality systems	2
MEM15003B	Use improvement processes in team activities	4
MEM16004B	Perform internal/external customer service	2
MEM16005A	Operate as a team member to conduct manufacturing, engineering or related activities	2
MEM16006A	Organise and communicate information	2
MEM16008A	Interact with computing technology	2
MEM17003A	Assist in the provision of on the job training	2
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2

Unit code	Unit title	P
MEM18013B	Perform gland packing	2
MEM18038B	Maintain wheels and tyres	2
MEM19001B	Perform jewellery metal casting	6
MEM19002B	Prepare jewellery illustrations	4
MEM19003B	Handle gem materials	2
MEM19006B	Replace watch batteries	1
MEM19009B	Perform investment procedures for lost wax casting process	1
MEM19010B	Produce rubber moulds for lost wax casting process	2
MEM19011B	Perform wax injection of moulds for lost wax casting process	2
MEM19014B	Perform hand engraving	4
MEM19015B	Perform jewellery enamelling	4
MEM19016B	Construct jewellery components	4
MEM19017B	Fabricate jewellery items	6
MEM20001A	Produce keys	4
MEM20002A	Assemble and test lock mechanisms	6
MEM20003A	Install and upgrade locks and hardware	4
MEM25001B	Apply fibre-reinforced materials	2
MEM25002B	Form and integrate fibre-reinforced structures	4
MEM25004B	Fair and shape surfaces	2
MEM25006B	Undertake marine sheathing operations	2
MEM25007B	Maintain marine vessel surfaces	4
MEM25014B	Perform marine slipping operations	2
MEM50002B	Work safely on marine craft	1
MEM50003B	Follow work procedures to maintain the marine environment	1

Unit code	Unit title	P
MEM50004B	Maintain quality of environment by following marina codes	1
MEM50009B	Safely operate a mechanically powered recreational boat	2
MSAENV272B	Participate in environmentally sustainable work practices	3

MEM10205 Certificate I in Boating Services

Modification History

The following units missing from the electives have been reinstated:
MEM50007B, 50008B, 50009B and 50010B, and MSAENV272B

Description

The minimum requirements for achievement of the Certificate I in Boating Services are:

- completion of the seven core units of competency listed below, and completion of three elective units from the list below to bring the total number of units to 10.

Two elective units may be chosen from other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate I. Note that the elective units listed below include all of the units that are approved for selection from the MEM Training Package for use in this qualification. This meets the NQC requirement that one sixth of the total units must be able to be selected from other qualifications in the same Training Package.

Registered Training Organisations must seek a determination from Manufacturing Skills Australia in respect of the suitability of any units proposed for importation from other Training Packages or accredited courses.

Additional qualification descriptors

There are no approved additional descriptors for this qualification.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Read, follow and communicate information on written job instructions, specifications, standard operating procedures, drawings and other applicable reference documents • Follow verbal instructions • Identify and follow safety signs/symbols • Recognise and use common boating terminology • Read and interpret information on boating identification and compliance plates, registration tags, engine and other component identification numbers • Use boating communication systems, methods and signals to convey messages
Teamwork	<ul style="list-style-type: none"> • Work alone or as part of a team • Contribute to a group effort in order to plan and carry out work • Identify work roles, communicate and cooperate with others
Problem-solving	<ul style="list-style-type: none"> • Identify actual and foreseeable workplace hazards during course of work • Inspect quality of own work • Identify waste and correct procedures for disposal • Assess operation and condition of components against specifications or manufacturer's requirements
Initiative and enterprise	<ul style="list-style-type: none"> • Be capable of applying skills and knowledge to specified situations and contexts • Use appropriate responses in reaction to incidents and accidents. • Modify work plan to overcome unforeseen situations that occur as work progresses • Assist the business to maintain the quality of the environment • Minimise wasteful use of resources including materials and services in own work
Planning and organising	<ul style="list-style-type: none"> • Identify sequence of activities and plan steps required to complete task • Collect and organise information relevant to work • Set up jobs prior to commencement of work including selection of appropriate materials and adjustment of equipment
Self-management	<ul style="list-style-type: none"> • Carry out work safely and in accordance with company policy and procedures, manufacturer's recommendations and legislative requirements • Monitor performance of operation or quality of product or service to ensure customer satisfaction • Take responsibility for own quality

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Learning	<ul style="list-style-type: none"> • Check and clarify task related information with appropriate personnel • Review and modify work progress to complement the work of others
Technology	<ul style="list-style-type: none"> • Select and use appropriate tools, materials, equipment and machines • Identify and describe the functions of the major systems of a recreational vessel and trailer • Identify and describe features and functions of attached navigation and communication devices • Use navigation and communication systems and equipment

Packaging Rules**Core units**

- select all of the units from this list

Unit code	Unit title
MEM13014A	Apply principles of occupational health and safety in the work environment
MEM14004A	Plan to undertake a routine task
MEM15024A	Apply quality procedures
MEM16007A	Work with others in a manufacturing, engineering or related environment
MEM50001B	Classify recreational boating technologies and features
MEM50002B	Work safely on marine craft
MEM50003B	Follow work procedures to maintain the marine environment

Elective units

- select three units from this list.

Unit code	Unit title
MEM09002B	Interpret technical drawing
MEM11010B	Operate mobile load shifting equipment
MEM11011B	Undertake manual handling
MEM12023A	Perform engineering measurements
MEM13003B	Work safely with industrial chemicals and materials
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEM50004B	Maintain quality of environment by following marina codes
MEM50005B	Refuel vessels
MEM50006B	Check operational capability of marine craft
MEM50007B	Check operational capability of sails and sail operating equipment
MEM50008B	Carry out trip preparation and planning
MEM50009B	Safely operate a mechanically powered recreational boat
MEM50010B	Respond to boating emergencies and incidents
MSAENV272B	Participate in environmentally sustainable work practices

MEM20105 Certificate II in Engineering

Modification History

Release 4 - equivalent. ISC advice on target groups and pathways included.

Description

This qualification covers the skills and knowledge required of workers employed as Engineering/manufacturing Employees -Level III as defined in the Manufacturing and Associated Industries and Occupations Award or in related industries where Engineering/Manufacturing Employees work.

The qualification has been specifically developed to reflect the minimum training requirement specified in the Award for employment in the above occupation. The qualification packaging has been developed on an assumption that competency will be developed through a combination of on and off-the-job learning strategies such as those delivered through a formal traineeship. The qualification may also be achieved through formal skills recognition assessment processes.

Application

This qualification is designed to provide an industry recognised skills profile related to production work as an Engineering/ Manufacturing Employee - Level III. Competency development would typically be undertaken through an Australian Apprenticeships arrangement where the integration of on and off-the-job training would be specified in the Training Plan associated with the Contract of Training between the employer and trainee.

Assessment of some units of competency must, where indicated, include evidence of the candidate's performance in a productive work environment where there is a sufficient range of appropriate tasks and/or materials to cover the scope of application of those units. All outcomes must reflect the standard of performance required of the work associated with the Unit/s.

This qualification is not suited and should not be used for people who are not employed in an engineering production or manufacturing environment. It is not suited and should not be used for school students unless they are formally engaged in a traineeship in accordance with the Australian Apprenticeships policy.

Packaging Rules

The minimum requirements for achievement of the Certificate II in Engineering are:

- completion of all of the core units of competency listed below, and

- completion of elective units from the list below to the value of at least 30 points.

Points associated with prerequisites count towards the total (refer to units and prerequisites listing in Appendix 2, Volume 1)

Appropriate elective units to the value of 6 points may be chosen from other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate II. Note that the elective units listed below include all of the units that are approved for selection from the MEM Training Package for use in this qualification. This meets the NQC requirement that one sixth of the total units must be able to be selected from other qualifications in the same Training Package.

Registered Training Organisations must seek a determination from Manufacturing Skills Australia in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses.

Core units

- select all of the units from this list

Unit code	Unit title
MEM13014A	Apply principles of occupational health and safety in the work environment
MEM14004A	Plan to undertake a routine task
MEM15002A	Apply quality systems
MEM15024A	Apply quality procedures
MEM16007A	Work with others in a manufacturing, engineering or related environment

Elective units

- select elective units from this list to the value of at least 30 points, including any prerequisites.

Unit code	Unit title	P
MEM03001B	Perform manual production assembly	4
MEM03002B	Perform precision assembly	4
MEM03003B	Perform sheet and plate assembly	4

Unit code	Unit title	P
MEM03004B	Perform electronic/electrical assembly (production)	8
MEM03005B	Rework and repair (electrical/electronic production)	8
MEM03006B	Set assembly stations	2
MEM04001B	Operate melting furnaces	4
MEM04002B	Perform gravity die casting	2
MEM04003B	Operate pressure die casting machine	4
MEM04004B	Prepare and mix sand for metal moulding	4
MEM04006B	Operate sand moulding and core making machines	8
MEM04007B	Pour molten metal	4
MEM04008B	Fettle and trim metal castings/forgings	4
MEM04018B	Perform general woodworking machine operations	4
MEM04019B	Perform refractory installation and repair	4
MEM05001B	Perform manual soldering/desoldering - electrical/electronic components	4
MEM05002B	Perform high reliability soldering and desoldering	4
MEM05003B	Perform soft soldering	2
MEM05004C	Perform routine oxy acetylene welding	2
MEM05005B	Carry out mechanical cutting	2
MEM05006C	Perform brazing and/or silver soldering	2
MEM05007C	Perform manual heating and thermal cutting	2
MEM05012C	Perform routine manual metal arc welding	2
MEM05013C	Perform manual production welding	2

Unit code	Unit title	P
MEM05027A	Perform aluminothermic welding	2
MEM05041B	Weld using powder flame spraying	4
MEM05049B	Perform routine gas tungsten arc welding	2
MEM05050B	Perform routine gas metal arc welding	2
MEM06001B	Perform hand forging	4
MEM06002B	Perform hammer forging	4
MEM06003C	Carry out heat treatment	6
MEM06005B	Perform drop and upset forging	4
MEM06007B	Perform basic incidental heat/quenching, tempering and annealing	2
MEM07001B	Perform operational maintenance of machines/equipment	2
MEM07003B	Perform machine setting (routine)	4
MEM07015B	Set computer controlled machines/processes	2
MEM07024B	Operate and monitor machine/process	4
MEM07025B	Perform advanced machine/process operation	6
MEM07026B	Perform advanced plastic processing	6
MEM07027B	Perform advanced press operations	6
MEM07028B	Operate computer controlled machines/processes	2
MEM07029B	Perform routine sharpening/maintenance of production tools and cutters	4
MEM07030C	Perform metal spinning lathe operations (basic)	8
MEM07031C	Perform metal spinning lathe operations (complex)	4
MEM07032B	Use workshop machines for basic operations	2

Unit code	Unit title	P
MEM07033B	Operate and monitor basic boiler	6
MEM07034A	Operate and monitor intermediate class boiler	4
MEM08001B	Perform wire, jig and barrel load/unload work	4
MEM08002C	Pre-treat work for subsequent surface coating	4
MEM08003C	Perform electroplating operations	6
MEM08004B	Finish work using wet, dry and vapour deposition methods	4
MEM08005B	Prepare and produce specialised coatings	4
MEM08006B	Produce clear and/or coloured and/or sealed anodised films on aluminium	2
MEM08007B	Control surface finish production and finished product quality	4
MEM08008B	Operate and control surface finishing waste treatment process	3
MEM08009C	Make up solutions	2
MEM08010B	Manually finish/polish materials	6
MEM08011B	Prepare surfaces using solvents and/or mechanical means	2
MEM08012B	Prepare surfaces by abrasive blasting (basic)	4
MEM08013B	Prepare surfaces by abrasive blasting (advanced)	4
MEM08014B	Apply protective coatings (basic)	4
MEM08015B	Apply protective coatings (advanced)	4
MEM08016B	Control blast coating by-products, materials and emissions	1
MEM09002B	Interpret technical drawing	4
MEM10002B	Terminate and connect electrical wiring	3

Unit code	Unit title	P
MEM10013A	Install split air conditioning systems and associated pipework	6
MEM11001C	Erect/dismantle scaffolding and equipment	4
MEM11002C	Erect/dismantle complex scaffolding and equipment	4
MEM11004B	Undertake dogging	4
MEM11005B	Pick and process order	4
MEM11006B	Perform production packaging	2
MEM11007B	Administer inventory procedures	4
MEM11008B	Package materials (stores and warehouse)	2
MEM11009B	Handle/move bulk fluids/gases	4
MEM11010B	Operate mobile load shifting equipment	4
MEM11011B	Undertake manual handling	2
MEM11012B	Purchase materials	6
MEM11013B	Undertake warehouse receival process	4
MEM11014B	Undertake warehouse dispatch process	4
MEM11016B	Order materials	2
MEM11017B	Organise and lead stocktakes	4
MEM11018B	Organise and maintain warehouse stock receival and/or dispatch system	6
MEM11019B	Undertake tool store procedures	4
MEM11020B	Perform advanced warehouse computer operations	4
MEM11021B	Perform advanced operation of load shifting equipment	2
MEM11022B	Operate fixed/moveable load shifting equipment	4

Unit code	Unit title	P
MEM12001B	Use comparison and basic measuring devices	2
MEM12002B	Perform electrical/electronic measurement	2
MEM12019B	Measure components using coordinate measuring machine	4
MEM12023A	Perform engineering measurements	5
MEM12024A	Perform computations	3
MEM13001B	Perform emergency first aid	1
MEM13002B	Undertake occupational health and safety activities in the workplace	3
MEM13003B	Work safely with industrial chemicals and materials	2
MEM13004B	Work safely with molten metals/glass	2
MEM13007B	Maintain water treatment systems for cooling towers	2
MEM13013B	Work safely with ionizing radiation	4
MEM14005A	Plan a complete activity	4
MEM15001B	Perform basic statistical quality control	2
MEM15003B	Use improvement processes in team activities	4
MEM16002C	Conduct formal interviews and negotiations	4
MEM16004B	Perform internal/external customer service	2
MEM16005A	Operate as a team member to conduct manufacturing, engineering or related activities	2
MEM16006A	Organise and communicate information	2
MEM16008A	Interact with computing technology	2
MEM17001B	Assist in development and deliver training in the workplace	2

Unit code	Unit title	P
MEM17002B	Conduct workplace assessment	2
MEM17003A	Assist in the provision of on the job training	2
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM18013B	Perform gland packing	2
MEM18024B	Maintain engine cooling systems	2
MEM18025B	Service combustion engines	2
MEM18026C	Test compression ignition fuel systems	4
MEM18027C	Overhaul engine fuel system components	8
MEM18028B	Maintain engine lubrication systems	2
MEM18029B	Tune diesel engines	4
MEM18038B	Maintain wheels and tyres	2
MEM18055B	Dismantle, replace and assemble engineering components	3
MEM18071B	Connect/disconnect fluid conveying system components	2
MEM18072B	Manufacture fluid conveying conductor assemblies	4
MEM18084A	Commission and decommission split air conditioning systems	4
MEM18085A	Install, service and repair domestic air conditioning and refrigeration appliances	6
MEM18086B	Test, recover, evacuate and charge refrigeration systems	4
MEM19001B	Perform jewellery metal casting	6
MEM19002B	Prepare jewellery illustrations	4
MEM19003B	Handle gem materials	2

Unit code	Unit title	P
MEM19004B	Handle and examine gemstone materials	6
MEM19006B	Replace watch batteries	1
MEM19007B	Perform gemstone setting	6
MEM19009B	Perform investment procedures for lost wax casting process	1
MEM19010B	Produce rubber moulds for lost wax casting process	2
MEM19011B	Perform wax injection of moulds for lost wax casting process	2
MEM19014B	Perform hand engraving	4
MEM19015B	Perform jewellery enamelling	4
MEM19016B	Construct jewellery components	4
MEM19017B	Fabricate jewellery items	6
MEM19020B	Fault-find and maintain micro-mechanisms	4
MEM19021B	Diagnose and service micro-mechanisms	6
MEM20001A	Produce keys	4
MEM20002A	Assemble and test lock mechanisms	6
MEM20003A	Install and upgrade locks and hardware	4
MEM20004A	Gain entry	4
MEM21001A	Replace watch batteries, capacitors and bands	2
MEM21002A	Perform watch movement exchange	2
MEM21003A	Perform watch case servicing, repair and refurbishment	4
MEM21004A	Clean watch and clock components	2
MEM21005A	Diagnose faults in quartz watches	2
MEM21006A	Service quartz watches	4

Unit code	Unit title	P
MEM21007A	Service complex quartz watches	4
MEM21008A	Service mechanical watches	4
MEM25001B	Apply fibre-reinforced materials	2
MEM25002B	Form and integrate fibre-reinforced structures	4
MEM25004B	Fair and shape surfaces	2
MEM25006B	Undertake marine sheathing operations	2
MEM25007B	Maintain marine vessel surfaces	4
MEM25011B	Install marine systems	8
MEM25012B	Install and test operations of marine auxiliary systems	6
MEM25014B	Perform marine slipping operations	2
MEM25015A	Assemble and install equipment and accessories/ancillaries	2
MEM26007A	Select and use reinforcing appropriate for product	4
MEM26008A	Select and use resin systems appropriate for product	4
MEM26009A	Select and use cores and fillers appropriate for product	2
MEM50002B	Work safely on marine craft	1
MEM50003B	Follow work procedures to maintain the marine environment	1
MEM50004B	Maintain quality of environment by following marina codes	1
MEM50009B	Safely operate a mechanically powered recreational boat	2
MSAENV272B	Participate in environmentally sustainable work practices	3

Unit code	Unit title	P
PMBPROD291B	Operate resin infusion moulding equipment	2
PMBPROD294B	Operate resin transfer moulding equipment	2
PMBPROD298B	Operate equipment using pre-pregs material	2

MEM20205 Certificate II in Engineering - Production Technology

Modification History

Release 6 - equivalent. ISC advice on target groups and pathways included.

Description

This qualification covers the skills and knowledge required of workers employed as Engineering/ Manufacturing Employees - Level IV as defined in the Manufacturing and Associated Industries and Occupations Award or in related industries where Engineering/ Manufacturing Employees work.

The qualification has been specifically developed to reflect the minimum training requirement specified in the Award for employment in the above occupation. The qualification packaging has been developed on an assumption that competency will be developed through a combination of on and off-the-job learning strategies such as those delivered through a formal traineeship. The qualification may also be achieved through formal skills recognition assessment processes.

Application

This qualification is designed to provide an industry recognised skills profile related to production work as an Engineering/ Manufacturing Employee - Level IV. Competency development would typically be undertaken through an Australian Apprenticeships arrangement where the integration of on and off-the-job training would be specified in the Training Plan associated with the Contract of Training between the employer and trainee.

Assessment of some units of competency must, where indicated, include evidence of the candidate's performance in a productive work environment where there is a sufficient range of appropriate tasks and/or materials to cover the scope of application of those units. All outcomes must reflect the standard of performance required of the work associated with the Unit/s.

This qualification is not suited and should not be used for people who are not employed in an engineering production or manufacturing environment. It is not suited and should not be used for school students unless they are formally engaged in a traineeship in accordance with the Australian Apprenticeships policy.

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials • Follow verbal instructions • Enter routine and familiar information onto proforma and standard workplace forms • Orally report routine information • Recognise and use common workplace terminology • Identify and follow safety signs and symbols
Teamwork	<ul style="list-style-type: none"> • Work alone or as part of a team • Identify work roles, communicate and cooperate with others • Consult with team leaders and appropriate personnel
Problem-solving	<ul style="list-style-type: none"> • Check material/product for conformance to specification • Identify problems/faults and act/report as required • Undertake numerical operations including comparison measurements, geometry and calculations/formulae
Initiative and enterprise	<ul style="list-style-type: none"> • Be capable of applying the required skills and knowledge in a variety of situations and contexts • Identify actual and foreseeable workplace hazards/problems during course of work • Participate in quality systems and suggest improvements • Prevent and minimise environmental risks and maximise opportunities for environmental improvement
Planning and organising	<ul style="list-style-type: none"> • Select, prepare and lay out or assemble materials and equipment correctly • Conduct pre-start checks on machinery/equipment • Plan steps required to complete task • Identify activities and work outcomes
Self-management	<ul style="list-style-type: none"> • Adhere to all relevant safety, quality and environmental requirements and guidelines • Perform work in accordance with job instructions, specifications and work procedures • Take responsibility for own quality
Learning	<ul style="list-style-type: none"> • Clarify tasks and required outcomes with appropriate personnel • Assist in the transfer of skills and knowledge to other employees
Technology	<ul style="list-style-type: none"> • Select and use appropriate tools, equipment and machines • Apply knowledge of process, equipment and materials

Packaging Rules

The minimum requirements for achievement of the Certificate II in Engineering - Production Technology are:

- completion of all of the core units of competency listed below, and
- completion of elective units from the list below to the value of at least 50 points.

Points associated with prerequisites count towards the total (refer to units for details). Appropriate elective units to the value of 11 points may be chosen from other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate II. Note that the elective units listed below include all of the units that are approved for selection from the MEM05 Training Package for use in this qualification. This meets the NSSC requirement that one sixth of the total units must be able to be selected from other qualifications in the same Training Package.

Registered Training Organisations must seek a determination from Manufacturing Skills Australia in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses.

Additional qualification descriptors

The following additional descriptors are approved for use with this qualification: Marine Craft Manufacturing; Surface Finishing; Marine Craft Surface Finishing

Core units

- select all of the units from this list

Unit code	Unit title
MEM12023A	Perform engineering measurements
MEM13014A	Apply principles of occupational health and safety in the work environment
MEM14004A	Plan to undertake a routine task
MEM15002A	Apply quality systems
MEM15024A	Apply quality procedures
MEM16006A	Organise and communicate information
MEM16007A	Work with others in a manufacturing, engineering or related environment
MEM17003A	Assist in the provision of on the job training

Unit code	Unit title
MSAENV272B	Participate in environmentally sustainable work practices

Elective units

- select elective units from this list to the value of at least 50 points, including any prerequisites.

Unit code	Unit title	P
MEM03001B	Perform manual production assembly	4
MEM03002B	Perform precision assembly	4
MEM03003B	Perform sheet and plate assembly	4
MEM03004B	Perform electronic/electrical assembly (production)	8
MEM03005B	Rework and repair (electrical/electronic production)	8
MEM03006B	Set assembly stations	2
MEM04001B	Operate melting furnaces	4
MEM04002B	Perform gravity die casting	2
MEM04003B	Operate pressure die casting machine	4
MEM04004B	Prepare and mix sand for metal moulding	4
MEM04006B	Operate sand moulding and core making machines	8
MEM04007B	Pour molten metal	4
MEM04008B	Fettle and trim metal castings/forgings	4
MEM04018B	Perform general woodworking machine operations	4
MEM04019B	Perform refractory installation and repair	4
MEM05001B	Perform manual soldering/desoldering - electrical/electronic components	4
MEM05002B	Perform high reliability soldering and desoldering	4
MEM05003B	Perform soft soldering	2

Unit code	Unit title	P
MEM05004C	Perform routine oxy acetylene welding	2
MEM05005B	Carry out mechanical cutting	2
MEM05006C	Perform brazing and/or silver soldering	2
MEM05007C	Perform manual heating and thermal cutting	2
MEM05009C	Perform automated thermal cutting	2
MEM05012C	Perform routine manual metal arc welding	2
MEM05013C	Perform manual production welding	2
MEM05014C	Monitor quality of production welding/fabrications	2
MEM05015D	Weld using manual metal arc welding process	4
MEM05017D	Weld using gas metal arc welding process	4
MEM05019D	Weld using gas tungsten arc welding process	4
MEM05023C	Weld using submerged arc welding process	4
MEM05027A	Perform aluminothermic welding	2
MEM05041B	Weld using powder flame spraying	4
MEM05049B	Perform routine gas tungsten arc welding	2
MEM05050B	Perform routine gas metal arc welding	2
MEM05051A	Select welding processes	2
MEM05052A	Apply safe welding practices	4
MEM05053A	Set and edit computer controlled thermal cutting machines	4
MEM06001B	Perform hand forging	4
MEM06002B	Perform hammer forging	4
MEM06003C	Carry out heat treatment	6
MEM06004B	Select heat treatment processes and test finished product	6
MEM06005B	Perform drop and upset forging	4

Unit code	Unit title	P
MEM06006C	Repair springs	4
MEM06007B	Perform basic incidental heat/quenching, tempering and annealing	2
MEM06008A	Hammer forge complex shapes	4
MEM06009A	Hand forge complex shapes	4
MEM07001B	Perform operational maintenance of machines/equipment	2
MEM07003B	Perform machine setting (routine)	4
MEM07004B	Perform machine setting (complex)	8
MEM07005C	Perform general machining	8
MEM07014B	Perform electro-discharge (EDM) machining operations	4
MEM07015B	Set computer controlled machines/processes	2
MEM07016C	Set and edit computer controlled machines/processes	4
MEM07024B	Operate and monitor machine/process	4
MEM07025B	Perform advanced machine/process operation	6
MEM07026B	Perform advanced plastic processing	6
MEM07027B	Perform advanced press operations	6
MEM07028B	Operate computer controlled machines/processes	2
MEM07029B	Perform routine sharpening/maintenance of production tools and cutters	4
MEM07030C	Perform metal spinning lathe operations (basic)	8
MEM07031C	Perform metal spinning lathe operations (complex)	4
MEM07032B	Use workshop machines for basic operations	2
MEM07033B	Operate and monitor basic boiler	6
MEM07034A	Operate and monitor intermediate class boiler	4
MEM07040A	Set multistage integrated processes	6

Unit code	Unit title	P
MEM07041A	Perform production machining*	8
MEM08001B	Perform wire, jig and barrel load/unload work	4
MEM08002C	Pre-treat work for subsequent surface coating	4
MEM08003C	Perform electroplating operations	6
MEM08004B	Finish work using wet, dry and vapour deposition methods	4
MEM08005B	Prepare and produce specialised coatings	4
MEM08006B	Produce clear and/or coloured and/or sealed anodised films on aluminium	2
MEM08007B	Control surface finish production and finished product quality	4
MEM08008B	Operate and control surface finishing waste treatment process	3
MEM08009C	Make up solutions	2
MEM08010B	Manually finish/polish materials	6
MEM08011B	Prepare surfaces using solvents and/or mechanical means	2
MEM08012B	Prepare surfaces by abrasive blasting (basic)	4
MEM08013B	Prepare surfaces by abrasive blasting (advanced)	4
MEM08014B	Apply protective coatings (basic)	4
MEM08015B	Apply protective coatings (advanced)	4
MEM08016B	Control blast coating by-products, materials and emissions	1
MEM08018B	Electroplate engineering coatings	6
MEM08019B	Electroplate protective finishes	6
MEM08020B	Electroplate decorative finishes	6
MEM09002B	Interpret technical drawing	4
MEM10002B	Terminate and connect electrical wiring	3
MEM10009B	Install refrigeration and air conditioning plant and equipment	4

Unit code	Unit title	P
MEM10010B	Install pipework and pipework assemblies	4
MEM10011B	Terminate and connect specialist cables	3
MEM10013A	Install split air conditioning systems and associated pipework	6
MEM11001C	Erect/dismantle scaffolding and equipment	4
MEM11002C	Erect/dismantle complex scaffolding and equipment	4
MEM11003B	Coordinate erection/dismantling of complex scaffolding/equipment	4
MEM11004B	Undertake dogging	4
MEM11005B	Pick and process order	4
MEM11006B	Perform production packaging	2
MEM11007B	Administer inventory procedures	4
MEM11008B	Package materials (stores and warehouse)	2
MEM11009B	Handle/move bulk fluids/gases	4
MEM11010B	Operate mobile load shifting equipment	4
MEM11011B	Undertake manual handling	2
MEM11012B	Purchase materials	6
MEM11013B	Undertake warehouse receipt process	4
MEM11014B	Undertake warehouse dispatch process	4
MEM11015B	Manage warehouse inventory system	6
MEM11016B	Order materials	2
MEM11017B	Organise and lead stocktakes	4
MEM11018B	Organise and maintain warehouse stock receipt and/or dispatch system	6
MEM11019B	Undertake tool store procedures	4
MEM11020B	Perform advanced warehouse computer operations	4

Unit code	Unit title	P
MEM11021B	Perform advanced operation of load shifting equipment	2
MEM11022B	Operate fixed/moveable load shifting equipment	4
MEM11023A	Operate a bridge and gantry crane	4
MEM11024A	Undertake basic rigging*	4
MEM11025A	Operate a non-slewing mobile crane of greater than three tonnes capacity	4
MEM12001B	Use comparison and basic measuring devices	2
MEM12002B	Perform electrical/electronic measurement	2
MEM12019B	Measure components using coordinate measuring machine	4
MEM12020B	Set and operate coordinate measuring machine	2
MEM12024A	Perform computations	3
MEM13001B	Perform emergency first aid	1
MEM13002B	Undertake occupational health and safety activities in the workplace	3
MEM13003B	Work safely with industrial chemicals and materials	2
MEM13004B	Work safely with molten metals/glass	2
MEM13007B	Maintain water treatment systems for cooling towers	2
MEM13013B	Work safely with ionizing radiation	4
MEM14005A	Plan a complete activity	4
MEM15001B	Perform basic statistical quality control	2
MEM15003B	Use improvement processes in team activities	4
MEM15004B	Perform inspection	2
MEM16002C	Conduct formal interviews and negotiations	4
MEM16004B	Perform internal/external customer service	2
MEM16005A	Operate as a team member to conduct manufacturing,	2

Unit code	Unit title	P
	engineering or related activities	
MEM16008A	Interact with computing technology	2
MEM16013A	Operate in a self-directed team	2
MEM17001B	Assist in development and deliver training in the workplace	2
MEM17002B	Conduct workplace assessment	2
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM18003C	Use tools for precision work	4
MEM18013B	Perform gland packing	2
MEM18024B	Maintain engine cooling systems	2
MEM18025B	Service combustion engines	2
MEM18026C	Test compression ignition fuel systems	4
MEM18027C	Overhaul engine fuel system components	8
MEM18028B	Maintain engine lubrication systems	2
MEM18029B	Tune diesel engines	4
MEM18030B	Diagnose and rectify low voltage electrical systems	8
MEM18031B	Diagnose and rectify low voltage starting systems	2
MEM18032B	Maintain induction/exhaust systems	4
MEM18033B	Perform engine bottom-end overhaul	4
MEM18035B	Diagnose and rectify braking systems	6
MEM18037B	Diagnose and rectify low voltage charging systems	2
MEM18038B	Maintain wheels and tyres	2
MEM18039B	Diagnose and rectify track type undercarriage	4
MEM18040B	Maintain suspension systems	4

Unit code	Unit title	P
MEM18041B	Maintain steering systems	4
MEM18042C	Diagnose and rectify manual transmissions	4
MEM18043C	Diagnose and rectify automatic transmissions	8
MEM18044C	Diagnose and rectify drive line and final drives	4
MEM18055B	Dismantle, replace and assemble engineering components	3
MEM18063B	Terminate signal and data cables	4
MEM18071B	Connect/disconnect fluid conveying system components	2
MEM18072B	Manufacture fluid conveying conductor assemblies	4
MEM18084A	Commission and decommission split air conditioning systems	4
MEM18085A	Install, service and repair domestic air conditioning and refrigeration appliances	6
MEM18086B	Test, recover, evacuate and charge refrigeration systems	4
MEM18098A	Prepare to perform work associated with fuel system installation and servicing*	2
MEM19001B	Perform jewellery metal casting	6
MEM19002B	Prepare jewellery illustrations	4
MEM19003B	Handle gem materials	2
MEM19004B	Handle and examine gemstone materials	6
MEM19005B	Produce three-dimensional precision items	8
MEM19006B	Replace watch batteries	1
MEM19007B	Perform gemstone setting	6
MEM19008B	Prepare jewellery designs	6
MEM19009B	Perform investment procedures for lost wax casting process	1
MEM19010B	Produce rubber moulds for lost wax casting process	2
MEM19011B	Perform wax injection of moulds for lost wax casting process	2

Unit code	Unit title	P
MEM19012B	Produce jewellery wax model	4
MEM19013B	Produce jewellery metal masters	4
MEM19014B	Perform hand engraving	4
MEM19015B	Perform jewellery enamelling	4
MEM19016B	Construct jewellery components	4
MEM19017B	Fabricate jewellery items	6
MEM19018B	Repair jewellery items	6
MEM19020B	Fault-find and maintain micro-mechanisms	4
MEM19021B	Diagnose and service micro-mechanisms	6
MEM20001A	Produce keys	4
MEM20002A	Assemble and test lock mechanisms	6
MEM20003A	Install and upgrade locks and hardware	4
MEM20004A	Gain entry	4
MEM20006A	Maintain and service mechanical locking devices	6
MEM20014A	Perform a site security survey	2
MEM21001A	Replace watch batteries, capacitors and bands	2
MEM21002A	Perform watch movement exchange	2
MEM21003A	Perform watch case servicing, repair and refurbishment	4
MEM21004A	Clean watch and clock components	2
MEM21005A	Diagnose faults in quartz watches	2
MEM21006A	Service quartz watches	4
MEM21007A	Service complex quartz watches	4
MEM21008A	Service mechanical watches	4
MEM24001B	Perform basic penetrant testing	2

Unit code	Unit title	P
MEM24003B	Perform basic magnetic particle testing	2
MEM25001B	Apply fibre-reinforced materials	2
MEM25002B	Form and integrate fibre-reinforced structures	4
MEM25004B	Fair and shape surfaces	2
MEM25006B	Undertake marine sheathing operations	2
MEM25007B	Maintain marine vessel surfaces	4
MEM25011B	Install marine systems	8
MEM25012B	Install and test operations of marine auxiliary systems	6
MEM25014B	Perform marine slipping operations	2
MEM25015A	Assemble and install equipment and accessories/ancillaries	2
MEM26001A	Lay up composites using open moulding techniques	6
MEM26002A	Lay up composites using vacuum closed moulding techniques	6
MEM26003A	Lay up composites using pressure closed moulding techniques	6
MEM26004A	Make basic plugs for composites fabrication	3
MEM26005A	Make basic moulds for composites fabrication	3
MEM26006A	Mark and cut out sheets for composite use	4
MEM26007A	Select and use reinforcing appropriate for product	4
MEM26008A	Select and use resin systems appropriate for product	4
MEM26009A	Select and use cores and fillers appropriate for product	2
MEM26010A	Store and handle composite materials	2
MEM26011A	Determine materials and techniques for a composite component or product*	6
MEM26012A	Record and trial work processes for one-off composite products	4
MEM26013A	Select and use composite processes or systems appropriate for product	4

Unit code	Unit title	P
MEM26014A	Adjust resin chemicals for current conditions	4
MEM26015A	Select and apply repair techniques	6
MEM26016A	Select and use joining techniques	6
MEM26017A	Prepare composite or other substrate surfaces	4
MEM26018A	Organise composite trials	4
MEM26019A	Finish a composite product	4
MEM26020A	Identify and interpret required standards for composites	2
MEM50002B	Work safely on marine craft	1
MEM50003B	Follow work procedures to maintain the marine environment	1
MEM50004B	Maintain quality of environment by following marina codes	1
MEM50009B	Safely operate a mechanically powered recreational boat	2
CPCCLDG3001 A	Licence to perform dogging	0
CPCCLRG3001 A	Licence to perform rigging basic level	0
CPCCLSF2001A	Licence to erect, alter and dismantle scaffolding basic level	0
CPCCLSF3001A	Licence to erect, alter and dismantle scaffolding intermediate level	0
PMBPROD291B	Operate resin infusion moulding equipment	2
PMBPROD294B	Operate resin transfer moulding equipment	2
PMBPROD298B	Operate equipment using pre-pregs material	2
PMBPROD391B	Produce composites using resin infusion	4
PMBPROD394B	Produce composites using resin transfer moulding	4
PMBPROD398B	Produce composites using pre-pregs	4
TLILIC0012A	Licence to operate a vehicle loading crane (capacity 10 metre tonnes and above)	1

Unit code	Unit title	P
TLILIC2001A	Licence to operate a forklift truck	0
TLILIC2002A	Licence to operate an order picking forklift truck	0
TLILIC3003A	Licence to operate a bridge and gantry crane	0
TLILIC3006A	Licence to operate a non-slewing mobile crane (greater than three tonnes capacity)	0

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Read, follow and communicate information on written job instructions, specifications, standard operating procedures, drawings and other applicable reference documents • Follow verbal instructions • Identify and follow safety signs/symbols • Recognise and use common boating terminology • Read and interpret information on boating identification and compliance plates, registration tags, engine and other component identification numbers • Use boating communication systems, methods and signals to convey messages
Teamwork	<ul style="list-style-type: none"> • Work alone or as part of a team • Contribute to a group effort in order to plan and carry out work • Identify work roles, communicate and cooperate with others
Problem-solving	<ul style="list-style-type: none"> • Identify actual and foreseeable workplace hazards during course of work • Inspect quality of own work • Identify waste and correct procedures for disposal • Assess operation and condition of components against specifications or manufacturer's requirements
Initiative and enterprise	<ul style="list-style-type: none"> • Be capable of applying skills and knowledge to specified situations and contexts • Use appropriate responses in reaction to incidents and accidents. • Modify work plan to overcome unforeseen situations that occur as work progresses • Assist the business to maintain the quality of the environment • Minimise wasteful use of resources including materials and services in own work
Planning and organising	<ul style="list-style-type: none"> • Identify sequence of activities and plan steps required to complete task • Collect and organise information relevant to work • Set up jobs prior to commencement of work including selection of appropriate materials and adjustment of equipment
Self-management	<ul style="list-style-type: none"> • Carry out work safely and in accordance with company policy and procedures, manufacturer's recommendations and legislative requirements • Monitor performance of operation or quality of product or service to ensure customer satisfaction • Take responsibility for own quality

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Learning	<ul style="list-style-type: none"> • Check and clarify task related information with appropriate personnel • Review and modify work progress to complement the work of others
Technology	<ul style="list-style-type: none"> • Select and use appropriate tools, materials, equipment and machines • Identify and describe the functions of the major systems of a recreational vessel and trailer • Identify and describe features and functions of attached navigation and communication devices • Use navigation and communication systems and equipment

Packaging Rules

The minimum requirements for achievement of the Certificate II in Boating Services are:

- completion of the eight (8) core units of competency listed below, and
- completion of six (6) elective units from the list below to bring the total number of units to fourteen (14).

Note that when selecting elective units any prerequisite units must also be completed and count towards the required number of elective units (refer to units for details).

Two appropriate elective units may be chosen from other endorsed Training Packages and accredited courses where those units are available at Certificate II. Note that the elective units listed below include all of the units that are approved for selection from the MEM05 Training Package for use in this qualification. This meets the NSSC requirement that one sixth of the total units must be able to be selected from other qualifications in the same Training Package.

Additional qualification descriptors

There are no approved additional descriptors for this qualification.

Core units

- select all of the units from this list

Unit code	Unit title
MEM13014A	Apply principles of occupational health and safety in the work environment
MEM14004A	Plan to undertake a routine task

Unit code	Unit title
MEM15024A	Apply quality procedures
MEM16006A	Organise and communicate information
MEM16007A	Work with others in a manufacturing, engineering or related environment
MEM50001B	Classify recreational boating technologies and features
MEM50002B	Work safely on marine craft
MEM50003B	Follow work procedures to maintain the marine environment

Elective units

- select six units from this list.

Unit code	Unit title
MEM04018B	Perform general woodworking machine operations
MEM05003B	Perform soft soldering
MEM05005B	Carry out mechanical cutting
MEM05007C	Manual heating and thermal cutting
MEM05012C	Perform routine manual metal arc welding
MEM05050B	Perform routine gas metal arc welding
MEM09002B	Interpret technical drawing
MEM11010B	Operate mobile load shifting equipment
MEM11011B	Undertake manual handling
MEM12023A	Perform engineering measurements
MEM13003B	Work safely with industrial chemicals and materials
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations

Unit code	Unit title
MEM25001B	Apply fibre-reinforced materials
MEM25004B	Fair and shape surfaces
MEM25007B	Maintain marine vessel surfaces
MEM50004B	Maintain quality of environment by following marina codes
MEM50005B	Refuel vessels
MEM50006B	Check operational capability of marine craft
MEM50007B	Check operational capability of sails and sail operating equipment
MEM50008B	Carry out trip preparation and planning
MEM50009B	Safely operate a mechanically powered recreational boat
MEM50010B	Respond to boating emergencies and incidents
MSAENV272B	Participate in environmentally sustainable work practices
TLILIC2001A	Licence to operate a forklift truck
TLILIC0012A	Licence to operate a vehicle loading crane (capacity 10 metre tonnes and above)

MEM20413 Certificate II in Engineering Pathways

Modification History

New qualification - Release 1

Description

This qualification applies to a learning and assessment environment where access to structured on-the-job learning in a workplace may not be available. This qualification is only for delivery in learning institutions.

The qualification is intended for people interested in exposure to an engineering or related working environment with a view to entering into employment in that area. This qualification will equip graduates with knowledge and skills which will enhance their prospects of employment in an engineering or related working environment.

Application

The learning program should develop trade-like skills but not attempt to develop trade-level skills. As an example, the outcome level of welding skills from this qualification is not about learning trade-level welding theory and practice; it is about being introduced to welding, how it can be used to join metal and having the opportunity to weld some metal together. Similarly with machining, the outcome should be something produced on a lathe etc., not the theory and practice of machining. The focus should be on using engineering tools and equipment to produce or modify objects. This needs to be done in a safe manner for each learner and those around them.

Delivery

Registered Training Organisations (RTOs) offering this qualification will need to have access to basic engineering equipment and facilities, as well as sufficient open plan workshop facilities where long-term projects, perhaps spanning the duration of the learning, can be completed. The teachers/trainers must be experienced with the knowledge and trade skills to successfully facilitate and motivate skills development in the learners. Trainers and assessors must meet the NVR/AQTF trainer and assessor requirements for training and assessment, vocational competency and professional development.

The learning program should be centred around the major project.

MSAPCI101A Adapt to work in industry is a unit of competency that provides the opportunity for work placement.

Pathways Information

Pathways into the qualification

This qualification will be typically accessed by direct entry.

Pathways from the qualification

This qualification delivers broad-based underpinning skills and knowledge in a range of engineering and manufacturing tasks which will enhance the graduates' entry-level employment prospects for apprenticeships, traineeships or general employment in an engineering-related workplace.

Achievement of competence in units *MEM13014A Apply principles of occupational health and safety in a work environment*, *MSAPMSUP106A Work in a team*, *MEM16006A Organise and communicate information*, *MEM16008A Interact with computing technology*, *MSAENV272B Participate in environmentally sustainable work practices*, *MEM18001C Use hand tools* and *MEM18002B Use power tools/hand held operations* will provide credit towards a range of manufacturing and engineering trade and production qualifications.

Achievement of competence in all of the other units will provide advanced progress towards reaching competence in units contained in other metal and engineering qualifications.

Licensing/Regulatory Information

There are no specific licences that relate to this qualification.

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Read and interpret routine information on written job instructions and standard operating procedures including simple drawings • Follow verbal instructions • Orally report routine information • Use basic numeracy skills for undertaking measurements
Teamwork	<ul style="list-style-type: none"> • Work alone or as part of a team • Identify work roles, communicate and cooperate with others
Problem-solving	<ul style="list-style-type: none"> • Check material/product for conformance to specification • Identify waste and correct procedures for disposal • Identify routine problems/faults in machine/process/equipment operations and act/report as required
Initiative and enterprise	<ul style="list-style-type: none"> • Be capable of applying skills and knowledge to specified situations and contexts • Identify actual and foreseeable workplace hazards/problems during course of work • Minimise wasteful use of resources including materials and services in own work
Planning and organising	<ul style="list-style-type: none"> • Select, prepare and lay out or assemble materials and equipment correctly • Conduct pre-start checks on machinery/equipment • Plan steps required to complete routine task • Identify sequence of activities/operations
Self-management	<ul style="list-style-type: none"> • Adhere to all safety requirements • Perform work in accordance with job instructions and work procedures
Learning	<ul style="list-style-type: none"> • Clarify tasks and required outcomes with appropriate personnel
Technology	<ul style="list-style-type: none"> • Use dedicated tools, equipment and machines

Packaging Rules

The minimum requirements for achievement of the Certificate II in Engineering Pathways are completion of a minimum of twelve (12) units of competency as described below:

- all of the core units of competency listed below
- a **minimum of seven (7)** Group A electives
- a **maximum of one (1)** Group B elective.

Core units

- select all of the units from this list

Unit code	Unit title
MEM13014A	Apply principles of occupational health and safety in the work environment
MEMPE005A	Develop a career plan for the engineering and manufacturing industry
MEMPE006A	Undertake a basic engineering project
MSAENV272B	Participate in environmentally sustainable work practices

Group A electives

Unit code	Unit title
MEM16006A	Organise and communicate information
MEM16008A	Interact with computing technology
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEMPE001A	Use engineering workshop machines
MEMPE002A	Use electric welding machines
MEMPE003A	Use oxy-acetylene and soldering equipment
MEMPE004A	Use fabrication equipment
MEMPE007A	Pull apart and re-assemble engineering mechanisms

Group B Electives

Unit code	Unit title
MSAPCI101A	Adapt to work in industry
MSAPMSUP106A	Work in a team

MEM30105 Certificate III in Engineering - Production Systems

Modification History

Release 8 - Imported elective unit AURV225908A replaced by AURVTN2002. No change in outcomes.

Release 7 - equivalent. Inclusion of three new die correction electives.

Description

This qualification covers the skills and knowledge required of workers employed as Engineering/Manufacturing Employees - Level V as defined in the Manufacturing and Associated Industries and Occupations Award or in related industries where Engineering/Manufacturing Employees work.

The qualification has been specifically developed to reflect the minimum training requirement specified in the Award for employment in the above occupation. The qualification packaging has been developed on an assumption that competency will be developed through a combination of on and off-the-job learning strategies such as those delivered through a formal traineeship. The qualification may also be achieved through formal skills recognition assessment processes.

Application

This qualification is designed to provide an industry recognised skills profile related to production work as an Engineering/ Manufacturing Employee - Level V. Competency development would typically be undertaken through an Australian Apprenticeships arrangement where the integration of on and off-the-job training would be specified in the Training Plan associated with the Contract of Training between the employer and trainee.

Assessment of some units of competency must, where indicated, include evidence of the candidate's performance in a productive work environment where there is a sufficient range of appropriate tasks and/or materials to cover the scope of application of those units. All outcomes must reflect the standard of performance required of the work associates with the Unit/s.

This qualification is not suited and should not be used for people who are not employed in an engineering production or manufacturing environment. It is not suited and should not be used for school students unless they are formally engaged in a traineeship in accordance with the Australian Apprenticeships policy.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Read, interpret, follow and communicate information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents • Produce sketches, diagrams, charts or graphs • Check and clarify task-related information • Recognise and use common engineering terminology • Liaise with appropriate authorities
Teamwork	<ul style="list-style-type: none"> • Work alone or as part of a team • Contribute to a group effort in order to plan and carry out work • Identify work roles, communicate and cooperate with others
Problem-solving	<ul style="list-style-type: none"> • Undertake numerical operations, geometry and calculations/ formulae (including addition, subtraction, multiplication, division, fractions and decimals, percentages and proportions, simple ratios and averages) • Use appropriate measuring techniques • Inspect quality of own or other employee's work • Analyse information according to enterprise and work requirements • Assess operation and condition of components against specifications or manufacturer's requirements • Use diagnostic skills and tests to identify and determine causes of faults, including interpretation of in-built fault indicators and error codes • Translate designs into practical outcomes
Initiative and enterprise	<ul style="list-style-type: none"> • Be capable of applying the competency in new and different situations and contexts • Identify actual and foreseeable workplace hazards during course of work • Implement OHS risk management procedures • Modify work plan to overcome unforeseen difficulties or developments that occur as work progresses • Participate in improvement procedures including process, quality, environmental compliance and improvement, and internal/external customer/supplier relationships • Economise material use and minimise waste
Planning and organising	<ul style="list-style-type: none"> • Plan, prioritise and sequence work operations/complete activities/ scheduled production • Select and use planning techniques and tools • Organise and analyse information relevant to work • Set up jobs prior to commencement of work including selection

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	of appropriate tools, equipment and materials and adjustment of equipment
Self-management	<ul style="list-style-type: none"> • Carry out work safely and in accordance with company policy and procedures, manufacturer's recommendations and legislative requirements • Monitor performance of operation or quality of product or service to ensure customer satisfaction • Take responsibility for work outcomes • Apply techniques, procedures, tools and equipment for compliance with site or manufacturers' specifications.
Learning	<ul style="list-style-type: none"> • Read, interpret, follow and communicate information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents • Produce sketches, diagrams, charts or graphs • Check and clarify task-related information • Recognise and use common engineering terminology • Liaise with appropriate authorities
Technology	<ul style="list-style-type: none"> • Work alone or as part of a team • Contribute to a group effort in order to plan and carry out work • Identify work roles, communicate and cooperate with others

Packaging Rules

The minimum requirements for achievement of the Certificate III in Engineering - Production Systems are:

- completion of all core units of competency listed below, and
- completion of Group A production stream units from the list below to the value of at least 40 points, and
- completion of Group B specialisation units from the list below to bring the total value of elective units to at least 73 points.

Points associated with prerequisites count towards the total (refer to units for details). Appropriate Group B elective units to the value of 16 points may be chosen from other endorsed Training Packages and accredited courses where those units are available at Certificate III. Note that the elective units listed below include all of the units that are approved for selection from the MEM05 Training Package for use in this qualification. This meets the NSSC requirement that one sixth of the total units must be able to be selected from other qualifications in the same Training Package.

Registered Training Organisations must seek a determination from Manufacturing Skills Australia in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses.

Additional qualification descriptors

The following additional descriptors are approved for use with this qualification: Surface Finishing; Marine Craft Surface Finishing.

Core Units

- select all of the units from this list

Unit code	Unit title
MEM12023A	Perform engineering measurements
MEM12024A	Perform computations
MEM13014A	Apply principles of occupational health and safety in the work environment
MEM14004A	Plan to undertake a routine task
MEM14005A	Plan a complete activity
MEM15002A	Apply quality systems
MEM15024A	Apply quality procedures
MEM16006A	Organise and communicate information
MEM16007A	Work with others in a manufacturing, engineering or related environment
MEM16008A	Interact with computing technology
MEM17003A	Assist in the provision of on the job training
MSAENV272B	Participate in environmentally sustainable work practices

Elective Units

Group A - Production stream units

- select units from this list to the value of at least 40 points

Unit code	Unit title	P
------------------	-------------------	----------

Unit code	Unit title	P
MEM03001B	Perform manual production assembly	4
MEM03002B	Perform precision assembly	4
MEM03003B	Perform sheet and plate assembly	4
MEM03004B	Perform electronic/electrical assembly (production)	8
MEM03005B	Rework and repair (electrical/electronic production)	8
MEM03006B	Set assembly stations	2
MEM04001B	Operate melting furnaces	4
MEM04002B	Perform gravity die casting	2
MEM04003B	Operate pressure die casting machine	4
MEM04004B	Prepare and mix sand for metal moulding	4
MEM04006B	Operate sand moulding and core making machines	8
MEM05001B	Perform manual soldering/desoldering - electrical/electronic components	4
MEM05002B	Perform high reliability soldering and desoldering	4
MEM05003B	Perform soft soldering	2
MEM05027A	Perform aluminothermic welding	2
MEM06003C	Carry out heat treatment	6
MEM06004B	Select heat treatment processes and test finished product	6
MEM06006C	Repair springs	4
MEM07001B	Perform operational maintenance of machines/equipment	2
MEM07003B	Perform machine setting (routine)	4
MEM07004B	Perform machine setting (complex)	8

Unit code	Unit title	P
MEM07024B	Operate and monitor machine/process	4
MEM07025B	Perform advanced machine/process operation	6
MEM07026B	Perform advanced plastic processing	6
MEM07027B	Perform advanced press operations	6
MEM07028B	Operate computer controlled machines/processes	2
MEM07042A	Undertake corrections and basic maintenance to aluminium extrusion dies and die support systems	4
MEM07043A	Identify causes of faulty aluminium extrusions	6
MEM07044A	Test a new aluminium extrusion die	4
MEM08001B	Perform wire, jig and barrel load/unload work	4
MEM08002C	Pre-treat work for subsequent surface coating	4
MEM08003C	Perform electroplating operations	6
MEM08004B	Finish work using wet, dry and vapour deposition methods	4
MEM08005B	Prepare and produce specialised coatings	4
MEM08006B	Produce clear and/or coloured and/or sealed anodised films on aluminium	2
MEM08007B	Control surface finish production and finished product quality	4
MEM08008B	Operate and control surface finishing waste treatment process	3
MEM08009C	Make up solutions	2
MEM08010B	Manually finish/polish materials	6
MEM08011B	Prepare surfaces using solvents and/or mechanical means	2
MEM08012B	Prepare surfaces by abrasive blasting (basic)	4
MEM08013B	Prepare surfaces by abrasive blasting (advanced)	4

Unit code	Unit title	P
MEM08014B	Apply protective coatings (basic)	4
MEM08015B	Apply protective coatings (advanced)	4
MEM08016B	Control blast coating by-products, materials and emissions	1
MEM08018B	Electroplate engineering coatings	6
MEM08019B	Electroplate protective finishes	6
MEM08020B	Electroplate decorative finishes	6
MEM09002B	Interpret technical drawing	4
MEM11001C	Erect/dismantle scaffolding and equipment	4
MEM11002C	Erect/dismantle complex scaffolding and equipment	4
MEM11003B	Coordinate erection/dismantling of complex scaffolding/equipment	4
MEM11004B	Undertake dogging	4
MEM11005B	Pick and process order	4
MEM11006B	Perform production packaging	2
MEM11007B	Administer inventory procedures	4
MEM11008B	Package materials (stores and warehouse)	2
MEM11009B	Handle/move bulk fluids/gases	4
MEM11010B	Operate mobile load shifting equipment	4
MEM11011B	Undertake manual handling	2
MEM11012B	Purchase materials	6
MEM11013B	Undertake warehouse receipt process	4
MEM11014B	Undertake warehouse dispatch process	4
MEM11015B	Manage warehouse inventory system	6

Unit code	Unit title	P
MEM11016B	Order materials	2
MEM11017B	Organise and lead stocktakes	4
MEM11018B	Organise and maintain warehouse stock receipt and/or dispatch system	6
MEM11019B	Undertake tool store procedures	4
MEM11020B	Perform advanced warehouse computer operations	4
MEM11021B	Perform advanced operation of load shifting equipment	2
MEM11022B	Operate fixed/moveable load shifting equipment	4
MEM11023A	Operate a bridge and gantry crane	4
MEM11024A	Undertake basic rigging*	4
MEM11025A	Operate a non-slewing mobile crane of greater than three tonnes capacity	4
MEM12001B	Use comparison and basic measuring devices	2
MEM12002B	Perform electrical/electronic measurement	2
MEM12019B	Measure components using coordinate measuring machine	4
MEM13003B	Work safely with industrial chemicals and materials	2
MEM13004B	Work safely with molten metals/glass	2
MEM15001B	Perform basic statistical quality control	2
MEM15003B	Use improvement processes in team activities	4
MEM15004B	Perform inspection	2
MEM15005B	Select and control inspection processes and procedures	4
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2

Unit code	Unit title	P
MEM18098A	Prepare to perform work associated with fuel system installation and servicing*	2
MEM26001A	Lay up composites using open moulding techniques	6
MEM26002A	Lay up composites using vacuum closed moulding techniques	6
MEM26003A	Lay up composites using pressure closed moulding techniques	6
MEM26004A	Make basic plugs for composites fabrication	3
MEM26005A	Make basic moulds for composites fabrication	3
MEM26006A	Mark and cut out sheets for composite use	4
MEM26007A	Select and use reinforcing appropriate for product	4
MEM26008A	Select and use resin systems appropriate for product	4
MEM26009A	Select and use cores and fillers appropriate for product	2
MEM26010A	Store and handle composite materials	2
MEM26011A	Determine materials and techniques for a composite component or product*	6
MEM26012A	Record and trial work processes for one-off composite products	4
MEM26013A	Select and use composite processes or systems appropriate for product	4
MEM26014A	Adjust resin chemicals for current conditions	4
MEM26015A	Select and apply repair techniques	6
MEM26016A	Select and use joining techniques	6
MEM26017A	Prepare composite or other substrate surfaces	4
MEM26018A	Organise composite trials	4

Unit code	Unit title	P
MEM26019A	Finish a composite product	4
MEM26020A	Identify and interpret required standards for composites	2
CPCCLDG3001A	Licence to perform dogging	0
CPCCLRG3001A	Licence to perform rigging basic level	0
CPCCLSF2001A	Licence to erect, alter and dismantle scaffolding basic level	0
CPCCLSF3001A	Licence to erect, alter and dismantle scaffolding intermediate level	0
TLILIC0012A	Licence to operate a vehicle loading crane (capacity 10 metre tonnes and above)	1
TLILIC2001A	Licence to operate a forklift truck	0
TLILIC2002A	Licence to operate an order picking forklift truck	0
TLILIC3003A	Licence to operate a bridge and gantry crane	0
TLILIC3006A	Licence to operate a non-slewing mobile crane (greater than three tonnes capacity)	0

Group B - Specialisation units

- select units from this list to bring the total value of Production stream and Specialisation units to at least 73 points, including any prerequisites.

Unit code	Unit title	P
MEM03001B	Perform manual production assembly	4
MEM03002B	Perform precision assembly	4
MEM03003B	Perform sheet and plate assembly	4
MEM03004B	Perform electronic/electrical assembly (production)	8
MEM03005B	Rework and repair (electrical/electronic production)	8
MEM03006B	Set assembly stations	2

Unit code	Unit title	P
MEM04001B	Operate melting furnaces	4
MEM04002B	Perform gravity die casting	2
MEM04003B	Operate pressure die casting machine	4
MEM04004B	Prepare and mix sand for metal moulding	4
MEM04005C	Produce moulds and cores by hand (jobbing)	16
MEM04006B	Operate sand moulding and core making machines	8
MEM04007B	Pour molten metal	4
MEM04008B	Fettle and trim metal castings/forgings	4
MEM04010B	Develop and manufacture wood patterns	20
MEM04011B	Produce polymer patterns	8
MEM04012B	Assemble plated patterns	8
MEM04013B	Develop and manufacture polystyrene patterns	2
MEM04014B	Develop and manufacture production patterns	8
MEM04015B	Develop and manufacture vacuum forming moulds and associated equipment	6
MEM04018B	Perform general woodworking machine operations	4
MEM04019B	Perform refractory installation and repair	4
MEM05001B	Perform manual soldering/desoldering - electrical/electronic components	4
MEM05002B	Perform high reliability soldering and desoldering	4
MEM05003B	Perform soft soldering	2
MEM05004C	Perform routine oxy acetylene welding	2
MEM05005B	Carry out mechanical cutting	2
MEM05006C	Perform brazing and/or silver soldering	2
MEM05007C	Perform manual heating and thermal cutting	2

Unit code	Unit title	P
MEM05009C	Perform automated thermal cutting	2
MEM05011D	Assemble fabricated components	8
MEM05012C	Perform routine manual metal arc welding	2
MEM05013C	Perform manual production welding	2
MEM05014C	Monitor quality of production welding/fabrications	2
MEM05015D	Weld using manual metal arc welding process	4
MEM05017D	Weld using gas metal arc welding process	4
MEM05019D	Weld using gas tungsten arc welding process	4
MEM05023C	Weld using submerged arc welding process	4
MEM05041B	Weld using powder flame spraying	4
MEM05047B	Weld using flux core arc welding process	4
MEM05049B	Perform routine gas tungsten arc welding	2
MEM05050B	Perform routine gas metal arc welding	2
MEM05051A	Select welding processes	2
MEM05052A	Apply safe welding practices	4
MEM05053A	Set and edit computer controlled thermal cutting machines	4
MEM05054A	Write basic NC/CNC programs for thermal cutting machines	4
MEM06001B	Perform hand forging	4
MEM06002B	Perform hammer forging	4
MEM06003C	Carry out heat treatment	6
MEM06004B	Select heat treatment processes and test finished product	6
MEM06005B	Perform drop and upset forging	4
MEM06006C	Repair springs	4
MEM06007B	Perform basic incidental heat/quenching, tempering and	2

Unit code	Unit title	P
	annealing	
MEM06008A	Hammer forge complex shapes	4
MEM06009A	Hand forge complex shapes	4
MEM07001B	Perform operational maintenance of machines/equipment	2
MEM07002B	Perform precision shaping/planning/slotting operations	4
MEM07003B	Perform machine setting (routine)	4
MEM07004B	Perform machine setting (complex)	8
MEM07005C	Perform general machining	8
MEM07010B	Perform tool and cutter grinding operations	4
MEM07013B	Perform machining operations using horizontal and/or vertical boring machines	4
MEM07014B	Perform electro-discharge (EDM) machining operations	4
MEM07015B	Set computer controlled machines/processes	2
MEM07016C	Set and edit computer controlled machines/processes	4
MEM07018C	Write basic NC/CNC programs	4
MEM07019C	Program NC/CNC machining centre	2
MEM07022C	Program CNC wire cut machines	2
MEM07024B	Operate and monitor machine/process	4
MEM07025B	Perform advanced machine/process operation	6
MEM07026B	Perform advanced plastic processing	6
MEM07027B	Perform advanced press operations	6
MEM07028B	Operate computer controlled machines/processes	2
MEM07029B	Perform routine sharpening/maintenance of production tools and cutters	4
MEM07030C	Perform metal spinning lathe operations (basic)	8

Unit code	Unit title	P
MEM07031C	Perform metal spinning lathe operations (complex)	4
MEM07032B	Use workshop machines for basic operations	2
MEM07033B	Operate and monitor basic boiler	6
MEM07034A	Operate and monitor intermediate class boiler	4
MEM07040A	Set multistage integrated processes	6
MEM07041A	Perform production machining*	8
MEM07042A	Undertake corrections and basic maintenance to aluminium extrusion dies and die support systems	4
MEM07043A	Identify causes of faulty aluminium extrusions	6
MEM07044A	Test a new aluminium extrusion die	4
MEM08001B	Perform wire, jig and barrel load/unload work	4
MEM08002C	Pre-treat work for subsequent surface coating	4
MEM08003C	Perform electroplating operations	6
MEM08004B	Finish work using wet, dry and vapour deposition methods	4
MEM08005B	Prepare and produce specialised coatings	4
MEM08006B	Produce clear and/or coloured and/or sealed anodised films on aluminium	2
MEM08007B	Control surface finish production and finished product quality	4
MEM08008B	Operate and control surface finishing waste treatment process	3
MEM08009C	Make up solutions	2
MEM08010B	Manually finish/polish materials	6
MEM08011B	Prepare surfaces using solvents and/or mechanical means	2
MEM08012B	Prepare surfaces by abrasive blasting (basic)	4
MEM08013B	Prepare surfaces by abrasive blasting (advanced)	4

Unit code	Unit title	P
MEM08014B	Apply protective coatings (basic)	4
MEM08015B	Apply protective coatings (advanced)	4
MEM08016B	Control blast coating by-products, materials and emissions	1
MEM08018B	Electroplate engineering coatings	6
MEM08019B	Electroplate protective finishes	6
MEM08020B	Electroplate decorative finishes	6
MEM09002B	Interpret technical drawing	4
MEM09011B	Apply basic engineering design concepts	6
MEM09022A	Create 2D code files using computer aided manufacturing system	4
MEM10002B	Terminate and connect electrical wiring	3
MEM10004B	Enter and change programmable controller operational parameters	2
MEM10011B	Terminate and connect specialist cables	3
MEM10013A	Install split air conditioning systems and associated pipework	6
MEM11001C	Erect/dismantle scaffolding and equipment	4
MEM11002C	Erect/dismantle complex scaffolding and equipment	4
MEM11003B	Coordinate erection/dismantling of complex scaffolding/equipment	4
MEM11004B	Undertake dogging	4
MEM11005B	Pick and process order	4
MEM11006B	Perform production packaging	2
MEM11007B	Administer inventory procedures	4
MEM11008B	Package materials (stores and warehouse)	2
MEM11009B	Handle/move bulk fluids/gases	4

Unit code	Unit title	P
MEM11010B	Operate mobile load shifting equipment	4
MEM11011B	Undertake manual handling	2
MEM11012B	Purchase materials	6
MEM11013B	Undertake warehouse receipt process	4
MEM11014B	Undertake warehouse dispatch process	4
MEM11015B	Manage warehouse inventory system	6
MEM11016B	Order materials	2
MEM11017B	Organise and lead stocktakes	4
MEM11018B	Organise and maintain warehouse stock receipt and/or dispatch system	6
MEM11019B	Undertake tool store procedures	4
MEM11020B	Perform advanced warehouse computer operations	4
MEM11021B	Perform advanced operation of load shifting equipment	2
MEM11022B	Operate fixed/movable load shifting equipment	4
MEM12001B	Use comparison and basic measuring devices	2
MEM12002B	Perform electrical/electronic measurement	2
MEM11023A	Operate a bridge and gantry crane	4
MEM11024A	Undertake basic rigging*	4
MEM11025A	Operate a non-slewing mobile crane of greater than three tonnes capacity	4
MEM12003B	Perform precision mechanical measurement	2
MEM12004B	Perform precision electrical/electronic measurement	4
MEM12019B	Measure components using coordinate measuring machine	4
MEM12020B	Set and operate coordinate measuring machine	2
MEM12025A	Use graphical techniques and perform simple statistical	2

Unit code	Unit title	P
	computations	
MEM13001B	Perform emergency first aid	1
MEM13002B	Undertake occupational health and safety activities in the workplace	3
MEM13003B	Work safely with industrial chemicals and materials	2
MEM13004B	Work safely with molten metals/glass	2
MEM13006B	Collect and evaluate occupational health and safety data for an enterprise or section of an enterprise	4
MEM13010A	Supervise occupational health and safety in an industrial work environment	4
MEM13013B	Work safely with ionizing radiation	4
MEM15001B	Perform basic statistical quality control	2
MEM15003B	Use improvement processes in team activities	4
MEM15004B	Perform inspection	2
MEM15005B	Select and control inspection processes and procedures	4
MEM16002C	Conduct formal interviews and negotiations	4
MEM16004B	Perform internal/external customer service	2
MEM16005A	Operate as a team member to conduct manufacturing, engineering or related activities	2
MEM16011A	Communicate with individuals and small groups	2
MEM16013A	Operate in a self-directed team	2
MEM17001B	Assist in development and deliver training in the workplace	2
MEM17002B	Conduct workplace assessment	2
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM18003C	Use tools for precision work	4

Unit code	Unit title	P
MEM18010C	Perform equipment condition monitoring and recording	4
MEM18045B	Fault find/repair electrical equipment/components up to 250 volts single phase supply	4
MEM18049C	Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.	3
MEM18055B	Dismantle, replace and assemble engineering components	3
MEM18063B	Terminate signal and data cables	4
MEM18071B	Connect/disconnect fluid conveying system components	2
MEM18072B	Manufacture fluid conveying conductor assemblies	4
MEM18084A	Commission and decommission split air conditioning systems	4
MEM18085A	Install, service and repair domestic air conditioning and refrigeration appliances	6
MEM18086B	Test, recover, evacuate and charge refrigeration systems	4
MEM18098A	Prepare to perform work associated with fuel system installation and servicing*	2
MEM19001B	Perform jewellery metal casting	6
MEM19002B	Prepare jewellery illustrations	4
MEM19003B	Handle gem materials	2
MEM19004B	Handle and examine gemstone materials	6
MEM19005B	Produce three-dimensional precision items	8
MEM19006B	Replace watch batteries	1
MEM19007B	Perform gemstone setting	6
MEM19009B	Perform investment procedures for lost wax casting process	1
MEM19010B	Produce rubber moulds for lost wax casting process	2
MEM19011B	Perform wax injection of moulds for lost wax casting process	2

Unit code	Unit title	P
MEM19012B	Produce jewellery wax model	4
MEM19014B	Perform hand engraving	4
MEM19015B	Perform jewellery enamelling	4
MEM19016B	Construct jewellery components	4
MEM19017B	Fabricate jewellery items	6
MEM19020B	Fault-find and maintain micro-mechanisms	4
MEM19021B	Diagnose and service micro-mechanisms	6
MEM20001A	Produce keys	4
MEM20002A	Assemble and test lock mechanisms	6
MEM20003A	Install and upgrade locks and hardware	4
MEM20004A	Gain entry	4
MEM20006A	Maintain and service mechanical locking devices	6
MEM20014A	Perform a site security survey	2
MEM24001B	Perform basic penetrant testing	2
MEM24002B	Perform penetrant testing	4
MEM24003B	Perform basic magnetic particle testing	2
MEM25001B	Apply fibre-reinforced materials	2
MEM25002B	Form and integrate fibre-reinforced structures	4
MEM25003B	Set up marine vessel structures	4
MEM25004B	Fair and shape surfaces	2
MEM25005B	Construct and assemble marine vessel timber components	8
MEM25006B	Undertake marine sheathing operations	2
MEM25007B	Maintain marine vessel surfaces	4
MEM25008B	Repair marine vessel surfaces and structures	4

Unit code	Unit title	P
MEM25009B	Form timber shapes using hot processes	2
MEM25010B	Perform fitout procedures	4
MEM25011B	Install marine systems	8
MEM25012B	Install and test operations of marine auxiliary systems	6
MEM25013B	Produce three-dimensional plugs/moulds	12
MEM25014B	Perform marine slipping operations	2
MEM25015A	Assemble and install equipment and accessories/ancillaries	2
MEM30012A	Apply mathematical techniques in a manufacturing, engineering or related environment	4
MEM50002B	Work safely on marine craft	1
MEM50003B	Follow work procedures to maintain the marine environment	1
MEM50004B	Maintain quality of environment by following marina codes	1
MEM50009B	Safely operate a mechanically powered recreational boat	2
MSAENV472B	Participate in environmentally sustainable work practices	4
AURVTN2002	Carry out panel repairs	4
CPCCLDG3001 A	Licence to perform dogging	0
CPCCLRG3001 A	Licence to perform rigging basic level	0
CPCCLSF2001 A	Licence to erect, alter and dismantle scaffolding basic level	0
CPCCLSF3001 A	Licence to erect, alter and dismantle scaffolding intermediate level	0
TLILIC0012A	Licence to operate a vehicle loading crane (capacity 10 metre tonnes and above)	1
TLILIC2001A	Licence to operate a forklift truck	0
TLILIC2002A	Licence to operate an order picking forklift truck	0

Unit code	Unit title	P
TLILIC3003A	Licence to operate a bridge and gantry crane	0
TLILIC3006A	Licence to operate a non-slewing mobile crane (greater than three tonnes capacity)	0
PMBPROD291B	Operate resin infusion moulding equipment	2
PMBPROD294B	Operate resin transfer moulding equipment	2
PMBPROD298B	Operate equipment using pre-pregs material	2
PMBPROD391B	Produce composites using resin infusion	4
PMBPROD394B	Produce composites using resin transfer moulding	4
PMBPROD398B	Produce composites using pre-pregs	4

MEM30205 Certificate III in Engineering - Mechanical Trade

Modification History

ISC upgrade to include new units in Trade Specialisation list. Refer to Mapping of Changes.

Description

This qualification covers the skills and knowledge required to work as an Engineering Tradesperson - Mechanical within metal, engineering, manufacturing and associated industries or other industries where Engineering Tradesperson - Mechanical work. The qualification has been specifically developed for apprentices in the above trade. The qualification packaging has been developed on an assumption that competency will be developed through a combination of on and off-the-job learning strategies such as those delivered through a formal apprenticeship. The qualification may also be achieved through formal skills recognition assessment processes.

Job roles/employment outcome

The Certificate III in Engineering - Mechanical Trade specifies the competencies required for employment as an Engineering Tradesperson - Mechanical including the design, assembly, manufacture, installation, modification, testing, fault finding, commissioning, maintenance and service of all mechanical equipment, machinery, fluid power systems, stationary and mobile equipment, instruments, refrigeration, and the use of computer controlled machine tools.

Employment outcomes related to this qualification are found in a wide variety of manufacturing and engineering related sectors as well as Engineering Tradesperson - Mechanical roles in other industries.

Application

This qualification is designed to provide an industry recognised skills profile related to trade work as an Engineering Tradesperson - Mechanical. Skills development would be undertaken through an Australian Apprenticeship arrangement where the mix of on and off-the-job training would be specified in the Training Plan associated with the Contract of Training between the employer and apprentice.

Assessment of some units of competency must, where indicated, include evidence of the candidate's performance in a productive work environment where there is a sufficient range of appropriate tasks and materials to cover the scope of application of those units. All outcomes must reflect the standard of performance inherent in the job.

Occupational titles that this qualification is suitable for may vary and include mechanical tradesperson, fitter and turner, fitter and machinist, maintenance fitter, diesel fitter, plant mechanic, refrigeration mechanic and 1st class machinist.

Pathways Information

Pathways into the qualification

There is no qualification entry requirement. It is assumed that the learner is engaged as an apprentice under a Training Contract and that the learner is receiving appropriate structured on-the-job training while undertaking this qualification.

This qualification may be accessed by direct entry. Credit may be granted towards this qualification by those who have completed MEM10105 Certificate I in Engineering, MEM10205 Certificate I in Boating Services, MEM20105 Certificate II in Engineering, MEM20205 Certificate II in Engineering - Production Technology or other relevant qualifications. Credit towards this qualification may also include units of competency contained within relevant skill sets and Statements of Attainment.

Pathways from the qualification

Further training pathways from this qualification include MEM40105 Certificate IV in Engineering and MEM50105 Diploma of Engineering - Advanced Trade or other relevant qualifications.

Additional qualification advice

An additional descriptor may be added to this qualification to illustrate a particular skills focus or trade discipline.

This could be achieved by adding a pathway descriptor or sentence *below* the formal title of the qualification. Note that no changes may be made to the qualification title and the use of one of these descriptors to a qualification does not change the qualification's formal title or unique national code.

