- prominent practitioners and practices
- relationship with other creative arts industry sectors
- specific features of local and regional industry sectors, including their relationship with local community.

Creative arts industries may include:

- Entertainment
- Film, Television, Radio and Interactive Media
- Museums and Library Services
- Music
- Visual Arts, Craft and Design.

Appropriate sources may include:

- agents and artists' managers
- copyright representatives
- discussions with current industry practitioners, colleagues and community groups
- electronic and print media, including news, reviews and articles
- employee and industry association representatives
- events, including industry functions, conferences, trade fairs, community activities, expositions, exhibitions, festivals and social events
- government bodies and associated publications
- induction kits
- industry managers
- internet
- libraries and telephone books
- peak copyright organisations

RANGE STATEMENT	
	<ul style="list-style-type: none"> • personal observations and experience • reference books, industry information sheets, magazines and journals • retail and wholesale suppliers of products and services • technical publications • training programs, seminars, conferences, symposiums, workshops, master classes and other professional development opportunities • union publications (e.g. newsletters, magazines, bulletins and letters) and other sources of industrial relations information.
<i>Employment obligations and opportunities</i> may include:	<ul style="list-style-type: none"> • career opportunities and career paths • codes of conduct and codes of ethics • employer bodies and professional associations • employment conditions • employment contracts and job descriptions • industrial relations issues, including award provisions, enterprise bargaining agreements and non-award areas • roles, responsibilities and employment rights of individuals and contracted freelance workers • unions.
<i>New technology</i> may include:	<ul style="list-style-type: none"> • advances in any type of equipment or technology used within the industry • likely effects of new technology on current work practices and the structure of the industry • sources of technical advice and support • ways of upgrading skills to allow for the use of new technology.
<i>Laws and regulations</i> may include:	<ul style="list-style-type: none"> • anti-discrimination • consumer protection • contempt of court • copyright • defamation • duty of care • environmental issues • equal employment opportunity • industrial relations, awards and enterprise agreements

RANGE STATEMENT	
	<ul style="list-style-type: none"> • insurance issues • intellectual property • libel • obscenity • OHS • plagiarism • privacy legislation • racial vilification • slander.
<i>Current issues of concern</i> may include:	<ul style="list-style-type: none"> • changing nature of the marketplace, including marketing and production of products and services • cultural protocols • funding policies • government initiatives • importing and exporting issues • industry contraction or expansion • insurance issues • taxation issues • trends in industry practice.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Clarify research brief	<ol style="list-style-type: none"> 1. Confirm topic or content to be researched with <i>relevant personnel</i>, including deadlines for completion 2. Identify <i>research and data gathering techniques</i> that best meet the requirements of the brief 3. Discuss research ideas fully and constructively with relevant personnel and identify any implications for research briefs 4. Reach agreement with relevant personnel on the <i>format for presenting research findings</i> 5. Identify issues of a culturally sensitive or <i>legal nature</i> that affect research briefs 6. Alert relevant personnel to potential difficulties in meeting briefs and agree on alternative strategies or outcomes 7. Where specialist research expertise is required, identify potential subcontractors and organise subcontract arrangements in consultation with relevant personnel
Conduct research	<ol style="list-style-type: none"> 8. Identify <i>sources of information</i> and potential contributors relevant to research briefs 9. Design <i>research tools</i> as required 10. Contact a sufficiently wide range of valid sources to optimise information gathering in line with research briefs and agreed methodology 11. Approach relevant sources promptly and in a way most likely to elicit the required information 12. Adjust research strategies as required, without compromising required outcomes 13. Maintain accurate and comprehensive details of information sources 14. Adjust contact information when requirements of research briefs change and keep records up to date 15. Record all data gathered in a <i>system</i> that allows easy access and retrieval of information in the analysis phase
Analyse research findings	<ol style="list-style-type: none"> 16. Analyse and interpret data or information gathered 17. Check all facts before including them in research findings 18. Make judgements about how much information to include in research findings and be clear on the rationale for doing so 19. Develop conclusions and recommendations as required

ELEMENT	PERFORMANCE CRITERIA
	in consultation with relevant personnel
Present research findings	20. Organise information logically and clearly in the agreed format 21. Present information to relevant personnel by agreed deadlines 22. Identify key issues for further research or discussion with relevant personnel 23. Seek feedback on the quality of research outcomes and note areas for improvement

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication and teamwork skills sufficient to:
 - present information and research findings in a way that is easily understood by others
 - use industry and community networks as sources of information
 - negotiate changes to research briefs
 - participate in and act on feedback sessions with colleagues
- initiative and flexibility sufficient to:
 - follow new leads in the course of research activities
 - respond to difficulties encountered during the course of research activities
- planning and writing skills sufficient to:
 - organise information logically in line with its intended purpose
 - document research findings clearly and concisely
- analytical and literacy skills sufficient to interpret and summarise information and research findings
- self-management skills sufficient to work under pressure and meet deadlines

Required knowledge

- effective communication techniques, including effective listening, questioning and non-verbal cues
- legal issues that affect research activities, e.g. copyright, intellectual property and privacy legislation
- reliable sources of advice on legal issues
- features of commonly used quantitative and qualitative research methodologies
- protocols to be observed when collecting information of a culturally sensitive nature
- OHS standards as they relate to working for periods of time on computers

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • ability to clarify research briefs • ability to gather reliable and valid information from a range of sources in response to research briefs • research findings on a range of topics presented in an appropriate format by agreed deadlines • collaborative approach to work.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to a computer and the internet • access to a range of information sources as listed in the range statement • access to appropriate learning and assessment support when required • use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third-party workplace reports of on-the-job performance • evaluation of research findings prepared by the candidate in response to a range of briefs • written or oral questioning to test knowledge as listed in the required skills and knowledge section of this unit and to discuss candidate's approach to conducting research.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • BSBWRT401A Write complex documents • CUFPPM401A Produce programs and program

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Relevant personnel</i> may include:</p>	<ul style="list-style-type: none"> • clients • designers • directors • industry organisations • managers • producers • specialist subcontractors • supervisors.
<p><i>Research and data gathering techniques</i> may include:</p>	<ul style="list-style-type: none"> • qualitative, e.g. focus groups or interviews with key people • quantitative, e.g. mail or telephone surveys based on a statistically reliable random sample.
<p><i>Formats for presenting research findings</i> may include:</p>	<ul style="list-style-type: none"> • audio and visual presentations • interactive media presentations • verbal briefings or presentations • written reports.
<p>Issues of a <i>legal nature</i> may include:</p>	<ul style="list-style-type: none"> • contempt of court • copyright • defamation • intellectual property • obscenity • privacy legislation • racial vilification.
<p><i>Sources of information</i> may include:</p>	<ul style="list-style-type: none"> • archives • community organisations • government departments • industry and trade journals • internet • libraries, including text, film, video, sound and graphic • market research companies • media, including television, radio and print

RANGE STATEMENT	
	<ul style="list-style-type: none"> • museums and galleries • organisational policies, procedures and journals • personal observations and experience • print and online standard references, such as: <ul style="list-style-type: none"> • atlases • dictionaries of biography • encyclopaedias • year books and almanacs • directories of people and associations • telephone directories • professional and industry organisations • technical publications and manuals.
<i>Research tools</i> may include:	<ul style="list-style-type: none"> • questions for personal interviews or focus groups • surveys, e.g. print, online or telephone.
<i>Systems</i> may include:	<ul style="list-style-type: none"> • electronic, e.g. databases, spreadsheets and statistical software applications • manual, e.g. card index file.

Co-requisite units	

CUVACD304A Make scale models

Modification History

Version	Comments
CUVACD304A	This version first released with <i>CUV11 Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to make three-dimensional (3-D) physical scale models in response to specifications. It does not cover the use of 3-D digital software which can be found in 'CUFANM303A Create 3D digital models', a unit in CUF07 Screen and Media Training Package.

Application of the Unit

People working in many industries use scale models as part of the design process. Models are required for production design for live theatre and events, as well as film and television productions. More broadly, individuals working with any 3-D form use and make scale models to inform their work.

At this level, models would be relatively straightforward in nature, and be built based on supplied specifications and requirements. Work would be undertaken with some guidance from others.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element

Elements describe the essential outcomes of a unit of competency.

Performance Criteria

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

<p>1. Prepare to make scale models</p>	<p>1.1 Clarify scale model requirements based on relevant <i>documentation, verbal briefs</i> and consultation with <i>relevant people</i></p> <p>1.2 Identify potential challenges and plan work to minimise risk in consultation with relevant personnel</p> <p>1.3 Select <i>techniques</i> for model making consistent with project objectives and <i>parameters</i></p> <p>1.4 Confirm requirements for presenting final <i>scale models</i></p> <p>1.5 Confirm <i>equipment, materials</i> and <i>work space requirements</i></p> <p>1.6 Set up work space and equipment according to <i>safety considerations</i> and organisational procedures</p>
<p>2. Complete model construction</p>	<p>2.1 Safely make preliminary models representing core dimensions in line with specifications</p> <p>2.2 Review preliminary models against objectives and specifications in consultation with others as required</p> <p>2.3 Make adjustments to models as required</p> <p>2.4 Complete models consistent with objectives and other parameters</p> <p>2.5 Present models to relevant colleagues in line with project and organisational requirements</p> <p>2.6 Follow organisational storage and <i>inventory procedures</i></p> <p>2.7 Seek and use feedback from others to improve own skills</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to work with others in the model making process
- initiative and enterprise skills to construct scale models that respond to specifications
- learning skills to improve own skills in constructing scale models
- literacy skills to interpret specifications and briefs for scale models
- numeracy skills to interpret and correctly apply calculations and measurements required for the production of scale models
- planning and organising skills to:
 - plan work tasks in a logical sequence
 - organise resources
- problem-solving skills to identify and resolve common problems in model making
- self-management skills to complete work within agreed timeframes.

Required knowledge

- ways in which model making is used in specific industry contexts
- basic principles of model making, including the physical properties and capabilities of the range of equipment, tools and materials used for model making
- ways in which to present finished scale models
- work space requirements for the production of models, including set-up of work space for particular types of work
- issues and challenges that arise in making scale models
- intellectual property issues and legislation associated with making scale models
- sustainability issues associated with equipment, tools and materials used in scale model making
- OHS procedures for scale model making.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • apply selected techniques to make models consistent with project objectives and parameters • demonstrate knowledge of the processes and techniques used for making scale models • present finished scale models in an appropriate way.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • tools and equipment required to construct scale models.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate constructing models • evaluation of scale models made by the candidate • oral or written questioning to assess knowledge of scale model making techniques • review of portfolios of evidence • review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands and the needs of particular groups (e.g. people with disabilities, and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling.</p>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • BSBDES303A Explore and apply the creative design process to 3D forms.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Documentation may include briefs or specifications with information, such as:</p>	<ul style="list-style-type: none"> • background information about clients • budget • clients’ needs • considerations, such as: <ul style="list-style-type: none"> • contractual • copyright • ethical • legal • creative objectives • diagrams indicating, for example: <ul style="list-style-type: none"> • colours • measurements • scale • style • materials • personnel involved in the project • purpose • relevant statutory requirements, e.g. health and safety considerations • requirements for development or building consent • scope for making adjustments • sponsorship • technical objectives • technology • timeframe • visual representation of scale model.
<p>Relevant people may include:</p>	<ul style="list-style-type: none"> • art department • client • creative director • designer • director • head of department • manager

	<ul style="list-style-type: none"> • mentor • other technical or specialist personnel • producer • production manager • project manager • representative of organisation commissioning the work • supervisor • technical director.
<p><i>Techniques</i> may relate to:</p>	<ul style="list-style-type: none"> • carpentry • ceramics • glasswork • lighting, such as: <ul style="list-style-type: none"> • ambient • laser • spot • modelling with flexible materials • painting and other surface decoration • projection • manufacture of form by: <ul style="list-style-type: none"> • bending • folding • hinging • sculpture • twisting • working with textiles.
<p><i>Scale models</i> may be required for a wide range of work situations, such as:</p>	<ul style="list-style-type: none"> • event design • foyer design • lighting plots • object or product design • open space environment • room, site and stage layouts • set design, such as for: <ul style="list-style-type: none"> • theatre • screen and media productions • visual artworks and projects, such as: <ul style="list-style-type: none"> • ceramic pieces • community installations • performance • public art • sculpture.

<i>Equipment</i> may include:	<ul style="list-style-type: none">• brushes• buckets• clamps and pliers• containers• hand and power tools, such as:<ul style="list-style-type: none">• compressor• drills• saws• sanders• lighting• protective clothing• scrapers• shaping tools, such as:<ul style="list-style-type: none">• carving tools• planers• surfboard blades• spatulas• specialised equipment for ceramic work• specialised equipment for sculpture work• spray gun.
--------------------------------------	---

Materials may include:

- bolts
- cardboard
- charcoal
- clays
- coloured pencils
- crayons
- extenders and binders
- fibreglass
- foamcore
- found objects and materials
- glass
- hooks
- inks
- laminates
- latex
- materials to represent a particular surfaces, such as:
 - earth
 - rock
 - water
- metals, such as:
 - sheet
 - wire
- nails
- natural and synthetic fibres
- paper
- paper pulp
- pastels
- perspex
- polystyrene
- recycled materials
- resins
- rubber
- screws
- solvents and cleaning materials
- specialised metal and wood primers
- string
- tape
- turps
- water and oil-based paints
- waterproof lacquers
- wood and timber products, such as:

	<ul style="list-style-type: none"> • balsa wood • MDF board • wooden skewers.
<p>Work space requirements may include:</p>	<ul style="list-style-type: none"> • drying space • dust extraction • lighting and power requirements • location-specific requirements • process-specific space needs • ventilation • wet and dry areas.
<p>Safety considerations may include:</p>	<ul style="list-style-type: none"> • federal, state and territory legislation, regulations and standards • personal protection • recycling • safe disposal of waste.

<i>Inventory procedures</i> may involve:	<ul style="list-style-type: none">• files, including digital• notes on future use of scale models• product safety labels• spreadsheet documentation• written and visual documentation of manufacturers' instructions.

Visual communication – art, craft and design

CUVACD504A Research and apply light and colour

Modification History

Version	Comments
CUVACD504A	This version first released with <i>CUV11 Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to research light and colour, and to develop own ideas about the use of light and colour for integration into a body of creative work.

Application of the Unit

Visual artists and designers working across art forms and design disciplines have expertise in the use of light and colour. This unit is also relevant to photographers. It may be applied in traditional or digital contexts.

At this level, this expertise would be demonstrated within a body of professional creative work. The practitioner is working independently with access to mentoring and guidance as required.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element

Elements describe the essential outcomes of a unit of competency.

Performance Criteria

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

<p>1. Research light and colour</p>	<p>1.1 Source <i>information and ideas</i> about the use of light and colour in art and design practice</p> <p>1.2 Research the use of light and colour in historical and contemporary contexts</p> <p>1.3 Research the use of light and colour in <i>multidisciplinary and transdisciplinary contexts</i></p>
<p>2. Develop own ideas about light and colour</p>	<p>2.1 Analyse and distil <i>relevant ideas and information</i> from research</p> <p>2.2 Reflect on the <i>application of light and colour</i> in own practice</p> <p>2.3 Develop <i>informed positions</i> about the use of light and colour in own work and the work of others</p> <p>2.4 Examine the ways in which digital technology impacts on the use of light and colour in own practice</p> <p>2.5 Refine ideas through ongoing <i>discussion and debate</i></p>
<p>3. Integrate light and colour into a body of work</p>	<p>3.1 Achieve different effects through manipulation of light and colour in own work</p> <p>3.2 Experiment with different aspects of light and colour</p> <p>3.3 Challenge and adapt uses of light and colour to suit own practice</p> <p>3.4 Show command of the use of light and colour in a <i>body of creative work</i></p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to discuss technical and conceptual aspects of creative works
- critical thinking and analytical skills to:
 - evaluate and make judgements about relationships between light and colour, effects and ideas (within and outside of a visual arts context)
 - make critical evaluations about light and colour
- initiative and enterprise skills to identify and act on opportunities for own practice presented by the use of light and colour
- learning skills to develop and refine own approach to the use of light and colour
- literacy skills to analyse complex and varied information
- problem-solving skills to identify and resolve technical problems with the use of light and colour
- self-management and planning skills to draw together research and experimentation processes for benefit of own work
- technology skills to conduct web-based research

Required knowledge

- historical and contemporary use of light and colour in own area of creative practice
- ways that light and colour are used in other creative disciplines and more broadly in areas of business, science and technology
- commonly used research methodologies for artists
- intellectual property issues and legislation associated with arts practice
- sustainability issues associated with the tools and materials used in the particular area of work
- OHS procedures in relation to area of work

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • develop an individual approach to the use of light and colour in own work • produce a coherent body of professional artwork that shows a command of light and colour • research the use of light and colour, both within and beyond the visual arts context.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • equipment, materials and tools used in the relevant art form.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • evaluation of the use of light and colour within a body of work produced by the candidate • evaluation of processes used by the candidate to explore light and colour • direct observation of work in progress, including exploration of, and experimentation with, techniques • questioning and discussion about candidate's intentions and the work outcome • review of portfolios of evidence • review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands (e.g. literacy) and the needs of particular groups (e.g. people with disabilities, and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling).</p>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • art form specialisation units • graphic design units • photo imaging units.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Information and ideas</i> may come from:</p>	<ul style="list-style-type: none"> • artworks • commercial briefs • critical writing • events • exhibitions • experiences of self or others • films • images • internet • music • objects • other people • performances • presentations • printed texts • technical information.
<p><i>Multidisciplinary and transdisciplinary contexts</i> may include:</p>	<ul style="list-style-type: none"> • across other art forms • business • science • technology.
<p><i>Relevant ideas and information</i> may include:</p>	<ul style="list-style-type: none"> • media • new concepts for work • techniques.
<p><i>Application of light and colour</i> may relate to:</p>	<ul style="list-style-type: none"> • aspects of colour: <ul style="list-style-type: none"> • hue • intensity and saturation • value • brightness • chroma • digital processes • illumination • illusion • reflection • refraction

	<ul style="list-style-type: none"> • shadow • use of colour: <ul style="list-style-type: none"> • additive • complementary colours • contrast • shades • subtractive • tints • tones • unity • visual adaptation.
<p><i>Informed positions</i> may include positions that are:</p>	<ul style="list-style-type: none"> • grounded in appropriate research • informed by own experimentation • result of rational and logical thought • subjected to the analysis of others, such as peer review • supported by relevant information.
<p><i>Discussion and debate</i> may be with:</p>	<ul style="list-style-type: none"> • clients • employers • mentors • other creative practitioners • peers • supervisors.
<p><i>Body of creative work</i> may include:</p>	<ul style="list-style-type: none"> • any art form, including two-dimensional and three-dimensional • design work • models • props • sets • sketches.

Unit Sector(s)

Visual communication – art, craft and design

CUVACD506A Refine 2-D design ideas and processes

Modification History

Version	Comments
CUVACD506A	This version first released with <i>CUVII Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to extend and deepen engagement with two-dimensional (2-D) design ideas and processes for the production of work at a professional level.

Application of the Unit

Designers and artists engage with a wide and potentially complex range of ideas about 2-D design. At this level they are able to then develop and refine their own ideas and responses to the potential of the 2-D form through the production of professional work.

This unit complements units that focus on specialised skills for particular design disciplines or art forms.

Work may be independent or collaborative. It is largely self-directed with guidance and mentoring available as required.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element

Elements describe the essential outcomes of a unit of competency.

Performance Criteria

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Originate ideas for 2-D design	<p>1.1 Generate ideas for design concepts through research, exploration and experimentation</p> <p>1.2 Develop initial design concepts consistent with the intent of the work or <i>specifications</i> of the brief</p> <p>1.3 Evaluate, explore and play with options that best suit the design brief</p> <p>1.4 Refine options and select the approach that best meets design brief requirements</p>
2. Plan design process	<p>2.1 Develop clear plan and schedule for design realisation</p> <p>2.2 Organise and allocate <i>resources</i> to meet required standards, timeframes and budget</p> <p>2.3 Liaise with others involved in design realisation as required</p> <p>2.4 Monitor process to ensure integrity of design is maintained, including challenging own design work</p> <p>2.5 Identify difficulties or problems and take action to rectify</p> <p>2.6 Maintain accurate, relevant and complete documentation</p>
3. Refine and consolidate process	<p>3.1 Develop effective 2-D designs and <i>design processes</i></p> <p>3.2 Develop and document a <i>design language</i> that reflects own style and approach</p> <p>3.3 Identify opportunities for refinement and re-thinking and make adjustments as required</p> <p>3.4 Articulate the design process and the final solution through effective documentation of work</p> <p>3.5 Prepare and present 2-D design solutions to <i>key people</i></p>
4. Maintain expertise	<p>4.1 Apply <i>professional work ethic</i> to design activities</p> <p>4.2 Use feedback from others to improve own skills in design</p> <p>4.3 Stay up-to-date with industry standards and seek opportunities to further develop technical and conceptual skills</p> <p>4.4 Source new ideas and trends through regular review of the work of others</p> <p>4.5 Keep informed about new creative approaches, techniques, materials and equipment for 2-D design</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - work collaboratively in the design process
 - create design documentation
- initiative and enterprise skills to:
 - apply creative thinking techniques to originate ideas and concepts
 - generate a range of ideas and options for visually representing a concept, idea or brief
 - develop 2-D designs that best respond to specifications
- learning skills to:
 - keep informed of new creative approaches, techniques, materials and equipment relevant to 2-D design
 - improve own skills in developing 2-D designs through practice and responding to feedback from others on own work
- literacy skills to interpret specifications and briefs for 2-D design
- numeracy skills to interpret and correctly apply calculations and measurements
- planning and organising skills to independently undertake the design process
- problem-solving skills to take responsibility for creating design solutions for wide-ranging and unpredictable design challenges
- self-management skills to manage own work and adopt a professional work ethic
- technical skills to develop 2-D designs using a range of techniques and approaches appropriate to the brief or idea

Required knowledge

- ways in which 2-D designs are used in the particular area of work
- principles of 2-D design
- physical properties and capabilities of the range of equipment, tools and materials used for 2-D design
- ways to present finished 2-D designs
- work space requirements for the production of 2-D design, including set-up of work space for particular types of 2-D work
- issues and challenges that arise in the context of making 2-D designs
- intellectual property issues and legislation associated with making 2-D designs
- sustainability issues associated with equipment, tools and materials used in 2-D design
- organisational and legislative OHS procedures in relation to design

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • originate concepts for 2-D design that address the brief • develop effective 2-D designs and design processes that meet project requirements and provide creative solutions • apply professional practice to 2-D design work.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • projects, tools, space and equipment required for developing 2-D designs in the relevant area of work.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • practical demonstration of skills using required resources to develop 2-D designs • direct observation of the development of 2-D designs by the candidate • evaluation of 2-D designs produced by the candidate • oral or written questioning to assess knowledge of 2-D design techniques • review of portfolios of evidence • review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands and the needs of particular groups (e.g. people with disabilities, and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling).</p>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Specifications</i> may include:</p>	<ul style="list-style-type: none"> • background information about clients • budget • clients’ needs • creative objectives • considerations, such as: <ul style="list-style-type: none"> • contractual • copyright • ethical • legal • diagrams indicating, for example: <ul style="list-style-type: none"> • colours • measurements • scale • style • materials • personal intent • personnel involved in the project • purpose • relevant statutory requirements, e.g. health and safety considerations • requirements for development or building consent • scope for making adjustments • sponsorship • technical objectives • technology • timeframe • visual representations.
<p><i>Resources</i> may include:</p>	<ul style="list-style-type: none"> • equipment, such as: <ul style="list-style-type: none"> • cutting blades • digital equipment • measuring tools • pens and nibs • range of brushes, including air brushes • receptacles

	<ul style="list-style-type: none"> • rulers • scissors • spatulas • sponges • spray guns • materials, such as: <ul style="list-style-type: none"> • cardboard • charcoal • clays • coloured pencils • crayons • extenders and binders • fibreglass • foamcore • inks • laminates • latex • nails • natural and synthetic fibres • paper • paper pulp • pastels • perspex • polystyrene • resins • rubber • solvents and cleaning materials • specialised metal and wood primers • tape • turps • water and oil-based paints • waterproof lacquers • relevant software • time.
<p><i>Design processes may include:</i></p>	<ul style="list-style-type: none"> • applying elements and principles of design • assessing various materials, equipment and software • developing inspiration boards, storyboards and other draft visuals • identifying, classifying and selecting constraints • manipulating design variables to satisfy the non-negotiable

	constraints and optimising those that are negotiable.
<i>Design language refers to:</i>	<ul style="list-style-type: none"> • overarching scheme or style that guides the design of a complement of products.
<i>Key people</i> may include:	<ul style="list-style-type: none"> • art department • audience • client • creative director • designer • director • manager • mentor • other technical and specialist personnel • producer • production manager • project manager • representative of organisation commissioning the work • supervisor • teacher • technical director.
<i>Professional work ethic</i> may include:	<ul style="list-style-type: none"> • attentive behaviour in creative practice • following organisational and industry storage and inventory procedures • following organisational, industry and legislative OHS procedures • punctuality and reliability • responding appropriately to feedback • working creatively with individual differences.

CUVACD507A Refine 3-D design ideas and processes

Modification History

Version	Comments
CUVACD507A	This version first released with <i>CUV11 Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to extend and deepen engagement with three-dimensional (3-D) design ideas and processes for the production of work at a professional level.

Application of the Unit

Designers and artists engage with a wide and potentially complex range of ideas about 3-D design. At this level they are able to then develop and refine their own ideas and responses to the potential of the 3-D form through the production of professional work.

This unit complements units that focus on specialised skills for particular design disciplines or art forms.

Work may be independent or collaborative. It is largely self-directed with guidance and mentoring available as required.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element

Elements describe the essential outcomes of a unit of competency.

Performance Criteria

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Originate ideas for 3-D design	<p>1.1 Generate ideas for design concepts through research, exploration and experimentation</p> <p>1.2 Develop initial design concepts consistent with the intent of the work or <i>specifications</i> of the brief</p> <p>1.3 Evaluate, explore and play with options and <i>materials</i> that best suit the design brief</p> <p>1.4 Refine options and select the approach that best meets design brief requirements</p>
2. Plan design process	<p>2.1 Develop clear plan and schedule for design realisation</p> <p>2.2 Organise and allocate resources to meet required standards, timeframes and budget</p> <p>2.3 Liaise with others involved in design realisation as required</p> <p>2.4 Monitor process to ensure integrity of design is maintained, including challenging own design work</p> <p>2.5 Identify difficulties or problems and take action to rectify</p> <p>2.6 Maintain accurate, relevant and complete documentation</p>
3. Refine and consolidate process	<p>3.1 Develop effective 3-D designs and <i>design processes</i></p> <p>3.2 Develop and document a <i>design language</i> that reflects own style and approach</p> <p>3.3 Identify opportunities for refinement and re-thinking and make adjustments as required</p> <p>3.4 Articulate the design process and the final solution through effective documentation of work</p> <p>3.5 Prepare and present 3-D design solutions to <i>key people</i></p>
4. Maintain expertise	<p>4.1 Apply <i>professional work ethic</i> to design activities</p> <p>4.2 Use feedback from others to improve own skills in design</p> <p>4.3 Stay up-to-date with industry standards and seek opportunities to further develop technical and conceptual skills</p> <p>4.4 Source new ideas and trends through regular review of the work of others</p> <p>4.5 Keep informed about new creative approaches, techniques, materials and equipment for 3-D design</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - work collaboratively in the design process
 - create design documentation
- initiative and enterprise skills to:
 - apply creative thinking techniques to originate ideas and concepts
 - generate a range of ideas and options for visually representing a concept, idea or brief
 - develop 3-D designs that best respond to specifications
- learning skills to:
 - keep informed of new creative approaches, techniques, materials and equipment relevant to 3-D design
 - improve own skills in developing 3-D designs through practice and responding to feedback from others on own work
- literacy skills to interpret specifications and briefs for 3-D design
- numeracy skills to interpret and correctly apply calculations and measurements
- planning and organising skills to independently undertake the design process
- problem-solving skills to take responsibility for creating design solutions for wide-ranging and unpredictable design challenges
- self-management skills to manage own work and adopt a professional work ethic
- technical skills to develop 3-D designs using a range of techniques and approaches appropriate to the brief or idea

Required knowledge

- ways in which 3-D designs are used in the particular area of work
- principles of 3-D design
- physical properties and capabilities of the range of materials, tools and equipment used for 3-D design
- ways to present finished 3-D designs
- work space requirements for the production of 3-D design, including set-up of work space for particular types of 3-D work
- issues and challenges that arise in the context of making 3-D designs
- intellectual property issues and legislation associated with making 3-D designs
- sustainability issues associated with materials, tools and equipment used in 3-D design
- organisational and legislative OHS procedures in relation to design

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • originate a concept for 3-D design that meet the needs of the brief • develop effective 3-D designs and design processes that meet project requirements and provide creative solutions • apply professional practice to 3-D design work.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • projects, tools, space and equipment required for developing 3-D designs in the relevant area of work.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • practical demonstration of skills using required resources to develop 3-D designs • direct observation of the development of 3-D designs by the candidate • evaluation of 3-D designs produced by the candidate • oral or written questioning to assess knowledge of 3-D design techniques • review of portfolios of evidence • review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands and the needs of particular groups (e.g. people with disabilities, and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling).</p>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Specifications</i> may include:</p>	<ul style="list-style-type: none"> • background information about clients • budget • clients’ needs • creative objectives • considerations, such as: <ul style="list-style-type: none"> • contractual • ethical • legal • diagrams indicating, for example: <ul style="list-style-type: none"> • colours • measurements • scale • style • materials • personal intent • personnel involved in the project • purpose • relevant statutory requirements, e.g. health and safety considerations • requirements for development or building consent • scope for making adjustments • sponsorship • technical objectives • technology • timeframe • visual representations.
<p><i>Materials</i> may include:</p>	<ul style="list-style-type: none"> • clays • drawing and illustration materials, such as pencils, crayons, pastels, inks, charcoal and paints • fasteners, such as nails, screws, hooks and bolts • found objects and materials • glass • lacquers • laminates • latex

	<ul style="list-style-type: none"> • manufactured plastics, such as: <ul style="list-style-type: none"> • fibreglass • polyurethane and polyester resins • sheet plastics • silicones • thermoset and thermoplastic elastomers • materials to represent particular surfaces, such as rock, earth and water • materials for cleaning, priming and finishing, such as: <ul style="list-style-type: none"> • extenders and binders • specialised primers • water and oil-based paints • metals, such as: <ul style="list-style-type: none"> • metal wire • sheet metal • natural and synthetic fibres • paper pulp • plaster products, such as: <ul style="list-style-type: none"> • Forton MG • gypsum cement • pottery plaster and dental plaster • recycled materials • sheet materials, such as: <ul style="list-style-type: none"> • cardboard • foamcore • paper • perspex and other plastic sheet materials • polystyrene • sheet metal • string • tape • waxes, such as: <ul style="list-style-type: none"> • jewellery wax • microcrystalline wax • wood and timber products, such as: <ul style="list-style-type: none"> • balsa wood • MDF board • wooden skewers
<p><i>Design processes</i> may include:</p>	<ul style="list-style-type: none"> • applying elements and principles of design • assessing various materials, equipment and software

	<ul style="list-style-type: none"> • developing inspiration boards, storyboards and other draft visuals • identifying, classifying and selecting constraints • manipulating design variables to satisfy the non-negotiable constraints and optimising those that are negotiable.
<i>Design language refers to:</i>	<ul style="list-style-type: none"> • overarching scheme or style that guides the design of a complement of products.
<i>Key people</i> may include:	<ul style="list-style-type: none"> • art department • audience • client • creative director • designer • director • manager • mentor • other technical and specialist personnel • producer • production manager • project manager • representative of organisation commissioning the work • supervisor • teacher • technical director.
<i>Professional work ethic</i> may include:	<ul style="list-style-type: none"> • attentive behaviour in creative practice • following organisational and industry storage and inventory procedures • following organisational, industry and legislative OHS procedures • punctuality and reliability • responding appropriately to feedback • working creatively with individual differences.

CUVACD512A Work with photomedia in creative practice

Modification History

Version	Comments
CUVACD512A	This version first released with <i>CUVII Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to work with any type of photomedia in professional creative practice.

Application of the Unit

Professional artists and designers working in many media and disciplines engage with photomedia in different ways, depending on the needs of their practice. Photomedia may be used as a vehicle for the creative presentation or documentation of work, or could be a finished work in its own right, either as a whole work or part of a work. It may include still images, film, video, music or interactive content. At this level, the practitioner works independently with mentoring and guidance as required. This unit does not address the specialised skills needed by photo imaging professionals.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element

Elements describe the essential outcomes of a unit of competency.