There are no specific requirements associated with the use of these descriptors other than their use should reflect the nature of the choice of units of competency in the qualification and must be consistent with the work role of an Engineering Tradesperson - Mechanical.

Reference to other occupational or functional pathways consistent with the role of an Engineering Tradesperson - Mechanical may be included on any qualification statement that is issued.

Competitive Manufacturing qualifications are available for employees at this level who already possess trade and other technical skills and who require additional manufacturing practice skills above those available in this qualification.

Licensing considerations

There are no specific licences that relate to this qualification. However, some units in this qualification may relate to licensing or regulatory requirements. Where appropriate electives are taken these can also be used to satisfy regulations regarding refrigeration and air conditioning work. Local regulations should be checked for details.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Read, interpret, follow and communicate information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents • Produce sketches, diagrams, charts or graphs • Check and clarify task-related information • Recognise and use common mechanical engineering terminology and symbols • Liaise with appropriate authorities
Teamwork	<ul style="list-style-type: none"> • Work alone or as part of a team • Contribute to a group effort in order to plan and carry out work • Identify work roles, communicate and cooperate with others
Problem-solving	<ul style="list-style-type: none"> • Undertake numerical operations, geometry and calculations/ formulae (including addition, subtraction, multiplication, division, fractions and decimals, percentages and proportions, simple ratios and averages) • Use appropriate measuring techniques • Inspect quality of own or other employee's work • Analyse information according to enterprise and work requirements • Assess operation and condition of components against specifications or manufacturer's requirements • Use diagnostic skills and tests to identify and determine causes of faults, including interpretation of in-built fault indicators and error codes • Develop, implement and evaluate solutions to problems • Translate designs into practical outcomes
Initiative and enterprise	<ul style="list-style-type: none"> • Be capable of applying the competency in new and different situations and contexts • Identify actual and foreseeable workplace hazards during course of work • Implement OHS risk management procedures • Modify work plan to overcome unforeseen difficulties or developments that occur as work progresses • Participate in improvement procedures including process, quality and internal/external customer/supplier relationships • Economise material and energy use and minimise waste
Planning and organising	<ul style="list-style-type: none"> • Plan, prioritise and sequence work operations/ complete activities/ scheduled production • Select and use planning techniques and tools • Organise and analyse information relevant to work

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	<ul style="list-style-type: none"> Set up jobs prior to commencement of work including selection of appropriate tools, equipment and materials and adjustment of equipment
Self-management	<ul style="list-style-type: none"> Carry out work safely and in accordance with company policy and procedures, manufacturer's recommendations and legislative requirements Monitor performance of operation or quality of product or service to ensure customer satisfaction Take responsibility for own work outcomes Apply techniques, procedures, tools and equipment for compliance with site or manufacturers' specifications.
Learning	<ul style="list-style-type: none"> Check and clarify task related information with appropriate personnel or technical adviser Identify customers' requirements with respect to the operation or quality of the product or service Assess and modify own work practices Use manuals, online help and other reference materials such as catalogues/lists as required Maintain current knowledge of applicable standards, legislation, codes of practice and product/process developments Assist with on the job training and assessment
Technology	<ul style="list-style-type: none"> Select and use appropriate tools, equipment, materials and machines Select and use appropriate measuring/testing devices Navigate technology to access /input /store/retrieve/save and produce information/data using appropriate software applications Apply knowledge of appropriate engineering principles, techniques, procedures, diagnostic methods, tools and equipment to achieve the required outcome Calibrate equipment/instruments Improve efficiency of machines and equipment in order to minimise waste

Packaging Rules

Packaging Rules

The minimum requirements for achievement of the Certificate III in Engineering - Mechanical Trade are:

- completion of all core units of competency listed below, and

- completion of Group A Mechanical Trade stream units to the value of at least 40 points, and
- completion of units from Group B Certificate III Trade specialisation units listed in Appendix 1, Volume 1 of the Training Package, to bring the total value to at least 73 points

Points associated with prerequisites count towards the total (refer to units and prerequisites listing in Appendix 2, Volume 1).

Appropriate Group B elective units to the value of 16 points may be chosen from other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate III. Note that the elective units listed below include all of the units that are approved for selection from the MEM Training Package for use in this qualification. This meets the NQC requirement that one sixth of the total units must be able to be selected from other qualifications in the same Training Package.

Registered Training Organisations must seek a determination from Manufacturing Skills Australia in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses.

Only select units that would be suitable for Mechanical Trade occupational outcomes.

Additional qualification descriptors

The following additional descriptors are approved for use with this qualification: Refrigeration and Air Conditioning; Instrumentation; Maintenance; Patternmaking; Toolmaking; Watchmaking; Machining.

Core units

- select all of the units from this list

Unit code	Unit title
MEM12023A	Perform engineering measurements
MEM12024A	Perform computations
MEM13014A	Apply principles of occupational health and safety in the work environment
MEM14004A	Plan to undertake a routine task
MEM14005A	Plan a complete activity
MEM15002A	Apply quality systems
MEM15024A	Apply quality procedures
MEM16006A	Organise and communicate information

Unit code	Unit title
MEM16007A	Work with others in a manufacturing, engineering or related environment
MEM16008A	Interact with computing technology
MEM17003A	Assist in the provision of on the job training
MSAENV272B	Participate in environmentally sustainable work practices

Elective Units

Group A - Mechanical Trade stream units

- select units from this list to the value of at least 40 points

Unit code	Unit title	P
MEM07001B	Perform operational maintenance of machines/equipment	2
MEM07002B	Perform precision shaping/planing/slotting operations	4
MEM07003B	Perform machine setting (routine)	4
MEM07004B	Perform machine setting (complex)	8
MEM07005C	Perform general machining	8
MEM07006C	Perform lathe operations	4
MEM07007C	Perform milling operations	4
MEM07008D	Perform grinding operations	4
MEM07009B	Perform precision jig boring operations	4
MEM07010B	Perform tool and cutter grinding operations	4
MEM07011B	Perform complex milling operations	4
MEM07012B	Perform complex grinding	4

Unit code	Unit title	P
	operations	
MEM07013B	Perform machining operations using horizontal and/or vertical boring machines	4
MEM07014B	Perform electro-discharge (EDM) machining operations	4
MEM07015B	Set computer controlled machines/processes	2
MEM07016C	Set and edit computer controlled machines/processes	4
MEM07018C	Write basic NC/CNC programs	4
MEM07019C	Program NC/CNC machining centre	2
MEM07020C	Program multiple spindle and/or multiple axis NC/CNC machining centre	2
MEM07021B	Perform complex lathe operations	4
MEM07022C	Program CNC wire cut machines	2
MEM07023C	Program and set up CNC manufacturing cell	6
MEM07024B	Operate and monitor machine/process	4
MEM07025B	Perform advanced machine/process operation	6
MEM07026B	Perform advanced plastic processing	6
MEM07027B	Perform advanced press operations	6
MEM07028B	Operate computer controlled machines/processes	2
MEM07029B	Perform routine sharpening/maintenance of production tools and cutters	4

Unit code	Unit title	P
MEM07030C	Perform metal spinning lathe operations (basic)	8
MEM07031C	Perform metal spinning lathe operations (complex)	4
MEM07032B	Use workshop machines for basic operations	2
MEM07033B	Operate and monitor basic boiler	6
MEM07034A	Operate and monitor intermediate class boiler	4
MEM07040A	Set multistage integrated processes	6
MEM09002B	Interpret technical drawing	4
MEM09022A	Create 2D code files using computer aided manufacturing system	4
MEM10004B	Enter and change programmable controller operational parameters	2
MEM10006B	Install machine/plant	4
MEM12003B	Perform precision mechanical measurement	2
MEM12006C	Mark off/out (general engineering)	4
MEM13007B	Maintain water treatment systems for cooling towers	2
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM18003C	Use tools for precision work	4
MEM18004B	Maintain and overhaul mechanical equipment	4
MEM18005B	Perform fault diagnosis, installation and removal of bearings	4

Unit code	Unit title	P
MEM18006C	Repair and fit engineering components	6
MEM18007B	Maintain and repair mechanical drives and mechanical transmission assemblies	4
MEM18008B	Balance equipment	2
MEM18009B	Perform levelling and alignment of machines and engineering components	4
MEM18010C	Perform equipment condition monitoring and recording	4
MEM18011C	Shut down and isolate machines/equipment	2
MEM18012B	Perform installation and removal of mechanical seals	2
MEM18013B	Perform gland packing	2
MEM18014B	Manufacture press tools and gauges	8
MEM18015B	Maintain tools and dies	4
MEM18018C	Maintain pneumatic system components	4
MEM18019B	Maintain pneumatic systems	4
MEM18020B	Maintain hydraulic system components	4
MEM18021B	Maintain hydraulic systems	4
MEM18022B	Maintain fluid power controls	8
MEM18024B	Maintain engine cooling systems	2
MEM18025B	Service combustion engines	2
MEM18026C	Test compression ignition fuel systems	4

Unit code	Unit title	P
MEM18027C	Overhaul engine fuel system components	8
MEM18028B	Maintain engine lubrication systems	2
MEM18029B	Tune diesel engines	4
MEM18030B	Diagnose and rectify low voltage electrical systems	8
MEM18031B	Diagnose and rectify low voltage starting systems	2
MEM18032B	Maintain induction/exhaust systems	4
MEM18033B	Perform engine bottom-end overhaul	4
MEM18034B	Perform engine top-end overhaul	8
MEM18035B	Diagnose and rectify braking systems	6
MEM18037B	Diagnose and rectify low voltage charging systems	2
MEM18038B	Maintain wheels and tyres	2
MEM18039B	Diagnose and rectify track type undercarriage	4
MEM18040B	Maintain suspension systems	4
MEM18041B	Maintain steering systems	4
MEM18042C	Diagnose and rectify manual transmissions	4
MEM18043C	Diagnose and rectify automatic transmissions	8
MEM18044C	Diagnose and rectify drive line and final drives	4
MEM18045B	Fault find/repair electrical equipment/components up to 250 volts single phase supply	4

Unit code	Unit title	P
MEM18046B	Fault find/repair electrical equipment/components up to 1000 volts a.c./1500 volts d.c.	10
MEM18047B	Diagnose and maintain electronic controlling systems on mobile plant	4
MEM18048B	Fault find and repair/rectify basic electrical circuits	12
MEM18049C	Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.	3
MEM18050C	Disconnect/reconnect fixed wired equipment over 1000 volts a.c./1500 volts d.c.	3
MEM18051B	Fault find and repair/rectify complex electrical circuits	6
MEM18052B	Maintain fluid power systems for mobile plant	4
MEM18054B	Fault find, test and calibrate instrumentation systems and equipment	8
MEM18055B	Dismantle, replace and assemble engineering components	3
MEM18056B	Diagnose and repair analog equipment and components	10
MEM18057B	Maintain/service analog/digital electronic equipment	6
MEM18058C	Modify electronic equipment	4
MEM18060B	Maintain, repair control instrumentation - single and multiple loop control systems	8
MEM18062B	Install, maintain and calibrate instrumentation sensors, transmitters and final control elements	8

Unit code	Unit title	P
MEM18063B	Terminate signal and data cables	4
MEM18064B	Maintain instrumentation system components	6
MEM18065B	Diagnose and repair digital equipment and components	10
MEM18066B	Diagnose and repair microprocessor-based equipment	6
MEM18067B	Tune control loops - multi controller or multi element systems	6
MEM18071B	Connect/disconnect fluid conveying system components	2
MEM18072B	Manufacture fluid conveying conductor assemblies	4
MEM18086B	Test, recover, evacuate and charge refrigeration systems	4
MEM18087B	Service and repair domestic and light commercial refrigeration and air conditioning equipment	6
MEM18088B	Maintain and repair commercial air conditioning systems and components	4
MEM18089B	Maintain and repair central air handling systems	6
MEM18090B	Maintain and repair industrial refrigeration systems and components	6
MEM18091B	Maintain and repair multi stage, cascade and/or ultra-cold industrial refrigeration systems	4
MEM18092B	Maintain and repair commercial and/or industrial refrigeration and/or air conditioning controls	6

Unit code	Unit title	P
MEM18094B	Service and repair commercial refrigeration	6
MEM18095A	Maintain and repair cooling towers/evaporative condensers and associated equipment	4
MEM18096A	Maintain, repair/replace and adjust refrigerant flow controls and associated equipment	6
MEM18097A	Manufacture cavity dies	8
MEM18098A	Prepare to perform work associated with fuel system installation and servicing*	2

Group B - Trade Specialisation units

- Select units from the Certificate III Trade Specialisation units listed in Appendix 1, Volume 1 of MEM05 to bring the total value of units to at least 73 points, including any prerequisites.
-

MEM30305 Certificate III in Engineering - Fabrication Trade

Modification History

ISC upgrade to include new units in Trade Specialisation list. Refer to Mapping of Changes.

Description

This qualification covers the skills and knowledge required for employment as an Engineering Tradesperson - Fabrication within the metal, engineering, manufacturing and associated industries or other industries where Engineering Tradespersons - Fabrication work. The qualification has been specifically developed to meet the needs of apprentices in the above trade. The qualification packaging has been developed on an assumption that competency will be developed through an integrated combination of on and off-the-job learning strategies such as those delivered through a formal apprenticeship. The qualification may also be achieved through formal skills recognition assessment processes.

Job roles/employment outcomes

The Certificate III in Engineering - Fabrication Trade specifies the competencies required for employment as an Engineering Tradesperson - Fabrication including metal fabrication, forging, founding, structural steel erection, electroplating, metal spinning, metal polishing, sheet metal work, welding and the use of related computer controlled equipment. Employment outcomes related to this qualification are found in a wide variety of manufacturing and engineering related sectors as well as Engineering Tradesperson - Fabrication roles in other industries.

Application

This qualification is designed to provide an industry recognised skills profile related to trade work as an Engineering Tradesperson - Fabrication. Skills development would usually be undertaken through an Australian Apprenticeship arrangement where the mix of on and off-the-job training would be specified in the Training Plan associated with the Contract of Training between the employer and apprentice.

Assessment of some units of competency must, where indicated, include evidence of the candidate's performance in a productive work environment where there is a sufficient range of appropriate tasks and materials to cover the scope of application of those units. All outcomes must reflect the standard of performance inherent in the job.

Occupational titles that this qualification is suitable for may vary and include metal fabrication tradesperson, boilermaker, 1st class sheet metal worker, 1st class welder, moulder, foundry tradesperson and patternmaker.

Pathways Information

Pathways into the qualification

There is no qualification entry requirement. It is assumed that the learner is engaged as an apprentice under a Training Contract and that the learner is receiving appropriate structured on the job training while undertaking this qualification.

This qualification may be accessed by direct entry. Credit for relevant units of competency achieved should be granted towards this qualification for those who have completed MEM10105 Certificate I in Engineering, MEM10205 Certificate I in Boating Services, MEM20105 Certificate II in Engineering, MEM20205 Certificate II in Engineering - Production Technology or other relevant qualifications. Credit towards this qualification may also include units of competency contained within relevant pre-vocational and pre-apprenticeship programs and Statements of Attainment.

Pathways from the qualification

Further training pathways from this qualification include MEM40105 Certificate IV in Engineering and MEM50105 Diploma of Engineering - Advanced Trade or other relevant qualifications.

Additional qualification advice

An additional descriptor may be added to this qualification to illustrate a particular skill focus or trade discipline.

This could be achieved by adding a pathway descriptor or sentence *below* the formal title of the qualification. Note that no changes may be made to the qualification title and the use of one of these descriptors to a qualification does not change the qualification's formal title or unique national code.

There are no specific requirements associated with the use of these descriptors other than their use should reflect the nature of the choice of units of competency in the qualification and must be consistent with the work role of an Engineering Tradesperson - Fabrication. Reference to other occupational or functional pathways consistent with the role of an Engineering Tradesperson - Fabrication may be included on any qualification statement that is issued.

Competitive Manufacturing qualifications are available for employees at this level who already possess trade and other technical skills and who require additional manufacturing practice skills above those available in this qualification.

Licensing considerations

There are no specific licences that relate to this qualification. However, some units of competency in this qualification may relate to licensing or regulatory requirements. Local regulations should be checked for details.

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Read, interpret, follow and communicate information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents • Convey and share technical information • Produce sketches, diagrams, charts or graphs • Check and clarify task-related information • Recognise and use common fabrication terminology • Liaise with appropriate authorities
Teamwork	<ul style="list-style-type: none"> • Work alone or as part of a team • Contribute to a group effort in order to plan and carry out work • Identify work roles, communicate and cooperate with others
Problem-solving	<ul style="list-style-type: none"> • Undertake numerical operations, geometry and calculations/ formulae (including addition, subtraction, multiplication, division, fractions and decimals, percentages and proportions, simple ratios and averages) • Use appropriate measuring techniques • Inspect quality of own or other employee's work • Analyse information according to enterprise and work requirements • Assess operation and condition of components against specifications or manufacturer's requirements • Use diagnostic skills to identify and determine causes of faults, including interpretation of in-built fault indicators and error codes • Translate designs into practical outcomes
Initiative and enterprise	<ul style="list-style-type: none"> • Be capable of applying the competency in new and different situations and contexts • Identify actual and foreseeable workplace hazards during course of work • Implement OHS risk management procedures • Modify work plan to overcome unforeseen difficulties or developments that occur as work progresses • Participate in improvement procedures including process, quality and internal/external customer/supplier relationships • Economise material use and minimise waste
Planning and organising	<ul style="list-style-type: none"> • Plan, prioritise and sequence work operations/complete activities/scheduled production • Select and use planning techniques and tools • Organise and analyse information relevant to work • Set up jobs prior to commencement of work including selection

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	of appropriate tools, equipment and materials and adjustment of equipment
Self-management	<ul style="list-style-type: none"> • Carry out work safely and in accordance with company policy and procedures, manufacturer's recommendations, environmental guidelines and legislative requirements • Monitor performance of operation or quality of product or service to ensure customer satisfaction • Take responsibility for own work outcomes • Apply techniques, procedures, tools and equipment for compliance with site or manufacturers' specifications.
Learning	<ul style="list-style-type: none"> • Check and clarify task related information with appropriate personnel or technical adviser • Identify customers' requirements with respect to the operation or quality of the product or service • Assess and modify own work practices • Use manuals, online help and other reference materials such as catalogues/lists as required • Maintain current knowledge of applicable standards, legislation, codes of practice and product/process developments • Assist with on the job training and assessment
Technology	<ul style="list-style-type: none"> • Select and use appropriate tools, equipment, materials and machines • Select and use appropriate measuring/testing devices • Navigate technology to access /input /store/retrieve/save and produce information/data using appropriate software applications • Apply knowledge of appropriate engineering principles, techniques, procedures, tools and equipment to achieve the required outcome

Packaging Rules

Packaging Rules

The minimum requirements for achievement of the Certificate III in Engineering - Fabrication Trade are:

- completion of all core units of competency listed below, and
- completion of Group A Fabrication stream units listed below to the value of at least 40 points, and

- completion of units from Group B Certificate III Trade specialisation units listed in Appendix 1, Volume 1 of the Training Package, to bring the total value to at least 73 points

Points associated with prerequisites count towards the total (refer to units and prerequisites listing in Appendix 2, Volume 1).

Appropriate Group B elective units to the value of 16 points may be chosen from other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate III. Note that the elective units listed below include all of the units that are approved for selection from the MEM Training Package for use in this qualification. This meets the NQC requirement that one sixth of the total units must be able to be selected from other qualifications in the same Training Package.

Registered Training Organisations must seek a determination from Manufacturing Skills Australia in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses.

Only select units that would be suitable for Fabrication Trade occupational outcomes.

Additional qualification descriptors

The following additional descriptors are approved for use with this qualification: Casting and Moulding; Heavy Fabrication; Light Fabrication; Maintenance; Patternmaking; Surface Finishing; Welding.

Core units

- select all of the units from this list

Unit code	Unit title
MEM12023A	Perform engineering measurements
MEM12024A	Perform computations
MEM13014A	Apply principles of occupational health and safety in the work environment
MEM14004A	Plan to undertake a routine task
MEM14005A	Plan a complete activity
MEM15002A	Apply quality systems
MEM15024A	Apply quality procedures
MEM16006A	Organise and communicate information
MEM16007A	Work with others in a manufacturing, engineering or related environment

Unit code	Unit title
MEM16008A	Interact with computing technology
MEM17003A	Assist in the provision of on the job training
MSAENV272B	Participate in environmentally sustainable work practices

Elective Units

Group A - Fabrication Trade stream units

- select units from this list to the value of at least 40 points

Unit code	Unit title	P
MEM03003B	Perform sheet and plate assembly	4
MEM04001B	Operate melting furnaces	4
MEM04002B	Perform gravity die casting	2
MEM04003B	Operate pressure die casting machine	4
MEM04004B	Prepare and mix sand for metal moulding	4
MEM04005C	Produce moulds and cores by hand (jobbing)	16
MEM04006B	Operate sand moulding and core making machines	8
MEM04007B	Pour molten metal	4
MEM04008B	Fettle and trim metal castings/forgings	4
MEM04010B	Develop and manufacture wood patterns	20
MEM04011B	Produce polymer patterns	8
MEM04012B	Assemble plated patterns	8
MEM04013B	Develop and manufacture	2

Unit code	Unit title	P
	polystyrene patterns	
MEM04014B	Develop and manufacture production patterns	8
MEM04015B	Develop and manufacture vacuum forming moulds and associated equipment	6
MEM04016C	Develop and manufacture precision models	6
MEM04017B	Develop and manufacture gear, conveyor screw and propeller patterns	4
MEM04018B	Perform general woodworking machine operations	4
MEM04019B	Perform refractory installation and repair	4
MEM05001B	Perform manual soldering/desoldering - electrical/electronic components	4
MEM05002B	Perform high reliability soldering and desoldering	4
MEM05003B	Perform soft soldering	2
MEM05004C	Perform routine oxy acetylene welding	2
MEM05005B	Carry out mechanical cutting	2
MEM05006C	Perform brazing and/or silver soldering	2
MEM05007C	Perform manual heating and thermal cutting	2
MEM05008C	Perform advanced manual thermal cutting, gouging and shaping	2
MEM05009C	Perform automated thermal cutting	2

Unit code	Unit title	P
MEM05010C	Apply fabrication, forming and shaping techniques	8
MEM05011D	Assemble fabricated components	8
MEM05012C	Perform routine manual metal arc welding	2
MEM05013C	Perform manual production welding	2
MEM05014C	Monitor quality of production welding/fabrications	2
MEM05015D	Weld using manual metal arc welding process	4
MEM05016C	Perform advanced welding using manual metal arc welding process	4
MEM05017D	Weld using gas metal arc welding process	4
MEM05018C	Perform advanced welding using gas metal arc welding process	4
MEM05019D	Weld using gas tungsten arc welding process	4
MEM05020C	Perform advanced welding using gas tungsten arc welding process	4
MEM05022C	Perform advanced welding using oxy acetylene welding process	6
MEM05023C	Weld using submerged arc welding process	4
MEM05026C	Apply welding principles	4
MEM05036C	Repair/replace/modify fabrications	4
MEM05037C	Perform geometric development	6
MEM05038B	Perform advanced geometric development - cylindrical/rectangular	2

Unit code	Unit title	P
MEM05039B	Perform advanced geometric development - conical	2
MEM05040B	Perform advanced geometric development - transitions	4
MEM05041B	Weld using powder flame spraying	4
MEM05047B	Weld using flux core arc welding process	4
MEM05048B	Perform advanced welding using flux core arc welding process	4
MEM05049B	Perform routine gas tungsten arc welding	2
MEM05050B	Perform routine gas metal arc welding	2
MEM05051A	Select welding processes	2
MEM05052A	Apply safe welding practices	4
MEM05053A	Set and edit computer controlled thermal cutting machines	4
MEM05054A	Write basic NC/CNC programs for thermal cutting machines	4
MEM06001B	Perform hand forging	4
MEM06002B	Perform hammer forging	4
MEM06003C	Carry out heat treatment	6
MEM06004B	Select heat treatment processes and test finished product	6
MEM06005B	Perform drop and upset forging	4
MEM06006C	Repair springs	4
MEM06008A	Hammer forge complex shapes	4
MEM06009A	Hand forge complex shapes	4

Unit code	Unit title	P
MEM08001B	Perform wire, jig and barrel load/unload work	4
MEM08002C	Pre-treat work for subsequent surface coating	4
MEM08003C	Perform electroplating operations	6
MEM08004B	Finish work using wet, dry and vapour deposition methods	4
MEM08005B	Prepare and produce specialised coatings	4
MEM08006B	Produce clear and/or coloured and/or sealed anodised films on aluminium	2
MEM08007B	Control surface finish production and finished product quality	4
MEM08008B	Operate and control surface finishing waste treatment process	3
MEM08009C	Make up solutions	2
MEM08010B	Manually finish/polish materials	6
MEM08011B	Prepare surfaces using solvents and/or mechanical means	2
MEM08012B	Prepare surfaces by abrasive blasting (basic)	4
MEM08013B	Prepare surfaces by abrasive blasting (advanced)	4
MEM08014B	Apply protective coatings (basic)	4
MEM08015B	Apply protective coatings (advanced)	4
MEM08016B	Control blast coating by-products, materials and emissions	1
MEM08018B	Electroplate engineering coatings	6
MEM08019B	Electroplate protective finishes	6

Unit code	Unit title	P
MEM08020B	Electroplate decorative finishes	6
MEM09002B	Interpret technical drawing	4
MEM10001C	Erect structures	4
MEM12007D	Mark off/out structural fabrications and shapes	4
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM18098A	Prepare to perform work associated with fuel system installation and servicing*	2

Group B - Trade Specialisation units

Select units from the Certificate III Trade Specialisation units listed in Appendix 1, Volume 1 of MEM05 to bring the total value of units to at least 73 points, including any prerequisites.

MEM30405 Certificate III in Engineering - Electrical/Electronic Trade

Modification History

Updated one unit of competency - MEM05006B to MEM05006C

Description

This qualification covers the skills and knowledge required for employment as an Engineering Tradesperson - Electrical/Electronic within the metal, engineering, manufacturing and associated industries or other industries where Engineering Tradespersons - Electrical/Electronic work. The qualification has been specifically developed for apprentices in the above trade. The qualification packaging has been developed on an assumption that competency will be developed through an integrated combination of on and off-the-job learning strategies such as those delivered through a formal apprenticeship. The qualification may also be achieved through formal skills recognition assessment processes.

Job roles/employment outcomes

The Certificate III in Engineering - Electrical/Electronic Trade specifies the competencies required for employment as an Engineering Tradesperson - Electrical/Electronic including the design, assembly, manufacture, installation, modification, testing, fault finding, commissioning, maintenance and service of all electrical and electronic devices systems, equipment and controls e.g. electrical wiring, motors, generators, PLCs, and other electronic controls, instruments, refrigeration, telecommunications, radio and television, communication and information processing.

Employment outcomes related to this qualification are found in a wide variety of manufacturing and engineering related sectors as well as Engineering Tradesperson - Electrical/Electronic trade related roles in other industries.

Application

This qualification is designed to provide an industry recognised skills profile related to trade work as an Engineering Tradesperson - Electrical/Electronic. Skills development would usually be undertaken through an Australian Apprenticeship arrangement where the mix of on and off-the-job training would be specified in the Training Plan associated with the Contract of Training between the employer and apprentice.

Assessment of some units of competency must, where indicated, include evidence of the candidate's performance in a productive work environment where there is a sufficient range of appropriate tasks and materials to cover the scope of application of those units. All outcomes must reflect the standard of performance inherent in the job.

Occupational titles at the enterprise level covered by this qualification may vary and include engineering tradesperson - electrical/electronic, electrical fitter, electrical mechanic, electrical fitter/mechanic, electrician, refrigeration mechanic and radio tradesperson.

Pathways Information

Pathways into the qualification

While there is no qualification entry requirement, it is assumed that the learner is engaged as an apprentice under a Training Contract and that the learner is receiving appropriate structured on-the-job training while undertaking this qualification.

This qualification may be accessed by direct entry. Credit for relevant units of competency achieved should be granted towards this qualification for those who have completed MEM10105 Certificate I in Engineering, MEM10205 Certificate I in Boating Services, MEM20105 Certificate II in Engineering, MEM20205 Certificate II in Engineering - Production Technology or other relevant qualifications. Credit towards this qualification may also include units of competency contained within relevant pre-vocational and pre-apprenticeship programs and Statements of Attainment.

Pathways from the qualification

Further training pathways from this qualification include MEM40105 Certificate IV in Engineering, MSA41108 Certificate IV in Competitive Manufacturing, MSA40108 Certificate IV in Manufacturing Technology or other relevant qualifications.

Additional qualification advice

An additional descriptor may be added to this qualification title to illustrate a particular skills profile.

This could be achieved by adding a pathway descriptor or sentence *below* the formal title of the qualification. Note that no changes may be made to the qualification title and the use of one of these descriptors to a qualification does not change the qualification's formal title or unique national code.

There are no specific requirements associated with the use of these descriptors other than their use should reflect the nature of the choice of units of competency in the qualification and must be consistent with the work role of an Engineering Tradesperson - Electrical/Electronic. Reference to other occupational or functional pathways consistent with the role of an Engineering Tradesperson - Electrical/Electronic may be included on any qualification statement that is issued.

Competitive Manufacturing qualifications are available for employees at this level who already possess trade and other technical skills and who require additional manufacturing practice skills above those available in this qualification.

Licensing considerations

If appropriate electives are undertaken this qualification can be used as the basis for an application in each state and territory for a license to practise as an electrician. It can also be used to satisfy regulations regarding refrigeration and airconditioning work. Local regulations should be checked for details.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents • Interpret, record and communicate information including measurements • Produce sketches, diagrams, charts or graphs • Check and clarify task-related information • Recognise and use common workplace terminology • Tag, mark or label cabling for identification • Interpret circuit diagrams • Provide advice on minimising electricity use • Liaise with appropriate authorities
Teamwork	<ul style="list-style-type: none"> • Work alone or as part of a team • Contribute to a group effort in order to plan and carry out work • Identify work roles, communicate and cooperate with others
Problem-solving	<ul style="list-style-type: none"> • Undertake numerical operations, geometry and calculations/ formulae (including addition, subtraction, multiplication, division, fractions and decimals, percentages and proportions, simple ratios and averages) • Use appropriate measuring techniques • Inspect quality of own or other employee's work • Analyse information according to enterprise and work requirements • Assess operation and condition of components against specifications or manufacturer's requirements • Use diagnostic skills and tests to identify and determine causes of electrical faults, including interpretation of in-built fault indicators and error codes • Translate designs into practical outcomes
Initiative and enterprise	<ul style="list-style-type: none"> • Be capable of applying the competency in new and different situations and contexts • Identify actual and foreseeable workplace hazards during course of work • Implement OHS risk management procedures • Modify work plan to overcome unforeseen difficulties or developments that occur as work progresses • Participate in improvement procedures including process, quality and internal/external customer/supplier relationships
Planning and organising	<ul style="list-style-type: none"> • Plan, prioritise and sequence work operations/complete activities/scheduled production

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	<ul style="list-style-type: none"> • Select and use planning techniques and tools • Organise and analyse information relevant to work • Set up jobs prior to commencement of work including selection of appropriate tools, equipment and materials and adjustment of equipment
Self-management	<ul style="list-style-type: none"> • Carry out work safely and in accordance with company policy and procedures, manufacturer's recommendations and legislative requirements • Monitor performance of operation or quality of product or service to ensure customer satisfaction • Take responsibility for work outcomes • Apply techniques, procedures, tools and equipment for compliance with site or manufacturers' specifications.
Learning	<ul style="list-style-type: none"> • Check and clarify task related information with appropriate personnel or technical adviser • Identify customers' requirements with respect to the operation or quality of the product or service • Assess and modify own work practices • Use manuals, online help and other reference materials such as catalogues/lists as required • Maintain current knowledge of applicable standards, legislation, codes of practice, environmental guidelines and product/process developments • Assist with on the job training and assessment
Technology	<ul style="list-style-type: none"> • Select and use appropriate tools, equipment, materials and machines • Select and use appropriate measuring/testing devices • Perform calculations using a calculator • Navigate technology to access /input /store/retrieve/save and produce information/data using appropriate software applications • Apply knowledge of appropriate engineering principles, techniques, procedures, tools and equipment to achieve the required outcome • Apply techniques, tools and equipment required to install/maintain electrical equipment/systems/components • Use tools, equipment and techniques to test the operation of electrical equipment/components/systems • Calibrate instrumentation equipment/components

Packaging Rules

Packaging Rules

The minimum requirements for achievement of the Certificate III in Engineering - Electrical/Electronic Trade are:

- completion of all core units of competency listed below, and
- completion of units from the Group A Electrical/Electronic Stream to the value of at least 40 points, and
- completion of units from Group B Certificate III Trade specialisation units listed in Appendix 1, Volume 1 of the Training Package, to bring the total value to at least 73 points

Points associated with prerequisites count towards the total (refer to units and prerequisites listing in Appendix 2, Volume 1).

Appropriate elective units to the value of 16 points may be chosen from other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate III. Note that the elective units listed below include all of the units that are approved for selection from the MEM Training Package for use in this qualification. This meets the NQC requirement that one sixth of the total units must be able to be selected from other qualifications in the same Training Package.

Registered Training Organisations must seek a determination from Manufacturing Skills Australia in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses.

Only select units that would be suitable for Electrical/Electronic Trade occupational outcomes

Additional qualification descriptors

The following additional descriptors are approved for use with this qualification: Refrigeration and Air-conditioning; Instrumentation; Maintenance; Marine Electronics.

Core Units

- select all of the units from this list

Unit code	Unit title
MEM12023A	Perform engineering measurements
MEM12024A	Perform computations
MEM13014A	Apply principles of occupational health and safety in the work environment
MEM14004A	Plan to undertake a routine task
MEM14005A	Plan a complete activity

Unit code	Unit title
MEM15002A	Apply quality systems
MEM15024A	Apply quality procedures
MEM16006A	Organise and communicate information
MEM16007A	Work with others in a manufacturing, engineering or related environment
MEM16008A	Interact with computing technology
MEM17003A	Assist in the provision of on the job training
MSAENV272B	Participate in environmentally sustainable work practices

Electives

Group A - Electrical/Electronic Trade stream units

- select units from this list to the value of at least 40 points

Unit code	Unit title	P
MEM05001B	Perform manual soldering/desoldering - electrical/electronic components	4
MEM05002B	Perform high reliability soldering and desoldering	4
MEM05003B	Perform soft soldering	2
MEM05006C	Perform brazing and/or silver soldering	2
MEM09002B	Interpret technical drawing	4
MEM10002B	Terminate and connect electrical wiring	3
MEM10003B	Install and test electrical wiring and circuits up to 1000 volts a.c. and 1500 volts d.c.	12
MEM12002B	Perform electrical/electronic measurement	2

Unit code	Unit title	P
MEM12004B	Perform precision electrical/electronic measurement	4
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM18045B	Fault find/repair electrical equipment/components up to 250 volts single phase supply	4
MEM18046B	Fault find/repair electrical equipment/components up to 1000 volts a.c./1500 volts d.c.	10
MEM18047B	Diagnose and maintain electronic controlling systems on mobile plant	4
MEM18048B	Fault find and repair/rectify basic electrical circuits	12
MEM18049C	Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.	3
MEM18050C	Disconnect/reconnect fixed wired equipment over 1000 volts a.c./1500 volts d.c.	3
MEM18051B	Fault find and repair/rectify complex electrical circuits	6
MEM18052B	Maintain fluid power systems for mobile plant	4
MEM18054B	Fault find, test and calibrate instrumentation systems and equipment	8
MEM18055B	Dismantle, replace and assemble engineering components	3
MEM18056B	Diagnose and repair analog equipment and components	10

Unit code	Unit title	P
MEM18057B	Maintain/service analog/digital electronic equipment	6
MEM18058C	Modify electronic equipment	4
MEM18060B	Maintain, repair control instrumentation - single and multiple loop control systems	8
MEM18062B	Install, maintain and calibrate instrumentation sensors, transmitters and final control elements	8
MEM18063B	Terminate signal and data cables	4
MEM18064B	Maintain instrumentation system components	6
MEM18065B	Diagnose and repair digital equipment and components	10
MEM18098A	Prepare to perform work associated with fuel system installation and servicing*	2

Group B - Trade Specialisation units

Select units from the Certificate III Trade Specialisation units listed in Volume 1 of MEM05 to bring the total value of units to at least 73 points, including any prerequisites

Note: The following units of competency are required to meet the National Uniform Electrical Licensing '66 essential capabilities' for an electrician's license.

Unit code	Unit title	P
MEM12023A	Perform engineering measurements	n/a
MEM12024A	Perform computations	n/a
MEM13014A	Apply principles of occupational health and safety in the work environment	n/a
MEM14004A	Plan to undertake a routine task	n/a
MEM14005A	Plan a complete activity	n/a

Unit code	Unit title	P
MEM15002A	Apply quality systems	n/a
MEM15024A	Apply quality procedures	n/a
MEM16006A	Organise and communicate information	n/a
MEM16007A	Work with others in a manufacturing, engineering or related environment	n/a
MEM16008A	Interact with computing technology	n/a
MEM17003A	Assist in the provision of on the job training	n/a
MEM09002B	Interpret technical drawing	4
MEM10002B	Terminate and connect electrical wiring	3
MEM10003B	Install and test electrical wiring and circuits up to 1000 volts a.c. and 1500 volts d.c.	12
MEM10004B	Enter and change programmable controller operational parameters	2
MEM10011B	Terminate and connect specialist cables	3
MEM12002B	Perform electrical/electronic measurement	2
MEM12004B	Perform precision electrical/electronic measurement	4
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM18046B	Fault find/repair electrical equipment/components up to 1000 volts a.c./1500 volts d.c.	10
MEM18048B	Fault find and repair/rectify basic electrical circuits	12

Unit code	Unit title	P
MEM18049C	Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.	3
MEM18051B	Fault find and repair/rectify complex electrical circuits	6
	Points total	65

MEM30505 Certificate III in Engineering - Technical

Modification History

Release 2 - Addition of new and updated elective units covering skills in computer-aided design/drafting (CAD) operations. Outcomes are equivalent.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Read, interpret, follow and communicate information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents • Produce detail drawings using standard engineering drawing symbols, references and terminology • Prepare drafts of functional and operational requirements • Liaise with internal and external stakeholders • Use communication and negotiation skills • Write reports
Teamwork	<ul style="list-style-type: none"> • Work alone or as part of a team • Verify operational requirements with supervisor or team
Problem-solving	<ul style="list-style-type: none"> • Analyse information according to enterprise and work requirements • Apply mathematical techniques to solve problems • Analyse manufacturing/ production system components • Apply engineering principles to translate designs into practical outcomes
Initiative and enterprise	<ul style="list-style-type: none"> • Be capable of applying the competency in new and different situations and contexts • Implement OHS risk management procedures • Economise material use and minimise waste and energy use • Modify work plan to overcome unforeseen difficulties or developments that occur as work progresses • Participate in improvement procedures including procedures to improve processes, quality, environmental performance, and internal/external customer/supplier relationships
Planning and organising	<ul style="list-style-type: none"> • Organise, categorise and sequence information • Plan and sequence work operations/complete activities/scheduled production • Source and organise required information from workshop manuals, customer specifications, product suppliers, designers or similar
Self-management	<ul style="list-style-type: none"> • Take responsibility for work outcomes • Carry out work safely and in accordance with company policy and procedures, manufacturer's recommendations and legislative requirements
Learning	<ul style="list-style-type: none"> • Use manuals, online help and other reference materials as required • Check and clarify task-related information • Assess and modify own work practices

	<ul style="list-style-type: none"> • Research equipment function and operational requirements • Maintain current knowledge of applicable standards, legislation, codes of practice and product/process developments
Technology	<ul style="list-style-type: none"> • Know functions and capabilities of various types of computing technology and software used in the workplace • Use a CAD program, computer and peripherals • Apply knowledge of basic mechanical components, drive components, pneumatic systems, hydraulic systems

Packaging Rules

The minimum requirements for achievement of the Certificate III in Engineering - Technical are:

- completion of the three (3) core units of competency listed below, and
- completion of seven (7) elective units of competency from the list below to bring the total of units selected to ten (10).

Note that when selecting elective units any prerequisite units must also be completed and can be counted towards the required number of elective units (refer to units and prerequisites listing in Appendix 2).

Note also that additional requirements apply to the selection of non-destructive testing units. These additional requirements are listed at the end of the elective units.

Up to two (2) appropriate electives may be chosen from other endorsed Training Packages and accredited courses where those units are available in a Certificate III. Note that the elective units listed below include all of the units that are approved for selection from the MEM05 Training Package for use in this qualification. This meets the NQC requirement that one sixth of the total units must be able to be selected from other qualifications in the same Training Package.

Additional qualification descriptors

There are no approved additional descriptors for this qualification.

Core units

- Select all of the units from this list.

Unit code	Unit title
MEM16006A	Organise and communicate information
MEM16008A	Interact with computing technology
MSAENV272B	Participate in environmentally sustainable work practices

Note: It is anticipated that many learners will have gained these skills through Year 12 school study and be eligible for recognition of prior learning. The actual awarding of the units will be subject to assessment by the Registered Training Provider offering the qualification.

Elective units

- Select seven (7) units from this list.

Unit code	Unit title	Prerequisites
MEM05051A	Select welding processes	
MEM09002B	Interpret a technical drawing	
MEM09201A	Work effectively in an engineering drafting workplace	
MEM09202A	Produce freehand sketches	
MEM09203A	Measure and sketch site information	
MEM09205A	Produce electrical schematic drawings	*
MEM09208A	Detail fasteners and locking devices in mechanical drawings	*
MEM09209A	Detail bearings, seals and other componentry in mechanical drawings	*
MEM09213A	Produce schematic drawings for hydraulic and pneumatic fluid power systems	*
MEM12023A	Perform engineering measurements	
MEM12024A	Perform computations	
MEM13013B	Work safely with ionizing radiation	
MEM15001B	Perform basic statistical quality control	
MEM16003B	Provide advanced customer service	
MEM18001C	Use hand tools	
MEM24001B	Perform basic penetrant testing	*
MEM24003B	Perform basic magnetic particle testing	*

MEM24005B	Perform basic eddy current testing	*
MEM24007B	Perform ultrasonic thickness testing	*
MEM24009B	Perform basic radiographic testing	*
MEM30005A	Calculate force systems within simple beam structures	*
MEM30006A	Calculate stresses in simple structures	*
MEM30007A	Select common engineering materials	
MEM30008A	Apply basic economic and ergonomic concepts to evaluate engineering applications	
MEM30009A	Contribute to the design of basic mechanical systems	*
MEM30010A	Set up basic hydraulic circuits	
MEM30011A	Set up basic pneumatic circuits	
MEM30012A	Apply mathematical techniques in a manufacturing, engineering or related environment	
MEM30013A	Assist in the preparation of a basic workplace layout	
MEM30014A	Apply basic just in time systems to the reduction of waste	
MEM30015A	Develop recommendations for basic set up time improvements	
MEM30016A	Assist in the analysis of a supply chain	
MEM30017A	Use basic preventative maintenance techniques and tools	
MEM30018A	Undertake basic process planning	
MEM30019A	Use resource planning software systems in manufacturing	*
MEM30020A	Develop and manage a plan for a simple manufacturing related project	
MEM30021A	Prepare a simple production schedule	

MEM30022A	Undertake supervised procurement activities	
MEM30023A	Prepare a simple cost estimate for a manufactured product	
MEM30024A	Participate in quality assurance techniques	*
MEM30025A	Analyse a simple electrical system circuit	*
MEM30026A	Select and test components for simple electronic switching and timing circuits	*
MEM30027A	Prepare basic programs for programmable logic controllers	
MEM30028A	Assist in sales of technical products/systems	
MEM30031A	Operate computer-aided design (CAD) system to produce basic drawing elements	
MEM30032A	Produce basic engineering drawings	
MEM30033A	Use computer-aided design (CAD) to create and display 3-D models	*
MSATCS301A	Interpret architectural and engineering design specifications for structural steel detailing	*
MSATCS302A	Detail bolts and welds for structural steelwork connections	*

Special requirements for the selection of Non-destructive Testing units

In order to ensure that the Certificate III in Engineering - Technical aligns to occupational outcomes in industry the following additional rules apply to the selection of the following units -

Only two (2) of the following units can be selected within the qualification:

MEM24001B	Perform basic penetrant testing	*
MEM24003B	Perform basic magnetic particle testing	*
MEM24005B	Perform basic eddy current testing	*

And, only one (1) of the following units can be selected within the qualification:

MEM24007B	Perform ultrasonic thickness testing	*
MEM24009B	Perform basic radiographic testing	*

Packaging Rules

The minimum requirements for achievement of the Certificate III in Jewellery Manufacture are:

- completion of all core units of competency listed below, and
- completion of Group A Jewellery Manufacture stream units from the list below to the value of at least 40 points, and
- completion of units from Group B Certificate III Trade specialisation units listed in Appendix I, Volume 1 of the Training Package, to bring the total value to at least 73 points

Points associated with prerequisites count towards the total (refer to units and prerequisites listing in Appendix 2, Volume 1).

Appropriate Group B elective units to the value of 16 points may be chosen from other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate III. Note that the elective units listed below include all of the units that are approved for selection from the MEM Training Package for use in this qualification. This meets the NQC requirement that one sixth of the total units must be able to be selected from other qualifications in the same Training Package.

Registered Training Organisations must seek a determination from Manufacturing Skills Australia in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses.

Only select units that would be suitable for Jewellery Manufacture occupational outcomes

Additional qualification descriptors

There are no approved additional descriptors for this qualification.

Core Units

- select all of the units from this list

Unit code	Unit title
MEM12023A	Perform engineering measurements
MEM12024A	Perform computations
MEM13014A	Apply principles of occupational health and safety in the work environment
MEM14004A	Plan to undertake a routine task
MEM14005A	Plan a complete activity
MEM15002A	Apply quality systems
MEM15024A	Apply quality procedures
MEM16006A	Organise and communicate information
MEM16007A	Work with others in a manufacturing, engineering or related environment
MEM16008A	Interact with computing technology
MEM17003A	Assist in the provision of on the job training
MSAENV272B	Participate in environmentally sustainable work practices

Electives

Group A - Jewellery Manufacture stream units

- select units from this list to the value of at least 40 points

Unit code	Unit title	P
MEM03001B	Perform manual production assembly	4
MEM03002B	Perform precision assembly	4
MEM03006B	Set assembly stations	2
MEM05006C	Perform brazing and/or silver soldering	2
MEM06007B	Perform basic incidental heat/quenching, tempering and annealing	2
MEM07001B	Perform operational maintenance of machines/equipment	2
MEM07005C	Perform general machining	8
MEM07024B	Operate and monitor machine/process	4
MEM07032B	Use workshop machines for basic operations	2
MEM07040A	Set multistage integrated processes	6
MEM08001B	Perform wire, jig and barrel load/unload work	4
MEM08002C	Pre-treat work for subsequent surface coating	4
MEM08003C	Perform electroplating operations	6
MEM08010B	Manually finish/polish materials	6

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Read, interpret, follow and communicate information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents • Produce sketches, diagrams, charts or graphs and 3D shapes (lofting) • Check and clarify task-related information • Recognise and use common marine terminology • Liaise with appropriate authorities
Teamwork	<ul style="list-style-type: none"> • Work alone or as part of a team • Contribute to a group effort in order to plan and carry out work • Identify work roles, communicate and cooperate with others
Problem-solving	<ul style="list-style-type: none"> • Undertake numerical operations, geometry and calculations/formulae (including addition, subtraction, multiplication, division, fractions and decimals, percentages and proportions, simple ratios and averages) • Use appropriate measuring techniques • Inspect quality of own or other employee's work • Assess operation and condition of components against specifications or manufacturer's requirements • Translate designs into practical outcomes • Use diagnostic skills and tests to identify and determine causes of faults, including interpretation of in-built fault indicators and error codes
Initiative and enterprise	<ul style="list-style-type: none"> • Be capable of applying the competency in new and different situations and contexts • Identify actual and foreseeable workplace hazards during course of work • Implement OHS risk management procedures • Modify work plan to overcome unforeseen difficulties or developments that occur as work progresses • Economise material use and minimise waste and negative environmental impacts • Participate in improvement procedures including process, quality and internal/external customer/supplier relationships
Planning and organising	<ul style="list-style-type: none"> • Plan, prioritise and sequence work operations • Select and use planning techniques and tools • Organise and analyse information relevant to work • Set up jobs prior to commencement of work including selection of appropriate materials and adjustment of equipment • Inspect and prepare worksite

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Self-management	<ul style="list-style-type: none"> • Carry out work safely and in accordance with company policy and procedures, manufacturer's recommendations and legislative requirements • Monitor performance of operation or quality of product or service to ensure customer satisfaction • Take responsibility for work outcomes • Apply techniques, procedures, tools and equipment for compliance with site or manufacturers' specifications.
Learning	<ul style="list-style-type: none"> • Check and clarify task related information with appropriate personnel or technical adviser • Identify customers' requirements with respect to the operation or quality of the product or service • Assess and modify own work practices • Use manuals, online help and other reference materials such as catalogues/lists as required • Maintain current knowledge of applicable standards, legislation, environmental guidelines, codes of practice and product/process developments • Assist with on the job training and assessment
Technology	<ul style="list-style-type: none"> • Select and use appropriate tools, equipment, materials and machines • Select and use appropriate measuring/testing devices • Navigate technology to access /input /store/retrieve/save and produce information/data using appropriate software applications • Apply knowledge of marine systems and engineering principles, techniques, procedures, tools and equipment to achieve the required outcome • Use CAD equipment

Packaging Rules

The minimum requirements for achievement of the Certificate III in Marine Craft Construction are:

- completion of all core units of competency listed below, and
- completion of Group A Marine Craft Construction stream units from the list below to the value of at least 40 points, and
- completion of units from Group B - Certificate III Trade specialisation units listed in Appendix 1, Volume 1 of the Training Package, to bring the total value to at least 73 points

Points associated with prerequisites count towards the total (refer to units and prerequisites listing in Appendix 2, Volume 1).

Appropriate Group B elective units to the value of 16 points may be chosen from other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate III. Note that the elective units listed below include all of the units that are approved for selection from the MEM Training Package for use in this qualification. This meets the NQC requirement that one sixth of the total units must be able to be selected from other qualifications in the same Training Package.

Registered Training Organisations must seek a determination from Manufacturing Skills Australia in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses.

Only select units that would be suitable for Marine Craft Construction occupational outcomes

Additional qualification descriptors

There are no approved additional descriptors for this qualification.

Core Units

- select all of the units from this list

Unit code	Unit title
MEM12023A	Perform engineering measurements
MEM12024A	Perform computations

Packaging Rules

The minimum requirements for achievement of the Certificate III in Boating Services are:

- completion of all nine (9) core units of competency listed below, and
- completion of thirteen (13) elective units from the list below to bring the total number of units to twenty one (21).

Note that when selecting elective units any prerequisite units must also be completed and count towards the required number of elective units (refer to units for details).

Up to four appropriate electives may be chosen from other endorsed Training Packages and accredited courses where those units are available in a Certificate III. Note that the elective units listed below include all of the units that are approved for selection from the MEM05 Training Package for use in this qualification. This meets the NSSC requirement that one sixth of the total units must be able to be selected from other qualifications in the same Training Package.

Only select units that would be suitable for Boating Services occupational outcomes.

Additional qualification descriptors

There are no approved additional descriptors for this qualification.

Core Units

- select all of the units from this list

Unit code	Unit title
MEM13014A	Apply principles of occupational health and safety in the work environment
MEM14004A	Plan to undertake a routine task

MEM05012C	Perform routine manual metal arc welding
MEM05050B	Perform routine gas metal arc welding
MEM09002B	Interpret technical drawing
MEM11010B	Operate mobile load shifting equipment
MEM11011B	Undertake manual handling
MEM12023A	Perform engineering measurements
MEM12006C	Mark off/out (general engineering)
MEM12007D	Mark off/out structural fabrications and shapes
MEM13003B	Work safely with industrial chemicals and materials
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEM25001B	Apply fibre-reinforced plastics
MEM25004B	Fair and shape surfaces
MEM25007B	Maintain marine vessel surfaces
MEM50004B	Maintain quality of environment by following marina codes
MEM50005B	Refuel vessels
MEM50006B	Check operational capability of marine craft
MEM50007B	Check operational capability of sails and sail operating equipment
MEM50008B	Carry out trip preparation and planning
MEM50009B	Safely operate a mechanically powered recreational boat

Unit code	Unit title
MEM50010B	Respond to boating emergencies and incidents
TLILIC0012A	Licence to operate a vehicle loading crane (capacity 10 metre tonnes and above)
TLILIC2001A	Licence to operate a forklift truck

MEM31010 Certificate III in Watch and Clock Service and Repair

Modification History

Not Applicable

Description

This qualification has been specifically developed for apprentices in trades related to watch and clock servicing and repair and describes the skills and knowledge required to perform trade work in watch and clock service and repair. The qualification packaging has been developed on an assumption that competency will be developed through a combination of on and off-the-job learning strategies. The qualification may also be achieved through formal skills recognition assessment processes.

Job roles/employment outcome

The Certificate III in Watch and Clock Service and Repair specifies the competencies required for employment as a watch and clock service and repair tradesperson, including the disassembly, assembly, installation, adjustment, replacement, modification, testing, fault-finding, and maintenance and service of watch and clock cases, mechanisms and other relevant components.

Employment outcomes directly associated with this qualification are found in a variety of watch and clock service related businesses, including retail stores, manufacturer service centres and specialist watch and clock service and repair businesses, including self employment.

Application

This qualification is designed to reflect the industry recognised skills profile associated with trade work as a watch and clock service and repair tradesperson. Skills development would typically be undertaken through an Australian Apprenticeship arrangement where the integration of on and off-the-job training would be specified in the Training Plan associated with the Training Contract between the employer and apprentice.

Pathways Information

Pathways into the qualification

There is no qualification entry requirement. It is assumed that the learner is engaged as an apprentice under a Training Contract and is involved in appropriate structured on-the-job learning while undertaking this qualification.

This qualification may be accessed by direct entry. Credit for relevant units of competency achieved should be granted towards this qualification for those who have completed MEM10105 Certificate I in Engineering, MEM20105 Certificate II in Engineering, MEM20205 Certificate II in Engineering - Production Technology or other qualifications relevant to watch and clock service and repair. Credit towards this qualification may also include units of competency contained within relevant pre-vocational and pre-apprenticeship programs and Statements of Attainment.

Pathways from the qualification

Further training pathways from this qualification include MEM40105 Certificate IV in Engineering and MEM50105 Diploma of Engineering - Advanced Trade or other relevant qualifications.

Competitive Manufacturing qualifications are available for employees at this level who already possess trade and other technical skills and who require additional manufacturing practice skills above those available in this qualification.

Licensing considerations

There are no specific licences that relate to this qualification.

	<ul style="list-style-type: none"> • Take responsibility for own work outcomes • Apply techniques, procedures, tools and equipment for compliance with site or manufacturers' specifications
Learning	<ul style="list-style-type: none"> • Check and clarify task-related information with appropriate personnel or technical adviser • Identify customers' requirements with respect to the operation or quality of the product or service • Assess and modify own work practices • Use manuals, online help and other reference materials, such as catalogues/lists as required • Maintain current knowledge of applicable standards, legislation, codes of practice and product/process developments • Assist with on-the-job training and assessment
Technology	<ul style="list-style-type: none"> • Select and use appropriate tools, equipment, materials and machines, including high tolerance/precision tools and equipment • Use high magnification optics • Use watch and clock service and repair techniques, tools, processes and procedures • Select and use appropriate measuring/testing devices • Navigate technology to access/input/store/retrieve/save and produce information/data using appropriate software applications

Packaging Rules

Packaging rules

The minimum requirements for achievement of the Certificate III in Watch and Clock Service and Repair are:

- completion of all core units of competency listed below
- completion of elective units to a total value of at least 73 points, chosen as described below:
 - watch and clock stream units from Group A to the value of at least 40 points; and
 - trade specialisation units from Group B to bring the total value to at least 73 points.

Units with prerequisites are marked with an asterisk. Points associated with prerequisites count towards the total (refer to units and prerequisites listing in Appendix 2, Volume 1). Appropriate Group B elective units to the value of 16 points may be chosen from other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate III.

Registered Training Organisations must seek a determination from Manufacturing Skills Australia in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses.

Note that the elective units listed below include all of the units that are approved for selection from the MEM Training Package for use in this qualification. This meets the NQC requirement that one sixth of the total units must be able to be selected from other qualifications in the same Training Package.

Only select units that would be suitable for occupational outcomes in a watch and clock service and repair environment.

Core units of competency

- Select all of the units from this list.

Unit code	Unit title
MEM12023A	Perform engineering measurements
MEM12024A	Perform computations
MEM13014B	Apply principles of occupational health and safety in the work environment
MEM14004A	Plan to undertake a routine task
MEM14005A	Plan a complete activity
MEM15002A	Apply quality systems
MEM15024A	Apply quality procedures
MEM16006A	Organise and communicate information
MEM16007A	Work with others in a manufacturing, engineering or related environment
MEM16008A	Interact with computing technology
MEM17003A	Assist in the provision of on the job training
MSAENV272B	Participate in environmentally sustainable work practices

Elective units of competency

Group A - Watch and Clock stream units

- Select units from this list to the value of at least 40 points.

Unit code	Unit title	P

MEM30025A	Analyse a simple electrical system circuit*	4

Group B - specialisation units

- Select units from the Certificate III Trade Specialisation units listed in Appendix I, Volume 1 of this Training Package to bring the total value of units to at least 73 points, including any prerequisites.
- Appropriate specialisation units to the value of 16 points may be chosen from other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate III.
-

MEM31112 Certificate III in Engineering - Composites Trade

Modification History

Release 1 - new qualification

Description

This qualification covers the skills and knowledge required by a tradesperson working with composites within the metal, engineering, manufacturing and associated industries, or other industries where composites tradespersons work. The qualification has been specifically developed to meet the needs of apprentices in the above trade. The qualification packaging has been developed on the assumption that competency will be developed through an integrated combination of on and off-the-job learning strategies such as those delivered through a formal apprenticeship. The qualification may also be achieved through formal skills recognition assessment processes.

Job roles/employment outcomes

The MEM31112 Certificate III in Engineering - Composites Trade specifies the competencies required for employment as a composites tradesperson, including:

- laying up composites
- selecting and using materials and components for composite products
- handling, using and storing materials and components used in composites
- undertaking repairs and modifications to composite components
- undertaking repairs and modifications using composites
- adjusting resin chemicals for composite products and conditions
- selecting and using joining techniques.

People with this qualification may work in a large manufacturing organisation, a smaller workshop, a repair facility, a defence or a government facility. The composites tradesperson may work in a composites manufacturing or repair organisation, or they may work in an aerospace, civil construction, general manufacturing, marine, vehicle or other organisation as a composites specialist. They may be part of a large organisation or they may be an independent contractor performing composites trade work for other organisations.

'Composites' in this application refers to reinforced resin components and does not include geo-textile or other industrial textiles.

Application

This qualification is designed to provide an industry recognised skills profile related to working as a composites tradesperson. Skills development would usually be undertaken through an Australian Apprenticeship arrangement where the mix of on and off-the-job training would be specified in the Training Plan associated with the Contract of Training between the employer and apprentice.

This work will generally be undertaken in a factory or workshop environment but may also be undertaken onsite.

Assessment of some units of competency must, where indicated, include evidence of the candidate's performance in a productive work environment where there is a sufficient range of appropriate tasks and materials to cover the scope of application of those units. All outcomes must reflect the standard of performance inherent in the job.

Pathways Information

Pathways into the qualification

There is no qualification entry requirement. It is assumed that the learner is engaged as an apprentice under a Training Contract and that the learner is involved in appropriate structured on-the-job learning while undertaking this qualification.

This qualification may be accessed by direct entry. Credit for relevant units of competency achieved should be granted towards this qualification for those who have completed other relevant qualifications. Credit towards this qualification may also include units of competency contained within relevant pre-vocational and pre-apprenticeship programs and Statements of Attainment.

Pathways from the qualification

Further training pathways from this qualification include MEM40105 Certificate IV in Engineering and MEM50105 Diploma of Engineering – Advanced Trade or other relevant qualifications.

Competitive Manufacturing qualifications are available for employees at this level who already possess trade and other technical skills and who require additional manufacturing practice skills above those available in this qualification.

Licensing/Regulatory Information

There are no specific licences that relate to this qualification.

Entry Requirements

Not applicable.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Read, interpret, follow and communicate information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents • Convey and share technical information • Produce sketches, diagrams, charts or graphs • Check and clarify task-related information • Recognise and use common fabrication terminology • Liaise with appropriate authorities
Teamwork	<ul style="list-style-type: none"> • Work alone or as part of a team • Contribute to a group effort in order to plan and carry out work • Identify work roles, communicate and cooperate with others
Problem solving	<ul style="list-style-type: none"> • Undertake numerical operations, geometry and calculations/ formulae (including addition, subtraction, multiplication, division, fractions and decimals, percentages and proportions, simple ratios and averages) • Use appropriate measuring techniques • Inspect quality of own or other employee's work • Analyse information according to enterprise and work requirements • Assess operation and condition of components against specifications or manufacturer's requirements • Use diagnostic skills to identify and determine causes of faults, including interpretation of in-built fault indicators and error codes • Translate designs into practical outcomes
Initiative and enterprise	<ul style="list-style-type: none"> • Be capable of applying the competency in new and different situations and contexts • Identify actual and foreseeable workplace hazards during course of work • Implement OHS risk management procedures • Modify work plan to overcome unforeseen difficulties or developments that occur as work progresses • Participate in improvement procedures, including process, quality and internal/external customer/supplier relationships • Economise material use and minimise waste
Planning and organising	<ul style="list-style-type: none"> • Plan, prioritise and sequence work operations/complete activities/scheduled production • Select and use planning techniques and tools • Organise and analyse information relevant to work • Set up jobs prior to commencement of work, including selection of appropriate tools, equipment and materials and adjustment of equipment

Self-management	<ul style="list-style-type: none"> • Carry out work safely and in accordance with company policy and procedures, manufacturer's recommendations, environmental guidelines and legislative requirements • Monitor performance of operation or quality of product or service to ensure customer satisfaction • Take responsibility for own work outcomes • Apply techniques, procedures, tools and equipment for compliance with site or manufacturer specifications
Learning	<ul style="list-style-type: none"> • Check and clarify task related information with appropriate personnel or technical adviser • Identify customers' requirements with respect to the operation or quality of the product or service • Assess and modify own work practices • Use manuals, online help and other reference materials, such as catalogues/lists, as required • Maintain current knowledge of applicable standards, legislation, codes of practice and product/process developments • Assist with on-the-job training and assessment
Technology	<ul style="list-style-type: none"> • Select and use appropriate tools, equipment, materials and machines • Select and use appropriate measuring/testing devices • Navigate technology to access/input /store/retrieve/save and produce information/data using appropriate software applications • Apply knowledge of appropriate engineering principles, techniques, procedures, tools and equipment to achieve the required outcome

Packaging Rules

The minimum requirements for achievement of the MEM31112 Certificate III in Engineering - Composites Trade are:

- completion of all core units of competency listed below
- completion of elective units to a total value of at least 73 points, chosen as described below:
 - basic composite fabrication units from Group A to the value of at least 12 points
 - composite trade specialisation units from Group B to the value of at least 28 points
 - units not already chosen from Group B and trade specialisation units from Group C to bring the total value to at least 73 points.

Units with prerequisites are marked with an asterisk. Points associated with prerequisites count towards the total (refer to units and prerequisites listing in Appendix 2).

Appropriate Group C elective units to the value of 16 points may be chosen from other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate III.

Registered Training Organisations must seek a determination from Manufacturing Skills Australia in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses.

Note that the elective units listed below include all of the units that are approved for selection from the MEM05 Training Package for use in this qualification. This meets the flexibility requirement that one sixth of the total units must be able to be selected from other qualifications in the same Training Package.

Core units of competency

- Select all units from this list.

Unit code	Unit title
MEM12023A	Perform engineering measurements
MEM12024A	Perform computations
MEM13014A	Apply principles of occupational health and safety in the work environment
MEM14004A	Plan to undertake a routine task
MEM14005A	Plan a complete activity
MEM15002A	Apply quality systems
MEM15024A	Apply quality procedures
MEM16006A	Organise and communicate information
MEM16007A	Work with others in a manufacturing, engineering or related environment
MEM16008A	Interact with computing technology
MEM17003A	Assist in the provision of on the job training
MSAENV272B	Participate in environmentally sustainable work practices

Elective units of competency

Group A – Composite fabrication units

- Select units from this list to the value of at least 12 points.

Unit code	Unit title	Points
MEM26001A	Lay up composites using open moulding techniques	6
MEM26002A	Lay up composites using vacuum closed moulding techniques	6
MEM26003A	Lay up composites using pressure closed moulding techniques	6

Group B - Composites trade specialisation units

- Select units from this list to the value of at least 28 points.

Unit code	Unit title	Points
MEM26004A	Make basic plugs for composites fabrication	3
MEM26005A	Make basic moulds for composites fabrication	3
MEM26006A	Mark and cut out sheets for composite use	4
MEM26007A	Select and use reinforcing appropriate for product	4
MEM26008A	Select and use resin systems appropriate for product	4
MEM26009A	Select and use cores and fillers appropriate for product	2
MEM26010A	Store and handle composite materials	2
MEM26011A	Determine materials and techniques for a composite component or product*	6
MEM26012A	Record and trial work processes for one-off composite products	4
MEM26013A	Select and use composite processes or systems appropriate for product	4
MEM26014A	Adjust resin chemicals for current conditions	4
MEM26015A	Select and apply repair techniques	6
MEM26016A	Select and use joining techniques	6
MEM26017A	Prepare composite or other substrate surfaces	4

Unit code	Unit title	Points
MEM26018A	Organise composite trials	4
MEM26019A	Finish a composite product	4
MEM26020A	Identify and interpret required standards for composites	2

Group C - specialisation units

- Select additional units from Group B or from the Certificate III Trade Specialisation units listed in Appendix I of this Training Package to bring the total value of units to at least 73 points, including any prerequisites.
- Appropriate specialisation units to the value of 16 points may be chosen from other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate III.

MEM40105 Certificate IV in Engineering

Modification History

Release 4 - Imported elective unit AURV225908A replaced by AURVTN2002. No change in outcomes.

Updated one unit of competency - MEM05006B to MEM05006C

Minor formatting corrected

Description

This qualification covers the skills and knowledge required for employment as a Higher Engineering Tradesperson or a Special Class Engineering Tradesperson (Mechanical) - Level II, Special Class Engineering Tradesperson (Fabrication) - Level II, Special Class Engineering Tradesperson (Electrical/Electronic) - Level II within the metal, engineering, manufacturing and associated industries or at equivalent levels in other industries where Engineering Tradespersons work.

The qualification has been specifically developed to be delivered to people who are existing engineering tradespersons or delivered to apprentices in an Engineering Trade who choose to study at a higher level during their apprenticeship. The qualification packaging has been developed on an assumption that competency will be developed through an integrated combination of on and off-the-job learning strategies such as those delivered through a formal apprenticeship. The qualification may also be achieved through formal skills recognition assessment processes.

Job roles/employment outcomes

The Certificate IV in Engineering specifies the competencies required for employment as a Higher Engineering Tradesperson or a Special Class Engineering Tradesperson - Level II in mechanical, electrical/electronic or fabrication trade disciplines. The job role involves application of additional skills in the learner's trade or cross skills from other trades. Job roles may include the design, assembly, manufacture, installation, modification, testing, fault finding, commissioning, maintenance and service of equipment and machinery, the fabrication of structures and assemblies, manufacture of sheet metal work, as well as use of relevant machinery, equipment and joining techniques. Machinery and equipment can include fluid power systems, stationary and mobile equipment, instruments, refrigeration, and the use of computer controlled machine tools.

Employment outcomes related to this qualification are found in a wide variety of manufacturing and engineering related sectors as well as Higher Engineering Tradesperson or a Special Class Engineering Tradesperson - Level II related roles in other industries.

Application

This qualification is designed to provide an industry recognised skills profile related to trade work as a Higher Engineering Tradesperson or a Special Class Engineering Tradesperson - Level II. Skills development would be undertaken through post-apprenticeship training or as part of an Australian Apprenticeship arrangement where the mix of on and off-the-job training would be specified in the Training Plan associated with the Contract of Training between the employer and apprentice.

Assessment of some units of competency must, where indicated, include evidence of the candidate's performance in a productive work environment where there is a sufficient range of appropriate tasks and materials to cover the scope of application of those units. All outcomes must reflect the standard of performance inherent in the job.

Occupational titles at the enterprise level covered by this qualification may vary and include special class engineering tradesperson - mechanical, fabrication or electrical/electronic, special class mechanical tradesperson, fitter and turner, fitter and machinist, maintenance fitter, diesel fitter, plant mechanic, 1st class machinist, special class metal fabrication tradesperson, boilermaker, sheet metal worker, welder, moulder, foundry tradesperson, patternmaker, or special class electrical fitter, electrical mechanic, electrical fitter/mechanic, electrician, refrigeration mechanic and radio tradesperson

Pathways Information

Pathways into the qualification

While there is no qualification entry requirement, it is assumed that the learner is either already a tradesperson with access to structured on and off-the-job training, or is an apprentice under an Australian Apprenticeship arrangement where the mix of on and off-the-job training would be specified in the Training Plan associated with the Contract of Training between the employer and apprentice.

This qualification may be accessed by direct entry. Credit for relevant units of competency achieved should be granted towards this qualification for those who have completed MEM30205 Certificate III in Engineering - Mechanical Trade, MEM30305 Certificate III in Engineering - Fabrication Trade, MEM30405 Certificate III in Engineering - Electrical/Electronic Trade, MEM30605 Certificate III in Jewellery Manufacture, MEM30705 Certificate III in Marine Craft Construction, MEM30805 Certificate III in Locksmithing, MEM31010 Certificate III in Watch and Clock Service and Repair, or other relevant qualifications.

Pathways from the qualification

Further training pathways from this qualification include MEM50105 Diploma of Engineering - Advanced Trade or other relevant qualifications.

Additional qualification advice

An additional descriptor may be added to this qualification title to illustrate a particular skills profile.

This could be achieved by adding a pathway descriptor or sentence below the formal title of the qualification. Note that no changes may be made to the qualification title and the use of one of these descriptors to a qualification does not change the qualification's formal title or unique national code.

There are no specific requirements associated with the use of these descriptors other than their use should reflect the nature of the choice of units of competency in the qualification and must be consistent with the work role of a Higher Engineering Tradesperson or a Special Class Engineering Tradesperson - Level II.

Reference to other occupational or functional pathways consistent with the role of a Higher Engineering Tradesperson or a Special Class Engineering Tradesperson - Level II may be included on any qualification statement that is issued.

Competitive Manufacturing qualifications are available for employees at this level who already possess trade and other technical skills and who require additional manufacturing practice skills above those available in this qualification.

Licensing considerations

If appropriate electives are undertaken as part of a contract of training recognised by licensing authorities, then this qualification can be used as the basis for an application in each state and territory for a license to practise as an electrician. It can also be used to satisfy regulations regarding refrigeration and air conditioning work. Local regulations should be checked for details.

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Read, interpret, follow and communicate information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents • Produce sketches, diagrams, charts or graphs • Check and clarify trade related information • Provide clear and precise information to others including trade team members, apprentices, production employees • Recognise and use common engineering terminology and symbols • Liaise with appropriate authorities
Teamwork	<ul style="list-style-type: none"> • Work alone or as part of a trade team • Contribute to a group effort in order to plan and carry out work • Identify work roles, communicate and cooperate with others
Problem-solving	<ul style="list-style-type: none"> • Undertake numerical operations, geometry and calculations/ formulae (including addition, subtraction, multiplication, division, fractions and decimals, percentages and proportions, simple ratios and averages) • Use advanced measuring techniques • Inspect quality of own or other employee's work • Assess operation and condition of equipment against specifications or manufacturer's requirements • Analyse information from drawings, production data, manuals and reports from other employees to improve equipment performance • Use diagnostic skills and tests to identify and determine causes of faults, including interpretation of in-built fault indicators and error codes • Develop, implement and evaluate solutions to problems • Translate designs into practical outcomes
Initiative and enterprise	<ul style="list-style-type: none"> • Be capable of applying the competency in new and different situations and contexts • Identify actual and foreseeable workplace hazards during course of work • Implement OHS risk management procedures • Modify work plan to overcome unforeseen difficulties or developments that occur as work progresses • Participate in improvement procedures including process, quality and internal/external customer/supplier relationships • Economise material and energy use and minimise waste

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Planning and organising	<ul style="list-style-type: none"> • Plan, prioritise and sequence maintenance and repair operations to ensure completion of activities within schedules and with minimal disruption to scheduled production • Plan allocation of work to others including apprentices, trades assistants to ensure efficiency and safety • Organise and analyse information relevant to work • Set up jobs prior to commencement of work including selection of appropriate tools, equipment and materials and adjustment of equipment
Self-management	<ul style="list-style-type: none"> • Carry out work safely and in accordance with company policy and procedures, manufacturer's recommendations, environmental and other legislative requirements • Monitor performance of own and other's work to ensure customer satisfaction, efficiency and sustainability • Take responsibility for own work outcomes • Apply techniques, procedures, tools and equipment for compliance with site or manufacturers' specifications.
Learning	<ul style="list-style-type: none"> • Check and clarify task related information with appropriate personnel or technical adviser • Identify internal or external customer requirements with respect to the work to be performed • Assess and modify own work practices • Use workshop and equipment manuals, online help, and other reference materials such as catalogues/lists as required • Maintain current knowledge of applicable standards, legislation, environmental and other codes of practice and product/process developments • Assist with on the job training and assessment
Technology	<ul style="list-style-type: none"> • Select, set up and use appropriate tools, equipment, materials and machines • Select and use appropriate measuring and testing devices to ensure compliance with tolerances and other specifications • Navigate technology to access /input /store/retrieve/save and produce information/data using appropriate software applications • Apply knowledge of appropriate engineering principles, techniques, procedures, diagnostic methods, tools and equipment to achieve the required outcome • Check equipment and instruments for accuracy • Improve efficiency of machines and equipment in order to minimise waste

Packaging Rules

The minimum requirements for achievement of the Certificate IV in Engineering are:

- completion of all core units of competency listed below, and
- completion of units from the Group A Specialisation electives listed below to the value of at least 12 points, and
- completion of Group B electives listed below to bring the total value to at least 109 points.

Points associated with prerequisites count towards the total (refer to units and prerequisites listing in Appendix 2, Volume 1).

Appropriate Group B elective units to the value of 22 points may be chosen from other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate IV. Note that the elective units listed below include all of the units that are approved for selection from the MEM Training Package for use in this qualification. This meets the NQC requirement that one sixth of the total units must be able to be selected from other qualifications in the same Training Package.

Registered Training Organisations must seek a determination from Manufacturing Skills Australia in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses.

Additional qualification descriptors

The following additional descriptors are approved for use with this qualification:

Refrigeration and Air Conditioning; Casting and Moulding; CNC programming; Fluid Power; Heavy Fabrication; Instrumentation; Maintenance; Marine Electronics; Mechatronics; Patternmaking; Robotics; Toolmaking; Welding, Watch and Clock Service and Repair.

Core Units

- select all of the units from this list

Unit code	Unit title
MEM12023A	Perform engineering measurements
MEM12024A	Perform computations
MEM13014A	Apply principles of occupational health and safety in the work environment
MEM14004A	Plan to undertake a routine task
MEM14005A	Plan a complete activity
MEM15024A	Apply quality procedures

Unit code	Unit title
MEM15002A	Apply quality systems
MEM16006A	Organise and communicate information
MEM16007A	Work with others in a manufacturing, engineering or related environment
MEM16008A	Interact with computing technology
MEM17003A	Assist in the provision of on the job training
MSAENV272B	Participate in environmentally sustainable work practices

Electives

Group A- Specialisation units

- select units from this list to a value of at least 12 points and up to a maximum of 109 points

Unit code	Unit title	P
MEM04020A	Supervise individual ferrous melting and casting operation	4
MEM04021A	Supervise individual non ferrous melting and casting operation	4
MEM04022A	Examine appropriateness of methoding for mould design	4
MEM04023A	Undertake prescribed tests on foundry related materials	4
MEM05024B	Perform welding supervision	12
MEM05025C	Perform welding/fabrication inspection	12
MEM05026C	Apply welding principles	4
MEM05042B	Perform welds to code standards using flux core arc welding process	6

Unit code	Unit title	P
MEM05043B	Perform welds to code standards using gas metal arc welding process	6
MEM05044B	Perform welds to code standards using gas tungsten arc welding process	6
MEM05045B	Perform pipe welds to code standards using manual metal arc welding process	6
MEM05046B	Perform welds to code standards using manual metal arc welding process	6
MEM05053A	Set and edit computer controlled thermal cutting machines	4
MEM05054A	Write basic NC/CNC programs for thermal cutting machines	4
MEM07016C	Set and edit computer controlled machines/processes	4
MEM07018C	Write basic NC/CNC programs	4
MEM07019C	Program NC/CNC machining centre	2
MEM07020C	Program multiple spindle and/or multiple axis NC/CNC machining centre	2
MEM07022C	Program CNC wire cut machines	2
MEM07023C	Program and set up CNC manufacturing cell	6

ICTTC137B	Install, maintain and modify customer premises communications cabling: ACA Open Rule	6
MEA405A	Repair/modify aircraft composite material structure/components	4
MEM03001B	Perform manual production assembly	4
MEM03002B	Perform precision assembly	4
MEM03003B	Perform sheet and plate assembly	4
MEM03004B	Perform electronic/electrical assembly (production)	8
MEM03005B	Rework and repair (electrical/electronic production)	8
MEM03006B	Set assembly stations	2
MEM04001B	Operate melting furnaces	4
MEM04002B	Perform gravity die casting	2
MEM04003B	Operate pressure die casting machine	4
MEM04004B	Prepare and mix sand for metal moulding	4
MEM04005C	Produce moulds and cores by hand (jobbing)	16

Unit code	Unit title	P
MEM04006B	Operate sand moulding and core making machines	8
MEM04007B	Pour molten metal	4
MEM04008B	Fettle and trim metal castings/forgings	4
MEM04010B	Develop and manufacture wood patterns	20
MEM04011B	Produce polymer patterns	8
MEM04012B	Assemble plated patterns	8
MEM04013B	Develop and manufacture polystyrene patterns	2
MEM04014B	Develop and manufacture production patterns	8
MEM04015B	Develop and manufacture vacuum forming moulds and associated equipment	6
MEM04016C	Develop and manufacture precision models	6
MEM04017B	Develop and manufacture gear, conveyor screw and propeller patterns	4
MEM04018B	Perform general woodworking machine operations	4
MEM04019B	Perform refractory installation and repair	4
MEM05001B	Perform manual soldering/desoldering - electrical/electronic components	4
MEM05002B	Perform high reliability soldering and desoldering	4
MEM05003B	Perform soft soldering	2

Unit code	Unit title	P
MEM05004C	Perform routine oxy acetylene welding	2
MEM05005B	Carry out mechanical cutting	2
MEM05006C	Perform brazing and/or silver soldering	2
MEM05007C	Perform manual heating and thermal cutting	2
MEM05008C	Perform advanced manual thermal cutting, gouging and shaping	2
MEM05009C	Perform automated thermal cutting	2
MEM05010C	Apply fabrication, forming and shaping techniques	8
MEM05011D	Assemble fabricated components	8
MEM05012C	Perform routine manual metal arc welding	2
MEM05013C	Perform manual production welding	2
MEM05014C	Monitor quality of production welding/fabrications	2
MEM05015D	Weld using manual metal arc welding process	4
MEM05016C	Perform advanced welding using manual metal arc welding process	4
MEM05017D	Weld using gas metal arc welding process	4
MEM05018C	Perform advanced welding using gas metal arc welding process	4
MEM05019D	Weld using gas tungsten arc welding process	4
MEM05020C	Perform advanced welding using	4

Unit code	Unit title	P
	gas tungsten arc welding process	
MEM05022C	Perform advanced welding using oxy acetylene welding process	6
MEM05023C	Weld using submerged arc welding process	4
MEM05036C	Repair/replace/modify fabrications	4
MEM05037C	Perform geometric development	6
MEM05038B	Perform advanced geometric development - cylindrical/rectangular	2
MEM05039B	Perform advanced geometric development - conical	2
MEM05040B	Perform advanced geometric development - transitions	4
MEM05041B	Weld using powder flame spraying	4
MEM05047B	Weld using flux core arc welding process	4
MEM05048B	Perform advanced welding using flux core arc welding process	4
MEM05049B	Perform routine gas tungsten arc welding	2
MEM05050B	Perform routine gas metal arc welding	2
MEM05051A	Select welding processes	2
MEM05052A	Apply safe welding practices	4
MEM06001B	Perform hand forging	4
MEM06002B	Perform hammer forging	4
MEM06003C	Carry out heat treatment	6
MEM06004B	Select heat treatment processes and	6

Unit code	Unit title	P
	test finished product	
MEM06005B	Perform drop and upset forging	4
MEM06006C	Repair springs	4
MEM06007B	Perform basic incidental heat/quenching, tempering and annealing	2
MEM06008A	Hammer forge complex shapes	4
MEM06009A	Hand forge complex shapes	4
MEM07001B	Perform operational maintenance of machines/equipment	2
MEM07002B	Perform precision shaping/planing/slotting operations	4
MEM07003B	Perform machine setting (routine)	4
MEM07004B	Perform machine setting (complex)	8
MEM07005C	Perform general machining	8
MEM07006C	Perform lathe operations	4
MEM07007C	Perform milling operations	4
MEM07008D	Perform grinding operations	4
MEM07009B	Perform precision jig boring operations	4
MEM07010B	Perform tool and cutter grinding operations	4
MEM07011B	Perform complex milling operations	4
MEM07012B	Perform complex grinding operations	4
MEM07013B	Perform machining operations using horizontal and/or vertical boring machines	4

Unit code	Unit title	P
MEM07014B	Perform electro-discharge (EDM) machining operations	4
MEM07015B	Set computer controlled machines/processes	2
MEM07021B	Perform complex lathe operations	4
MEM07024B	Operate and monitor machine/process	4
MEM07025B	Perform advanced machine/process operation	
MEM07026B	Perform advanced plastic processing	6
MEM07027B	Perform advanced press operations	6
MEM07028B	Operate computer controlled machines/processes	2
MEM07029B	Perform routine sharpening/maintenance of production tools and cutters	4
MEM07030C	Perform metal spinning lathe operations (basic)	8
MEM07031C	Perform metal spinning lathe operations (complex)	4
MEM07032B	Use workshop machines for basic operations	2
MEM07033B	Operate and monitor basic boiler	6
MEM07034A	Operate and monitor intermediate class boiler	4
MEM07040A	Set multistage integrated processes	6
MEM08001B	Perform wire, jig and barrel load/unload work	4
MEM08002C	Pre-treat work for subsequent surface coating	4

Unit code	Unit title	P
MEM08003C	Perform electroplating operations	6
MEM08004B	Finish work using wet, dry and vapour deposition methods	4
MEM08005B	Prepare and produce specialised coatings	4
MEM08006B	Produce clear and/or coloured and/or sealed anodised films on aluminium	2
MEM08007B	Control surface finish production and finished product quality	4
MEM08008B	Operate and control surface finishing waste treatment process	3
MEM08009C	Make up solutions	2
MEM08010B	Manually finish/polish materials	6
MEM08011B	Prepare surfaces using solvents and/or mechanical means	2
MEM08012B	Prepare surfaces by abrasive blasting (basic)	4
MEM08013B	Prepare surfaces by abrasive blasting (advanced)	4
MEM08014B	Apply protective coatings (basic)	4
MEM08015B	Apply protective coatings (advanced)	4
MEM08016B	Control blast coating by-products, materials and emissions	1
MEM08018B	Electroplate engineering coatings	6
MEM08019B	Electroplate protective finishes	6
MEM08020B	Electroplate decorative finishes	6
MEM09002B	Interpret technical drawing	4

Unit code	Unit title	P
MEM09003B	Prepare basic engineering drawing	8
MEM09005B	Perform basic engineering detail drafting	8
MEM09011B	Apply basic engineering design concepts	6
MEM09021B	Interpret and produce curved 3-dimensional shapes	4
MEM09022A	Create 2D code files using computer aided manufacturing system	4
MEM10001C	Erect structures	4
MEM10002B	Terminate and connect electrical wiring	3
MEM10003B	Install and test electrical wiring and circuits up to 1000 volts a.c. and 1500 volts d.c.	12
MEM10004B	Enter and change programmable controller operational parameters	2
MEM10005B	Commission programmable controller programs	4
MEM10006B	Install machine/plant	4
MEM10009B	Install refrigeration and air conditioning plant and equipment	4
MEM10010B	Install pipework and pipework assemblies	4
MEM10011B	Terminate and connect specialist cables	3
MEM10013A	Install split air conditioning systems and associated pipework	6
MEM11001C	Erect/dismantle scaffolding and equipment	4

Unit code	Unit title	P
MEM11002C	Erect/dismantle complex scaffolding and equipment	4
MEM11003B	Coordinate erection/dismantling of complex scaffolding/equipment	4
MEM11004B	Undertake dogging	4
MEM11005B	Pick and process order	4
MEM11006B	Perform production packaging	2
MEM11007B	Administer inventory procedures	4
MEM11008B	Package materials (stores and warehouse)	2
MEM11009B	Handle/move bulk fluids/gases	4
MEM11010B	Operate mobile load shifting equipment	4
MEM11011B	Undertake manual handling	2
MEM11012B	Purchase materials	6
MEM11013B	Undertake warehouse receipt process	4
MEM11014B	Undertake warehouse dispatch process	4
MEM11015B	Manage warehouse inventory system	6
MEM11016B	Order materials	2
MEM11017B	Organise and lead stocktakes	4
MEM11018B	Organise and maintain warehouse stock receipt and/or dispatch system	6
MEM11019B	Undertake tool store procedures	4
MEM11020B	Perform advanced warehouse computer operations	4

Unit code	Unit title	P
MEM11021B	Perform advanced operation of load shifting equipment	2
MEM11022B	Operate fixed/moveable load shifting equipment	4
MEM12001B	Use comparison and basic measuring devices	2
MEM12002B	Perform electrical/electronic measurement	2
MEM12006C	Mark off/out (general engineering)	4
MEM12007D	Mark off/out structural fabrications and shapes	4
MEM12019B	Measure components using coordinate measuring machine	4
MEM12020B	Set and operate coordinate measuring machine	2
MEM12021B	Program coordinate measuring machine	4
MEM12022B	Program coordinate measuring machine (advanced)	2
MEM13001B	Perform emergency first aid	1
MEM13002B	Undertake occupational health and safety activities in the workplace	3
MEM13003B	Work safely with industrial chemicals and materials	2
MEM13004B	Work safely with molten metals/glass	2
MEM13006B	Collect and evaluate occupational health and safety data for an enterprise or section of an enterprise	4
MEM13007B	Maintain water treatment systems	2

Unit code	Unit title	P
	for cooling towers	
MEM13010A	Supervise occupational health and safety in an industrial work environment.	4
MEM13013B	Work safely with ionizing radiation	4
MEM15001B	Perform basic statistical quality control	2
MEM15003B	Use improvement processes in team activities	4
MEM15004B	Perform inspection	2
MEM15005B	Select and control inspection processes and procedures	4
MEM16002C	Conduct formal interviews and negotiations	4
MEM16004B	Perform internal/external customer service	2
MEM16005A	Operate as a team member to conduct manufacturing, engineering or related activities	2
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM18003C	Use tools for precision work	4
MEM18004B	Maintain and overhaul mechanical equipment	4
MEM18005B	Perform fault diagnosis, installation and removal of bearings	4
MEM18006C	Repair and fit engineering components	6
MEM18007B	Maintain and repair mechanical drives and mechanical transmission	4

Unit code	Unit title	P
	assemblies	
MEM18008B	Balance equipment	2
MEM18009B	Perform levelling and alignment of machines and engineering components	4
MEM18012B	Perform installation and removal of mechanical seals	2
MEM18013B	Perform gland packing	2
MEM18014B	Manufacture press tools and gauges	8
MEM18015B	Maintain tools and dies	4
MEM18018C	Maintain pneumatic system components	4
MEM18020B	Maintain hydraulic system components	4
MEM18024B	Maintain engine cooling systems	2
MEM18025B	Service combustion engines	2
MEM18026C	Test compression ignition fuel systems	4
MEM18027C	Overhaul engine fuel system components	8
MEM18028B	Maintain engine lubrication systems	2
MEM18029B	Tune diesel engines	4
MEM18030B	Diagnose and rectify low voltage electrical systems	8
MEM18031B	Diagnose and rectify low voltage starting systems	2
MEM18032B	Maintain induction/exhaust systems	4
MEM18033B	Perform engine bottom-end	4

Unit code	Unit title	P
	overhaul	
MEM18034B	Perform engine top-end overhaul	8
MEM18035B	Diagnose and rectify braking systems	6
MEM18037B	Diagnose and rectify low voltage charging systems	2
MEM18038B	Maintain wheels and tyres	2
MEM18039B	Diagnose and rectify track type undercarriage	4
MEM18040B	Maintain suspension systems	4
MEM18041B	Maintain steering systems	4
MEM18042C	Diagnose and rectify manual transmissions	4
MEM18043C	Diagnose and rectify automatic transmissions	8
MEM18044C	Diagnose and rectify drive line and final drives	4
MEM18045B	Fault find/repair electrical equipment/components up to 250 volts single phase supply	4
MEM18046B	Fault find/repair electrical equipment/components up to 1000 volts a.c./1500 volts d.c.	10
MEM18047B	Diagnose and maintain electronic controlling systems on mobile plant	4
MEM18048B	Fault find and repair/rectify basic electrical circuits	12
MEM18052B	Maintain fluid power systems for mobile plant	4
MEM18055B	Dismantle, replace and assemble engineering components	3

Unit code	Unit title	P
MEM18057B	Maintain/service analog/digital electronic equipment	6
MEM18063B	Terminate signal and data cables	4
MEM18064B	Maintain instrumentation system components	6
MEM18071B	Connect/disconnect fluid conveying system components	2
MEM18072B	Manufacture fluid conveying conductor assemblies	4
MEM18084A	Commission and decommission split air conditioning systems	4
MEM18085A	Install, service and repair domestic air conditioning and refrigeration appliances	6
MEM18086B	Test, recover, evacuate and charge refrigeration systems	4
MEM18087B	Service and repair domestic and light commercial refrigeration and air conditioning equipment	6
MEM18088B	Maintain and repair commercial air conditioning systems and components	4
MEM18089B	Maintain and repair central air handling systems	6
MEM18090B	Maintain and repair industrial refrigeration systems and components	6
MEM18094B	Service and repair commercial refrigeration	6
MEM18095A	Maintain and repair cooling towers/evaporative condensers and associated equipment	4

Unit code	Unit title	P
MEM18096A	Maintain, repair/replace and adjust refrigerant flow controls and associated equipment	6
MEM18097A	Manufacture cavity dies	8
MEM19001B	Perform jewellery metal casting	6
MEM19002B	Prepare jewellery illustrations	4
MEM19003B	Handle gem materials	2
MEM19004B	Handle and examine gemstone materials	6
MEM19005B	Produce three-dimensional precision items	8
MEM19006B	Replace watch batteries	1
MEM19007B	Perform gemstone setting	6
MEM19009B	Perform investment procedures for lost wax casting process	1
MEM19010B	Produce rubber moulds for lost wax casting process	2
MEM19011B	Perform wax injection of moulds for lost wax casting process	2
MEM19012B	Produce jewellery wax model	4
MEM19014B	Perform hand engraving	4
MEM19015B	Perform jewellery enamelling	4
MEM19016B	Construct jewellery components	4
MEM19017B	Fabricate jewellery items	6
MEM19020B	Fault-find and maintain micro-mechanisms	4
MEM19021B	Diagnose and service micro-mechanisms	6

Unit code	Unit title	P
MEM20001A	Produce keys	4
MEM20002A	Assemble and test lock mechanisms	6
MEM20003A	Install and upgrade locks and hardware	4
MEM20004A	Gain entry	4
MEM20005A	Install and maintain door control devices/systems	2
MEM20006A	Maintain and service mechanical locking devices	6
MEM20007A	Plan and prepare a masterkey system	4
MEM20009A	Gain entry and reinstate fire and security containers	4
MEM20010A	Gain entry and reinstate automotive locking systems	4
MEM20014A	Perform a site security survey	2
MEM21001A	Replace watch batteries, capacitors and bands	2
MEM21002A	Perform watch movement exchange *	2
MEM21003A	Perform watch case servicing, repair and refurbishment *	4
MEM21004A	Clean watch and clock components	2
MEM21005A	Diagnose faults in quartz watches *	2
MEM21006A	Service quartz watches *	4
MEM21007A	Service complex quartz watches	4
MEM21008A	Service mechanical watches	4
MEM21009A	Inspect, diagnose, adjust and repair mechanical watches	4

Unit code	Unit title	P
MEM21010A	Service watch power generating systems	2
MEM21011A	Service calendar and other dial indication mechanisms for watches	4
MEM21012A	Service and repair mechanical watch oscillating systems	4
MEM21013A	Service, test and adjust watch escapements	4
MEM21014A	Service mechanical chronograph watches	6
MEM21015A	Perform precision watch timing and adjustment	6
MEM21016A	Install and set up clocks	2
MEM21017A	Service and repair clock timepieces	6
MEM24001B	Perform basic penetrant testing	2
MEM24003B	Perform basic magnetic particle testing	2
MEM24005B	Perform basic eddy current testing	2
MEM24007B	Perform ultrasonic thickness testing	2
MEM24009B	Perform basic radiographic testing	2
MEM25001B	Apply fibre-reinforced materials	2
MEM25002B	Form and integrate fibre-reinforced structures	4
MEM25003B	Set up marine vessel structures	4
MEM25004B	Fair and shape surfaces	2
MEM25005B	Construct and assemble marine vessel timber components	8
MEM25006B	Undertake marine sheathing operations	2

Unit code	Unit title	P
MEM25007B	Maintain marine vessel surfaces	4
MEM25009B	Form timber shapes using hot processes	2
MEM25010B	Perform fitout procedures	4
MEM25011B	Install marine systems	8
MEM25012B	Install and test operations of marine auxiliary systems	6
MEM25014B	Perform marine slipping operations	2
MEM25015A	Assemble and install equipment and accessories/ancillaries	2
MEM50002B	Work safely on marine craft	1
MEM50003B	Follow work procedures to maintain the marine environment	1
MEM50004B	Maintain quality of environment by following marina codes	1
MEM50009B	Safely operate a mechanically powered recreational boat	2
MSAENV472B	Implement and monitor environmentally sustainable work practices	4
PMBPROD291B	Operate resin infusion moulding equipment	2
PMBPROD294B	Operate resin transfer moulding equipment	2
PMBPROD298B	Operate equipment using pre-pregs material	2
PMBPROD391B	Produce composites using resin infusion	4
PMBPROD394B	Produce composites using resin transfer moulding	4

Unit code	Unit title	P
PMBPROD398B	Produce composites using pre-pregs	4
PRSTS202A	Install security equipment/system	4
PRSTS302A	Program security equipment/system	2
PRSTS303A	Test installed security equipment/system	2
PRSTS304A	Commission/decommission security equipment/system	2
PRSTS305A	Identify and diagnose electronic security equipment/ system fault	2
PRSTS307A	Maintain and service security equipment/system	4
PRSTS317A	Provide estimate and quote	4
PRSTS319A	Modify and repair security equipment/system	4
TLILIC0012A	Licence to operate a vehicle loading crane (capacity 10 metre tonnes and above)	1
TLILIC2001A	Licence to operate a forklift truck	0

The minimum requirements for this qualification can also be met by holders of one of the following qualifications or equivalent with the completion of additional units of competency drawn from Specialisation units Group A to a minimum value of 12 points and Specialisation units from Group B to bring the total value of additional units to at least 36 points (note that additional units are those units not included in the Certificate III qualification already held):

- MEM30105 Certificate III in Engineering - Production Systems
- MEM30205 Certificate III in Engineering - Mechanical Trade
- MEM30305 Certificate III in Engineering - Fabrication Trade
- MEM30405 Certificate III in Engineering - Electrical/Electronic Trade
- MEM30605 Certificate III in Jewellery Manufacture
- MEM30705 Certificate III in Marine Craft Construction
- MEM30805 Certificate III in Locksmithing
- MEM31010 Certificate III in Watch and Clock Service and Repair
- AUR30505 Certificate III in Marine
-

MEM40205 Certificate IV in Boating Services

Modification History

Release 2 - Title corrected for unit MEM05003B Perform soft soldering

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Read, interpret, follow and communicate information on written job instructions, specifications, standard operating procedures, charts and maps, lists, drawings and other applicable reference documents • Produce sketches, diagrams, charts or graphs • Check and clarify boating related information • Provide clear and precise information to others including team members, customers and service personnel • Recognise and use common marine terminology and symbols • Liaise with appropriate authorities
Teamwork	<ul style="list-style-type: none"> • Work alone or lead or work as part of a team • Contribute to a group effort in order to plan and carry out work • Identify work roles, communicate and cooperate with others
Problem-solving	<ul style="list-style-type: none"> • Undertake numerical operations, calculations/ formulae (including addition, subtraction, multiplication, division, fractions and decimals, percentages and proportions, simple ratios and averages) • Use measuring techniques • Inspect quality of own or other employee's work • Assess operation and condition of equipment against specifications or manufacturer's requirements • Analyse information from drawings, charts and maps, manuals and reports from other employees to improve service to customers • Develop, implement and evaluate solutions to problems
Initiative and enterprise	<ul style="list-style-type: none"> • Be capable of applying skills in new and different situations and contexts • Identify actual and foreseeable workplace hazards during course of work • Implement OHS risk management procedures • Modify work plan to overcome unforeseen difficulties or developments that occur as work progresses • Participate in improvement procedures including activities to improve services, work processes, environmental impacts, quality and internal/external customer/supplier relationships • Economise material and energy use and minimise waste
Planning and organising	<ul style="list-style-type: none"> • Plan, prioritise and sequence maintenance and repair operations to ensure completion of activities within schedules and with minimal disruption to scheduled production • Plan allocation of work to others including apprentices, trades

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	<p>assistants to ensure efficiency and safety</p> <ul style="list-style-type: none"> • Organise and analyse information relevant to work • Set up jobs prior to commencement of work including selection of appropriate tools, equipment and materials and adjustment of equipment
Self-management	<ul style="list-style-type: none"> • Carry out work safely and in accordance with company policy and procedures, manufacturer's recommendations, environmental and other legislative requirements • Monitor performance of own and other's work to ensure customer satisfaction, efficiency and sustainability • Take responsibility for own work outcomes • Apply techniques, procedures, tools and equipment for compliance with site or manufacturers' specifications.
Learning	<ul style="list-style-type: none"> • Check and clarify task related information with appropriate personnel or technical adviser • Identify internal or external customer requirements with respect to the work to be performed • Assess and modify own work practices • Use workshop and equipment manuals, online help, and other reference materials such as catalogues/lists as required • Maintain current knowledge of applicable standards, legislation, environmental and other codes of practice and product/process developments • Assist with on the job training and assessment
Technology	<ul style="list-style-type: none"> • Select, set up and use appropriate tools, equipment, materials and machines • Select and use appropriate measuring and testing devices to ensure compliance with specifications • Navigate technology to access , input, store, retrieve, save and produce information using appropriate software applications • Apply knowledge of appropriate engineering principles, techniques, procedures, diagnostic methods, tools and equipment to achieve the required outcome • Check equipment and instruments for faults and performance to specification • Improve efficiency of machines and equipment in order to minimise waste

Packaging Rules

The minimum requirements for achievement of the Certificate IV in Boating Services are:

- completion of ten (10) core units of competency listed below, and
- completion of nineteen (19) elective units from Groups A, B and C as described below to bring the total number of units to twenty nine (29).

Note that when selecting elective units any prerequisite units must also be completed and count towards the required number of elective units (refer to units for details).

Up to five appropriate elective units of competency may be chosen from other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate IV. Note that the elective units listed below include all of the units that are approved for selection from the MEM05 Training Package for use in this qualification. This meets the NSSC requirement that one sixth of the total units must be able to be selected from other qualifications in the same Training Package.

Only select units that would be suitable for occupational outcomes in a marine environment.

Additional qualification descriptors

There are no approved additional descriptors for this qualification.

Core Units

- select all of the units from this list

Unit code	Unit title
MEM13014A	Apply principles of occupational health and safety in the work environment
MEM14004A	Plan to undertake a routine task
MEM15024A	Apply quality procedures
MEM16006A	Organise and communicate information
MEM16007A	Work with others in a manufacturing, engineering or related environment
MEM50001B	Classify recreational boating technologies and features
MEM50002B	Work safely on marine craft
MEM50003B	Follow work procedures to maintain the marine environment
MEM50004B	Maintain quality of environment by following marina codes
MSAENV272B	Participate in environmentally sustainable work practices

Elective units

Group A

- select at least one unit from this list

Unit code	Unit title
MEM50005B	Refuel vessels
MEM50006B	Check operational capability of marine craft
MEM50007B	Check operational capability of sails and sail operating equipment
MEM50008B	Carry out trip preparation and planning
MEM50009B	Safely operate a mechanically powered recreational boat
MEM50010B	Respond to boating emergencies and incidents

Group B

- select at least five units from this list

Unit code	Unit title
BSBCMN408A	Report on financial activity
BSBRKG301A	Control records
BSALF401A	Maintain trust accounts
BSBADM402A	Produce complex business documents
BSBCMN406A	Maintain business technology
BSBADM408A	Prepare financial reports
Any units from BSB40807 Certificate IV in Frontline Management may be selected. These units are not listed in this Volume. Please refer to the relevant host training package.	
Any units from TAE40110 Certificate IV in Training and Assessment. These units are not listed in this Volume. Please refer to the relevant host training package.	

Group C

- select the balance of units from this list.

Unit code	Unit title
MEM04018B	Perform general woodworking machine operations
MEM05003B	Perform soft soldering
MEM05005B	Carry out mechanical cutting
MEM05007C	Perform manual heating and thermal cutting
MEM05012C	Perform routine manual metal arc welding
MEM05050B	Perform routine gas metal arc welding
MEM09002B	Interpret technical drawing
MEM11010B	Operate mobile load shifting equipment
MEM11011B	Undertake manual handling
MEM12023A	Perform engineering measurements
MEM12006C	Mark off/out (general engineering)
MEM12007D	Mark off/out structural fabrications and shapes
MEM13003B	Work safely with industrial chemicals and materials
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEM25001B	Apply fibre-reinforced materials
MEM25004B	Fair and shape surfaces
MEM25007B	Maintain marine vessel surfaces
MEM50005B	Refuel vessels
MEM50006B	Check operational capability of marine craft
MEM50007B	Check operational capability of sails and sail operating equipment

Unit code	Unit title
MEM50008B	Carry out trip preparation and planning
MEM50009B	Safely operate a mechanically powered recreational boat
MEM50010B	Respond to boating emergencies and incidents
MSAENV472B	Implement and monitor environmentally sustainable work practices

The minimum requirements for this qualification can also be met by holders of one of the following qualifications or equivalent subject to the completion of at least one additional Core unit of competency and seven additional Group A and Group B elective units of competency as specified below (note that additional units are those units not included in the Certificate III qualification already held):

- MEM30705 Certificate III in Marine Craft Construction
- MEM30905 Certificate III in Boating Services
- AUR30505 Certificate III in Marine
- LMT30407 Certificate III in Textile Fabrication

Core Units

- select this unit

Unit code	Unit title
MEM50001B	Classify recreational boating technologies and features

Elective units

Group A

- select one unit from this list

Unit code	Unit title
MEM50002B	Work safely on marine craft
MEM50003B	Follow work procedures to maintain the marine environment
MEM50004B	Maintain quality of environment by following marina codes

Unit code	Unit title
MEM50005B	Refuel vessels
MEM50006B	Check operational capability of marine craft
MEM50007B	Check operational capability of sails and sail operating equipment
MEM50008B	Carry out trip preparation and planning
MEM50009B	Safely operate a mechanically powered recreational boat
MEM50010B	Respond to boating emergencies and incidents

Group B

- select six units from this list.

Unit code	Unit title
BSBCMN408A	Report on financial activity
BSBRKG301A	Control records
BSALF401A	Maintain trust accounts
BSBADM402A	Produce complex business documents
BSBCMN406A	Maintain business technology
BSBADM408A	Prepare financial reports
Any units from BSB40807 Certificate IV in Frontline Management. These units are not listed in this Volume. Please refer to the relevant host training package.	
Any units from TAE40110 Certificate IV in Training and Assessment. These units are not listed in this Volume. Please refer to the relevant host training package.	

MEM40311 Certificate IV in Advanced Jewellery Manufacture

Modification History

Release 2 - Imported elective unit BSBSMB405A replaced by BSBSMB405B. No change in outcomes.

Release 1 - New qualification

Description

This qualification has been specifically developed to be delivered to people who are existing jewellery tradespersons or apprentices in a jewellery-related trade who choose to study at a higher level during their apprenticeship. The qualification packaging has been developed on an assumption that competency will be developed through a combination of on and off the job learning strategies. The qualification may also be achieved through formal skills recognition processes.

Job roles/employment outcomes

The MEM40311 Certificate IV in Advanced Jewellery Manufacture specifies the competencies required for employment as a Higher Engineering Tradesperson or a Special Class Engineering Tradesperson – Level II in jewellery-related disciplines, Jeweller Tradesperson Special Class, or related classification depending on the Award or Agreement.

The job role involves application of additional skills in the jewellery trade including, gem setting, engraving or jewellery manufacturing skills. Employment outcomes related to this qualification are found in jewellery manufacturing and retail and wholesale jewellery enterprises.

Application

This qualification is typically used to develop skill and knowledge in the application of specialised jewellery manufacturing trade and related skills within jewellery-related enterprises.

Pathways Information

Pathways into the qualification

This qualification may be accessed by direct entry. Credit for relevant units of competency should be granted towards this qualification for those who have completed MEM30605 Certificate III in Jewellery Manufacture, other relevant qualifications or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification include design orientated training in the Diploma and Advanced Diploma in Jewellery and Object Design or management qualifications.

Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements in some environments. Local regulations should be checked for details.

Entry Requirements

Not applicable.

Employability Skills Summary

Certificate IV in Advanced Jewellery Manufacturing

The following table contains a summary of the Employability Skills as identified by the jewellery industry for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that reflect skill requirements for this level.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Establish and maintain effective relationships with industry representatives and clients • Interpret industry standards, regulations and policies • Undertake client discussion to determine work requirements and job specifications • Consult with supply chain personnel to determine resource supply capabilities • Calculate job costs • Negotiate with client to establish costing and job timeframes • Sketch designs • Accurately record and interpret detailed work specifications • Complete detailed and accurate documentation and maintain records
Teamwork	<ul style="list-style-type: none"> • Establish and maintain cooperative and consultative relationships with clients or colleagues • Work with others in the supply chain • Provide information and feedback to others to maintain production quality • Participate in sustainability improvements
Problem-solving	<ul style="list-style-type: none"> • Examine risks and implement and maintain risk control measures for materials and equipment • Identify and report environmental features, regulations, insurance requirements, legal requirements and other factors which may affect the product or service to be provided • Determine and implement corrective measures for production problems and faults • Undertake maintenance of machinery and equipment • Determine work requirements and modifications • Assess quality of materials before using in work items • Produce cost-effective specifications in line with client expectations

	<ul style="list-style-type: none"> • Determine specific construction techniques to be used • Respond effectively to supply chain issues related to supply of resources • Investigate environmental performance and identify potential areas for improvement
Initiative and enterprise	<ul style="list-style-type: none"> • Develop continuous improvement of processes • Determine necessary adjustment to production techniques in line with specifications • Anticipate and address design and production issues • Investigate and apply new tools and strategies to improve resource use
Planning and organising	<ul style="list-style-type: none"> • Undertake effective planning of own work to achieve desired outcomes within agreed timeframes • Undertake ordering of resources and materials to ensure work flows are met • Monitor quality processes and analyse outcomes • Determine and implement contingency plans to respond to incidents and problems • Monitor and maintain equipment condition and performance
Self-management	<ul style="list-style-type: none"> • Manage own work plans and priorities • Manage client and industry relationships and contracts • Manage data flows and record keeping • Maintain housekeeping of workplace • Monitor and maintain own work against quality standards • Apply safety procedures, including the use of protective equipment • Monitor use of resources
Learning	<ul style="list-style-type: none"> • Assess own skill requirements and seek further development, if required • Develop or adjust own processes based on prior experience • Maintain currency of learning with regards to trends, jewellery design features and production techniques • Experiment with production techniques
Technology	<ul style="list-style-type: none"> • Monitor and maintain machine operation • Use machinery and equipment effectively, efficiently and safely • Use specialised computing equipment and software

Packaging Rules

The minimum requirements for achievement of the MEM40311 Certificate IV in Advanced

Jewellery Manufacture are:

- completion of all twelve (12) core units of competency listed below, and
- completion of elective units as described below from Groups A and B, to bring the total value to at least 109 points.

Elective units are to be chosen as follows:

- completion of Group A electives to the value of at least 12 points
- completion of Group B electives to bring the total value of elective units to 109 points.

Appropriate elective units to the value of 22 points may be chosen from other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate IV. Note that the elective units listed below include all of the units that are approved for selection from the MEM05 Training Package for use in this qualification. This meets the NQC requirement that one sixth of the total units must be able to be selected from other qualifications in the same Training Package.

Registered Training Organisations must seek a determination from Manufacturing Skills Australia in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses.

Units with prerequisites are marked with an asterisk. Note that when selecting elective units any prerequisite units must also be completed. Points associated with prerequisites count towards the total (refer to units and prerequisites listing in Appendix 2).

Core units of competency

Complete all twelve (12) units of competency from this list.

Unit code	Unit title
MEM12023A	Perform engineering measurements
MEM12024A	Perform computations
MEM13014A	Apply principles of occupational health and safety in the work environment
MEM14004A	Plan to undertake a routine task
MEM14005A	Plan a complete activity
MEM15002A	Apply quality systems
MEM15024A	Apply quality procedures
MEM16006A	Organise and communicate information
MEM16007A	Work with others in a manufacturing, engineering or related environment
MEM16008A	Interact with computing technology
MEM17003A	Assist in the provision of on the job training
MSAENV272B	Participate in environmentally sustainable work practices

Elective units of competency

Group A - Advanced Jewellery Specialisation units

Select units from this list to the value of at least 12 points and up to a maximum of 109 points.

Unit code	Unit title	Points
MEM19023A	Apply drawing and rendering techniques to jewellery or object design	4
MEM19024A	Use CAD to create and display 3D jewellery and object models	4
MEM19025A	Create and present designs for jewellery and other 3D objects	4
MEM19026A	Investigate quality and application of jewellery materials	2
MEM19028A	Select materials and new technologies for jewellery and 3D object design applications	2
MEM19031A	Produce renderings and technical drawings for jewellery and object design construction	2
MEM19033A	Create silversmithing objects	4
MEM19034A	Apply chain manufacture process	2
MEM19035A	Plan and apply casting techniques for jewellery and object designs	4
MEM19037A	Plan and implement chenier fabrication process	2
MEM19038A	Apply traditional techniques to jewellery and 3D object production	4
MEM19044A	Repair and restore antique jewellery	4
MEM19045A	Set gems in channel style settings	4
MEM19046A	Apply grain setting techniques	4
MEM19047A	Set gems in claw and bezel style settings	4
MEM19048A	Develop and apply complex borders and decorations for hand engraving	4
MEM19049A	Develop and apply heraldic designs for hand engraving	2
MEM19050A	Hand carve engraving work	4
MEM19051A	Construct multiple stone settings*	4
MEM19052A	Produce complex objects using silversmithing	4

	techniques*	
MEM19053A	Create complex findings and mechanisms for jewellery items*	4
MEM19054A	Fabricate platinum jewellery items	4

Group B - Jewellery Manufacture stream units

Select units from this group to bring the total value of Group A and B units to 109 points, including any prerequisites.

Unit code	Unit title	Points
MEM03001B	Perform manual production assembly	4
MEM03002B	Perform precision assembly*	4
MEM03003B	Perform sheet and plate assembly*	4
MEM03004B	Perform electronic/electrical assembly (production)	8
MEM03006B	Set assembly stations*	2
MEM05006C	Perform brazing and/or silver soldering	2
MEM06007B	Perform basic incidental heat/quenching, tempering and annealing	2
MEM07001B	Perform operational maintenance of machines/equipment*	2
MEM07005C	Perform general machining	8
MEM07024B	Operate and monitor machine/process	4
MEM07032B	Use workshop machines for basic operations*	2
MEM07040A	Set multistage integrated processes*	6
MEM08001B	Perform wire, jig and barrel load/unload work	4
MEM08002C	Pre-treat work for subsequent surface coating*	4
MEM08003C	Perform electroplating operations*	6
MEM08010B	Manually finish/polish materials*	6
MEM08011B	Prepare surfaces using solvents and/or mechanical means*	2
MEM09002B	Interpret technical drawing	4
MEM13001B	Perform emergency first aid	1
MEM13002B	Undertake occupational health and safety activities in the workplace	3
MEM13003B	Work safely with industrial chemicals and materials	2
MEM13004B	Work safely with molten metals/glass	2

MEM13010A	Supervise occupational health and safety in an industrial work environment*	4
MEM15003B	Use improvement processes in team activities*	4
MEM15004B	Perform inspection	2
MEM15015B	Examine trading practices*	5
MEM16002C	Conduct formal interviews and negotiations	4
MEM16004B	Perform internal/external customer service	2
MEM16005A	Operate as a team member to conduct manufacturing, engineering or related activities	2
MEM16011A	Communicate with individuals and small groups*	2
MEM16013A	Operate in a self-directed team*	2
MEM17001B	Assist in development and deliver training in the workplace	2
MEM17002B	Conduct workplace assessment	2
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM18003C	Use tools for precision work*	4
MEM18055B	Dismantle, replace and assemble engineering components*	3
MEM19001B	Perform jewellery metal casting*	6
MEM19002B	Prepare jewellery illustrations*	4
MEM19003B	Handle gem materials	2
MEM19004B	Handle and examine gemstone materials*	6
MEM19005B	Produce three-dimensional precision items*	8
MEM19006B	Replace watch batteries*	1
MEM19007B	Perform gemstone setting*	6
MEM19008B	Prepare jewellery designs*	6

MEM19009B	Perform investment procedures for lost wax casting process*	1
MEM19010B	Produce rubber moulds for lost wax casting process	2
MEM19011B	Perform wax injection of moulds for lost wax casting process	2
MEM19012B	Produce jewellery wax model	4
MEM19013B	Produce jewellery metal masters*	4
MEM19014B	Perform hand engraving*	4
MEM19015B	Perform jewellery enamelling*	4
MEM19016B	Construct jewellery components*	4
MEM19017B	Fabricate jewellery items*	6
MEM19018B	Repair jewellery items*	6
MEM19020B	Fault-find and maintain micro-mechanisms*	4
MEM19021B	Diagnose and service micro-mechanisms*	6
MEM19022B	Perform precision micro-mechanism diagnosis and servicing	6
MEM30012A	Apply mathematical techniques in a manufacturing, engineering or related environment	4
BSBSMB403A	Market the small business	4
BSBSMB405B	Monitor and manage business operations	4
BSBSMB406A	Manage small business finances	4

MEM40412 Certificate IV in Engineering Drafting

Modification History

Release 3 - Imported elective unit UEPMNT419A replaced by UEPMNT419B - no change in outcomes.

Release 2 - Competitive manufacturing (MSACM) units replaced by Competitive Systems and Practices units.

Release 1 - New qualification

Description

This qualification covers the skills and knowledge required for a detail draftsman producing specialist engineering drawings within an engineering or manufacturing work environment.

Application

The qualification has been developed with manufacturing and engineering-related industry sectors as a focus and may be packaged to meet the specific needs of drafting in mechanical and machine construction and maintenance, steel fabrication, other fabrication services and assembly, mechanical services, electrical services, fluid power, piping assembly, and so on. Application of this qualification involves producing detail drawings according to engineering design intent and required Australian Standards (AS). Skills required include use of computer-aided design (CAD) software functions and ability to apply industry and discipline specific knowledge to produce models, drawings and schematics for specialised engineering-related areas of industry. Skills required include knowledge of engineering principles for the specialised area as well as mathematics together with appropriate drafting skills. The qualification applies to drawings produced to specifications required by designers and to all relevant standards, including AS 1100.101–1992 Technical drawing – General principles. Skills covered may also include information gathering, such as on-site visits, calculations, consultations and research.

Pathways Information

Pathways into the qualification

This qualification may be accessed by direct entry. Credit for relevant units of competency achieved will be granted towards this qualification for those who have completed MEM30505 Certificate III in Engineering - Technical, or MSA30208 Certificate III in Manufacturing Technology, or other relevant qualifications.

Pathways from the qualification

Further training pathways from this qualification include the MSA50108 Diploma of Manufacturing Technology (Structural Steel Detailing stream) or the MEM50211 Diploma of Engineering - Technical.

Licensing/Regulatory Information

There are no specific licences that relate to this qualification.

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Read, interpret, follow and communicate information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents • Produce sketches, diagrams, charts or graphs • Check and clarify work-related information • Provide clear and precise information to others, including team members, apprentices and production employees • Produce engineering drawings complete with all references and notations to communicate design detail • Recognise and use common engineering terminology and symbols • Liaise with appropriate authorities
Teamwork	<ul style="list-style-type: none"> • Work alone or as part of a team • Contribute to a group effort in order to plan and carry out work • Identify work roles, communicate and cooperate with others
Problem solving	<ul style="list-style-type: none"> • Undertake numerical operations, geometry and calculations/formulae, including addition, subtraction, multiplication, division, fractions and decimals, percentages and proportions, simple ratios and averages • Use engineering measuring techniques • Inspect quality of own or other employee's work • Assess operation and condition of equipment against specifications • Analyse information from drawings, design documents, manuals and reports • Develop, implement and evaluate solutions to problems • Translate designs into drawing documents
Initiative and enterprise	<ul style="list-style-type: none"> • Be capable of applying the competency in new and different situations and contexts • Identify actual and foreseeable workplace hazards during course of work • Implement OHS risk management procedures • Modify work plan to overcome unforeseen difficulties or developments that occur as work progresses • Participate in improvement procedures, including process, quality and internal/external customer/supplier relationships • Economise material and energy use and minimise waste

Planning and organising	<ul style="list-style-type: none"> • Plan, prioritise and sequence work operations to ensure completion of activities within schedules • Organise and analyse information relevant to work • Set up jobs prior to commencement of work, including selection of appropriate tools and equipment
Self-management	<ul style="list-style-type: none"> • Carry out work safely and in accordance with company policy and procedures, environmental and other legislative requirements • Monitor performance of own and other's work to ensure customer satisfaction, efficiency and sustainability • Take responsibility for own work outcomes • Apply techniques, procedures, tools and equipment for compliance with project specifications • Ensure work complies with industry standards
Learning	<ul style="list-style-type: none"> • Check and clarify task-related information with appropriate personnel, engineer or designer • Identify internal or external customer requirements with respect to the work to be performed • Assess and modify own work practices • Use equipment manuals, online help and other reference materials, such as catalogues/lists, as required • Maintain current knowledge of applicable standards, legislation, environmental and other codes of practice and product/process developments • Assist with on-the-job training and assessment
Technology	<ul style="list-style-type: none"> • Select, set up and use appropriate tools and equipment • Select and use appropriate measuring devices to ensure compliance with tolerances and other specifications • Navigate technology to access/input/store/retrieve/save and produce information/data using appropriate software applications • Apply knowledge of appropriate engineering principles, techniques, procedures, diagnostic methods, tools and equipment to achieve the required outcome • Check equipment and instruments for accuracy • Improve efficiency of equipment in order to minimise waste

Packaging Rules

To be awarded the MEM40412 Certificate IV in Engineering Drafting, competency must be achieved in **fifteen (15)** units of competency:

- **four (4)** core units of competency
- **eleven (11)** elective units of competency, chosen as described below.

Prerequisites

Units marked with an asterisk have one or more prerequisite requirements. The prerequisites for these units are to be counted in the total number of units required in the elective group. Please refer to the individual units for details.

Core units of competency

The following **four (4)** units must be chosen.

Unit code	Unit title
MEM16006A	Organise and communicate information
MEM16008A	Interact with computing technology
MEM30012A	Apply mathematical techniques in a manufacturing, engineering or related environment
MSAENV272B	Participate in environmentally sustainable work practices

Elective units of competency

Select **eleven (11)** elective units:

- a minimum of **eight (8)** from Group A below
- the balance may be chosen from Group A or Group B General Electives.

A maximum of **two (2)** general electives may be imported from other qualifications in this Training Package, other endorsed Training Packages and accredited courses where those units are available at Certificate III or IV level.

Group A – Specialisation units

Unit code	Unit title	Prerequisites
MEM09002B	Interpret technical drawing	
MEM09201A	Work effectively in an engineering drafting workplace	
MEM09202A	Produce freehand sketches	
MEM09203A	Measure and sketch site information	
MEM09204A	Produce basic engineering detail drawings	*
MEM09205A	Produce electrical schematic drawings	*
MEM09206A	Produce drawings for mechanical services	*
MEM09207A	Produce drawings for reticulated services	*
MEM09208A	Detail fasteners and locking devices in mechanical drawings	*
MEM09209A	Detail bearings, seals and other componentry in mechanical drawings	*
MEM09210A	Create 3-D solid models using computer-aided design (CAD) system	*
MEM09211A	Produce drawings or models for industrial piping	*
MEM09212A	Produce detailed drawings of steel to non-steel connections	*
MEM09213A	Produce schematic drawings for hydraulic and pneumatic fluid power systems	*
MEM09216A	Interpret and produce curved 3-D shapes and patterns	
MEM09217A	Prepare plans for pipe and duct fabrication	*
MEM09218A	Participate in drafting projects for building services	*
MEM09219A	Prepare drawings for fabricated sheet metal products	*
MEM09220A	Apply surface modelling techniques to 3-D drawings	*

MEM09221A	Create 3-D model assemblies using computer-aided design (CAD) system	*
MEM12023A	Perform engineering measurements	
MEM15001B	Perform basic statistical quality control	
MEM16014A	Report technical information	*
MEM30031A	Operate computer-aided design (CAD) system to produce basic drawing elements	
MEM30032A	Produce basic engineering drawings	
MEM30033A	Use computer-aided design (CAD) to create and display 3-D models	*
CPCCOHS1001A	Work safely in the construction industry	
CPCPCM4002A	Estimate and cost work	
MSATCS301A	Interpret architectural and engineering design specifications for structural steel detailing	*
MSATCS302A	Detail bolts and welds for structural steelwork connections	*
MSATCS501A	Detail standardised structural connections	*
MSATCS502A	Detail structural steel members	*
MSATCS504A	Detail ancillary steelwork	*
UEPMNT419B	Perform civil drafting	
Group B – General electives		

Unit code	Unit title	Prerequisites
MEM05051A	Select welding processes	
MEM12024A	Perform computations	
MEM16003B	Provide advanced customer service	
MEM30005A	Calculate force systems within simple beam structures	*
MEM30006A	Calculate stresses in simple structures	*
MEM30007A	Select common engineering materials	
MEM30008A	Apply basic economic and ergonomic concepts to evaluate engineering applications	
MEM30010A	Set up basic hydraulic circuits	
MEM30011A	Set up basic pneumatic circuits	
MEM30013A	Assist in the preparation of a basic workplace layout	
MEM30016A	Assist in the analysis of a supply chain	
MEM30019A	Use resource planning software systems in manufacturing	*
MEM30023A	Prepare a simple cost estimate for a manufactured product	
MEM30024A	Participate in quality assurance techniques	*
MEM30025A	Analyse a simple electrical system circuit	*
FDFO2005A	Work in a socially diverse environment	
LMTGN4002A	Participate in product engineering	
MSS402002A	Sustain process improvements	
MSS402030A	Apply cost factors to work practices	
MSS402051A	Apply quality standards

MEM50105 Diploma of Engineering - Advanced Trade

Modification History

Release 5 - Imported elective unit AURV225908A replaced by AURVTN2002. No change in outcomes.

Release 4 - Correction to packaging advice for holders of a Certificate IV (units to a maximum of 12 points from Group B, not Group C)

Release 3 - MEM05006B updated to MEM05006C and minor formatting correction

Description

This qualification covers the skills and knowledge required for employment as an Advanced Engineering Tradesperson - Level II within the metal, engineering, manufacturing and associated industries or at equivalent levels in other industries where Engineering Tradespersons work. The qualification has been specifically developed to meet the needs of apprentices in an Engineering Trade who choose to study at a higher level during their apprenticeship in the above trade or for people who are existing engineering tradespersons.

The qualification packaging has been developed on an assumption that competency will be developed through an integrated combination of on and off-the-job learning strategies, such as those delivered through a formal apprenticeship. The qualification may also be achieved through formal skills recognition assessment processes.

Job roles/employment outcomes

The Diploma of Engineering - Advanced Trade specifies the competencies required for employment as an Advanced Engineering Tradesperson - Level II in mechanical, electrical/ electronic or fabrication trade disciplines.

The job role involves application of advanced system level skills in the learner's trade and may also include cross skills from other trades. Job roles may include the design, assembly, manufacture, installation, modification, testing, fault finding, commissioning, maintenance and service of mechanical, electrical or electronic systems including related equipment and machinery, fabrication of structures and assemblies requiring advanced manufacturing and assembly techniques, sheet metal work requiring advanced manufacturing and assembly techniques as well as use of relevant machinery, equipment and joining techniques. Machinery and equipment can include fluid power systems, stationary and mobile equipment, instruments, refrigeration, and the use of computer controlled machine tools.

Employment outcomes related to this qualification are found in a wide variety of manufacturing and engineering related sectors as well as Advanced Engineering Tradesperson - Level II related roles in other industries.

Application

This qualification is designed to provide an industry recognised skills profile related to trade work as an Advanced Engineering Tradesperson - Level II. Skills development would be undertaken through an Australian Apprenticeship arrangement where the mix of on and off-the-job training would be specified in the Training Plan associated with the Contract of Training between the employer and apprentice.

Assessment of some units of competency must, where indicated, include evidence of the candidate's performance in a productive work environment where there is a sufficient range

of appropriate tasks and materials to cover the scope of application of those units. All outcomes must reflect the standard of performance inherent in the job.

Occupational titles at the enterprise level covered by this qualification may vary and include Advanced Engineering Tradesperson - Level II in mechanical, fabrication or electrical/electronic, or advanced level of any of the following: mechanical tradesperson, fitter and turner, fitter and machinist, maintenance fitter, diesel fitter, plant mechanic, 1st class machinist, special class metal fabrication tradesperson, boilermaker, sheet metal worker, welder, moulder, foundry tradesperson, patternmaker, electrical fitter, electrical mechanic, electrical fitter/mechanic, electrician, refrigeration mechanic and radio tradesperson.

Pathways Information

Pathways into the qualification

While there is no qualification entry requirement, it is assumed that the learner is either already a tradesperson with access to structured on and off-the-job training, or is an apprentice under an Australian Apprenticeship arrangement where the mix of on and off-the-job training would be specified in the Training Plan associated with the Contract of Training between the employer and apprentice.

This qualification may be accessed by direct entry. Credit for relevant units of competency achieved should be granted towards this qualification for those who have completed MEM40105 Certificate IV in Engineering, MEM30205 Certificate III in Engineering - Mechanical Trade, MEM30305 Certificate III in Engineering - Fabrication Trade, MEM30405 Certificate III in Engineering - Electrical/Electronic Trade, MEM30605 Certificate III in Jewellery Manufacture, MEM30705 Certificate III in Marine Craft Construction, MEM30805 Certificate III in Locksmithing, or other relevant qualifications.

Pathways from the qualification

Further training pathways from this qualification include transition into technical work through completion of the MEM60105 Advanced Diploma of Engineering or undertaking other relevant qualifications. Learners are advised that not all units of competency completed in the Diploma of Engineering - Advanced Trade carry credit into the MEM60105 Advanced Diploma of Engineering and the actual credit will depend on the choice of electives.

Additional qualification advice

An additional descriptor may be added to this qualification title to illustrate a particular skills profile.

This could be achieved by adding a pathway descriptor or sentence below the formal title of the qualification. Note that no changes may be made to the qualification title and the use of one of these descriptors to a qualification does not change the qualification's formal title or unique national code.

There are no specific requirements associated with the use of these descriptors other than their use should reflect the choice of units of competency in the qualification and must be consistent with the work role of an Advanced Engineering Tradesperson - Level II.

Reference to other occupational or functional pathways consistent with the role of an Advanced Engineering Tradesperson - Level II may be included on any qualification statement that is issued.

Competitive Manufacturing qualifications are available for employees at this level who already possess trade and other technical skills and who require additional manufacturing practice skills above those available in this qualification.

Licensing/Regulatory Information

If appropriate electives are undertaken this qualification can be used as the basis for an application in each state and territory for a license to practise as an electrician. It can also be used to satisfy regulations regarding refrigeration and airconditioning work. Local regulations should be checked for details.

Entry Requirements

Not Applicable

Employability Skills Summary

MEM50105 Diploma of Engineering - Advanced Trade

The following table contains a summary of the Employability Skills as identified by the jewellery industry for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that reflect skill requirements for this level.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Read, interpret and analyse information on specifications, design briefs, charts, lists, drawings and other applicable reference documents • Access, organise and communicate information from reference texts, manufacturer's catalogues and industrial magazines, websites, use of phone, email and fax • Apply interpersonal, negotiating and communicating skills in work situations • Create reports, graphics, specifications and other documentation • Use standard engineering drawing symbols, references, terminology and scientific notation • Consult with clients, internal and external stakeholders and others to confirm specifications and discuss alternatives • Prepare and disseminate information, instructions, work plans and other documentation
Teamwork	<ul style="list-style-type: none"> • Work alone or as part of a team including mixed discipline teams and teams made up of professionals, para-professionals, trade and production personnel • Consult and liaise with interested parties • Provide clear and precise information to team members • Continually monitor and review team performance • Encourage and facilitate improvement suggestions from team members
Problem-solving	<ul style="list-style-type: none"> • Analyse and evaluate information and data from operations, processes, and test results according to enterprise and work requirements • Apply mathematical techniques and scientific principles to solve engineering problems (Including arithmetic, algebraic expressions with one independent variable, two-dimensional geometry, trigonometry, linear functions, basic quadratic functions, basic statistical methods and statistical process control)

	<ul style="list-style-type: none"> • Evaluate and rank engineering options and develop recommendations • Apply strategies for minimising resource use, reductions in toxic material and hazardous chemical use • Evaluate sustainability and environmental implications of processes and equipment • Perform hazard and risk analysis • Perform tests to analyse materials, operations and capabilities and detect faults
Initiative and enterprise	<ul style="list-style-type: none"> • Be capable of applying skills and knowledge in new and different situations and contexts • Use judgement and discretion when determining implications and making decisions • Facilitate and capitalise on change and innovation • Identify solutions and improvements and make recommendations
Planning and organising	<ul style="list-style-type: none"> • Organise, categorise and sequence information • Plan, sequence and prioritise work operations • Prepare, monitor and review work plans, schedules, programs and budgets • Identify procedural steps for implementation, commissioning and maintenance purposes
Self-management	<ul style="list-style-type: none"> • Carry out work within given timeframe, process and quality constraints • Carry out work safely and in accordance with company policy and procedures and legislative requirements • Monitor work to ensure compliance with legislation, codes and national standards
Learning	<ul style="list-style-type: none"> • Undertake research using manuals, online help and other reference materials as required • Identify and consult appropriate technical personnel to obtain and verify information • Provide and communicate information to other team members • Maintain current knowledge of applicable standards, legislation, environmental and other codes of practice and product and process developments
Technology	<ul style="list-style-type: none"> • Use computing technology to access, input and store information • Use a CAD program, computer and peripherals • Develop/customise, install, program, commission and maintain computer and control hardware and software • Identify and select common engineering materials by their principal properties

	<ul style="list-style-type: none"> • Select test and analysis equipment, materials, components and systems, support structures, power supply and control systems appropriate for the engineering application
--	---

Packaging Rules

The minimum requirements for achievement of the Diploma of Engineering - Advanced Trade are:

- completion of all of the Core units of competency listed below, and
- completion of Specialisation units from the Group A list below to a maximum value of 100 points, and
- completion of units up to the value of 12 points from the Group B list below and
- completion of units from the Group C list below to bring the total value of units from Groups A, B and C to at least 117 points.

Points associated with prerequisites count towards the total (refer to units and prerequisites listing in Appendix 2 in this Training Package).

Appropriate elective units to the value of 26 points may be chosen from other endorsed Training Packages and accredited courses where those units are available for inclusion at Diploma. Note that the elective units listed below include all of the units that are approved for selection from the MEM Training Package for use in this qualification. This meets the NQC requirement that one sixth of the total units must be able to be selected from other qualifications in the same Training Package.

Registered Training Organisations must seek a determination from Manufacturing Skills Australia in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses.

Only select units that would be suitable for occupational outcomes in a manufacturing, engineering or related environment.

Additional qualification descriptors

The following additional descriptors are approved for use with this qualification:

Refrigeration and Air-conditioning; Casting and Moulding; CNC programming; Fluid Power; Heavy Fabrication; Instrumentation; Maintenance; Marine Electronics; Mechatronics; Patternmaking; Robotics; Toolmaking; Welding, Watch and Clock Service and Repair.

Core units of competency

- select **all** of the units from this list.

Unit code	Unit title
MEM12023A	Perform engineering measurements
MEM12024A	Perform computations
MEM12025A	Use graphical techniques and perform simple statistical computations
MEM13014A	Apply principles of occupational health and safety in the work environment
MEM14004A	Plan to undertake a routine task
MEM14005A	Plan a complete activity
MEM15002A	Apply quality systems
MEM15024A	Apply quality procedures
MEM16006A	Organise and communicate information
MEM16007A	Work with others in a manufacturing, engineering or related environment
MEM16008A	Interact with computing technology
MEM16009A	Research and analyse engineering information
MEM16011A	Communicate with individuals and small groups
MEM16012A	Interpret technical specifications and manuals
MEM16014A	Report technical information
MEM17003A	Assist in the provision of on the job training
MEM30012A	Apply mathematical techniques in a manufacturing, engineering or related
MSAENV272B	Participate in environmentally sustainable work practices

Elective units of competency

Group A - Specialisation units

- select units from this list to a maximum value of 100 points

Unit code	Unit title	P
MEM03001B	Perform manual production assembly	4
MEM03002B	Perform precision assembly	4
MEM03003B	Perform sheet and plate assembly	4
MEM03004B	Perform electronic/electrical assembly (production)	8
MEM03005B	Rework and repair (electrical/electronic production)	8
MEM03006B	Set assembly stations	2
MEM04001B	Operate melting furnaces	4
MEM04002B	Perform gravity die casting	2
MEM04003B	Operate pressure die casting machine	4
MEM04004B	Prepare and mix sand for metal moulding	4
MEM04005C	Produce moulds and cores by hand (jobbing)	16
MEM04006B	Operate sand moulding and core making machines	8
MEM04007B	Pour molten metal	4
MEM04008B	Fettle and trim metal castings/forgings	4
MEM04010B	Develop and manufacture wood patterns	20
MEM04011B	Produce polymer patterns	8
MEM04012B	Assemble plated patterns	8
MEM04013B	Develop and manufacture polystyrene patterns	2
MEM04014B	Develop and manufacture production patterns	8
MEM04015B	Develop and manufacture vacuum forming moulds and associated equipment	6
MEM04016C	Develop and manufacture precision models	6
MEM04017B	Develop and manufacture gear, conveyor screw and propeller patterns	4
MEM04018B	Perform general woodworking machine operations	4

MEM04019B	Perform refractory installation and repair	4
MEM05001B	Perform manual soldering/desoldering – electrical/electronic components	4
MEM05002B	Perform high reliability soldering and desoldering	4
MEM05003B	Perform soft soldering	2
MEM05004C	Perform routine oxy acetylene welding	2
MEM05005B	Carry out mechanical cutting	2
MEM05006B	Perform brazing and/or silver soldering	2
MEM05007C	Perform manual heating and thermal cutting	2
MEM05008C	Perform advanced manual thermal cutting, gouging and shaping	2
MEM05009C	Perform automated thermal cutting	2
MEM05010C	Apply fabrication, forming and shaping techniques	8
MEM05011D	Assemble fabricated components	8
MEM05012C	Perform routine manual metal arc welding	2
MEM05013C	Perform manual production welding	2
MEM05014C	Monitor quality of production welding/fabrications	2
MEM05015D	Weld using manual metal arc welding process	4
MEM05016C	Perform advanced welding using manual metal arc welding process	4
MEM05017D	Weld using gas metal arc welding process	4
MEM05018C	Perform advanced welding using gas metal arc welding process	4
MEM05019D	Weld using gas tungsten arc welding process	4
MEM05020C	Perform advanced welding using gas tungsten arc welding process	4
MEM05022C	Perform advanced welding using oxy acetylene welding process	6
MEM05023C	Weld using submerged arc welding process	4

MEM05036C	Repair/replace/modify fabrications	4
MEM05037C	Perform geometric development	6
MEM05038B	Perform advanced geometric development – cylindrical/rectangular	2
MEM05039B	Perform advanced geometric development – conical	2
MEM05040B	Perform advanced geometric development – transitions	4
MEM05041B	Weld using powder flame spraying	4
MEM05047B	Weld using flux core arc welding process	4
MEM05048B	Perform advanced welding using flux core arc welding process	4
MEM05049B	Perform routine gas tungsten arc welding	2
MEM05050B	Perform routine gas metal arc welding	2
MEM05051A	Select welding processes	2
MEM05052A	Apply safe welding practices	4
MEM06001B	Perform hand forging	4
MEM06002B	Perform hammer forging	4
MEM06003C	Carry out heat treatment	6
MEM06004B	Select heat treatment processes and test finished product	6
MEM06005B	Perform drop and upset forging	4
MEM06006C	Repair springs	4
MEM06007B	Perform basic incidental heat/quenching, tempering and annealing	2
MEM06008A	Hammer forge complex shapes	4
MEM06009A	Hand forge complex shapes	4
MEM07001B	Perform operational maintenance of machines/equipment	2
MEM07002B	Perform precision shaping/planing/slotting operations	4
MEM07003B	Perform machine setting (routine)	4

MEM07004B	Perform machine setting (complex)	8
MEM07005C	Perform general machining	8
MEM07006C	Perform lathe operations	4
MEM07007C	Perform milling operations	4
MEM07008D	Perform grinding operations	4
MEM07009B	Perform precision jig boring operations	4
MEM07010B	Perform tool and cutter grinding operations	4
MEM07011B	Perform complex milling operations	4
MEM07012B	Perform complex grinding operations	4
MEM07013B	Perform machining operations using horizontal and/or vertical boring machines	4
MEM07014B	Perform electro-discharge (EDM) machining operations	4
MEM07015B	Set computer controlled machines/processes	2
MEM07021B	Perform complex lathe operations	4
MEM07024B	Operate and monitor machine/process	4
MEM07025B	Perform advanced machine/process operation	6
MEM07026B	Perform advanced plastic processing	6
MEM07027B	Perform advanced press operations	6
MEM07028B	Operate computer controlled machines/processes	2
MEM07029B	Perform routine sharpening/maintenance of production tools and cutters	4
MEM07030C	Perform metal spinning lathe operations (basic)	8
MEM07031C	Perform metal spinning lathe operations (complex)	4
MEM07032B	Use workshop machines for basic operations	2
MEM07033B	Operate and monitor basic boiler	6
MEM07034A	Operate and monitor intermediate class boiler	4

MEM07040A	Set multistage integrated processes	6
MEM08001B	Perform wire, jig and barrel load/unload work	4
MEM08002C	Pre-treat work for subsequent surface coating	4
MEM08003C	Perform electroplating operations	6
MEM08004B	Finish work using wet, dry and vapour deposition methods	4
MEM08005B	Prepare and produce specialised coatings	4
MEM08006B	Produce clear and/or coloured and/or sealed anodised films on aluminium	2
MEM08007B	Control surface finish production and finished product quality	4
MEM08008B	Operate and control surface finishing waste treatment process	3
MEM08009C	Make up solutions	2
MEM08010B	Manually finish/polish materials	6
MEM08011B	Prepare surfaces using solvents and/or mechanical means	2
MEM08012B	Prepare surfaces by abrasive blasting (basic)	4
MEM08013B	Prepare surfaces by abrasive blasting (advanced)	4
MEM08014B	Apply protective coatings (basic)	4
MEM08015B	Apply protective coatings (advanced)	4
MEM08016B	Control blast coating by-products, materials and emissions	1
MEM08018B	Electroplate engineering coatings	6
MEM08019B	Electroplate protective finishes	6
MEM08020B	Electroplate decorative finishes	6
MEM09002B	Interpret technical drawing	4
MEM09003B	Prepare basic engineering drawing	8
MEM09005B	Perform basic engineering detail drafting	8
MEM09011B	Apply basic engineering design concepts	6

MEM09021B	Interpret and produce curved 3-dimensional shapes	4
MEM09022A	Create 2D code files using computer aided manufacturing system	4
MEM10001C	Erect structures	4
MEM10002B	Terminate and connect electrical wiring	3
MEM10003B	Install and test electrical wiring and circuits up to 1000 volts a.c. and 1500 volts d.c.	12
MEM10004B	Enter and change programmable controller operational parameters	2
MEM10005B	Commission programmable controller programs	4
MEM10006B	Install machine/plant	4
MEM10009B	Install refrigeration and air conditioning plant and equipment	4
MEM10010B	Install pipework and pipework assemblies	4
MEM10011B	Terminate and connect specialist cables	3
MEM10013A	Install split air conditioning systems and associated pipework	6
MEM11001C	Erect/dismantle scaffolding and equipment	4
MEM11002C	Erect/dismantle complex scaffolding and equipment	4
MEM11003B	Coordinate erection/dismantling of complex scaffolding/equipment	4
MEM11004B	Undertake dogging	4
MEM11005B	Pick and process order	4
MEM11006B	Perform production packaging	2
MEM11007B	Administer inventory procedures	4
MEM11008B	Package materials (stores and warehouse)	2
MEM11009B	Handle/move bulk fluids/gases	4
MEM11010B	Operate mobile load shifting equipment	4
MEM11011B	Undertake manual handling	2

MEM11012B	Purchase materials	6
MEM11013B	Undertake warehouse receipt process	4
MEM11014B	Undertake warehouse dispatch process	4
MEM11015B	Manage warehouse inventory system	6
MEM11016B	Order materials	2
MEM11017B	Organise and lead stocktakes	4
MEM11018B	Organise and maintain warehouse stock receipt and/or dispatch system	6
MEM11019B	Undertake tool store procedures	4
MEM11020B	Perform advanced warehouse computer operations	4
MEM11021B	Perform advanced operation of load shifting equipment	2
MEM11022B	Operate fixed/movable load shifting equipment	4
MEM12001B	Use comparison and basic measuring devices	2
MEM12002B	Perform electrical/electronic measurement	2
MEM12006C	Mark off/out (general engineering)	4
MEM12007D	Mark off/out structural fabrications and shapes	4
MEM12019B	Measure components using coordinate measuring machine	4
MEM12020B	Set and operate coordinate measuring machine	2
MEM12021B	Program coordinate measuring machine	4
MEM12022B	Program coordinate measuring machine (advanced)	2
MEM13001B	Perform emergency first aid	1
MEM13002B	Undertake occupational health and safety activities in the workplace	3
MEM13003B	Work safely with industrial chemicals and materials	2
MEM13004B	Work safely with molten metals/glass	2
MEM13006B	Collect and evaluate occupational health and safety data for an	4

	enterprise or section of an enterprise	
MEM13007B	Maintain water treatment systems for cooling towers	2
MEM13010A	Supervise occupational health and safety in an industrial work environment.	4
MEM13013B	Work safely with ionizing radiation	4
MEM15001B	Perform basic statistical quality control	2
MEM15003B	Use improvement processes in team activities	4
MEM15004B	Perform inspection	2
MEM15005B	Select and control inspection processes and procedures	4
MEM16002C	Conduct formal interviews and negotiations	4
MEM16004B	Perform internal/external customer service	2
MEM16005A	Operate as a team member to conduct manufacturing, engineering or related activities	2
MEM18001C	Use hand tools	2
MEM18002B	Use power tools/hand held operations	2
MEM18003C	Use tools for precision work	4
MEM18004B	Maintain and overhaul mechanical equipment	4
MEM18005B	Perform fault diagnosis, installation and removal of bearings	4
MEM18006C	Repair and fit engineering components	6
MEM18007B	Maintain and repair mechanical drives and mechanical transmission assemblies	4
MEM18008B	Balance equipment	2
MEM18009B	Perform levelling and alignment of machines and engineering components	4
MEM18012B	Perform installation and removal of mechanical seals	2
MEM18013B	Perform gland packing	2
MEM18014B	Manufacture press tools and gauges	8

MEM18015B	Maintain tools and dies	4
MEM18018C	Maintain pneumatic system components	4
MEM18020B	Maintain hydraulic system components	4
MEM18024B	Maintain engine cooling systems	2
MEM18025B	Service combustion engines	2
MEM18026C	Test compression ignition fuel systems	4
MEM18027C	Overhaul engine fuel system components	8
MEM18028B	Maintain engine lubrication systems	2
MEM18029B	Tune diesel engines	4
MEM18030B	Diagnose and rectify low voltage electrical systems	8
MEM18031B	Diagnose and rectify low voltage starting systems	2
MEM18032B	Maintain induction/exhaust systems	4
MEM18033B	Perform engine bottom-end overhaul	4
MEM18034B	Perform engine top-end overhaul	8
MEM18035B	Diagnose and rectify braking systems	6
MEM18037B	Diagnose and rectify low voltage charging systems	2
MEM18038B	Maintain wheels and tyres	2
MEM18039B	Diagnose and rectify track type undercarriage	4
MEM18040B	Maintain suspension systems	4
MEM18041B	Maintain steering systems	4
MEM18042C	Diagnose and rectify manual transmissions	4
MEM18043C	Diagnose and rectify automatic transmissions	8
MEM18044C	Diagnose and rectify drive line and final drives	4
MEM18045B	Fault find/repair electrical equipment/components up to 250 volts single phase supply	4

MEM18046B	Fault find/repair electrical equipment/components up to 1000 volts a.c./1500 volts d.c.	10
MEM18047B	Diagnose and maintain electronic controlling systems on mobile plant	4
MEM18048B	Fault find and repair/rectify basic electrical circuits	12
MEM18052B	Maintain fluid power systems for mobile plant	4
MEM18055B	Dismantle, replace and assemble engineering components	3
MEM18057B	Maintain/service analog/digital electronic equipment	6
MEM18063B	Terminate signal and data cables	4
MEM18064B	Maintain instrumentation system components	6
MEM18071B	Connect/disconnect fluid conveying system components	2
MEM18072B	Manufacture fluid conveying conductor assemblies	4
MEM18084A	Commission and decommission split air conditioning systems	4
MEM18085A	Install, service and repair domestic air conditioning and refrigeration appliances	6
MEM18086B	Test, recover, evacuate and charge refrigeration systems	4
MEM18087B	Service and repair domestic and light commercial refrigeration and air conditioning equipment	6
MEM18088B	Maintain and repair commercial air conditioning systems and components	4
MEM18089B	Maintain and repair central air handling systems	6
MEM18090B	Maintain and repair industrial refrigeration systems and components	6
MEM18094B	Service and repair commercial refrigeration	6
MEM18095A	Maintain and repair cooling towers/evaporative condensers and associated equipment	4
MEM18096A	Maintain, repair/replace and adjust refrigerant flow controls and associated equipment	6
MEM18097A	Manufacture cavity dies	8

MEM18098A	Prepare to perform work associated with fuel system installation and servicing*	2
MEM19001B	Perform jewellery metal casting	6
MEM19002B	Prepare jewellery illustrations	4
MEM19003B	Handle gem materials	2
MEM19004B	Handle and examine gemstone materials	6
MEM19005B	Produce three-dimensional precision items	8
MEM19006B	Replace watch batteries	1
MEM19007B	Perform gemstone setting	6
MEM19009B	Perform investment procedures for lost wax casting process	1
MEM19010B	Produce rubber moulds for lost wax casting process	2
MEM19011B	Perform wax injection of moulds for lost wax casting process	2
MEM19012B	Produce jewellery wax model	4
MEM19014B	Perform hand engraving	4
MEM19015B	Perform jewellery enamelling	4
MEM19016B	Construct jewellery components	4
MEM19017B	Fabricate jewellery items	6
MEM19020B	Fault-find and maintain micro-mechanisms	4
MEM19021B	Diagnose and service micro-mechanisms	6
MEM20001A	Produce keys	4
MEM20002A	Assemble and test lock mechanisms	6
MEM20003A	Install and upgrade locks and hardware	4
MEM20004A	Gain entry	4
MEM20005A	Install and maintain door control devices/systems	2
MEM20006A	Maintain and service mechanical locking devices	6

MEM20007A	Plan and prepare a masterkey system	4
MEM20009A	Gain entry and reinstate fire and security containers	4
MEM20010A	Gain entry and reinstate automotive locking systems	4
MEM20014A	Perform a site security survey	2
MEM21001A	Replace watch batteries, capacitors and bands	2
MEM21002A	Perform watch movement exchange *	2
MEM21003A	Perform watch case servicing, repair and refurbishment *	4
MEM21004A	Clean watch and clock components	2
MEM21005A	Diagnose faults in quartz watches *	2
MEM21006A	Service quartz watches *	4
MEM21007A	Service complex quartz watches	4
MEM21008A	Service mechanical watches	4
MEM21009A	Inspect, diagnose, adjust and repair mechanical watches	4
MEM21010A	Service watch power generating systems	2
MEM21011A	Service calendar and other dial indication mechanisms for watches	4
MEM21012A	Service and repair mechanical watch oscillating systems	4
MEM21013A	Service, test and adjust watch escapements	4
MEM21014A	Service mechanical chronograph watches	6
MEM21015A	Perform precision watch timing and adjustment	6
MEM21016A	Install and set up clocks	2
MEM21017A	Service and repair clock timepieces	6
MEM24001B	Perform basic penetrant testing	2
MEM24003B	Perform basic magnetic particle testing	2
MEM24005B	Perform basic eddy current testing	2

MEM24007B	Perform ultrasonic thickness testing	2
MEM24009B	Perform basic radiographic testing	2
MEM25001B	Apply fibre-reinforced materials	2
MEM25002B	Form and integrate fibre-reinforced structures	4
MEM25003B	Set up marine vessel structures	4
MEM25004B	Fair and shape surfaces	2
MEM25005B	Construct and assemble marine vessel timber components	8
MEM25006B	Undertake marine sheathing operations	2
MEM25007B	Maintain marine vessel surfaces	4
MEM25009B	Form timber shapes using hot processes	2
MEM25010B	Perform fitout procedures	4
MEM25011B	Install marine systems	8
MEM25012B	Install and test operations of marine auxiliary systems	6
MEM25014B	Perform marine slipping operations	2
MEM25015A	Assemble and install equipment and accessories/ancillaries	2
MEM50002B	Work safely on marine craft	1
MEM50003B	Follow work procedures to maintain the marine environment	1
MEM50004B	Maintain quality of environment by following marina codes	1
MEM50009B	Safely operate a mechanically powered recreational boat	2
AURVTN2002	Carry out panel repairs	4
BSBOHS502A	Participate in the management of the OHS information and data systems	2
BSBOHS601A	Develop a systematic approach to managing OHS	4
BSBOHS602A	Develop OHS information and data analysis and reporting and recording processes	2
BSBOHS603A	Analyse and evaluate OHS risk	4

ICTTC136B	Install, maintain and modify customer premises communications cabling: ACA Restricted Rule	6
ICTTC137B	Install, maintain and modify customer premises communications cabling: ACA Open Rule	6
MEA405A	Repair/modify aircraft composite material structure/components	4
PMBPROD291B	Operate resin infusion moulding equipment	2
PMBPROD294B	Operate resin transfer moulding equipment	2
PMBPROD298B	Operate equipment using pre-pregs material	2
PMBPROD391B	Produce composites using resin infusion	4
PMBPROD394B	Produce composites using resin transfer moulding	4
PMBPROD398B	Produce composites using pre-pregs	4
PRSTS202A	Install security equipment/system	4
PRSTS302A	Program security equipment/system	2
PRSTS303A	Test installed security equipment/system	2
PRSTS304A	Commission/decommission security equipment/system	2
PRSTS305A	Identify and diagnose electronic security equipment/system fault	2
PRSTS307A	Maintain and service security equipment/system	4
PRSTS317A	Provide estimate and quote	4
PRSTS319A	Modify and repair security equipment/system	4
TLILIC0012A	Licence to operate a vehicle loading crane (capacity 10 metre tonnes and above)	1
TLILIC2001A	Licence to operate a forklift truck	0

Group B - Specialisation units (optional)

- Units up to the value of 12 points may be selected from this list.