Performance Criteria

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Explore the potential of photomedia in own work	<p>1.1 Research the potential of <i>photomedia</i> in own work using appropriate <i>sources of information</i></p> <p>1.2 Reference traditional and contemporary approaches to the use of photomedia</p> <p>1.3 Identify relevant <i>technologies</i> and approaches for the development of photomedia projects</p> <p>1.4 Develop ideas for work through investigation, exploration, discussion and review</p>
2. Experiment with photomedia	<p>2.1 Confirm a command of the basic technical features and capabilities of chosen technologies</p> <p>2.2 Explore and experiment with particular features of specific technologies, including the potential of combining technologies for particular purposes</p> <p>2.3 Achieve different effects by extending the capabilities of photomedia technologies</p> <p>2.4 Refine ideas through a process of experimentation</p>
3. Create and present finished photomedia work	<p>3.1 Fulfil work objectives through manipulation of technologies with increasing skill and confidence</p> <p>3.2 Challenge and test technical and conceptual aspects of the work during the development process</p> <p>3.3 Complete technical requirements for integration of photomedia with other media</p> <p>3.4 Finalise images and files using appropriate protocols</p> <p>3.5 Apply safe work practices for chosen photomedia technologies</p>
4. Evaluate work	<p>4.1 Review work in progress in the context of personal, professional and artistic objectives</p> <p>4.2 Identify and respond to <i>opportunities for refinement and re-thinking</i></p> <p>4.3 Evaluate the work process in terms of its <i>efficiency and effectiveness</i></p> <p>4.4 Evaluate finished work in terms of its <i>coherence with the project concept</i>, technical resolution and suitability for the intended purpose</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to discuss abstract and complex ideas with others
- critical thinking skills to:
 - compare contemporary styles and conceptual/aesthetic approaches to photomedia
 - employ reflective questioning to analyse own work
- literacy skills to interpret technical information associated with different technologies
- numeracy skills to work with technical features of photomedia technologies
- problem-solving skills to solve technical and conceptual challenge in photomedia projects
- learning and self-management skills to review own work to inform professional development
- planning and organising skills to organise equipment and work processes
- technology skills to work with advanced features of photomedia technologies

Required knowledge

- range of traditional, current and emerging options for the use of photomedia in the context of creative practice
- traditional and contemporary issues that inform the use of photomedia in creative practice
- intellectual property issues and legislation that affect the use of photomedia
- sustainability issues associated with photomedia materials, tools and equipment
- OHS requirements for working with photomedia

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • produce a coherent body of photomedia work using well-developed conceptual and technical skills • research traditional and contemporary photomedia options for application to own work • apply safe work practices for the technologies being used.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • a range of photomedia technologies as required by the creative work.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of work in progress, including exploration of, and experimentation with, techniques • evaluation of technical proficiency within a body of work produced by the candidate • evaluation of processes used by the candidate to evolve and refine photomedia projects • evaluation of the work documentation • questioning and discussion about candidate's intentions and the work outcome • review of portfolios of evidence • review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands (e.g. literacy) and the needs of particular groups (e.g. people with disabilities, and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling).</p>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Photomedia opportunities may relate to:</p>	<ul style="list-style-type: none"> • documentation of own work • integration in own work • presentation of own work • a complete work or part of a work, including: <ul style="list-style-type: none"> • moving images • still images • time-based art.
<p>Sources of information may include:</p>	<ul style="list-style-type: none"> • critical works • discussions with innovative industry practitioners • electronic or print media • exhibitions • industry associations • internet and podcasts • libraries and archives • lifestyle and contemporary issues magazines • museums • personal observations and experience • technical publications • work of other artists.
<p>Technologies may include:</p>	<ul style="list-style-type: none"> • digital • experimental • traditional.
<p>Opportunities for refinement and re-thinking may relate to:</p>	<ul style="list-style-type: none"> • collaboration • ideas • materials • processes • techniques • workflow.
<p>Efficiency and effectiveness may relate to:</p>	<ul style="list-style-type: none"> • completion on time • completion on budget • positive or negative impact on own health • quality of the work • success in communicating ideas • technical standard of work.

<p><i>Coherence with the project concept</i> may relate to:</p>	<ul style="list-style-type: none">• connections within the work• connections or divergence between initial concept and final product• materials• processes• techniques.

CUVACD601A Extend professional expertise with drawing and other visual representation tools

Modification History

Version	Comments
CUVACD601A	This version first released with <i>CUV11 Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to extend skills with drawing and other forms of visual representation to develop a personal approach or style suited to the individual's professional practice.

Application of the Unit

Creative practitioners working independently apply the skills and knowledge in this unit. They draw on high-level cognitive and creative skills to evolve and refine personalised approaches to visual representation to support their professional practice. This activity is self-directed.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element

Elements describe the essential outcomes of a unit of competency.

Performance Criteria

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

<p>1. Evolve technical skills and other visual representation tools</p>	<p>1.1 Evolve expertise through ongoing experimentation with <i>different tools and media</i></p> <p>1.2 Deepen drawing technique and confidence through practice with tone, layout, perspective, colour and imagery</p> <p>1.3 Evaluate own drawing expertise against <i>professional needs and aspirations</i></p>
<p>2. Refine drawing and representational skills as visual-thinking tools</p>	<p>2.1 Extend drawing as a visual research tool in the development of work</p> <p>2.2 Harmonise <i>research, thinking and analysis</i> through the drawing process</p> <p>2.3 Analyse drawing as visual thinking in own work</p>
<p>3. Develop personalised style to support professional practice</p>	<p>3.1 Develop a <i>personalised style</i> that supports and reflects the unique nature of own work and practice</p> <p>3.2 Evaluate the ways in which drawing contributes to a successful professional practice</p> <p>3.3 Discuss and explore drawing processes and challenges with others</p> <p>3.4 Challenge, adapt and refine own style to meet new and <i>changing contexts for work</i></p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to discuss and explore complex and abstract ideas with others
- critical thinking and analytical skills to analyse the drawing work of others and use drawing as a visual research tool
- initiative and enterprise skills to research and identify opportunities for drawing in own practice
- learning and self-management skills to recognise and use drawing as a professional development tool
- problem-solving skills to adapt and challenge own practice in the light of experience
- technical skills to use an extended range of drawing techniques, materials and tools

Required knowledge

- industry expectations and standards for professional practitioners in relation to visually representing ideas
- techniques and devices to extend expertise in drawing and visual representation
- physical properties and capabilities of a wide range of materials and tools used in drawing
- intellectual property issues and legislation in relation to drawing and visual representation
- OHS issues associated with the tools and materials used for drawing and visual representation

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • develop a personalised style of drawing or visual representation that supports and reflects the individual's professional creative work • extend expertise through ongoing practice with different techniques and media.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • drawing materials, tools and equipment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • evaluation of the processes of drawing and visual representation used by the candidate • evaluation of completed drawings prepared by the candidate and their relationship to completed artwork • questioning and discussion about candidate's intentions and the work outcome • review of portfolios of evidence • review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands (e.g. literacy) and the needs of particular groups (e.g. people with disabilities, and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling).</p>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Different tools and media</i> may include:</p>	<ul style="list-style-type: none"> • black and white media • charcoal • coloured media • conte • digital media • gouache • ink • modelling • paint • pastel, including oil pastel • pencil • watercolour.
<p><i>Professional needs and aspirations</i> may relate to:</p>	<ul style="list-style-type: none"> • own interactions with the drawing process • specific value of drawing to particular areas of professional practice • ways work needs to be presented and promoted.
<p><i>Research, thinking and analysis</i> may involve:</p>	<ul style="list-style-type: none"> • challenging preconceptions • examining own motivations • making connections and associations • questioning assumptions • referencing the work of others.
<p><i>Personalised style</i> is one which:</p>	<ul style="list-style-type: none"> • is based on the outcomes of own research and experimentation • reflects and supports a professional practice in chosen area of work.
<p><i>Changing contexts for work</i> may relate to:</p>	<ul style="list-style-type: none"> • evolving personal ideas • industry trends • market trends • opportunities for work in different industries • tools and technologies.

CUVDES403A Research and apply techniques for the design of wearable objects

Modification History

Version	Comments
CUVDES403A	This version first released with <i>CUV11 Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to research and apply techniques for the design of wearable objects. It involves interpreting work briefs, organising resources, testing ideas, and refining approaches to a range of design challenges. The unit covers the design process to the point of producing prototypes of wearable objects.

Application of the Unit

Individuals who generate design ideas and solutions for wearable objects, such as fashion accessories and clothing, costumes, footwear, millinery and jewellery, apply the skills and knowledge in this unit.

Skills associated with producing the final wearable objects can be found in units related to specific disciplines, e.g. making costumes or jewellery. These units can be found elsewhere in CUV11 Visual Arts, Craft and Design Training Package, or in other Training Packages such as CUF07 Screen and Media or LMT07 Textiles, Clothing and Footwear.

At this level, research, experimentation and ongoing refinement are used to produce a range of design work where an individual is beginning the process of finding an individual style. Work is undertaken independently with supervision and guidance as required.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element

Elements describe the essential outcomes of a unit of competency.

Performance Criteria

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

<p>1. Interpret briefs for the design of wearable objects</p>	<p>1.1 Interpret the <i>specifications</i> of design <i>briefs</i></p> <p>1.2 Take user or client requirements into account when making decisions about designing <i>wearable objects</i></p> <p>1.3 Clarify issues about specifications, <i>parameters and constraints</i> with <i>relevant people</i> as required</p> <p>1.4 Research and evaluate <i>information</i> pertinent to briefs</p>
<p>2. Organise resources</p>	<p>2.1 Identify resources required to develop prototypes of wearable objects, including <i>work space, materials, tools and equipment</i></p> <p>2.2 Prepare and care for resources according to requirements</p> <p>2.3 Follow storage and inventory procedures</p>
<p>3. Test design approaches for wearable objects</p>	<p>3.1 Produce <i>preliminary visual representations</i></p> <p>3.2 Identify possible <i>approaches</i> and establish <i>criteria</i> for selecting final approach</p> <p>3.3 Select appropriate materials, tools and equipment and <i>test</i> approaches and <i>techniques</i></p> <p>3.4 Evaluate testing processes against criteria and select the approach that best meets the requirements of briefs</p> <p>3.5 Critique own work and seek feedback as required</p> <p>3.6 <i>Refine</i> and <i>document the design approach</i> based on testing and evaluation</p>
<p>4. Make prototypes of wearable objects</p>	<p>4.1 Evaluate the need for object fabrication and the scope of work required</p> <p>4.2 Select and organise materials, tools and equipment for fabrication according to design approach</p> <p>4.3 Make the prototype or sample ensuring consistency with design concepts and briefs</p> <p>4.4 Respond positively to feedback and refine work as required</p> <p>4.5 Present prototypes within agreed timeframes</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to engage with others about approaches to the design of wearable objects
- initiative and enterprise skills to experiment with techniques to produce effects that enhance wearable objects
- learning skills to refine and improve a range of techniques
- literacy skills to:
 - interpret design briefs
 - research information to support graphic design work
- numeracy skills to:
 - calculate costs and quantities
 - take measurements
- self-management and planning skills to plan work tasks
- technical skills to evaluate, adapt and integrate a range of techniques into the design and prototyping of wearable objects

Required knowledge

- role of experimentation in the design process
- work and ideas of other designers of wearable objects
- formal elements and principles of design and their application to the design of wearable objects
- techniques, materials, tools and equipment and their application to designing and making wearable objects
- capabilities of different types of equipment used in the manufacture of wearable objects
- common formats and features of briefs relating to the design of wearable objects
- history and theory of design in relation to the design of wearable objects
- intellectual property issues and legislation and their relevance to the design of wearable objects
- sustainability considerations for wearable object design
- OHS requirements relevant to the design of wearable objects

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • test and use a range of approaches and techniques for the design of wearable objects in response to the requirements of a brief • produce a prototype of at least one wearable object • apply knowledge of processes and techniques used to design wearable objects.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • briefs on which to base the design of wearable objects • equipment and tools used to produce prototypes of wearable objects.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of design or prototyping work in progress, including exploration of, and experimentation with, techniques • evaluation of objects designed by the candidate • questioning and discussion about the candidate's intentions and the work outcome • review of visual documentation for wearable objects • review of portfolios of evidence • review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands (e.g. literacy) and the needs of particular groups (e.g. people with disabilities and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling).</p>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • BSBDES401A Generate design solutions • BSBDES402A Interpret and respond to a design brief.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Specifications may refer to:	<ul style="list-style-type: none"> • medium • purpose • style • target group.
Briefs are usually prepared by a commissioning body or organisation and may be:	<ul style="list-style-type: none"> • diagrammatic • verbal • visual • written.
Wearable objects may include:	<ul style="list-style-type: none"> • accessories • costumes • fashion clothing • footwear • jewellery • millinery.
Parameters and constraints may refer to:	<ul style="list-style-type: none"> • budgeting and financing requirements • cost of production • number of items • outlets • timeframes.
Relevant people may include:	<ul style="list-style-type: none"> • clients • colleagues • industry practitioners • managers • mentors • supervisors.
Information may be about:	<ul style="list-style-type: none"> • design standards • health and safety • industry standards • considerations, such as: <ul style="list-style-type: none"> • contractual • copyright • ethical • legal • technology

	<ul style="list-style-type: none"> • material characteristics and capabilities.
<p>Work space needs may include:</p>	<ul style="list-style-type: none"> • dry and wet areas • dust extraction • lighting • process-specific space needs • ventilation.
<p>Materials may include:</p>	<ul style="list-style-type: none"> • acrylic • cardboard • dyes • fabric • felt • fibre • found objects • inks • latex • leather • metal • paints • paper • plastics • pulp • rubber • spun fibre • stones • straw • wire • wood.
<p>Tools and equipment relate to requirements for dressmaking, shoemaking and leatherwork, millinery and jewellery making, and include:</p>	<ul style="list-style-type: none"> • blocks • hand tools • lasts • leather-working tools • metal-working tools • painting and dyeing equipment • sewing machines for fabric and leather • weaving equipment • woodworking tools.
<p>Preliminary visual representations may involve:</p>	<ul style="list-style-type: none"> • computer-aided drawing • mock-up • sketching.
<p>Approaches may include:</p>	<ul style="list-style-type: none"> • aesthetic considerations • choice of medium and materials

	<ul style="list-style-type: none"> • design solutions • parameters of the brief.
<i>Criteria</i> may relate to:	<ul style="list-style-type: none"> • access to materials, tools and equipment required to make objects • access to specialist fabricators • consistency with briefs for wearable objects • ease of manufacture • personal affinity with medium and materials.
Strategies to <i>test</i> techniques may involve:	<ul style="list-style-type: none"> • exploring techniques by making practice pieces, test pieces, mock-ups or samples • testing materials by applying stress tests and colour tests.
<i>Techniques</i> may include:	<ul style="list-style-type: none"> • bottoming • casting • crimping • dying • embellishing • embossing • engraving • etching • finishing • in-seaming • knitting • knotting • lasting • leatherwork • metalwork • millinery stitching • painting • printing • sewing • stitching • stone setting • straw and felt blocking • trimming • weaving.
Process to <i>refine</i> design approach may involve:	<ul style="list-style-type: none"> • adjustment to design and design considerations • adjustment to use the extended capabilities of the techniques.
Process used to <i>document the design approach</i> may involve:	<ul style="list-style-type: none"> • final drawings • illustrations • material samples • models

	<ul style="list-style-type: none">• photographs• specifications for fabrication• written rationale or description.

Design – design process

CUVDIG401A Experiment with techniques to enhance digital images

Modification History

Version	Comments
CUVDIG401A	This version first released with <i>CUVII Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to proactively experiment and innovate with various digital imaging techniques and ideas to develop an individual style or voice.

Application of the Unit

People with a command of digital techniques apply the skills and knowledge outlined in this unit. They could be producing digital images for electronic media or physical output. At this level, work is undertaken independently with supervision and guidance as required.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element

Elements describe the essential outcomes of a unit of competency.

Performance Criteria

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

<p>1. Develop proficiency with a range of digital imaging techniques and media</p>	<p>1.1. Evaluate the potential for new approaches to digital imaging based on capabilities of <i>techniques</i> already used</p> <p>1.2. Adapt or introduce new tools, <i>equipment</i> and <i>materials</i> to achieve different effects</p> <p>1.3. Extend the capabilities of digital imaging techniques through experimentation</p> <p>1.4. Take account of the <i>safety and sustainability considerations</i> for different techniques and media</p>
<p>2. Develop ideas for digital imaging</p>	<p>2.1. Articulate creative and other goals for digital image work</p> <p>2.2. <i>Research</i>, adapt and use relevant <i>ideas</i> and approaches from other practitioners with consideration of <i>intellectual property requirements</i></p> <p>2.3. Apply knowledge of different digital imaging techniques to inform ideas</p> <p>2.4. Allow techniques and ideas to work together to inform each other</p> <p>2.5. Consider the <i>professional potential</i> and <i>other criteria</i> for work when developing ideas</p> <p>2.6. <i>Refine</i> and confirm ideas based on experimentation, research and collaboration with others</p>
<p>3. Organise digital imaging resources</p>	<p>3.1. Assess specific resource requirements for the chosen work</p> <p>3.2. Research and access potential <i>sources of supply</i> for digital imaging resources</p> <p>3.3. Evaluate <i>cost and other constraints</i> that impact on the development of work</p> <p>3.4. Evaluate and respond to <i>presentation considerations</i> for finished digital images</p> <p>3.5. Set up or coordinate resource requirements according to safety and other workplace requirements</p>
<p>4. Create finished digital images</p>	<p>4.1. Create digital images, using techniques and media selected from research and experimentation</p> <p>4.2. Review and refine ideas and approaches based on ongoing experience with the production of work</p> <p>4.3. Use safe and sustainable work practices throughout the production of work</p> <p>4.4. Document and record the development of the work and</p>

	the research and ideas that inform it
5. Evaluate own digital imaging work	<p>5.1. Reflect on own work in terms of conceptual development and technical execution</p> <p>5.2. Identify areas for future improvement especially in terms of own skill development</p> <p>5.3. Discuss completed work with others and respond positively to feedback</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - discuss ideas and techniques in own work
 - create a record of the digital imaging work
- initiative and enterprise skills to:
 - experiment with digital imaging techniques to enhance final digital images
 - apply critical thinking and analytical skills when developing ideas for digital imaging
- learning skills to:
 - refine and improve a range of techniques
 - evaluate quality of own work and identify ways to enhance own practice
- literacy skills to undertake research about the work of other digital imaging artists and arts practitioners
- numeracy skills to:
 - evaluate resource costs
 - calculate material requirements
- planning and organising skills to plan work tasks and resources
- problem-solving skills to identify and resolve technical and conceptual issues in digital imaging work
- technology skills to use the internet as a research tool.

Required knowledge

- role of experimentation in developing and refining ideas for digital imaging and how this relates to the development of an individual style or voice
- ways to adapt, extend and combine the capabilities of a wide range of digital imaging technologies and techniques
- characteristics of different materials under different treatments and the potential of these characteristics to achieve different effects in work
- formal elements and principles of design and how they may be used, adapted and challenged in digital imaging work
- research methodologies used by artists
- historical and theoretical contexts for digital imaging and how they may be used to inform individual practice
- sources of raw, part-processed and processed digital imaging materials
- sources of other resources needed in a professional digital imaging practice
- intellectual property issues and legislation to be considered by independent arts practitioners
- sustainability considerations for the professional operation of a digital imaging practice
- OHS requirements for the set-up and operation of digital imaging work space.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • develop ideas and techniques through a process of research and experimentation • produce a series of digital images or single major work that demonstrates a command of techniques • apply knowledge of digital imaging techniques, equipment and materials and the ways they may be adapted and combined.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • equipment and materials used in digital imaging work.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • evaluation of technical execution of work pieces produced by the candidate • direct observation of digital imaging in progress, including exploration of, and experimentation with, techniques • questioning and discussion about candidate's intentions and the work outcome • review of portfolios of evidence • review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands (e.g. literacy) and the needs of particular groups (e.g. people with disabilities, and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling).</p>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • CUVPRP401A Realise a creative project • ICPPP430C Manage colour.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Techniques</i> may include:</p>	<ul style="list-style-type: none"> • acquiring images: <ul style="list-style-type: none"> • from the internet • through digital photography • through scanning • manipulating images using the full range of features in industry-standard digital imaging software • matching resolution and format of output to reproduction requirements • outputting image as: <ul style="list-style-type: none"> • a print • CD • other storage medium • uploading images to the internet.
<p><i>Equipment</i> may include:</p>	<ul style="list-style-type: none"> • computer • digital camera • digital imaging software • discs and memory cards • guillotine • output devices • scanner.
<p><i>Materials</i> may include:</p>	<ul style="list-style-type: none"> • a range of printing surfaces: <ul style="list-style-type: none"> • papers • acetate • fabrics • hard copy source material, such as: <ul style="list-style-type: none"> • photos • magazine clippings • paintings.
<p><i>Safety and sustainability considerations</i> may include:</p>	<ul style="list-style-type: none"> • federal, state and territory legislation, regulations and standards • personal protection • recycling • safe disposal of waste.

Research may involve:	<ul style="list-style-type: none"> • approaching individuals with relevant expertise • attending lectures and talks • conducting material and technical experiments and tests • seeking out information in books, journals and newspapers • searching the internet • visiting exhibitions and museums.
Ideas may be influenced by:	<ul style="list-style-type: none"> • artistic aspirations • current capability with techniques • historical and theoretical contexts • subject matter or theme for the work, such as: <ul style="list-style-type: none"> • built environment • land and place • natural world • political, cultural and social issues • the body • spiritual concerns.
Intellectual property requirements may relate to:	<ul style="list-style-type: none"> • extent to which the work may be used • form of acknowledgement or credit • procedures for seeking permission to use the work of others, including systems for the administration of copyright • protocols for the adaptation of work by others.
Professional potential may relate to:	<ul style="list-style-type: none"> • cost of production • existence of an established market • how to promote or sell the work • market trends • professional development.
Other criteria may relate to:	<ul style="list-style-type: none"> • client and user expectations • environment in which work will be viewed • materials • quality of final product • techniques • timelines • tools.
Process followed to refine ideas may include:	<ul style="list-style-type: none"> • adjustment to consideration of elements and principles of design • adjustment to subject matter or theme • adjustment to use the extended capabilities of the technique.
Sources of supply may include:	<ul style="list-style-type: none"> • commercial outlets • imaging bureaux

	<ul style="list-style-type: none">• internet• share ware• software resources.
<i>Cost and other constraints</i> may relate to:	<ul style="list-style-type: none">• availability of materials and equipment• budgeting• sponsorship• timeframe.
<i>Presentation considerations</i> may include:	<ul style="list-style-type: none">• availability of space and equipment• cost• practical considerations• presentation context• timeframe.

CUVDIG501A Refine digital art techniques

Modification History

Version	Comments
CUVDIG501A	This version first released with <i>CUVII Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to refine techniques in working with digital media and to develop own digital art style in a body of creative work. This occurs through a process of research, refinement and evaluation.

Application of the Unit

Visual artists and designers whose practice includes the creation of digital media works apply the skills and knowledge in this unit. Work could be completely digital or an integration of digital and traditional media.

At this level, the practitioner has a well-developed command of digital technologies as well as the conceptual and creative skills to create a coherent body of digital work.

Technique refinement is a largely independent activity with mentoring and guidance as required. It would normally include work with several different techniques and technologies as part of the process of developing an individual style. In practice, this process is integrated with the skills described in the unit CUVPRP501A Realise a body of creative work.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element

Elements describe the essential outcomes of a unit of competency.

Performance Criteria

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

<p>1. Research digital media ideas and techniques</p>	<p>1.1. Support professional practice by expanding own knowledge of historical and contemporary digital media practice</p> <p>1.2. Research ways that other artists have used different <i>digital media techniques</i></p> <p>1.3. Investigate how particular digital media techniques work to achieve different <i>technical effects</i></p> <p>1.4. Evaluate the relationships between digital media techniques and ideas</p> <p>1.5. Adapt and use relevant ideas and approaches with consideration of <i>intellectual property requirements</i></p>
<p>2. Select digital media techniques for refinement</p>	<p>2.1. Consider the <i>opportunities</i> offered by different digital media techniques</p> <p>2.2. Determine <i>limitations and constraints</i> of particular techniques</p> <p>2.3. Select digital media techniques for <i>refinement</i></p>
<p>3. Consolidate digital media technique to professional level</p>	<p>3.1. Establish and follow <i>safe work practices</i> for selected techniques</p> <p>3.2. Develop increasing confidence and skill through practice and experimentation</p> <p>3.3. Proactively identify and resolve technical problems in digital media projects based on developing expertise</p> <p>3.4. Challenge and test ideas, and allow new and unpredictable ideas to emerge</p> <p>3.5. Evolve ideas and other professional skills through ongoing experimentation with technique</p> <p>3.6. Develop own ways of working with techniques to create individual style</p> <p>3.7. Create a <i>coherent body of digital media work</i> that shows command of selected digital media techniques</p>
<p>4. Evaluate own digital media technique</p>	<p>4.1. Evaluate development of own technique with others and seek feedback</p> <p>4.2. Seek and participate in conversations that challenge and explore different concepts and approaches</p> <p>4.3. Reflect on the particular ways that experimentation with different techniques has informed own work</p> <p>4.4. Identify <i>ways in which technique may be further</i></p>

	<i>developed</i> as part of a professional practice and build ideas into future work
--	--

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to engage with others about the technical and conceptual aspects of digital media work
- critical thinking and analytical skills to:
 - evaluate and make judgements about relationships between digital media technique, effects and ideas
 - make critical evaluations of own digital media technique
 - make critical evaluations of research findings
- initiative and enterprise skills to identify and act on opportunities for own practice presented by research
- learning skills to develop and refine own skills to a professional practice standard
- literacy skills to analyse complex and varied information about digital media technique
- problem-solving skills to identify and resolve technical problems in digital media work
- self-management and planning skills to create a coherent body of digital media work
- technical skills to show command of chosen digital media techniques at a professional level
- technology skills to use the internet as a research tool.

Required knowledge

- relationship between digital media technique, particular effects and ideas – in the work of other artists and in the context of own practice
- extended range of information sources that support research in digital media practice
- cultural, sociological, philosophical, aesthetic, political and commercial influences on digital media technique, in historical and contemporary contexts
- professional development opportunities for artists seeking to develop a digital media practice
- elements and principles of design and how they may be used, adapted and challenged in the creation of work
- intellectual property issues and legislation associated with digital media as a professional practice
- sustainability issues for the professional operation of a practice that includes digital media
- OHS requirements for the set-up and operation of a professional work space for digital media work.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • evolve and refine digital media technique through a demonstrated process of experimentation • develop individual style in own work • produce a coherent body of professional artwork that includes the use of well-developed digital media technique • research digital media technique in the broader context of other artwork and artists • use safe and sustainable work practices.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • equipment, materials and tools used to produce digital media work.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • evaluation of digital media technique within a body of work produced by the candidate • evaluation of processes used by the candidate to evolve and refine digital media technique • evaluation of the work documentation • direct observation of digital media in progress, including exploration of, and experimentation with, techniques • questioning and discussion about candidate's intentions and the work outcome • review of portfolios of evidence • review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands (e.g. literacy) and the needs of particular groups (e.g. people with disabilities, and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling).</p>
Guidance information	Holistic assessment with other units relevant to the industry

for assessment	sector, workplace and job role is recommended, for example: <ul style="list-style-type: none">• CUVPRP501A Realise a body of creative work.
-----------------------	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Digital media techniques</i> may include:</p>	<ul style="list-style-type: none"> • animation • auterism • camera angles: <ul style="list-style-type: none"> • low • titled • aerial view • camera movement: <ul style="list-style-type: none"> • pan/dolly • tracking • zoom • camera scales: <ul style="list-style-type: none"> • close up • medium shot • long shot • editing in linear and non-linear forms: <ul style="list-style-type: none"> • cross-cutting • cutaway • jump cuts • dissolves • mise-en-scene • montage • sound: <ul style="list-style-type: none"> • direct • ambient • special effects • voice-overs • music score • synthesised • techniques to accommodate different lighting and weather conditions • imaging conventions: <ul style="list-style-type: none"> • composition • tone
--	--

	<ul style="list-style-type: none"> • balance • lighting.
Technical effects may include:	<ul style="list-style-type: none"> • controlling and displaying time • imaging the passage of time • integrating images and other technologies • creating emotive content • making minute things visible to the naked eye • pictorial representation of subjects normally beyond human vision, comprehension or understanding.
Intellectual property requirements may relate to:	<ul style="list-style-type: none"> • copyright • design licensing regulations • form of acknowledgement or credit • moral rights • protocols for the adaptation of work by others • trademarks.
Opportunities may include:	<ul style="list-style-type: none"> • communication of ideas • natural affinity with particular techniques • potential for combining techniques • potential for interactions between technique and media • themes in work.
Limitations and constraints may include:	<ul style="list-style-type: none"> • availability of materials • capacity of technique to deliver required effect • own interaction with technique • resources • time.
Refinement relates to:	<ul style="list-style-type: none"> • ability to use technique with confidence • use of technique in a body of professional work.
Safe work practices may include:	<ul style="list-style-type: none"> • ergonomic safety • use of consumables.
Coherent body of digital media work is:	<ul style="list-style-type: none"> • conceptually resolved • documented in terms of its development • subject to critical feedback by others • technically resolved • thematically connected.
Ways in which technique may be further developed may include:	<ul style="list-style-type: none"> • collaboration • further study • intensive workshops • mentored guidance • new projects.

CUVDRA501A Refine drawing techniques

Modification History

Version	Comments
CUVDRA501A	This version first released with <i>CUVII Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to refine drawing technique and to develop own drawing style in a coherent body of creative work. This occurs through a process of research, refinement and evaluation. This unit relates to drawing as an art form and therefore differs from units that focus on drawing as a visual representation tool.

Application of the Unit

Visual artists whose practice includes drawing apply the skills and knowledge in this unit. Drawings may be presented in a range of media and could be mixed media works. At this level, the practitioner has a well-developed command of drawing techniques as well as the conceptual and creative skills to create a coherent body of work. Technique refinement is a largely independent activity with mentoring and guidance as required. It would normally include work with several different techniques as part of the process of developing an individual style. In practice, this process is integrated with the skills described in the unit CUVPRP501A Realise a body of creative work.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element

Elements describe the essential outcomes of a unit of competency.

Performance Criteria

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Research drawing ideas and techniques	<p>1.1. Support professional practice by expanding own knowledge of historical and contemporary drawing practice</p> <p>1.2. Research ways that other artists have used different <i>drawing techniques</i></p> <p>1.3. Investigate how particular drawing techniques work to achieve different <i>technical effects</i></p> <p>1.4. Evaluate the relationships between drawing techniques and ideas</p> <p>1.5. Adapt and use relevant ideas and approaches with consideration of <i>intellectual property requirements</i></p>
2. Select drawing techniques for refinement	<p>2.1. Consider the <i>opportunities</i> offered by different drawing techniques</p> <p>2.2. Determine <i>limitations and constraints</i> of particular techniques</p> <p>2.3. Select drawing techniques for <i>refinement</i></p>
3. Consolidate drawing technique to professional level	<p>3.1. Establish and follow <i>safe work practices</i> for selected techniques</p> <p>3.2. Develop increasing confidence and skill through practice and experimentation</p> <p>3.3. Proactively identify and resolve <i>technical problems</i> in drawing projects based on developing expertise</p> <p>3.4. Challenge and test ideas, and allow new and unpredictable ideas to emerge</p> <p>3.5. Evolve ideas and other professional skills through ongoing experimentation with technique</p> <p>3.6. Develop own ways of working with techniques to create individual style</p> <p>3.7. Create a <i>coherent body of drawing work</i> that shows command of selected drawing techniques</p>
4. Evaluate own drawing technique	<p>4.1. Evaluate development of own technique with others and seek feedback</p> <p>4.2. Seek and participate in conversations that challenge and explore different concepts and approaches</p> <p>4.3. Reflect on the particular ways that experimentation with different techniques has informed own artwork</p> <p>4.4. Identify <i>ways in which technique may be further developed</i> as part of a professional practice and build ideas</p>

	into future work
--	------------------

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to engage with others about the technical and conceptual aspects of drawing with others
- critical thinking and analytical skills to:
 - evaluate and make judgements about relationships between drawing technique, effects and ideas
 - make critical evaluations of own drawing technique
 - make critical evaluations of research findings
- initiative and enterprise skills to identify and act on opportunities for own practice presented by research
- learning skills to develop and refine own skills to a professional practice standard
- literacy skills to analyse complex and varied information about drawing technique
- problem-solving skills to identify and resolve technical problems in drawing work
- self-management and planning skills to create a coherent body of drawing work
- technical skills to show command of chosen drawing techniques at a professional level
- technology skills to use the internet as a research tool.

Required knowledge

- relationship between drawing technique, particular effects and ideas in the work of other artists and in the context of own practice
- extended range of information sources that support research in drawing practice
- cultural, sociological, philosophical, aesthetic, political and commercial influences on drawing technique, in historical and contemporary contexts
- professional development opportunities for artists seeking to develop a drawing practice
- elements and principles of design and how they may be used, adapted and challenged in the creation of work
- intellectual property issues and legislation associated with drawing as a professional practice
- sustainability issues for the professional operation of a drawing practice
- OHS requirements for the set-up and operation of a professional work space for drawing.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • evolve and refine drawing technique through a demonstrated process of experimentation • develop individual style in own work • produce a coherent body of professional artwork that includes the use of well-developed drawing technique • research drawing technique in the broader context of other artwork and artists • use safe and sustainable work practices.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • equipment, materials and tools used to produce drawing work.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • evaluation of drawing technique within a body of work produced by the candidate • evaluation of processes used by the candidate to evolve and refine drawing technique • evaluation of the work documentation • direct observation of drawing in progress, including exploration of, and experimentation with, techniques • questioning and discussion about candidate's intentions and the work outcome • review of portfolios of evidence • review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands (e.g. literacy) and the needs of particular groups (e.g. people with disabilities, and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling).</p>
Guidance information	Holistic assessment with other units relevant to the industry

for assessment	sector, workplace and job role is recommended, for example: <ul style="list-style-type: none">• CUVPRP501A Realise a body of creative work.
-----------------------	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Drawing techniques</i> may include:</p>	<ul style="list-style-type: none"> • abrasive technique • additive technique • application of pigment • collage or frottage • digital drawing techniques • erasure or subtractive techniques • hatching and cross-hatching • integration of text and drawing • linear marks: <ul style="list-style-type: none"> • of differing character • of differing intensity and character • to produce illusion of form in space • linear perspective • resist techniques • scaling techniques • simple linear perspective • tonal range to produce illusion of form in space • use of positive and negative space.
<p><i>Technical effects</i> may include:</p>	<ul style="list-style-type: none"> • atmosphere • chiaroscuro • illusion • mood • movement • perspective • trompe l'oeil.
<p><i>Intellectual property requirements</i> may relate to:</p>	<ul style="list-style-type: none"> • copyright • design licensing regulations • form of acknowledgement or credit • moral rights • protocols for the adaptation of work by others • trademarks.
<p><i>Opportunities</i> may relate to:</p>	<ul style="list-style-type: none"> • communication of ideas • natural affinity with particular techniques

	<ul style="list-style-type: none"> • potential for combining techniques • potential for interactions between technique and media • themes in work.
Limitations and constraints may relate to:	<ul style="list-style-type: none"> • availability of materials • capacity of technique to deliver required effect • own interaction with technique • resources • time.
Refinement relates to:	<ul style="list-style-type: none"> • ability to use selected techniques with confidence • ongoing demonstration of development of technique • use of selected techniques in a body of professional work.
Safe work practices may include:	<ul style="list-style-type: none"> • completing material safety data sheets (MSDS) • correct disposal of waste materials • dust and fume extraction • ergonomic safety • managing risk • reporting accidents and incidents • use of tools and equipment • using clearly designated wet and dry areas • using personal protective equipment (PPE).
Technical problems may include:	<ul style="list-style-type: none"> • implications of scale and size • limitations of digital technology • limitations of materials.
Coherent body of drawing work is:	<ul style="list-style-type: none"> • conceptually resolved • documented in terms of its development • subject to critical feedback by others • technically resolved • thematically connected.
Ways in which technique may be further developed may include:	<ul style="list-style-type: none"> • collaboration • further study • intensive workshops • mentored guidance • new projects.