Unit code	Unit title	P
MEM05026C	Apply welding principles	4
MEM05042B	Perform welds to code standards using flux core arc welding process	6
MEM05043B	Perform welds to code standards using gas metal arc welding process	6
MEM05044B	Perform welds to code standards using gas tungsten arc welding process	6
MEM05045B	Perform pipe welds to code standards using manual metal arc welding process	6
MEM05046B	Perform welds to code standards using manual metal arc welding process	6
MEM05053A	Set and edit computer controlled thermal cutting machines	4
MEM05054A	Write basic NC/CNC programs for thermal cutting machines	4
MEM07016C	Set and edit computer controlled machines/processes	4
MEM07018C	Write basic NC/CNC programs	4
MEM07019C	Program NC/CNC machining centre	2
MEM07020C	Program multiple spindle and/or multiple axis NC/CNC machining centre	2
MEM07022C	Program CNC wire cut machines	2
MEM12003B	Perform precision mechanical measurement	2
MEM12004B	Perform precision electrical/electronic measurement	4
MEM18011C	Shut down and isolate machines/equipment	2
MEM18049C	Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.	3
MEM18050C	Disconnect/reconnect fixed wired equipment over 1000 volts a.c./1500 volts d.c.	3
MEM18054B	Fault find, test and calibrate instrumentation systems and equipment	8

MEM18056B	Diagnose and repair analog equipment and components	10
MEM18062B	Install, maintain and calibrate instrumentation sensors, transmitters and final control elements	8
MEM18065B	Diagnose and repair digital equipment and components	10
MEM18092B	Maintain and repair commercial and/or industrial refrigeration and/or air conditioning controls	6

Group C - Specialisation units

- Select units from this list to bring the total value of the Specialisation units chosen from Groups A, B and C to 117 points, including any prerequisites.

Unit code	Unit title	P
MEM05024B	Perform welding supervision	12
MEM05025C	Perform welding/fabrication inspection	12
MEM07023C	Program and set up CNC manufacturing cell	6
MEM07039A	Write programs for industrial robots	4
MEM09004B	Perform electrical/electronic detail drafting	8
MEM09006B	Perform advanced engineering detail drafting	4
MEM09007B	Perform advanced mechanical detail drafting	4
MEM09008B	Perform advanced structural detail drafting	4
MEM09009C	Create 2D drawings using computer aided design system	8
MEM09010C	Create 3D models using computer aided design system	4
MEM09023A	Create 3D code files using computer aided manufacturing system	6
MEM10007C	Modify control systems	6
MEM10008B	Undertake commissioning procedures for plant and/or equipment	4
MEM12005B	Calibrate measuring equipment	6
MEM14001B	Schedule material deliveries	8
MEM14002B	Undertake basic process planning	8
MEM14003B	Undertake basic production scheduling	8
MEM15007B	Conduct product and/or process capability studies	6
MEM15008B	Perform advanced statistical quality control	2
MEM15010B	Perform laboratory procedures	8
MEM15011B	Exercise external quality assurance	6
MEM15012B	Maintain/supervise application of quality procedures	4
MEM15015B	Examine trading practices	5

MEM15016B	Inspect pre-packed articles	8
MEM15017B	Use and maintain reference standards	3
MEM15018B	Investigate consumer complaints	6
MEM15019B	Conduct a field inspection	12
MEM15020C	Perform verification/certification or in-service inspection	12
MEM15021C	Conduct audits of servicing licensees and public weighbridge licensees	4
MEM15022B	Verify reference standards	8
MEM16001B	Give formal presentations and take part in meetings	2
MEM16003B	Provide advanced customer service	2
MEM16010A	Write reports	2
MEM16013A	Operate in a self-directed team	2
MEM17001B	Assist in development and deliver training in the workplace	2
MEM17002B	Conduct workplace assessment	2
MEM18010C	Perform equipment condition monitoring and recording	4
MEM18016B	Analyse plant and equipment condition monitoring results	4
MEM18017C	Modify mechanical systems and equipment	8
MEM18019B	Maintain pneumatic systems	4
MEM18021B	Maintain hydraulic systems	4
MEM18022B	Maintain fluid power controls	8
MEM18023B	Modify fluid power system operation	8
MEM18051B	Fault find and repair/rectify complex electrical circuits	6
MEM18053B	Modify fluid power control systems	6
MEM18058C	Modify electronic equipment	4
MEM18059B	Modify electronic systems	4

MEM18060B	Maintain, repair control instrumentation – single and multiple loop control systems	8
MEM18061B	Maintain/calibrate complex control systems	8
MEM18066B	Diagnose and repair microprocessor-based equipment	6
MEM18067B	Tune control loops – multi controller or multi element systems	6
MEM18069B	Maintain, repair instrumentation process control analysers	6
MEM18070C	Modify complex electrical circuits and systems	6
MEM18073A	Perform advanced equipment testing and diagnostics on mobile plant and equipment	8
MEM18091B	Maintain and repair multi stage, cascade and/or ultra-cold industrial refrigeration systems	4
MEM18093B	Maintain and repair integrated industrial refrigeration and/or large air handling system controls	8
MEM19008B	Prepare jewellery designs	6
MEM19013B	Produce jewellery metal masters	4
MEM19018B	Repair jewellery items	6
MEM19022B	Perform precision micro-mechanism diagnosis and servicing	6
MEM20008A	Develop and implement a masterkey system	6
MEM20011A	Service and repair fire and security containers	6
MEM20012A	Service and repair mechanical automotive locking systems	4
MEM20013A	Service automotive transponder systems	2
MEM21018A	Service clock escapements and oscillating systems	4
MEM21019A	Service and repair clock striking mechanisms	4
MEM21020A	Service and repair clock chiming mechanisms	6
MEM21021A	Restore clockwork mechanisms	6
MEM21022A	Manufacture watch and clock components	6
MEM21023A	Plan, set up and operate horological workshop or service centre	4

MEM24002B	Perform penetrant testing	4
MEM24004B	Perform magnetic particle testing	4
MEM24006B	Perform eddy current testing	6
MEM24008B	Perform ultrasonic testing	6
MEM24010B	Perform radiographic testing	6
MEM24011B	Establish non-destructive tests	12
MEM24012C	Apply metallurgy principles	4
MEM25008B	Repair marine vessel surfaces and structures	4
MEM25013B	Produce three-dimensional plugs/moulds	12
MEM30025A	Analyse a simple electrical circuit	4
MSAENV472B	Implement and monitor environmentally sustainable work practices	4

The minimum requirements for this qualification can also be met by holders of one of the following qualifications or equivalent subject to the completion of the Core units of competency as specified for this Diploma as well as additional Specialisation units of competency drawn from Specialisation units Group A to a maximum value of 24 points and Specialisation units in Group B and Group C (units to a maximum of 12 points may be selected from Group B) to bring the total value of additional units to at least 44 points (note that additional units are those units not included in the Certificate III qualification already held):

- MEM30105 Certificate III in Engineering - Production Systems
- MEM30205 Certificate III in Engineering - Mechanical Trade
- MEM30305 Certificate III in Engineering - Fabrication Trade
- MEM30405 Certificate III in Engineering - Electrical/Electronic Trade
- MEM30605 Certificate III in Jewellery Manufacture
- MEM30705 Certificate III in Marine Craft Construction
- MEM30805 Certificate III in Locksmithing
- MEM31010 Certificate III in Watch and Clock Service and Repair.
- AUR30305 Certificate III in Marine

In addition to the above, the minimum requirements for this qualification can also be met by holders of the MEM40105 Certificate IV in Engineering subject to the completion of the Mandatory units of competency as specified above as well as additional Specialisation units drawn from Specialisation units Group A to bring the total value of additional units to at least 8 points. Where higher level Core units (i.e. those required beyond Certificate IV) were included in the Certificate IV as Specialisation units then additional Specialisation units from Group C to the same points value will also be need to be completed.

MEM50212 Diploma of Engineering - Technical

Modification History

Release 4 - Removal of superseded unit from Group B electives (MEM14082A replaced in V9 by MEM14090A). Equivalent.

Release 3 - Imported elective unit UEPMNT419A replaced by UEPMNT419B. No change in outcomes.

Release 2 - ISC correction - MEM09141A and MEM09142A removed from packaging rules (units superseded and replaced in version 9)

Description

Not applicable

Pathways Information

Not Applicable

Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, for employment at paraprofessional levels in the aeronautical and avionic fields in the Australian aviation industry, the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA) have requirements that must be met. Units designed to meet these requirements are included as electives in this qualification. Advice on the selection of electives to meet ADF and CASA requirements is given at the end of this qualification.

Entry Requirements

Not applicable

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Read, interpret and analyse information on specifications, design briefs, charts, lists, drawings and other applicable reference documents • Research, organise, analyse and communicate complex information from reference texts, manufacturer's catalogues and industrial magazines, websites, use of phone, email and fax • Communicate effectively across a range of communication networks in the workplace, including attending meetings and facilitating small group discussions and meetings on relevant engineering and trade related issues, writing memos or letters, making telephone calls • Produce, interpret and analyse engineering drawings, charts and graphs • Prepare and disseminate verbal or written technical information, instructions, work plans, reports, specifications and other documentation • Identify, access, interpret and analyse trade related information in an enterprise, including quality documentation, equipment manufacturer specifications, engineering data sheets, production and maintenance records and national standards • Use engineering terminology and language appropriate to the situation and target audience • Write technical or non-technical reports that include some level of analysis and/or research
Teamwork	<ul style="list-style-type: none"> • Work alone or as part of a team that may include apprentices, other tradespersons, technicians, engineers and production personnel • Provide clear and precise information to team members • Delegate and supervise work where appropriate
Problem-solving	<ul style="list-style-type: none"> • Analyse information and data from operations, processes, and test results including determining trends from graphical data • Develop solutions and recommendations to trade related problems based on analysis of data • Apply mathematical techniques and scientific principles to engineering situations (including arithmetic, algebraic expressions with one independent variable, two-dimensional geometry, trigonometry, linear functions, basic quadratic functions, basic statistical methods and statistical process control) • Perform hazard and risk analysis
Initiative and enterprise	<ul style="list-style-type: none"> • Be capable of applying trade-related skills and knowledge in new and different situations and contexts

	<ul style="list-style-type: none"> • Apply statistical processes to make recommendations solutions for equipment and process improvements or to improve sustainability of operations • Make modifications to work plans and schedules to overcome unforeseen difficulties or developments • Initiate significant modifications to plant and equipment that lead to desired changes in performance
Planning and organising	<ul style="list-style-type: none"> • Organise, sort, categorise and sequence information • Select and use planning techniques and tools to plan, sequence and prioritise work operations • Prepare, monitor and review work plans, schedules, programs and budgets
Self-management	<ul style="list-style-type: none"> • Carry out work within given timeframe, process and quality constraints • Carry out work safely and in accordance with company policy and procedures and legislative requirements • Monitor work to ensure compliance with legislation, codes and national standards
Learning	<ul style="list-style-type: none"> • Use manuals, online help and other reference materials as required to research technical information and data suitable and appropriate for advanced trade and technician applications • Identify and consult appropriate personnel and technical experts or other reference sources to obtain/verify information • Provide and communicate information to other team members • Provide on the job training and monitor trainee progress • Maintain knowledge of relevant legislative requirements, codes and standards
Technology	<ul style="list-style-type: none"> • Use computing technology to access, input and store information • Apply engineering knowledge and principles • Search computer databases and internet for technical information and data suitable and appropriate for advanced trade applications • Inspect engineering plant, equipment and systems for optimum operation and undertake modifications as required

Packaging Rules

The minimum requirements for achievement of the MEM50212 Diploma of Engineering - Technical are:

- completion of the **five (5)** core units of competency listed below, and
- **fifteen (15)** elective units, to bring the total number of units to **twenty (20)**.

Elective units must be selected as follows:

- up to **eight (8)** general elective units from the list in Group A
- at least **seven (7)** specialist elective units from Group B, to bring the total number of elective units to **fifteen (15)**.

Three (3) appropriate Group B electives may be chosen from other endorsed Training Packages and accredited courses where those units are available for inclusion at Diploma level. Note that the elective units listed below include all of the units that are approved for selection from the MEM05 Training Package for use in this qualification. This meets the NSSC requirement that one sixth of the total units must be able to be selected from other qualifications in the same Training Package.

Note that when selecting elective units any prerequisite units must also be completed. Note that prerequisites can only count towards the number of electives required if they are listed in the groups below (refer to units for details).

Additional qualification descriptors

The following additional descriptors are approved for use with this qualification:

Mechanical, Mechatronics, Manufacturing, Maintenance, Aeronautical and Avionic.

Core units

- Select all of the units from this list.

Unit code	Unit title
MEM16006A	Organise and communicate information
MEM16008A	Interact with computing technology
MEM30007A	Select common engineering materials
MEM30012A	Apply mathematical techniques in a manufacturing, engineering or related environment
MSAENV272 B	Participate in environmentally sustainable work practices

Electives units

Group A - general electives

- Select up to **eight (8)** units from this list.

Unit code	Unit title	Prerequisites
MEM09002B	Interpret technical drawing	

Unit code	Unit title	Prerequisites
MEM09202A	Produce freehand sketches	
MEM09203A	Measure and sketch site information	
MEM09204A	Produce basic engineering detail drawings	*
MEM09205A	Produce electrical schematic drawings	*
MEM09206A	Produce drawings for mechanical services	*
MEM09207A	Produce drawings for reticulated services	*
MEM09208A	Detail fasteners and locking devices in mechanical drawings	*
MEM09209A	Detail bearings, seals and other componentry in mechanical drawings	*
MEM09211A	Produce drawings or models for industrial piping	*
MEM09212A	Produce detailed drawings of steel to non-steel connections	*
MEM09213A	Produce schematic drawings for hydraulic and pneumatic fluid power systems	*
MEM09216A	Interpret and produce curved 3-D shapes and patterns	
MEM09217A	Prepare plans for pipe and duct fabrication	*
MEM09218A	Participate in drafting projects for building services	*
MEM09219A	Prepare drawings for fabricated sheet metal products	*
MEM12024A	Perform computations	
MEM13013B	Work safely with ionizing radiation	
MEM15001B	Perform basic statistical quality control	
MEM16003B	Provide advanced customer service	
MEM16012A	Interpret technical specifications and manuals	
MEM16014A	Report technical information	
MEM18001C	Use hand tools	

Unit code	Unit title	Prerequisites
MEM24001B	Perform basic penetrant testing	*
MEM24003B	Perform basic magnetic particle testing	*
MEM24005B	Perform basic eddy current testing	*
MEM24007B	Perform ultrasonic thickness testing	*
MEM24009B	Perform basic radiographic testing	*
MEM30005A	Calculate force systems within simple beam structures	*
MEM30006A	Calculate stresses in simple structures	*
MEM30008A	Apply basic economic and ergonomic concepts to evaluate engineering applications	
MEM30009A	Contribute to the design of basic mechanical systems	*
MEM30010A	Set up basic hydraulic circuits	
MEM30011A	Set up basic pneumatic circuits	
MEM30013A	Assist in the preparation of a basic workplace layout	
MEM30014A	Apply basic just in time systems to the reduction of waste	
MEM30015A	Develop recommendations for basic set up time improvements	
MEM30016A	Assist in the analysis of a supply chain	
MEM30017A	Use basic preventative maintenance techniques and tools	
MEM30018A	Undertake basic process planning	
MEM30019A	Use resource planning software systems in manufacturing	
MEM30020A	Develop and manage a plan for a simple manufacturing related project	
MEM30021A	Prepare a simple production schedule	
MEM30022A	Undertake supervised procurement activities	

Unit code	Unit title	Prerequisites
MEM30023A	Prepare a simple cost estimate for a manufactured product	
MEM30024A	Participate in quality assurance techniques	*
MEM30025A	Analyse a simple electrical system circuit	*
MEM30026A	Select and test components for simple electronic switching and timing circuits	*
MEM30027A	Prepare basic programs for programmable logic controllers	
MEM30028A	Assist in sales of technical products/systems	
MEM30031A	Operate computer-aided design (CAD) system to produce basic drawing elements	
MEM30032A	Produce basic engineering drawings	
MEM30033A	Use computer-aided design (CAD) to create and display 3-D models	*
CPCCOHS1001 A	Work safely in the construction industry	
MEA101B	Interpret occupational health and safety practices in aviation maintenance	
MEA105C	Apply quality standards applicable to aviation maintenance processes	*
MEA107B	Interpret and use aviation maintenance industry manuals and specifications	
MEA108B	Complete aviation maintenance industry documentation	*
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance	*
MEA270A	Lay out avionic systems	*
MEA271A	Lay out avionic flight management systems	*
MEA340A	Lay out and set up aircraft systems	*
MEA341A	Apply basic aircraft design characteristics	*

Unit code	Unit title	Prerequisites
MSAENV472B	Implement and monitor environmentally sustainable work practices	
MSATCS301A	Interpret architectural and engineering design specifications for structural steel detailing	*
MSATCS302A	Detail bolts and welds for structural steelwork connections	*
UEPMNT419B	Perform civil drafting	
Prerequisites:	Where a unit has prerequisites then those prerequisite units can only be used in the count towards the total number of units where they are listed in the table above.	

Group B - specialist electives

- Select at least **seven (7)** units from this list to bring the total number of elective units to **fifteen (15)**.

Unit code	Unit title	Prerequisites
MEM09011B	Apply basic engineering design concepts	
MEM09210A	Create 3-D solid models using computer-aided design (CAD) system	*
MEM09214A	Perform advanced engineering detail drafting	*
MEM09215A	Supervise detail drafting projects	*
MEM09220A	Apply surface modelling techniques to 3-D drawings	*
MEM09221A	Create 3-D model assemblies using computer-aided design (CAD) system	*
MEM09222A	Interpret and maintain or restore original drawings	*
MEM09143A	Represent aeronautical engineering designs	*
MEM09144A	Represent avionic engineering designs	*
MEM09155A	Prepare mechanical models for computer-aided engineering (CAE)	*

Unit code	Unit title	Prerequisites
MEM09156A	Prepare mechatronic models for computer-aided engineering (CAE)	*
MEM09157A	Perform mechanical engineering design drafting	
MEM09158A	Perform mechatronics engineering design drafting	
MEM12005B	Calibrate measuring equipment	*
MEM12022B	Program coordinate measuring machines (advanced)	*
MEM12025A	Use graphical techniques and perform simple statistical computations	*
MEM13010A	Supervise occupational health and safety in an industrial work environment	*
MEM14001B	Schedule material deliveries	
MEM14002B	Undertake basic process planning	
MEM14003B	Undertake basic production scheduling	
MEM14081A	Apply mechanical engineering fundamentals to support design and development of projects	*
MEM14083A	Apply aeronautical fundamentals to support design and development of engineering projects	*
MEM14084A	Apply avionic fundamentals to support design and development of engineering projects	*
MEM14085A	Apply mechanical engineering analysis techniques	
MEM14086A	Apply mechatronic engineering analysis techniques	
MEM14087A	Apply manufactured product design techniques	*
MEM14088A	Apply maintenance engineering techniques to equipment and component repairs and modifications	*
MEM14089A	Integrate mechanical fundamentals into an engineering task	*
MEM14090A	Integrate mechatronic fundamentals into an engineering task	*

Unit code	Unit title	Prerequisites
MEM14091A	Integrate manufacturing fundamentals into an engineering task	*
MEM14092A	Integrate maintenance fundamentals into an engineering task	*
MEM15007B	Conduct product and/or process capability studies	*
MEM15008B	Perform advanced statistical quality control	*
MEM15010B	Perform laboratory procedures	
MEM15011B	Exercise external quality assurance	*
MEM15012B	Maintain/supervise the application of quality procedures	*
MEM18016B	Analyse plant and equipment condition monitoring results	*
MEM22002A	Manage self in the engineering environment	*
MEM22012A	Coordinate resources for an engineering project or operation	
MEM22013A	Coordinate engineering projects	
MEM22014A	Coordinate engineering-related manufacturing operations	*
MEM22015A	Source and estimate engineering materials requirements	
MEM22017A	Coordinate continuous improvement and technical development	
MEM22018A	Coordinate sales and promotion of engineering-related products or services	
MEM23003A	Operate and program computers and/or controllers in engineering situations	*
MEM23004A	Apply technical mathematics	
MEM23006A	Apply fluid and thermodynamics principles in engineering	*
MEM23007A	Apply calculus to engineering tasks	*
MEM23052A	Apply basic electro and control scientific principles and techniques in aeronautical engineering situations	

Unit code	Unit title	Prerequisites
MEM23063A	Select and test mechanical engineering materials	*
MEM23064A	Select and test mechatronic engineering materials	*
MEM23073A	Select and apply aeronautical engineering methods, processes and construction techniques	*
MEM23074A	Select and apply avionic engineering methods, processes and construction techniques	*
MEM23109A	Apply engineering mechanic principles	*
MEM23111A	Select electrical equipment and components for engineering applications	*
MEM23112A	Investigate electrical and electronic controllers in engineering applications	*
MEM23139A	Design a basic single zone duct distribution system	*
MEM23140A	Determine operational parameters for building HVAC hydronic systems	*
MEM23142A	Determine psychrometric processes and system performance	*
MEM23143A	Apply energy management principles	*
MEM23145A	Apply codes and regulations to air conditioning designs	*
MEM23148A	Develop energy management solutions	*
MEM23151A	Commission and optimise performance of HVAC/R systems	*
MEM23152A	Apply principles of refrigeration food storage technology	
MEM23154A	Analyse and service HVAC/R control systems	*
MEM24002B	Perform penetrant testing	*
MEM24004B	Perform magnetic particle testing	*
MEM24006B	Perform eddy current testing	*
MEM24008B	Perform ultrasonic testing	*

Unit code	Unit title	Prerequisites
MEM24010B	Perform radiographic testing	*
MEM24011B	Establish non-destructive tests	*
MEM24012C	Apply metallurgy principles	
MEM30029A	Use workshop equipment and processes to complete an engineering project	
CPPBDN5013A	Develop and collaborate on building information models for small-scale building design projects	
MEA272B	Apply basic scientific principles and techniques in avionic engineering situations	
MEA273A	Select and test avionic engineering materials	
MEA342A	Apply basic aircraft power plant design characteristics	*
MEA349B	Apply basic scientific principles and techniques in aeronautical engineering situations	
MEA350A	Select and test aeronautical engineering materials	
MSS403010A	Facilitate change in an organisation implementing competitive systems and practices	
MSS405010A	Manage relationships with non-customer external organisations	
MSS405011A	Manage people relationships	
MSS405012A	Manage workplace learning	
MSS403001A	Implement competitive systems and practices	
MSS403002A	Ensure process improvements are sustained	
MSS405001A	Develop competitive systems and practices for an organisation	
MSS405002A	Analyse and map a value stream	
MSS405003A	Manage a value stream	
MSS405004A	Develop business plans in an organisation implementing	

Unit code	Unit title	Prerequisites
	competitive systems and practices	
MSS402030A	Apply cost factors to work practices	
MSS402060A	Use planning software systems in operations	
MSS402061A	Use SCADA systems in operations	
MSS402080A	Undertake root cause analysis	
MSS403021A	Facilitate a Just in Time system	
MSS403030A	Improve cost factors in work practices	
MSS403032A	Analyse manual handling processes	
MSS403040A	Facilitate and improve implementation of 5S	
MSS404050A	Undertake process capability improvements	*
MSS403051A	Mistake proof an operational process	
MSS404052A	Apply statistics to operational processes	
MSS404060A	Facilitate the use of planning software systems in a work area or team	
MSS404061A	Facilitate the use of SCADA systems in a team or work area	
MSS404081A	Undertake proactive maintenance analyses	
MSS404082A	Assist in implementing a proactive maintenance strategy	
MSS405020A	Develop quick changeover procedures	
MSS405021A	Develop a Just in Time system	
MSS405030A	Optimise cost of product or service	
MSS405031A	Undertake value analysis of a product or process costs in terms of customer requirements	
MSS405040A	Manage 5S system in an organisation	
MSS405050A	Determine and improve process capability	*

Unit code	Unit title	Prerequisites
MSS405060A	Develop the application of enterprise control systems in an organisation	
MSS405061A	Determine and establish information collection requirements and processes	
MSS405070A	Develop and manage sustainable energy practices	
MSS405075A	Facilitate the development of a new product	*
MSS405081A	Develop a proactive maintenance strategy	
MSATCS501A	Detail standardised structural connections	*
MSATCS502A	Detail structural steel members	*
MSATCS503A	Incorporate structural steel detailing into fabrication and construction project management	
MSATCS504A	Detail ancillary steelwork	*
Prerequisites:	Where a unit has prerequisites then those prerequisite units can only be used in the count towards the total number of units where they are listed in the table above.	

In addition to the above, the minimum requirements for this qualification can also be met by holders of the MEM30505 Certificate III in Engineering -Technical or equivalent subject to the completion of the specified Core units of competency as well as the additional elective units drawn from Group B.

Packaging advice to meet Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA) requirements

In order to meet the requirements of both Regulators for employment as para-professionals in aeronautical and avionic fields in the Australian aviation industry, electives must be selected as described below for the Aeronautical and Avionic streams.

Aeronautical stream

- Select the following seven (7) units from Group A.

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA105C	Apply quality standards applicable to aviation maintenance processes*

MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation*
MEA109B	Perform basic hand skills, standard trade practices and fundamentals*
MEA340A	Lay out and set up aircraft systems*
MEA341A	Apply basic aircraft design characteristics*

- Select the following seven (7) units from Group B.

MEA342A	Apply basic aircraft power plant design characteristics*
MEA349B	Apply basic scientific principles and techniques in aeronautical engineering situations
MEA350A	Select and test aeronautical engineering materials
MEM09143A	Represent aeronautical engineering designs*
MEM14083A	Apply aeronautical fundamentals to support design and development of engineering projects*
MEM23052A	Apply basic electro and control scientific principles and techniques in aeronautical engineering situations
MEM23073A	Select and apply aeronautical engineering methods, processes and construction techniques*

To bring the total number of electives to fifteen (15), one (1) additional unit can be chosen from Groups A or B, or from Diploma level units in the MEA11 Aeroskills Training Package.

Avionic stream

- Select the following seven (7) units from Group A

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA105C	Apply quality standards applicable to aviation maintenance processes*
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation*
MEA109B	Perform basic hand skills, standard trade practices and fundamentals*

MEA270A	Lay out avionic systems*
MEA271A	Lay out avionic flight management systems*

- Select the following five (5) units from Group B

MEA272B	Apply basic scientific principles and techniques in avionic engineering situations
MEA273A	Select and test avionic engineering materials
MEM09144A	Represent avionic engineering designs*
MEM14084A	Apply avionic fundamentals to support design and development of engineering projects*
MEM23074A	Select and apply avionic engineering methods, processes and construction techniques*

To bring the total number of electives to fifteen (15), another three (3) units are to be selected as follows:

- a minimum of two (2) additional units must be chosen from Group B
- a maximum of one (1) additional unit can be chosen from Group A, or from Diploma level units in the MEA11 Aeroskills Training Package.
-

MEM50311 Diploma of Jewellery and Object Design

Modification History

Release 5 - Imported elective units replaced by current versions.

Release 4 - Elective unit MEM22006A replaced by MEM22015A in Group C.

Release 3 - Elective unit MEM30001A replaced by MEM30031A

Release 2 - CUV unit codes corrected in Group D

Description

This qualification describes the skills and knowledge required to apply design processes and technical production skills to the design and manufacture of custom-made jewellery and objects.

Job roles/employment outcomes

This qualification targets those producing designs for jewellery which are likely to be for custom manufacture. It also includes skills required to produce designs according to the design brief. This person is likely to be employed in a production workshop or small business operation and working directly with clients to produce items as a designer/maker.

Application

This qualification is typically used to develop skills and knowledge in jewellery enterprises. Skills gained from this qualification may be applied to specialist jewellery and object design briefs, including heritage jewellery, theatre and film commissions, exhibitions and churchware, as well as one-off individual client briefs.

Pathways Information

Pathways into the qualification

This qualification may be accessed by direct entry. Credit will be granted towards this qualification to those who have completed MEM30605 Certificate III in Jewellery Manufacture, MEM40311 Certificate IV in Advanced Jewellery Manufacture (under development) or who can demonstrate equivalent vocational experience.

Pathways from the qualification

Further training pathways from this qualification include MEM60211 Advanced Diploma of Jewellery and Object Design.

Licensing/Regulatory Information

There is no direct link between this qualification and licensing, legislative and/or regulatory requirements. However, all work must comply with occupational health and safety (OHS) and environmental regulations and legislation that apply to the workplace.

Entry Requirements

Not applicable.

Employability Skills Summary

Diploma of Jewellery and object design

The following table contains a summary of the employability skills as identified by the jewellery and object design industry for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that reflect skill requirements for this level.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Interpret and implement relevant industry and workplace standards, regulations and policies • Complete design documentation in a range of formats, including drawings, specifications and plans • Use communication technologies efficiently • Interpret and document design brief and specifications • Discuss and explore problems with items and designs • Discuss design requirements with clients and others in the design or production team • Maintain accurate and legible records • Establish effective working relationships with colleagues • Present design ideas • Complete computer aided and manual drawings • Interact and network with industry participants • Interpret information on production techniques and materials
Teamwork	<ul style="list-style-type: none"> • Work independently and as a team member • Demonstrate and encourage others in working cooperatively with people of different ages, gender, race or religion • Support others in the design process • Undertake appropriate and effective communication with others in the design process • Provide and obtain feedback on processes, outcomes and specifications to support and improve team outcomes • Participate in sustainability improvements
Problem solving	<ul style="list-style-type: none"> • Identify risks and implement risk control measures for machinery, equipment and processes • Identify and address problems and faults • Check performance of machinery and equipment and perform minor maintenance as required • Assess and evaluate skill requirements of self and others to perform tasks • Deal with and promptly resolve issues • Use problem-solving techniques to determine design

	<p>requirements and production specifications</p> <ul style="list-style-type: none"> • Apply knowledge of materials and processes to solve design problems • Assess quality of materials before using in items • Test designs and production specifications • Identify and report potential environmental hazards
Initiative and enterprise	<ul style="list-style-type: none"> • Test procedures and design concepts to assess effectiveness in meeting objectives • Provide leadership in design and production processes • Collect and analyse information to guide design and business practices • Identify non-conformances to standards and initiate appropriate action • Identify and implement effective ways to achieve design and production outcomes • Rectify problems promptly and appropriately • Monitor and adjust activities in response to operational variations • Identify and address existing and potential risks • Provide leadership in continuous improvement practices • Assess and apply sustainable practices to work
Planning and organising	<ul style="list-style-type: none"> • Monitor quality outcomes • Determine production requirements and plans for designs • Plan processes to achieve desired outcomes within agreed timeframes • Ensure workstation and equipment are set up so that work requirements are met • Manage design processes • Produce design samples • Develop and implement contingency plans when responding to incidents and problems • Identify and monitor resource use in own work
Self-management	<ul style="list-style-type: none"> • Maintain own work efficiency • Ensure the work area is kept clean and tidy at all times • Manage work load priorities • Monitor own work against workplace, industry and quality standards • Adjust processes or techniques as required according to variations in requirements • Conduct work in a manner which minimises waste • Implement and apply OHS practices in the workplace • Check accuracy of own documented information

Learning	<ul style="list-style-type: none"> • Experiment with design ideas and review outcomes • Seek feedback on ideas and work outcomes • Assess own skill requirements and seek further development if required • Develop or adjust processes based on previous experience
Technology	<ul style="list-style-type: none"> • Use appropriate tools, machines and equipment safely, efficiently and effectively • Use information and communication technologies • Perform minor maintenance on equipment • Work with technology safely and according to workplace standards • Use computer-aided design (CAD) technology in the development of designs

Packaging Rules

The minimum requirements for achievement of the MEM50311 Diploma of Jewellery and Object Design are:

- completion of all **six (6)** core units of competency
- completion of **twenty (20)** elective units of competency, to bring the total number of units to **twenty six (26)**.

Units with prerequisites are marked with an asterisk. Note that when selecting elective units any prerequisite units must also be completed (refer to units for details).

Elective units of competency must be selected as follows:

- at least **three (3)** units of competency from Group A
- at least **three (3)** units of competency from Group B
- at least **three (3)** units of competency from Group C.

The **eleven (11)** remaining elective units can be selected as follows, to bring the total number of elective units to **twenty (20)**:

- Group A, B or C electives not previously selected
- a maximum of **three (3)** units from Group D
- up to **four (4)** appropriate elective units may be chosen from other endorsed Training Packages and accredited courses where those units are available in a Diploma or Certificate IV qualification.

Appropriate units are those that would be suitable for occupational outcomes in a jewellery and object design environment.

Note that the elective units listed below include all of the units that are approved for selection from the MEM05 Training Package for use in this qualification. This meets the NSSC requirement that one sixth of the total units must be able to be selected from other qualifications in the same Training Package.

Units that have been achieved through completion of other qualifications will be credited towards the Diploma when they are also included in the unit lists for this qualification.

CORE UNITS

- Complete all **six (6)** units of competency from this list:

Unit code	Unit title	P
MEM13014A	Apply principles of occupational health and safety in the work environment	
MEM19023A	Apply drawing and rendering techniques to jewellery or object design	
MEM19026A	Investigate quality and application of jewellery materials	
CUVPRP501A	Realise a body of creative work	
CUVRES502A	Analyse cultural history and theory	
MSAENV272B	Participate in environmentally sustainable work practices	

ELECTIVE UNITS

Group A: Specialist jewellery and object creative and design units

- Select a minimum of **three (3)** units of competency from this list:

Unit code	Unit title	P
MEM19024A	Use CAD to create and display 3D jewellery and object models	
MEM19025A	Create and present designs for jewellery and other 3D objects	
MEM19027A	Produce life drawings for presenting jewellery and object designs	*
MEM19028A	Select materials and new technologies for jewellery and 3D object design applications	
MEM19029A	Produce a professional jewellery design and 3D object portfolio	
MEM19030A	Research and design sustainable objects	
MEM19031A	Produce renderings and technical drawings for jewellery and object design construction	

Group B: Design process and drawing units

- Select a minimum of **three (3)** units of competency from this list:

Unit code	Unit title	P
MEM09002B	Interpret technical drawing	
MEM30031A	Operate computer-aided design (CAD) system to produce basic drawing elements	
BSBCRT501A	Originate and develop concepts	
BSBDES402A	Interpret and respond to a design brief	
BSBDES502A	Establish, negotiate and refine a design brief	
CUVACD504A	Research and apply light and colour	
CUVACD506A	Refine 2-D design ideas and processes	
CUVACD507A	Refine 3-D design ideas and processes	
CUVDRA501A	Refine drawing techniques	
CUVDRA502A	Investigate drawing materials and processes	
CUVPRP503A	Present a body of own creative work	
LMFFDT4012A	Produce ideation drawings	

Group C: Jewellery and object production units

- Select a minimum of **three (3)** units from this list:

Unit code	Unit title	P
MEM05006C	Perform brazing and/or silver soldering	
MEM06007B	Perform basic incidental heat/quenching, tempering and annealing	
MEM08010B	Manually finish/polish materials	*
MEM12023A	Perform engineering measurements	
MEM12024A	Perform computations	
MEM13003B	Work safely with industrial chemicals and materials	
MEM13004B	Work safely with molten metals/glass	
MEM18001C	Use hand tools	
MEM18002B	Use power tools/hand held operations	
MEM18003C	Use tools for precision work	*
MEM19001B	Perform jewellery metal casting	*
MEM19012B	Produce jewellery wax model	*

MEM19013B	Produce jewellery metal masters	*
MEM19032A	Design and implement mechanisms in jewellery items	
MEM19033A	Create silversmithing objects	
MEM19034A	Apply chain manufacture process	
MEM19035A	Plan and apply casting techniques for jewellery and object designs	
MEM19036A	Use specialised techniques to produce jewellery and objects	
MEM19037A	Plan and implement chain fabrication process	
MEM22015A	Source and estimate engineering materials requirements	
CUVACD304A	Make scale models	
CUVDES403A	Research and apply techniques for the design of wearable objects	
CUVJWL401A	Experiment with techniques to produce jewellery	

Group D: General electives

- Select a maximum of **three (3)** units of competency from this list:

Unit code	Unit title	P
Digital context and imaging		
MEM16008A	Interact with computing technology	
MEM19042A	Render images using computer graphics software	*
CUVACD512A	Work with photomedia in art and design practice	
CUVDIG401A	Experiment with techniques to enhance digital images	
CUVDIG501A	Refine digital art techniques	
CUVGRD301A	Prepare files for publication	
CUVPHI302A	Capture photographic images	
CUVPHI403A	Apply photo imaging lighting techniques	
Communication		
MEM16006A	Organise and communicate information	
BSBCM401A	Make a presentation	
BSBCRT401A	Articulate, present and debate ideas	
BSBCRT402A	Collaborate in a creative process	
CUVPRP405A	Develop and discuss ideas for own creative work	

Unit code	Unit title	P
Professional practice and management/industry context		
BSBIPR501A	Manage intellectual property to protect and grow business	
BSBIPR401A	Use and respect copyright	
BSBPMG522A	Undertake project work	
BSBSMB403A	Market the small business	
BSBSMB405B	Monitor and manage small business operations	
BSBSMB406A	Manage small business finances	
CUFIND201A	Develop and apply creative arts industry knowledge	
CUFRES401A	Conduct research	
CUVPRP403A	Select and organise finished work for storage	
CUVPRP502A	Prepare for sustainable professional practice	
MSAENV472B	Implement and monitor environmentally sustainable work practices	
SIRXSL201	Sell products and services

MEM60112 Advanced Diploma of Engineering

Modification History

Release 2 – Equivalent. ISC code correction in Avionic stream to updated unit MEM23086A.

Description

Not Applicable

Pathways Information

Not Applicable

Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, for employment at paraprofessional levels in the aeronautical and avionic fields in the Australian aviation industry, the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA) have requirements that must be met. Units designed to meet these requirements are included as electives in this qualification. Advice on the selection of electives to meet ADF and CASA requirements is given at the end of this qualification.

Entry Requirements

Not Applicable

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Read, interpret and follow information on legislative and regulatory requirements, codes of practice, specifications, design briefs, charts, lists, drawings and other applicable reference documents • Access, organise and communicate information from reference texts, manufacturer's catalogues and industrial magazines, websites, use of phone, email and fax • Negotiate, develop, implement and document work instructions, outcomes and performance measures • Communicate complex ideas through presentations, meetings and one-on-one communication • Prepare reports, graphics, specifications and other documentation • Use standard engineering drawing symbols, references, terminology and scientific notation • Consult and advise internal and external clients to ensure clarification of requirements for projects or operations • Liaise with internal and external stakeholders and others to confirm specifications and discuss alternatives • Research, evaluate and report information on systems, techniques, requirements, options and solutions
Teamwork	<ul style="list-style-type: none"> • Work alone or as part of single and multi-disciplinary teams that includes other para-professionals, professionals, trades and production personnel • Provide clear and precise information to team members • Negotiate and communicate with stakeholders • Continually monitor and review team performance • Delegate and supervise work where appropriate
Problem-solving	<ul style="list-style-type: none"> • Analyse and evaluate information to determine requirements, strategies and solutions (including benefit/cost analysis) • Apply and manipulate mathematical techniques and scientific principles to engineering situations (including arithmetic, algebraic expressions with one independent variable, two-dimensional geometry, trigonometry, linear functions, basic quadratic functions, basic statistical methods, significant figures) • Evaluate and rank engineering options • Evaluate environmental and sustainability performance of equipment and processes and make recommendations for improvements • Perform hazard and risk analysis

	<ul style="list-style-type: none"> Identify and select common engineering materials by their principal properties Diagnose performance and process problems
Initiative and enterprise	<ul style="list-style-type: none"> Be capable of applying skills and knowledge in new and different situations and contexts Use judgement and discretion Facilitate and capitalise on change and innovation Generate innovative and creative ideas, approaches and solutions
Planning and organising	<ul style="list-style-type: none"> Design and plan documentation for particular applications Plan and sequence work operations Manage work priorities and resources Prepare, monitor and review work plans, programs and budgets Identify requirements and manage processes to ensure adequate resourcing, programming, maintenance and training for operations
Self-management	<ul style="list-style-type: none"> Manage own time and own processes Complete tasks in a competent and timely manner Set personal goals and plans Gain and use feedback to improve personal performance Address all legislation, codes and standards related to safety, environmental impact and sustainability issues
Learning	<ul style="list-style-type: none"> Undertake research by consulting appropriate personnel, technical experts, manuals, online help and other reference materials as required Evaluate career options and develop career path strategy Review and maintain academic development, work experience, ethical practice, indemnity, negotiation, consultation and human relations with respect to the practice of engineering Manage learning opportunities in and outside the workplace Mentor others Identify options for professional development opportunities
Technology	<ul style="list-style-type: none"> Apply engineering knowledge and principles Select and apply engineering techniques and associated technologies, software and hardware Use technology appropriately to manage work priorities and commitments Use a CAD program, computer and peripherals

Packaging Rules

The minimum requirements for achievement of the MEM60112 Advanced Diploma of Engineering are:

- completion of the **seven (7)** core units of competency listed below, and
- completion of **twenty three (23)** elective units, to bring the total number of units to **thirty (30)**.

Group A and Group B elective units must be selected as follows:

- up to **eight (8)** general elective units from the list in Group A
- at least **fifteen (15)** specialist elective units from Group B, to bring the total number of elective units to **twenty three (23)**.

Note that when selecting elective units any prerequisite units must also be completed and count towards the required number of elective units (refer to units for details).

Five (5) appropriate Group B electives may be chosen from other endorsed Training Packages and accredited courses where those units are available for inclusion at Advanced Diploma. Note that the Group A and B elective units listed below include all the MEM units that are approved for selection in this qualification. This meets the NSSC requirement that one sixth of the total units must be able to be selected from other qualifications in the same Training Package.

Additional qualification descriptors

The following additional descriptors are approved for use with this qualification: Mechanical, Mechatronics, Manufacturing, Maintenance, Aeronautical and Avionics.

Core units

- Select all of the units from this list.

Unit code	Unit title
MEM16006A	Organise and communicate information
MEM16008A	Interact with computing technology
MEM22001A	Perform engineering activities
MEM22002A	Manage self in the engineering environment
MEM30007A	Select common engineering materials
MEM30012A	Apply mathematical techniques in a manufacturing, engineering or related environment
MSAENV272B	Participate in environmentally sustainable work practices

Elective units

Group A - general

- Select up to **eight (8)** units from this list.

Unit code	Unit title	Prerequisites
MEA101B	Interpret occupational health and safety practices in aviation maintenance	
MEA105C	Apply quality standards applicable to aviation maintenance processes	*
MEA107B	Interpret and use aviation maintenance industry manuals and specifications	
MEA108B	Complete aviation maintenance industry documentation	*
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance	*
MEA270A	Lay out avionic systems	*
MEA271A	Lay out avionic flight management systems	*
MEA340A	Lay out and set up aircraft systems	*
MEA341A	Apply basic aircraft design characteristics	*
MEM12024A	Perform computations	
MEM13013B	Work safely with ionising radiation	
MEM15001B	Perform basic statistical quality control	
MEM18001C	Use hand tools	
MEM24001B	Perform basic penetrant testing	*
MEM24003B	Perform basic magnetic particle testing	*
MEM24005B	Perform basic eddy current testing	*
MEM24007B	Perform ultrasonic thickness testing	*
MEM24009B	Perform basic radiographic testing	*
MEM30005A	Calculate force systems within simple beam structures	*
MEM30006A	Calculate stresses in simple structures	*
MEM30008A	Apply basic economic and ergonomic concepts to evaluate engineering applications	

Unit code	Unit title	Prerequisites
MEM30009A	Contribute to the design of basic mechanical systems	*
MEM30010A	Set up basic hydraulic circuits	
MEM30011A	Set up basic pneumatic circuits	
MEM30013A	Assist in the preparation of a basic workplace layout	
MEM30014A	Apply basic just in time systems to the reduction of waste	
MEM30015A	Develop recommendations for basic set up time improvements	
MEM30016A	Assist in the analysis of a supply chain	
MEM30017A	Use basic preventative maintenance techniques and tools	
MEM30018A	Undertake basic process planning	
MEM30019A	Use resource planning software systems in manufacturing	
MEM30020A	Develop and manage a plan for a simple manufacturing related project	
MEM30021A	Prepare a simple production schedule	
MEM30022A	Undertake supervised procurement activities	
MEM30023A	Prepare a simple cost estimate for a manufactured product	
MEM30024A	Participate in quality assurance techniques	*
MEM30025A	Analyse a simple electrical system circuit	*
MEM30026A	Select and test components for simple electronic switching and timing circuits	*
MEM30027A	Prepare basic programs for programmable logic controllers	
MEM30028A	Assist in sales of technical products/systems	
MEM30031A	Operate computer-aided design (CAD) system to produce basic drawing elements	
MEM30032A	Produce basic engineering drawings	
MEM30033A	Use computer-aided design (CAD) system to create and	*

Unit code	Unit title	Prerequisites
	display 3-D models	
MSAENV472B	Implement and monitor environmentally sustainable work practices	
Prerequisites:	Where a unit has prerequisites then those prerequisite units can only be used in the count towards the total number of units where they are listed in the table above.	

Group B - specialist

- Select at least **fifteen (15)** units from this list to bring the total number of elective units to **twenty three (23)**.

Unit code	Unit title	Prerequisites
MEA272B	Apply basic scientific principles and techniques in avionic engineering situations	
MEA273A	Select and test avionic engineering materials	
MEA342A	Apply basic aircraft power plant design characteristics	*
MEA349B	Apply basic scientific principles and techniques in aeronautical engineering situations	
MEA350A	Select and test aeronautical engineering materials	*
MEM09143A	Represent aeronautical engineering designs	*
MEM09144A	Represent avionic engineering designs	*
MEM09153A	Apply computer aided modelling and data management techniques to aeronautical engineering designs	*
MEM09154A	Apply computer aided modelling and data management techniques to avionic engineering designs	*
MEM09155A	Prepare mechanical models for computer-aided engineering (CAE)	*
MEM09156A	Prepare mechatronic models for computer-aided engineering (CAE)	*
MEM09157A	Perform mechanical engineering design drafting	
MEM09158A	Perform mechatronics engineering design drafting	

Unit code	Unit title	Prerequisites
MEM09204A	Produce basic engineering detail drawings	*
MEM09205A	Produce electrical schematic drawings	*
MEM12005B	Calibrate measuring equipment	*
MEM12022B	Program coordinate measuring machine (advanced)	*
MEM12025A	Use graphical techniques and perform simple statistical computations	*
MEM13010A	Supervise occupational health and safety in an industrial work environment	*
MEM14001B	Schedule material deliveries	
MEM14002B	Undertake basic process planning	
MEM14003B	Undertake basic production scheduling	
MEM14065A	Plan and design aeronautical engineering projects	*
MEM14066A	Plan and design avionic engineering projects	*
MEM14083A	Apply aeronautical engineering fundamentals to support design and development of engineering projects	*
MEM14084A	Apply avionic engineering fundamentals to support design and development of engineering projects	*
MEM14085A	Apply mechanical engineering analysis techniques	
MEM14086A	Apply mechatronic engineering analysis techniques	
MEM14087A	Apply manufactured product design techniques	*
MEM14088A	Apply maintenance engineering techniques to equipment and component repairs and modifications	*
MEM14089A	Integrate mechanical fundamentals into an engineering task	*
MEM14090A	Integrate mechatronic fundamentals into an engineering task	*
MEM14091A	Integrate manufacturing fundamentals into an engineering task	*
MEM14092A	Integrate maintenance fundamentals into an engineering task	*

Unit code	Unit title	Prerequisites
MEM15007B	Conduct product and/or process capability studies	*
MEM15008B	Perform advanced statistical quality control	*
MEM15010B	Perform laboratory procedures	
MEM15011B	Exercise external quality assurance	*
MEM15012B	Maintain/supervise application of quality procedures	*
MEM18016B	Analyse plant/equipment condition monitoring results	*
MEM22007A	Manage environmental effects of engineering activities	*
MEM22012A	Coordinate resources for an engineering project or operation	
MEM22013A	Coordinate engineering projects	
MEM22014A	Coordinate engineering-related manufacturing operations	*
MEM22015A	Source and estimate engineering materials requirements	
MEM22017A	Coordinate continuous improvement and technical development	
MEM22018A	Coordinate sales and promotion of engineering-related products or services	
MEM23003A	Operate and program computers and/or controllers in engineering situations	*
MEM23004A	Apply technical mathematics	
MEM23005A	Apply statistics and probability techniques to engineering tasks	*
MEM23006A	Apply fluid and thermodynamics principles in engineering	*
MEM23007A	Apply calculus to engineering tasks	*
MEM23008A	Apply advanced algebra and numerical methods to engineering tasks	*
MEM23052A	Apply basic electro and control scientific principles and techniques in aeronautical engineering situations	
MEM23063A	Select and test mechanical engineering materials	*

Unit code	Unit title	Prerequisites
MEM23064A	Select and test mechatronic engineering materials	*
MEM23073A	Select and apply aeronautical engineering methods, processes and construction techniques	*
MEM23074A	Select and apply avionic engineering methods, processes and construction techniques	*
MEM23084A	Apply scientific principles and techniques in aeronautical engineering situations	*
MEM23086A	Apply scientific principles and techniques in avionic engineering situations	*
MEM23095A	Apply aeronautical system design principles and techniques in aeronautical engineering situations	*
MEM23096A	Apply avionic system design principles and techniques in avionic engineering situations	*
MEM23097A	Apply automated systems principles and techniques in aeronautical engineering situations	*
MEM23098A	Apply automated systems principles and techniques in avionic engineering situations	*
MEM23109A	Apply engineering mechanic principles	*
MEM23111A	Select electrical equipment and components for engineering applications	*
MEM23112A	Investigate electric and electronic controllers in engineering applications	*
MEM23113A	Evaluate hydrodynamic systems and system components	*
MEM23114A	Evaluate thermodynamic systems and components	*
MEM23115A	Evaluate fluid power systems	*
MEM23116A	Evaluate programmable logic controller and related control system component applications	*
MEM23117A	Evaluate microcontroller applications	*
MEM23118A	Apply production and service control techniques	*

Unit code	Unit title	Prerequisites
MEM23119A	Evaluate continuous improvement processes	*
MEM23120A	Select mechanical machine and equipment components	*
MEM23121A	Analyse loads on frames and mechanisms	*
MEM23122A	Evaluate computer integrated manufacturing systems	*
MEM23123A	Evaluate manufacturing processes	
MEM23124A	Measure and analyse noise and vibration	*
MEM23125A	Evaluate maintenance systems	*
MEM23126A	Evaluate industrial robotic applications	*
MEM23129A	Evaluate thermal loads in heating, ventilation, air conditioning and refrigeration	*
MEM23130A	Coordinate servicing and fault finding of HVAC/R control systems	*
MEM23131A	Evaluate rapid prototyping applications	*
MEM23132A	Evaluate rapid manufacturing processes	*
MEM23133A	Evaluate rapid tooling applications	*
MEM23134A	Evaluate jigs and fixtures	*
MEM23135A	Evaluate moulding tools and processes	*
MEM23136A	Evaluate stamping and forging tools	*
MEM23137A	Evaluate rolling tools and processes	*
MEM23138A	Evaluate suitability of materials for engineering related applications	*
MEM23141A	Complete a building thermal performance survey	*
MEM23144A	Contribute to the design of a commercial refrigeration system	*
MEM23146A	Contribute to the design of industrial refrigeration systems	*
MEM23147A	Contribute to the design of hydronic systems	*

Unit code	Unit title	Prerequisites
MEM23149A	Contribute to the design of commercial and industrial exhaust systems	*
MEM23150A	Contribute to the design of heating systems	*
MEM23153A	Contribute to the design of heat exchanger systems	*
MEM24002B	Perform penetrant testing	*
MEM24004B	Perform magnetic particle testing	*
MEM24006B	Perform eddy current testing	*
MEM24008B	Perform ultrasonic testing	*
MEM24010B	Perform radiographic testing	*
MEM24011B	Establish non-destructive tests	*
MEM24012C	Apply metallurgy principles	
MEM30029A	Use workshop equipment and processes to complete an engineering project	
MSS402030A	Apply cost factors to work practices	
MSS402060A	Use planning software systems in operations	
MSS402061A	Use SCADA systems in operations	
MSS402080A	Undertake root cause analysis	
MSS403001A	Implement competitive systems and practices	
MSS403002A	Ensure process improvements are sustained	
MSS403010A	Facilitate change in an organisation implementing competitive systems and practices	
MSS403021A	Facilitate a Just in Time system	
MSS403023A	Monitor a levelled pull system of operations	
MSS403030A	Improve cost factors in work practices	
MSS403032A	Analyse manual handling processes	

Unit code	Unit title	Prerequisites
MSS403040A	Facilitate and improve implementation of 5S	
MSS403051A	Mistake proof an operational process	
MSS404050A	Undertake process capability improvements	*
MSS404052A	Apply statistics to operational processes	
MSS404060A	Facilitate the use of planning software systems in a work area or team	
MSS404061A	Facilitate the use of SCADA systems in a team or work area	
MSS404081A	Undertake proactive maintenance analyses	
MSS404082A	Assist in implementing a proactive maintenance strategy	
MSS405001A	Develop competitive systems and practices for an organisation	
MSS405002A	Analyse and map a value stream	
MSS405003A	Manage a value stream	
MSS405004A	Develop business plans in an organisation implementing competitive systems and practices	
MSS405005A	Manage competitive systems and practices in an organisation responding to individual and unique customer orders	
MSS405010A	Manage relationships with non-customer external organisations	
MSS405011A	Manage people relationships	
MSS405012A	Manage workplace learning	
MSS405020A	Develop quick changeover procedures	
MSS405021A	Develop a Just in Time system	
MSS405022A	Design a process layout	
MSS405023A	Develop a levelled pull system for operations and processes	
MSS405030A	Optimise cost of product or service	

Unit code	Unit title	Prerequisites
MSS405031A	Undertake value analysis of a product or process costs in terms of customer requirements	
MSS405040A	Manage 5S system in an organisation	
MSS405050A	Determine and improve process capability	*
MSS405052A	Design an experiment	*
MSS405060A	Develop the application of enterprise control systems in an organisation	
MSS405061A	Determine and establish information collection requirements and processes	
MSS405070A	Develop and manage sustainable energy practices	
MSS405075A	Facilitate the development of a new product	*
MSS405081A	Develop a proactive maintenance strategy	
MSS405083A	Adapt a proactive maintenance strategy for a seasonal or cyclical manufacturing business	
MSAENV672B	Develop workplace policy and procedures for sustainability	
Prerequisites:	Where a unit has prerequisites then those prerequisite units can only be used in the count towards the total number of units where they are listed in the table above.	

In addition to the above, the minimum requirements for this qualification can also be met by holders of the MEM30505 Certificate III in Engineering - Technical or the MEM50212 Diploma of Engineering - Technical or equivalent subject to the completion of the specified Core units of competency as well as the additional elective units drawn from Group B.

Packaging advice to meet Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA) requirements

In order to meet the requirements of both Regulators for employment as paraprofessionals in aeronautical and avionic fields in the Australian aviation industry, electives must be selected as described below for the Aeronautical and Avionic streams.

Aeronautical stream

- Select the following **seven(7)** units from Group A

MEA101B	Interpret occupational health and safety practices in aviation maintenance
---------	--

MEA105C	Apply quality standards applicable to aviation maintenance processes*
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation*
MEA109B	Perform basic hand skills, standard trade practices and fundamentals*
MEA340A	Lay out and set up aircraft systems*
MEA341A	Apply basic aircraft design characteristics*

- Select the following **twelve (12)** units from Group B

MEA342A	Apply basic aircraft power plant design characteristics*
MEA349B	Apply basic scientific principles and techniques in aeronautical engineering situations
MEA350A	Select and test aeronautical engineering materials*
MEM09143A	Represent aeronautical engineering designs*
MEM09153A	Apply computer aided modelling and data management techniques to aeronautical engineering designs*
MEM14065A	Plan and design aeronautical engineering projects*
MEM14083A	Apply aeronautical fundamentals to support design and development of engineering projects*
MEM23052A	Apply basic electro and control scientific principles and techniques in aeronautical engineering situations
MEM23073A	Select and apply aeronautical engineering methods, processes and construction techniques*
MEM23084A	Apply scientific principles and techniques in aeronautical engineering situations*
MEM23095A	Apply aeronautical system design principles and techniques in aeronautical engineering situations*
MEM23097A	Apply automated systems principles and techniques in aeronautical engineering situations*

To bring the total number of electives to **twenty three (23)**, another four units are to be selected as follows:

- a minimum of **three (3)** additional units must be chosen from Group B
- a maximum of **one (1)** additional unit can be chosen from Group A, or from the Advanced Diploma level units in the MEA11 Aeroskills Training Package.

Avionic stream

- Select the following **seven (7)** units from Group A

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA105C	Apply quality standards applicable to aviation maintenance processes*
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation*
MEA109B	Perform basic hand skills, standard trade practices and fundamentals*
MEA270A	Lay out avionic systems*
MEA271A	Lay out avionic flight management systems*

- Select the following **ten (10)** units from Group B

MEA272B	Apply basic scientific principles and techniques in avionic engineering situations
MEA273A	Select and test avionic engineering materials
MEM09144A	Represent avionic engineering designs*
MEM09154A	Apply computer aided modelling and data management techniques to avionic engineering designs*
MEM14066A	Plan and design avionic engineering projects*
MEM14084A	Apply avionic fundamentals to support design and development of engineering projects*
MEM23074A	Select and apply avionic engineering methods, processes and construction techniques*
MEM23086A	Apply scientific principles and techniques in avionic engineering situations*
MEM23096A	Apply avionic system design principles and techniques in avionic engineering situations*
MEM23098A	Apply automated systems principles and techniques in avionic engineering situations*

To bring the total number of electives to **twenty three (23)**, another **six (6)** units are to be selected as follows:

- a minimum of **five (5)** additional units must be chosen from Group B
- a maximum of **one (1)** additional unit can be chosen from Group A, or from Advanced Diploma level units in the MEA11 Aeroskills Training Package.
-

MEM60211 Advanced Diploma of Jewellery and Object Design

Modification History

Release 4 - Imported elective units replaced by current versions.

Release 3 - Elective unit MEM22006A replaced by MEM22015A in Group D.

Release 2 - Elective unit MEM30001A replaced by MEM30031A

Release 1 - New qualification

Description

This qualification describes the skills and knowledge required to develop jewellery and object design solutions that require a wide range of specialised technical and creative skills. Design solutions reflect consideration of aesthetics, function, production techniques, material characteristics, and marketability of jewellery and objects.

Job roles/employment outcomes

This qualification targets independent professional designers or designers/practitioners in jewellery and objects. Designs may meet a specific client brief and reflect original design concepts. This person is likely to be an owner/operator or employed in a production workshop or small business operation and working directly with clients to produce items.

Application

This qualification is typically used to develop skills and knowledge in jewellery and object design enterprises. Skills gained from this qualification may be applied to specialist jewellery and object design briefs, including heritage jewellery, theatre and film commissions, exhibitions and churchware, as well as one-off individual client briefs.

Pathways Information

Pathways into the qualification

This qualification may be accessed by direct entry. Credit will be granted towards this qualification to those who have completed MEM50311 Diploma of Jewellery and Object Design, MEM40311 Certificate IV in Advanced Jewellery Manufacture (under development), or who can demonstrate equivalent vocational experience.

Pathways from the qualification

Further training pathways from this qualification include appropriate higher education or Vocational Graduate qualifications.

Licensing/Regulatory Information

There is no direct link between this qualification and licensing, legislative and/or regulatory requirements. However, all work must comply with occupational health and safety (OHS) and environmental regulations and legislation that apply to the workplace.

Entry Requirements

Not applicable.

Employability Skills Summary

Advanced Diploma of Jewellery and object design

The following table contains a summary of the employability skills as identified by the jewellery and object design industry for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that reflect skill requirements for this level.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Use research and communication techniques and technology to gather and interpret data and information related to the development designs • Develop design specifications in consultation with client • Make calculations to determine production specifications • Communicate with clients and design or production team • Complete design documentation in a range of formats including drawings, specifications and plans • Produce detailed specifications and production documents to guide production • Negotiate designs with clients • Present design ideas • Interact with and negotiate with industry representatives
Teamwork	<ul style="list-style-type: none"> • Demonstrate and encourage others in working cooperatively with people of different ages, gender, race or religion • Provide and obtain feedback on processes, outcomes and specifications to support and improve team outcomes • Exchange information with clients and design team • Provide support to production team and oversee outcomes • Work with others throughout the design and production process • Provide leadership and direction to others • Participate in sustainability improvement
Problem solving	<ul style="list-style-type: none"> • Analyse suitability of materials for design concept • Analyse and apply design influences to determine trends and opportunities • Evaluate information to guide design development and processes • Make modifications to designs or techniques based on client requirements, production or resource issues • Identify and address design and production problems • Determine and test specifications to meet objectives • Assess commercial viability of designs
Initiative and	<ul style="list-style-type: none"> • Test procedures and design concepts to assess effectiveness in

enterprise	<p>meeting objectives</p> <ul style="list-style-type: none"> • Provide leadership in design and production processes • Identify non-conformances to standards and initiate appropriate action • Identify and implement effective ways to achieve design and production outcomes • Initiate and implement continuous improvement practices • Develop new designs for a target market • Identify design opportunities • Sell ideas to clients and other stakeholders • Determine promotional opportunities for work • Explore creative possibilities for designs • Evaluate sustainability of operations
Planning and organising	<ul style="list-style-type: none"> • Evaluate quality outcomes • Determine production requirements and plans for designs • Develop design and production plans • Plan processes to achieve desired outcomes within agreed timeframes • Ensure workplace and equipment are set up so that work requirements are met • Manage design and production processes • Produce and test design prototypes • Develop and implement contingency plans when responding to incidents and problems • Identify and monitor resource use in own work
Self-management	<ul style="list-style-type: none"> • Monitor own work against workplace, industry and quality standards • Adjust processes or techniques as required according to variations in requirements • Implement and apply OHS practices in the workplace • Seek feedback on own work to assess areas for improvement • Test quality and viability of work • Conduct work in a manner which minimises waste • Maintain currency of knowledge of trends, techniques and influences
Learning	<ul style="list-style-type: none"> • Assess own skill requirements and seek further development if required • Develop or adjust processes based on new information • Maintain current knowledge and skills in trends, techniques and influences • Seek feedback from target market on designs and products • Use design tools to explore and test design concepts • Experiment with materials, design concepts and production

	techniques
Technology	<ul style="list-style-type: none">• Use information and communication technology to acquire, manage and share information• Use computer aided design (CAD) technology in the development of designs• Use machinery and equipment in the production of prototypes

Packaging Rules

The minimum requirements for achievement of the MEM60211 Advanced Diploma of Jewellery and Object Design are:

- completion of all **nine (9)** core units of competency
- completion of **twenty seven (27)** elective units of competency, to bring the total number of units to **thirty six (36)**.

Units with prerequisites are marked with an asterisk. Note that when selecting elective units any prerequisite units must also be completed (refer to units for details).

Elective units of competency must be selected as follows:

- at least **five (5)** units of competency from Group A
- at least **three (3)** units of competency from Group B
- at least **three (3)** units of competency from Group C
- at least **three (3)** units of competency from Group D.

The **thirteen (13)** remaining elective units can be selected as follows, to bring the total number of elective units to **twenty seven (27)**:

- Group A, B, C or D electives not previously selected
- a maximum of **five (5)** units from Group E
- up to **six (6)** appropriate elective units may be chosen from other endorsed Training Packages and accredited courses where those units are available in an Advanced Diploma, Diploma (maximum 4 units) or Certificate IV (maximum 4 units) qualification.

Appropriate units are those that would be suitable for occupational outcomes in a jewellery and object design environment.

Note that the elective units listed below include all of the units that are approved for selection from the MEM05 Training Package for use in this qualification. This meets the NSSC requirement that one sixth of the total units must be able to be selected from other qualifications in the same Training Package.

CORE UNITS

- Complete all **nine (9)** units of competency from this list:

Unit code	Unit title	P
MEM13014A	Apply principles of occupational health and safety in the work environment	
MEM19023A	Apply drawing and rendering techniques to jewellery or object design	

MEM19026A	Investigate quality and application of jewellery materials	
MEM19040A	Create and manufacture jewellery or object design prototypes for the mass market	
MEM19041A	Experiment with jewellery or object designs	
BSBDES502A	Establish, negotiate and refine a design brief	
CUVPRP501A	Realise a body of creative work	
CUVRES502A	Analyse cultural history and theory	
MSAENV272B	Participate in environmentally sustainable work practices	

ELECTIVE UNITS

Group A: Specialist Advanced Diploma jewellery and object design units

- Select a minimum of **five (5)** units of competency from this list:

Unit code	Unit title	P
MEM19038A	Apply traditional techniques to jewellery and 3D object production	
MEM19039A	Plan, conduct and supervise a jewellery and object exhibition	
MEM19043A	Oversee jewellery or object design production	
BSBCRT601A	Research and apply concepts and theories of creativity	
BSBDES601A	Manage design realisation	
BSBDES602A	Research global design trends	
BSBDES701A	Research and apply design theory	
CUVACD601A	Extend professional expertise with drawing and other visual representation tools	
CUVPRP601A	Originate a body of independent creative work	
CUVPRP602A	Collaborate in professional creative projects	
CUVPRP603A	Engage in the business of creative practice	
CUVPRP604A	Publicly present a body of own creative work	
CUVRES601A	Extend cultural research expertise	

Group B: Specialist jewellery and object creative and design units

- Select a minimum of **three (3)** units of competency from this list:

Unit code	Unit title	P
MEM19024A	Use CAD to create and display 3D jewellery and object models	
MEM19025A	Create and present designs for jewellery and other 3D objects	
MEM19027A	Produce life drawings for presenting jewellery and object designs	*
MEM19028A	Select materials and new technologies for jewellery and 3D object design applications	
MEM19029A	Produce a professional jewellery design and 3D object portfolio	
MEM19030A	Research and design sustainable objects	
MEM19031A	Produce renderings and technical drawings for jewellery and object design construction	

Group C: Design process and drawing units

- Select a minimum of **three (3)** units of competency from this list:

Unit code	Unit title	P
MEM09002B	Interpret technical drawing	
MEM30031A	Operate computer-aided design (CAD) system to produce basic drawing elements	
BSBCRT501A	Originate and develop concepts	
BSBDES402A	Interpret and respond to a design brief	
CUVACD504A	Research and apply light and colour	
CUVACD506A	Refine 2-D design ideas and processes	
CUVACD507A	Refine 3-D design ideas and processes	
CUVDRA502A	Investigate drawing materials and processes	
CUVDRA501A	Refine drawing techniques	

CUVPRP503A	Present a body of own creative work	
LMFFDT4012A	Produce ideation drawings	

Group D: Jewellery and object production units

- Select a minimum of **three (3)** units of competency from this list:

Unit code	Unit title	P
MEM05006C	Perform brazing and/or silver soldering	
MEM06007B	Perform basic incidental heat/quenching, tempering and annealing	
MEM08010B	Manually finish/polish materials	*
MEM12023A	Perform engineering measurements	
MEM12024A	Perform computations	
MEM13003B	Work safely with industrial chemicals and materials	
MEM13004B	Work safely with molten metals/glass	
MEM18001C	Use hand tools	
MEM18002B	Use power tools/hand held operations	
MEM18003C	Use tools for precision work	*
MEM19001B	Perform jewellery metal casting	*
MEM19012B	Produce jewellery wax model	*
MEM19013B	Produce jewellery metal masters	*
MEM19032A	Design and implement mechanisms in jewellery items	
MEM19033A	Create silversmithing objects	
MEM19034A	Apply chain manufacture process	
MEM19035A	Plan and apply casting techniques for jewellery and object designs	
MEM19036A	Use specialised techniques to produce jewellery and objects	
MEM19037A	Plan and implement chain fabrication process	

MEM22015A	Source and estimate engineering materials requirements	
CUVACD304A	Make scale models	
CUVDES403A	Research and apply techniques for the design of wearable objects	
CUVJWL401A	Experiment with techniques to produce jewellery	

Group E: General Electives

- A maximum of **five (5)** units may be selected from the following list:

Unit code	Unit title	P
Digital context and imaging		
MEM16008A	Interact with computing technology	
MEM19042A	Render images using computer graphics software	*
CUVACD512A	Work with photomedia in creative practice	
CUVDIG401A	Experiment with techniques to enhance digital images	
CUVDIG501A	Refine digital art techniques	
CUVGRD301A	Prepare files for publication	
CUVPHI302A	Capture photographic images	
CUVPHI403A	Apply photo imaging lighting techniques	
Communication		
MEM16006A	Organise and communicate information	
BSBCMM401A	Make a presentation	
BSBCRT401A	Articulate, present and debate ideas	
BSBCRT402A	Collaborate in a creative process	
CUVPRP405A	Develop and discuss ideas for own creative work	
Professional practice and management/industry context		
BSBIPR401A	Use and respect copyright	

Unit code	Unit title	P
BSBIPR501A	Manage intellectual property to protect and grow business	
BSBPMG522A	Undertake project work	
BSBSMB403A	Market the small business	
BSBSMB405B	Monitor and manage small business operations	
BSBSMB406A	Manage small business finances	
CUFIND201A	Develop and apply creative arts industry knowledge	
CUFRES401A	Conduct research	
CUVPRP403A	Select and organise finished work for storage	
CUVPRP502A	Prepare for sustainable professional practice	
MSAENV472B	Implement and monitor environmentally sustainable work practices	
SIRXSLS201	Sell products and services

MEM80112 Vocational Graduate Diploma of Engineering

Modification History

Release 1 – This qualification supersedes MEM80111. Additional elective units included. Competitive manufacturing (MSACM) units replaced by Competitive Systems and Practices units.