Unit Sector(s)

Visual communication – drawing

CUVDRA502A Investigate drawing materials and processes

Modification History

Version	Comments
CUVDRA502A	This version first released with <i>CUVII Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to research and explore selected drawing materials and processes and integrate their use into creative practice. This unit relates to drawing as an art form and therefore differs from units that focus on drawing as a visual representation tool.

Application of the Unit

Artists who create drawing as art apply the skills and knowledge in this unit. Material and process exploration at this level is a largely independent activity with mentoring and guidance as required. It would normally include investigation of a range of materials and processes to develop an individual professional style. In practice, this process is integrated with the skills described in the unit CUVPRP501A Realise a body of creative work.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element

Elements describe the essential outcomes of a unit of competency.

Performance Criteria

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Research drawing materials and processes	<p>1.1. Research the detailed <i>physical properties and capabilities</i> of different <i>drawing materials</i></p> <p>1.2. Investigate the <i>safety issues</i> associated with different materials and processes prior to use</p> <p>1.3. Collate and store safety and technical <i>data</i> to meet safety requirements and inform future practice</p> <p>1.4. Investigate the relationship between materials and <i>drawing processes</i></p> <p>1.5. Explore the relationships between ideas and materials or process</p> <p>1.6. Determine <i>cost and supply parameters</i></p>
2. Select drawing materials and processes for in-depth exploration	<p>2.1. Assess the <i>creative and professional opportunities</i> offered by different drawing materials and processes</p> <p>2.2. Determine <i>limitations and constraints</i> of particular materials and processes</p> <p>2.3. Select particular materials and processes that suit own practice</p>
3. Integrate drawing materials and processes into own work	<p>3.1. Explore <i>different ways of working with materials and processes</i> to achieve desired outcomes</p> <p>3.2. Challenge and stretch the capabilities and uses of different materials and processes through experimentation</p> <p>3.3. Develop <i>own ways of working</i> with materials and processes</p> <p>3.4. Engage in informed discussion with others about the characteristics and opportunities of particular drawing materials and processes</p> <p>3.5. Establish and follow <i>safe work practices</i></p>
4. Manage drawing resources in professional practice	<p>4.1. Establish a <i>sustainable supply</i> of drawing resources</p> <p>4.2. Develop ways of working with resources that minimise waste</p> <p>4.3. Maintain the quality and life of drawing resources through <i>appropriate handling and storage</i></p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to engage in informed discussion around materials, processes and their relationship with ideas
- critical thinking and analytical skills to evaluate and make judgements about relationships between drawing materials, techniques and processes
- initiative and enterprise skills to:
 - develop individual ways of working with materials and processes
 - identify and act on opportunities for own practice presented by different materials and processes
- learning skills to develop and refine own skills to a professional practice standard
- literacy skills to analyse varied and technical information about drawing materials and processes
- problem-solving skills to identify and resolve technical problems in drawing work
- self-management and planning skills to:
 - develop own ways of working with drawing materials and processes
 - research and organise sustainable supply of materials and processes
- technology skills to use the internet as a research tool.

Required knowledge

- ways in which a wide range of drawing materials and processes can be used, adapted, combined and challenged by the professional artist
- physical properties and capabilities of the selected materials and processes
- types of technical and other data that may need to be stored for safety and other reasons
- characteristics of different materials under different treatments and the potential of these characteristics to achieve different effects
- cost and supply parameters for drawing materials and tools in the context of professional practice
- storage requirements and options for different materials
- intellectual property issues and legislation associated with drawing as a professional practice
- sustainability issues for the professional operation of a drawing practice
- OHS requirements for the set-up and operation of a professional work space.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • apply knowledge of drawing materials and processes and how they may be adapted and extended at a professional level • evolve and refine ways of working with materials and processes through a demonstrated process of experimentation • integrate materials and processes into own work in a way that supports coherence of the creative work • demonstrate technical proficiency in the use of selected materials and processes • use safe and sustainable work practices.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • equipment, materials and tools used to produce drawings.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • evaluation of the use of materials and processes in terms of the coherence of the body of work • evaluation of processes used by the candidate to develop new ways of working with drawing materials and processes • evaluation of the work documentation • questioning and discussion about candidate's intentions and the work outcome • review of portfolios of evidence • review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands (e.g. literacy) and the needs of particular groups (e.g. people with disabilities, and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted</p>

	schooling).
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example: <ul style="list-style-type: none">• CUVPRP501A Realise a body of creative work.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Physical properties and capabilities</i> may include:</p>	<ul style="list-style-type: none"> • dryness • flexibility • fluidity • hardness • opacity • permanency • softness • transparency.
<p><i>Drawing materials</i> may include:</p>	<ul style="list-style-type: none"> • blended materials • erasers of different types • fluids • found objects • improvised media • inks • natural materials • paints • pastels and chalks • pigments • protective sprays • solvents • surface materials: <ul style="list-style-type: none"> • board • fabric • glass • metal • paper • perspex • wood • tapes • traditional drawing materials.
<p><i>Safety issues</i> may relate to:</p>	<ul style="list-style-type: none"> • dust and airborne particles • equipment used for drawing • fire

	<ul style="list-style-type: none"> • fumes • manual handling requirements • noise • sharp objects • use and labelling of chemicals • use of equipment with moving parts • work posture.
Data may include:	<ul style="list-style-type: none"> • material safety data sheets (MSDS) • quantity calculations • results of experimentation.
Drawing processes may include:	<ul style="list-style-type: none"> • digital drawing techniques • integration of text and drawing • linear marks: <ul style="list-style-type: none"> • of differing intensity and character • to produce illusion of form in space • linear perspective • scaling techniques • tonal range to produce illusion of form in space • use of positive and negative space.
Cost and supply parameters may relate to:	<ul style="list-style-type: none"> • budgetary restrictions • capacity to share costs with others • continuity of supply • delivery issues • location of suppliers • potential for use of found objects • terms of payment • use of freely available natural materials • use of recycled materials.
Creative and professional opportunities may relate to:	<ul style="list-style-type: none"> • creative potential: <ul style="list-style-type: none"> • communication of ideas • personal affinity with particular materials and processes • potential for combining materials and processes • potential for interactions of different materials and processes • themes in work • professional potential: <ul style="list-style-type: none"> • collaboration • emerging market trends • professional development • saleability.

<p><i>Limitations and constraints</i> may include:</p>	<ul style="list-style-type: none"> • availability of supplies • financial expenditure • safety aspects of process • storage facilities • studio space • timeframe • transportation.
<p><i>Different ways of working with materials and processes</i> may involve:</p>	<ul style="list-style-type: none"> • combining materials and processes in new ways • making samples, prototypes and maquettes • varying established approaches to achieve new effects • working collaboratively with a particular material or process.
<p><i>Own ways of working</i> may include:</p>	<ul style="list-style-type: none"> • approaches that reflect and support individual voice • particular nuances and subtleties unique to the individual artist.
<p><i>Safe work practices</i> may include:</p>	<ul style="list-style-type: none"> • completing MSDS • correct disposal of waste materials • dust and fume extraction • ergonomic safety • managing risk • reporting accidents and incidents • use of tools and equipment • using clearly designated wet and dry areas • using personal protective equipment (PPE).
<p><i>Sustainable supply</i> is:</p>	<ul style="list-style-type: none"> • available when needed • environmentally friendly • of appropriate quality • safe • within budgetary requirements.
<p><i>Appropriate handling and storage</i> may include:</p>	<ul style="list-style-type: none"> • handling damage • insect proofing • light sensitivity • longevity of materials • mould prevention.

CUVGRD301A Prepare files for publication

Modification History

Version	Comments
CUVGRD301A	This version first released with <i>CUVII Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to prepare electronic files for pre-press processing. It applies to files that still require some processing before printing or electronic distribution.

Application of the Unit

People working in any industry apply the skills and knowledge outlined in this unit. They may work as individuals providing administrative support in an enterprise, or may be technical or knowledge experts responsible for preparing their own files for publication as either hard or soft copy documents.

At this level, work would be undertaken independently but within established parameters. Supervision or guidance is available as required.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element

Elements describe the essential outcomes of a unit of competency.

Performance Criteria

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Clarify formatting requirements	<p>1.1. Review documentation that provides information on printing <i>requirements</i> and the <i>end use</i> for text and image files</p> <p>1.2. Plan work to comply with <i>pre-press</i> requirements in consultation with <i>relevant people</i></p> <p>1.3. Take account of the requirements for different <i>publication processes</i> when planning work and selecting <i>software</i></p>
2. Prepare text for pre-press processing	<p>2.1. Save text in appropriate <i>format</i></p> <p>2.2. Review text to remove extraneous or unnecessary formatting</p> <p>2.3. Apply templates and styles as required</p>
3. Prepare graphics for pre-press processing	<p>3.1. Ensure scans are completed at appropriate <i>resolution</i></p> <p>3.2. Use appropriate scanning curve</p> <p>3.3. Save colour in required format</p> <p>3.4. Undertake basic <i>manipulation</i> of digital images as required</p> <p>3.5. Ensure that combined images can be edited and adjusted</p> <p>3.6. Check that all templates and styles have been applied correctly</p> <p>3.7. Save final graphic images in appropriate format</p>
4. Finalise work	<p>4.1. Evaluate final files for visual impact, effectiveness and fitness for purpose</p> <p>4.2. Use feedback from others to improve own skills in preparing files for publication</p> <p>4.3. Submit files to relevant personnel as required</p> <p>4.4. Make back-up copies of files in line with organisational procedures</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to clarify written and verbal instructions
- initiative and enterprise skills to make adjustments to the layout and look of text and image files to produce the optimum visual outcome
- learning skills to improve own skills from feedback
- literacy skills to interpret information and material related to preparing files for publication
- numeracy skills to calculate document layout requirements
- planning and organising skills to plan work tasks in a logical sequence
- self-management skills to prioritise work tasks and complete work within agreed timeframes
- problem-solving skills to use processes flexibly and interchangeably
- technology skills to:
 - proficiently use common page layout software applications
 - proficiently use a scanner to reproduce photo images to specification
 - use digital imaging software for basic manipulation of digital images
 - manage files using standard naming conventions.

Required knowledge

- design issues related to different hard copy and electronic publishing processes
- file formats for various outputs
- basic colour theory in relation to preparing files for pre-press
- basic typographic theory in relation to preparing files for pre-press
- elements and principles of design
- intellectual property issues and legislation associated with pre-press preparation
- sustainability considerations for equipment, tools and materials associated with pre-press processing work
- OHS procedures in relation to preparation for pre-press processing work, including ergonomics.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • prepare text and graphic files that meet required output specifications for at least two hard copy and two soft copy jobs • apply knowledge of current pre-press techniques and technologies.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • industry-standard page layout and digital imaging software.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate undertaking pre-press processing work • evaluation of files prepared by the candidate • discussion and questioning about candidate's intentions and the work outcome • review of portfolios of evidence • review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands (e.g. literacy) and the needs of particular groups (e.g. people with disabilities and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling).</p>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • BSBITU309A Produce desktop published documents • CUFDIG303A Produce and prepare photo images • CUVGRD302A Use typography techniques.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Requirements may relate to:	<ul style="list-style-type: none"> • file formats: <ul style="list-style-type: none"> • images • text • file size • image resolution.
End use of text and images may be for:	<ul style="list-style-type: none"> • annual reports • book covers • corporate presentations • corporate stationery • electronic distribution, including as attachments: <ul style="list-style-type: none"> • to electronic communications • for download from websites • invitations • posters.
Pre-press includes:	<ul style="list-style-type: none"> • pre-press section of a printing company • pre-press trade houses or bureaus.
Relevant people may include:	<ul style="list-style-type: none"> • client • designer • graphic artist • manager • online production personnel • other specialist creative and administrative staff • supervisor.
Publication processes may include:	<ul style="list-style-type: none"> • any hard copy printing process • electronic platforms: <ul style="list-style-type: none"> • CD • DVD • games console • internet • kiosk • mobile phone • other video playback devices • personal digital assistant (PDA)

	<ul style="list-style-type: none"> • video players (iPods).
Software may include:	<ul style="list-style-type: none"> • computer-aided design and drafting (CADD) • digital imaging: <ul style="list-style-type: none"> • Adobe Photoshop • Corel Paint Shop Pro • layout and page description applications • word processing applications.
Format may relate to:	<ul style="list-style-type: none"> • colour: <ul style="list-style-type: none"> • CMYK • RGB • image files: <ul style="list-style-type: none"> • GIF • JPEG • PICT • PNG • PSD • TIFF • text files: <ul style="list-style-type: none"> • PDF • file outputs from word processing applications.
Resolution may be:	<ul style="list-style-type: none"> • high • low, e.g. for position only (FPO) • medium.
Manipulation may relate to:	<ul style="list-style-type: none"> • appending text/type for files and captions • brushing • creating artistic effects • cropping • eliminating red eye • emulating photographic effects • image enhancement, including: <ul style="list-style-type: none"> • tones • contrast • colour • cast or tint • saturation • masking layers • retouching • sharpening.

CUVJWL401A Experiment with techniques to produce jewellery

Modification History

Version	Comments
CUVJWL401A	This version first released with <i>CUVII Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to proactively experiment and innovate with various jewellery-making techniques and ideas to develop an individual style or voice.

Application of the Unit

People with a command of jewellery-making techniques apply the skills and knowledge in this unit. They often produce work at a pre-professional level for sale in a range of outlets, such as markets and fairs.

At this level, work is undertaken independently with supervision and guidance as required.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element

Elements describe the essential outcomes of a unit of competency.

Performance Criteria

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

<p>1. Develop proficiency with a range of jewellery-making techniques and media</p>	<p>1.1. Evaluate the potential for new approaches to jewellery making based on capabilities of <i>techniques</i> already used</p> <p>1.2. Adapt or introduce new <i>tools, equipment</i> and <i>materials</i> to achieve different effects</p> <p>1.3. <i>Extend</i> the capabilities of jewellery-making techniques through experimentation</p> <p>1.4. Take account of the <i>safety and sustainability considerations</i> for different techniques and media</p>
<p>2. Develop ideas for jewellery</p>	<p>2.1. Articulate creative and other goals for jewellery work</p> <p>2.2. <i>Research</i>, adapt and use relevant <i>ideas</i> and approaches from other practitioners with consideration of <i>intellectual property requirements</i></p> <p>2.3. Apply knowledge of different jewellery-making techniques to inform ideas</p> <p>2.4. Allow techniques and ideas to work together to inform each other</p> <p>2.5. Consider the <i>professional potential</i> and other <i>criteria</i> for work when developing ideas</p> <p>2.6. <i>Refine</i> and confirm ideas based on experimentation, research and collaboration with others</p>
<p>3. Organise jewellery-making resources</p>	<p>3.1. Assess specific resource requirements for the chosen work</p> <p>3.2. Research and access potential <i>sources of supply</i> for jewellery-making resources</p> <p>3.3. Evaluate <i>cost and other constraints</i> that impact on the development of work</p> <p>3.4. Evaluate and respond to <i>presentation considerations</i> for finished jewellery</p> <p>3.5. Set up or coordinate resource requirements according to safety and other workplace requirements</p>
<p>4. Create finished jewellery</p>	<p>4.1. Create jewellery, using techniques and media selected from research and experimentation</p> <p>4.2. Review and refine ideas and approaches based on ongoing experience with the production of work</p> <p>4.3. Use safe and sustainable work practices throughout the production of jewellery</p> <p>4.4. Document and record the development of the work and</p>

	the research and ideas that inform it
5. Evaluate own jewellery work	<p>5.1. Reflect on own work in terms of conceptual development and technical execution</p> <p>5.2. Identify areas for future improvement especially in terms of own skill development</p> <p>5.3. Discuss completed work with others and respond positively to feedback</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - discuss ideas and techniques in own work
 - create a record of the jewellery work
- initiative and enterprise skills to:
 - experiment with techniques to enhance final jewellery
 - apply critical thinking and analytical skills when developing ideas for jewellery
- learning skills to:
 - refine and improve a range of techniques
 - evaluate quality of own work and identify ways to enhance own practice
- literacy skills to undertake research about the work of other jewellery makers and other arts practitioners
- numeracy skills to:
 - evaluate resource costs
 - calculate material requirements
- planning and organising skills to plan work tasks and resources
- problem-solving skills to identify and resolve technical and conceptual issues in jewellery-making work
- technology skills to use the internet as a research tool.

Required knowledge

- role of experimentation in developing and refining ideas for jewellery making and how this relates to the development of an individual style or voice
- ways to adapt, extend and combine the capabilities of a wide range of jewellery-making materials and techniques
- physical properties and capabilities of an extended range of materials and tools used in jewellery making
- characteristics of different materials under different treatments and the potential of these characteristics to achieve different effects
- formal elements and principles of design and how they may be used, adapted and challenged in jewellery-making work
- research methodologies used by artists
- historical and theoretical contexts for jewellery making and how they may be used to inform individual practice
- sources of raw, part-processed and processed jewellery-making materials
- sources of other resources needed in a professional jewellery-making practice
- intellectual property issues and legislation to be considered by independent arts practitioners
- sustainability considerations for the professional operation of a jewellery-making practice
- OHS requirements for the set-up and operation of jewellery-making work space.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • develop ideas and techniques through a process of research and experimentation • produce multiple finished jewellery items or a single major work that demonstrate a command of techniques • apply knowledge of jewellery-making techniques, equipment and materials and the ways they may be adapted and combined • use safe and sustainable work practices.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • equipment, materials and tools used to produce jewellery.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • evaluation of technical execution of work pieces produced by the candidate • direct observation of jewellery making in progress, including exploration of, and experimentation with, techniques • questioning and discussion about candidate's intentions and the work outcome • review of portfolios of evidence • review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands (e.g. literacy) and the needs of particular groups (e.g. people with disabilities, and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling).</p>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • CUVPRP401A Realise a creative project.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Techniques</i> may include:</p>	<ul style="list-style-type: none"> • anodising • binding • casting • champlévé • cloisonné • embossing • enamelling • engraving • etching • fabrication • forging • fusion • granulation • grinding • lathe work • mould making • patination • plique-a-jour • polishing and finishing • pressing and forming • reticulation • soldering • stone setting • a combination of techniques.
<p><i>Tools and equipment</i> may include:</p>	<ul style="list-style-type: none"> • guillotine • hand drill and drill bits • hand tools: <ul style="list-style-type: none"> • brushes • burr • centre punch • clamps • files • hammers

	<ul style="list-style-type: none"> • knives • mallets • piercing saw and range of blades • pliers • scissors • scriber • snips • tongs • tweezers • jewellery bench • measuring devices • measuring tools • modelling tools and sets • needles • power tools, such as sander • protective clothing • specialised items for: <ul style="list-style-type: none"> • embossing • engraving • gluing • piercing • silversmithing • soldering • welding.
<p><i>Materials</i> may include:</p>	<ul style="list-style-type: none"> • fabricated materials: <ul style="list-style-type: none"> • das • fabrics • fibres • fimo • metal objects • papier-mâché • plastic • twine • found objects • gem stones • metals: <ul style="list-style-type: none"> • brass • copper • gilding metal • pewter

	<ul style="list-style-type: none"> • silver • natural objects: <ul style="list-style-type: none"> • bones • clay • feathers • palm fronds • seeds • shells • twigs • vines • wood.
Extending capabilities through experimentation involve:	<ul style="list-style-type: none"> • exploring the full potential of the art form • innovation.
Safety and sustainability considerations may include:	<ul style="list-style-type: none"> • federal, state and territory legislation, regulations and standards • personal protection • recycling • safe disposal of waste.
Research may involve:	<ul style="list-style-type: none"> • approaching individuals with relevant expertise • attending lectures and talks • conducting material and technical experiments and tests • seeking out information in books, journals, newspapers • searching the internet • visiting exhibitions and museums.
Ideas may be influenced by:	<ul style="list-style-type: none"> • artistic aspirations • current capability with techniques • historical and theoretical contexts • subject matter or theme for the work, such as: <ul style="list-style-type: none"> • built environment • land and place • natural world • political, cultural and social issues • the body • spiritual concerns.
Intellectual property requirements may relate to:	<ul style="list-style-type: none"> • extent to which the work may be used • form of acknowledgement or credit • procedures for seeking permission to use the work of others, including systems for the administration of

	<ul style="list-style-type: none"> copyright • protocols for the adaptation of work by others.
<i>Professional potential</i> may relate to:	<ul style="list-style-type: none"> • cost of production • existence of an established market • how to promote or sell the work • market trends • professional development.
<i>Criteria</i> may relate to:	<ul style="list-style-type: none"> • client and user expectations • duration • environment in which textile work will be viewed • materials • quality of final product • techniques • timelines • tools.
Process followed to <i>refine</i> ideas may include:	<ul style="list-style-type: none"> • adjustment to take account of elements and principles of design • adjustment to subject matter or theme • adjustment to use extended capabilities of the technique.
<i>Sources of supply</i> may include:	<ul style="list-style-type: none"> • commercial outlets • found objects and materials • manufacturing or factory waste • nature.
<i>Cost and other constraints</i> may relate to:	<ul style="list-style-type: none"> • availability of materials and tools • budgeting • sponsorship • timeframe.
<i>Presentation considerations</i> may include:	<ul style="list-style-type: none"> • availability of space • cost • practical considerations • presentation context • timeframe.

CUVPHI302A Capture photographic images

Modification History

Version	Comments
CUVPHI302A	This version first released with <i>CUVII Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to apply a range of techniques to capture images using a standard digital stills camera.

Application of the Unit

This unit describes many of the foundation skills needed by those planning a career in photo imaging, but also applies in contexts where photography may not be the primary job role or main focus of work activity. For example, in the creative sectors a visual artist uses these skills to document the progress of work. In the events industry, an event coordinator might need to take photographs of potential venues or site layouts. Image styles may be technical, photojournalistic or illustrative. Further skills needed by professional photographers are covered in the unit CUVPHI401A Capture images in response to a brief.

At this level, work would be undertaken independently but within established parameters. Supervision or guidance is available as required.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element

Elements describe the essential outcomes of a unit of competency.

Performance Criteria

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Prepare to capture digital images	<p>1.1. Discuss photographic project with <i>relevant people</i> and select appropriate camera and <i>accessories</i></p> <p>1.2. Assess <i>digital camera features</i> to ensure that outcomes meet project requirements</p> <p>1.3. Plan shots for the project taking into account digital camera features, <i>lighting, photographic design elements and photographic techniques</i></p>
2. Preview and experiment with image capture	<p>2.1. Operate digital camera according to manufacturer specifications</p> <p>2.2. Set digital camera preferences and use photographic techniques to achieve desired results</p> <p>2.3. Adjust planned shots as required and experiment with different ways of achieving desired results</p>
3. Review images	<p>3.1. Download digital images or scan developed film images using appropriate <i>digital imaging software</i> where appropriate</p> <p>3.2. Rotate, cull, <i>sort</i> and rename images to meet requirements</p> <p>3.3. Apply <i>metadata</i> and key words to images as required</p> <p>3.4. Back up and archive as required</p> <p>3.5. Seek feedback from others on quality of original captures and note areas for future improvement</p>
4. Enhance images	<p>4.1. <i>Enhance</i> images using digital imaging software</p> <p>4.2. Evaluate outcome against project requirements and confirm with relevant people as required</p> <p>4.3. Seek feedback from others on quality of enhanced images and note areas for future improvement</p>
5. Finalise image capture process	<p>5.1. Catalogue as required, ensuring extraction and embedding of all necessary metadata as required</p> <p>5.2. Complete workplace <i>documentation</i> as required</p> <p>5.3. Clean and store equipment and accessories according to workplace procedures</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication and literacy skills to:
 - interpret and clarify written and verbal instructions
 - follow instructions in equipment operation manuals
 - interpret technical charts or diagrams associated with standard cameras
- critical thinking skills to evaluate a range of information in order to assess and respond to the requirements of a photo imaging project
- problem-solving skills to:
 - resolve minor equipment set-up problems
 - identify and correct image issues when enhancing
- self-management skills to:
 - work within requirements of a project
 - seek expert assistance when required
- technical skills to proficiently use:
 - a digital camera to create well-composed photo images
 - software and other equipment to enhance photo images.

Required knowledge

- basic photographic techniques
- features of standard digital cameras
- cleaning and maintenance techniques for cameras and accessories
- key photo imaging industry terminology
- pixel count (megapixels) and how this relates to resolution and output size of the final image
- elements and principles of design for photo images
- manuals, safety and other documentation relevant to image capture and storage requirements and locations
- OHS procedures in relation to photo imaging work, cameras and computers.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> capture photo images that meet the quality and look requirements for a range of projects use a wide range of features of a standard digital stills camera.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> materials, resources and equipment needed to capture digital photographic images.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> practical demonstration of skills using a camera to capture images for specific purposes evaluation of images captured by the candidate oral or written questioning to assess knowledge of camera techniques and features discussion and/or written report of the nominated techniques applied to selected subject matter review of portfolios of evidence review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands (e.g. literacy) and the needs of particular groups (e.g. people with disabilities and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling).</p>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Relevant people</i> may include:</p>	<ul style="list-style-type: none"> • clients • colleagues • managers • mentors • other specialised creative staff • people being photographed • supervisors • teachers.
<p><i>Accessories</i> may include:</p>	<ul style="list-style-type: none"> • batteries • computer and monitor, including laptop computer • computer cables and hub • extension leads • filters • lens hoods • light reflectors • light absorbers • monopod • memory storage devices: <ul style="list-style-type: none"> • flash drive • external hard drive • memory card • range of lenses • tripod.
<p><i>Digital camera features</i> may include:</p>	<ul style="list-style-type: none"> • aperture: minimum and maximum values • battery: type, size, voltage and output power • colour, target and working space • compatibility of hardware with digital imaging software • exposure compensation • file format and compression/quality if relevant • flash, such as: <ul style="list-style-type: none"> • fill flash • flash compensation • on-off

	<ul style="list-style-type: none">• red-eye reduction• second or rear curtain sync• slow-sync• focussing options:<ul style="list-style-type: none">• auto• facial recognition• focus points• manual• ISO: auto, manual, film speed and push/pull processing• lens focal length:<ul style="list-style-type: none">• close-up/macro• telephoto• wide angle• memory storage device: type, capacity and read/write speed• menu functions• metering options:<ul style="list-style-type: none">• centre weighted• matrix• spot• operating modes:<ul style="list-style-type: none">• aperture priority• automatic (green square)• manual• program• shutter priority• resolution: megapixels and compression/quality if relevant• scene modes:<ul style="list-style-type: none">• backlight• beach• fireworks• macro• night• snow• sunset• shutter speed: minimum and maximum values• subject modes:<ul style="list-style-type: none">• portrait• landscape• sports
--	---

	<ul style="list-style-type: none"> • macro • viewfinder diopter adjustment values • white balance: <ul style="list-style-type: none"> • auto (AWB) • Kelvin value • sunlight • shade • tungsten • zoom: <ul style="list-style-type: none"> • range • maximum aperture at extremities of focal length.
<p>Lighting may be:</p>	<ul style="list-style-type: none"> • ambient • axis lighting • backlit • daylight • diffused • direct • directional-diffused • front lit • moonlight • natural light • on-camera flash • open shade • raking • reflected or bounced • rim light • side lighting • silhouetting • top or overhead lighting • under lighting • window light.
<p>Photographic design elements may relate to:</p>	<ul style="list-style-type: none"> • balance • colour relationships: <ul style="list-style-type: none"> • accent on neutral • similar • complementary • monochromatic • tetrad • triad • composition:

	<ul style="list-style-type: none"> • rule of thirds • golden mean • fallow edges (margins) • contrast: increased or decreased • emphasis and de-emphasis, e.g. depth of field • eye tracking • framing: <ul style="list-style-type: none"> • angle of view • field of view • point of view • leading lines • line, curve, shape and form • positive and negative space • perspective • proportion • repetition • scale • subject separation: <ul style="list-style-type: none"> • by colour • by focus • by tone • symmetry and asymmetry • unity.
<p>Photographic techniques may be:</p>	<ul style="list-style-type: none"> • activating auto focus • setting depth of field: <ul style="list-style-type: none"> • minimum and maximum hyperfocal points • relationship formula between focal length, distance from subject and aperture • metering for exposure: <ul style="list-style-type: none"> • contrast evaluation • grey card • incident • reflected • spot • using focus lock and pefocus • controlling perspective with focal length: <ul style="list-style-type: none"> • flattened • normal • steepened • working with moving subjects and motion:

	<ul style="list-style-type: none"> • freezing movement with high shutter speed • freezing movement with flash • implying movement with second or rear curtain flash sync • panning a moving subject • implying movement with slow shutter speeds • capturing a time exposure sequence.
Digital imaging software may include:	<ul style="list-style-type: none"> • wide range of programs, such as: <ul style="list-style-type: none"> • Adobe Photoshop • Adobe Photoshop Elements • Adobe Photoshop Lightroom • Apple Aperture • Corel Paint Shop Pro • Corel PhotoPaint • GNU Image Manipulation Program (GIMP and GIMPshop).
Sort may include:	<ul style="list-style-type: none"> • auto sort by metadata • drag into an order • flag • group like images together • label • rate • stack.
Metadata may include:	<ul style="list-style-type: none"> • copyright notice • copyright status • creator • date of capture/date created • description • international standards: <ul style="list-style-type: none"> • EXIF • IPTC • PLUS • headline or caption • job or identifier number • key words or tags • geotagging and GPS coordinates • rights usage and terms • subject • title • version.

<i>Enhance</i> may include:	<ul style="list-style-type: none"> • straightening: horizon or a known horizontal or vertical line • correcting perspective, such as converging verticals • cropping to discard surplus data • setting most common resolution, without resampling • specifying tonal range • allocating contrast • compensating for colour cast or tint • boosting vibrance, saturation and chroma • basic spotting: <ul style="list-style-type: none"> • dust marks • remove red eye.
<i>Documentation</i> may be:	<ul style="list-style-type: none"> • digital: <ul style="list-style-type: none"> • catalogue • diagrams and plans • database • spreadsheets • hard copy: <ul style="list-style-type: none"> • visual diary • data sheets with notes • diagrams and plans • sketches.

Visual communication – photo imaging

CUVPHI403A Apply photo imaging lighting techniques

Modification History

Version	Comments
CUVPHI403A	This version first released with <i>CUV11 Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to select and apply lighting to a range of subjects in different work spaces.

Testing and tagging of electrical equipment must be carried out by a person with the relevant certificate of competency according to the performance specifications of Australian Standard 3760: 2000 In-service safety inspection and testing of electrical equipment and Australian Standard 3002: 1985 Electrical installations – shows and carnivals.

Application of the Unit

Photographers apply the skills and knowledge described in this unit. On large photo shoots, this role could be assigned to a photographer's assistant. Photo shoots could be for the fashion industry, marketing and promotional activities, live entertainment events, as well as for film and television productions. Artists who use photography as a medium also apply these skills and knowledge.

At this level, work may be independent or supervised depending on the work context.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element

Elements describe the essential outcomes of a unit of competency.

Performance Criteria

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Set up lighting for photo shoot	<p>1.1. Confirm lighting characteristics required for <i>subjects</i> in consultation with <i>relevant personnel</i> as required</p> <p>1.2. Select <i>lighting equipment and accessories</i> that best fit the purpose of images</p> <p>1.3. Determine <i>work environment needs</i></p> <p>1.4. Select appropriate <i>camera system and accessories</i></p> <p>1.5. Correctly assemble camera and lighting systems according to work requirements</p> <p>1.6. Undertake work with due regard to <i>safety considerations</i></p> <p>1.7. Use equipment and <i>materials</i> in a manner that minimises waste</p>
2. Light subjects	<p>2.1. Position models and props as required</p> <p>2.2. Test lighting <i>techniques</i> to determine their fitness for purpose</p> <p>2.3. <i>Adjust</i>, modify and calibrate camera settings to meet lighting requirements</p> <p>2.4. Work collaboratively with others when required to meet timelines associated with photo shoots</p>
3. Complete and review shoot	<p>3.1. Capture images using appropriate camera features</p> <p>3.2. Review images against work requirements and adjust lighting as required</p> <p>3.3. Document work process as required</p>
4. Complete post-shoot activities	<p>4.1. Safely clean and restore work environment to its original state</p> <p>4.2. Clean and maintain equipment according to manufacturer instructions</p> <p>4.3. Report damage to equipment according to organisational procedures</p> <p>4.4. Safely transport and store equipment and materials and ensure readiness for future use</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to interpret written instructions, safety labels and procedures
- numeracy skills to interpret technical charts and diagrams about lighting
- planning and organising skills to assemble and test lighting equipment in a logical sequence
- self-management skills to comply with OHS requirements and work to project parameters
- technical skills to:
 - assemble and disassemble lighting equipment for photo shoots
 - use different types of light-measuring devices.