Description

The MEM80112 Vocational Graduate Diploma of Engineering is a qualification for people with responsibility and accountability for engineering-related design and/or development, leadership or operations across a range of industries and disciplines. The work environment may be project based or relate to an ongoing senior paraprofessional role as a technical specialist or technical leader.

The MEM80112 Vocational Graduate Diploma of Engineering is designed to build upon existing expertise and provides high level specialist engineering design and engineering technical and project management skills.

The MEM80112 Vocational Graduate Diploma of Engineering can also provide an articulation pathway to professional qualifications.

Job roles/employment outcomes

The MEM80112 Vocational Graduate Diploma of Engineering provides the skills and knowledge for people performing the role of a Principal Technical Officer or equivalent in a range of engineering disciplines. Job roles related to this qualification may include engineering leadership roles, project planning, product development, research and development, project management, operations management, engineering related design and other engineering related technical roles requiring the exercising of engineering related skills of a complex and sophisticated nature or skills in a particular field of technical work.

The MEM80112 Vocational Graduate Diploma of Engineering qualification satisfies the requirements for employment as a Principal Technical Officer under relevant Awards and Agreements. Individuals seeking further information on the relationship of this qualification to the Principal Technical Officer classification should seek advice from their relevant industrial organisation.

Pathways Information

Pathways into the qualification

Pathways for candidates considering this qualification may include:

- a Diploma or Advanced Diploma of Engineering from the MEM05 Metal and Engineering Training Package
- significant relevant vocational training and/or work experience.

Pathways from the qualification

After achieving this qualification, candidates may undertake a Bachelor of Engineering or

other suitable higher education qualifications.

Additional qualification advice

Units of competency selected from other Training Packages must be relevant to the work outcome, local industry requirements and the qualification level.

Many units of competency in this qualification assume a level of English, mathematics and science equivalent to a school sector Year 12 standard.

Note: Manufacturing Skills Australia recommends that the design of any training delivery and assessment program to support the achievement of this qualification is based on the context required by the industry and/or enterprise.

Licensing/Regulatory Information

There is no direct link between this qualification and licensing, legislative and/or regulatory requirements.

Entry Requirements

Entry requirements for the MEM80112 Vocational Graduate Diploma of Engineering are:

- an Advanced Diploma of Engineering or a Diploma of Engineering, or a
- relevant Certificate IV or Certificate III together with significant relevant vocational practice in an engineering related role, or a
- Bachelor Degree; or other higher education qualification, with relevant vocational practice in an engineering related role.
-

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Establish parameters to the brief or contract and provide initial advice • Communicate and negotiate with project stakeholders and contributors • Communicate with support professionals and technicians • Establish visual performance indicators • Motivate personnel • Review proposal with client to improve outcomes and overcome possible problems

	<ul style="list-style-type: none"> • Negotiate adjustments to brief or contract • Obtain sign-off
Teamwork	<ul style="list-style-type: none"> • Coordinate the work of others, general and specialist, for projects that require complex and specialised knowledge to achieve objectives • Research and respond to organisational behaviour and management theory • Maintain a database of professional, trades and industry contacts • Establish and maintain continuous improvement teams
Problem-solving	<ul style="list-style-type: none"> • Generate and evaluate complex ideas through the analysis of information and concepts at an abstract level • Develop continuous improvement processes • Implement problem solving and decision making tools, including root cause analysis and solution evaluation techniques
Initiative and enterprise	<ul style="list-style-type: none"> • Initiate, analyse, design, plan, execute and evaluate major functions either broad and/or highly specialised within highly varied and/or highly specialised contexts • Generate a range of solutions using appropriate innovation, creativeness and conceptual skills • Establish and maintain project or operations management systems
Planning and organising	<ul style="list-style-type: none"> • Optimise the implementation plan and schedule • Establish the budget and control measures for project or operations management to conform to the financial business plan • Establish physical resources requirements • Establish human resources and skills development requirements • Establish and maintain records of operations or project for accountability against project objectives, schedule and budget • Maintain a plan and schedule of priorities for project or operations activities • Establish and maintain records of legislative compliance • Coordinate project functions, including planning, budgeting and strategy
Self-management	<ul style="list-style-type: none"> • Demonstrate full responsibility and accountability for personal outputs • Establish personal responsibilities for significant operations or projects • Establish, maintain and perform personal priorities • Establish and pursue a personal professional development

	program
Learning	<ul style="list-style-type: none"> • Demonstrate the self-directed development and achievement of broad and/or highly specialised areas of knowledge and skills building on prior knowledge and skills • Establish human resources and skills development requirements • Research and respond to organisational behaviour and management theory • Research industrial and related law • Research financial management techniques • Research knowledge, skills and techniques appropriate to chosen technical electives, mechanical, fluid power, hydrodynamic, thermodynamic, electrical, PLC and microcontroller techniques, computer simulation, differential equations, machine design, noise and vibration, manufacturing and maintenance management techniques
Technology	<ul style="list-style-type: none"> • Demonstrate an expert command of wide-ranging, highly specialised, technical, creative or conceptual skills in complex and/or highly specialised or varied contexts • Develop knowledge, skills and techniques appropriate to chosen technical electives, mechanical, fluid power, hydrodynamic, thermodynamic, electrical, PLC and microcontroller techniques, computer simulation, differential equations, machine design, noise and vibration, manufacturing and maintenance management techniques • Calibrate equipment, take measurements and analyse results • Use software for modelling, human machine interfaces, graphical user interfaces, and networks for data handling and control

Packaging Rules

The MEM80112 Vocational Graduate Diploma of Engineering requires achievement of **ten (10)** units in accordance with the following rules:

- **three (3)** core units of competency
- **seven (7)** elective units of competency.

Elective selection must include:

- a minimum of four (4) Group A elective units
- three (3) remaining elective units may be selected from any combination of:
 - Group A elective units

- Group B elective units
- units from any nationally endorsed Training Packages and accredited courses that are packaged at a Vocational Graduate Certificate or Vocational Graduate Diploma level.

NOTE: Units marked with an asterisk (*) have prerequisite unit/s which must be completed either before or concurrently with the listed unit.

Core units of competency

- Complete the following **three (3)** units of competency.

Unit code	Unit title
MEM234002A	Integrate engineering technologies
MEM234035A	Maintain and apply technical and engineering skills
MSAENV672B	Develop workplace policy and procedures for environmental sustainability

Elective units of competency

Group A

Select a minimum of **four (4)** elective units of competency from the following list.

Unit code	Unit title
MEM234001A	Plan and manage engineering-related projects or operations
MEM234003A	Design machines and ancillary equipment
MEM234004A	Design for engineering-related noise and vibration mitigation
MEM234005A	Design hydrodynamic pumping systems
MEM234006A	Evaluate and select thermodynamic systems or sub-systems
MEM234007A	Design fluid power systems
MEM234008A	Design plant using computer simulations
MEM234009A	Design computer-integrated manufacturing systems
MEM234010A	Design microcontroller applications
MEM234011A	Design programmable logic controller applications
MEM234012A	Design integrated maintenance management systems
MEM234013A	Plan and design engineering-related manufacturing processes
MEM234014A	Design a robotic system
MEM234015A	Design hydronic heat exchanger systems
MEM234016A	Design refrigeration systems
MEM234017A	Design exhaust, ventilation and dust collection systems
MEM234018A	Design heating, ventilation, air conditioning and refrigeration control systems
MEM234019A	Apply finite element analysis in engineering design
MEM234020A	Coordinate small lot manufacture using rapid manufacture processes
MEM234021A	Apply statistics to technology problems
MEM234022A	Apply advanced calculus to technology problems

MEM234023A	Apply differential equations to technology problems
MEM234024A	Apply advanced mathematics in technology problems
MEM234025A	Apply numerical methods to technology problems
MEM234026A	Develop and coordinate engineering-related contingency plans
MEM234027A	Plan and manage materials supply for an engineering project or manufacturing operation
MEM234028A	Produce and manage technical documentation
MEM234029A	Produce and manage technical publications
MEM234030A	Provide specialised technical and engineering guidance to other technical employees
MEM234031A	Manage installation, commissioning or modification of machines and equipment
MEM234032A	Manage fluid power related technologies in an enterprise
MEM234033A	Lead engineering-related quality operations in an enterprise
MEM234034A	Manage heating, ventilation, air conditioning and refrigeration systems or projects
MSS407012A	Lead a problem solving process to determine and solve root cause
MSL976003A	Evaluate and select appropriate test methods and/or procedures

Group B

A maximum of three (3) elective units of competency may be selected from the following list, Group A units not already chosen or units from other endorsed Training Packages where the units are available in a Vocational Graduate Certificate or Vocational Graduate Diploma.

--

Unit code	Unit title
MEM23063A	Select and test mechanical engineering materials*
MEM23064A	Select and test mechatronic engineering materials*
MEM23111A	Select electrical equipment and components for engineering applications*
MEM23112A	Investigate electric and electronic controllers in engineering applications*
MEM23113A	Evaluate hydrodynamic systems and system components*
MEM23114A	Evaluate thermodynamic systems and components*
MEM23115A	Evaluate fluid power systems*
MEM23116A	Evaluate programmable logic controller and related control system component applications*
MEM23117A	Evaluate microcontroller applications*
MEM23118A	Apply production and service control techniques*
MEM23119A	Evaluate continuous improvement processes*
MEM23120A	Select mechanical machine and equipment components*
MEM23121A	Analyse loads on frames and mechanisms*
MEM23122A	Evaluate computer integrated manufacturing systems*
MEM23123A	Evaluate manufacturing processes
MEM23124A	Measure and analyse noise and vibration*
MEM23125A	Evaluate maintenance systems*
MEM234036A	Apply configuration management procedures in engineering management*
MEM234037A	Perform maintenance-related integrated logistic support management activities*
MEM234038A	Apply systems engineering procedures to engineering design project management
BSBLED705A	Plan and implement a mentoring program

BSBLED706A	Plan and implement a coaching strategy
BSBLED710A	Develop human capital
BSBREL701A	Develop and cultivate collaborative partnerships and relationships
MSS407013A	Review continuous improvement processes
MSS407001A	Prepare for and implement change
MSS407002A	Review operations practice tools and techniques
MSS407003A	Analyse process changes
MSS407004A	Facilitate improvements in the internal value stream
MSS407005A	Undertake a qualitative review of a process change
MSS407006A	Build relationships between teams in an operations environment
MSS407007A	Respond to a major non-conformance
MSS407008A	Capture learning from daily activities in a organisation
MSS407009A	Facilitate improvements in the external value stream
MSS407010A	Improve visual management in the workplace
MSS407011A	Manage benchmarking studies
MSS408008A	Analyse data for relevance to organisational learning
MSS408001A	Develop the competitive systems and practices approach
MSS408002A	Audit the use of competitive tools
MSS408003A	Develop models of future state operations practice
MSS408004A	Develop the value stream
MSS408005A	Develop the learning processes of the operations organisation
MSS408006A	Develop and refine systems for continuous improvement in operations
MSS408007A	Develop problem solving capability of an organisation
MSS405007A	Introduce competitive systems and practices to a small or medium enterprise

MSS405020A	Develop quick changeover procedures
MSS405022A	Design a process layout
MSS405023A	Develop a levelled pull system for operations and processes
MSS405032A	Analyse cost implications of maintenance strategy

MEMSS00001 Non Destructive Testing - Level 2 NDT practitioner

Modification History

New Skill Set. Release 1

Description

This Skill Set is intended to build on existing trade or technical qualifications. The competencies can also provide credit towards higher level qualifications within the Metal and Engineering Training Package. It covers the skill and knowledge requirements that may lead to certification against AS 3998/ISO 9712 - LEVEL 2 in the following methods:

- penetrant testing
- eddy current testing
- ultrasonic testing
- radiographic testing

However, the certifying body may impose additional requirements before a NDT practitioner can work in the field. Applicants should check full certification requirements with the relevant body. Entrants to this Skill Set should have sufficient workplace skills in OH&S, communication and teamwork that provide underpinning competency to acquire and apply the Skill Set.

An individual certified to NDT level 2 is qualified to perform and direct non-destructive testing in accordance with established or recognized procedures. This may include:

- defining the limitations of application of the test method for which the level 2 individual is qualified;
- translating NDT codes, standards, specifications and procedures into practical testing instructions adapted to the actual working conditions;
- setting up and verifying equipment settings;
- performing and supervising tests;
- interpreting and evaluating results according to applicable codes, standards and specifications;
- preparing NDT instructions;
- carrying out or supervising all level 1 duties;
- training or guiding personnel below level 2; and
- organizing and reporting results of non-destructive tests.
-

Pathways Information

Not applicable.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM18001C	Use hand tools
MEM24002B	Perform penetrant testing
MEM24006B	Perform eddy current testing
MEM24008B	Perform ultrasonic testing
MEM13013B	Work safely with ionizing radiation
MEM24010B	Perform radiographic testing
MEM24012C	Apply metallurgy principles

Target Group

This Skill Set is appropriate for experienced trade and technical personnel such as NDT technicians, quality assurance inspectors and other operators required to conduct non destructive testing of materials and components using a range of test methods.

The roles, training and experience requirements for NDT operators are defined through a comprehensive range of national and international standards which identify a three level structure. Certification is for a limited period, five years initially, and must be renewed, either on the basis of continuing work experience in the appropriate area or examination. After ten years re-certification is based on examination.

Suggested words for Statement of Attainment

These competencies are taken from the Metal and Engineering Training Package and provide training that may meet the minimum skill and knowledge requirements for industry certification as a Level 2 NDT practitioner.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Read and understand job sheets	1.1. Job sheets and instructions are understood and followed correctly.
2. Select assembly equipment and components	2.1. Assembly equipment is selected according to instructions or job sheets and used to standard operating procedures. 2.2. Components/sub-assemblies are obtained and arranged for assembly. 2.3. Equipment/tools are used in a safe manner.
3. Assemble components	3.1. Assembly is produced following correct sequence of operations, using selected equipment to standard operating procedures. 3.2. Production data is recorded/input to standard operating procedures.
4. Perform tests	4.1. Assembly is tested/checked for compliance to job sheet requirements, following standard operating procedures as required.
5. Protect assembly from damage	5.1. Components and/or assemblies are handled and stored safely, in a manner least likely to cause damage.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- following job instructions and standard operating procedures
- selecting and using assembly tools, components and sub-assemblies
- entering routine and familiar information onto proformas and other standard workplace forms
- following oral instruction

Required knowledge

Look for evidence that confirms knowledge of:

REQUIRED SKILLS AND KNOWLEDGE

- application and use of assembly tools and equipment
- sequence in which the assemblies are to be performed
- storage location of the component/sub-assemblies
- required tests and checks
- required action for non-conformance
- potential damage through the use of inappropriate handling and/or unsafe storage procedures
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with manual production assembly

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to assemble components and/or sub-assemblies in a production environment and test the components and/or sub-assemblies to ensure compliance with specifications.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing manual production assembly or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Read and understand job sheets	1.1. Job sheet or equivalent instructions are interpreted correctly. 1.2. All components/sub-assemblies are checked against job sheet, assembly list or equivalent instructions. 1.3. Fitting requirements and sequential assembly planning are carried out where applicable.
2. Select and use assembly tools and equipment	2.1. Tools, equipment and components/sub-assemblies are selected to meet job requirements.
3. Assemble engineering components	3.1. Defective or faulty components/sub-assemblies are identified and processed according to standard operating procedure. 3.2. Components/sub-assemblies are correctly prepared for assembly. 3.3. Techniques and principles appropriate to the job requirements are applied in assembly activity. 3.4. Records/inputs are accurately maintained or processed. 3.5. Components of assembly are fitted to ensure correct positioning and conformance with specifications. 3.6. Assembly is tested to ensure that components interface/interact according to operational specifications.
4. Adjust mechanical assemblies	4.1. Final adjustments are performed on assembly to ensure alignment with operational specifications. 4.2. Faulty assemblies are identified for rework by operator or, where the fault is outside the scope of the workstation, processed according to standard operating procedure. 4.3. The assembly is correctly marked/tagged/identified.
5. Protect assembly from damage	5.1. Components and/or assembly are handled and stored according to standard operating procedures and in a manner least likely to cause damage.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. This may include drawings
- preparing a sequential assembly plan
- selecting and sourcing appropriate tools, components and sub-assemblies
- using tools appropriately
- following job instructions
- identifying faulty components
- following oral instruction
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- fitting requirements
- uses of relevant tools and equipment
- sequence in which the tasks are to be performed
- sources of the component/sub-assemblies
- required action for tests and checks
- required action for non-conformance
- damage to components and/or assemblies through the use of inappropriate handling and/or unsafe storage procedures
- relevant record keeping requirements
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with precision assembly

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Read and understand job sheets	1.1. Job sheets/instruction are correctly interpreted and followed.
2. Select and use sheet and plate assembly equipment	2.1. Assembly equipment is selected in accordance with instructions on job sheet. 2.2. Equipment is used in a safe manner according to standard operating procedures.
3. Assemble fabrications	3.1. Products to be assembled are verified against specifications. 3.2. Assembly is produced following correct sequence of operations. 3.3. Assemblies/fabrications are joined to specification using specified joining techniques. 3.4. Assembly is tested/checked for compliance with job requirements using standard operating procedures.
4. Protect assembly from damage	4.1. Assemblies/fabrications are handled and stored according to standard operating procedures and in a safe manner least likely to cause damage.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following written job sheets, instructions, standard operating procedures and other applicable reference documents
- checking and clarifying routine familiar information
- selecting and using specified assembly equipment and tools
- following sequence of operations
- joining the components/fabrications correctly and safely using appropriate techniques
- testing and checking assembled products for compliance with specifications
- handling and storing components, fabrications and/or assemblies
- checking for conformance to specifications
- following oral instructions

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

Look for evidence that confirms knowledge of:

- the importance of following the sequence of operations
- application and function of assembly equipment
- safety precautions and operating characteristics of assembly equipment and tools
- application and limitations of different joining techniques
- surface preparation and joining techniques
- assembly tests/checks
- safe handling and storage procedures applicable to components, fabrications and/or assemblies
- effects of inappropriate handling and storage procedures
- hazards and control measures associated with sheet and plate assembly
- use and application of personal protective equipment
- safe work practices and procedures for sheet and plate assembly

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Read and understand job sheets.	1.1. Job sheets and instructions are understood and followed correctly.
2. Select assembly equipment	2.1. Assembly equipment is selected and used in accordance with instructions or job sheets to standard operating procedures. 2.2. Equipment is used in a safe manner.
3. Identify electronic/electrical components	3.1. Common name, appearance, colour of electronic and electrical components are identified. 3.2. Polarity indicators are identified on components.
4. Assemble components	4.1. Correct components are selected by code/colour or other identification methods. 4.2. Components/devices are prepared for soldering or other termination methods. 4.3. Cables are connected to a variety of plug and socket combinations as required. 4.4. Components are safely handled and stored using appropriate anti-static handling procedures and techniques in accordance with standard operating procedures. 4.5. Assembly is produced following correct sequence of operations.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following assembly job sheets, instructions and standard operating procedures
- selecting appropriate tools and equipment
- using tools and equipment
- selecting electronic and electrical components by name, colour and appearance
- preparing components/devices for soldering and termination
- connecting cables to plugs/sockets

REQUIRED SKILLS AND KNOWLEDGE

- handling and storing components safely
- applying anti-static handling procedures and techniques
- checking work for conformance to specification
- completing production records and reports
- following oral instructions
- using hand and power tools dedicated to the assembly process
- identifying components by name, appearance and colour
- entering routine and familiar information onto proforma and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- assembly equipment and its application
- hazards associated with the misuse of tools and equipment
- polarity indicators on common electronic and electrical components
- consequences of connecting electronic and electrical components with incorrect polarity
- termination methods
- preparation requirements for components/devices to be soldered
- preparation requirements for components/devices to be terminated using non-soldering techniques
- connection requirements of a variety of plugs and sockets
- anti-static procedures and techniques
- safe handling and storage requirements of electrical and electronic components
- consequences of not following the correct sequence of operations
- specifications against which the assembly is to be checked/tested
- test/check procedures
- data recording requirements

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to perform electrical/electronic assembly (production).</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and to be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with electronic/electrical assembly (production) or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Perform tests	<p>1.1.Assembly is tested for functional requirements from job sheets.</p> <p>1.2.Faults in assembly or soldering are identified.</p>
2. Identify cause of fault and rectify fault	<p>2.1.Cause of fault is identified using standard operating procedures.</p> <p>2.2.Repair and/or rework is completed according to instructions from job cards, drawings, assembly specification.</p> <p>2.3.Components are safely handled and stored using appropriate anti-static handling procedures and techniques.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following job sheets/instructions, standard operating procedures and assembly drawings
- performing specified tests on the assembly
- identifying assembly or soldering faults and their causes
- obtaining all information relevant to the repair and/or rework to be undertaken
- completing repair and/or rework to specification
- safely handling and storing components
- using anti-static handling procedures and techniques
- following oral instructions

Required knowledge

Look for evidence that confirms knowledge of:

- the functional requirements of the assembly
- assembly tests and methods
- faulty connections and components and their symptoms
- causes of faults in connections and components

REQUIRED SKILLS AND KNOWLEDGE

- the dangers of static electricity to electrical and electronic components
- anti-static procedures and techniques
- safe handling and storage requirements of electrical and electronic components
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify job requirements	1.1. Setting requirements are correctly identified from job sheets/instructions.
2. Select and use a range of hand tools and equipment	2.1. Hand tools and equipment for setting assembly stations are used in a safe manner, according to instructions, standard operating procedures and any legislative requirements.
3. Set assembly stations	3.1. Assembly stations are set up for a range of processes and operations according to defined procedures. 3.2. Safe work practices are observed and implemented. 3.3. Assembly stations are adjusted to specifications and operational requirements. 3.4. Assembly stations are tested for correct operation.
4. Maintain equipment	4.1. Routine maintenance is carried out to standard operating procedures. 4.2. Worn or damaged components are identified and changed.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings for setting assembly stations
- following oral instructions
- testing and checking assembly station and outputs
- identifying worn and/or damaged components

Required knowledge

Look for evidence that confirms knowledge of:

- procedures to be followed in setting up assembly stations
- safety hazards associated with the assembly station and/or its setting up

REQUIRED SKILLS AND KNOWLEDGE

- specifications applicable to the assembly station
- effect of various adjustments that can be made to the assembly station
- routine maintenance requirements
- effect of worn or damaged components on the operational requirements and specifications of the assembly station
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to set, adjust and test assembly stations. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication materials handling, recording and reporting associated with setting, adjusting and testing assembly stations or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

EVIDENCE GUIDE

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Job sheets/instructions

Verbal and written job instructions, specifications, standard operating procedures and assembly drawings within the scope of this unit

Assembly station

May be used for operations such as riveting, pressing, screwing, tensioning etc. and processes such as testing, gluing, identification, numbering or simple hot stamping etc.

Set up

Ensuring that appropriate jigs, fixtures, die sets, stores and tooling etc. are in place as required to meet the production order or schedules

Processes and operations

Riveting, pressing, screwing, tensioning, testing, gluing, identification, numbering or simple hot stamping of components and assemblies

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select materials	1.1.Requisitions are completed as required according to standard operating procedures. 1.2.Charge analysis is undertaken in accordance with standard operating procedures. 1.3.The charge analysis is converted to furnace charge weight using standard operating procedures. 1.4.Charge is weighed according to standard operating procedures.
2. Start up furnace	2.1.Furnace is inspected for any defects or damage. 2.2.Routine operational maintenance of furnace is undertaken to standard operating procedures. 2.3.Furnace is started up to standard operating procedures. 2.4.Faults are reported according to standard operating procedures.
3. Charge furnace	3.1.Emergency/safety procedures are identified and followed as necessary. 3.2.Materials are pre-heated if required according to standard operating procedures. 3.3.Materials are charged into furnace using standard operating procedures. 3.4.Suitable areas for emergency unloading of molten metal are identified and kept available.
4. Monitor furnace	4.1.Furnace is maintained at optimum operating condition to standard operating procedures. 4.2.Sample for chemical analysis is taken and remedial action is applied as required to standard operating procedures. 4.3.Furnace is drossed and/or degassed to standard operating procedures. 4.4.Temperature of metal is checked and adjustment made if necessary.
5. Tap or unload the furnace	5.1.Quantity of the required metal is identified. 5.2.Tap rate is carried out to standard operating procedures. 5.3.Tapping or unloading is undertaken and completed safely according to standard operating procedures.
6. Shut down furnace	6.1.Shut-down of furnace is completed to standard operating procedures.

ELEMENT	PERFORMANCE CRITERIA
	6.2. Routine operational maintenance of furnace is undertaken to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and interpreting routine information on written job instructions, specifications, standard operating procedures relevant test data sheets and other standard workplace forms. May include drawings for furnace operation
- following oral instruction
- entering routine and familiar information onto proformas and standard workplace forms
- identifying faults and areas for routine repair of the furnace and performing routine maintenance as necessary
- following procedures for starting and closing down the furnace
- deciding on charge materials
- weighing charge materials
- feeding materials into furnace
- measuring metal temperature and correcting as necessary
- sampling for chemical, carbon equivalent and wedge tests
- degassing as necessary
- deslagging/drossing
- tapping the metal

Required knowledge

Look for evidence that confirms knowledge of:

- refractory conditions, faults, and routine repair
- condition of cooling water supply
- starting procedures for different types of furnaces
- metallic charge materials and alloying elements
- weighing procedures and scale types
- correct order of loading of different charge materials
- thermocouple condition monitoring and adjustment mechanism for furnace

REQUIRED SKILLS AND KNOWLEDGE

- interpretation of carbon equivalent and wedge test results
- degassing procedures including tablet, lance and other procedures
- coagulant agents, application procedures and slag removal procedures
- close-down procedures
- applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with operating melting furnaces

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare equipment	1.1. Die coat is mixed in correct proportion. 1.2. Die temperatures are lifted to, or maintained, at the correct level. 1.3. Appropriate safety clothing and apparatus is used. 1.4. Die coat is applied in correct sequence and in a safe manner according to standard operating procedures. 1.5. Die is correctly located and closed. 1.6. Die is correctly placed on machine, toggle clamps are attached and done up to required torque. 1.7. Air cooling is attached to the die as specified if required.
2. Carry out manual pouring	2.1. Pour is made in manner to reduce porosity and lamination. 2.2. Conditions are identified that contribute to inferior castings or rejects. 2.3. Allowance is made for adequate cooling time. 2.4. Pour is made at a continuous and appropriate rate during filling. 2.5. Monitoring of die coating condition is carried out and re-spraying occurs as required.
3. Remove materials	3.1. Parts are removed and stored in a manner that minimises damage. Any flash is removed from the die surface.
4. Clean die	4.1. Shot blaster is operated in a safe manner and according to standard operating procedures. 4.2. Chemical analysis of melt is taken and remedial action is applied as required to standard operating procedures. 4.3. Furnace is drossed and/or degassed to standard operating procedures. 4.4. Work area is cleaned of coating and shot residue to appropriate standard.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings relating to gravity die casting
- mixing of die coats in the correct proportions in accordance with standard operating procedures
- maintaining of die at correct temperatures
- pouring of molten metal
- assessing correct curing times
- applying die coats
- removing of casting from die
- operating shot blaster
- using measurement skills needed to meet the requirements of this unit
- entering routine and familiar information onto proforma and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- relevant written instructions
- die coat function(s) in gravity die casting
- correct proportions and consistency of die coats
- correct identification of die coat materials
- procedures for raising the temperature of the die to the correct level and maintaining the required temperature
- procedures to be followed when pouring molten metal to produce sound castings
- causes of defects in castings
- curing times for castings of various volumes and materials
- timing of die coat application and quantity of die coat to be used for different applications
- correct procedures for removing castings from the die and storing of castings
- die condition and need for shot blasting
- shot blaster operating procedures
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with gravity die casting, including housekeeping

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Conduct pre-operational checks	1.1.The start-up procedure is conducted according to standard operating procedures. 1.2.If necessary, the shot size is adjusted. 1.3.If applicable, nitrogen and/or vacuum systems are checked 1.4.If applicable, a functional check is made of the picking robot, and the component gripper is adjusted if necessary. 1.5.Die spray nozzles are adjusted as necessary. 1.6.Planning is carried out which ensures efficient flow of finished product i.e. breaking of runners, stacking baskets, bins, conveyors.
2. Operate all functions on machine control panel	2.1.Appropriate knowledge of die casting process is applied to the operation, adjustment and monitoring of machine functions.
3. Operate machine to produce castings	3.1.The die casting machine is operated to standard operating procedures, including maintenance of liquid metal and die operating conditions. 3.2.Runners are broken off correctly. 3.3.Castings are visually inspected for porosity, cracks, tears, splits, sinks, cold shuts, tinning and die surface crazing according to standard operating procedures. 3.4.Castings are handled in a manner that minimises risk of damage to the casting and injury to personnel. 3.5.First-off castings are produced, visually inspected and submitted for checking against specifications.
4. Monitor furnace	4.1.The furnace is maintained at optimum operating condition to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

REQUIRED SKILLS AND KNOWLEDGE

- reading and following information on written job procedures and specifications
- performing pre-start checks
- adjusting the shot size
- checking nitrogen and/or vacuum systems for correct operation
- checking and adjusting the picking robot and component gripper
- adjusting die spray nozzles
- sequencing of operations
- starting, operating and shutting down a die casting machine
- visually checking for conformance to specifications
- handling castings

Required knowledge

Look for evidence that confirms knowledge of:

- procedures for pre-start checks
- procedures for starting up the die casting machine
- adjustments that can be made to ensure correct operation of the machine
- procedures for adjusting the shot size
- the effects of incorrect shot size on the quality of the die casting
- the function of nitrogen and vacuum systems in the die casting process
- the procedures for checking/ adjusting nitrogen and/or vacuum systems
- the function of a picking robot and the component gripper
- procedures for adjusting the picking robot
- the effects of adjustments on robot performance
- the reasons for spraying the die
- procedures for adjusting the die spray nozzles
- operations to be performed subsequent to the die casting of the product
- tools and equipment
- methods of transporting/conveying the die cast product
- the die casting process
- the effect of adjusting each machine control on the quality of the die casting produced
- procedures to adjust the operation of the die casting machine
- die casting machine operation
- maintenance of liquid levels
- operating parameters
- procedures to remove runners from the die casting
- procedures to inspect die castings
- common faults in die castings and probable causes
- damage that can be caused to castings through inappropriate handling and storage
- procedures for checking first-off castings for conformance to specification

REQUIRED SKILLS AND KNOWLEDGE

- specifications of the die cast product
- shut-down procedures
- hazards and control measures associated with operating a die casting machine, including housekeeping
- safe work practices and procedures
- use and application of personal protective equipment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Load mixer (mill/muller)	1.1.All pre start-up checks are performed safely and according to standard operating procedures. 1.2.Formula for sand mix is determined according to standard operating procedures. 1.3.Materials are measured and loaded according to formula specification.
2. Mix sand	2.1.Sand is mixed for correct time to specifications. 2.2.The performance of mixer and the condition of the sand is monitored. 2.3.Material supply is maintained. 2.4.Faults are reported.
3. Take and test samples	3.1.Sample is correctly extracted. 3.2.Test is applied in accordance with standard operating procedures. 3.3.Test results are compared against specifications. 3.4.Adjustments to formula/mix are made as required in accordance with standard operating procedures.
4. Discharge mixture	4.1.Load is charged correctly according to standard operating procedures. 4.2.Unwanted treated sand is disposed of according to standard operating procedures.
5. Clean mixer	5.1.Mixer is shut down to standard safety and operating procedures. 5.2.Mixer is cleaned according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and following written instructions and standard operating procedures
- setting parameters for mixing

REQUIRED SKILLS AND KNOWLEDGE

- loading mixers
- mixing sand and monitoring the process
- sampling and testing mixed sand
- discharging sand
- closing down and cleaning
- using measurement skills for preparing and mixing sand within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- characteristics, safe handling procedure and mixture applications of sand and binding agent
- moulding requirements
- mixers, applications, loading, operating and unloading procedures
- volumes, quantities, ratios and percentages
- sampling, testing and acceptance criteria for mixed sand
- procedures for cleaning and shutting down mixer
- environmental requirements for the disposal of unwanted sand
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures related to preparing and mixing sand for metal moulding

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to prepare and mix moulding sand.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with mixing moulding sand or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

MEM04005C Produce moulds and cores by hand (jobbing)

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit of competency covers manual making (jobbing) of sand moulds and cores for metal casting typically in a working foundry. Moulds are made by an Engineering Tradesperson - Fabrication from specifications, instructions or drawings.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit of competency applies to the production of sand moulds and cores by a foundry tradesperson often called a moulder using manual (jobbing) methods to produce metal castings. The unit does not cover machine moulding. The jobbing moulding methods covered by this unit apply to a range of materials and types of patterns and require matching of job specifications and patterns to mould and core production based on knowledge of the metal casting process.</p> <p>This unit has been developed for Engineering Tradesperson - Fabrication apprenticeship training and the recognition of trade level skills in the production of moulds and cores. The ability to match patterns, moulds and cores for a wide range of jobs is a key trade skill and can usually only be gained from experience in the range of work and the combination of on and off-the-job training typical of an apprenticeship.</p> <p>Where lifting and moving moulds and cores requires the use of mobile load shifting equipment or overhead cranes, appropriate manual handling units should also be selected. Where the securing of moulds requires welding skills, refer to MEM05012C Perform routine manual metal arc welding and MEM05050B Perform routine gas metal arc welding, as appropriate.</p> <p>Band: A</p> <p>Unit Weight: 16</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify job requirements	1.1. Job requirements are correctly identified from drawings, instructions and specifications 1.2. Material is selected appropriate to job requirements
2. Determine sequence of operation	2.1. Sequence of operation including job set up is determined for maximum safety, efficiency and to meet job specifications
3. Select inspect and prepare pattern equipment	3.1. Pattern equipment is correctly identified from specifications to standard operating procedures 3.2. Pattern equipment is inspected to specifications, and damaged patterns are identified for repair or replacement to standard operating procedures 3.3. Pattern is assembled to specification 3.4. Pattern equipment is set up to specification according to standard operating procedures
4. Make mould and core	4.1. Core is positioned in prints utilising chaplets and chills as required and vented to specification according to standard operating procedures 4.2. Mould is closed and checked for compliance to component specification in accordance with standard operating procedures 4.3. Appropriate moulding/core making equipment is selected and positioned according to standard operating procedures 4.4. Appropriate moulding media is selected to produce mould and core to specification 4.5. Mould is secured according to standard operating procedures 4.6. Moulding media is used to produce mould and core according to standard operating procedures 4.7. Pouring basin is selected or manufactured to specification and positioned in accordance with standard operating procedures 4.8. Mould and cores are rammed up with joints and drawbacks as required to standard operating procedures 4.9. Parting and stripping systems are utilised in accordance with standard operating procedures 4.10. Loose pieces, vents, risers and runners are positioned and secured as required to standard operating procedures

ELEMENT	PERFORMANCE CRITERIA
	4.11. Pattern and loose pieces are removed from mould and core box in a safe manner least likely to cause damage to the pattern and in accordance with standard operating procedures 4.12. Mould is inspected and repaired as required 4.13. Mould and core is cleaned and painted according to specification using standard operating procedures
5. Clean and restore work area	5.1. All materials/debris is cleared and work site cleaned and left in a safe state 5.2. Unwanted treated sand is disposed of according to standard operating procedures and legislative and statutory requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting written instructions, sketches and drawings
- assembling and positioning patterns in moulding boxes
- positioning ancillary methoding components
- preparing moulding media
- filling and compacting mould assemblies
- stripping patterns
- inspecting moulds
- finishing moulds
- positioning cores in prints
- closing moulds
- placing pouring basins
- securing moulds
- following oral instructions
- entering routine and familiar information onto proforma and standard workplace forms

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge includes:

- metal casting process
- variety of pattern types and their application in a casting process
- pattern assembly techniques
- selection of a moulding box to match job and pattern
- principles and processes for selection of ancillary components
- sand types and their bonding systems
- compaction processes
- parting and stripping systems
- mould requirements including vents, runners, risers and other methoding requirements
- finishing and closing techniques
- core placement
- pouring requirements
- securing systems
- pattern care and storage
- environmental requirements
- use and application of personal protective equipment
- foundry safe work practices and procedures
- hazards and control measures associated with producing moulds and cores by hand (jobbing)

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to produce a range of jobbing moulds and cores by hand. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different situations and contexts. Critical aspects of assessment and evidence include:</p> <ul style="list-style-type: none"> • following all safety procedures for working safely in a typical working foundry environment • knowledge of the casting process including the role of patterns, sands, moulds and cores, and the importance of correct methoding • matching of specifications, sketches and drawings to mould and core requirements for a range of patterns, metals and sands • planning skills are evident in sequence of work, selection and layout of materials, and construction of moulds and cores • appropriately identifying, assembling and determining patterns as fit for purpose • ensuring core positioning is in accordance with job specifications • placing methoding components in accordance with job specifications • selecting moulding equipment and media to match a range of job requirements • making moulds, cores and pouring basins for a range of jobs and metals efficiently and to meet all safety requirements with minimum waste of materials • disposing of used sand and debris according to standard operating procedures and regulations.
<p>Context of and specific resources for assessment</p>	<p>This unit has been developed to support training in and recognition of trade level jobbing moulding skills as applied to a jobbing moulding environment.</p>

EVIDENCE GUIDE	
	<p>Assessment resources include a furnace to supply adequate molten metal for testing of moulds and cores, sand and other materials to enable enough sufficient moulds and cores to be produced and all normal foundry safety and personal protective equipment.</p> <p>The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p>
Method of assessment	<p>The emphasis for assessment should be on jobbing ability, that is, the ability to produce moulds and cores for a variety of job specifications involving different metals, sands and patterns.</p> <p>A single assessment event is not appropriate. On the job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	<p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with producing jobbing moulds and cores by hand or other units requiring the exercise of the skills and knowledge covered by this unit.</p> <p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required</p>

EVIDENCE GUIDE

	knowledge, and be capable of applying the competency in new and different situations and contexts.
--	--

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Materials

Materials may include:

- binders
- hardeners
- sand additives
- mould coatings

Patterns

Patterns may include:

- flatback
- uneven
- plated patterns
- multi-joint
- consumable
- split patterns
- loose piece patterns
- patterns requiring odd sides
- cored moulds
- drag and cope mould

Moulds

Moulds may include:

- flatback
- uneven jointed
- multi-part moulds

Cores

Cores may include full, half and segment cores

Mould securing methods

Mould securing methods may include:

RANGE STATEMENT	
	<ul style="list-style-type: none"> • weights • clamps • bolting
Moulding media	Moulding media may include use of a wide range of sands including green sand, shell sand and chemically bonded media
Pouring basins	Pouring basins may include hand and pattern formed
Parting and stripping systems	Parting and stripping systems may include dry and wet

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Instructions and specifications are interpreted correctly.
2. Conduct pre-operational checks	2.1. Pattern/core box is selected and inspected to specifications and cleaned as required. Damaged patterns/core boxes are identified for repair or replacement to standard operating procedures. 2.2. Pattern/core box is set up in bolster and core box according to standard operating procedures.
3. Operate machine to produce mould/cores	3.1. Appropriate moulding media is selected to produce mould and core to specification. 3.2. Moulds/cores are filled to specification according to standard operating procedures. 3.3. Machine is operated in accordance with standard operating procedures. 3.4. Machine is unloaded safely to standard operating procedures. 3.5. Moulds/cores are stripped, inspected and painted as required according to standard operating procedures.
4. Assemble moulds/cores	4.1. Moulds/cores are dried, glued and vented as required to specification and closed in accordance with standard operating procedures. 4.2. Runner bush is set to specification as required.
5. Clean and restore work area	5.1. All material/debris is cleared and work site is cleaned and left in a safe state. 5.2. Unwanted treated sand is disposed of according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting written instructions and specifications

REQUIRED SKILLS AND KNOWLEDGE

- preparing and installing pattern or core box
- programming operating parameters
- operating and monitoring moulding and core making machines
- assembling moulds and cores
- inserting cores (in moulding machines)
- inserting runner bushes
- maintaining integrity of mould or core
- maintaining integration of interrelated metal melting, core making and sand mixing processes
- maintaining operational capability of moulding and core making machines
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- characteristics and applications of sand and binding agents
- machine operation, fault identification, analysis and rectification procedures
- core selection and loading procedures
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with operating sand moulding and core making machines

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to operate a sand moulding and core making machine.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with operation of sand moulding and core making machines or other units requiring the exercise of the skills and knowledge covered by this unit.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for pouring molten metal	1.1.The condition of the mould is checked according to standard operating procedures. 1.2.The condition of the ladle is checked according to standard operating procedures. 1.3.The temperature of molten metal is checked for conformance to specification, and pouring method is sequenced to standard operating procedures. 1.4.The capacity of the required pour is identified against specification according to standard operating procedures.
2. Preheat or prepare ladle	2.1.The ladle is preheated/prepared to receive molten metal.
3. Transfer ladle to furnace	3.1.Safety clips are checked according to standard operating procedures. 3.2.The ladle is filled and transferred to the pouring area in accordance with standard operating procedures. 3.3.Additives are determined from specification and added to molten metal as required.
4. Maintain quality of metal as required	4.1.Slag/dross is removed where necessary. 4.2.The temperature is monitored as required. 4.3.Chemical analysis is undertaken and remedial action is applied as required to standard operating procedures.
5. Pour molten metal	5.1.Personnel in the immediate area of the metal pour are informed that pour is to take place and appropriate safety clothing and equipment is used as specified in standard operating procedures. 5.2.Metal is poured safely to specification and in accordance with standard operating procedures. 5.3.Metal is poured at an appropriate and continuous rate. 5.4.A test bar is poured in accordance with standard operating procedures as required.
6. Empty excess metal from ladle	6.1.Pigs are poured and tagged.
7. Return ladle	7.1.The ladle is emptied, cleaned and maintained according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and following written instructions, standard operating procedures, specifications and standard test data sheets
- selecting and checking ladle
- preparing ladle for pouring
- transferring metal to ladle
- treating metal
- removing slag and dross
- sampling and testing molten metal
- pouring molten metal into moulds and pigs
- tagging pig metal
- using communication skills to effectively transfer skills and knowledge to employees

Required knowledge

Look for evidence that confirms knowledge of:

- types and pouring characteristics of metals
- types and characteristics of ladles
- procedures for maintaining condition and integrity of ladle
- procedures for safe handling and transference of molten metal
- metal treatments, applications and procedures for making additions to molten metal
- slag and dross removing procedures
- techniques for sampling and testing molten metal
- pouring procedures
- metal identification and tagging procedures
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with pouring molten metal

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Job requirements are correctly determined from instructions and specifications. 1.2. Correct mouldings and/or castings/forgings are located and arranged for efficient processing.
2. Observe safety requirements	2.1. Personal protective equipment is selected and used correctly. 2.2. Castings/forgings are handled using manual or mechanical handling methods appropriate to the task. 2.3. Castings/forgings are stored or positioned in a safe manner.
3. Identify excess material for removal	3.1. Casting is removed from mould and/or sand media is removed from casting as required. 3.2. Castings/forgings are visually checked as suitable for further processing, and excess metal is correctly identified according to standard operating procedures.
4. Select correct tools and equipment	4.1. Cleaning method is selected appropriate to casting and job requirements. 4.2. Rumbling/shot blast/sand blast equipment is set to specification and used in accordance with standard operating procedures as required. 4.3. Appropriate hand tools are selected and used for the given task. 4.4. Appropriate power tools and accessories are selected and used for the given task.
5. Remove excess material	5.1. Excess metal (e.g. runners, risers and flashing) is removed using methods and equipment appropriate to the task and to standard operating procedures. 5.2. Excess metal suitable for recycling is identified according to standard operating procedures. 5.3. Excess metallic materials are identified from specifications and isolated as required according to standard operating procedures.
6. Quality assess castings/forgings	6.1. Castings/forgings are visually checked for conformance with specifications to standard operating procedures. 6.2. Non-conforming castings/forgings are rejected or set aside and identified for further consideration or remedial action according to standard operating

ELEMENT	PERFORMANCE CRITERIA
	<p>procedures.</p> <p>6.3.Faults are reported/recorded as required according to standard operating procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting written instruction sketches and drawings
- identifying castings
- visually inspecting castings
- fettling and trimming metal castings/forgings
- conducting a final inspection

Required knowledge

Look for evidence that confirms knowledge of:

- accept/reject/rework criteria
- fettling requirements
- fettling tools
- fettling standards
- handling and storage requirements
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with fettling and trimming metal castings/forgings
- excess metals suitable for recycling

MEM04010B Develop and manufacture wood patterns

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers developing and manufacturing wood patterns, both regular shaped and split patterns, based on an understanding of casting and moulding principles.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to the manufacture of all types of solid, split and turned wood patterns and wood pattern component parts, including but is not limited to general engineering patterns, master patterns with multiple contraction, skeleton, frame and strickle, wheels, pulleys, chain sheaves, impellers etc.</p> <p>Patterns may be constructed by laminating timber and timber composites, stave and lag, box or frame construction or any alternative method that minimises timber shrinkage, warp and achieves required strength. A full range of timber and timber composites may be used.</p> <p>Solid patterns may be set up on a regular or irregular joint. Turned patterns are manufactured using tools and machines appropriate for shaping wood. This unit covers all specifications interpreted from drawings, technical sketches and/or customer requirements.</p> <p>Tasks undertaken include utilising appropriate wood pattern making principles and techniques, designated procedures, correct and appropriate tools and equipment.</p> <p>If patterns are set up on pattern plates, see Unit MEM04012B (Assemble plated patterns).</p> <p>For the development and manufacture of marine propellers, conveyor screws, cast gears etc., Unit MEM04017B (Develop and manufacture gear, conveyor screw and propeller patterns) should also be considered.</p> <p>Where precision measurement is required, Unit MEM12003B (Perform precision mechanical measurement) should also be considered.</p> <p>This unit should not be selected when Unit MEM18014B (Manufacture tools, gauges and dies) has already been selected.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Job instructions and specifications are interpreted correctly. 1.2. Type of wood pattern required is determined through application of moulding/casting techniques and foundry processes. 1.3. Appropriate timber/timber composites are selected to meet specification.
2. Develop and lay out wood patterns	2.1. Pattern parameters are calculated to specification e.g. angles, tapers, clearances, contractions etc. 2.2. Pattern is laid out showing tapers, machining allowances, core prints and method of construction to specification. 2.3. Jigs and fixtures are developed and manufactured to aid wood pattern manufacture as required.
3. Manufacture wood patterns	3.1. Materials are marked out and construction is developed to meet specification. 3.2. Using acceptable wood pattern making techniques and procedures, and utilising appropriate hand and handheld power tools, pattern or pattern component parts are produced to size and shape and checked for conformance to specifications. 3.3. Using acceptable wood pattern making techniques and procedures, pattern component parts are joined or fixed as required and checked for conformance to specification. 3.4. Pattern is correctly marked, colour coded or tagged to specifications or standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading/interpreting/following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other

REQUIRED SKILLS AND KNOWLEDGE

documents

- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit
- selecting appropriate timber to suit the moulding/casting techniques and foundry process
- laying out the pattern/core boxes
- constructing patterns/core boxes
- joining and fixing component parts
- pattern checking

Required knowledge

Look for evidence that confirms knowledge of:

- timber products including features, characteristics and applications
- moulding and casting techniques
- tooling required for casting/moulding
- methoding techniques
- the use and application of jigs and fixtures
- methods of construction
- the formulae and mathematical techniques required for necessary manufacturing of patterns/core boxes i.e. contraction, taper, clearances, machining allowances etc.
- identification coding and numbering
- pattern checking techniques
- mouldability i.e. surface finish, face taper, convex or concave perspectives, undercuts, etc.
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with the development and manufacture of wood patterns

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, i.e. the candidate is not in productive work, then appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with developing and manufacturing wood patterns or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
<p>Method of assessment</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Moulding/casting techniques

The variety of sand moulding techniques and sand mediums

Timber/timber composites

Hardwood, softwood, laminates, plywood, veneers and bonded fibreboard

Calculations

Calculations include the determination of contraction rates, as well as general engineering calculations

Joining and fixing

Glued, screwed, nailed, stapled

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Inspect and prepare patterns and cores	1.1. Patterns or cores are inspected for appropriate surface finish and set up on jointline or flat board to specification. 1.2. Appropriate parting agent is selected and applied to polymer specifications.
2. Manufacture moulds, patterns, tooling aids etc.	2.1. Appropriate polymer materials are selected to specification. 2.2. Polymer and hardener are mixed to correct ratios and specifications using standard safety and operating procedures. 2.3. Polymer is applied to specification and using predetermined methods, ensuring that air is not entrapped in application, excessive heat is not generated and delamination does not occur in final use. 2.4. Pattern/core box is stripped, inspected, cleaned and repaired as required. 2.5. Faces of polymer pattern are machined and finished to specifications. 2.6. Appropriate method of location is applied to patterns and core boxes. 2.7. Polymer tooling is checked for conformance to specifications as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit, including determination of contraction rates
- measuring polymer materials

REQUIRED SKILLS AND KNOWLEDGE

- interpreting written instructions, sketches and drawings
- making master patterns
- machining patterns/core boxes and tooling aids
- sealing the patterns or cores with appropriate surface finish
- alignment of pattern to core box
- setting up with necessary locations
- applying the parting agents
- selecting polymers
- preparing polymer and hardener
- applying polymer coating
- releasing patterns and moulds
- cleaning patterns and moulds

Required knowledge

Look for evidence that confirms knowledge of:

- machining for pattern making
- parting agents
- safe working procedures
- methods of locating patterns and core boxes
- the range of surface finishes
- range of polymers and their applications
- mixing ratios and calculations
- characteristics of polymer under exothermic reaction
- exothermic control procedures
- methods of stripping
- pattern checking techniques
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with producing polymer patterns

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to produce polymer patterns. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with producing polymer patterns or other units requiring the exercise of the skills and knowledge covered by this unit.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Job instructions and specifications are correctly interpreted and followed.
2. Inspect and layout patterns	2.1. Pattern(s) are inspected to ensure dimensions and surface finish conform to specifications. 2.2. Pattern and runner system is laid out to specifications from drawings, sketches or verbal instructions. 2.3. Pattern(s) are correctly aligned.
3. Mount pattern on plates	3.1. Cope and drag patterns/double sided match plate patterns are attached to pattern plate/s according to specification. 3.2. Cope and drag patterns/double sided match plate patterns are inspected for security and alignment.
4. Mount runner system	4.1. Volume of runner system conforms to specification. 4.2. Runner components are attached to pattern plates using appropriate fixing and joining techniques to specification.
5. Inspect plated pattern assembly	5.1. Surface and mouldability of plated pattern assembly are inspected for compliance with specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- determining job requirements from written instructions, specifications, sketches and drawings
- planning and sequencing tasks
- checking and clarifying task-related information
- performing relevant calculations
- following verbal instructions
- applying surface finishes for the moulding process
- laying out patterns and runner systems

REQUIRED SKILLS AND KNOWLEDGE

- attaching pattern and runner components
- locating and aligning patterns
- checking patterns for compliance

Required knowledge

Look for evidence that confirms knowledge of:

- units of measurement, numerical operations and calculations associated with assembling plated patterns
- fixing and drilling techniques
- the reason for using particular layout and runner system
- types of pattern plates
- the techniques for avoiding cross jointing or mismatch of the pattern and their relationship to the pin-centre
- methoding systems
- mouldability i.e. surface finish, face taper, convex or concave perspectives, undercuts, etc.
- moulding and casting techniques
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with assembling plated patterns

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	<p>1.1. Drawings, instructions and specifications are interpreted and understood.</p> <p>1.2. The appropriate grade/type of polystyrene is selected to meet specifications.</p>
2. Mark out pattern	<p>2.1. Calculations are performed to determine contraction allowance etc.</p> <p>2.2. Pattern/pattern components are marked out to specifications.</p>
3. Manufacture pattern	<p>3.1. Pattern components are correctly jointed and secured using adhesives appropriate to the task.</p> <p>3.2. Appropriate tools are selected and techniques are used to manufacture polystyrene patterns to specification.</p> <p>3.3. Pattern is checked for conformance to specifications and correctly marked for identification.</p>
4. Protect pattern from damage	<p>4.1. Patterns are handled and stored in a safe manner least likely to cause damage using standard operating procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- determining job requirements from written instructions, sketches and drawings
- planning and sequencing tasks/operations
- checking and clarifying task-related information
- selecting polystyrene appropriate for pattern or foundry process
- marking out in relation to polystyrene patterns
- selecting and applying adhesives
- manufacturing polystyrene patterns
- checking patterns for compliance
- handling finished polystyrene products

REQUIRED SKILLS AND KNOWLEDGE

- using calculations to determine contraction allowances

Required knowledge

Look for evidence that confirms knowledge of:

- types and applications of polystyrene for pattern making
- the formulae and mathematical techniques required for manufacturing patterns/core boxes i.e. contraction, taper, clearances, machining allowances etc.
- marking out techniques for polystyrene patterns
- undercuts and holes
- types and applications of adhesives
- tools and their uses in the manufacture of polystyrene patterns
- pattern checking techniques
- handling and storage techniques
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with developing and manufacturing polystyrene patterns

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Drawings, instructions and specifications are interpreted and understood. 1.2. Pattern type and design is conceptualised and planned with reference to customer's specification (written or verbal) for number, layout, runner system and core box design. 1.3. Pattern design is interpreted and visualised from drawings, prints or plans and checked against customer requirements. 1.4. A plan is developed for sequence of manufacture for either a high or low volume foundry production pattern.
2. Develop pattern equipment	2.1. Appropriate materials are selected and obtained to meet requirements of strength, durability and component finish etc. 2.2. Calculations appropriate to establishing pattern parameters are performed, including angles, tapers, contraction, etc. where applicable.
3. Manufacture production patterns and core boxes	3.1. Appropriate machines and machining process are selected to shape/produce production patterns and core boxes to specification. 3.2. A range of hand and hand held power tools are selected to fashion/manufacture production patterns and core boxes to specification. 3.3. Production patterns and core boxes are checked to specification and surface finish and are checked for mouldability.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- determining job requirements from written instructions, sketches and drawings
- planning and sequencing manufacturing operations

REQUIRED SKILLS AND KNOWLEDGE

- checking and clarifying task-related information
- selecting appropriate metals to suit the moulding/casting techniques and foundry process
- laying out/constructing production pattern/core boxes
- joining and fixing component parts
- checking pattern for conformance to specifications
- measuring components to specified tolerances
- calculating contraction rates

Required knowledge

Look for evidence that confirms knowledge of:

- characteristics of metals and alloys and their application in the development/manufacture of production patterns
- tolerances and contraction rates typically used in the manufacture of production patterns
- production moulding and casting techniques
- tooling required for casting/moulding
- methoding techniques
- the use and application of jigs and fixtures
- methods of construction including machining provision and clamping arrangements
- appropriate techniques, tools and equipment to measure, mark out and produce production patterns
- the formulae and mathematical techniques required for manufacturing production patterns/core boxes i.e. contraction, taper, clearances, machining allowances etc.
- identification coding and numbering
- pattern checking techniques
- mouldability i.e. surface finish, face taper, convex or concave perspectives, undercuts, etc.
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with developing and manufacturing production patterns

	MEM30012A	Apply mathematical techniques in a manufacturing engineering or related environment

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Drawings, instructions and specifications are interpreted and understood. 1.2. Vacuum forming processes are applied to determine the design of vacuum forming moulds and associated equipment to be constructed. 1.3. Appropriate material is selected to meet specifications.
2. Develop and mark out pattern for vacuum forming	2.1. Pattern parameters are calculated, taking into account plastic sheet thickness and shrinkage etc. 2.2. Vacuum forming pattern is marked out, showing size and position of air evacuation and of the moulded form.
3. Manufacture pattern for vacuum forming	3.1. Appropriate machines and machining process are selected to shape/produce vacuum forming pattern to specification. 3.2. A range of hand and hand held power tools are selected and used to fashion/manufacture vacuum forming patterns to specification. 3.3. Constructed vacuum forming pattern is checked to specification.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents • checking and clarifying task-related information • selecting appropriate timber or epoxy resin to suit the vacuum forming process • laying out the vacuum forming pattern or mould • checking patterns and moulds • calculating contraction rates

REQUIRED SKILLS AND KNOWLEDGE

- checking for conformance to specifications
- measuring components to specified tolerances
- conceptualising and determining type of model required to meet specifications
- using required hand and hand held power tools

Required knowledge

Look for evidence that confirms knowledge of:

- timber and epoxy resin product knowledge including features, characteristics and applications
- vacuum forming techniques
- tooling required for manufacture of vacuum forming patterns and moulds
- the formulae and calculations/formulae required to manufacture patterns and moulds i.e. contraction, taper
- techniques, tools and equipment to measure, mark out and produce vacuum forming patterns and moulds
- pattern checking techniques
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with developing and manufacturing vacuum forming moulds and associated equipment

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to develop and manufacture vacuum forming moulds and associated equipment. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with developing and manufacturing vacuum forming patterns and moulds or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

EVIDENCE GUIDE

Guidance information for assessment

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Vacuum forming processes	Vacuum forming processes include positive or negative pressure forming processes
Material	Includes timber, epoxy resins, composites, polymer, metal
Calculations	The determination of contraction rates as well as general engineering calculations within the scope of this unit

Unit Sector(s)

Competency field	Casting and moulding
------------------	----------------------

MEM04016C Develop and manufacture precision models

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers laying out, manufacturing and finishing precision models.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies where accurate and complicated models are required to assist in the development and manufacture of production of tooling for a wide variety of processes, such as blow moulding, metal forming, vacuum forming, rotational moulding, gravity die casting, pressure die casting, low pressure die casting, complex ferrous and non-ferrous castings, plastic injection moulding, etc.</p> <p>Models may include flow models, viewing models, prototype and development models using a wide range of materials e.g. timber, metal plastic, fibreglass composites and processes. It may include the inspection/completion of items made in the stereo lithography process etc.</p> <p>Work is undertaken autonomously or in a team environment using predetermined standards of quality, safety and workshop procedures. All specifications are interpreted from complex drawings and Mylar drawings, technical sketches and/or customer requirements.</p> <p>When the programming of coordinate measurement machines and/or NC/CNC machines is required see appropriate machine programming units.</p> <p>Band: A</p> <p>Unit Weight: 6</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Drawings, instructions and specifications are interpreted and understood. 1.2. Appropriate material is selected to meet specifications.
2. Layout model	2.1. Finished model design is conceptualised and planned with reference to customer's specifications (written or verbal) for finish, quality and form, using applicable processes. 2.2. Contractions allowances, clearances, tapers etc. are calculated to establish model parameters. 2.3. Datum boards, jigs and fixtures are designed and manufactured as required.
3. Manufacture model	3.1. Sequence of manufacture, including build-up on datum board, establishing datum's mark out of model and areas to be NC/CNC machined, are determined. 3.2. Appropriate machines and machining processes are selected to shape/produce model to specifications. 3.3. A range of hand and hand held power tools is selected and used utilising acceptable techniques and procedures to fashion/manufacture model to fine tolerances according to specifications, ensuring that surface finish is appropriate to the type of model. 3.4. Appropriate measurement/calculations are undertaken to check specifications, including coordinate measuring and machine checking as required. 3.5. Where necessary, all deviations or modifications to original tooling design, prints or plans, are recorded and reported consistent with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- selecting appropriate materials
- conceptualising and determining type of model required to meet specifications
- performing calculations necessary for manufacture
- developing and manufacturing datum boards, datum holes or datum faces, jigs and fixtures etc. required for accurate manufacture
- developing a planned sequence of manufacture
- identifying areas required to be accurately manufactured by NC/CNC
- selecting and operating the appropriate range of machines and machining processes for manufacturing the model accurately to size, tolerance and specifications
- using required hand and hand held power tools
- measuring components to specified tolerances
- carrying out checking procedures for checking to the predetermined accuracy and fine tolerances
- orally reporting routine information
- recording

Required knowledge

Look for evidence that confirms knowledge of:

- consequences of selecting inappropriate materials
- various processes requiring models
- calculus, engineering calculations and formulae relating to developing and manufacturing precision models
- properties and uses of datum boards, datum holes or datum faces
- reasons for developing the sequence of manufacture
- the range of machines and machining processes and their operations
- the various checking procedures and devices including coordinate measuring and machine checking
- procedures for recording deviation or modification to original drawings or specifications
- hazards and control measures associated with developing and manufacturing precision models
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Drawings, instructions and specifications are interpreted and understood. 1.2. Appropriate material is selected to specifications. 1.3. Moulding, cast techniques and foundry processes are applied in determining the type of pattern required.
2. Lay out pattern	2.1. Pattern parameters are calculated. 2.2. Pattern is laid out showing tapers, machining allowances, core prints and method of construction etc. to specification. 2.3. Jigs and fixtures are developed and manufactured to aid the manufacture of the pattern form as required.
3. Manufacture pattern	3.1. Materials are marked out and construction is developed to meet specifications. 3.2. Pattern or pattern component parts are produced to size and shape and checked for compliance with specifications using acceptable wood pattern making techniques, procedures and utilising appropriate hand and hand held power tools. 3.3. Pattern component parts are joined or fixed as required, according to specifications, using acceptable pattern making techniques and procedures. 3.4. Pattern is correctly marked, colour-coded and/or tagged in compliance with specifications or standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- determining job requirements from written instructions, standard operating procedures, sketches, drawings and other applicable reference documents

REQUIRED SKILLS AND KNOWLEDGE

- planning and sequencing operations
- checking and clarifying task-related information
- selecting appropriate materials to suit the moulding/casting techniques and foundry process
- laying out the pattern/core boxes
- constructing patterns/core boxes
- joining and fixing component parts
- checking patterns
- calculating contraction rates/pitch/proportions/profiles
- undertaking relevant engineering calculations

Required knowledge

Look for evidence that confirms knowledge of:

- timber, epoxy resin and composite product knowledge including features, characteristics and applications
- moulding and casting techniques for cast gears, conveyor screws and marine propellers
- tooling required for casting/moulding
- methoding techniques
- the use and application of jigs and fixtures
- methods of construction
- techniques, tools and equipment to measure, mark out&produce gear, conveyor screw&propeller patterns
- mathematical calculations and formulae required to manufacture patterns/core boxes - contraction, taper, pitch, profiles, clearances, machining allowances
- identification coding and numbering
- pattern checking techniques
- mouldability i.e. surface finish, face taper, convex or concave perspectives, undercuts, etc.
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with developing and manufacturing gear, conveyor screw and propeller patterns

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Job instructions and specifications are interpreted and understood. 1.2. Appropriate woodworking machine is selected to meet specifications.
2. Set up woodworking machines	2.1. Tools/cutters are selected appropriate to task requirements. 2.2. Cutting tools are sharpened and/or shaped to specification. 2.3. Tools/cutters are correctly installed using standard operating procedures. 2.4. Guards/stops are set and adjusted as required.
3. Operate woodworking machines	3.1. Material to be machined is positioned and secured effectively. 3.2. Materials are machined to specification using standard operating procedures. 3.3. Material use is optimised and waste is minimised.
4. Check finished component	4.1. Machined component is checked against specifications and predetermined finish.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- determining job requirements from job instructions, specifications, standard operating procedures and other applicable reference documents
- checking and clarifying task-related information
- selecting and setting machines
- setting guards and stops
- handling, machining and storing timber and wood
- measuring materials and components to specified sizes/tolerances
- checking for conformance to specifications

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

Look for evidence that confirms knowledge of:

- application and use of general wood working machines
- interpreting instructions, drawings or sketches
- numerical operations and calculations within the scope of this unit
- machine settings including installation of blades and cutters, clamping for the job, including adjustments for sizing and speed
- the range of tools/cutters for different purposes
- the consequences of incorrect set or cutting angles
- the consequences of tool holders, tools and cutters etc., being incorrectly secured
- the consequences of not using guards etc.
- timber product knowledge including features, characteristics and applications
- methods of optimising quality of appearance, retention of shape, strength, and the minimisation of waste
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with general woodworking machine operations

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Inspect refractory	1.1. Specification is interpreted and understood. 1.2. Specific areas of the refractory are identified for repair or replacement.
2. Knock out refractory	2.1. Sequence of operations to remove refractory is determined to meet the job specification. 2.2. Appropriate tools and equipment are selected to safely remove damaged refractory. 2.3. Damaged refractory is removed and disposed of safely.
3. Prepare refractory materials	3.1. Appropriate refractory materials are selected to meet specifications. 3.2. Refractory media is mixed to specification.
4. Install refractory	4.1. Sequence of operations to install refractory is determined to meet the job specification. 4.2. Refractory is installed using appropriate techniques and tools and equipment to meet the job specification.
5. Cure refractory	5.1. Refractory is cured to specifications using appropriate techniques and equipment to meet the job specification.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • interpreting job specifications and other applicable reference documents • planning and sequencing operations • inspecting and identifying faults • removing damaged refractory safely • mixing refractory correctly • installing refractory correctly • curing refractory correctly

REQUIRED SKILLS AND KNOWLEDGE

- following oral instructions

Required knowledge

Look for evidence that confirms knowledge of:

- repair or replacement requirements
- inspection techniques
- mixing, installing and curing techniques and equipment
- OH&S legislation and EPA regulations applying to working with refractory
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with refractory installation and repair

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to repair and install/replace of all types of refractory. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with to repair and install/replace of all types of refractory or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

EVIDENCE GUIDE

Guidance information for assessment	
--	--

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Refractory

The heat insulating material used inside molten metal vessels and includes material which can be machine rammed, hand rammed, forked or vibrated including refractory bricks, fibreboard

Installed

Hand ramming, machine ramming, internal and external vibration

Unit Sector(s)

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify specifications for required casting	1.1. Identify required material specification 1.2. Identify mould requirements 1.3. Identify any special melting and casting requirements for the job 1.4. Identify safety procedures for the required melting and casting operation 1.5. Identify and follow regulations and codes of practice relevant to foundry and individual melting, pouring and casting operation
2. Verify metal charges to melting	2.1. Select required components to give the required metal specification 2.2. Calculate required charge of each component 2.3. Recommend changes/additions to the charge 2.4. Monitor the preparation of the charge including checking for contaminants
3. Monitor furnace operation	3.1. Check that the furnace is in good operational condition and that appropriate lining is present 3.2. Organise for maintenance/repairs as required 3.3. Identify metal or alloy specification for required casting 3.4. Monitor a melt to ensure the product meets specification
4. Monitor pouring of molten metal	4.1. Check pouring area is secure and that all non-essential personnel are excluded 4.2. Check all members of pouring crew are wearing appropriate and in good condition personal protective equipment 4.3. Ensure escape routes are known in advance by all members of the pouring crew 4.4. Check emergency pour out pit is operational and other safety measures are in place 4.5. Ensure moulds are ready to receive liquid metal, ensure access ways and pouring ways are clear, and that there are appropriate spaces between each mould 4.6. Check pouring is undertaken at correct temperature and in efficient order 4.7. Ensure pouring basin and moulds are ready to receive liquid metal 4.8. Take required samples for analysis

ELEMENT	PERFORMANCE CRITERIA
5. Control hazards	5.1. Identify hazards in the metal melting/pouring process 5.2. Assess the risks arising from those hazards 5.3. Implement procedures to control those hazards in line with procedures and duty of care

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- taking calculations needed for determining charges
- performing visual checks of furnaces for operational condition and safety risks
- taking samples
- following safety and quality procedures

Required knowledge

Required knowledge includes:

- charge calculations:
 - importance of composition control
 - methods used to calculate for additions
 - types of alloy additions and their effects on casting behaviour and finished product
- steel:
 - induction furnace melting, principles, refractories suitable for steelmaking and their characteristics
 - arc furnace melting; acid, basic, single slag, double slag, deoxidisation and hydrogen control
 - ladle refining
- cast iron:
 - types of cast iron
 - influence of carbon and silicon contents
 - carbon equivalent
 - effect of cooling rate

REQUIRED SKILLS AND KNOWLEDGE

- microstructure and classification of graphite
- carbide stabilisers and graphite
- inoculation and types of inoculant
- spheroidal graphite formation and treatment methods
- casting characteristics of grey, S.G (ductile) and malleable cast irons
- ferrous alloys:
 - definitions of ferrous metals
 - the grades of iron and their applications, including S.G. iron, ductile iron, grey and white irons, alloy cast irons, chilled and malleable iron
 - the grades of steel and their applications including carbon steel and alloy steels
 - methods of controlling physical properties
 - advantages/disadvantages of density of each type of ferrous metal
 - methods of controlling tensile strength of ferrous metals
 - methods of controlling the hardness of ferrous metals
 - the influence of melting points on production processes
 - the shrinkage percentage of the types of ferrous metals
 - how to control metal fluidity
 - the use of degassing to control gas defects
 - be able to take action to control grain size
 - casting temperature
 - make a selection of ferrous metal based on required properties
 - conduct metal analysis on ferrous metal
 - use Australian standards (or other appropriate standard) for ferrous metals
- types of furnaces and their relative advantages and disadvantages:
 - blast furnace
 - cupola
 - induction
 - direct arc
 - indirect arc
 - open hearth
 - reverberatory
 - rotary
 - maintenance
- refractory types and purposes including:
 - dolomite
 - silica brick
 - chrome brick
 - ganister

REQUIRED SKILLS AND KNOWLEDGE

- fireclay
- firebrick
- magnesite
- kyanite
- fused alumina
- linings types and purposes including:
 - monolithic
 - castable
 - rammable
 - bricks
 - basic
 - acid
 - neutral
- types of ladles:
 - lip
 - tea pot
 - bottom pour
- safe working with ladles:
 - pre-heat ladles
 - ladle maintenance
 - check mechanical condition of ladles including gearboxes and safety locks
- use of lifting and handling equipment including:
 - tongs
 - shanks
 - cranes
 - hoists
 - bogey ladles
 - maintenance
- supervision of other staff in melting and casting safety including:
 - housekeeping
 - personal protective clothing
 - dry area and tools
 - pre-heating of ladles
 - safe working load of overhead cranes
- furnace operation procedures including:
 - ensuring a dry and safe charge
 - warm and dry equipment
 - pre-heating

REQUIRED SKILLS AND KNOWLEDGE

- scrap selection
- housekeeping
- melting schedule
- pouring schedule
- calculations including volume and mass calculations
- charge calculations
- maintaining supply
- maintenance of melting and pouring equipment
- types of control equipment:
 - thermal analysis
 - pyrometers
 - gas analysis
 - chemical analysis
 - wet chemical analysis
 - spectrograph
 - fluidity test
- quality control and procedures for:
 - accurate weighing
 - correct chemical analysis
 - covers and fluxes
 - mould/metal reactions
 - conduct and interpretation of thermal analysis
 - alloying procedure
 - thermal analysis
 - degassing
 - deoxidising
 - ladle refining
 - chill/wedge test
 - customer requirements
- types of defects and prevention including but not limited to:
 - contamination
 - gas absorption
 - metal analysis
 - temperature control
 - oxidation
 - other defects common to iron and steel
- tapping and pouring operations including:
 - when to pour according to job and furnace specification

REQUIRED SKILLS AND KNOWLEDGE

- availability of emergency pour out pits and other safety equipment
- availability of cranes or other transport
- pour out rate
- ensure mechanical test bar is available and taken if required
- ensure pig pouring and tagging is performed correctly

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>Evidence should be provided from a number of castings using different alloys and/or different moulds.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors should ensure that candidates can competently and consistently:</p> <ul style="list-style-type: none"> • monitor the melting and casting of ferrous metal • safely operate a melting furnace and monitor and supervise the operation of a furnace by other employees • safely handle pouring equipment and monitor and supervise the operation of pouring equipment by other employees.
Context of and specific resources for assessment	<p>Assessment may occur on the job or in an appropriately simulated environment. Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and OHS practices.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</p>
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the MEM05 Metal and Engineering Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.</p>

EVIDENCE GUIDE	
	<p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process.</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</p> <p>Assessment may be in conjunction with assessment of other units of competency where required.</p>
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Codes of practice/standards	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used
Contaminants	Contaminants include: non-specified metal, rubber, grease, water, paint and non-metallics, closed containers or pipes and pressure containers such as aerosols
Material specification	Material specification includes: ferrous metals and ferrous alloys as well as contaminants