Required knowledge

- electromagnetic spectrum as it impacts on photo imaging practice
- colour temperature and colour synthesis in photo imaging practice
- ways in which light-sensitive materials, including films and digital sensors, respond to light
- effect of light on exposure of light-sensitive media
- physical properties and capabilities of camera systems and lighting equipment used in the exposure of photographic film and digital sensors
- elements and principles of design and their application to photographic lighting
- theoretical and historical contexts of lighting for photo imaging and a range of other art forms
- work, ideas and techniques of other photographers, especially with regard to lighting
- issues and challenges that arise in the context of lighting photo shoots
- sustainability considerations for photo imaging practice
- OHS issues and procedures associated with lighting.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> select appropriate camera and lighting equipment and accessories for range of different subjects in different physical environments apply appropriate lighting techniques to a range of different subjects in different physical environments.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> materials, resources and equipment needed to select, set up, adjust and apply camera and lighting systems.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct observation of the candidate setting up lighting equipment for a photo shoot and applying lighting techniques evaluation of lighting in images where the candidate was responsible for lighting review of case studies to assess knowledge of how to apply lighting techniques in a range of situations written or oral questioning to test knowledge as listed in the required knowledge section of this unit review of portfolios of evidence review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands (e.g. literacy) and the needs of particular groups (e.g. people with disabilities and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling).</p>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> CUVPH401A Capture images in response to a brief.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Subjects</i> may include people or objects photographed for purposes, such as:</p>	<ul style="list-style-type: none"> • photo-documentary: <ul style="list-style-type: none"> • the built environment • the natural environment • portraiture: <ul style="list-style-type: none"> • formal • candid • scientific • medical • technical • still life.
<p><i>Relevant personnel</i> may include:</p>	<ul style="list-style-type: none"> • supervisor • manager • client • art director • designer: <ul style="list-style-type: none"> • set designer • costume designer • production designer • director • production manager • make-up and hair personnel • model.

CUVPRP403A Select and organise finished work for storage

Modification History

Version	Comments
CUVPRP403A	This version first released with <i>CUV11 Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to select finished creative work for storage, to assess storage needs, and to protect and maintain work in storage.

Application of the Unit

People working in all areas of arts practice apply the skills and knowledge described in this unit. They could be responsible for selecting and organising the storage of finished works in their own practice, at an artist-run studio, or in a gallery, exhibition space or educational institution.

At this level, they would be expected to exercise autonomy and judgement in a range of situations and contexts.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Assess finished works for storage	1.1 Determine <i>criteria</i> for selecting finished works to be stored 1.2 Select works for storage based on criteria 1.3 Assess <i>storage needs</i> of selected works, taking into account their condition and nature
2. Organise storage of finished works	2.1 Identify and select appropriate <i>protective materials</i> and conditions for storage 2.2 Ensure that correct <i>procedures</i> are followed to prepare works for storage 2.3 Ensure that works are safely stored in allocated or selected storage spaces
3. Maintain stored works	3.1 Maintain accurate and complete <i>records</i> of stored finished work 3.2 Protect confidential information and adhere to copyright requirements in the storage of records 3.3 Monitor and review condition of work in storage according to its specific requirements 3.4 Make adjustments to storage arrangements as required

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- initiative and enterprise skills to develop storage solutions that best address the characteristics of finished works
- literacy skills to:
 - interpret information related to protecting, storing and maintaining finished creative work
 - keep accurate records of stored works
- planning and organising skills to ensure that finished work is prepared and stored according to correct procedures
- problem-solving skills to anticipate issues that affect the storage of finished works
- self-management skills to prioritise and plan work

Required knowledge

- archival principles and values
- security issues associated with storing works
- physical properties and capabilities of a range of materials suitable for protecting and storing work in the relevant area of creative practice
- record-keeping systems appropriate for storage and retrieval
- intellectual property issues for the storage and maintenance of stored work
- sustainability issues associated with equipment, tools and materials required for the protection and storage of finished works in the relevant context
- OHS procedures in relation to storage and maintenance of finished work

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • select works for storage according to agreed criteria • organise the safe storage of finished work • demonstrate knowledge of archival principles and values in the maintenance of stored work.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • areas suitable for the storage of finished work.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of candidate organising the storage of finished works • evaluation of items prepared for storage by the candidate • review of records created or maintained by the candidate • discussion and questioning about the care and protection of finished works and the record-keeping system used • review of portfolios of evidence • review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands (e.g. literacy) and the needs of particular groups (e.g. people with disabilities, and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling).</p>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Criteria may include:</p>	<ul style="list-style-type: none"> • archival values • available space • client requirements • personal affinity to pieces of work • potential of works to be used as exemplars • potential future use for works • public interest in works • quality of works • quantity and size of works.
<p>Storage needs may involve:</p>	<ul style="list-style-type: none"> • consideration of factors related to: <ul style="list-style-type: none"> • archival values • dampness • dust • electromagnetic fields • fading • fungi • humidity • insects • light • light-sensitive characteristics of images • deciding on best form of storage, given the condition of a specific work • simple repairs prior to storage, e.g. to mounted materials • stabilising any damage to prevent deterioration in storage.
<p>Protective materials may include:</p>	<ul style="list-style-type: none"> • archival materials • CD cases • characteristics of the materials used in the work, such as: <ul style="list-style-type: none"> • acid free wrapping or mount board • water absorbent • reflective • enclosures • folders • form of the artwork: <ul style="list-style-type: none"> • upright

	<ul style="list-style-type: none"> • flat • negative sleeves • materials designed to protect fragile objects: <ul style="list-style-type: none"> • padding • tissues • bubble wrap • box framing.
<p><i>Procedures</i> may include:</p>	<ul style="list-style-type: none"> • protocols for recording and registering stored work, including ethical considerations • use of protective materials • verbal instructions • workplace procedures: <ul style="list-style-type: none"> • safety • security • process-specific procedures • recycling • cost control • reporting.
<p><i>Records</i> may include:</p>	<ul style="list-style-type: none"> • electronic records, e.g. image archiving software • labelling of work: <ul style="list-style-type: none"> • medium • number • title • year produced • list of stored finished works • model release • permits, contracts containing conditional usage requirements • register of all stored and finished works, e.g. date and usage of photographic material • slide library.

CUVPRP405A Develop and discuss ideas for own creative work

Modification History

Version	Comments
CUVPRP405A	This version first released with <i>CUV11 Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to develop and discuss ideas for creative work.

The unit includes research and analysis, as well as the ability to participate in critical and informed discussion with others about creative work

Application of the Unit

People working across all areas of creative practice apply the skills and knowledge described in this unit. The ability to research, generate and discuss ideas is an integral part of the creative process, and sits alongside the technical skills specific to particular art forms.

This work would usually be carried out under mentored supervision.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Research ideas	<p>1.1 Identify and source information that supports the development of ideas for creative work</p> <p>1.2 Critically analyse information in the context of current and potential work</p>
2. Generate ideas	<p>2.1 Develop a range of different, innovative and creative ideas based on the nature of own creative practice</p> <p>2.2 Reflect on and integrate ideas generated from research</p> <p>2.3 Consider possible constraints on ideas</p> <p>2.4 Select ideas based on research, reflection and relevant constraints</p>
3. Discuss ideas with others	<p>3.1 Identify and seek out people who can provide valuable input to discussions about work ideas</p> <p>3.2 Evaluate different communication options and select the most appropriate</p> <p>3.3 Present key information on ideas and their process of development</p> <p>3.4 Use effective communication techniques to generate discussion, debate and critical analysis of ideas</p>
4. Adjust and refine ideas	<p>3.5 Reflect on the views and contributions of others</p> <p>3.6 Make own analysis of ideas based on individual aspirations and goals</p> <p>3.7 Refine ideas based on own analysis and interactions with others</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to engage in informed discussion about potentially abstract ideas
- critical thinking skills to evaluate, distil and select ideas from research
- learning skills to learn from discussion with others
- literacy skills to interpret a wide range of source materials for the development of ideas

Required knowledge

- historical and contemporary references in chosen area of practice
- different ways to communicate and collaborate in creative practice
- intellectual property issues and legislation that affect the development of ideas for creative work in the relevant context

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • generate ideas for creative work grounded in research and reflection • engage in informed discussion about ideas in own work • apply knowledge of historical and contemporary references in own area of creative work.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • interaction with others about ideas for work.
Method of assessment	<p>Assessment may incorporate a range of methods to assess performance and the application of essential underpinning knowledge, and might include:</p> <ul style="list-style-type: none"> • evaluation of presentation by the candidate • questioning about research and development processes • review of portfolios of evidence • review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands (e.g. literacy) and the needs of particular groups (e.g. people with disabilities and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling).</p>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • CUVPRP401A Realise a creative project.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Information may include:</p>	<ul style="list-style-type: none"> • direct observation of the natural or built environment • music, film and video • myths and legends • oral history • photographs and other artworks • promotional material • range of texts and text types • technical reports and data.
<p>Way to critically analyse information may involve:</p>	<ul style="list-style-type: none"> • considering how ideas may be adapted and challenged within work • drawing links between references and own work • making judgements about relevance of information and ideas.
<p>Constraints may include:</p>	<ul style="list-style-type: none"> • audience • availability of materials, tools and equipment • budgeting • own skills • presentation venue/context • sponsorship • timeframe.
<p>People may include:</p>	<ul style="list-style-type: none"> • critics and writers • mentors • other creative practitioners • peer groups • supervisors • teachers.
<p>Communication options may include:</p>	<ul style="list-style-type: none"> • blog • informal discussions • electronic forums • oral presentation • visual presentation • written presentation • wiki.

CUVPRP501A Realise a body of creative work

Modification History

Version	Comments
CUVPRP501A	This version first released with <i>CUV11 Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to realise a coherent body of creative work. Practitioners integrate conceptual, technical and organisational skills to create work in their chosen creative form.

Application of the Unit

Creative practitioners at the beginning of their professional practice apply the skills and knowledge in this unit. They have a well-developed command of materials, process and technique. Completed work conveys strong conceptual and theoretical development.

This unit reflects the integrated creative process that is so important to artistic practice. It may be applied to any creative form and, in practice, is combined with other discipline-specific units that address specialised technical skills.

At this level, work is undertaken independently with mentoring and guidance as required.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Develop ideas for a coherent body of work	<p>1.1 Establish and explore a <i>developing range of sources</i> to inform new ideas</p> <p>1.2 Support professional practice by extending knowledge of historical and contemporary references</p> <p>1.3 Evaluate developing ideas and options for creative work using <i>critical and creative thinking approaches</i></p> <p>1.4 <i>Consider the professional potential of ideas</i></p> <p>1.5 Where appropriate, refine personal thinking through consultation with <i>relevant people</i></p> <p>1.6 Develop ideas or designs based on research, reflection and suitability for the intended purpose</p>
2. Plan and organise the production of work	<p>2.1 Confirm the <i>scope and objectives of the work</i> based on the project concept</p> <p>2.2 Evaluate and organise financial, physical and other resources based on in-depth knowledge of the creative form</p> <p>2.3 Set up or gain access to an appropriate work space</p> <p>2.4 Develop a <i>realistic timeframe</i> for the production of work</p> <p>2.5 Evaluate and respond to <i>project constraints</i></p> <p>2.6 Monitor project workflow against the plan</p>
3. Develop own approach to documenting the body of work	<p>3.1 Evaluate <i>options for documenting and recording work</i> and the ideas and research that inform it</p> <p>3.2 Consider <i>information for inclusion</i> and the need to reveal the process of work</p> <p>3.3 Select and develop own approach and presentation style</p> <p>3.4 Document production of work from initial ideas to realisation</p>
4. Collaborate with others	<p>4.1 Seek and be open to critical analysis of own work by others</p> <p>4.2 Participate <i>critically and knowledgably</i> in conversations that explore different ways of doing things</p> <p>4.3 Explore and experiment with ideas that come from collaboration</p>
5. Create finished work	<p>5.1 Use safe work practices to manipulate selected materials, processes and technologies with increasing confidence and skill</p> <p>5.2 Challenge and test technical and conceptual aspects of the work during production</p> <p>5.3 Finish work to professional standard</p>

6. Evaluate own artwork	6.1 Review work in progress against personal, professional and artistic objectives 6.2 Identify and respond to <i>opportunities for refinement and re-thinking</i> 6.3 Evaluate <i>efficiency and effectiveness</i> of the work process 6.4 Evaluate finished work in terms of its <i>coherence with the project concept</i> , technical resolution and suitability for the intended purpose
-------------------------	---

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - collaborate with others as part of the creative process
 - discuss abstract ideas with others
 - create a professional documentation of work
- critical thinking and analytical skills to:
 - evaluate, distil and select ideas for application to own work
 - evaluate own work in terms of its coherence
- initiative and enterprise skills to develop ideas and create work that responds to creative and professional objectives
- learning skills to:
 - receive and integrate constructive criticism from others
 - engage in an ongoing process of skills development
- literacy skills to:
 - interpret information dealing with complex or abstract ideas
 - document work in ways that communicate processes and ideas
- numeracy skills to manage project costs
- problem-solving skills to creatively resolve conceptual and technical issues that arise within the work
- self-management and planning skills to plan and coordinate a creative project from initial concept to realisation
- technical skills to apply, adapt and refine specialised skills relevant to the particular creative form

Required knowledge

- relationship between technique, materials and process in the relevant creative form
- cultural, sociological, philosophical, aesthetic, political and commercial influences on chosen area of work, in historical and contemporary contexts
- critical and creative thinking techniques and how they work in the context of creative practice
- professional opportunities in the relevant area of creative practice
- typical problems that occur during the production of a body of creative work, and how to avoid or resolve them
- commonly used research methodologies for creative practitioners
- current and emerging practice for documenting work in a creative context
- basic project management techniques, particularly in relation to work planning, time management and resource management
- intellectual property issues and legislation associated with professional creative practice

- sustainability issues associated with the tools and materials used in the chosen creative form
- organisational and legislative OHS procedures in relation to chosen creative form

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • create a coherent body of creative work that is technically and conceptually resolved, is consistent with the project concept, and is finished to a professional standard • consider the professional potential for proposed work • document the work creatively from initial idea to realisation • evaluate and discuss work in an informed way • use safe and sustainable work practices.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • appropriate resources for the production of work, including work space, tools, equipment and materials • studio and workshop facilities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • evaluation of a body of work produced by the candidate • evaluation of processes used by the candidate to conceive, plan and realise the work • direct observation of work in progress • group peer review of the work • evaluation of a candidate's visual diary or other forms of documentation showing the development of the work • questioning and discussion about candidate's intentions and the work outcome • review of portfolios of evidence • review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands (e.g. literacy) and the needs of particular groups (e.g. people with disabilities, and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling).</p>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p>

	<ul style="list-style-type: none">• specialisation units for any creative form.
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>A developing range of sources</i> provides access to:</p>	<ul style="list-style-type: none"> • ideas that challenge own work to date • in-depth exploration of ideas already touched on • previously unexplored ideas • uses of new techniques, materials or processes • ideas that challenge own beliefs.
<p><i>Sources</i> may include:</p>	<ul style="list-style-type: none"> • art critics • art history texts • artworks • cultural theorists • design ideas • exhibitions • films • galleries • images • internet • journal articles • museums • myths and legends • objects • oral history • own experience • performances • presentations • philosophers • social commentators • technical or medium-specific information • writings.
<p><i>Critical and creative thinking approaches</i> may include:</p>	<ul style="list-style-type: none"> • blog or wiki • brainstorming • daydreaming and mental wandering • discussion • Edward de Bono's Six Thinking Hats • graphic organisers: <ul style="list-style-type: none"> • concept fans • visual maps

	<ul style="list-style-type: none"> • webbing • lateral thinking games • making associations • mind mapping • morphological analysis • sketching • social networking • storytelling • sub-culture surfing • trigger words • use of metaphors and analogies • vision circles • visualisation • wishful thinking • word salads.
Professional potential may relate to:	<ul style="list-style-type: none"> • collaboration • market trends • professional development • saleability.
Relevant people may include:	<ul style="list-style-type: none"> • employers • mentors • other creative practitioners • peers • potential customers • teachers.
Scope and objectives of the work may relate to:	<ul style="list-style-type: none"> • brief for the work • competition criteria • creative criteria • ideas to be communicated • number of items to be produced • potential to exhibit and sell • self-development potential • time for creation.
Realistic timeframe takes account of:	<ul style="list-style-type: none"> • availability of materials • client needs • complexity of the work • other commitments • potential for external factors to impact • sponsor requirements.
Project constraints may include:	<ul style="list-style-type: none"> • availability of outsourced production or assistance • budget

	<ul style="list-style-type: none"> • client preferences • potential for burn-out • public safety • safety requirements • saleability • technical skills and knowledge • time.
<p><i>Options for documenting and recording work</i> may include:</p>	<ul style="list-style-type: none"> • blog or wiki • digital presentations • maquettes • notes and other written text • online forum • photographic record • physical portfolio • practice pieces • verbal presentation • visual diary.
<p><i>Information for inclusion</i> may include:</p>	<ul style="list-style-type: none"> • challenges encountered • intellectual property considerations • development of techniques • early ideas • external references and sources • input from others • refinement processes for ideas and techniques • use of materials and processes • work log, including time and expenses.
<p><i>Critically and knowledgably</i> may include:</p>	<ul style="list-style-type: none"> • familiarity with the work of others • knowledge of materials, process and technique • substantiated ideas and positions.
<p><i>Opportunities for refinement and re-thinking</i> may relate to:</p>	<ul style="list-style-type: none"> • collaboration • ideas • materials • market demand • processes • techniques • workflow.
<p><i>Efficiency and effectiveness</i> may relate to:</p>	<ul style="list-style-type: none"> • aesthetic or functional quality of the work • completion on budget • completion on time • positive or negative impact on own health • success in communicating ideas

	<ul style="list-style-type: none">• technical standard of work.
<i>Coherence with the project concept</i> may relate to:	<ul style="list-style-type: none">• connection of ideas within the work• connections or divergence in process between initial concept and final product• materials• processes• techniques.