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify specifications for required casting	1.1. Identify required material specification 1.2. Identify mould requirements 1.3. Identify any special melting and casting requirements for the job 1.4. Identify safety procedures for the required melting and casting operation 1.5. Identify and follow regulations and codes of practice relevant to foundry and individual melting, pouring and casting operation
2. Verify metal charges to melting	2.1. Select required components to give the required metal specification 2.2. Calculate required charge of each component 2.3. Select required components to give the required metal specification 2.4. Recommend changes/additions to the charge 2.5. Monitor the preparation of the charge including checking for contaminants
3. Monitor furnace operation	3.1. Check that the furnace is in good operational condition and that appropriate lining is present 3.2. Organise for maintenance/repairs as required 3.3. Identify metal or alloy specification for required casting 3.4. Monitor a melt to ensure the product meets specification
4. Monitor pouring of molten metal	4.1. Check pouring area is secure and that all non-essential personnel are excluded 4.2. Check all members of pouring crew are wearing appropriate and in good condition personal protective equipment 4.3. Ensure escape routes are known in advance by all members of the pouring crew 4.4. Check emergency pour out pit is operational and other safety measures are in place 4.5. Ensure moulds are ready to receive liquid metal, ensure access ways and pouring ways are clear, and that there are appropriate spaces between each mould 4.6. Check pouring is undertaken at correct temperature and in efficient order 4.7. Ensure pouring basin and moulds are ready to

ELEMENT	PERFORMANCE CRITERIA
	receive liquid metal 4.8. Take required samples for analysis
5. Control hazards	5.1. Identify hazards in the metal melting/pouring process 5.2. Assess the risks arising from those hazards 5.3. Implement procedures to control those hazards in line with procedures and duty of care

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- taking calculations needed for determining charges
- visually checking furnaces for operational condition and safety risks
- taking samples
- following safety and quality procedures

Required knowledge

Required knowledge includes:

- charge calculations:
 - importance of composition control
 - methods used to calculate for additions
 - types of alloy additions and their effects on casting behaviour and finished product
- non-ferrous alloys:
 - definition of non-ferrous metals
 - methods of controlling physical properties
 - advantages/disadvantages of density of each type of non-ferrous metal
 - methods of controlling tensile strength of non-ferrous metals
 - methods of controlling the hardness of non-ferrous metals
 - influence of melting points on production processes
 - shrinkage percentage of the types of non-ferrous metals
 - how to control metal fluidity

REQUIRED SKILLS AND KNOWLEDGE

- be able to make a refractory selection for non-ferrous alloys
- the use of degassing to control gas defects
- be able to take action to control grain size
- the grades of brass and their applications
- the grades of bronze and their applications
- the grades of gunmetal and their applications
- the grades of other copper based alloys and their applications
- the grades of aluminium based alloys and their applications
- the grades of lead based alloys and their applications
- the grades of zinc based alloys and their applications
- the grades of magnesium based alloys and their applications
- make a selection of non-ferrous metal based on required properties
- conduct metal analysis on non-ferrous metals
- use Australian standards (or other appropriate standard) for non-ferrous metals
- types of furnaces and their relative advantages and disadvantages:
 - crucible
 - oil
 - gas
 - induction
 - channel
 - coreless
 - resistance
 - reverberatory
 - maintenance
- selection of appropriate refractories for non-ferrous melting:
 - silica
 - ganister
 - coatings
 - others common to non-ferrous melting
- selection of the form of linings for non-ferrous melting:
 - monolithic
 - castable
 - rammable
 - bricks
- selection of the appropriate ladles/crucibles with regard to:
 - types
 - ladles
 - crucibles

REQUIRED SKILLS AND KNOWLEDGE

- safety
- maintenance including checking of mechanical condition of gearboxes and safety locks
- care of crucibles
- porous plug
- supervision of other staff in melting and casting safety including:
 - housekeeping
 - personal protective clothing
 - dry area and tools
 - pre-heating of ladles
 - safe working load of overhead cranes
- furnace operation including procedures for:
 - ensuring a dry and safe charge
 - warm and dry equipment
 - pre-heating
 - scrap selection
 - scrap segregation
 - housekeeping
 - melting schedule
 - pouring schedule
 - charge calculations
 - calculations including volume and mass calculations
 - maintenance of melting and pouring equipment
- use of lifting and handling equipment including:
 - tongs
 - shanks
 - cranes
 - hoists
 - bogey ladles
 - maintenance
- types of control equipment:
 - thermal analysis
 - pyrometers
 - gas analysis
 - chemical analysis
 - wet chemical analysis
 - spectrograph
 - fluidity test

REQUIRED SKILLS AND KNOWLEDGE

- shrinkage test
- quality control and procedures for:
 - accurate weighing
 - correct chemical analysis
 - temperature control
 - covers and fluxes
 - mould/metal reactions
 - conduct and interpretation of thermal analysis
 - degassing
 - deoxidising
 - ladle refining
 - customer requirements
- types of defects and prevention including but not limited to:
 - contamination
 - gas absorption
 - metal analysis
 - temperature control
 - oxidation
 - other defects common to non-ferrous metals
- tapping and pouring operations including:
 - when to pour according to job and furnace specification
 - availability of emergency pour out pits and other safety equipment
 - availability of cranes or other transport
 - pour out rate
 - ensure mechanical test bar is available and taken if required
 - ensure pig pouring and tagging is performed correctly

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify specification requirements for required casting	1.1. Obtain all relevant job requirements and design specifications in accordance with workplace procedures 1.2. Identify and interpret drawing requirements and specifications
2. Evaluate proposed mould design for methoding requirements	2.1. Identify desired solidification process taking into account casting design, metal composition, mould design and specifications 2.2. Identify running, gating and feeding principles and techniques appropriate for the particular casting 2.3. Examine suitability of methoding if already selected including gating and the number, placement and sizing of feeders/risers 2.4. Where required, enter data to facilitate the generation of a computer simulation of methoding and casting process for later comparison to actual casting
3. Report results	3.1. Determine reporting requirements 3.2. Prepare reports in accordance with standard operating requirements 3.3. Circulate and file report to procedures 3.4. Communicate suggestions for improvements directly to other team members where appropriate

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Required skills include: <ul style="list-style-type: none"> • applying scientific principles to foundry mould design • examining mould designs using basic metallurgical skills and techniques to suit specific applications • calculating mould runner and feeding systems • selecting appropriate techniques and associated software and hardware

REQUIRED SKILLS AND KNOWLEDGE

technologies to suit specific applications in foundry mould design

- presenting methoding solution and any associated limitations to mould design referring to the original aim of the application and any relevant instructions from metallurgist

Required knowledge

Required knowledge includes:

- ability to perform calculations related to methoding and feeding including:
 - measuring dimensions of runner systems
 - calculating cross-sectional areas of sprue, runners and ingates
 - volumes and dimensions of feeders
- the effects on solidification of:
 - nucleation
 - growth mechanisms (crystal and interfacial)
 - dendrite coherency
 - constitutional undercooling
 - superheat - effects, control and minimisation of excess heat
 - eutectic and peritectic solidification
 - grain structure
- the principles underpinning the effective operation of running, gating and feeding systems including:
 - runner and gating principles (ratios)
 - determining type and placement of sprue, runners and ingates
 - inclusion control (slag and erosion)
 - calculations and effect of metal flow (lamellar and turbulent), velocity and temperature
 - calculation of feeder size
 - principles used in the determination of the location of feeders (end and feed zones, neighbourhood effect and feeding distances) including effect on solidification
 - exothermic and insulating feeding aids (sleeves and topping)
 - feeding mechanisms (liquid, mass, interdendritic, burst and solid)
 - use of computer packages (runner and feeder calculations and mould simulations) including benefits and limitations
 - yield calculations
- risk management strategies to minimise defect formation and the methods for minimising:
 - shrinkage
 - porosity

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>Evidence should be provided from the evaluation of a number of moulds. Evidence must be provided of manual calculations and compared to computer program results.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors should ensure that candidates can competently and consistently:</p> <ul style="list-style-type: none"> • calculate manually and by use of computer programs runner and feeding systems for casting designs within defined design parameters • examine mould designs for suitability against job specifications • understand the interplay between moulds, cores, gating and feeding • examine the resulting casting for success of gating and feeding • compare casting results with computer simulated predictions.
Context of and specific resources for assessment	<p>Assessment may occur on the job or in an appropriately simulated environment. Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and OHS practices.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</p>
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the MEM05 Metal and Engineering Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of</p>

EVIDENCE GUIDE	
	<p>underpinning knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process.</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</p> <p>Assessment may be in conjunction with assessment of other units of competency where required.</p>
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Codes of practice/standards	Where reference is made to industry codes of practice and/or Australian/international standards, it is expected that the latest version will be used
Size and number of feeder heads and gating	Calculation of the size of feeder heads and gating includes manual calculation and use of computer programs within defined design parameters

MEM04023A Undertake prescribed tests on foundry related materials

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to carry out prescribed chemical analysis and mechanical (destructive) tests on foundry related materials and compare the results against predetermined specifications. It also includes the conducting of optical emission spectroscopy (OES) testing, but not the conducting of any other tests.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit of competency applies to a foundry tradesperson who is required to select and conduct an appropriate chemical, mechanical or OES test from a prescribed range of possible tests. Tests are conducted on samples of materials commonly used in foundries with results being compared against specifications for the material or product. The foundry tradesperson may be required to draw some conclusions from the results of the specified tests in regard to whether an adjustment is required within their skills and knowledge to casting or melting procedures or whether to consult on the results with a metallurgist or other authority according to standard procedures. Work would be conducted under the general supervision of a metallurgist.</p> <p>Band: B</p> <p>Unit Weight: 4</p>

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select appropriate testing procedures/standards	1.1. Identify the need (or otherwise) for testing 1.2. Identify the relevant test and testing standard from prescribed range of tests and testing standards 1.3. Arrange for external testing if appropriate 1.4. Identify appropriate and certified laboratory/test equipment 1.5. Select appropriate procedures/standards for the requirements of the test 1.6. Prepare sample according to appropriate procedures
2. Undertake prescribed tests	2.1. Check that sample or casting has been prepared as required by test method 2.2. Prepare sample or casting 2.3. Prepare instrument as required by procedures 2.4. Test sample or casting 2.5. Record and check test results 2.6. Repeat test results if required
3. Arrange other tests	3.1. Identify need for test 3.2. Arrange for internal or external test according to standard enterprise procedures
4. Report result of tests	4.1. Identify reporting requirements 4.2. Source externally conducted test results from provider 4.3. Determine implications of test results for process or product 4.4. Undertake or recommend actions to be taken based on test results and enterprise procedures 4.5. Prepare and circulate report in accordance with enterprise requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills include:

- analysing data
- selecting and setting up appropriate tests
- solving problems
- performing tests
- interpreting results
- reporting results

Required knowledge

Required knowledge includes:

- standards:
 - needs for standards
 - standards organisations
 - structure and operations of Standards Australia (SA)
- role of National Association of Testing Australia (NATA):
 - tensile testing
 - methods for tensile testing e.g. AS 1391 or equivalent international standard
 - determination of tensile properties
- general impact testing:
 - factors affecting impact properties of materials
 - impact testing (AS 1544) or equivalent international standard
 - dropweight tear test (AS 1330) or equivalent international standard
- hardness testing:
 - Vickers Hardness Testing (AS 1817, Part 1) or equivalent international standard
 - Brinell Hardness Testing (AS 1816, Part 1) or equivalent international standard
 - Rockwell Hardness Testing (AS 1815, Part1) or equivalent international standard
 - other hardness testing methods (e.g. Equotip and other rebound methods)
- the principles of operation, uses and limitations of optical emission spectroscopy (OES) otherwise known as atomic emission spectroscopy (AES)
- the purpose and scope of the following tests to the level required to determine the suitability or otherwise of the test but not to the level of conducting the test or interpreting the test:
 - fatigue/flex testing
 - creep testing
 - strain test and measurement

REQUIRED SKILLS AND KNOWLEDGE

- static shear and bend test
- ultraviolet-visible (UV-VIS) spectrophotometry
- infrared spectroscopy (IR)
- gas chromatography (GC)
- X-ray fluorescence (XRF)
- flame photometry
- atomic absorption spectrometry (AAS)
- scanning electron microscopy (SEM)
- mathematics relevant to the collation and reporting of test data
- the impact of chemical composition on the foundry process and product
- the potential implications of the variety of adjustments that could be made in response to test results

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>This competency requires evidence of competency in the selection of appropriate test methods from a prescribed range of tests for various scenarios and the interpretation of test results against predetermined specifications and standards. The scenarios, materials and test results should be relevant to the foundry industry and may be drawn directly from the workplace or may be simulated case studies.</p> <p>Tests may be conducted in either a workplace or suitable laboratory facility.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors should ensure that candidates can competently and consistently:</p> <ul style="list-style-type: none"> • select appropriate test methods • obtain repeatable results • interpret test results for a foundry • successfully complete several scenarios requiring the selection of different tests • obtain reproducible test results from testing across different samples requiring different sample preparation/test conditions.
<p>Context of and specific resources for assessment</p>	<p>Assessment may occur on the job or in an appropriately simulated environment. Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and OHS practices.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</p>
<p>Method of assessment</p>	<p>Assessment must satisfy the endorsed assessment guidelines of the MEM05 Metal and Engineering</p>

EVIDENCE GUIDE	
	<p>Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process.</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</p> <p>Assessment may be in conjunction with assessment of other units of competency where required.</p>
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Standards and industry codes of practice	Where reference is made to industry codes of practice and/or Australian/international standards, it is expected that the latest version will be used
Prescribed range of tests	Prescribed range of tests means tests that may be conducted by the foundry tradesperson and where the need for the test has been determined by a

RANGE STATEMENT	
	<p>metallurgist or other authority according to the procedures of the enterprise and the requirements for the casting and mould materials being used and the product being cast. The prescribed range of tests may include:</p> <ul style="list-style-type: none"> • OES • tensile/compression testing which may include testing for tensile strength, compressive strength, elongation, reduction of area, yield stress, yield point, proof stress, Young's modulus, elastic/plastic region and deformation or viscoelastic deformation • hardness testing - Vickers, Brinell, Rockwell and Durometer tests • impact testing including Izod, Charpy and Dropweight Tear
Other tests	<p>Other tests include</p> <ul style="list-style-type: none"> • fatigue/flex testing • creep testing • strain test and measurement • static shear and bend test • UV-VIS spectrophotometry • infrared spectroscopy (IR) • gas chromatography (GC) • X-ray fluorescence (XRF) • flame photometry • atomic absorption spectrometry (AAS) • scanning electron microscopy (SEM)
Prepare sample	<p>Prepare sample means that:</p> <ul style="list-style-type: none"> • representative sub-samples have been taken • samples are ground and milled • the sample is ready for the test
Prepare instrument	<p>Prepare instrument includes:</p> <ul style="list-style-type: none"> • checking calibration • ensuring the availability of required consumables • curve generation where OES test is required • setting machine conditions • checking machine function

RANGE STATEMENT**Materials**

Materials for mechanical tests include metals, polymer based materials and other solid materials on which mechanical testing is relevant

Casting and moulding

MEM05001B Perform manual soldering/desoldering - electrical/electronic components

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers performing manual soldering/desoldering for the installation and fabrication of electrical/electronic components.
------------------------	--

Application of the Unit

Application of the unit	<p>Work is undertaken in a production or maintenance environment using predetermined standards of quality, safety and work procedures. Component protection procedures are predetermined.</p> <p>Depending on the actual soldering job, hand and power tools and measuring skills may be required. These are covered by other units such as Unit MEM18001C (Use hand tools), Unit MEM18002B (Use power tools/hand held operations) and appropriate measurement units.</p> <p>This unit does not include skills in silver soldering or brazing skills. These skills are covered in Unit MEM05006B (Perform brazing and/or silver soldering).</p> <p>Where soldering and desoldering is limited to the straightforward termination, disconnection or reconnection of electrical wiring then see Unit MEM10002B (Terminate and connect electrical wiring).</p> <p>Advanced specification and high reliability soldering associated with the installation of electrical/electronic components, in areas where reliability of connections is critical, is covered by Unit MEM05002B (Perform high reliability soldering and desoldering).</p> <p>Band: A</p> <p>Unit Weight: 4</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare materials for soldering	1.1. Materials preparation instructions are followed. 1.2. Materials are prepared using correct tools, equipment, materials and procedures. 1.3. Materials are prepared to specifications using instruction or standard operating procedures.
2. Solder materials	2.1. Correct soldering techniques, procedures, materials and soldering tools are selected. 2.2. Materials to be jointed, mounted, shaped are to specification using standard operating procedures. 2.3. Solder is applied using correct and appropriate techniques. 2.4. Where appropriate, excess material is removed using correct tools and techniques. 2.5. Procedures for the protection of components are observed according to standard operating procedures.
3. Inspect solder joints	3.1. Inspection procedure is undertaken to standard operating procedures. 3.2. Inspection results are reported/recorded to standard operating procedures as required.
4. Undertake desoldering	4.1. Correct and appropriate techniques, procedures, desoldering tools and equipment are selected for given task. 4.2. Materials/components are desoldered using correct procedure and minimising damage to materials/components. 4.3. Material/components are removed and cleaned to specifications using standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- performing routine soldering

REQUIRED SKILLS AND KNOWLEDGE

- performing desoldering
- undertaking material preparation
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures
- following oral instruction

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning solutions and properties and cleaning procedures
- use and application of personal protective equipment for manual soldering/desoldering
- safe work practices and procedures
- methods of joint preparation
- properties of fluxes and their uses
- heat and damage protection procedures
- procedures for preventing electrostatic discharge damage
- soldered joint testing and inspection procedures
- reworking procedures and precautions

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to perform manual soldering/desoldering of electrical/electronic components.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication materials handling, recording and reporting associated with manual soldering/desoldering for the installation and fabrication of electrical/ electronic components or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Job specification is determined using data sheets, specifications, technical drawings or via consultation with technical experts. 1.2. Correct and appropriate tools, equipment and material are selected.
2. Prepare for soldering	2.1. Material/device is cut, shaped and/or drilled to specification. 2.2. Materials/devices are cleaned to specifications using correct and appropriate materials and procedures. 2.3. Correct and appropriate set-up and/or mounting techniques are used.
3. Solder materials	3.1. Material/device is mounted to specifications using correct and appropriate tools and techniques. 3.2. Soldering is undertaken using correct and appropriate techniques including appropriate use of flux. 3.3. Necessary techniques are undertaken to protect materials/devices from heat damage. 3.4. Printed circuit boards, assemblies and components are handled in such a way as to prevent electrostatic discharge or mechanical damage.
4. Test/inspect soldered joints	4.1. Visual inspection is carried out to ensure compliance with specifications. 4.2. Where required, mechanical/electrical tests are undertaken using correct and appropriate techniques and equipment to ensure compliance with specifications.
5. Rework/repair faulty joints including desoldering	5.1. Rework/repair is carried out to ensure compliance with specifications. 5.2. Repair/rework is inspected and tested.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE**Required skills**

Look for evidence that confirms skills in:

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify job requirements	1.1.Soldering requirements are identified and correctly understood from job sheets or instructions.
2. Undertake soft soldering	2.1.Tools, equipment and consumables appropriate to the task are assembled and prepared for use as required. 2.2.Materials to be soldered are prepared, arranged and checked as required, to ensure solder joint meets specifications. 2.3.Correct techniques are used to apply soft solder to standard operating procedures. 2.4.Solder joint is cleaned and checked for conformance to specifications using standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- using soldering irons
- using direct flame and other heating devices
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures
- following oral instruction

Required knowledge

Look for evidence that confirms knowledge of:

- the effect of material to be soft soldered on the selection of consumables
- the reasons for preparing surfaces prior to soldering
- the procedures for rectifying defects in soldered joints
- use and application of personal protective equipment for soft soldering
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to perform soft soldering.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify weld requirements	1.1. Weld requirements are identified from job instructions. 1.2. Location of welds is identified in accordance with standard operating procedures and job specifications.
2. Prepare materials for welding	2.1. Materials are cleaned and prepared ready for welding.
3. Prepare equipment for welding	3.1. Welding equipment is set up correctly. 3.2. Settings and consumables are selected.
4. Perform routine welding using <i>oxy acetylene</i>	4.1. Safe welding practices are applied. 4.2. Materials are welded to job requirements. 4.3. Welds are cleaned in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing materials
- setting up welding equipment
- welding with oxy acetylene fuel gas
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures
- following oral instructions
- using measurement skills for joint preparation and routine oxy acetylene welding

Required knowledge

Look for evidence that confirms knowledge of:

- preparatory requirements
- materials and consumables properties and characteristics
- equipment and equipment settings
- fuel gas properties and applications

REQUIRED SKILLS AND KNOWLEDGE

- post welding treatments
- weld characteristics
- any applicable industry standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- safe work practices and procedures
- safe welding practices
- use and application of personal protective equipment for routine oxy acetylene welding

Unit Descriptor

Unit descriptor	This unit covers setting up and operating a range of mechanical cutting and holing equipment.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to sawing, shearing, cropping and/or holing and includes setting up and operating a range of equipment. Examples of machines that could be covered include guillotines, croppers, cold saws, band saws, automatic saws etc. Typical applications of this unit may include cutting for manufacture, production cutting and cutting of materials selected from stores in a maintenance environment.</p> <p>This unit does not cover hand or hand held power tools used for cutting e.g. circular saws, nibblers and side grinder. These skills are covered by Unit MEM18001C (Use hand tools) and Unit MEM18002B (Use power tools/hand held operations).</p> <p>This unit does not include the skills required for operational maintenance of the equipment used; these skills are covered by Unit MEM07001B (Perform operational maintenance of machines/equipment).</p> <p>For repair and welding of band saw blades where blade repair unit is not attached to the machine, refer to Unit MEM05013C (Perform manual production welding).</p> <p>Band: A</p> <p>Unit Weight: 2</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Job requirements and specifications are determined from job sheets and/or instructions. 1.2. Appropriate method/machine is selected to meet specifications. 1.3. Machine is loaded and adjusted for operation consistent with standard operating procedures.
2. Select/set up machine tooling	2.1. Tooling is selected to match job requirements. 2.2. Tooling is correctly installed using standard operating procedures. 2.3. Machine is set up and adjusted using standard operating procedures.
3. Operate mechanical cutting machine	3.1. Appropriate stops and guards are set and adjusted as required. 3.2. Material is secured and correctly positioned using measuring equipment as necessary. 3.3. Machine is started and stopped safely to standard operating procedures. 3.4. Machine is operated to cut/hole material to specifications using standard operating procedures.
4. Check material for conformance to specification	4.1. Material is checked against specification. Machine and/or tooling is adjusted as required and in process adjustments carried out as necessary. 4.2. Material is cut and/or holed to within workplace tolerances. 4.3. Material is used in most economical way. 4.4. Codes and standards are observed.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- loading and adjusting cutting machines

REQUIRED SKILLS AND KNOWLEDGE

- selecting machines and tooling
- installing cutting tool
- setting up and adjusting cutting machine
- securing and correctly positioning materials
- cutting and holing materials
- applying relevant codes and standards
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures
- following oral instruction
- measuring materials to specified workplace tolerances and within the machine range
- clarifying routine task-related information

Required knowledge

Look for evidence that confirms knowledge of:

- the characteristics of cutting methods and machines
- effect of materials on the machine tooling, tooling defects and adjustments
- effect of adjustments on the dimensions of the cut material
- applicable tolerances
- methods of marking out materials to ensure minimum wastage
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standard
- use and application of personal protective equipment for mechanical cutting
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to carry out mechanical cutting on a range of machines. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication materials handling, recording and reporting associated with carrying out mechanical cutting or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Machine	Guillotines, croppers, cold saws, band saws, automatic saws etc.
Tooling	Tooling to suit guillotines, croppers, cold saws, band saws, automatic saws etc.
Stops and guards	All safety equipment/stops/guards on guillotines, croppers, cold saws, band saws, automatic saws etc.
Material	Ferrous and non-ferrous metals and non-metallic products
Codes and standards	Legislative and regulatory requirements, industry and enterprise codes and standards

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assemble/disassemble plant and equipment	1.1. Accessories and equipment are correctly selected and assembled for manual heating and thermal cutting.
2. Operate heating and thermal cutting equipment	2.1. Cutting process and/or procedure appropriate for material is selected. 2.2. All safety procedures are observed. 2.3. Equipment start-up procedures are followed correctly to standard operating procedures. 2.4. Equipment adjustments are made correctly using standard operating procedures. 2.5. Appropriate cutting allowances are made. 2.6. Material is used in the most economical way. 2.7. Defects are identified and corrective action is taken to standard operating procedures. 2.8. Material is heated and cut to specification. 2.9. Shape/size/length is to accepted workplace standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- performing pre-start checks
- safely starting equipment
- following standard operating procedures
- adjusting equipment to operating specifications
- making cutting allowances
- economising material and minimising wastage
- identifying cutting defects and taking corrective action
- heating and cutting materials to specifications
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings

REQUIRED SKILLS AND KNOWLEDGE

- following oral instructions
- performing measurements needed to meet the requirements of this unit
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- cutting processes appropriate to various materials
- heating and cutting specifications
- procedures for heating and cutting
- the tools, equipment and techniques for heating and cutting
- assembling procedures for equipment and accessories
- hazards and control measures associated with manual heating and thermal cutting
- use and application of personal protective clothing and equipment
- equipment pre-checks and operation
- procedures for adjusting heating and cutting equipment
- cutting allowances and reasons for applying them
- procedures for minimising waste material
- reasons for minimising waste material
- cutting defects and their causes
- procedures for correcting cutting defects
- tools, equipment and techniques required to correct cutting defects
- use and application of personal protective equipment
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare materials and equipment	1.1. Job requirements are determined from specifications and/ or instructions. 1.2. Materials are correctly prepared using appropriate tools and techniques. 1.3. Materials are correctly assembled/aligned to meet specifications as required. 1.4. Distortion prevention measures are identified and appropriate action is taken as required. 1.5. Heating equipment is assembled and set up safely and correctly in accordance with standard operating procedures. 1.6. Correct and appropriate consumables are selected and prepared. 1.7. Test run is undertaken and verified as required.
2. Braze and/or silver solder	2.1. The correct process is selected to meet specifications. 2.2. Materials are preheated as required. 2.3. Consumables are applied using correct techniques. 2.4. Jointing material is applied correctly and in appropriate quantities to meet job/specifications. 2.5. Material temperature is annealed using correct and appropriate techniques.
3. Inspect joints	3.1. Excess jointing materials are removed using correct and appropriate techniques. 3.2. Inspection of joints is undertaken to standard operating procedures. 3.3. Inspection results are reported/recorded using standard operating procedures as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in:

REQUIRED SKILLS AND KNOWLEDGE

- preparing materials
- performing brazing, braze welding, silver soldering
- undertaking visual inspection
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures
- following oral instructions

Required knowledge

Look for evidence that confirms knowledge of:

- the reasons for selecting specific methods of assembly/alignment
- the procedures for minimising distortion of the materials being brazed/braze welded/silver soldered
- the procedures for assembling and setting up the specific heating equipment
- the reasons for selecting specific heating equipment
- the reasons for selecting specific consumables
- conducting test runs
- typical applications of brazing/braze welding and silver soldering processes
- the procedures and precautions for preheating the materials to be joined
- the effects of the use of inappropriate techniques on the performance of the jointed materials
- the effect of inappropriate quantities of jointing material on the performance of the jointed materials
- the procedures for normalising the temperature of jointed materials
- the consequences of using inappropriate techniques to normalise the temperature of the joint
- the procedures for removing excess jointing material
- the procedures for inspecting brazed/braze welded/silver soldered joints
- use and application of personal protective equipment for silver soldering and brazing/braze welding
- safe work practices and procedures

Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • obtaining, interpreting and following relevant job sheets, drawings, instructions and procedures • selecting and assembling equipment and accessories • following safety procedures • safely checking, starting and operating equipment • cutting material to specifications • identifying and correcting cutting defects • economising material and minimising waste
Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms knowledge of:

- cutting processes and procedures appropriate to various material
- heating and cutting specifications
- procedures for heating and cutting
- specifications for cutting and surface finish
- use and applications of tools, equipment and techniques for heating and cutting
- assembling procedures for equipment and accessories
- equipment settings
- application of various consumables
- sources of information on equipment settings and consumables
- hazards and control measures associated with manual heating and thermal cutting
- use and application of personal protective clothing and equipment
- equipment pre-checks and operation
- procedures for adjusting heating and cutting equipment
- cutting allowances and reasons for applying them
- procedures for minimising waste material
- reasons for minimising waste material
- cutting defects and their causes
- procedures for correcting cutting defects
- tools, equipment and techniques required to correct cutting defects
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to perform advanced manual thermal cutting, gouging and shaping. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with advanced manual thermal cutting, gouging and shaping or other units requiring the exercise of the skills and knowledge covered by this unit.

Method of assessment

Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Unit Descriptor

Unit descriptor	This unit of competency covers applying fabrication, forming and shaping of a wide variety of shapes and products undertaken by an Engineering Tradesperson - Fabrication using a variety of forming and shaping techniques. The fabrication, forming and shaping is done to specifications interpreted from technical drawings and job specifications using a variety of tools and equipment.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit of competency applies to fabrication, forming and shaping of plate, sheet and tubular ferrous and non-ferrous metal to specified measurements, tolerances and shapes. Skills covered by this unit are generally applied in occupational and work situations associated with steel fabrication, boilermaking or sheet metal work.</p> <p>This unit has been developed for Engineering Tradesperson - Fabrication apprenticeship training and the recognition of trade level skills in fabrication, forming and shaping.</p> <p>Predetermined standards of quality and safety are observed and work is carried out following standard operating procedures.</p> <p>This unit includes the ability to produce a wide range of shapes and products such as pipework, chamfers, cylinders, cones, angles, hoppers, ductwork, 'square to round', 'transitions', 'lobster backs' and all forms of tubular shapes, including hand rails, reticulation pipework and mufflers.</p> <p>Materials may include ferrous and non-ferrous and non-metallic materials. A variety of tools and equipment may be used including presses, shapers, benders, rollers and drop hammers.</p> <p>If heating or thermal cutting is required, MEM05007C Perform manual heating and thermal cutting should be accessed.</p> <p>Where marking off/out skills are required, then MEM12007D Mark off/out structural fabrications and shapes should be selected. Where welding is required, relevant welding units should be selected.</p>
--------------------------------	--

	<p>This unit does not cover repetitive fabrication, bending and shaping of metal and non-metallic materials by production workers, trades assistants etc. such as where the bending or shaping equipment has been pre-set and the material to be fabricated, formed or shaped has been pre-marked up or pre-cut to size. This unit is also not intended to apply in situations where products or shapes are merely bent using hand tools or equipment.</p> <p>Band: A Unit Weight: 8</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select and set up forming/shaping equipment for a specific operation	1.1. Most appropriate tools and equipment are selected 1.2. Equipment is correctly set up and adjusted for operation to standard operating procedures 1.3. Allowances for shrinkage, thickness and inside/outside measurements are correctly made
2. Operate forming/shaping equipment	2.1. Machine is safely started up and shut down to standard operating procedures 2.2. Material and safety guards are correctly positioned. 2.3. Equipment is correctly operated and adjusted
3. Form and shape material	3.1. Material is levelled, straightened, rolled, pressed or bent to specifications/drawings using fabrication techniques 3.2. Correct hot or cold forming procedures are followed 3.3. Final form/shape is checked for compliance to specification and adjusted as necessary to standard operating procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Required skills include: <ul style="list-style-type: none"> • selecting tools and equipment • setting up and adjusting equipment • calculating allowances • taking measurements • starting up and shutting down the machine • positioning material • positioning safety guards • obtaining drawings and/or specifications • selecting the most appropriate forming/shaping process to achieve the required size and specification • forming/shaping material to size and specification

REQUIRED SKILLS AND KNOWLEDGE

- checking the final form/shape of the object for conformance with specifications
- reworking the object to ensure conformance with specifications
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking task-related information

Required knowledge

Required knowledge includes:

- variety of hot and cold forming/shaping processes
- machines, tools and/or equipment required to perform forming/shaping processes
- reasons for selecting chosen tools, equipment and processes
- adjustments that can be made to the equipment and the effect of adjustments on the object being formed/shaped
- allowances when forming/shaping materials
- sources of data relating to allowances
- startup and shutdown procedures
- the material positioning/feeding requirements
- the location and function of all safety guards
- procedures for the forming/shaping process
- defects in formed/shaped materials
- defects that can be rectified by further work/adjustment
- hazards and control measures associated with undertaking fabrication, forming and shaping, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply fabrication, forming and shaping techniques to meet specifications. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different situations and contexts. Critical aspects of assessment and evidence include:</p> <ul style="list-style-type: none"> • examining drawings and specifications to determine correct equipment to be used and sequence of fabrication, forming and shaping processes • correctly identifying any specified tolerances • correctly calculating allowances for shrinkage, thickness and inside/outside measurements • setting up and safely operating equipment to ensure forming and shaping outcome is to specifications • ensuring equipment is shut down and made safe • carrying out hot and cold forming processes safely and to specifications including levelling, straightening, rolling, pressing or bending.
<p>Context of and specific resources for assessment</p>	<p>This unit has been developed to support training in and recognition of trade level competency in fabrication, forming and shaping as applied to a sheet metal or metal fabrication environment. Assessment should emphasise a workplace context and procedures found in the candidate's workplace.</p> <p>The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p>
<p>Method of assessment</p>	<p>Typically, persons engaged in Engineering Tradesperson - Fabrication work are required to exercise fabrication, forming and shaping skills and techniques across a range of jobs and specifications.</p>

EVIDENCE GUIDE	
	<p>A single assessment event is not appropriate. On the job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	<p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying fabrication, forming and shaping techniques or other units requiring the exercise of the skills and knowledge covered by this unit.</p> <p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>

Range Statement

RANGE STATEMENT
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and</p>

RANGE STATEMENT	
regional contexts) may also be included.	
Tools and equipment	Tools and equipment may include: <ul style="list-style-type: none"> • presses • shapers • benders • rollers • drop hammers
Material	Material may include ferrous and non-ferrous and non-metallic substances
Fabrication techniques	Fabrication techniques may include measurements and calculations associated with allowances for shrinkage, thickness and inside/outside measurements
Final form/shape	Final form/shape may include: <ul style="list-style-type: none"> • pipework • chamfers • cylinders • cones • angles • hoppers • ductwork • 'square to round' • 'transitions' • 'lobster backs' • all forms of tubular shapes, including hand rails, reticulation pipework and mufflers

Unit Descriptor

Unit descriptor	This unit of competency covers the assembly of general fabricated components in plate, pipe and section or sheet either on-site or in a typical fabrication workplace by an Engineering Tradesperson - Fabrication. Assembly is performed according to specifications or drawings. The unit covers trade level assembly techniques requiring the use of jigs, fixtures and tools.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit of competency applies to assembly of ferrous and non-ferrous fabrications to specifications including use of joining techniques. Skills covered by this unit are generally applied in occupational and work situations associated with steel fabrication, boilermaking or sheet metal work.</p> <p>This unit has been developed for Engineering Tradesperson - Fabrication apprenticeship training and the recognition of trade skills in assembly of fabricated components.</p> <p>Typical applications are transitions, pipeworks and structural fabrication, ductwork, general jobbing work, fired and unfired pressure vessels.</p> <p>Work may be undertaken in plant or on-site, and as part of a team in many instances in cooperation with those with rigging/dogging skills where necessary.</p> <p>This unit does not cover the skills for the assembly of fabricated engineering components. These skills are covered by MEM18006C Repair and fit engineering components.</p> <p>Assembly using pre-constructed jigs is covered by MEM03001B Perform manual production assembly or MEM03003B Perform sheet and plate assembly.</p> <p>Where welds are required to meet legislative or regulatory requirements, then appropriate welding units should also be selected.</p> <p>Band: A</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify assembly method and construct jigs if required	1.1.Method is identified and jigs are constructed from engineering drawings or according to workshop practice 1.2.Distortion prevention/control techniques are correctly applied
2. Ensure all components for assembly are available	2.1.All components are checked against drawings and material list
3. Select tools and fixtures for fabrication assembly	3.1.Most appropriate equipment is selected
4. Assemble fabricated components	4.1.Material and/or fabricated components are correctly positioned 4.2.Jigs, fixtures, tools and measuring equipment are correctly adjusted and applied 4.3.Datum line is correctly determined if necessary 4.4.Assembled components are checked for position including squareness, level and alignment to specification 4.5.Fixing/joining techniques are applied as necessary according to standard operating procedures 4.6.Assembly is checked for compliance with drawing 4.7.Codes/standards are interpreted and applied

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Required skills include: <ul style="list-style-type: none"> • constructing jigs where appropriate • applying distortion prevention/control techniques • positioning components in accordance with drawing/specifications • using jigs, fixtures, tools and equipment

REQUIRED SKILLS AND KNOWLEDGE

- correctly marking the datum line
- checking the position of all assembled components visually and dimensionally
- using appropriate fixing/joining techniques

Required knowledge

Required knowledge includes:

- methods for assembly of fabricated components
- jigs construction
- effects of distortion of fabricated components
- distortion prevention techniques
- drawing and material list
- characteristics of relevant tools and equipment squareness, level and alignment
- function of datum lines
- variety of fixing/joining techniques
- defects associated with the assembly of fabricated components
- methods of rectification of defects by rework or adjustment
- requirements of relevant codes/standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to safely assemble general fabricated components in plate, pipe and section or sheet to specifications and drawings using accepted engineering trade techniques, practices, processes and workplace procedures. Competency in this unit cannot be awarded until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different situations and contexts. Critical aspects of assessment and evidence include:

- planning assembly tasks and sequences
- determining and implementing appropriate distortion control techniques
- assembling general fabricated components in plate, pipe, section or sheet to specifications, codes, occupational health and safety (OHS) regulations and standard operating procedures
- demonstrating safe working practices at all times
- ability to assemble components in a workshop and site environment

Context of and specific resources for assessment

This unit has been developed to support training in and recognition of trade level competency in assembly of fabricated components as applied to a sheet metal or metal fabrication environment. Assessment should emphasise a workplace context and procedures found in the candidate's workplace.

The competencies covered by this unit can be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Method of assessment

Typically, persons engaged in Engineering Tradesperson - Fabrication work are required to use their fabricated assembly skills and techniques across a range of jobs and specifications.

EVIDENCE GUIDE	
	<p>A single assessment event is not appropriate. On the job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	<p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the assembly of fabricated components or other units requiring the exercise of the skills and knowledge covered by this unit.</p> <p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>

Range Statement

RANGE STATEMENT
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify weld requirements	1.1. Weld requirements are identified from job instructions. 1.2. Location of welds is identified in accordance with standard operating procedures and job specifications.
2. Prepare materials for welding	2.1. Materials are cleaned and prepared ready for welding.
3. Prepare equipment for welding	3.1. Welding equipment is set up correctly. 3.2. Correct electrodes are selected to suit application and settings.
4. Perform routine welding using MMAW	4.1. Safe welding practices are applied. 4.2. Materials are welded to job requirements. 4.3. Welds are cleaned in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing materials and electrodes
- setting up welding equipment
- welding with MMAW
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures
- performing measurements for joint preparation and routine MMAW

Required knowledge

Look for evidence that confirms knowledge of:

- material and equipment preparation
- properties and characteristics of materials and consumables
- weld characteristics
- equipment set-up and settings
- MMAW processes and properties

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Tack and/or weld material using appropriate welding process	1.1. Material is prepared for the process to be used following standard operating procedures. 1.2. Material is aligned (if required) using dedicated jigs and fixtures. 1.3. Welding is carried out to accepted workplace standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- aligning to jigs and fixtures
- welding within the scope of this unit
- following standard operating procedures

Required knowledge

Look for evidence that confirms knowledge of:

- function and use of jigs and fixtures in production welding
- hazards associated with the welding process used
- function, application and operation of welding equipment within the scope of this unit
- material preparation
- acceptable workplace standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to perform tacking or production welding, including spot welding using a range of methods and metallic and non-metallic materials in a production environment.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and to be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing manual production welding or other units requiring the exercise of the skills and knowledge covered by this unit.

Method of assessment

Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Monitor quality of welded products	1.1. Weld requirements are identified from specifications and/or drawings. 1.2. Inspection procedures are carried out to standard operating procedures. 1.3. Nonconforming welds are reported and corrective action is initiated according to standard operating procedures. 1.4. Pre-set gauges are used to monitor quality of product.
2. Initiate testing when required	2.1. Test requirements are implemented according to standard operating procedures and any legislative or regulatory requirements.
3. Undertake procedures reporting	3.1. Data is collected to standard operating procedures. 3.2. Reports are prepared as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- recognising nonconforming welds
- reading, interpreting and following information on specifications, standard operating procedures, drawings and other applicable reference documents
- using pre-set gauges
- collecting weld test data
- entering routine and familiar information onto proformas and standard workplace forms/reports

Required knowledge

Look for evidence that confirms knowledge of:

- the function of pre-set gauges
- test requirements appropriate to the welded product
- legislative and/or regulatory requirements of the welded product

REQUIRED SKILLS AND KNOWLEDGE

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to monitor the quality of completed or partly completed welded fabrications produced by others in a production environment. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, i.e. the candidate is not in productive work, appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with monitoring the quality of production welding/fabrications or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

MEM05015D Weld using manual metal arc welding process

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit of competency covers the preparation, positioning, fixing, and manual welding techniques associated with general trade level welding using manual metal arc welding (MMAW) equipment including the selection and set up of the equipment appropriate to both the material and the weld to be performed, carrying out the MMAW to prescribed standards, and examining for and correcting defects, in a range of welded fabrications.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit of competency applies to welds associated with heavy or light metal fabrications. Welds are fillet and butt welds in all positions on a range of ferrous and non-ferrous materials that may include carbon steel or stainless steel. Weld quality would conform to Australian Standard 1554 General Purpose, American Bureau of Shipping (ABS) or equivalent.</p> <p>This unit has been primarily developed for Engineering Tradesperson - Fabrication apprenticeship training and the recognition of trade level skills in MMAW. It may also apply to other trade occupations requiring higher level MMAW welding skills.</p> <p>Where manual thermal processes associated with preparation, pre-heat and/or post-heat are required, MEM05007C Perform manual heating and thermal cutting and/or MEM05008C Perform advanced manual thermal cutting, gouging and shaping should be considered for selection.</p> <p>Band: A</p> <p>Unit Weight: 4</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare materials for manual metal arc welding (MMAW)	1.1. Weld requirements are identified from specifications and/or drawings 1.2. Materials are correctly prepared 1.3. Materials are assembled/aligned to specification, where required
2. Select welding equipment and consumables	2.1. Welding equipment and electrodes appropriate to the material and the weld are identified and selected
3. Assemble and set up welding equipment	3.1. Welding equipment is assembled and set up
4. Minimise and rectify distortion	4.1. Appropriate distortion prevention measures are selected and applied 4.2. Distortion is rectified
5. Weld to job specification using MMAW	5.1. Weld deposit is to specification 5.2. Joints are cleaned to specifications
6. Ensure weld conformance	6.1. Defects are rectified with minimum loss of sound metal using correct techniques and tools 6.2. Weld joints are visually inspected for conformance to specifications
7. Where required, maintain weld records	7.1. Where required, weld records are completed correctly

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying and interpreting welding specifications including appropriate standards e.g. Australian Standard 1554 General Purpose, American Bureau of Shipping (ABS) or equivalent
- selecting and using appropriate tools and equipment

REQUIRED SKILLS AND KNOWLEDGE

- using a variety of welding machines and electrodes
- identifying and rectifying weld defects
- applying techniques for distortion prevention and rectification
- cleaning welds
- reading and interpreting information on sketches, written job instructions, specifications, standard operating procedures and engineering drawings
- recording routine information including routine weld records related to MMAW onto proformas and standard workplace forms
- following oral instructions
- measurement skills relating to joint preparation and MMAW

Required knowledge

Required knowledge includes:

- material preparation
- joint preparations
- electrode classification
- causes of distortion for materials within the scope of this unit
- causes of defects and methods of rectification
- the relationships between amperage, electrode and material
- safe welding practices
- use and application of personal protective equipment for MMAW

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to prepare materials, select and set up the welding equipment, carry out MMAW and examine for and correct defects, in a range of welding activities associated with MMAW. Competency in this unit cannot be awarded until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different workplace situations and contexts. Critical aspects of assessment and evidence include:</p> <ul style="list-style-type: none"> • following all safety procedures to protect self, other workers and members of the public • identifying and interpreting specifications for MMA welding including Australian Standard 1554 General Purpose • interpreting welding specifications including standard welding symbols used to show weld procedure • selecting appropriate weld preparation methods for material and position of welds. • preparing materials, setting up of jigs, fixtures, clamps, etc. and joint preparation including bevelling • consistently welding different ferrous and non-ferrous materials to AS 1554 General Purpose or equivalent • identifying defects as described in the range statement across a range of welded materials • rectifying defects.
<p>Context of and specific resources for assessment</p>	<p>Welding to AS 1554 General Purpose or equivalent requires both theoretical knowledge and high level practical skills. The assessment process must be designed to identify consistent performance to the standard and the specifications across a range of materials and positions. The assessment must also identify a level of workplace performance in terms of defect rates and weld failure rates. It is recommended that assessment involve demonstrations of competency under both workshop and</p>

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare welding materials and equipment	1.1. Welding equipment is prepared. 1.2. Welding equipment appropriate to task requirements is assembled and adjusted correctly and safely. 1.3. Materials are prepared to achieve the required weld specification.
2. Weld joints to code requirements using MMAW	2.1. Weld requirements are interpreted correctly. 2.2. Welds are deposited correctly to specifications. 2.3. Appropriate distortion prevention measures are selected for the weld type and material and distortions are rectified as required.
3. Assess weld quality and rectify faults	3.1. Weld joints are visually inspected against specifications. 3.2. Defects are removed using appropriate methods for the given task. 3.3. Weld records are correctly completed and maintained.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • welding to conform to Australian Standard 1554 Structural Purpose, Bureau Det Norse Verticas or equivalent • interpreting weld requirements and specifications • entering information onto proformas and standard workplace forms • interpreting technical drawings and weld specifications relating to advanced MMAW • using hand and power tools to prepare and weld material using MMAW • using measurement and numeracy skills relating to advanced MMAW and preparation • selecting equipment and consumables appropriate to the task • using visual identification of faults/defects

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Look for evidence that confirms knowledge of:

- in-depth knowledge of the properties and characteristics of a wide range of materials
- requirements to conform to Australian Standard 1554 Structural Purpose, Bureau Det Norse Verticas or equivalent
- weld procedures and requirements
- different welder identification systems such as numbering, bar coding, paint coding, letter stamps
- safety requirements
- safe welding practices
- use and application of personal protective equipment for MMAW

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying and interpreting welding specifications including appropriate standards e.g. Australian Standard 1554 General Purpose, American Bureau of Shipping (ABS) or equivalent
- selecting and using appropriate tools and equipment

REQUIRED SKILLS AND KNOWLEDGE

- using a variety of welding machines and electrodes
- identifying and rectifying weld defects
- applying techniques for distortion prevention and rectification
- cleaning welds
- reading and interpreting information on sketches, written job instructions, specifications, standard operating procedures and engineering drawings
- recording routine information including routine weld records related to GMAW onto proformas and standard workplace forms
- following oral instructions
- measurement skills relating to joint preparation and GMAW

Required knowledge

Required knowledge includes:

- types of gases and their uses
- the relationships between amperage/wire feed, voltage, gas flow, electrode and material
- the application of weld metal transfer (short arc, spray etc.)
- correct welding machine, leads, hand pieces and electrodes
- material preparation
- joint preparations
- electrode classification
- causes of distortion for materials within the scope of this unit
- safe welding practices
- use and application of personal protective equipment for GMAW

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to prepare materials, select and set up the welding equipment, carry out GMAW and examine for and correct defects, in a range of welding activities associated with GMAW. Competency in this unit cannot be awarded until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different workplace situations and contexts. Critical aspects of assessment and evidence include:

- following all safety procedures to protect self, other workers and members of the public
- identifying and interpreting specifications for GMAW including Australian Standard 1554 General Purpose
- interpreting welding specifications including standard welding symbols used to show weld procedure
- selecting appropriate weld preparation methods for material and position of welds.
- preparing materials, setting up of jigs, fixtures, clamps, etc. and joint preparation including bevelling
- consistently welding different ferrous and non-ferrous materials to AS 1554 General Purpose or equivalent
- identifying defects as described in the range statement across a range of welded materials
- rectifying defects.

Context of and specific resources for assessment

Welding to AS 1554 General Purpose or equivalent requires both theoretical knowledge and high level practical skills. The assessment process must be designed to identify consistent performance to the standard and the specifications across a range of materials and positions. The assessment must also identify a level of workplace performance in terms of defect rates and weld failure rates. It is recommended that assessment involve demonstrations of competency under both workshop and

EVIDENCE GUIDE	
	<p>site conditions. This means that the ideal assessment environment is either on the job or a combination of both on and off the job.</p> <p>The competencies covered by this unit may be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p>
Method of assessment	<p>Typically an Engineering Tradesperson - Fabrication and other tradespersons engaged in welding are required to exercise GMAW skills and techniques across a range of jobs and specifications.</p> <p>A single assessment event is not appropriate. On the job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	<p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with welding using GMAW process or other units requiring the exercise of the skills and knowledge covered by this unit.</p> <p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Required skills

Look for evidence that confirms skills in:

- welding to conform to Australian Standard 1554 Structural Purpose, Bureau Det Norse Verticas or equivalent
- performing safe welding practices
- using and applying personal protective equipment for GMAW
- interpreting weld requirements and specifications
- entering information onto proformas and standard workplace forms
- interpreting technical drawings and weld specifications relating to advanced GMAW
- using hand and power tools to prepare and weld material using GMAW
- using measurement and numeracy skills relating to advanced GMAW and preparation
- selecting equipment and consumables appropriate to the task

REQUIRED SKILLS AND KNOWLEDGE

- using visual identification of faults/defects

Required knowledge

Look for evidence that confirms knowledge of:

- in-depth knowledge of the properties and characteristics of a wide range of materials
- requirements to conform to Australian Standard 1554 Structural Purpose, Bureau Det Norse Verticas or equivalent
- weld procedures and requirements
- different welder identification systems such as numbering, bar coding, paint coding, letter stamps
- safe welding practices
- use and application of personal protective equipment for GMAW

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to prepare materials, select and set up the welding equipment, carry out advanced GMAW, inspect for and correct defects, and maintain the weld records. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing advanced welding using gas metal arc welding process or other units requiring the exercise of the skills and knowledge covered by this unit.

Method of assessment

Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes,

EVIDENCE GUIDE	
	standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Welding equipment	AC or DC welding machines, settings, electrodes and related equipment
Preparing materials	Preheating, setting up of jigs, fixtures, clamps, etc., joint preparation e.g. bevelling
Materials	Low carbon, cast iron, stainless and low alloy steel, aluminium and aluminium alloys
Welds	Fillet and butt in all positions
Distortion prevention measures	Preheating, setting up of jigs, fixtures, clamps, etc.
Defects	Porosity, slag inclusions, discontinuities, lack of penetration, undercut
Appropriate methods	Oxy acetylene arc equipment, grinding devices
Weld records	Proformas and other standard workplace forms

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit of competency covers the preparation, positioning, fixing, and welding techniques associated with general trade level welding using gas tungsten arc welding (GTAW) equipment including the selection and set up of the equipment appropriate to both the material and the weld to be performed, carrying out the GTAW to prescribed standards, and examining for and correcting defects, in a range of welded fabrications.</p>
-------------------------------	---

Application of the Unit

<p>Application of the unit</p>	<p>This unit of competency applies to welds associated with heavy or light metal fabrications. Welds are fillet and butt welds in all positions on a range of ferrous and non-ferrous materials that may include carbon steel or stainless steel and aluminium. Weld quality would conform to Australian Standard 1554 General Purpose, American Bureau of Shipping (ABS), or equivalent.</p> <p>This unit has been primarily developed to support Engineering Tradesperson - Fabrication apprenticeship training and the recognition of trade level skills in GTAW. It may also apply to other trade occupations requiring higher level GTAW welding skills.</p> <p>Where manual thermal processes associated with preparation, pre-heat and/or post-heat are required, MEM05007C Perform manual heating and thermal cutting and/or MEM05008C Perform advanced manual thermal cutting, gouging and shaping should be considered for selection.</p> <p>Band: A</p> <p>Unit Weight: 4</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare materials for gas tungsten arc welding (GTAW)	1.1. Weld requirements are identified from specifications and/or drawings 1.2. Material is correctly prepared 1.3. Materials are assembled/aligned to specification, where required
2. Select welding equipment and consumables	2.1. Welding equipment and electrodes, accessories and consumables appropriate to the material are identified and selected
3. Assemble and set up welding equipment	3.1. Welding equipment is assembled and set up
4. Minimise and rectify distortion	4.1. Appropriate distortion prevention measures for weld and material type are selected and applied 4.2. Distortion is rectified
5. Weld to job specification using GTAW	5.1. Weld deposit is to specifications 5.2. Joints are cleaned to specifications
6. Ensure weld conformance	6.1. Defects are removed with minimum loss of sound metal using techniques and tools appropriate to the defect, material and process 6.2. Weld joints are visually inspected for conformance to specifications
7. Maintain weld records as required	7.1. Weld records are completed correctly

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying and interpreting welding specifications including appropriate standards e.g. Australian Standard 1554 General Purpose, American Bureau of Shipping (ABS) or equivalent
- selecting and using appropriate tools and equipment

REQUIRED SKILLS AND KNOWLEDGE

- using a variety of welding machines and electrodes
- identifying and rectifying weld defects
- applying techniques for distortion prevention and rectification
- cleaning welds
- reading and interpreting information on sketches, written job instructions, specifications, standard operating procedures and engineering drawings
- recording routine information including routine weld records related to GTAW onto proformas and standard workplace forms
- following oral instructions
- measurement skills relating to joint preparation and GTAW

Required knowledge

Required knowledge includes:

- correct welding machine, leads, hand pieces and electrodes
- material preparation
- joint preparations
- electrode classification
- causes of distortion for materials within the scope of this unit
- causes of defects and methods of rectification
- the relationships between amperage, electrode and material
- types of gases and their uses
- types of electrodes, current settings and high frequency voltage
- filler materials and consumables
- safe welding practices
- use and application of personal protective equipment for GTAW

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to prepare materials, select and set up the welding equipment, carry out the GTAW welding and examine for and correct defects, in a range of welding activities associated with GTAW. Competency in this unit cannot be awarded until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different workplace situations and contexts. Critical aspects of assessment and evidence include:

- following all safety procedures to protect self, other workers and members of the public
- identifying and interpreting specifications for GTAW including Australian Standard 1554 General Purpose
- interpreting welding specifications including standard welding symbols used to show weld procedure
- selecting appropriate weld preparation methods for material and position of welds.
- preparing materials, setting up of jigs, fixtures, clamps, etc. and joint preparation including bevelling
- consistently welding different ferrous and non-ferrous materials to AS 1554 General Purpose or equivalent
- identifying defects as described in the range statement across a range of welded materials
- rectifying defects.

Context of and specific resources for assessment

Welding to AS 1554 General Purpose or equivalent requires both theoretical knowledge and high practical skills. The assessment process must be designed to identify consistent performance to standard and specification across a range of materials and positions. The assessment must also identify a level of workplace performance in terms of defect rate and weld failure rates. It is recommended that assessment involve demonstrations of competency under both workshop and site conditions. This means that the ideal assessment

EVIDENCE GUIDE	
	<p>environment is either on the job or a combination of both on and off the job.</p> <p>The competencies covered by this unit may be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p>
Method of assessment	<p>Typically an Engineering Tradesperson - Fabrication and other tradespersons engaged in welding are required to exercise GTAW skills and techniques across a range of jobs and specifications.</p> <p>A single assessment event is not appropriate. On the job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	<p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with welding using GTAW process or other units requiring the exercise of the skills and knowledge covered by this unit.</p> <p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Prepared	Prepared may include: <ul style="list-style-type: none"> • pre-heating • setting up of jigs, fixtures and clamps • joint preparation (e.g. bevelling)
Welds	Welds include fillet and butt welds carried out in all positions
Materials	Materials may include ferrous and non-ferrous materials including carbon steel, stainless steel, aluminium and other materials suitable for GTAW welding
Welding equipment	Welding equipment may include AC or DC welding machines
Distortion prevention measures	Distortion prevention measures may include: <ul style="list-style-type: none"> • pre-heating • setting up of jigs, fixtures and clamps
Rectified	Rectified may include: <ul style="list-style-type: none"> • oxy acetylene and air arc equipment • grinding devices
Defects	Defects may include: <ul style="list-style-type: none"> • porosity • slag inclusions • discontinuities • lack of penetration • undercut

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select welding equipment and consumables	1.1. Correct welding equipment and consumables are selected from weld procedure specifications.
2. Prepare welding materials and equipment	2.1. Welding equipment and consumables are prepared according to job requirements. 2.2. Welding equipment appropriate to the task is assembled and adjusted correctly and safely. 2.3. Materials are prepared to achieve required weld specification.
3. Assemble welding equipment	3.1. Welding equipment, including cylinders, regulators, hoses, torches and tips is assembled and set up safely in accordance with standard operating procedures.
4. Weld joints to Australian Standard 1554 SP or equivalent	4.1. Materials are welded to Australian Standard 1554 SP or equivalent in all positions. 4.2. Instructions, symbols, specifications are interpreted correctly including bead size, bead placement, reinforcement etc. and in accordance with weld procedure sheet, if available, and standard operating procedures.
5. Inspect welds	5.1. Weld joints are visually inspected against specifications. 5.2. Weld defects are identified.
6. Correct faults	6.1. Defects are removed with minimum loss of sound metal using correct and appropriate techniques and tools to Australian Standard 3992 or equivalent.
7. Maintain weld records	7.1. Weld records are maintained in accordance with specifications and standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

REQUIRED SKILLS AND KNOWLEDGE

- selecting equipment and consumables
- assembling welding equipment
- welding to AS1554 SP
- inspecting welds to specification
- correcting weld faults to AS3992
- entering information on to proformas and standard workplace forms
- using hand and power tools to prepare and weld materials
- interpreting weld requirements and specifications/procedures
- using measurement and numeracy skills for advanced oxy acetylene welding
- selecting equipment and consumables appropriate to given task
- using visual identification of defects/faults

Required knowledge

Look for evidence that confirms knowledge of:

- preparatory requirements
- the purpose and examples of pre-welding and post-welding heating of the weld materials
- the appropriate settings for the given task and the selected equipment/consumables
- the purpose of reinforcing areas to be welded
- the methods of weld defect removal and their application
- material and consumable properties and characteristics
- requirements of AS1554SP and AS3992 or equivalent
- fuel gas properties and applications
- post treatments
- recording procedures
- safe welding practices
- use and application of personal protective equipment for oxy acetylene welding
- relevant hazards and control measures related to the competency

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare materials for welding	1.1. Weld requirements are identified from specifications and/or drawings. 1.2. Material is correctly prepared using tools and techniques appropriate to the material and process. 1.3. Materials are assembled/aligned to specifications, where required.
2. Select welding machine settings and consumables	2.1. Welding machine settings and consumables are identified from job requirements, welding procedures and specifications and/or technical drawings.
3. Assemble and set up welding equipment	3.1. Welding equipment is assembled and set up safely and correctly to standard operating procedures. 3.2. Test runs are undertaken and verified in accordance with specifications.
4. Identify distortion prevention methods	4.1. Distortion prevention measures are identified. 4.2. Action appropriate to the weld type and material is taken to minimise and rectify distortion.
5. Weld joints using submerged arc by correct process	5.1. Pad, butt and fillet welds are deposited correctly in flat, and fillet welds in horizontal position, to specification. 5.2. Joints are cleaned to specifications using techniques and tools appropriate to the defect, material and process.
6. Inspect welds	6.1. Weld joints are visually inspected against specifications. 6.2. Weld defects are identified.
7. Correct faults	7.1. Remedial action is taken, where required. 7.2. Defects are removed with minimum loss of sound metal using techniques and tools appropriate to the defect, material and process.
8. Maintain weld records as required	8.1. Weld records are maintained to specifications and standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- identifying and interpreting appropriate standard e.g. Australian Standard 1554 General Purpose, American Bureau of Shipping (ABS) or equivalent
- selecting and using appropriate tools and equipment
- using a variety of welding machines, wire electrodes, settings and materials
- identifying and rectifying weld defects
- applying techniques for distortion prevention and rectification
- cleaning weld
- maintaining weld records

Required knowledge

Look for evidence that confirms knowledge of:

- main types of fluxes and flux/wire combinations
- typical applications of SAW and common materials
- the application of weld metal transfer (short arc, spray, etc.)
- material preparation
- joint preparations
- electrode classification
- causes of distortion for materials within the scope of this unit
- causes of defects and methods of rectification
- code requirements
- safe welding practices
- use and application of personal protective equipment for submerged arc welding
- relevant hazards and control measures related to the competency

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Weld	Fillet and butt in flat and horizontal positions
Prepared	Preparation of materials including preheating, setting up of jigs, fixtures, clamps, etc., joint preparation e.g. bevelling
Equipment	DC welding machines
Distortion prevention measures	Distortion prevention including preheating, setting up of jigs, fixtures, clamps, etc.
Defects	Porosity, slag inclusions, discontinuities, lack of penetration, undercut
Remedial action	Remedial action using thermal processes may include oxy acetylene and air arc equipment; grinding devices may also be used

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine and prepare welding procedure	1.1. Welders are instructed according to procedure. 1.2. Welding parameters are determined in accordance with procedures 1.3. Variables and sequence checks are planned against documentation. 1.4. Documentation is prepared for record keeping.
2. Qualify welders to required procedures	2.1. Welders are trained in relevant procedures. 2.2. Welders are tested against relevant procedures. 2.3. Welder performance reports against procedures are maintained.
3. Monitor/maintain quality assurance and safety procedures	3.1. Internal quality assurance plan is monitored. 3.2. Traceability of materials is ensured. 3.3. Welding is supervised to ensure compliance with prescribed specifications and/or documented procedures and/or safety procedures.
4. Prepare documents	4.1. Procedure is recorded against pre-qualifying procedures. 4.2. Findings on internal quality assurance plan are recorded.
5. Arrange for non-destructive testing and destructive testing	5.1. Weld tests appropriate to the weld procedure are arranged. 5.2. Non-destructive testing/destructive testing reports are verified against job requirements and specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- individuals working in this field would hold at least one certificate satisfying the requirements of Australian Standard 1796 Certificate 1-9.
- welding to the procedure being supervised

REQUIRED SKILLS AND KNOWLEDGE

- providing training to welders on welding procedures
- communicating to welders on welding requirements
- planning of weld procedures
- writing workplace welding procedures, recording information on proformas and other workplace documents/reports

Required knowledge

Look for evidence that confirms knowledge of:

- welding science, principles and effects of heat treatment
- welding terms, codes and symbols
- welding processes, parameters and relation to weld quality
- welding procedures defined by code and technical requirements
- non-destructive testing
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment for welding supervision
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to provide appropriate supervision to welding tasks and outcomes. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, that is the candidate is not in productive work, appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying a wide knowledge of welding science, processes, procedures and technical requirements to the supervision process or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select and organise/conduct appropriate non-destructive test procedures or verify previous test procedures	1.1.Appropriate non-destructive tests are selected and organised/conducted in accordance with standard operating procedures or job specifications. 1.2.Results of previous testing procedures are verified.
2. Establish welding procedure	2.1.Joint design specification is interpreted. 2.2.Parameters are described. 2.3.Variables are checked. 2.4.Procedures are documented.
3. Validate welding procedures	3.1.Preparation of a test piece is organised. 3.2.Prescribed tests are arranged or conducted. 3.3.Test results are interpreted and report is prepared identifying required action.
4. Ensure quality assurance procedures are carried out	4.1.Material identification is checked. 4.2.Movement of material through workshop in-site is documented. 4.3.Transferring material test certification numbers is witnessed. 4.4.Identification of consumables in accordance with welding procedures is performed. 4.5.Storage and use of consumables are monitored. 4.6.Quality records are maintained and reviewed to ensure compliance with requirements.
5. Monitor procedures in process	5.1.Material forming is checked. 5.2.Dimensional checks are carried out. 5.3.Final inspection is made against specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms skills in:

- obtaining, interpreting and applying relevant job instructions, design and weld specifications, codes, standards and procedures
- organising tests
- initiating and conducting weld tests
- obtaining and interpreting weld tests
- obtaining and interpreting weld design data
- verbally conveying, checking and clarifying information
- checking weld parameters for conformance to specifications
- documenting welding procedures
- preparing test reports
- recording movement of material through the workshop
- producing test pieces
- marking consumables for identification
- checking material for conformance to specifications
- using and storing welding consumables
- maintaining welding quality records
- checking welding records for conformance with welding quality requirements
- checking the form of the material to be welded for conformance with specifications
- using measurement skills for checking the dimensions of welded components
- performing relevant calculations

Required knowledge

Look for evidence that confirms knowledge of:

- hazards and control measures associated with welding/fabrication inspection
- safe work practices and procedures
- use and application of personal protective equipment
- types of non-destructive tests and their application
- welding procedures for the given weld
- tests/checks to be conducted
- arithmetic operations, formulae and calculations for testing welding/fabrications
- procedures for initiating the weld tests
- procedures for conducting a variety of non-destructive tests
- procedures for obtaining previous weld tests
- discrepancies between previous and current weld tests
- reasons for any identified discrepancies
- effects of testing procedures on test results
- procedures for verifying/amending previously established weld test procedures
- the parameters affecting the performance of the weld with respect to specifications

REQUIRED SKILLS AND KNOWLEDGE

- variables affecting the performance of the weld
- tools, equipment and techniques necessary to check each variable
- procedures, tools, techniques and equipment necessary to check the form and dimensions of the welded components
- procedures for documenting welding procedures and preparing a weld test piece
- tools, equipment and techniques to carry out the prescribed tests
- procedures for initiating prescribed tests, obtaining test results, and reporting test result
- discrepancies between the test results and weld specifications
- action to be taken to return the welds produced to specification
- weld specifications
- methods of identifying weld materials
- reasons for correctly marking/identifying weld materials
- procedures for documenting/recording the movement of material through the workshop
- the reasons for documenting/recording the movement of material through the workshop
- procedures for transferring material test certification numbers
- person(s) who can witness the transfer of material test certification numbers
- the reasons for witnessing the transfer of material test certification numbers
- procedures for identifying consumables and reasons for marking consumables for identification purposes
- procedures for using and storing consumables and the consequences of inappropriate use and/or storage of consumables
- the storage life of consumables
- procedures for maintaining welding quality records
- the welding quality requirements of the relevant code, standard and/or welding procedure

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply all statutory and regulatory requirements to welding procedures	1.1. Statutory and safety requirements are applied to welding
2. Interpret all welding terms, codes and symbols	2.1. Welding terms and symbols are correctly interpreted
3. Determine the effects of heat treatment on metal in relation to welding	3.1. Reasons for performing heat treatment are identified 3.2. Processes such as pre-heat/post-heat treatment, stress relieving, normalising and annealing are appropriately applied
4. Plan the logical sequence of welding operations	4.1. Principles of planning and setting up welding are applied 4.2. Where specified, welds are prepared for testing

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Required skills include: <ul style="list-style-type: none"> interpreting welding specifications including terms, codes and symbols planning the sequence of welding operations
Required knowledge
Required knowledge includes: <ul style="list-style-type: none"> any applicable industry standards, national/Australian standards, NOHSC guidelines, state/territory regulatory codes of practice/standards for the applicable welding processes safe work practices and procedures hazards related to welding safety equipment and procedures related to welding activities welding terminology welding codes and symbols

REQUIRED SKILLS AND KNOWLEDGE

- heat treatment processes
- logical sequence for welding processes
- tools, equipment, techniques used in welding
- effect of heat treatment on metal

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to apply welding principles to meet the statutory and regulatory requirements for welding procedures.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently apply the skills and knowledge covered in this unit of competency in new and different workplace situations and contexts. Critical aspects of assessment and evidence include:</p> <ul style="list-style-type: none"> • applying welding statutory and safety requirements to different welding jobs and environments • interpreting welding codes and symbols including symbols for type of weld, weld size, processing and finishing operations etc • applying appropriate pre and post-heat treatment processes for a range of welded materials • setting up weld sequence and preparing materials in a logical manner for welding job.
Context of and specific resources for assessment	<p>This unit must be assessed in combination with one of the units satisfying the Australian Standard 1796 Certificates 1-9. Welding to AS 1796 requires both theoretical knowledge and high practical skills. The assessment process for the two units must be designed to identify consistent performance to the standards, the code and specifications across a range of materials and positions. The assessment must also identify a workplace level of performance in terms of defect rates and weld failure rates. It is recommended that assessment involve demonstrations of competency under both workshop and site conditions. This means that the ideal assessment environment is either on the job or a combination of both on and off the job.</p> <p>The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p>
Method of assessment	<p>Typically an Engineering Tradesperson - Fabrication and</p>

EVIDENCE GUIDE

	<p>other tradespersons engaged in welding are required to apply welding principles and techniques across a range of jobs and specifications.</p> <p>A single assessment event is not appropriate. On the job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
<p>Guidance information for assessment</p>	<p>This unit must be assessed in combination with one of the units satisfying the Australian Standard 1796 Certificate 1-9 and these units include:</p> <ul style="list-style-type: none"> • MEM05042B Perform welds to code standards using flux core arc welding process • MEM05043B Perform welds to code standards using gas metal arc welding process • MEM05044B Perform welds to code standards using gas tungsten arc welding process • MEM05045B Perform pipe welds to code standards using manual metal arc welding process • MEM05046B Perform welds to code standards using manual metal arc welding process. <p>This unit could also be assessed in conjunction with any other units addressing the safety, quality, communication materials handling, recording and reporting associated with applying welding principles to meet the statutory and regulatory requirements for welding procedures or other units requiring the exercise of the skills and</p>

EVIDENCE GUIDE

	<p>knowledge covered by this unit.</p> <p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
--	--

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Statutory and safety requirements

Statutory and safety requirements as required by AS 1796 welding codes

Welding

Welding to AS 1796 using any of the following processes:

- flux core arc welding
- gas metal arc welding
- gas tungsten arc welding
- manual metal arc welding

MEM05027A Perform aluminothermic welding

Modification History

Release 1 New unit

Unit Descriptor

This unit of competency covers the skills and knowledge required to weld using the aluminothermic welding process. It includes planning and preparing the welding method, preparing materials and the site for aluminothermic welding, carrying out the welding process in accordance with safe working/regulatory requirements and workplace procedures, checking weld conformance, and completing all required documentation.

Application of the Unit

This unit applies in a maintenance or site environment where the weld quality is not required to meet an Australian Standard. The aluminothermic welding process (commonly referred to as the CADWELD process) is pre-engineered and can be used to make welded connections of copper to copper or copper to steel or other metals. It is also used for header cable taps, conductor splices and terminations, and ground rod connections, or for attaching cathodic protection leads to pipes (steel or cast iron), tanks and structures in which no outside source of heat or power is required. A common use is to join copper cables (wire) for use in direct burial (grounding/earthing) applications.

Work may be undertaken in the field/on site (as distinct from a production/manufacturing facility) and may be undertaken in a trench. In those situations, it may be appropriate to also access *MSAPMOPS363A Organise on site work* for work on site and *MSAPMPER205C Enter confined space* for work in a trench. Work will often be undertaken under a permit to work system in which case it may also be appropriate to access *MSAPMPER200C Work in accordance with an issued permit* and possibly other related permit units.

Where the aluminothermic welding process is required for rail track welding, *TLIW3015A Weld rail using aluminothermic welding process* should be selected from the TLI10 Transport and Logistics Training Package.

Band: A

Unit Weight: 2

Licensing/Regulatory Information

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | |
|---------------------------------|-----|--|
| 1 Prepare and plan for welding | 1.1 | Weld requirements are identified from job instructions |
| | 1.2 | Permits and other required authorities are obtained |
| | 1.3 | Site and job hazards are identified and appropriate hazard controls implemented |
| | 1.4 | Pre-site preparations are completed |
| | 1.5 | The locations of welds are identified and assessed in accordance with standard operating procedures and specifications |
| | 1.6 | Surfaces are cleaned and prepared ready for welding |
| | 1.7 | Site is cleared of obstructions and combustible material to minimise risk of accidents and fire |
| 2 Prepare equipment for welding | 2.1 | Welding equipment is set up correctly |
| | 2.2 | Consumables are selected to suit application |

3 Perform aluminothermic welding	3.1	Safe welding practices are applied
	3.2	Moulds are fitted and shimmed, sleeved or sealed, as required
	3.3	Materials are pre-heated to standard
	3.4	Materials are welded using aluminothermic method in accordance with approved procedures
	3.5	Welds are cleaned to standard operating procedures
	3.6	Mould is cleaned and inspected to standard operating procedures
4 Check weld conformance	4.1	Weld conformance is assessed in accordance with standard operating procedures and specifications
5 Complete documentation	5.1	Required reports, documentation and/or records are completed in accordance with workplace requirements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating effectively with others
- reading and interpreting technical data, drawings, procedures, instructions and manuals
- working collaboratively with others when welding materials using the aluminothermic process
- planning and monitoring own work, including predicting consequences and identifying improvements
- selection and use of required personal protective equipment
- implementing fire control procedures
- selecting appropriate welding tools and equipment
- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities without injury to self or others, or damage to equipment
- reporting and/or rectifying any identified problems, faults or malfunctions that may occur in

- accordance with regulatory requirements and workplace procedures
- applying defect acceptance criteria and identifying actions to be taken after rejections of welds
- checking compliance between work and job specifications
- completing reports, records and documentation

Required knowledge

Required knowledge includes:

- relevant safety, occupational health and safety (OHS) and environmental procedures and regulations
- principles of the aluminothermic welding process chemical reaction
- common types of welding imperfections and defects and their causes (e.g. cracks, porosities, mould off centre, stresses in materials, pre-heating offset, sand inclusions and moisture)
- workplace procedures for the welding of materials using the aluminothermic technique
- problems that may occur during the welding of materials using the aluminothermic technique and action that can be taken to report or resolve the problems
- hazards that may exist during the welding of materials using the aluminothermic technique and ways of controlling the risks involved
- contents of relevant technical manuals and instructions
- characteristics of plant and equipment, hardware and components used in welding activities
- impact on work activities of regulatory requirements
- impact of other work activities on welding integrity
- workplace documentation requirements
- site inspection techniques

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to carry out and apply the principles of the aluminothermic welding process and associated equipment, applications and procedures, outlining the main phases and operations, including safety aspects.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency

	<p>in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job, or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Method of assessment	<p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with carrying out aluminothermic welding or other units requiring the exercise of the skills and knowledge covered by this unit</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Work environment	Work environment may include, but is not limited to:
-------------------------	--

	<ul style="list-style-type: none"> • restricted spaces • exposed conditions • controlled or open environments
Pre-site preparations	<p>Pre-site preparations may include, but are not limited to:</p> <ul style="list-style-type: none"> • checking all required equipment and materials • identifying required personal protective equipment • loading all requirements for the job
Materials to be joined	<p>Materials to be joined may include, but are not limited to:</p> <ul style="list-style-type: none"> • common steel • copper-clad steel • Columbium • Niobium • brass • wrought iron • stainless steel • cast iron • galvanised and bethanised steel • bronze • silicon bronze
Assessment of weld locations	<p>Assessment of weld locations may include, but are not limited to:</p> <ul style="list-style-type: none"> • proximity to existing welds or repairs • substrate integrity issues • preparation of pre-qualification samples
Weld consumables	<p>Weld consumables may include, but are not limited to:</p> <ul style="list-style-type: none"> • aluminothermic powder • starting powder • metallic disc
Equipment	<p>Equipment may include, but is not limited to:</p> <ul style="list-style-type: none"> • mould • lute (sealant) • ignition source • handle clamps • wire brush • mould scraper • gas pre-heating/cutting equipment
Personal protective equipment	<p>Personal protective equipment may include, but is not</p>

	<p>limited to:</p> <ul style="list-style-type: none"> • high visibility clothing • fire retardant overalls or long sleeved shirts and long pants • hearing protection • gauntlet type gloves • welding goggles • safety glasses • safety headwear • safety footwear • portable radios/mobile phones • other safety devices
<p>Procedures and codes</p>	<p>Procedures and codes may include, but are not limited to:</p> <ul style="list-style-type: none"> • relevant state/territory OHS legislation together with any nationally approved compliance codes and/or guidelines • relevant state/territory environmental protection requirements • legislation • relevant fire regulations

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers assessing task requirements; preparing materials; undertaking the repair, replacement or modification of the fabrication; cleaning and finishing to specifications; and inspecting the result.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit requires an integrated level of skills in fabrication maintenance and repair. This unit is intended to build on skills covered by the specialist prerequisites. Processes may involve the simple mark out of materials, and the setting up and operation of a variety of welding and cutting plant/equipment. If individual skills are required, relevant specialist units only should be selected.</p> <p>Where additional or more complex marking out skills are required, refer to Unit MEM12007D (Mark off/out structural fabrications and shapes). If machines and equipment for forming, bending or shaping are required, Unit MEM05010C (Apply fabrication, forming and shaping techniques) should also be selected.</p> <p>Band: A</p> <p>Unit Weight: 4</p>

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess and process repair, replacement, modification requirement	1.1. Work requirements are determined from job sheet, instruction or visual inspection. 1.2. Specifications and drawings are obtained and interpreted where required. 1.3. Fabrication is inspected and suitability for repair/replacement/modification determined.
2. Assess and process material requirements	2.1. Material requirements are assessed in accordance with relevant codes, manufacturers' specifications and standard operating procedures. 2.2. Materials are obtained/requisitioned according to standard operating procedures. 2.3. Tool and equipment requirements are assessed and obtained, where required, according to standard operating procedures.
3. Prepare materials	3.1. Fabrication for repair/replacement and/or modification is prepared to specification using acceptable workplace practices, tools and equipment. 3.2. Materials are marked out and prepared to specifications with minimum wastage using correct principles, tools, equipment and procedures. 3.3. Materials are cut, bent, rolled, shaped or formed to specifications using appropriate fabrication techniques/procedures, tools and equipment. 3.4. Where required, items are marked for identification.
4. Repair, replace or modify fabrication	4.1. Using suitable clamping methods, equipment, jigs and fixtures, materials are positioned/clamped for welding. 4.2. Pre-tack checks are undertaken and compliance with specifications is determined prior to tack welding in position. 4.3. Welding equipment is prepared and settings are adjusted according to requirements. 4.4. Immediate work site environment is checked to ensure compliance with safety requirements and procedures. 4.5. Material or item is tack welded using appropriate distortion minimisation techniques and procedures. 4.6. Material or item is checked against specifications prior to welding. 4.7. Material or item is welded to specifications using

ELEMENT	PERFORMANCE CRITERIA
	techniques and procedures appropriate to job requirements.
5. Finish and inspect repair, replacements and/or modification	5.1.Repair, replacement and/or modification is cleaned and finished to specifications using appropriate workplace practices. 5.2.Welds are visually inspected to assess weld quality against predetermined specifications. 5.3.Completed repair, replacement and/or modification is assessed against specifications. 5.4.Maintenance report is prepared and lodged according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- visually inspecting fabrication for defects, faults, and compliance
- marking out
- minimising wastage of materials
- cutting, bending, rolling, shaping or forming materials
- positioning and clamping materials for welding
- undertaking pre-welding/tacking checks
- setting up and adjusting welding equipment
- tack welding
- welding according to all relevant codes, and specifications
- cleaning and finishing materials/fabrication
- reading and interpreting job sheets, specifications, drawings, standard operating procedures, manufacturer documentation and other literature to the level required by this unit
- assessing material and equipment requirements
- using measuring skills for preparing and marking out materials and for checking modification against specifications
- completing short reports using relevant terminology and format

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms knowledge of:

- applicable industry standards, national/Australian standards, NOHSC guidelines, State/Territory regulatory codes of practice/standards
- characteristics of faults, defects and or non-compliance
- means of rectifying faults, defects and/or non-compliance by rework or additional work, or by replacement of components/materials
- effects of proposed modifications on the fabrication
- reasons for selection of specific materials, tools, equipment and consumables
- marking out principles, techniques
- material preparation processes
- clamping method(s) for the welds undertaken.
- location of all materials to be welded
- weld specifications
- equipment, consumables and settings required to achieve the weld specification
- distortion minimisation procedures and methods for rectifying any distortion of materials
- material cleaning and finishing processes for the repair/replacement/modification
- reporting requirements
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and hazard control measures associated with repairing, replacing or modifying fabrications

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to integrate skills in fabrication maintenance and repair/replace/modify fabrications. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with repairing, replacing or modifying fabrications, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Transfer dimensions from a detail drawing to work	1.1. Specifications and work requirements are determined and understood using correct and appropriate calculations 1.2. Development is carried out to specifications or standard operating procedures using appropriate tools and equipment 1.3. Datum points are correctly established and marked appropriate to task requirements
2. Make templates as required	2.1. Appropriate template material is chosen 2.2. Templates are produced to specification 2.3. Correct storage procedures are followed including labelling and identification to standard operating procedures
3. Develop patterns as required	3.1. Parallel line, radial line and triangulation development methods are chosen and applied 3.2. Allowances for fabrication and assembly are correctly determined and transferred
4. Interpret relevant codes, standards and symbols	4.1. Relevant standards/codes and symbols are interpreted 4.2. Requirements of standards/codes are interpreted and applied to materials and processes
5. Estimate quantities of materials from detail drawings	5.1. Materials are correctly identified 5.2. Quantities are estimated from drawings 5.3. Material wastage is minimised

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- performing geometric calculations
- carrying out geometric development
- establishing datum points

REQUIRED SKILLS AND KNOWLEDGE

- producing templates to specification
- labelling and storing templates
- developing patterns
- making fabrication and assembly allowances
- determining material and component quantities
- minimising material wastage

Required knowledge

Required knowledge includes:

- specifications of work
- tools and equipment
- development preparation
- datum points
- materials used for the preparation of templates
- manufacturing allowance considerations
- template development, labelling, identification and storage requirements
- development methods and applications
- fabrication and assembly allowances
- sources of data on fabrication
- relevant standards and codes

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to mark out general fabrications using geometric development. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different workplace situations and contexts. Critical aspects of assessment and evidence include:

- examining detailed drawings for fabrication requirements and specifications including materials, measurements and tolerances, joining methods, standards and code requirements
- correctly calculating allowances for fabrication and assembly including shrinkage, thickness and inside/outside measurements
- correctly establishing and marking datum points
- selecting and using parallel line, radial line and triangulation development methods with minimum material wastage with accurate dimensions and allowances
- accurately producing templates.

Context of and specific resources for assessment

This unit has been developed to support training in and recognition of trade level competency in marking out using geometric development as applied to a sheet metal or metal fabrication environment. Assessment should emphasise a workplace context and procedures found in the candidate's workplace.

The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Method of assessment

Typically, persons engaged in Engineering Tradesperson - Fabrication work are required to apply their geometric development skills and techniques across a range of jobs and specifications.

EVIDENCE GUIDE	
	<p>A single assessment event is not appropriate. On the job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	<p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying geometric development or other units requiring the exercise of the skills and knowledge covered by this unit.</p> <p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>

Range Statement

RANGE STATEMENT
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Mark off/out fabrications	1.1. Specifications and work requirements are determined using correct calculations appropriate to the task. 1.2. Development is carried out to specifications or standard operating procedures using tools and equipment appropriate to the task. 1.3. Datum points are correctly established and indicated. 1.4. Allowances are correctly determined and marked (thickness, bend, pitch, angle, circumference, perimeter).
2. Make templates as required	2.1. Template material is selected appropriate to the marking out requirements. 2.2. Templates are accurately produced. 2.3. Allowances are correctly determined and transferred. 2.4. Templates for rolling, bending, pressing, drilling and profiling are accurately produced. 2.5. Correct storage procedures are followed including labelling and identification to standard operating procedures.
3. Develop patterns as required	3.1. The most appropriate development method for the task is chosen and applied. 3.2. Allowances are correctly determined and transferred.
4. Interpret relevant codes, standards and symbols	4.1. Relevant standards/codes and symbols are interpreted. 4.2. Requirements of standards/codes are interpreted and applied to materials and processes.
5. Estimate quantities of materials from engineering drawings	5.1. Materials are correctly identified. 5.2. Quantities are estimated from drawings. 5.3. Material use is optimised and wastage is minimised.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms skills in:

- performing material calculations
- carrying out geometric development
- establishing datum points
- calculating allowances
- marking out techniques
- producing template/patterns
- labelling and storing template/patterns
- developing template/patterns
- determining and transferring fabrication and assembly allowances
- applying relevant codes/standards
- determining material and component quantities using geometric formulae
- applying principles for minimising material wastage

Required knowledge

Look for evidence that confirms knowledge of:

- tools, equipment, techniques in template/patterns
- datum points
- geometrical principles and formulae
- calculations of allowances:
 - thickness
 - bend
 - pitch
 - angle
 - circumference
 - perimeter
- template/patterns materials
- manufacturers' allowances on materials
- procedures for making template/patterns
- template/patterns labelling, identification and storage
- fabrication and assembly allowances
- effects of material type/thickness on fabrication and assembly allowances
- sources of data on fabrication/assembly allowances
- relevant standards, codes, symbols
- fabrication materials
- optimising material use and minimising material wastage
- safe work practices and procedures

- establishing datum points
- calculating allowances
- marking out techniques
- producing template/patterns
- labelling and storing template/patterns
- developing template/patterns
- determining and transferring fabrication and assembly allowances
- applying relevant codes/standards
- calculating material and component quantities by applying geometric formulae
- applying principles for minimising material wastage

Required knowledge

Look for evidence that confirms knowledge of:

- tools, equipment, techniques in template/ pattern development
- datum points
- geometrical principles, and formulae
- template/patterns materials
- procedures for making template/patterns
- template/patterns labelling, identification, storage and development
- calculations of allowances:
 - thickness
 - bend
 - pitch
 - angle
 - circumference
 - perimeter
- manufacturers' allowances on materials
- fabrication and assembly allowances
- effects of material type/thickness on fabrication and assembly allowances
- sources of data on fabrication/ assembly allowances
- relevant standards, codes, symbols
- fabrication materials
- optimising material use and minimising material wastage
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to mark out complex conical fabrications. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication materials handling, recording and reporting associated with marking out complex conical fabrications or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Fabrications	Hoppers with round/rectangular branch intersections
Allowances	Thickness, bend, pitch, angle, circumference, perimeter
Template material	Steel plate, perspex, timber
Templates produced	Rolling, bending, pressing, drilling and profiling, cutting
Storage procedures	Labelling, identification, e.g. template lofts
Development methods	Parallel line, radial line and triangulation

Unit Descriptor

Unit descriptor	This unit covers marking out complex fabrications using geometric development.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit reflects the advanced skills required to calculate cutting, bending lines and developments. Fabrications may include elliptical shapes, curves, spirals etc. Patterns may include complex and irregular shapes.</p> <p>In the context of light gauge fabrications this unit may apply to marking out complex cylindrical&rectangular sheetmetal fabrications used in square/rectangular ventilation ducting, air-conditioning&cylindrical components.</p> <p>In the context of heavy gauge fabrications this unit may apply to marking out complex cylindrical&rectangular plate and/or pipe fabrications used in ducting, extraction, piping and cylindrical components.</p> <p>Marking out skills for general engineering and maintenance are covered by Units MEM12006C (Mark off/out [general engineering]), MEM07005C (Perform general machining), MEM18006C (Repair and fit engineering components) and MEM18014B (Manufacture tools, gauges and dies).</p> <p>Band: A</p> <p>Unit Weight: 4</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Mark off/out fabrications	1.1. Specifications and work requirements are determined using correct calculations appropriate to the task. 1.2. Development is carried out to specifications or standard operating procedures using tools and equipment appropriate to the task. 1.3. Datum points are correctly established and indicated. 1.4. Allowances are correctly determined and marked (thickness, bend, pitch, angle, circumference, contraction, etc.).
2. Make templates as required	2.1. Template material is selected appropriate to the marking out requirements. 2.2. Templates are accurately produced. 2.3. Allowances are correctly determined and transferred. 2.4. Templates for rolling, bending, pressing, drilling and profiling are accurately produced. 2.5. Correct storage procedures are followed including labelling and identification to standard operating procedures.
3. Develop patterns as required	3.1. The most appropriate development method for the task is chosen and applied. 3.2. Allowances are correctly determined and transferred.
4. Interpret relevant codes, standards and symbols	4.1. Relevant standards/codes and symbols are interpreted. 4.2. Requirements of standards/codes are interpreted and applied to materials and processes.
5. Estimate quantities of materials from engineering drawings	5.1. Materials are correctly identified. 5.2. Quantities are estimated from drawings. 5.3. Material use is optimised and wastage is minimised.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms skills in:

- performing material calculations
- carrying out geometric development
- establishing datum points
- calculating allowances
- marking out techniques
- producing template/patterns
- labelling and storing template/patterns
- developing template/patterns
- determining and transferring fabrication and assembly allowances
- applying relevant codes/standards
- determining material and component quantities by applying geometric formulae
- applying principles for optimising material use and minimising material wastage

Required knowledge

Look for evidence that confirms knowledge of:

- tools, equipment, techniques in template/patterns development
- datum points
- geometrical principles and formulae
- calculations of allowances:
 - thickness
 - bend
 - pitch
 - angle
 - circumference
 - perimeter
- template/patterns materials
- template/patterns development
- manufacturers' allowances on materials
- procedures for making template/patterns
- template/patterns labelling, identification and storage
- fabrication and assembly allowances
- effects of material type/thickness on fabrication and assembly allowances
- sources of data on fabrication/assembly allowances
- relevant standards, codes, symbols
- fabrication materials
- optimising material use and minimising material wastage
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare work for spray welding	1.1.Spray weld requirements are identified from specifications and/or drawings. 1.2.Work is prepared using appropriate tools and techniques. 1.3.Work is assembled/aligned to specifications as required.
2. Select spray welding equipment and powders	2.1.Appropriate spray welding equipment and consumables for materials and work requirements are selected.
3. Set up spray welding equipment	3.1.Gas setting on spray welding equipment is adjusted to task requirements.
4. Implement distortion prevention/control measures	4.1.Distortion prevention/control measures are identified. 4.2.Appropriate distortion prevention/control measures are applied to minimise and rectify distortion.
5. Spray weld material	5.1.Spray weld is correctly deposited to specification.
6. Inspect spray weld	6.1.Weld area/joints are visually inspected against specification. 6.2.Detected defects are removed with minimum loss of sound material.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing materials
- selecting equipment and powders
- setting up equipment
- spray welding material
- identifying defects in welds
- rectifying weld defects
- applying techniques for distortion prevention and rectification

REQUIRED SKILLS AND KNOWLEDGE

- cleaning welds
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings
- following oral instructions
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- correct welding equipment, hoses, tips, hand pieces and filler powder
- procedures and processes for material preparation
- procedures and processes for joint preparations
- causes of distortion for materials within the scope of this unit
- causes of defects and methods of rectification
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to powder spray, using hot and/or cold processes, on a range of heavy or light materials. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and to be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with welding using powder spraying equipment or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Welds	Fillet and butt in all positions
Prepared	Preheating, setting up of jigs, fixtures, clamps, etc., joint preparation e.g. bevelling
Equipment	AC or DC welding machines
Materials	Steels, carbon steels, cast iron, etc. or non-metallic materials (plastic/nylon)
Distortion prevention	Preheating, setting up of jigs, fixtures, clamps, etc.
Defects	Porosity, slag inclusions, discontinuities, lack of penetration, undercut
Removal of defects	Oxy acetylene and air arc equipment, grinding devices

MEM05042B Perform welds to code standards using flux core arc welding process

Modification History

Release 3 - equivalent. Australian Standard code corrected to AS4041.

Unit Descriptor

This unit covers preparing and producing welds to code standards using flux core arc welding (FCAW).

Application of the Unit

Application of the unit	<p>This unit applies to the production of butt and fillet welds in all positions. Welds in this unit are associated with high quality fabrications.</p> <p>Welds produced to the standard of this unit would typically conform to Australian Standard 1210, AS 4041, American Society of Mechanical Engineers (ASME) IX or equivalent. This unit, in conjunction with Unit MEM05026C (Apply welding principles), may satisfy the requirements of AS 1796 Certificate 8F.</p> <p>Band:</p> <p>This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C7 (AQF level IV).</p> <p>Unit Weight: 6</p>

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain welding equipment	1.1. Routine maintenance is performed on welding equipment.
2. Prepare welding materials and equipment for FCAW welding to code standard	2.1. Weld requirements for FCAW welding to code standards are determined. 2.2. Materials are prepared to produce weld to code standard. 2.3. Welding equipment is set up correctly.
3. Weld joints using FCAW to procedure specifications	3.1. Materials are welded as per weld procedure specification.
4. Ensure weld quality	4.1. Discontinuities are rectified to ensure conformance to code requirements. 4.2. Weld records are maintained in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- depositing welds to procedure requirements
- determining weld outcomes, consumables and settings from welding procedure specification
- interpreting technical drawings and weld specifications for welding to code standards using FCAW
- using hand and power tools to prepare and weld materials to code standard
- using measurement and numeracy skills for welding to code standards
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings

Required knowledge

Look for evidence that confirms knowledge of:

- requirements to produce welds to quality of AS1210, AS4041, ASME IX or

REQUIRED SKILLS AND KNOWLEDGE

equivalent

- safe welding practices
- use and application of personal protective equipment for FCAW
- relevant standards or codes
- methods for preparing plate and pipe for code standard welding
- pre-welding and post-welding heating methods and requirements for plate and pipe welding to code standard
- requirements for maintaining weld records to code standard
- hazards and control measures associated with welding, including housekeeping

Pre-Requisites

Prerequisite units		
Path 1	MEM05007C	Perform manual heating and thermal cutting
	MEM05019D	Weld using gas tungsten arc welding process
	MEM05020C	Perform advanced welding using gas tungsten arc welding process
	MEM05026C	Apply welding principles
	MEM05049B	Perform routine gas tungsten arc welding
	MEM05051A	Select welding processes
	MEM05052A	Apply safe welding practices
	MEM09002B	Interpret technical drawing
	MEM12023A	Perform engineering measurements
	MEM18001C	Use hand tools
	MEM18002B	Use power tools/hand held operations

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain welding equipment	1.1. Routine maintenance is performed on welding equipment.
2. Prepare welding materials and equipment for GTAW welding to code standard	2.1. Weld requirements for GTAW welding to code standards are determined. 2.2. Materials are prepared to produce weld to code standard. 2.3. Welding equipment is set up correctly.
3. Weld joints using GTAW to procedure specifications	3.1. Materials are welded as per weld procedure specification.
4. Ensure weld quality	4.1. Discontinuities are rectified to ensure conformance to code requirements. 4.2. Weld records are maintained in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- depositing welds to procedure requirements
- determining weld outcomes, consumables and settings from welding procedure specification
- interpreting technical drawings and weld specifications for welding to code standards using GTAW
- using hand and power tools to prepare and weld materials to code standard
- using measurement and numeracy skills for welding to code standards
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings
- following oral instructions

Required knowledge

Look for evidence that confirms knowledge of:

REQUIRED SKILLS AND KNOWLEDGE

- requirements to produce welds to quality of AS 1210, AS 4041, ASME IX or equivalent
- safe welding practices
- use and application of personal protective equipment for GTAW
- relevant standards or codes
- methods for preparing plate and pipe for code standard welding
- pre-welding and post-welding heating methods and requirements for plate and pipe welding to code standard
- requirements for maintaining weld records to code standard
- hazards and control measures associated with welding, including housekeeping

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to prepare and produce welds to code standards using GTAW process. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing welds to code standards using gas tungsten arc welding process (GTAW) or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Routine maintenance

Ensuring hand piece, gas shroud, flow meter etc. are in serviceable condition

Prepared

Flame cut and ground or machined, preheating, setting up of jigs, fixtures, clamps, etc.

Materials

Carbon/manganese steel, low alloy steel and aluminium materials, etc. on plate, pipe and rolled steel sections

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare materials for flux core arc welding	1.1. Weld requirements are identified from specifications and/or drawings. 1.2. Materials are correctly prepared. 1.3. Materials are assembled/aligned to specification where required.
2. Select welding machine components	2.1. Welding machine settings accessories and consumables are identified.
3. Assemble and set up welding equipment	3.1. Welding equipment is assembled and set up.
4. Minimise and rectify distortion	4.1. Appropriate distortion prevention measures are selected. 4.2. Distortion is rectified.
5. Weld to job specification using FCAW	5.1. Weld deposit is to specification. 5.2. Joints are cleaned to specifications.
6. Ensure weld conformance	6.1. Defects are removed with minimum loss of sound metal using correct and appropriate techniques and tools. 6.2. Weld joints are visually inspected for conformance to specifications.
7. Maintain weld records	7.1. Weld records are completed correctly.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- identifying and interpreting appropriate standard e.g. Australian Standard 1554 General Purpose, American Bureau of Shipping (ABS) or equivalent
- depositing welds in accordance with appropriate standards
- following specifications and drawings
- using appropriate tools and techniques to prepare material for welding

REQUIRED SKILLS AND KNOWLEDGE

- undertaking distortion prevention and rectification
- cleaning the welded joint using appropriate tools and techniques
- removing weld defects to achieve a minimum amount of sound metal with the defect.
- reading and interpreting information on written job instructions, specifications, standard operating procedures and drawings
- recording routine information related to FCAW onto proformas and standard workplace forms
- following oral instructions
- using measurement skills relating to joint preparation and FCAW

Required knowledge

Look for evidence that confirms knowledge of:

- types of gases and their uses
- the relationships between amperage/wire feed, voltage, gas flow, electrode, contact tip and material
- material preparation
- polarity
- electrode stickout
- joint preparations
- electrode classification
- causes of distortion for materials within the scope of this unit
- safe welding practices
- use and application of personal protective equipment for FCAW
- hazards and control measures associated with welding, including housekeeping

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare welding materials and equipment	1.1. Welding equipment is prepared. 1.2. Appropriate welding equipment is assembled and adjusted correctly and safely. 1.3. Materials are prepared to achieve required weld specification.
2. Weld joints to code requirements using advanced FCAW	2.1. Weld requirements are interpreted correctly. 2.2. Welds are deposited correctly to specifications.
3. Assess weld quality and rectify faults	3.1. Weld joints are visually inspected against specifications. 3.2. Defects are removed using appropriate methods for the given task. 3.3. Weld records are correctly completed and maintained.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- depositing fillet and butt welds correctly
- performing all weld and preparation requirements
- identifying discontinuities that do not meet standard requirements
- repairing discontinuities
- using preheat methods
- interpreting weld requirements and specifications
- entering information onto proformas and standard workplace forms
- interpreting technical drawings and weld specifications relating to advanced FCAW
- using hand and power tools to prepare and weld material using FCAW
- using measurement and numeracy skills relating to advanced FCAW and preparation
- selecting equipment and consumables appropriate to task
- using visual identification of faults/defects

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

Look for evidence that confirms knowledge of:

- in depth knowledge of the properties and characteristics of a wide range of materials
- requirements to conform to Australian Standard AS 1554 Structural Propose, Bureau Det Norse Verticas or equivalent
- weld procedures and requirements
- safe welding practices
- use and application of personal protective equipment for FCAW
- purpose of pre-welding and/or post-welding heating and the methods of application
- instructions, symbols, specifications including bead size, bead placement, reinforcement, weld procedure sheet
- discontinuities in relation to standards/requirements
- different welder identification systems such as numbering, bar coding, paint coding, letter stamps

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to carry out advanced FCAW, inspect for and correct defects, and maintain the weld records. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing advanced welding using flux core arc welding process or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Welding equipment

Welding equipment	Gases, settings, electrodes and related equipment selected in accordance with welding procedure
Prepared	Preheating, setting up of jigs, fixtures, clamps, etc.
Materials	Low carbon, cast iron, stainless and low alloy steel
Welds	Fillet and butt in horizontal, vertical and overhead positions
Appropriate methods	Oxy acetylene and air act equipment, grinding devices

Prepared**Materials****Welds****Appropriate methods****Unit Sector(s)**

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify weld requirements	1.1. Weld requirements are identified from job instructions. 1.2. The locations of welds are identified in accordance with standard operating procedures and job specifications.
2. Prepare materials for welding	2.1. Materials are cleaned and prepared ready for welding.
3. Prepare equipment for welding	3.1. Welding equipment is set up correctly. 3.2. Settings and consumables are selected to suit application.
4. Perform routine welding using GTAW	4.1. Safe welding practices are applied. 4.2. Materials are welded to job requirements. 4.3. Welds are cleaned to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing materials
- setting up welding equipment
- welding with GTAW
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures
- using measurement skills for joint preparation and routine GTAW

Required knowledge

Look for evidence that confirms knowledge of:

- preparatory requirements
- properties and characteristics of materials and consumables
- equipment and equipment settings
- fuel gas properties and applications
- post welding treatments

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify properties of commonly used metals	1.1. Materials to be welded are identified. 1.2. Characteristics and properties of commonly used materials are identified. 1.3. Uses and purposes of commonly used materials are identified. 1.4. Basic metallurgical characteristics are considered.
2. Identify and provide for welding contingencies	2.1. Information relevant to welding processes is sourced as required. 2.2. Potential contingencies are identified and solutions are considered.
3. Identify appropriate welding processes	3.1. Welding processes are identified and selected to achieve specified outcomes with selected metals. 3.2. Effects of welding processes on materials are identified. 3.3. Distortion prevention measures are identified. 3.4. Alternative joining methods for job are identified and assessed for relevancy.
4. Identify cleaning and preparation requirements	4.1. Processes for cleaning and preparing metals are identified. 4.2. Role of contaminants in welding flaws is explained. 4.3. Safety requirements for chemicals and other materials are identified and utilised in accordance with manufacturers' specifications and legislative requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents

REQUIRED SKILLS AND KNOWLEDGE

- planning and sequencing operations
- checking and clarifying task-related information

Required knowledge

Look for evidence that confirms knowledge of:

- hazards and control measures associated with welding practices, including housekeeping
- safe work practices and procedures
- properties and characteristics of commonly used metals and materials
- basic metallurgy principles
- information resources
- chemical content of fumes emitted by welding processes
- uses and purposes of various metals
- distortion prevention measures for various metals

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Access and interpret OH&S information	1.1.OH&S information is obtained and interpreted. 1.2.Relevant OH&S legislation is identified. 1.3.Work related safety information is obtained and interpreted.
2. Identify risks associated with welding	2.1.Pollutants formed by welding processes are identified. 2.2.Occupational diseases and injuries which may be associated with welding are identified. 2.3.Factors associated with increased risk are identified. 2.4.Exposure levels for pollutants are identified. 2.5.Risks and potential health effects associated with specific metals are identified. 2.6.Risks and potential health effects associated with gases in welding are identified. 2.7.Other hazards of welding are identified.
3. Reduce risks associated with welding	3.1.Manual handling techniques are used. 3.2.Personal protective equipment is used correctly. 3.3.Procedures to control hazards are implemented. 3.4.Workplace safety procedures are implemented. 3.5.Workplace safety non-compliances are reported in accordance with workplace procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- sourcing and interpreting safety-related information and Material Safety Data Sheets (MSDS)
- planning and sequencing operations
- identifying workplace risks and nonconformances
- reporting workplace risks and nonconformances
- checking and clarifying task-related information

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

Look for evidence that confirms knowledge of:

- characteristics and properties of common metals and welding materials
- effect of gas and electrical welding operations on metals
- hazards and control measures associated with gas and electrical welding, including housekeeping
- welding safety practices and procedures
- effect of various treatments on a range of commonly used metals
- use and application of personal protective equipment

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to apply safe welding practices.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

MEM05053A Set and edit computer controlled thermal cutting machines

Modification History

Single band identifier removed to clarify dual status

Unit Descriptor

Unit descriptor	This unit covers setting work holding fixtures/devices/tools, setting gas and nozzle controls, trialling the program, instructing the operator and replacing worn or damaged hoses, regulators, nozzles and clamps or other holding devices or tools.
------------------------	---

Application of the Unit

Application of the unit	<p>The unit applies to any computer or numerically controlled thermal cutting machine or process. Applications may include NC/CNC thermal cutting machines and industrial robots performing thermal cutting.</p> <p>Editing applies to identifying and accessing programs in edit mode in order to make changes associated with gas mixtures, nozzle or work piece feed speed and operational sequence. Changes are generally made in situ.</p> <p>Work is performed to established processes, practices and specifications.</p> <p>All work and work practices are performed to instructions, plans and specifications as appropriate. Technical difficulties are resolved in consultation with appropriate technical advisers. Work is carried out autonomously to predetermined standards of quality and safety.</p> <p>For setting and editing other computer controlled machines, see Unit MEM07016C (Set and edit computer controlled machines/processes). Where manual thermal cutting, gouging and shaping is required Unit MEM05008C Perform advanced manual thermal cutting, gouging and shaping should also be selected.</p> <p>Band:</p> <p>This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C7 (AQF level IV).</p> <p>Unit Weight: 4</p>
--------------------------------	---

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify job requirements	1.1. Instructions/plans are understood and correctly followed.
2. Set work holding fixtures/devices/tools	2.1. Correct ancillary devices are selected and attached to machine using standard operating procedures. 2.2. Machine is prepared to accept work holding devices. 2.3. Work holding fixtures/devices/tools are set to zero or a datum using appropriate setting devices.
3. Set gas and nozzle controls	3.1. Gas and nozzle controls are set according to type and thickness of material to be cut and to minimise distortion.
4. Trial program	4.1. Program is trialled observing all safety procedures. 4.2. Sample cut is checked for compliance with specifications. 4.3. Program editing to change gas mixture, feed and operational sequence requirements is undertaken as required to ensure job conforms to specification.
5. Instruct machine operator	5.1. Operator is instructed if necessary ensuring that all safety procedures and devices are in place.
6. Replace worn or damaged nozzles, regulators and work holding devices/tools.	6.1. Where appropriate, worn or damaged nozzles, regulators and work holding devices/tools are replaced, or other corrective action is taken using standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents planning and sequencing operations

REQUIRED SKILLS AND KNOWLEDGE

- checking and clarifying task related information
- attaching ancillary devices
- mounting work holding devices
- editing programs
- instructing machine operator on the sequence of operations
- following safety procedures
- identifying worn or damaged holding devices or fixtures and taking appropriate corrective action

Required knowledge

Look for evidence that confirms knowledge of:

- ancillary equipment and its applications
- procedures for attaching the ancillary device(s) to the NC/CNC machine
- work holding devices, their application and procedures for mounting them
- location of work holding fixtures/devices/tools relative to the machine zero or datum
- operating procedures
- safety features and equipment
- measuring devices/ techniques for checking the parts or product
- effects of changes to gas mixtures and nozzle or work piece speed
- the impact of changes to the sequence of operations on the part or product to be produced
- procedures for editing programs via the machine controller
- the sequence of operations of the machine/process
- the corrective action to be taken for worn or damaged tooling
- hazards and control measures associated with computer controlled machines, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to set and edit computer controlled thermal cutting machines/processes. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, i.e. the candidate is not in productive work, an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with setting and editing computer controlled thermal cutting machines or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

MEM05054A Write basic NC/CNC programs for thermal cutting machines

Modification History

Single band identifier removed to clarify dual status

Unit Descriptor

Unit descriptor	This unit applies to thermal cutting machines and covers identifying computer controlled machine program elements, writing a basic program and operation sheet, and trialling the program.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit extends to writing a program to describe simple thermal cutting machine operations including cutting paths using appropriate software for machines which may incorporate single or multiple nozzles and material loaders. The program may use common M and G codes but does not include the programming of advanced operations using canned cycles and sub-routines.</p> <p>Programs are trialled and edited as necessary to adjust operation of the machine. Technical difficulties are resolved in consultation with appropriate technical advisers. Work would be undertaken autonomously using predetermined standards of quality.</p> <p>For basic programming of other computer controlled machines, see Unit MEM07018C (Write basic NC/CNC programs).</p> <p>Band:</p> <p>This unit has dual status and is to be regarded as both a specialisation band A unit and Specialisation band B unit for progression to C7 (AQF level IV).</p> <p>Unit Weight: 4</p>
--------------------------------	---

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify <i>basic</i> NC/CNC machine program elements	1.1.Appropriate program elements are selected for machine controller.
2. Write basic NC/CNC machine program	2.1.Engineering drawings are understood and interpreted to define basic machine function and cutting path geometry. 2.2.Coordinates are calculated for cutting path 2.3.Program is written in standard code format in accordance with standard operating procedures.
3. Write NC/CNC operation sheet	3.1.Operation sheets are produced to specification in accordance with standard operating procedures.
4. Trial program	4.1.Machine is operated in manual mode to test and prove program as required. 4.2.Program is edited if necessary to adjust operation as required. 4.3.Components are checked for conformance to specification as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- calculating coordinates of all relevant points on the part or product to be cut or welded
- writing NC/CNC program in standard code format
- producing NC/CNC operation sheet(s)
- operating NC/CNC machine safely in manual mode
- editing NC/CNC program

REQUIRED SKILLS AND KNOWLEDGE

- checking parts or products for conformance to specifications

Required knowledge

Look for evidence that confirms knowledge of:

- the elements of a basic NC/CNC program
- the function of elements in controlling the operation of an NC/ CNC machine
- type(s) of NC/CNC thermal cutting and welding machine and their applications
- thermal cutting operations controlled by program
- the cutting path(s) to be followed when cutting a part or product
- the reasons for selecting cutting path(s) and sequence of operations
- the zero point of the NC/CNC machine
- standard codes used in the writing of NC/CNC programs
- applications of standard codes in NC/CNC programming
- procedures for writing NC/CNC programs in standard code format
- procedures for completing NC/CNC operation sheets
- the information to be included in NC/CNC operation sheets
- procedures for manual operation of the NC/CNC machine
- reasons for testing and proving the NC/CNC program
- procedures for editing the NC/CNC program via the machine controller
- the effects of editing on the operation of the NC/CNC machine and the part or product to be cut
- the measuring equipment/techniques used to check for conformance to specification
- hazards and control measures associated with numerical and computer controlled machines, including housekeeping
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use hand tools and formers	1.1. Hand tools and formers are correctly selected for specific forging techniques. 1.2. Hand tools and formers used correctly.
2. Apply hand forging techniques	2.1. Knowledge of drawing, swaging, bending, upsetting, spreading, punching and drifting techniques is applied to produce articles to specification. 2.2. Forging temperatures and heat specifications are adhered to for various materials. 2.3. Allowance is made for material shrinkage and oxidation 2.4. Appropriate forging technique is selected and applied.
3. Operate heating equipment	3.1. Heating equipment is set up and operated correctly. 3.2. Equipment is operated in a manner that minimises oxidation. 3.3. Heat is controlled to specified areas.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- selecting and using hand tools and formers
- applying hand forging techniques
- determining correct forging temperatures
- setting up and operating heating equipment

Required knowledge

Look for evidence that confirms knowledge of:

- range of hand tools, formers used in hand forging
- hand forging techniques (drawing, swaging, bending, upsetting, spreading, punching, drifting)
- how to calculate mean diameter, length, circumference

REQUIRED SKILLS AND KNOWLEDGE

- source of information on forging temperatures
- heat specifications for various materials
- effects of and allowances for material shrinkage and oxidation
- the application, set up, and means of adjustment of a range of heating equipment
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with hand forging, including housekeeping

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to use hand tools and formers, apply hand forging techniques and operate heat treatment equipment. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with hand forging of low to medium carbon and alloy steels using a variety of techniques, tools formers and heating devices or other units requiring the exercise of the skills and knowledge covered by this unit.

Method of assessment

Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes,

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use hammer tools and formers	1.1.Hammer tools and formers are correctly selected for specific forging technique. 1.2.Hammer tools and formers are used correctly. 1.3.Forging machine is set up and operated correctly.
2. Apply hammer forging techniques	2.1.Appropriate hammer forging technique is selected and applied. 2.2.Defects are recognised and appropriate rectification action is taken. 2.3.Correct techniques are applied to the handling of hot metal with regard to balancing and pivoting. 2.4.Correct heating process is applied.
3. Select material	3.1.Material calculations are made using volumes and weights that include provision for oxidisation and shrinkage. 3.2.Material is correctly selected for use with specific tools and formers.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- using hammer tools and formers
- setting up and operating forging machines
- following job instructions, drawings, specifications
- detecting forging defects
- rectifying forging techniques
- safely handling hot metal
- correctly heating material being forged
- calculating volume and weight of material

Required knowledge

Look for evidence that confirms knowledge of:

REQUIRED SKILLS AND KNOWLEDGE

- hammer forging techniques
- the set up and operation of forging machines
- techniques for handling hot metal
- oxidation/shrinkage allowances
- numerical operations and formulae for determining the volume and weight of material
- material specifications
- hazards and control measures associated with hammer forging, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine requirements of job	1.1. Job requirements are determined from engineering drawings, job sheet, or verbal instructions from metallurgist or supervisor.
2. Select heat treatment equipment	2.1. Appropriate equipment is selected for the required heat treatment.
3. Set up equipment	3.1. Equipment is set up according to standard operating procedures and manufacturers' instructions.
4. Work safely with hot metals	4.1. Safety clothing and personal protective equipment is used correctly according to standard operating procedures. 4.2. Emergency procedures are demonstrated according to approved safety instructions. 4.3. Safety signs and symbols are identified and understood. 4.4. Equipment is used according to specifications and standard operating procedures.
5. Heat treat material	5.1. Material is treated to achieve required result and may include preparation processes. 5.2. Material is piece or batch loaded and unloaded using equipment appropriate to the situation, according to standard operating procedures. 5.3. Correct temperature is maintained according to standard operating procedures.
6. Identify hazardous conditions	6.1. Hazards are identified and hazard control measures are implemented to maintain a safe work environment.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	<p>1.1. Heat treatment process to achieve specified result is determined using reference material, metallurgist's report, consultation with technical specialists or other appropriate personnel.</p> <p>1.2. Knowledge of metal composition and effects of heat and cooling is applied to selection of appropriate process and equipment.</p>
2. Record and maintain heat treatment information	<p>2.1. All relevant task information is recorded according to standard operating procedures.</p> <p>2.2. Information relating to equipment and processes is maintained as required.</p>
3. Test material	<p>3.1. Material is prepared for testing as required.</p> <p>3.2. Properties of material are tested using appropriate testing equipment as required.</p> <p>3.3. Heat treatment faults are identified and reported if appropriate.</p> <p>3.4. Heat treatment faults are rectified where possible.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing materials for testing
- using appropriate equipment to test materials
- identifying heat treatment faults
- rectifying heat treatment faults
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, reports and other applicable reference documents
- entering routine and familiar information onto proformas and standard workplace forms
- checking and clarifying task-related information

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

Look for evidence that confirms knowledge of:

- material characteristics and properties
- heat treatment processes
- effect of heat on material characteristics
- material preparation
- quenching, preheating, temperature requirements for different materials and processes
- types of destructive and non-destructive testing
- heat treatment faults and corrections
- hazards/control measures within the scope of this unit
- use and application of personal protective equipment
- safe work practices and procedures

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Heat treatment process	Coatings and packings, preheating, soaking, quenching, tempering, annealing, normalising, carburising, sintering
Metal composition	High/low carbon steel, ferrous/non-ferrous
Equipment	Salt baths, vacuum furnace, induction heating, kilns, gas fired furnaces etc. Equipment range does not include drop and upset machinery, vacuum furnaces or rolling and extruding mill machinery.
Material	Ferrous and non-ferrous metals
Testing	Testing includes destructive and non-destructive methods
Heat treatment faults	Thermal fractures, distortion, shrinkage, oxidation, etc.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and select drop and upset forging equipment and tools for specific operation	1.1. Appropriate equipment is selected which accounts for size of material and procedures. 1.2. Dies and punches are correctly selected for specific operations and equipment. 1.3. Die replacement is correctly determined with regard to relief allowances, cracking, dimensions, etc.
2. Set up and operate drop and upset forging equipment	2.1. Equipment is correctly and safely set up, adjusted and operated. 2.2. Correct die setting techniques are applied in setting correct die and punch alignment. 2.3. Correct die preheating procedures are applied.
3. Prepare material	3.1. Materials are correctly prepared and heated in accordance with job requirements and/or specifications.
4. Drop and upset forge material	4.1. Material is drop forged using the correct procedures and techniques. 4.2. Correct lubricant is applied for die wear and forging release. 4.3. Correct grain flow is determined. 4.4. Galls, folds and cracks are identified and corrected. 4.5. Correct removal of flash or fin is carried out. 4.6. Material amounts are calculated with allowance for heat wastage and flash or fin.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • inspecting dies and preparing dies and materials • aligning dies and punches • replacing dies • operating drop/upset forging equipment

REQUIRED SKILLS AND KNOWLEDGE

- die preparation
- material preparation
- detecting and correcting defects
- removing flash or fins
- calculating material volume, weight, allowances, heat wastage, flash, fin

Required knowledge

Look for evidence that confirms knowledge of:

- drop or upset forging techniques
- characteristics of forging equipment
- safety work practices and procedures
- hazards and control measures associated with drop and upset forging, including housekeeping
- incorrect/correct alignment of dies, punches
- dies (preheating, preparation, lubrication, defects, conformance, replacement)
- materials pre-heating
- relevant tools, techniques and equipment
- setting, adjusting, operating forging equipment
- features of defects in drop/upset forged articles such as, galls, folds, cracks
- ways of correcting defects
- ways of removing flash, fins from drop/upset forged articles
- calculations for material volume, weight, allowances, heat wastage, flash/fin

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to perform preparation and forging of material using drop and upset methods on a range of metals, and a range of drop forging and upset forging equipment including cold upset forging equipment. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with selecting, setting up, and operating drop and upset forging equipment or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures,</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Equipment	May include: drop forging hammer/press, open die forging hammer using closed loose die or horizontal upsetting machine (heading machine)
Materials	May include: ferrous materials (steel) or non-ferrous material (copper, aluminium bronze)
Lubricants	Graphite bearing oils/greases or cellulose granules, waxes
Correct removal	Ejector pins, drafts in die (angle)

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess spring condition	1.1.Springs are checked for correct operation and defects are identified in accordance with standard operating procedures. 1.2.Springs suitable for rework are correctly identified. 1.3.Repair procedure is correctly identified.
2. Set and reset springs for repair	2.1.Correct stripping procedure is applied. 2.2.Setting tolerances are allowed for in set/reset of springs to specification. 2.3.Correct temperature is controlled for setting/resetting springs.
3. Set up and operate spring forming equipment	3.1.Equipment is safely set up and correctly used. 3.2.Material is correctly and safely positioned. 3.3.Forming equipment and tools are correctly selected and used for given application.
4. Form and shape material	4.1.Material is tapered, rolled and bent to conform with specifications. 4.2.Correct procedure is adopted for both hot and cold forming. 4.3.Allowance is made for relief and spring-back. 4.4.Material lengths are correctly determined.
5. Test components	5.1.Spring compression is determined from specifications. 5.2.Defects and dimensional accuracy are correctly determined. 5.3.Springs are correctly nested to specification.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- correctly using tools and equipment
- following plans

REQUIRED SKILLS AND KNOWLEDGE

- using calculations to determine material requirements
- determining repair requirements
- carrying out repairs
- following oral instruction
- checking and clarifying task-related information

Required knowledge

Look for evidence that confirms knowledge of:

- procedures for testing springs for correct operation/malfunction
- causes of deviations from specifications/defect in springs
- the effects of annealing, hardening, tempering, soaking and setting on spring operation
- repair and rework procedures for a range of spring defects
- hazards and control measures associated with the set-up and operation of spring forming equipment
- procedures for tapering, rolling and bending materials
- applications of both hot and cold forming processes
- allowances to be made for relief and spring-back
- procedures for recording test results
- procedures for nesting springs
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Job requirements are determined from engineering drawing, job sheet or verbal instructions.
2. Set up equipment for heat/quenching, tempering and annealing	2.1. Appropriate heating process and/or procedure is selected for the given job. 2.2. Equipment is set up according to standard operating procedures and manufacturers' instructions.
3. Operate heating equipment	3.1. All safety procedures are observed. 3.2. Appropriate heating equipment operating procedures are followed. 3.3. Appropriate equipment adjustments are made. 3.4. Material is treated to achieve required result.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, manufacturer instructions, charts, lists, drawings and other applicable reference documents
- checking and clarifying task-related information
- following verbal instructions
- orally reporting routine information
- selecting appropriate processes for heating/quenching, tempering, annealing
- setting up, adjusting and operating equipment

Required knowledge

Look for evidence that confirms knowledge of:

- characteristics and applications of heating/quenching, tempering, annealing processes
- specifications for heating, quenching, tempering, and annealing
- process for heating/quenching, tempering, annealing, different materials
- operating/adjusting heating equipment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Set up and operate forging machine	1.1.The forging machine is set up and operated in accordance with standard operating procedures and specifications. 1.2.Complex open die tooling is selected and used according to workplace procedures. 1.3.Safe operating procedures are followed.
2. Forge complex shapes and heavy parts	2.1.The material to be forged is safely and correctly positioned in the forming equipment in accordance with standard operating procedures. 2.2.Hot forgings are marked and measured as required. 2.3.Allowance is made for material shrinkage and oxidisation. 2.4.Hammer tools and fixtures attached to power hammer are used correctly. 2.5.Forging is checked to ensure conformance to tolerances and specifications. 2.6.Forgings are handled safely and correctly according to workplace procedures.
3. Heat complex forgings	3.1.Heating plant and equipment is selected appropriate to work undertaken. 3.2.Techniques used to heat heavy and complex forgings are applied correctly. 3.3.Post-forging heating is performed correctly and safely. 3.4.Hot forgings are handled safely and according to workplace procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- selecting and using measuring guides
- calculating allowance for material shrinkage and oxidisation

REQUIRED SKILLS AND KNOWLEDGE

- setting up and operating forging machine
- selecting forming tools and equipment
- positioning material
- handling materials
- selecting and setting up heating equipment
- performing heat treatment process(es) for forging

Required knowledge

Look for evidence that confirms knowledge of:

- hammer tools and formers and their applications
- hammer forging techniques
- numerical operations and calculations/formulae for data analysis within the scope of this unit
- tools, formers and techniques to produce a range of hammer forged articles
- procedures for measuring forged articles
- effects of material shrinkage and oxidisation on the dimensions of the forged article
- methods of overcoming/allowing for the effects of shrinkage and oxidisation when hammer forging articles
- hammer punching techniques
- procedures for handling material to be hammer forged
- heating equipment and applications
- heat treatment processes for forging
- heat treatment requirements for given materials

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Forge complex shapes using hand tools on an anvil</p>	<p>1.1.Task requirements for complex hand forging are identified and clarified as required.</p> <p>1.2.Material volume is correctly calculated.</p> <p>1.3.Allowances for bending, material shrinkage and oxidisation are made as required.</p> <p>1.4.Hand tools and formers are selected and used correctly in accordance with standard operating procedures.</p> <p>1.5.Safe hand forging procedures are followed.</p> <p>1.6.Techniques and principles for producing complex shapes are applied correctly.</p> <p>1.7.Forging is checked to ensure conformance to tolerances and specifications.</p>
<p>2. Perform splitting and bundling on anvil</p>	<p>2.1.Tools and equipment are selected and used correctly.</p> <p>2.2.Hand forging techniques and procedures are applied to forging and opening bundled and split sections.</p> <p>2.3.Allowance is made for material shrinkage, distortion and oxidisation.</p> <p>2.4.Heat is applied and controlled in specified areas of the material to be forged in accordance with standard operating procedures.</p> <p>2.5.Forgings are handled safely and correctly according to workplace procedures.</p> <p>2.6.Forgings are checked to ensure conformance to tolerances and specifications.</p>
<p>3. Produce jigs and tools for complex shapes</p>	<p>3.1.Tools and equipment required to taper and bend materials are selected appropriate to task requirements.</p> <p>3.2.Techniques for producing jigs and tools are applied correctly.</p> <p>3.3.Jigs and patterns are bent and shaped to specifications.</p> <p>3.4.Hand held tools are forged to cut pattern, in accordance with specifications.</p> <p>3.5.Final shaping, heat treatment and sharpening is performed to specifications</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- selecting and using measuring guides
- calculating allowance for material volume, bending, shrinkage and oxidation
- selecting tools and equipment
- forging and splitting sections
- forging bundled sections and opening bundled sections
- positioning material
- handling materials
- selecting and setting up heating equipment
- performing heat treatment process(es) for forging
- applying and controlling heat

Required knowledge

Look for evidence that confirms knowledge of:

- hand tools and their applications
- techniques and procedures for hand forging complex shapes
- numerical operations and calculations/formulae within the scope of this unit
- procedures for measuring forged articles
- forging temperatures and heat specifications for multiple pieces
- tools, techniques and equipment required to taper and bend materials
- effects of material shrinkage and oxidation on the dimensions of the forged article
- methods of overcoming/allowing for the effects of shrinkage and oxidation when hand forging articles
- procedures for handling forgings
- heating equipment and applications
- heat treatment processes for forging
- heat treatment requirements for given materials

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Complex hand forging

Shaping, reverse tapering, jump up section for bends

Hand forging techniques

Spreading, surface chasing, hot splitting

MEM07001B Perform operational maintenance of machines/equipment

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers carrying out programmed safety and maintenance checks on machines/equipment.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit mainly applies in a manufacturing setting, where routine programmed operational maintenance to machines/equipment is required. It is not intended to be used where higher level maintenance activities are performed.</p> <p>Machines/equipment range includes manual, semi-automatic and automatic machines of a stand-alone continuous production or process nature.</p> <p>This unit should not be selected when any of the following are selected: Unit MEM18055B (Dismantle, replace and assemble engineering components), Unit MEM18006C (Repair and fit engineering components), Unit MEM07005C (Perform general machining).</p> <p>Band: A</p> <p>Unit Weight: 2</p>
--------------------------------	---

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Undertake programmed safety and maintenance checks	<p>1.1. Checks are undertaken safely and to prescribed procedure.</p> <p>1.2. Status/report is recorded on proforma or reported orally.</p>
2. Undertake programmed maintenance	<p>2.1. Removal/replacement of consumable components is undertaken to prescribed procedure and instructions are followed.</p> <p>2.2. Fluids and lubricants are replaced and/or topped up to prescribed schedule.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- undertaking programmed safety and maintenance checks
- undertaking programmed operational maintenance
- entering routine and familiar information onto proformas and standard workplace forms
- following routine information on written procedures
- following oral instructions
- orally reporting routine information

Required knowledge

Look for evidence that confirms knowledge of:

- programmed maintenance and safety check procedures for the specified machine/equipment
- recording/reporting requirements
- safe work practices and procedures
- hazards and control measures associated with operational maintenance of machines/equipment

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to perform operational maintenance of machines/equipment. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with operational maintenance of machines/equipment or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Machines/equipment

Manual, semi-automatic and automatic machines of a stand-alone continuous production or process nature

Checks

Programmed safety and maintenance checks
Adjustments of a limited nature including safety guards, stops, wear pads and tool holders, nipping up glands and adjustment of scrapers and aprons

Consumable components

Air filters, oil wipers, grease containers, tool tips, indicator globes, fluids and lubricants, guides and limit switch actuators

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Observe safety precautions	1.1. Correct safety procedures are observed and protective clothing and safety glasses worn.
2. Determine job requirements	2.1. Drawings are interpreted, sequence of operations determined and tools selected to produce component to specification. 2.2. Cutting parameters are determined.
3. Perform precision shaping operations	3.1. Precision shaping operations are carried out including precision flat surfaces, shoulders, slots, keyways, angles and dovetails.
4. Perform precision planing operations	4.1. Precision planing operations are carried out including horizontal and vertical surfaces and angles.
5. Perform precision slotting operations	5.1. Precision slotting operations are carried out including feathered and tapered keyways, slotting internal cavities, dovetails, slotting circular surfaces and internal splines.
6. Check component for conformance to specification	6.1. Component is checked for conformance to specification using appropriate techniques, tools and equipment.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing an operational work plan
- performing precision shaping operations:
 - flat surfaces
 - shoulders
 - slots
 - keyways
 - angles
 - dovetails
- performing precision planing operations on:

REQUIRED SKILLS AND KNOWLEDGE

- horizontal and vertical surfaces
- performing precision slotting operations:
 - feathered keyways
 - tapered keyways
 - slotting internal cavities
 - dovetails
 - slotting circular surfaces
 - slotting internal splines
- checking for conformance to specifications
- using precision measurement equipment
- planning and sequencing operations
- reading and interpreting information on written job instructions, specifications, charts, lists, drawings and other applicable reference documents
- checking and clarifying task related information
- measuring components to specified tolerances
- performing calculations for determining cutting parameters and checking tolerances
- undertaking numerical operations within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- reasons for selecting the chosen sequence of operations
- procedures for setting up the work piece
- tool type and geometry to achieve the required specifications on different materials
- techniques and procedures for machining the following:
 - flat surfaces
 - shoulders
 - slots
 - keyways
 - angles
 - dovetails
- planing techniques and procedures for machining:
 - horizontal and vertical surfaces
- slotting techniques and procedures for machining:
 - feathered keyways
 - tapered keyways
 - slotting internal cavities
 - dovetails
 - slotting circular surfaces

REQUIRED SKILLS AND KNOWLEDGE

- slotting internal splines
- appropriate techniques, tools and equipment to measure machined components
- hazards, control measures and housekeeping associated with precision shaping/planing/slotting operations
- use and application of personal protective equipment
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Job sheets or equivalent instructions are interpreted correctly and understood.
2. Set machine	2.1. Safe working practices are understood and implemented. 2.2. Machine is set in accordance with defined procedures. 2.3. Machine is adjusted to meet specifications and operational requirements. 2.4. First-off samples are measured for compliance with specifications.
3. Instruct machine operator	3.1. Machine operator is instructed, if necessary, on sequencing settings and any required safety procedures.
4. Replace worn/damaged tooling	4.1. Worn or damaged tooling is identified and changed as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting and following job/operation sheets, standard operating procedures, specifications, safe working procedures and other applicable reference documents
- verbally conveying routine and familiar instructions
- identifying worn tools
- using hand tools for machine setting
- measuring to specified tolerances
- following oral instructions

Required knowledge

Look for evidence that confirms knowledge of:

- sequences of machine setting operations

REQUIRED SKILLS AND KNOWLEDGE

- techniques, tools and equipment to measure samples
- characteristics of machines/processes
- safe work practices and procedures
- tools and equipment for machine setting
- applicable machine tooling and accessories
- symptoms of tool wear
- use and application of personal protective equipment
- hazards and control measures associated with machine setting (routine)
- strategies for conveying routine instructions

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to determine job requirements, set the machine in accordance with defined procedures, instruct the operator and replace worn or damaged tooling. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Job sheets or equivalent instructions are interpreted correctly and understood
2. Set machine	2.1 Safe working practices are understood and implemented 2.2 Sequence of operations is determined and machine is set accordingly 2.3 Machine is adjusted to meet specifications and operational requirements 2.4 First-off samples are measured and inspected for compliance with specifications
3. Instruct machine operator	3.1 Machine operator is instructed, if necessary, on sequencing settings and any required safety procedures
4. Replace worn/damaged tooling	4.1 Tools are changed and settings are adjusted to specification as required

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting information on written job sheets, instructions, standard operating procedures, safe working procedures and other applicable reference documents
- determining machine/process sequences
- verbally conveying routine and familiar instructions
- checking and adjusting machine and replacing worn or damaged tooling
- checking and clarifying task-related information
- measuring to specified tolerances

Required knowledge

Look for evidence that confirms knowledge of:

- characteristics and hazards of machine/process
- tooling, equipment and timing requirements of the machine's operations

- common product faults or defects and adjustments
- consequences of not instructing the machine operator
- use and application of personal protective equipment
- safe work practices and procedures
- strategies for conveying routine instructions

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>

Unit Descriptor

Unit descriptor	This unit of competency covers determining the job requirements and sequence of operations, selecting and mounting tools, performing the machining, measuring the components, and adjusting and maintaining a range of standard machine tools.
------------------------	--

Application of the Unit

Application of the unit	<p>The unit of competency applies to the use of machinery to shape metal including lathes, mills, planers, shapers, radial arm drills, slotters and surface grinders.</p> <p>This unit has been developed to support Engineering Tradesperson - Mechanical apprenticeship training and the recognition of trade level skills in machining operations. Skills covered by this unit are generally applied in occupational and work situations associated with fitting and machining. It may also apply to other trade occupations requiring general machining skills. It may also apply in some circumstances to senior operators who have responsibility for machine set up, selection of materials and lubricants, establishment of datum points and basic marking out, and setting of speeds, feeds and other machining parameters.</p> <p>This unit has application in the MEM30205 Certificate III in Engineering - Mechanical qualification and other qualifications requiring a basic trade level of machining skills. It may also apply to MEM20205 Certificate II in Engineering - Production Technology and MEM30105 Certificate III in Engineering - Production Systems and other qualifications requiring machining skills.</p> <p>Machining is undertaken on one or more of a range of standard machine tools. Machines are not computer numerical controlled (CNC) machines.</p> <p>Where machining is undertaken without undertaking any set up including mounting of tools, setting of speeds, feeds and other operational parameters then either MEM07024B Operate and monitor machine/process or MEM07025B Perform advanced machine/process operation should be selected.</p> <p>Drilling operations in this unit exclude those covered by</p>
--------------------------------	--

	<p>MEM18002B Use power tools/hand held operations.</p> <p>Where substantial marking out is required, MEM12006C Mark off/out (general engineering) should be considered.</p> <p>Where precision measurement is required, MEM12003B Perform precision mechanical measurement should also be considered.</p> <p>For set-up and operation of electro-discharge (EDM) machines, refer to MEM07014B Perform electro-discharge (EDM) machining operations.</p> <p>Band: A</p> <p>Unit Weight: 8</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Drawings, instructions and specifications are interpreted and understood
2. Determine sequence of operations	2.1. Sequence of operations including job set-up is determined for maximum efficiency and to meet job specifications 2.2. Appropriate material is selected and datum established as required
3. Select and mount tools	3.1. Appropriate tools for job are selected, sharpened and shaped as required 3.2. Tools are mounted and positioned correctly
4. Perform machining operations	4.1. Basic marking out techniques are used where required 4.2. Machining parameters are set for job requirements and maximum tool life 4.3. Work is held or correctly clamped without damage to product, and all safety requirements are met 4.4. Machining is performed in a safe manner utilising all guards, safety procedures and personal protective clothing and equipment
5. Measure components	5.1. Components are checked with instruments or gauges appropriate to the measurement requirements to ensure compliance with specifications
6. Adjust and maintain machine	6.1. Routine maintenance and adjustments are carried out as required which may include slide and collar adjustment, cleaning and lubrication

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- reading and interpreting routine information on written job instructions, specifications and standard operating procedures which may include drawings

REQUIRED SKILLS AND KNOWLEDGE

- following oral instruction
- planning and sequencing operations
- preparing operational work plan
- sharpening and shaping cutting tools
- identifying worn or damaged cutting tools
- correct mounting and positioning of cutting tools
- basic marking out of materials
- setting machining parameters to achieve the job requirements and maximise tool life
- using appropriate and sufficient clamping/mounting of the work piece
- using coolant/lubricant correctly
- checking for conformance to specifications
- measuring to specified tolerances and dimensions

Required knowledge

Required knowledge includes:

- reasons for selecting the chosen sequence of operations
- methods of work holding
- basic marking out techniques including datum points/lines
- geometry of cutting tools for a range of materials and applications
- benefits of using correctly sharpened cutting tools
- machine operation
- selection of feeds and speeds to suit a range of materials and operations within the scope of this unit
- correct methods of mounting a variety of cutting tools
- safety issues with regard to correct clamping, guards and shields
- tolerances and limits of size
- situations indicating the need for machine adjustment, lubrication and cleaning
- techniques, tools and equipment to measure materials and machined components
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with general machining

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to perform general machining including responsibility for selecting and mounting tooling and setting machining parameters. Competency in this unit cannot be claimed until all prerequisites have been satisfied</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different situations and contexts. Critical aspects of assessment and evidence include:</p> <ul style="list-style-type: none"> • correct job planning including identifying job requirements from drawings, instructions or specifications and sequence of operations • identifying any required tooling, measuring equipment and accessories • selecting and mounting required tooling • selecting material and marking out if required • setting machining parameters • checking machined components for conformance to specifications.
<p>Context of and specific resources for assessment</p>	<p>This unit has been developed to support training in and recognition of trade level competency in general machining as applied to a trade level fitting and machining, other trade or senior operator work environment. Assessment should emphasise a workplace context and procedures found in the candidate's workplace.</p> <p>The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p>
<p>Method of assessment</p>	<p>Typically Engineering Tradespersons - Mechanical and other persons engaged in general machining work are required to apply their machining skills and techniques across a range of jobs and specifications.</p>

EVIDENCE GUIDE	
	<p>A single assessment event is not appropriate. On the job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	<p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing general machining or other units requiring the exercise of the skills and knowledge covered by this unit.</p> <p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>

Range Statement

RANGE STATEMENT
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and</p>

RANGE STATEMENT	
regional contexts) may also be included.	
Operations	Operations may include: <ul style="list-style-type: none"> • parallel cutting • slotting • planing • drilling • knurling • cutting flats • non-precision surface grinding operations
Materials	Materials may include ferrous and non-ferrous
Tools	Tools may include: <ul style="list-style-type: none"> • cutting tools and accessories • measuring devices
Marking out techniques	Marking out techniques may include basic marking out techniques using calipers, steel rules, dividers and scribes
Machining parameters	Machining parameters may include: <ul style="list-style-type: none"> • speeds • feeds • stops • coolant and cutting lubricants
Machines	Machines may include: <ul style="list-style-type: none"> • lathes • mills • planers • shapers • radial arm drills • slotters • surface grinder
Maintenance and adjustments	Maintenance and adjustments may include: <ul style="list-style-type: none"> • slide and collar adjustment • cleaning and lubrication

Unit Descriptor

Unit descriptor	This unit of competency covers performing machining operations on a lathe to produce components to required tolerances and specifications using all types of accessories except for the use of taper turning attachment and copy turning attachments. The unit does not cover turning of multi-start threads.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit of competency applies to the production of components using centre lathes and lathe accessories, precision measuring equipment and cutting tools on a range of standard engineering materials. It does not include use of a taper turning attachment, copy turning attachment or multi-start threads.</p> <p>Work is performed to established processes, practices and specifications. Cutting tools are selected using International Standard Organisation (ISO) standards or according to standard operating procedure as appropriate. Work is performed to drawings, sketches, specifications and instructions as appropriate.</p> <p>This unit has been developed for Engineering Tradesperson - Mechanical apprenticeship training and the recognition of trade level skills in lathe operations. Skills covered by this unit are generally applied in occupational and work situations associated with trade level fitting and machining work.</p> <p>This unit has application in the MEM30205 Certificate III in Engineering - Mechanical qualification and other qualifications requiring a trade level of lathe operation skills. Lathe operations may also be known as turning and the processes and associated level of skill covered by this unit are often described in industry by the term '1st Class Machining'.</p> <p>Band: A</p> <p>Unit Weight: 4</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Observe safety precautions	1.1. Correct safety procedures are observed and protective clothing and safety glasses worn
2. Determine job requirements	2.1. Drawings are interpreted, sequence of operation is determined and tooling is selected to produce component to specification
3. Mount job	3.1. Job is set up using instruments such as dial test indicators, and digital read-out equipment
4. Perform turning operations	4.1. Speeds and feeds are calculated using appropriate mathematical techniques and reference material 4.2. The full range of accessories on a centre lathe are used including three and four jaw chucks, centres, face plate, steadies, cross slide and tailstock 4.3. Turning operations are performed to specification
5. Check components for conformance with specifications	5.1. Components are checked for conformance to specification using appropriate techniques, tools and equipment

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting technical drawings/specifications in relation to turning
- setting up jobs using appropriate equipment
- calculating and setting cutting feeds and speeds appropriate to the job
- checking that job is concentric and running true
- safely operating lathes
- performing turning operations

Required knowledge

Required knowledge includes:

- sequence of operations to achieve the job requirements
- tool type and geometry to achieve the required specifications and for work pieces

REQUIRED SKILLS AND KNOWLEDGE

- of different materials
- numerical operations, geometry and calculations/formulae within the scope of this unit
- the consequences of varying speeds and feeds from the optimum rates calculated
- characteristics of different materials and their effects on cutting speeds and feeds
- application of lathe accessories
- techniques, tools and equipment to measure materials and machined components
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with lathe operations

Evidence Guide

ELEMENT	PERFORMANCE CRITERIA
1. Observe safety precautions	1.1. Correct safety procedures are observed and protective clothing and safety glasses worn
2. Determine job requirements	2.1. Drawings are interpreted, sequence of operation is determined and tooling is selected to produce component to specification 2.2. Cutting parameters are determined
3. Perform milling operations	3.1. Milling operations are carried out to produce components to specification 3.2. Operations are undertaken using conventional and/or climb milling techniques and a variety of cutters including slab, gang, end, shell, slot, form, slitting 3.3. The full range of standard accessories is used including dividing heads and rotary tables as required
4. Check components for conformance with specifications	4.1. Components are checked for conformance to specification using appropriate techniques, tools, instruments and equipment

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- setting up jobs using appropriate equipment
- calculating and setting cutting feeds and speeds appropriate to the job
- interpreting drawings and job instructions/specifications
- milling components to specification
- visually and dimensionally checking components for conformance to specification

Required knowledge

Required knowledge includes:

- safety hazards associated with milling machines
- sequence of operations to achieve the job requirements

REQUIRED SKILLS AND KNOWLEDGE

- cutter types and tooling geometry
- consequences of varying speeds and feeds from the optimum rates calculated
- effects of different materials on cutting speeds and feeds
- conventional and climb milling techniques and their applications
- the application of each of the following: slab, gang, shell, slot, form and slitting
- applications requiring the use of dividing heads and rotary tables when milling components
- the procedures for using dividing heads and rotary tables on milling machines
- appropriate techniques, tools and equipment to measure milled components
- use and application of personal protective equipment
- safe work practices and procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- reading and interpreting information on written job instructions, procedures, specifications, charts, lists, drawings and other applicable reference documents
- checking and clarifying task related information
- preparing an operational work plan
- planning and sequencing operations

REQUIRED SKILLS AND KNOWLEDGE

- using precision measurement equipment within the scope of this unit
- setting up work using tools, techniques and equipment
- using coolant and dust extraction devices
- selecting and preparing grinding wheels and accessories appropriate to the grinding task
- performing and monitoring internal/external cylindrical grinding process
- clamping/mounting work pieces
- checking for conformance to specifications
- performing numerical operations and calculations within the scope of this unit

Required knowledge

Required knowledge includes:

- reasons for selecting the chosen sequence of operations
- the application of a range of holding devices/accessories
- reasons for selecting specific work holding devices, tools, techniques and equipment
- coolant selection/function
- standard grinding wheel shapes
- the range of abrasive materials used in grinding wheels
- factors impacting grinding wheel selection including grain size of abrasive particles, grade or strength of bond and bond material
- grinding wheel dressing tools and their application
- internal/external cylindrical grinding process
- principles of effective clamping
- grinding operations/procedures
- the function of any grinding accessories
- tools, techniques and equipment for checking components for conformance to specifications
- hazards and control measures associated with grinding operations, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to perform a variety of grinding operations to specifications. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different situations and contexts. Critical aspects of assessment and evidence include:

- determining requirements for grinding job including quantity, material, measurements and tolerances
- correct job planning including identifying required measuring instruments and equipment, safety equipment, holding devices, grinding wheels, accessories and sequence of operations
- identifying guard, coolant and dust extraction requirements and checking equipment and coolant before grinding operation
- correct fixing of job
- correct monitoring of grinding operation
- undertaking grinding to trade standard in terms of time and responsibility for own work
- undertaking correct remedial procedures for out of specification results as per enterprise procedures e.g. procedures for scrapping or reworking of components not ground to specification.

Context of and specific resources for assessment

This unit has been developed to support training in and recognition of trade level competency in grinding operations as applied to a trade level fitting and machining work environment. Assessment should emphasise a workplace context and procedures found in the candidate's workplace.

The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

EVIDENCE GUIDE	
Method of assessment	<p>Typically, persons engaged in Engineering Tradesperson - Mechanical work are required to apply their grinding operations skills and techniques across a range of jobs and specifications.</p> <p>A single assessment event is not appropriate. On the job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	<p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with grinding operations or other units requiring the exercise of the skills and knowledge covered by this unit.</p> <p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Observe safety precautions	1.1. Correct safety procedures are observed and protective clothing and safety glasses are worn.
2. Determine job requirements	2.1. Drawings are interpreted and sequence of operations is determined.
3. Select appropriate tools and accessories	3.1. Tools and accessories are selected in accordance with standard operating procedures to meet job specifications.
4. Mount job	4.1. Job is set up using instruments such as dial test indicators and digital read out equipment.
5. Perform jig boring	5.1. Holes are bored relative to coordinate position and to specification. 5.2. Rotary or tilting rotary table is used as required.
6. Check components for conformance to specification	6.1. Components are checked for conformance to specification using appropriate techniques, tools and equipment.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, procedures, charts, lists, drawings and other applicable reference documents
- preparing operational work plan
- planning and sequencing operations
- selecting tools and accessories
- checking for conformance to specifications
- using precision measurement equipment
- checking and clarifying task related information
- performing numerical operations and calculations within the scope of this unit

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms knowledge of:

- reasons for selecting the chosen sequence of operations
- the application of rotary and tilting rotary tables to jig boring operations
- checks for conformance to specifications
- appropriate techniques, tools and equipment to measure machined components
- hazards and control measures associated with jig boring operations, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to perform precision jig boring operations. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing precision jig boring operations or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Tools and accessories	Cutting tools, tool attachments, charts and nomograms, rotary or tilting rotary table etc.
Appropriate techniques	Measuring techniques, comparison methods

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Observe safety precautions	<p>1.1. Machine guards, coolant and dust extraction devices are checked.</p> <p>1.2. Correct safety procedures are observed, and protective clothing and safety glasses are worn.</p>
2. Determine job requirements	2.1. Drawings are interpreted and sequence of operations is determined.
3. Select appropriate tool and cutter grinding wheels and accessories	3.1. Tool and cutter grinding wheels are selected, based on knowledge of grinding wheel structure, and are balanced and dressed. Accessories are selected to facilitate production to specification.
4. Perform tool and cutter grinding	<p>4.1. Universal tool and cutter grinding machines are operated to sharpen and shape the full range of tools and cutters including side and face cutters, end mill, form relieved milling cutters, flat, vee and circular form tools and hobs, slitting saws, and drills.</p> <p>4.2. Parallel internal and/or external grinding is carried out.</p> <p>4.3. Internal and/or external taper grinding is carried out to drawing specifications.</p>
5. Check components for conformance to specification	5.1. Components are checked for conformance to specification using appropriate techniques, tools and equipment.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, charts, lists, drawings and other applicable reference documents
- checking and clarifying task related information
- preparing operational work plan
- planning and sequencing operations
- performing numerical operations and calculations within the scope of this unit

REQUIRED SKILLS AND KNOWLEDGE

- performing safety checks of equipment
- selecting tool and cutter grinding accessories
- balancing/dressing grinding wheels
- sharpening/shaping tools and cutters
- checking components for conformance with specifications
- using precision measurement equipment within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- reasons for selecting the chosen sequence of operations
- function of coolant and dust extraction devices
- criteria for grinding wheel selection:
 - grain size of abrasive particles
 - grade or strength of bond
 - bond material
- grinding wheel dressing procedures and wheel dressing tools
- source(s) of data on tool geometry for the full range of tools and cutters, including the terminology used to describe the tool geometry
- procedures to be followed when parallel grinding on a tool and cutter grinder
- procedures to be followed when grinding tapers on a tool and cutter grinder
- tools, techniques and equipment used to check ground components for conformance with the following specifications:
 - dimensions and tolerances
 - geometry and tolerances
 - surface finish
- hazards and control measures associated with tool and cutter grinding, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select milling cutters	1.1. Correct milling cutter/s are selected for required operation. 1.2. Correct cutter inserts are selected as required using International Standard Organisation standards and mounted in cutter blank. 1.3. Cutter is mounted to machine spindle and checked for concentricity.
2. Set up work	2.1. Cutting parameters and steps required to mill given component/s are identified. 2.2. Machine is set up with appropriate accessories as required for milling operation. 2.3. Work is set up to required level of accuracy.
3. Perform complex milling	3.1. Components are milled and associated calculations are performed as necessary to achieve specification. 3.2. Components are verified using appropriate precision measuring equipment and reworked as necessary to meet specification.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying work related information
- setting up work to the required level of accuracy
- determining cutting parameters
- selecting the correct milling cutter inserts for the cutting parameters in accordance with ISO standards
- calculating cutting parameters such as speeds, feeds and ratios
- setting up gear trains according to calculations and standard operating procedures

REQUIRED SKILLS AND KNOWLEDGE

- safely operating milling machine
- performing complex milling operations using dividing heads and omniversal tables

Required knowledge

Look for evidence that confirms knowledge of:

- precision measuring equipment and their applications
- procedures for accurately setting up work
- ISO standards applicable to milling cutter inserts
- procedures for milling components such as racks and gears
- calculations, geometry and formulae relating complex milling activities
- accessories used for complex milling
- the applications and use of omniversal tables and differential dividing heads to complex milling operations
- hazards and control measures associated with complex milling operations, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to perform complex milling operations. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Job requirements are determined from specifications, and sequence of operations is determined.
2. Set up work	2.1. Grinding wheels are selected and dressed to form and size as required. 2.2. Work is set up to required level of accuracy as per specifications.
3. Perform complex grinding	3.1. Specialised grinding operations are performed on components such as jigs, tools and dies, eccentrics, threads, gauge shapes and forms.
4. Check components for conformance to specification	4.1. Components are checked for conformance to specification using appropriate techniques, tools and equipment.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing an operational work plan
- dressing grinding wheel to form and size
- performing specialised grinding operations
- reading, interpreting and following information on written job instructions, specifications, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying information
- entering routine and familiar information onto proformas and standard workplace forms
- checking for conformance to specifications
- using precision measurement equipment within the scope of this unit
- measuring components to specified tolerances
- performing numerical operations, geometry and calculations/formulae for specialised complex grinding operations

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms knowledge of:

- reasons for selecting the chosen sequence of operations
- function and application of work holding devices/accessories appropriate to complex grinding
- appropriate techniques, tools and equipment to measure machined components
- hazards and control measures associated with complex grinding, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Observe safety precautions	1.1. Correct safety procedures are observed, and protective clothing and safety glasses are worn.
2. Determine job requirements	2.1. Drawings are interpreted, and sequence of operations is determined. 2.2. Correct electrode is selected to ensure finished component conforms to drawing specifications. 2.3. Electrode surface area is calculated and process parameters are set to give safe, accurate and efficient operation.
3. Set up job	3.1. Job is set up relative to electrode to ensure required position is obtained.
4. Perform electro-discharge (EDM)	4.1. Electro-discharge machine is operated to produce components to drawing specifications.
5. Check components for conformance to specification	5.1. Components are checked for conformance to specification using appropriate techniques, tools and equipment.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- following relevant safety procedures
- obtaining and interpreting relevant drawings, job instructions and specifications
- selecting correct electrode to ensure that the finished product conforms to specification
- determining the coordinates of the work pieces relative to the machine datum
- calculating machining parameters necessary to achieve the safe, accurate and efficient machining of the work piece
- calculating the surface area of the electrode
- positioning work piece and electrode to enable the safe, accurate and efficient machining of the required feature(s)
- producing components to specification

REQUIRED SKILLS AND KNOWLEDGE

- checking machined components for conformance with specifications

Required knowledge

Look for evidence that confirms knowledge of:

- safety hazards associated with the use of electro-discharge machines
- the job requirements
- the sequence of operations to achieve the job requirements
- the electrode type and geometry required to achieve the specified outcome
- the effects of material to be machined on the electrode material and geometry
- the procedures for producing electrodes for the electro-discharge machining process
- the coordinates of the feature(s) to be machined
- the coordinates of the electrode relative to the machine datum
- the procedures for operating the electro-discharge machine to produce components
- the tools, techniques and equipment appropriate to the checking of machined components
- the procedures for checking machined components for conformance to specification
- the reasons for selecting the tools, techniques and equipment to be used

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to perform electro-discharge (EDM) machining operations. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with electro-discharge (EDM) machining operations or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Electrode

Electrode	Includes all types and grades of graphite electrodes
Job set up	Includes correct use of work holding devices and selection of EDM fluids, spark generation, cycle time, power settings, and dielectric fluids for the requirement of a particular job

Job set up**Unit Sector(s)**

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Obtain job instructions	1.1. Job sheets or equivalent instructions are understood and correctly followed.
2. Mount work holding fixtures/devices/tools	2.1. Machine is prepared to accept work holding fixtures/devices/tools. 2.2. Preset tooling is mounted as required into machine/equipment. 2.3. Work holding fixtures/devices are set on machine as required using standard operating procedures. 2.4. Tool offset or datum settings are identified/verified against job sheet using standard operating procedures. 2.5. Program is loaded, selected and verified in accordance with job instructions.
3. Conduct pre-start checks	3.1. Pre-start checks are undertaken to standard operating procedures. 3.2. Correct safety procedures are observed and all safety equipment is checked for correct operation.
4. Set machine	4.1. Machine is set/adjusted to meet operational requirements and specifications. 4.2. Production samples are checked for compliance with specifications using standard operating procedures.
5. Instruct machine operator	5.1. Operator is instructed, if necessary, ensuring that all safety procedures and devices are in place.
6. Replace worn/damaged tooling	6.1. Where appropriate, preset tools are replaced, tool offsets are adjusted or other corrective action is taken using standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

REQUIRED SKILLS AND KNOWLEDGE

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- mounting work holding fixtures/devices/tooling
- mounting preset tooling
- verifying tool offsets and/or datum settings against job sheets or instructions
- loading and verifying programs
- conducting pre-start checks
- following safety procedures
- checking safety features and safety equipment for correct operation
- performing numerical operations and calculations/formulae within the scope of this unit
- setting and adjusting machines
- measuring and verifying first-off samples
- instructing machine operators on the sequence of operations
- identifying worn or damaged tooling and taking appropriate corrective action

Required knowledge

Look for evidence that confirms knowledge of:

- work holding fixtures/devices/tools and preset tooling for different machines/processes
- procedures for mounting work holding fixtures/devices/tools
- location of work holding fixtures/devices/tools relative to the machine datum or zero
- reasons for establishing tool offsets
- the purpose of datum settings
- the source(s) of information on tool offsets and datum settings
- procedures to locate and load programs
- procedures for verifying loaded programs
- pre-start checks
- safety features of the machine/process
- the purpose and function of safety features and/or safety equipment
- machine/process setting procedures
- machine operating procedures
- adjustments that can be made to the machine/process
- the effect of adjustments on machine and operational specifications
- product or part specifications in relation to the machining process
- measuring devices for checking parts or products
- examples of worn or damaged tooling

REQUIRED SKILLS AND KNOWLEDGE

- the effects of worn or damaged tooling
- the corrective action for worn or damaged tooling
- hazards and control measures associated with numerical and computer controlled machines, including housekeeping
- safe work practices and procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify job requirements	1.1. Instructions/plans are understood and correctly followed.
2. Set work holding fixtures/devices/tools	2.1. Correct ancillary devices are selected and attached to machine using standard operating procedures. 2.2. Machine is prepared to accept work holding devices. 2.3. Work holding fixtures/devices/tools are set to zero or a datum using appropriate setting devices.
3. Set tooling offsets	3.1. Tooling offsets are measured and recorded in machine controller.
4. Trial program	4.1. Machine is operated to produce first-off samples, observing all safety procedures. 4.2. First-off samples are checked for compliance with specifications. 4.3. Program editing to change speeds, feed and operational sequence requirements is undertaken as required to ensure job conforms to specification.
5. Instruct machine operator	5.1. Operator is instructed if necessary ensuring that all safety procedures and devices are in place.
6. Replace worn or damaged tooling	6.1. Where appropriate, tools are replaced, tool offsets are adjusted or other corrective action is taken using standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information

REQUIRED SKILLS AND KNOWLEDGE

- attaching ancillary devices
- mounting work holding devices
- measuring tool offsets
- entering and verifying tool offsets
- producing and checking first-off samples
- editing programs
- instructing machine operator on the sequence of operations
- following safety procedures
- identifying worn or damaged tooling and taking appropriate corrective action

Required knowledge

Look for evidence that confirms knowledge of:

- ancillary equipment and its applications
- procedures for attaching the ancillary device(s) to the NC/CNC machine
- work holding devices, their application and procedures for mounting them
- location of work holding fixtures/devices/tools relative to the machine zero or datum
- reasons for establishing tool offsets
- procedures and devices for measuring tool offsets
- procedures for entering and verifying tool offset
- procedures for adjusting tool offsets
- operating procedures
- safety features and equipment
- measuring devices/ techniques for checking the parts or product
- effects of changes to cutting feeds and speeds
- the impact of changes to the sequence of operations on the part or product to be produced
- procedures for editing programs via the machine controller
- the sequence of operations of the machine/process
- examples of worn or damaged tooling
- the effects of worn or damaged tooling
- the corrective action to be taken for worn or damaged tooling
- hazards and control measures associated with computer controlled machines, including housekeeping
- safe work practices and procedures

1. Identify basic NC/CNC machine program elements	1.1.Appropriate program elements are selected for machine controller.
2. Write basic NC/CNC machine program	2.1.Engineering drawings are understood and interpreted to define basic machine function and tool path geometry. 2.2.Coordinates are calculated for simple tool path or basic machining functions. 2.3.Program is written in standard code format in accordance with standard operating procedures.
3. Write NC/CNC operation sheet	3.1.Operation sheets are produced to specification in accordance with standard operating procedures.
4. Trial program	4.1.Machine is operated in manual mode to test and prove program as required. 4.2.Program is edited if necessary to adjust operation as required. 4.3.Components are checked for conformance to specification as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- calculating coordinates of all relevant points on the part or product to be produced
- writing NC/CNC program in standard code format
- producing NC/CNC operation sheet(s)
- operating NC/CNC machine safely in manual mode
- editing NC/CNC program

REQUIRED SKILLS AND KNOWLEDGE

- checking parts or products for conformance to specifications

Required knowledge

Look for evidence that confirms knowledge of:

- the elements of a basic NC/CNC program
- the function of elements in controlling the operation of an NC/ CNC machine
- machining operations
- type(s) of NC/CNC machine and their applications
- machining operations controlled by program
- the tool path(s) to be followed when producing a part or product
- the sequence of machining operations
- the reasons for selecting tool path(s) and sequence of operations
- the zero point of the NC/CNC machine
- standard codes used in the writing of NC/CNC programs
- applications of standard codes in NC/CNC programming
- procedures for writing NC/CNC programs in standard code format
- procedures for completing NC/CNC operation sheets
- the information to be included in NC/CNC operation sheets
- procedures for manual operation of the NC/CNC machine
- reasons for testing and proving the NC/CNC program
- procedures for editing the NC/CNC program via the machine controller
- the effects of editing on the operation of the NC/CNC machine and the part or product to be produced
- the measuring equipment/techniques used to check for conformance to specification
- hazards and control measures associated with numerical and computer controlled machines, including housekeeping
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify basic NC/CNC machine program elements	1.1.Appropriate program elements are selected for machine controller.
2. Write basic NC/CNC machine program	2.1.Engineering drawings are understood and interpreted to define machine function and tool path geometry. 2.2.Coordinates calculated as required for tool path or machine functions. 2.3.Advanced operations using canned cycles and sub-routines are selected and applied appropriately. 2.4.Program is written in standard code format in accordance with standard operating procedures.
3. Write NC/CNC operation sheet	3.1.Operation sheets are produced to specification in accordance with standard operating procedures which includes appropriate Australian standard where required.
4. Trial program	4.1.Machine is operated in manual mode to test and prove program. 4.2.Program is edited if necessary to adjust operation. 4.3.Components are checked to conform to specification.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting engineering drawings, specifications and instructions
- calculating coordinates of all relevant points on the part or product to be produced
- writing NC/CNC program in standard code format and incorporating, where appropriate, canned cycles and sub-routines
- producing NC/CNC operation sheet(s)
- operating NC/CNC machine in manual mode
- editing NC/CNC program
- checking parts or products produced for conformance with specifications

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

Look for evidence that confirms knowledge of:

- elements of an NC/CNC program
- the function of elements in controlling the operation of an NC/ CNC machine
- machining operations to be performed in the manufacture of the given part or product
- the appropriate type(s) of NC/CNC machine to perform the required machining operations
- the machining operations to be controlled by the program to be written
- the tool path(s) to be followed when producing the part or product
- the sequence of machining operations to be programmed
- reasons for selecting the chosen tool path(s) and sequence of operations
- the zero point of the NC/CNC machine
- the canned cycles and sub-routines accessible in the particular NC/CNC machine
- the application of each canned cycle and sub-routine available
- the canned cycles and/or sub-routines to be used in the NC/CNC program
- reasons for selecting the chosen canned cycles and/or sub-routines
- standard codes used in the writing of NC/CNC programs
- applications of standard codes in NC/CNC programming
- procedures for writing NC/CNC programs in standard code format
- procedures for completing NC/CNC operation sheets
- the information to be included in NC/CNC operation sheets
- relevant Australian standards
- procedures for manual operation of the NC/CNC machine
- the reasons for testing and proving the NC/CNC program
- the procedures for editing the NC/CNC program via the machine controller
- the effects of editing on the operation of the NC/CNC machine and the part or product to be produced
- the specifications of the part or product
- the measuring equipment/techniques to be used to check for conformance with specifications

MEM07020C Program multiple spindle and/or multiple axis NC/CNC machining centre

Modification History

Single band identifier removed to clarify dual status

Unit Descriptor

Unit descriptor	This unit covers identifying NC/CNC machine program elements, writing and trialling a machine program for multiple spindle and/or multiple axis NC/CNC machining centres, and preparing an operation sheet.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit extends to writing programs to describe machine operations including tool paths using appropriate software for machines which include multiple spindles and/or multiple axis/B axis angular, multiple tool turrets, tool changers and may include component loaders of a pallet type etc.</p> <p>The program may use common M and G codes and include the programming of advanced operations, using canned cycles and sub-routines. Programs are trialled and edited as necessary to adjust operation of centre. Technical difficulties are resolved in consultation with appropriate technical advisers. Work would be undertaken autonomously using predetermined standards of quality.</p> <p>Where machining skills in excess of MEM07005C (Perform general machining) are required, then appropriate units should also be selected.</p> <p>Band:</p> <p>This unit has dual status and is to be regarded as both a specialisation band A unit and Specialisation band B unit for progression to C7 (AQF level IV).</p> <p>Unit Weight: 2</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify NC/CNC machine program elements	1.1.Appropriate program elements are selected for machine controller.
2. Write NC/CNC machine program	2.1.Engineering drawings are understood and interpreted to define machine function and tool path geometry. 2.2.Coordinates are calculated as required for tool path or machine functions. 2.3.Advanced operations using canned cycles and sub-routines are selected and applied appropriately. 2.4.Program is written in standard code format in accordance with standard operating procedures.
3. Write NC/CNC operation sheet	3.1.Operation sheets are produced to specification in accordance with standard operating procedures which includes appropriate Australian standard where required.
4. Trial program	4.1.Machine is operated in manual mode to test and prove program. 4.2.Program is edited if necessary to adjust operation. 4.3.Components are checked to conform to specification.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- calculating coordinates of all relevant points on the part or product to be produced
- writing NC/CNC program in standard code format and incorporating, where appropriate, canned cycles and sub-routines
- producing NC/CNC operation sheet(s)

REQUIRED SKILLS AND KNOWLEDGE

- operating NC/CNC machine in manual mode
- editing NC/CNC program
- checking parts or products produced for conformance with specifications

Required knowledge

Look for evidence that confirms knowledge of:

- elements of an NC/CNC program
- the function of elements in controlling the operation of an NC/ CNC machine
- machining operations to be performed in the manufacture of the given part or product
- the appropriate type(s) of NC/CNC machine to perform the required machining operations
- the machining operations to be controlled by the program to be written
- the tool path(s) to be followed when producing the part or product
- the sequence of machining operations to be programmed
- reasons for selecting the chosen tool path(s) and sequence of operations
- the zero point of the NC/CNC machine
- the canned cycles and sub-routines accessible in the particular NC/CNC machine
- the application of each canned cycle and sub-routine available
- the canned cycles and/or sub-routines to be used in the NC/CNC program
- reasons for selecting the chosen canned cycles and/or sub-routines
- standard codes used in the writing of NC/CNC programs
- applications of standard codes in NC/CNC programming
- procedures for writing NC/CNC programs in standard code format
- procedures for completing NC/CNC operation sheets
- the information to be included in NC/CNC operation sheets
- relevant Australian standards
- procedures for manual operation of the NC/CNC machine
- the reasons for testing and proving the NC/CNC program
- the procedures for editing the NC/CNC program via the machine controller
- the effects of editing on the operation of the NC/CNC machine and the part or product to be produced
- the specifications of the part or product
- the measuring equipment/techniques to be used to check for conformance with specifications
- hazards and control measures associated with numerical and computer controlled machines, including housekeeping
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine sequence of operations	1.1. Sequence of operations including job set-up is determined for maximum efficiency and to meet job specifications.
2. Set up work on lathe	2.1. Work is set up on the lathe to required level of accuracy using precision instruments such as dial test indicators etc. 2.2. Work piece is balanced as required when using face plates to ensure accuracy in machining. 2.3. Work piece is set up to ensure that work piece is free of distortion following completion of machining.
3. Select and prepare tooling	3.1. Tooling, accessories and consumables are selected appropriate to task, specifications and material. 3.2. Where necessary, cutting tool modifications required to perform complex turning operations are determined. 3.3. Tooling and accessories are prepared and modified as required. 3.4. International Standard Organisation standards for cutting tools or other appropriate standards to suit cutting parameters are applied as necessary.
4. Perform complex turning	4.1. Speeds and feeds are correctly calculated using appropriate mathematical techniques and reference material. 4.2. Complex turning is undertaken to specifications and workplace procedures. 4.3. Work piece is measured and verified to be in accordance with specification using precision measuring equipment.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

REQUIRED SKILLS AND KNOWLEDGE

- setting up work to the required level of accuracy using appropriate precision measuring equipment
- setting and supporting work to avoid distortion on release of clamping devices
- selecting correct cutting tools or inserts as appropriate to turning operation
- selecting and using appropriate feeds and speeds
- performing complex turning operations - counter balancing work on face plates:
 - mandrel work
 - trepanning
 - heavy (multi-tonne) shafts
- calculating cutting parameters, speeds and feeds
- reading, interpreting and following information on written job instructions, specifications, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- entering routine and familiar information onto proformas and standard workplace forms
- checking for conformance to specifications
- using precision measurement equipment
- measuring components to specified tolerances
- performing numerical operations, geometry and calculations/formulae within the scope of this unit
- following oral instructions
- orally reporting information

Required knowledge

Look for evidence that confirms knowledge of:

- precision measuring equipment and measuring techniques within the scope of this unit
- reasons for selecting different measuring equipment
- procedures for accurately setting up work for a variety of techniques
- ISO or other standards applicable to cutting tool inserts
- cutting parameters for the given task
- feeds and speeds for complex turning operation(s)
- formulae and data relating to feeds and speeds
- techniques and procedures for carrying out the following turning operations:
 - single-start thread cutting
 - multi-start thread cutting
 - internal blind hole thread cutting
 - eccentrics
 - copy turning

REQUIRED SKILLS AND KNOWLEDGE

- taper turning
- techniques and procedures for carrying out the following turning operations:
 - counter balancing work on face plates
 - mandrel work
 - trepanning
 - heavy (multi-tonne) shafts
- hazards and control measures, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Write program	1.1.Engineering drawings are understood and interpreted to define optimum tool path geometry. 1.2.Tool path is programmed using advanced operations, canned cycles and sub-routines or other appropriate sub-routines within system. 1.3.Program is written in standard code format, and confirmed and edited as necessary using appropriate routine and standard operating procedures. 1.4.Program is stored in accordance with standard operating procedures. 1.5.Operation sheet is produced to standard operating procedures.
2. Trial program	2.1.Program is downloaded, and machining parameters that may include wire offset, wire speed, power settings are selected. 2.2.Machine is prepared, work piece are loaded and aligned, datum and reference points are established in accordance with standard operating procedures. 2.3.Machine is operated in appropriate mode to test and prove program, work piece positioning. 2.4.Finished components are checked for conformance with drawing specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • interpreting drawings, specifications and instructions • calculating coordinates of all relevant points on the part or product to be produced • storing programs • producing NC/CNC operation sheet(s) • downloading and verifying NC/CNC program • setting machine parameters

REQUIRED SKILLS AND KNOWLEDGE

- mounting work holding fixtures/ devices/tools
- testing and proving NC/CNC program
- checking parts or products produced for conformance with specifications

Required knowledge

Look for evidence that confirms knowledge of:

- the operations to be controlled by the program to be written
- the tool path(s) to be followed when producing the part or product
- the sequence of operations to be programmed
- the reasons for selecting the chosen tool path(s) and sequence of operations
- the zero point of the wire cut machine
- the canned cycles and sub-routines accessible in the particular NC/CNC machine
- the application of each canned cycle and sub-routine available
- where appropriate, the canned cycles and/or sub-routines to be used in the NC/CNC program
- the reasons for selecting the chosen canned cycles and/or sub-routines
- the standard codes used in the writing of NC/CNC programs
- the applications of standard codes in NC/CNC programming
- procedures for writing NC/CNC programs in standard code format
- procedures for storing NC/CNC programs
- procedures for completing NC/CNC operation sheets
- the information to be included in NC/CNC operation sheets
- procedures for downloading NC/CNC programs
- procedures for verifying downloaded NC/CNC programs
- the machining parameters that may be entered into the machine controller
- the effect of varying the machining parameters on the product or part produced
- work holding fixtures/devices/tools
- procedures for mounting work holding fixtures/devices tools
- the location of the required work holding fixtures/devices/tools relative to the machine datum or zero
- purpose of datum setting
- pre-start checks
- safety features and equipment of the NC/CNC machine
- the purpose and function of the safety features and/or equipment
- the machine mode appropriate to the testing and proving of the NC/CNC program and the checking of the position of the work piece
- the procedures to be followed when using the machine in this mode
- the relative position of the work piece to the machine datum or zero
- the specifications of the part or product
- the measuring equipment/techniques to be used to check for conformance to

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Program operations	1.1.Engineering drawings and manufacturing specifications are interpreted and understood to determine equipment required. 1.2.Equipment/cell schedule is programmed. 1.3.Controllers are linked for integration.
2. Set up cell	2.1.Manufacturing cell machines and equipment are configured to meet production specifications. 2.2.Tooling and work holding devices are installed and adjusted to meet specifications.
3. Test cell operation	3.1.Cell is operated and adjusted to produce components to specification.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and interpreting relevant drawings, specifications and instructions
- loading/downloading NC/CNC programs into the individual machine controllers
- writing NC/CNC programs
- linking machine controllers of NC/ CNC machines and transfer devices
- positioning machines and equipment to optimise manufacturing cell performance
- installing and adjusting tooling and work holding devices
- operating manufacturing cell
- checking part or product for conformance with specifications

Required knowledge

Look for evidence that confirms knowledge of:

- the operations to be performed in producing the given part or product
- the appropriate type(s) of NC/CNC machine to perform the required machining operations
- the appropriate means of part or product transfer between machines
- the reasons for selecting the chosen equipment and machinery

REQUIRED SKILLS AND KNOWLEDGE

- the NC/CNC programs for use in each of the cell components
- the sequence of machining and transfer operations
- the means of coordinating the operations of all components within the cell
- the communication requirements between components of the cell
- the methods of linking machine controllers
- the precautions to be taken when linking machine controllers
- the procedures for linking machine controllers can be given
- the specifications of the part or product to be produced
- the optimum physical relationship between the machines and equipment within the cell
- the reasons for selecting this configuration of machines and equipment
- the appropriate tooling for each component of the cell
- the reasons for tooling selection
- the appropriate work holding devices for each component of the cell
- the reasons for selecting the chosen work holding devices
- the effects of adjustments to tooling and/or work holding devices on the part or product specifications
- operating procedures for the manufacturing cell
- the measurements to be taken to check the part or product for conformance to specification
- the techniques/equipment to be used to measure the part or product
- the effect of adjustments on cell performance
- the causes of non-essential dwell times
- action to be taken to minimise dwell times
- hazards and control measures associated with CNC manufacturing cells

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to program and set up CNC manufacturing cell. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with programming and setting up CNC manufacturing cells, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Unit Descriptor

Unit descriptor	This unit covers obtaining the job instruction, conducting the pre-start checks, and operating and monitoring the machine or process.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to a range of production operations or continuous processes. The work is performed in accordance with clear step-by-step instructions and procedures documented on job sheets or similar process instruction documents. Operational adjustments to the machine or process by the operator are made using external controls. Basic operation (excluding setting and tool adjustments) of CNC machines is covered by this unit.</p> <p>Where production packaging and labelling of the finished goods or product is required, Unit MEM11006B (Perform production packaging) should be considered.</p> <p>This unit should not be selected with any of the following units unless the skills of this unit are being applied to an additional and different type of machine and or process: Unit MEM04001B (Operate melting furnaces), Unit MEM04002B (Perform gravity die casting), Unit MEM04003B (Operate pressure die casting machine), Unit MEM04006B (Operate sand moulding and core making machines), Unit MEM06001B (Perform hand forging), Unit MEM06002B (Perform hammer forging), Unit MEM08001B (Perform wire, jig and barrel load/unload work), Unit MEM08004B (Finish work using wet, dry and vapour deposition methods), Unit MEM08008B (Operate and control surface finishing waste treatment process)</p> <p>Band: A</p> <p>Unit Weight: 4</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Obtain job instructions	1.1. Job sheets or equivalent instructions are interpreted correctly.
2. Conduct pre-start checks	2.1. Pre-start checks are undertaken to standard operating procedure. 2.2. Safety procedures are observed and all safety equipment is checked for correct operation.
3. Operate machine/process	3.1. Machine/process is started up safely and correctly in accordance with standard operating procedures. 3.2. Machine/process is operated in accordance with job instructions or standard operating procedures. 3.3. Components/feed stock are loaded and maintained consistent with production requirements. 3.4. Machine/process output is unloaded safely to standard operating procedures, as required. 3.5. Machine/process output is handled and stored in a manner not likely to cause damage, as required. 3.6. Production data is recorded to standard operating procedures.
4. Monitor machine/process	4.1. Machine/process is monitored for safe and correct operation, deviations and faults are identified and reported in accordance with standard operating procedures. 4.2. Emergency procedures are understood and followed in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • following job sheets, standard operating procedures and other applicable workplace forms • manual handling • following oral instructions

REQUIRED SKILLS AND KNOWLEDGE

- entering routine and familiar information onto proformas and standard workplace forms
- orally reporting routine information
- identifying deviations and faults in machine operation/process

Required knowledge

Look for evidence that confirms knowledge of:

- pre-start checks
- machine/process start-up and unloading procedures
- component/feed stock levels to ensure continuous process
- production recording and reporting requirements
- types of product fault/deviations
- consequences of improper handling and storing of finished work
- procedures to be followed in emergency situations
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with operating and monitoring machine/process

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Drawings, job instructions and specifications are interpreted and task requirements are understood including machine/process selection and settings.
2. Observe safety precautions	2.1. Safety equipment and guards are checked for correct position and operation.
3. Conduct pre-start checks	3.1. Programmed operational maintenance is undertaken to standard operating procedures. 3.2. Pre-start checks are undertaken to standard operating procedures. 3.3. Equipment, raw material and tooling are verified to match task requirement.
4. Operate machine/process	4.1. Machine/process is started up safely and correctly. 4.2. Machine/process is operated in accordance with job instructions or standard operating procedures. 4.3. Components/feed stock is loaded and maintained consistent with production requirements. 4.4. Machine/process output is unloaded safely to standard operating procedure as required. 4.5. Machine/process output is handled and stored in a manner not likely to cause damage as required. 4.6. Production data is recorded to standard operating procedures.
5. Monitor machine/process	5.1. Machine/process is monitored for safe and correct operation. 5.2. Emergency procedures are understood and followed in accordance with standard operating procedures.
6. Recognise and rectify deviations and faults in product/output	6.1. Product faults/deviations are recognised from standard operating procedures, job sheets or other documentation. 6.2. Product faults/deviations are rectified in accordance with standard operating procedures, job sheets or other documentation and may be achieved by adjustment of machine/process settings within parameters.
7. Recognise and rectify deviations and faults with raw material/feed stock	7.1. Raw material faults/deviations are recognised from standard operating procedures, job sheets or other documentation. 7.2. Raw material faults/deviations are rectified in accordance with standard operating procedures, job

ELEMENT	PERFORMANCE CRITERIA
	sheets or other documentation.
8. Recognise and rectify deviations and faults in process equipment	8.1.Process equipment faults/deviations are identified against specifications and reported to standard operating procedure. 8.2.Process equipment faults/deviations are rectified in accordance with standard operating procedures, job sheets or other documentation.
9. Recognise and rectify deviations and faults in machine/process	9.1.Machine/process faults/deviations are recognised from standard operating procedures, job sheets or other documentation. 9.2.Machine/process faults/deviations are rectified in accordance with standard operating procedures, job sheets or other documentation.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and interpreting routine information on written job instructions, specifications, standard operating procedures and other standard workplace documents. May include drawings
- undertaking manual handling
- following job/process instructions
- determining required adjustments to process
- following oral instruction
- entering routine and familiar information onto proforma and standard workplace forms
- checking and clarifying task-related information
- orally reporting routine information
- identifying and rectifying faults/deviations in raw material, product, process and equipment

Required knowledge

Look for evidence that confirms knowledge of:

REQUIRED SKILLS AND KNOWLEDGE

- job requirements
- documentation requirements
- pre-start checks
- machine/process start-up and unloading procedures
- reasons and procedures for programmed operational maintenance
- component/feed stock levels to ensure continuous process
- production recording and reporting requirements
- types of raw material, product, process and equipment fault/deviations and corrective actions
- procedures to be followed in emergency situations
- consequences of improper handling and storing of finished work
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with advanced machine/process operation

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Drawings, job instructions and specifications are interpreted and task requirements are understood including machine/process selection and settings.
2. Observe safety precautions	2.1. Safety equipment and guards are checked for correct position and operation.
3. Conduct pre-start checks	3.1. Programmed operational maintenance is undertaken to standard operating procedures. 3.2. Pre-start checks are undertaken to standard operating procedures. 3.3. The match of task requirements against equipment, raw material and tooling is verified.
4. Operate machine/process	4.1. Machine/process is started up safely and correctly. 4.2. Machine/process is operated in accordance with job instructions or standard operating procedures. 4.3. Components/feed stock are loaded and maintained consistent with production requirements. 4.4. Machine/process output is unloaded safely to standard operating procedures. 4.5. Machine/process output is handled and stored in a manner not likely to cause damage, as required. 4.6. Production data is recorded to standard operating procedures.
5. Monitor machine/process	5.1. Machine/process is monitored for safe and correct operation. 5.2. Emergency procedures are understood and followed in accordance with standard operating procedures.
6. Recognise and rectify deviations and faults in product/output	6.1. Product faults/deviations such as short shots, warped mouldings and dimensional errors are recognised from standard operating procedures, job sheets or other documentation. 6.2. Product faults/deviations are rectified in accordance with standard operating procedures, job sheets or other documentation and may be achieved by adjustment of machine/process settings within parameters.
7. Recognise and rectify deviations and faults with raw material/feed stock	7.1. Raw material faults/deviations such as contamination, colour variation are recognised from standard operating procedures, job sheets or other documentation.

ELEMENT	PERFORMANCE CRITERIA
	7.2.Raw material faults/deviations are rectified in accordance with standard operating procedures, job sheets or other documentation.
8. Recognise and rectify deviations and faults in tooling	8.1.Tooling faults/deviations resulting in blemishes, missing detail etc. are identified against specification and reported to standard operating procedure. 8.2.Tooling faults/deviations are rectified in accordance with standard operating procedures, job sheets or other documentation.
9. Recognise and rectify deviations and faults in machine/process	9.1.Machine/process faults/deviations such as short shots, burn marks, distortion etc. are recognised from standard operating procedures, job sheets or other documentation. 9.2.Machine/process faults/deviations are rectified in accordance with standard operating procedures, job sheets or other documentation.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- checking for conformance to specifications
- checking and clarifying task-related information
- reading, interpreting and following information on written job instructions standard operating procedures, charts, lists and other standard workplace documents
- following verbal instructions
- orally reporting routine information
- entering routine and familiar information onto proformas and standard workplace forms
- checking safety equipment and guards
- performing programmed operational maintenance
- completing pre-start checks
- checking equipment, raw material and tooling for serviceability
- starting, operating and shutting down machine/process
- loading components/feed stock

REQUIRED SKILLS AND KNOWLEDGE

- unloading machine/process output
- handling machine/process output
- completing production records
- monitoring operation of the machine/process
- identifying faults/deviations in product, raw materials, tooling and machine/process
- taking corrective action to correct faults/deviations in product, raw materials, tooling and machine/process

Required knowledge

Look for evidence that confirms knowledge of:

- safety features of the machine/process being operated
- safety equipment associated with the machine/process
- the programmed operational maintenance requirements of the machine/process
- pre-start checks
- start-up/shut-down procedures
- operating procedures
- unloading procedures
- procedures for handling and storing finished work
- consequences of improper handling and storing
- recording requirements
- the emergency procedures
- product fault/deviations
- the corrective action to rectify types of product fault/deviations
- raw material faults/deviations
- the correct action to rectify raw material faults/deviations
- tooling faults/deviations
- the correct action to rectify tooling faults/ deviations
- deviations and faults in machine/process
- the correct action to rectify machine/process faults/deviations
- hazards and control measures, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Drawings, job instructions and specifications are interpreted and task requirements are understood including machine/process selection and settings.
2. Observe safety precautions	2.1. Safety equipment and guards are checked for correct position and operation.
3. Conduct pre-start checks	3.1. Programmed operational maintenance is undertaken to standard operating procedures. 3.2. Pre-start checks are undertaken to standard operating procedures. 3.3. Equipment, raw material and tooling are verified to match task requirement.
4. Operate machine/process	4.1. Machine/process is started up safely and correctly. 4.2. Machine/process is operated in accordance with job instructions or standard operating procedures. 4.3. Components/feed stock is loaded and maintained consistent with production requirements. 4.4. Machine/process output is unloaded safely to standard operating procedure, as required. 4.5. Machine/process output is handled and stored in a manner not likely to cause damage, as required. 4.6. Production data is recorded to standard operating procedures.
5. Monitor machine/process	5.1. Machine/process is monitored for safe and correct operation. 5.2. Emergency procedures are understood and followed in accordance with standard operating procedures.
6. Recognise and rectify deviations and faults in product/output	6.1. Product faults/deviations such as splits, warping, deformation, dimensional errors etc. are recognised from standard operating procedures, job sheets or other documentation. 6.2. Product faults/deviations are rectified in accordance with standard operating procedures, job sheets or other documentation and may be achieved by adjustment of machine/process settings within parameters.
7. Recognise and rectify deviations and faults with raw material/feed stock	7.1. Raw material faults/deviations such as gauge variation, hardness, colour variation etc. are recognised from standard operating procedures, job sheets or other documentation.

ELEMENT	PERFORMANCE CRITERIA
	7.2.Raw material faults/deviations are rectified in accordance with standard operating procedures, job sheets or other documentation.
8. Recognise and rectify deviations and faults in tooling	8.1.Tooling faults/deviations resulting in marks, missing detail, dimensional errors etc. are identified against specifications and reported to standard operating procedure. 8.2.Tooling faults/deviations are rectified in accordance with standard operating procedures, job sheets or other documentation.
9. Recognise and rectify deviations and faults in machine/process	9.1.Machine/process faults/deviations resulting in splits, distortion etc. are recognised from standard operating procedures, job sheets or other documentation. 9.2.Machine/process faults/deviations are rectified in accordance with standard operating procedures, job sheets or other documentation.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- locating, reading and interpreting information on written job instructions, specifications, drawings, charts, lists and other reference documentation
- following job/process instructions
- checking and clarifying task-related information
- orally reporting routine information
- following oral instruction
- entering routine and familiar information onto proformas and standard workplace forms
- undertaking manual handling
- selecting appropriate processes for nominated materials
- determining required adjustments to process
- identifying and rectifying faults/deviations in product, process, tooling and machine

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

Look for evidence that confirms knowledge of:

- characteristics and properties of materials
- job requirements
- documentation requirements
- pre-start checks
- machine/process start-up and unloading procedures
- production recording and reporting requirements
- types of product, process, tooling and machine faults/deviations and corrective actions
- procedures to be followed in emergency situations
- consequences of improper handling and storing of finished work
- consequences of selecting incorrect processes for nominated materials
- component/feed stock levels to ensure continuous process
- programmed operational maintenance requirements
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with advanced press operations

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to perform advanced press operations. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with advanced press operations or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

EVIDENCE GUIDE

Guidance information for assessment	
--	--

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Machine/process

Range of metal working press operations including drawing, blanking, bending, coining, sizing, extruding, forming and shaping etc.

Faults/deviations

Deviations and faults of the machine, raw material, process equipment and process:

- splits, warping, deformation, dimensional errors etc.
- gauge variation, hardness, colour variation etc.
- marks, missing detail, dimensional errors etc.
- distortion

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Obtain job instructions	1.1. Job sheets or equivalent instructions are understood and correctly followed.
2. Conduct pre-start checks	2.1. Pre-start checks are undertaken to standard operating procedures. 2.2. Correct safety procedures are observed and all safety equipment is checked for correct operation.
3. Operate computer controlled machine/process	3.1. Installed computer controlled program is selected and verified in accordance with job instructions. 3.2. Computer controlled machine is operated safely to product specifications using standard operating procedures. 3.3. Machine malfunctions are identified and reported. 3.4. Production samples are checked for compliance to specification using standard operating procedures.
4. Monitor machine/process	4.1. Tool wear is monitored and, where appropriate, preset tools are replaced, tool offsets are identified in computer controlled program and adjusted, or other corrective action is taken using standard operating procedures. 4.2. Product deviation from specification is reported in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- making pre-start checks
- checking safety equipment and guards for correct operation

REQUIRED SKILLS AND KNOWLEDGE

- following safety procedures
- selecting and verifying the correct computer controlled program
- operating the computer controlled machine
- identifying and reporting machine malfunctions
- checking parts/products for conformance to specification
- monitoring the machine or process for signs of tool wear
- taking corrective action
- reporting part or product deviations from specification

Required knowledge

Look for evidence that confirms knowledge of:

- pre-start checks
- safety equipment and features associated with the machine/process
- safety procedures associated with the machine/process
- procedures for accessing computer controlled programs installed in the machine controller
- procedures for verifying the correct computer controlled program
- computer controlled machine operating procedures
- typical machine malfunctions
- procedures for reporting machine malfunctions
- measuring instruments/techniques
- examples of tool wear and the effect on product or part specifications
- procedures to be followed once tool wear has been detected
- replacing preset tools
- adjustments to tool offsets
- the effect of adjustments on part or product specifications
- procedures for reporting product or part deviations
- hazards and control measures associated with operating computer controlled machines/processes, including housekeeping
- safe workplace practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Obtain job instructions	1.1. Job sheets or equivalent instructions are interpreted correctly and understood.
2. Observe safety precautions	2.1. Machine guards, coolant and dust extraction devices are checked for proper operation in accordance with standard operating procedures. 2.2. Correct safety procedures are observed, and protective clothing and safety glasses are worn.
3. Disassemble production tooling in preparation for sharpening	3.1. Production tooling is disassembled as required to facilitate sharpening in accordance with standard operating procedures.
4. Set up machine	4.1. Tool and cutter grinding wheels are selected, balanced and dressed in accordance with job instructions. 4.2. Fixtures for locating tools/cutters to be sharpened are mounted in accordance with job instructions.
5. Perform tool and cutter grinding	5.1. Tools and cutters to be sharpened are mounted in predetermined fixtures. 5.2. Tools and cutters are sharpened in accordance with defined procedures.
6. Check tools/cutters for conformance to specification	6.1. Tools/cutters are visually inspected and checked, and measured for conformance to specification in accordance with job instructions.
7. Assemble/reassemble production tooling	7.1. Production tooling is reassembled, and inserts are installed in accordance with job instructions. 7.2. Assembled tooling is visually inspected and checked, and measured for conformance to specification in accordance with job instructions.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

REQUIRED SKILLS AND KNOWLEDGE

- reading and interpreting drawings and instructions
- planning a sequence of operations
- selecting and using appropriate tools
- entering routine and familiar information on to proforma and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- sequence of operations to be performed
- function of coolant and dust extraction devices
- hazards associated with tool and cutter grinding operations
- the standard grinding wheel shapes
- range of abrasive materials used in grinding wheels
- the effect of the following grinding wheel features on wheel selection and application:
 - grain size of abrasive particles
 - grade or strength of bond material
 - structure of grain spacing and dressing processes
- function and application of the full range of tool and cutter grinding accessories
- preparation requirements for tool maintenance
- requirements for checking:
 - dimensions and tolerances
 - geometry and tolerances
- surface finish
- use and application of personal protective equipment
- safe work practices and procedures

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Production tooling

Inserted boring bars, face cutters, gear cutters, grinding machines and accessories etc.

Grinding wheels

- Cup, dish, diamond
- Grain size of abrasive particles
- Grade or strength of bond
- Structure of grain spacing
- Grain size of abrasive particles

Fixtures/equipment

Dedicated holding devices e.g. clamps, vices, magnetic chucks, indicator pawls

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Observe safety precautions	1.1. Correct safety procedures are observed and protective clothing and safety glasses are worn.
2. Determine job requirements	2.1. Drawings are interpreted and sequence of operation is determined. 2.2. Tools are selected to produce components to specifications. 2.3. Disc size is determined in accordance with appropriate procedures.
3. Perform spinning operations	3.1. Spinning speeds are calculated for various metals and metal thicknesses using appropriate mathematical techniques and reference materials. 3.2. Correct back centre and form chucks are selected and mounted in accordance with procedures and specifications. 3.3. Prepared disc is mounted for forming. 3.4. A full range of spinning accessories is used including: back centre, various chucks, trimming accessories, blank centre equipment and tee-rest. 3.5. Spinning operations are performed to specifications.
4. Check components for conformance to specifications	4.1. Components are checked for conformance to specifications using appropriate techniques, tools and equipment.
5. Remove and store components	5.1. Components are removed from the spinning lathe without marking or any deformation. 5.2. Components are correctly stored and packaged to avoid oxidation and damage.
6. Adjust and maintain spinning lathe	6.1. Routine maintenance and adjustments are carried out as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms skills in:

- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings
- following oral instruction
- entering routine and familiar information onto proformas and standard workplace forms
- using all basic metal spinning tools
- minimising damage and defects
- calculating disc size and lathe speed
- undertaking manual handling related to spinning products
- using appropriate techniques, tools and equipment to measure materials and spinnings

Required knowledge

Look for evidence that confirms knowledge of:

- sequence of spinning operation
- types of spinning tools, their functions and requirements for maintaining tools
- types of damage and defects e.g. tool marks, cracking, stress marks, thinning and incorrect finish
- spinning lathe operation
- why and how lathe speed is calculated
- reasons for types of form chuck mounting
- function and operation of accessories for basic spinning
- methods used for each process
- methods for stacking and protecting finished product
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with metal spinning lathe operations (basic)

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Observe safety precautions	1.1. Correct safety procedures are observed and protective clothing and safety glasses are worn.
2. Determine job requirements	2.1. Drawings are interpreted and sequence of operation is determined. 2.2. Tools are selected to produce components to specifications. 2.3. Disc size is determined according to relevant procedures. 2.4. Disc is cut to the correct size and tolerance.
3. Prepare form chucks for spinning	3.1. Metal turning lathe is set up for machining form chucks according to standard operating procedures and standards. 3.2. Form chuck is prepared for general spinning as per drawings and specifications. 3.3. Form chuck is prepared for seaming/swaging joints as per drawings and specifications.
4. Perform complex spinning operations	4.1. Spinning speeds are calculated for various metals and metal thicknesses using appropriate mathematical techniques and reference materials. 4.2. Correct back centre and form chucks are selected and mounted according to procedures and specifications. 4.3. Prepared disc is mounted for forming. 4.4. A full range of spinning accessories is used including: back centre, holding and sectional chucks, tee-rest, compound and additional slides, recessed and cranked followers, rollers and knurling wheels. 4.5. Spinning, beading, recessing, oval spinning, screw forming, (thread spinning) seaming, swaging, trimming finishing, annealing and pickling operations are performed to specification.
5. Check components for conformance to specifications	5.1. Components are checked for conformance to specifications using appropriate techniques, tools and equipment.
6. Remove and store components	6.1. Components are removed from the spinning lathe without marking or any deformation. 6.2. Components are correctly stored and packaged to avoid oxidation and damage.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and interpreting information on written job instructions, specifications and standard operating procedures. May include drawings
- entering information onto proformas and standard workplace forms
- following oral instruction
- using all types of metal spinning tools and accessories
- calculating disc size and lathe speed including angles and radius
- manual handling related to spinning products
- coordinating use of multi-slides and tools, feeds and speeds
- producing complex spinning shapes using a variety of processes and techniques

Required knowledge

Look for evidence that confirms knowledge of:

- complex spinning operations, processes and techniques
- requirements for maintaining tools and manufacturing form chucks
- types of damage and defects e.g. tool marks, cracking, stress marks, thinning and incorrect finish
- function and operation of accessories
- methods used for each process
- methods for stacking and protecting finished product
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with metal spinning lathe operations (complex)

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Tools	Spinning tools, planishing tools, backstick, trimming, beading tools, back centre, holding and sectional chucks, tee-rest, compound and additional slides, recessed and cranked followers, rollers and knurling wheels etc.
Complex spinning operations	Spinning, beading, recessing, oval spinning, screw forming, (thread spinning) seaming, swaging, trimming finishing, annealing, pickling, combined angles and multi-radii
Metals	Steels, aluminium, monel, copper, brass, brass alloys, zinc, pewter, silver, gold, tin, etc., of varying thicknesses

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify job requirements.	1.1. Job requirements are interpreted from work instructions and standard operating procedures. 1.2. Appropriate machine is selected to meet requirements.
2. Set up machine	2.1. Tools are selected appropriate to the work requirements. 2.2. Cutting tools are sharpened as required. 2.3. Tools are correctly installed using standard operating procedures. 2.4. Guards are set and adjusted as required.
3. Operate machine	3.1. Material to be machined is mounted and secured using clamping device appropriate to the material and work requirements. 3.2. Machine is operated correctly to suit work and material requirements.
4. Check finished component	4.1. Machined component is checked against work requirements and predetermined finish.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following routine and familiar information on written job instructions, standard operating procedures and other applicable reference documents
- selecting the appropriate machine for the given task
- setting up machines and tooling within the scope of this unit, including speeds and feeds
- sharpening tools within the scope of this unit
- operating machines within the scope of this unit
- checking finished components
- checking and clarifying task-related information

REQUIRED SKILLS AND KNOWLEDGE

- measuring components to specification within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- cutting tool sharpening methods and techniques
- tool geometry within the scope of this unit
- units of measurement, tool geometry and numerical operations within the scope of this unit
- safe operation of tool sharpening equipment
- consequences of incorrect sharpening
- machine set-up
- consequences of incorrect speeds and feeds
- procedures for operating workshop machines
- reasons for poor surface finish.
- hazards and control measures
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to use workshop machines for basic operations. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with using workshop machines for basic operations or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Machines	Lathe, radial arm drill, mill etc.
Cutting tools	Lathe tools, milling cutters, drills etc.
Materials	Ferrous and non ferrous
Clamping device	Chucks, vices, clamps, bars and packing etc.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select and use personnel protective equipment	1.1. Personal protective clothing and equipment is selected and used correctly and in accordance with standard workplace procedures.
2. Carry out pre-operational checks	2.1. Pre-operational checks of boiler are undertaken correctly to plant operating procedures. 2.2. Maintenance requirements and visual faults are reported according to standard workplace procedures.
3. Maintain health and safety standards in work area	3.1. Hazards and potential hazards are identified and reported according to standard workplace procedures. 3.2. Hazard prevention/control measures are selected and used as required.
4. Start boiler	4.1. Boiler is started and brought on line safely, consistent with workplace procedures and production requirements.
5. Conduct hand-over/take-over procedures	5.1. Operating status of boiler is confirmed. 5.2. Operating log is maintained and boiler status/operation is communicated according to workplace procedures.
6. Operate and monitor boiler	6.1. Boiler is operated and monitored consistent with production and safety requirements. 6.2. Boiler water quality tests are conducted to manufacturer's recommendations and workplace procedures. 6.3. Boiler water quality is adjusted as required to manufacturer's recommendations and workplace procedures. 6.4. Boiler failures/emergencies are acted on according to workplace procedures and downstream users are notified, if necessary.
7. Carry out boiler operational shut-down	7.1. Boiler is shut down consistent with workplace procedures, production and safety requirements.
8. Carry out boiler shut-down for an internal inspection	8.1. Boiler is shut down for internal inspection according to manufacturer's recommendations and workplace procedures. 8.2. Boiler is cleaned internally and externally to manufacturer's recommendations and workplace procedures.
9. Store boiler in	9.1. Required storage mode is identified.

ELEMENT	PERFORMANCE CRITERIA
shut-down mode	9.2.Boiler is stored to manufacturer's recommendations and workplace procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- selecting and using personal protective clothing and equipment
- performing pre-operational checks of boiler
- identifying and reporting maintenance requirements
- identifying and reporting hazards and potential hazards in work area
- responding to boiler failures/emergencies
- applying hazard prevention/control measures
- starting boiler and bringing on line
- confirming operating status of boiler
- maintaining operating log
- communicating boiler status information
- monitoring boiler
- conducting boiler water quality tests
- adjusting boiler water quality
- shutting down boiler
- cleaning boiler internally and externally
- storing boiler

Required knowledge

Look for evidence that confirms knowledge of:

- personal protective clothing and equipment use and applications
- pre-operational checks such as feed water supply, boiler water level, fuel supply/heat source, boiler valves their operation and position, combustion air supply and combustion equipment
- procedures for identifying and reporting maintenance
- statutory requirements and workplace procedures for identifying and reporting hazards in the work area
- hazard prevention and control measures

REQUIRED SKILLS AND KNOWLEDGE

- processes for starting a boiler, such as heat input, warm up of the reticulation system, steam traps and steam line purge, systems operation, reticulation line pressure, steam usage and supply
- processes for confirming operational status of boiler
- procedures for maintaining operating log
- procedures for communicating boiler status and operation
- principles of boiler operation
- boiler fittings
- preparing boiler for inspection
- procedures for monitoring a boiler, such as steam reticulation line pressure, usage, supply and quality of steam, combustion/heat source system, feed water system, fuel system combustion air supply, water level, boiler steam pressures and operation of control/safety devices etc.
- location of inspection and explosion doors
- procedures for conducting boiler water quality tests
- feed water systems and treatment
- emergency procedures such as identification of emergency, isolation of heat source, selection and application of appropriate fire fighting equipment and notification of down stream users etc.
- processes and procedures such as confirming water level, cooling down, boiler pressure/vacuum and fuel/heat source isolation etc. when operationally shutting down a boiler
- processes and procedures such as confirming boiler cooling down, vacuum/pressure, fuel/heat source isolation, removal of combustion equipment and water from boiler, isolation from any common connection and the opening of all access points required for inspection etc.
- procedures for cleaning the boiler internally and externally
- the various modes of boiler storage
- procedures for storing the boiler in open or closed condition

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Pre-operational checks

Feed water supply, boiler water level, fuel supply/heat source, boiler valves - their operation and position, combustion air supply and combustion equipment

Boiler

Single fixed combustion air supply, non-modulating single heat source and fixed firing rate

Hazards

Chemical and thermal hazards, manual handling, guarding of machinery, illumination of work area, rubbish and combustibles, leakage of steam and fuel etc.

Monitored

Steam pressure, flame and combustion conditions, feed system and condensate returns, fuel system, water level, combustion management system, water management system, boiler and steam manifold fittings, soot blowers

Storage mode

Wet and dry storing, open or closed condition

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Carry out pre-operational checks	1.1.Pre-operational checks of boiler and associated equipment are carried out according to standard operating procedures. 1.2.Maintenance requirements are identified and reported in accordance with standard operating procedures.
2. Maintain health and safety standards in work area	2.1.Hazards and potential hazards in work area are identified and reported in accordance with statutory requirements and workplace procedures. 2.2.Personal protective equipment and clothing is selected and used as appropriate, according to statutory requirements and workplace procedures. 2.3.Hazard prevention/control measures are selected and used as required, in accordance with statutory requirements and workplace procedures
3. Start up boiler	3.1.Boiler is started and brought on line safely, consistent with workplace procedures and production requirements.
4. Conduct hand-over/take-over procedures	4.1.Operating status of the boiler is confirmed in accordance with manufacturer's recommendations and workplace procedures. 4.2.Boiler status and operation is communicated according to workplace procedures and statutory requirements.
5. Operate and monitor intermediate class boiler and associated equipment	5.1.The boiler and associated equipment is operated and monitored consistent with production and safety requirements. 5.2.Boiler water quality tests are conducted to manufacturer's recommendations and workplace procedures. 5.3.Water quality is maintained according to manufacturer's recommendations and workplace procedures. 5.4.Boiler failures and emergencies are responded to in accordance with statutory requirements, manufacturer's recommendations and workplace procedures.
6. Shut down boiler and associated equipment	6.1.Operational shut-downs of boiler and associated equipment are carried out in accordance with work-place procedures, production and safety

ELEMENT	PERFORMANCE CRITERIA
	<p>requirements.</p> <p>6.2. Shut-downs of boiler and associated equipment for internal inspection are carried out in accordance with workplace procedures, production and safety requirements.</p> <p>6.3. Boiler is isolated in accordance with statutory requirements, manufacturer's recommendations and workplace procedures.</p> <p>6.4. Boiler is cleaned internally and externally to manufacturer's recommendations and workplace procedures.</p>
7. Store boiler in shut-down mode	<p>7.1. Appropriate storage mode is identified</p> <p>7.2. Boiler and associated equipment is stored in shut-down mode to manufacturer's recommendations and workplace procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- following, standard operating procedures and statutory requirements
- performing preoperational checks of boiler
- performing maintenance checks
- orally reporting routine information
- identifying hazards, hazardous situations and control measures
- using personal protective clothing and equipment
- selecting the most appropriate prevention/control measure for a given situation
- starting up boilers, including those fitted with associated equipment such as superheaters and economisers
- monitoring boilers, including checks of combustion management system and superheater and economiser operation
- checking operating status
- recording routine and familiar information in operating log and other standard workplace forms
- performing water quality tests to manufacturer's recommendations and workplace

REQUIRED SKILLS AND KNOWLEDGE

procedures

- using testing equipment
- adjusting water quality
- responding to typical emergency situations
- notifying downstream users
- performing operational and inspection shut-down, including procedures for associated equipment, such as superheaters and economisers
- isolating boiler from any common connection between the boiler and other boilers on line and all access points required for inspection

Required knowledge

Look for evidence that confirms knowledge of:

- pre-operational checks
- procedures for identifying and reporting maintenance requirements
- statutory requirements and workplace procedures for identifying and reporting hazards in the work area
- use and application of personal protective equipment
- safe work practices and procedures
- prevention and control measures
- the processes for starting a boiler such as heat input, warm up of the reticulation system, steam traps and steam line purge, systems operation, reticulation line pressure, steam usage and supply, associated equipment such as superheaters and economisers
- the process for confirming operational status of boiler
- procedures for maintaining an operating log and communicating boiler status
- procedures for communicating boiler status and operation
- principles of intermediate boiler operation - single and battery
- boiler fittings
- preparing boiler for inspection
- feed water systems and treatment, including de-aerator function and purpose
- procedures for monitoring an intermediate class boiler, such as steam reticulation line pressure, usage, supply and quality of steam, combustion/heat source system, feed water system, fuel system, combustion air supply, water level, boiler steam pressures and operation of control/safety devices, combustion management system, associated equipment such as superheaters and economisers
- function, purpose and location of associated equipment:
 - superheater
 - economiser
 - air heater
 - feed water heater
 - attemperator

REQUIRED SKILLS AND KNOWLEDGE

- superheater safety valves
- economiser relief valves
- main steam stop valve
- procedures for conducting boiler water quality tests
- procedures for adjusting boiler water quality
- procedures such as identification of emergency isolation of heat source, operation of boiler, selection and application of fire fighting equipment and notification of downstream users
- operational shut-down processes and procedures such as confirming water level, cooling down, boiler pressure/vacuum and fuel/heat source isolation
- shut-down processes and procedures for internal inspection, such as confirming boiler cooling down, vacuum/pressure, fuel/heat source isolation, removal of combustion equipment and water from boiler
- isolation procedures and safety issues
- procedures for cleaning boiler internally and externally
- various modes of boiler storage, which may include integral associated equipment such as superheaters and economisers
- the reasons for selecting particular storage mode
- procedures for storing a boiler in shut-down mode

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to operate and monitor intermediate class boilers. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify robot requirements	1.1.Robot features and specifications are identified. 1.2.Robot language is identified. 1.3.Robot safety features are identified. 1.4.Manufacturer's operating procedures and engineering drawings are interpreted to define robot function and tool path geometry. 1.5.Required operations for robot and end effectors are determined in conjunction with appropriate technical experts or other technical reference sources.
2. Plan robot program	2.1.Programming requirements are identified. 2.2.Coordinates are calculated for tool path or robot functions. 2.3.Programming method is selected. 2.4.Program plan is developed.
3. Write basic program	3.1.Robot and computer equipment is prepared. 3.2.Program is written in required language and in accordance with standard operating procedures. 3.3.Safety features are incorporated in robot program. 3.4.Operation sheet is prepared.
4. Trial program	4.1.Program is trialled by operating robot in manual mode in conjunction with operator as appropriate. 4.2.Program performance is verified against required specifications and with appropriate technical experts or other technical reference sources. 4.3.Program is edited if necessary to adjust operation as required. 4.4.Components are checked for conformance to specifications as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, engineering drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- identifying robot features/applications/specifications
- calculating coordinates of all relevant points on the part or product to be produced
- writing programs in required programming language
- producing robot operation sheet(s)
- editing robot program
- checking parts/products for specification conformance
- undertaking program storage and filing procedures

Required knowledge

Look for evidence that confirms knowledge of:

- classifications/applications of industrial robots, such as:
 - welding
 - thermal cutting
 - machining
 - forming and shaping
 - pick and place
 - palletising
 - machine loading/unloading
- end effectors:
 - grippers
 - tools and tool changes
- features and specifications of robots and components
- joint movements of a robot
- drive systems used to generate robot movement
- programming methods and procedures
- function of elements in controlling operation of a robot
- safety features and requirements of robots
- type(s) of robots and end effectors and their applications
- robot operations controlled by programs
- the tool path(s) when producing a part or product
- the sequence of robot operations, including movements
- the zero point of the robot
- standard codes and languages for robot programs

REQUIRED SKILLS AND KNOWLEDGE

- procedures for completing robot operation sheets
- procedures for manual operation of the robot
- reasons for testing and proving the robot program
- procedures for editing the robot program
- the effects of editing on the operation of the robot and the part or product to be produced
- the measuring equipment/techniques used to check for conformance to specification
- hazards and control measures associated with programming robots, including housekeeping
- safe workplace practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to write basic robot programs. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with writing robot programming or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Features and specifications

- Components
- Capabilities
- Speed
- Reach
- Load carrying capacity
- Accuracy/repeatability
- Classification
- Polar coordinate
- Cylindrical coordinate
- Cartesian coordinate
- Jointed elbow
- SCARA
- Movements
- Base
- Shoulder
- Elbow
- Pitch
- Roll
- Yaw
- Applications
- Required operating conditions
- Limitations
- Justification
- Safety features

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine process	1.1. Job sheets/instructions are interpreted and understood.
2. Select and use a range of hand tools and equipment	2.1. Hand tools and equipment are used in a safe manner in accordance with standard operating procedures.
3. Set process line	3.1. Process line is set up to specifications in accordance with standard operating procedures. 3.2. All sensors, process links, displays, monitors, feedback loops etc. are set up to specifications using standard operating procedures. 3.3. All safety apparatus is in place and checked for correct operation. 3.4. Process line is run to meet predetermined production and quality requirements. 3.5. Process line is adjusted to meet specifications and operational requirements. 3.6. Operator(s) are instructed as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings related to setting multistage continuous process lines
- using specialist tools
- coordinating the running of multi-process lines
- entering routine and familiar information onto proformas and standard workplace forms
- verbally conveying information/instructions

Required knowledge

Look for evidence that confirms knowledge of:

REQUIRED SKILLS AND KNOWLEDGE

- communication strategies for giving clear instruction
- specifications and sequencing that apply to given process lines
- interpretation of feedback from machine process
- specifications applicable to the sensors, process links, displays, monitors, feedback loops etc. incorporated in the process line
- correct operation and specification for all safety apparatus incorporated in the process line
- product specifications and quality and production requirements
- the effect of process line adjustments on product and operational specifications
- operator procedures
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with setting of multistage continuous process lines

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to set, in accordance with determined procedures, a wide range of continuous process lines. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with setting multistage continuous process lines or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

MEM07041A Perform production machining

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers production machining using a range of engineering machinery, such as lathes, milling machines and grinders. It includes determining the job requirements and sequence of operations, selecting and mounting tools, performing the machining, measuring the components, and adjusting and maintaining a range of standard machine tools.

Application of the Unit

The unit of competency applies to the use of workshop machines in a volume production environment to shape metal, including lathes, mills, planers, shapers, radial arm drills, slotters and grinders.

This unit will typically apply to senior operators undertaking volume production who have responsibility for machine set up to defined parameters, selection of materials and lubricants, establishment of datum points and basic marking out, as well as setting speeds, feeds and other machining parameters.

This unit has application in the MEM20205 Certificate II in Engineering - Production Technology and MEM30105 Certificate III in Engineering - Production Systems and other qualifications requiring production machining skills.

Where machining is undertaken without the need for any set up, including mounting of tools, setting of speeds, feeds and other operational parameters, then either MEM07024B Operate and monitor machine/process or MEM07025B Perform advanced machine/process operation should be selected. Drilling operations in this unit exclude those covered by MEM18002B Use power tools/hand held operations. For set up and operation of electro-discharge (EDM) machines, refer to MEM07014B Perform electro-discharge (EDM) machining operations.

Band: A

Unit weight: 8

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

- MEM09002B Interpret technical drawing
- MEM12023A Perform engineering measurements
- MEM18001C Use hand tools

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

- | | | | |
|---|--|-----|---|
| 1 | Determine job requirements | 1.1 | Review drawings or charts, instructions and specifications for details of item to be produced |
| | | 1.2 | Confirm number of items to be produced |
| 2 | Follow required sequence of operations | 2.1 | Identify appropriate standard operating procedure (SOP) for machining operation |
| | | 2.2 | Plan operation for required run rate, efficiency and minimisation of waste |
| | | 2.3 | Select correct material for operation from pre-determined stock range |
| | | 2.4 | Establish starting point on stock for operation |
| | | 2.5 | Maintain process and quality logs |

- | | | | |
|---|---|-----|---|
| 3 | Select and mount tools | 3.1 | Select appropriate tooling from pre-selected range |
| | | 3.2 | Select appropriate stock and grind to required tool shape using pre-set jigs and fixtures to achieve pre-determined angles and clearances |
| | | 3.3 | Monitor tooling and sharpen tools and drills, as required, to pre-determined specifications |
| | | | |
| 4 | Perform production machining operations | 4.1 | Use basic marking out techniques to pre-determined specifications on stock or components |
| | | 4.2 | Set machining parameters for job requirements |
| | | 4.3 | Monitor tool or cutter performance life |
| | | 4.4 | Clamp or hold work without damage to product and ensuring all safety requirements are met |
| | | 4.5 | Perform machining utilising all guards, safety procedures and personal protective clothing and equipment |
| | | | |
| 5 | Perform production grinding operations | 5.1 | Select appropriate grinding wheel for required operation from pre-selected options |
| | | 5.2 | Mount and tighten grinding wheels to required sequence and specification |
| | | 5.3 | Position dressing tool correctly |
| | | 5.4 | Dress and true grinding wheel using given range of dressing tools |
| | | 5.5 | Check grinding wheel for balance and safety |
| | | 5.6 | Adjust coolant flow and position |
| | | 5.7 | Undertake grinding operation utilising all guards, safety procedures and personal protective clothing and equipment |
| | | 5.8 | Monitor grinding wheel performance and life according to SOP |

- | | | | |
|---|-----------------------------|-----|---|
| 6 | Measure components | 6.1 | Select instruments or gauges appropriate to the measurement requirements |
| | | 6.2 | Check machined or ground items for compliance with specifications |
| | | 6.3 | Identify out of specification items and check if settings or tooling require adjustment |
| 7 | Adjust and maintain machine | 7.1 | Carry out routine maintenance and adjustments, as required, which may include slide and collar adjustment, cleaning and lubrication |
| | | 7.2 | Report and log malfunctions according to enterprise procedures |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills include:

- reading and interpreting routine information on written job instructions, specifications and standard operating procedures which may include drawings
- following oral instruction
- planning and sequencing operations
- preparing operational work plan
- drill sharpening
- sharpening and shaping cutting tools
- identifying worn or damaged cutting tools
- correct mounting and positioning of cutting tools
- basic marking out of materials
- setting machining parameters to achieve the job requirements and maximise tool life
- using appropriate and sufficient clamping/mounting of the work piece
- using coolant/lubricant correctly
- checking for conformance to specifications
- measuring to specified tolerances and dimensions

Required knowledge includes:

- reasons for selecting the chosen sequence of operations
- methods of work holding
- basic marking out techniques, including datum points/lines
- benefits of using correctly sharpened cutting tools
- machine operation
- selection of feeds and speeds to SOPs
- correct methods of mounting selected cutting tools to SOPs
- safety issues with regard to correct clamping, guards and shields
- tolerances and limits of size
- situations indicating the need for machine adjustment, lubrication and cleaning
- techniques, tools and equipment to measure materials and machined components
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with general machining
- types and features of industrial grinding wheels, including:
 - international grinding wheel identification system

- grinding wheel make-up, including bonds and grits
- purpose and procedure for grinding wheel truing
- indicators of a need for grinding wheel dressing, including:
 - wheel glazing
 - wheel loading
 - wheel dresses
 - wheel drilling
- difference between centred and centreless grinding
- indicators of need for dressing, including:
 - loading
 - dulling
 - glazing
 - burn/thermal damage
 - surface finish
- grinding wheel storage and handling
- wheel safety checking, including checks for:
 - cracks
 - defects (e.g. holes, moisture and deterioration)
- grinding wheel blotters
- typical range of industrial drills and classification
- drilling machines
- drill sharpening procedures
- drill clamping arrangements
- common reasons for machining failure, including:
 - incorrect speed
 - faulty positioning of work
 - incorrect feed
 - rotation
 - incorrect coolant selection and positioning

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to perform production machining.
-------------------------------	---

	including responsibility for selecting and mounting tooling, and setting of machine within defined parameters.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different situations and contexts. Critical aspects of assessment and evidence include:</p> <ul style="list-style-type: none"> • correct job planning, including identifying job requirements from drawings, instructions or specifications, and sequence of operations • selecting appropriate tooling, measuring equipment, material and accessories from a predetermined range • selecting and mounting required tooling or grinding wheels • setting machining parameters • checking machined components for conformance to specifications.
Context of and specific resources for assessment	<p>Assessment should emphasise a workplace context and procedures found in the candidate's workplace.</p> <p>The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p>
Method of assessment	<p>Assessment should occur on a variety of machines and across a range of machining tasks. Assessment must include consideration of performance evidence as demonstrated in a volume production environment.</p> <p>The candidate must be able to demonstrate performance across a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy</p>

	<p>skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, manuals and reference materials.</p>
<p>Guidance information for assessment</p>	<p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing general machining or other units requiring the exercise of the skills and knowledge covered by this unit.</p> <p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Production machining</p>	<p>Production machining refers to use of workshop machines for volume production of parts or components made of metal or other machinable materials where the machine operator has responsibility for the setting up of the machine, including tooling, grinding wheels, and other accessories within defined parameters. It does not include one-off jobbing on workshop machines or complex calculations. Tolerances and tool paths will</p>
------------------------------------	--

	normally have been set in advance
Operations	<p>Operations may include:</p> <ul style="list-style-type: none"> • parallel cutting • slotting • drilling • knurling • cutting flats • centred and centreless grinding operations
Materials	Materials may include ferrous and non-ferrous metals as well as other machinable materials
Tooling	<p>Tooling may include:</p> <ul style="list-style-type: none"> • carbide, ceramic and high speed steel machine tooling cutting tool accessories and holding devices
Measuring devices	<p>Measuring devices may be:</p> <ul style="list-style-type: none"> • rulers • gauges • verniers and micrometers (digital or analog)
Marking out techniques	<p>Marking out techniques may include:</p> <ul style="list-style-type: none"> • basic marking out techniques using calipers, steel rules, dividers and scribes
Machining parameters	<p>Machining parameters may include:</p> <ul style="list-style-type: none"> • speeds • feeds • stops • coolant and cutting lubricants
Machines	Machines may include:

	<ul style="list-style-type: none"> • lathes • mills • planers • shapers • radial and pedestal drills • slotters • grinders
Maintenance and adjustments	<p>Maintenance and adjustments may include:</p> <ul style="list-style-type: none"> • slide and collar adjustment • cleaning and lubrication
Types and features of industrial grinding wheels	<p>Types and features of industrial grinding wheels refers to:</p> <ul style="list-style-type: none"> • wheel make-up • wheel hubs • wheel classification • types of grits and bonds
Dressing tools	<p>Dressing tools for this unit are limited to:</p> <ul style="list-style-type: none"> • industrial diamond • dressing wheels • dressing sticks
Balancing of grinding wheels	<p>Balancing for this unit is limited to checks and identification for balance. Correction of out of balance wheels is not covered by this unit</p>

MEM07042A Undertake corrections and basic maintenance to aluminium extrusion dies and die support systems

Modification History

New unit - Release 1

Unit Descriptor

This unit of competency covers the skills and knowledge required to correct aluminium extrusion dies and die support systems after faulty extrusions have been examined and causes of faults identified.

Application of the Unit

This unit applies to die correctors in an aluminium extrusion workplace who are making corrections to aluminium extrusion dies and their die support systems as well as undertaking basic maintenance of dies. The unit applies to both solid and hollow dies. The corrections may be made using hand tools, handheld power tools, or workshop machines.

The unit does not cover manufacture of dies or major repair or remanufacture of dies. This unit presumes that the cause/s of faulty extrusions has already been identified.

The units MEM11010B Operate mobile load shifting equipment and MEM11011B Undertake manual handling should be selected where the die corrector is required to remove and replace dies in extruders.

Band: A

Unit Weight: 4

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

- MEM07001B Perform operational maintenance of machines/equipment
- MEM07003B Perform machine setting (routine)
- MEM07004B Perform machine setting (complex)
- MEM07024B Operate and monitor machine/process
- MEM07025B Perform advanced machine/process operation
- MEM07032B Use workshop machines for basic operations
- MEM07043A Identify causes of faulty aluminium extrusions
- MEM07044A Test a new aluminium extrusion die
- MEM09002B Interpret technical drawing
- MEM12023A Perform engineering measurements
- MEM18001C Use hand tools
- MEM18002B Use power tools/hand held operations
- MEM18003C Use tools for precision work
- MEM18055B Dismantle, replace and assemble engineering components

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|----------------------------|-----|--|
| 1 | Prepare for die correction | 1.1 | Identify work health and safety (WHS), regulatory requirements, and risk management procedures relevant to die access and handling, extruder operation and die correcting procedures |
| | | 1.2 | Identify extrusion specifications, extruder operating procedures and other information relevant to die correction task |
| | | 1.3 | Where required, consult with die designer on intended correction |
| 2 | Correct solid dies | 2.1 | Calculate intended change in extrusion flow or speed |
| | | 2.2 | Determine bearing choke angles or length of bearing shortening as appropriate for required correction |
| | | 2.3 | Speed up flow, where required, through appropriate shortening of bearing |
| | | 2.4 | Slow down flow, where required, through appropriate choking of bearing |
| | | 2.5 | Relieve clearances |
| | | 2.6 | Supervise or run trial extrusions to test corrections |

- | | | | |
|---|--|-----|--|
| 3 | Correct hollow dies | 3.1 | Assess if shortening or choking of mandrel bearings is required and select bearings to be corrected |
| | | 3.2 | Determine choke angles and length of shortening as appropriate for required corrections |
| | | 3.3 | Undercut mandrel to widen chambers, where required |
| | | 3.4 | Increase depth of chamber back into bridge, where required |
| | | 3.5 | Adjust mandrel stems, where required |
| | | 3.6 | Adjust weld bridges, as required |
| | | 3.7 | Speed up flow, where required, through appropriate shortening of bearing |
| | | 3.8 | Slow down flow, where required, through appropriate choking of bearing |
| | | | |
| 4 | Undertake basic maintenance of dies | 4.1 | Monitor case and assess when re-nitriding is required |
| | | 4.2 | Prepare die for re-nitriding |
| | | 4.3 | Clean and polish dies when required |
| | | 4.4 | Repair fine bearing damage |
| | | 4.5 | Maintain bearing angle and flatness during polishing and repairs |
| | | 4.6 | Monitor fittings and devices for lifting die and die support components and arrange replacement or repair as necessary |
| | | | |
| 5 | Adjust die support system and components | 5.1 | Ensure toolstack components are flat and square with die |
| | | 5.2 | Check for and replace any coined bolsters |
| | | 5.3 | Check die slide alignment is within tolerance and re-align if necessary |