Industry capability – professional practice

CUVPRP502A Prepare for sustainable professional practice

Modification History

Version	Comments
CUVPRP502A	This version first released with <i>CUV11 Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to establish professional practice goals and to determine how practice can be developed in a sustainable way. A sustainable practice is one that takes account of all aspects of sustainability – individual, social, environmental and economic.

Application of the Unit

Professional practitioners across all sectors and areas of expertise must consider the sustainability of their practice.

At this level, an individual is beginning the journey of establishing a professional practice. This is a largely self-directed activity, but may involve some mentoring and guidance as required.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Develop own practice goals</p>	<p>1.1 Reflect on professional <i>goals and aspirations</i> in the context of chosen area of practice</p> <p>1.2 Identify and make contact with <i>key people</i> to support individual reflection</p> <p>1.3 Evaluate <i>factors that affect contemporary practice</i> in chosen area, including specific opportunities</p> <p>1.4 <i>Question</i> self and others about future directions for practice</p> <p>1.5 Look for opportunities and ideas <i>beyond the obvious</i></p> <p>1.6 Develop goals that take account of <i>individual personal circumstances</i></p> <p>1.7 Make decisions about overall practice direction, based on reflection and research</p>
<p>2. Identify key sustainability issues</p>	<p>2.1 Identify and investigate the <i>key components of sustainable professional practice</i> in chosen area of work</p> <p>2.2 Evaluate current practice and determine <i>opportunities to enhance sustainability</i></p> <p>2.3 Research and collate <i>information</i> to support future professional practice</p>
<p>3. Take action to develop sustainable individual practice</p>	<p>3.1 Develop practical and innovative strategies to enhance sustainability of practice</p> <p>3.2 Develop and nurture own professional networks</p> <p>3.3 Engage in sustainable work practices in all areas of activity</p> <p>3.4 Recognise and integrate the idea of lifelong learning into practice</p> <p>3.5 Engage in ongoing <i>collaboration</i> with peers and others</p> <p>3.6 Challenge and refine own ideas and strategies for developing professional practice</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to collaborate with others on practice development issues
- critical thinking and analytical skills to reflect on complex issues and make judgements and decisions about those issues
- initiative and enterprise skills to develop new ideas for developing sustainable practice
- learning and self-management skills to engage in and commit to an ongoing process of professional development and lifelong learning
- literacy skills to interpret varied information dealing with complex issues from a range of sources
- numeracy skills to investigate issues around financial viability of own practice
- planning and organising skills to develop and action strategies for overall practice development
- problem-solving skills to adjust to constraints and limitations
- technology skills to use the internet as a research tool

Required knowledge

- professional context for a given area of practice in terms of opportunities and constraints
- tools, techniques and strategies used by practitioners to build sustainable practice
- professional opportunities in own area of practice, across other areas of related practice and across the business and community more generally
- intellectual property issues and legislation and how they impact on the operation of a professional practice
- key aspects of individual, social, economic, environmental sustainability, and how they impact on a particular area of practice

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • develop realistic goals for own practice grounded in research and reflection • develop a set of actions to enhance the sustainability of individual practice • apply knowledge of key aspects of individual, social, economic and environmental sustainability.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • industry networks and information.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • evaluation of presentation or documentation prepared by the candidate detailing goals and plans to achieve a sustainable practice • questioning and discussion about candidate's professional plans • participation in discussions with the candidate and others about sustainable practice in a given area • review of portfolios of evidence • review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands (e.g. literacy) and the needs of particular groups (e.g. people with disabilities, and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling).</p>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Goals and aspirations</i> may relate to:</p>	<ul style="list-style-type: none"> • creative impulse • desire for collaboration • exhibition or performance ambitions • employment within public or private organisations • income • lifestyle • locations for work • professional credibility • professional networks • self-employment • status.
<p><i>Key people</i> may include:</p>	<ul style="list-style-type: none"> • community Elders • family members • mentors • peers • potential customers • potential employers • professional associations • recruitment agencies • teachers.
<p><i>Factors that affect contemporary practice</i> may be:</p>	<ul style="list-style-type: none"> • buying trends • current concerns in the community • economic • ideological • impacts of technology on practice • lifestyle trends • location of practice • political climate • social issues.
<p><i>Questions</i> may be:</p>	<ul style="list-style-type: none"> • am I good enough? • does my family life support my aspirations? • how do other creative practitioners do this? • how much money do I need? • how quickly do I want to achieve it? • what are the opportunities in my local market?

	<ul style="list-style-type: none"> • what do I need to learn now and over time? • what do I want to achieve? • who do I need to talk to?
<p>Opportunities <i>beyond the obvious</i> may include opportunities:</p>	<ul style="list-style-type: none"> • across disciplines and genres • in community service or health contexts • in industries across the full spectrum of the economy • involving collaboration with professionals in different sectors • using new and emerging materials and technologies.
<p><i>Individual personal circumstances</i> may relate to:</p>	<ul style="list-style-type: none"> • availability of time for developing practice • ability to further develop skills • family obligations • financial needs • geography and location • health • lifestyle objectives • scope of existing skills • work / life balance.
<p><i>Key components of sustainable professional practice</i> are:</p>	<ul style="list-style-type: none"> • economic: <ul style="list-style-type: none"> • financially viable • job opportunities • sound financial management • environmental: <ul style="list-style-type: none"> • effective use of physical resources • minimisation of waste • protection of the physical environment • use of alternative materials and processes • human: <ul style="list-style-type: none"> • lifelong learning • own professional development • personal health and nutrition • safety of self • stress management • social: <ul style="list-style-type: none"> • acknowledgment of the intellectual property of others • legal activity • community engagement • safety of others • social responsibility, such as taxation.
<p><i>Opportunities to enhance sustainability</i></p>	<ul style="list-style-type: none"> • additional safety measures in work space • adopting new technology as a habit

may include:	<ul style="list-style-type: none"> • applying for grants • applying for employment with arts organisations • establishing new networks • greater collaboration with others • further study and skill development • identifying philanthropic opportunities • improved nutrition • improved marketing and promotion • effective financial management systems • seeking assistance from experts • setting up shared studio space.
<i>Information</i> may include:	<ul style="list-style-type: none"> • business planning advice • ideas, self-generated or from others • industry publications • marketing advice • promotional ideas • taxation information • training opportunities.
<i>Collaboration</i> may involve:	<ul style="list-style-type: none"> • engaging in professional networks • participating in a community of practice • sharing ideas and information • working on joint projects.

CUVPRP503A Present a body of own creative work

Modification History

Version	Comments
CUVPRP503A	This version first released with <i>CUV11 Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to use creative, technical and project management skills to develop a professional and innovative presentation of own creative work. It is based on the unit CUVPHI520A Produce an innovative presentation of professional work.

Application of the Unit

All creative practitioners need to produce, present and continually update a professional presentation package or portfolio of their own creative work. The presentation may be physical or virtual.

Work is undertaken independently with mentoring and guidance as required.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Evaluate and select presentation options	<p>1.1 Research <i>presentation options</i> using appropriate <i>sources of information</i></p> <p>1.2 Explore ideas and options for presenting work in <i>new and innovative ways</i>, including those from other disciplines</p> <p>1.3 Identify and consult with <i>relevant people</i> when developing presentation options</p> <p>1.4 Select presentation methodologies based on <i>intended purpose</i> and <i>other parameters</i></p>
2. Plan presentation of work	<p>2.1 Use <i>critical thinking techniques</i> to develop an overall presentation concept</p> <p>2.2 Explore and refine how the presentation concept will impart explicit and implicit messages to its audience</p> <p>2.3 Develop realistic production budget, timeline and workflow plan</p> <p>2.4 Design a <i>template</i> for the presentation that supports key messages to be communicated</p>
3. Create presentation	<p>3.1 Select and integrate <i>content</i> that supports presentation objectives</p> <p>3.2 Obtain and accurately record copyright clearance on all sourced content</p> <p>3.3 Develop a cohesive presentation that supports objectives</p> <p>3.4 Review projected and actual budget outcomes</p>
4. Review and update presentation	<p>4.1 Evaluate presentation in the context of its objectives and feedback from others</p> <p>4.2 Proactively identify opportunities to update and refine presentation</p> <p>4.3 Develop systems to identify and respond to future presentation opportunities</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to impart key messages about own creative work to the intended audience
- critical thinking and analytical skills to analyse and evaluate different options for presentation of work, including current and emerging professional trends
- initiative and enterprise skills to identify and act on new ideas for presenting work
- learning and self-management skills to keep up-to-date with emerging and innovative practice in professional presentation of work
- literacy skills to create a coherent presentation of work
- planning and organising skills to:
 - manage the workflow for the production of a portfolio of work (research, concept development, production and post-production)
 - organise resources required for the portfolio
- problem-solving skills to develop solutions for conceptual and technical challenges
- numeracy skills to estimate costs for presentation production
- technology skills to use digital media, design and presentation technologies appropriate to the creative work being presented

Required knowledge

- typical and innovative ways in which portfolios of work are used by creative practitioners
- visual communication formats relevant to the presentation of creative work
- current and emerging trends in presentation technologies relevant to the particular area of work (including design, layout, typography, interactivity and accessibility)
- elements and principles of design as they apply to the creation of a professional presentation of work
- intellectual property issues and legislation and how they relate to the use of information in a professional presentation

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • research industry-standard presentation methodologies • design and realise presentation concepts • present creative products in a manner suited to the intended audience and purpose.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • appropriate technology and sources of information to research industry-standard presentation methodologies • industry-standard presentation packages and technology.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • evaluation of a presentation or portfolio created by the candidate • direct observation of candidate presenting creative products • evaluation of problem-solving activities to assess candidate's critical thinking skills • review of portfolios of evidence • review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands (e.g. literacy) and the needs of particular groups (e.g. people with disabilities, and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling).</p>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Presentation options</i> may include:</p>	<ul style="list-style-type: none"> • bound books and folios • brochures • catalogues • digital media presentations, including websites • exhibitions of work in a variety of display spaces • product demonstration • product sample cases • promotional folders • printed images, bound in book form or in folios.
<p><i>Sources of information</i> may include:</p>	<ul style="list-style-type: none"> • books • discussions with industry practitioners • events • government bodies • industry associations • internet • libraries and archives • journals • media • personal observations and experience • professional development sources: <ul style="list-style-type: none"> • awards • competitions • conferences • exhibitions • master classes • suppliers of products and services • technical publications.
<p><i>New and innovative ways</i> may include:</p>	<ul style="list-style-type: none"> • interactivity • media not used before • new distribution mechanisms • storytelling or other interpretive techniques.
<p><i>Relevant people</i> may include:</p>	<ul style="list-style-type: none"> • members of relevant professional associations • mentors and peers • practising artists and designers

	<ul style="list-style-type: none"> • presentation experts • teachers.
<i>Intended purpose</i> may be:	<ul style="list-style-type: none"> • application submission: <ul style="list-style-type: none"> • association membership • grant/commission • industry accreditation • artistic • commercial • educational • entertainment • job interview • marketing/promotion • promotional give-away to prospective clients.
<i>Other parameters</i> may relate to:	<ul style="list-style-type: none"> • budgetary constraints • competition rules • environmental sustainability • grant application requirements • longevity requirements • requirements of a brief • time constraints • viewing locations • viewing requirements.
<i>Critical thinking techniques</i> may include:	<ul style="list-style-type: none"> • analysing and evaluating actions and policies • clarifying issues, values and standards • comparing similar situations • comparing and contrasting ideals with practice • comparing and evaluating beliefs, interpretations and theories • developing criteria for evaluation • distinguishing relevant from irrelevant facts • examining and evaluating assumptions • exploring implications and consequences • generating and assessing solutions • making interdisciplinary connections • making plausible inferences and predictions • noting significant similarities and differences • reading and listening critically • recognising contradictions • transferring insights to new contexts • using critical vocabulary.
<i>Template</i> may include:	<ul style="list-style-type: none"> • chapter and section headings • colour scheme

	<ul style="list-style-type: none">• outline script• image specifications• layout and design• thematic connections• typography to be used.
<i>Content</i> may include:	<ul style="list-style-type: none">• audio, video and DVD sequences• drawings• illustrations• maquettes and other three-dimensional (3-D) forms• paintings• photo images.

Industry capability – professional practice

CUVPRP601A Originate a body of independent creative work

Modification History

Version	Comments
CUVPRPR601A	This version first released with <i>CUV11 Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to independently conceive, plan and realise a coherent body of creative work at a professional level.

Application of the Unit

Creative practitioners at this level have a capacity for independent thought and self-direction that allows them to conceive, plan and realise a body of work of a professional standard. They engage with peers and industry networks in ways that develop and confirm their place as arts professionals. Their command of materials, process and technique is highly developed. This unit may be applied to any creative form.

This unit lies at the heart of artistic practice and reflects processes of experimentation, refinement and maturation at both a conceptual and technical level.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Evolve conceptual thinking	<p>1.1 Identify the potential for <i>individualised or specialised research</i> based on current practice</p> <p>1.2 Investigate <i>new sources and research opportunities</i></p> <p>1.3 Reflect on own practice to evolve personal ideas</p> <p>1.4 Challenge assumptions, preconceptions and norms to stretch the boundaries of own thinking</p> <p>1.5 Use <i>critical analysis</i> to evolve own ideas and develop innovative approaches</p> <p>1.6 Hone and adapt ideas for work based on emerging ideas and research</p>
2. Seek professional opportunities and engagement	<p>2.1 Pursue opportunities for professional work based on <i>established goals and aspirations</i></p> <p>2.2 Evaluate potential <i>commercial opportunities</i> as part of a viable professional practice</p> <p>2.3 Engage with <i>professionals within and outside the arts community</i> to further develop own ideas, professional identity and opportunities for work</p> <p>2.4 Establish <i>sustainable ways to support ongoing professional engagement</i></p>
3. Plan an independent project	<p>3.1 Integrate individual research, personal ideas and professional realities to confirm the concept for a body of creative work</p> <p>3.2 Develop and implement a <i>sustainable project management approach</i> for the work</p> <p>3.3 Consider and integrate the promotion, exhibition and communication of the work in the planning process</p>
4. Realise the body of creative work	<p>4.1 Integrate command of technique, materials and process to create finished work of professional standard suitable for the public domain</p> <p>4.2 Deepen individual engagement with techniques, ideas and the relationships between them</p> <p>4.3 Apply critical and creative thinking to challenge, adapt and refine the creative work</p> <p>4.4 Further evolve and refine ideas through processes of experimentation and exploration</p> <p>4.5 Bring together the disparate challenges of the project to complete work on time</p>

5. Evaluate professional work	5.1 Seek and apply <i>constructive criticism</i> from others to improve own work 5.2 Evaluate work against planned strategy for own creative practice 5.3 Evaluate own work in the context of work by others to extend own practice 5.4 Adjust work processes and practice as necessary to improve technical, conceptual and commercial outcomes
-------------------------------	---

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to engage with others at a professional level
- critical thinking and analytical skills to:
 - independently analyse and evaluate ideas to inform original work
 - evaluate own work in terms of its coherence and its place in a professional practice
- initiative and enterprise skills to independently generate new ideas and work opportunities
- learning skills to evaluate own skills against professional practice strategy
- literacy skills to:
 - interpret information dealing with complex or abstract ideas
 - document work in ways that communicate processes and ideas
- numeracy skills to calculate project costs
- problem-solving skills to:
 - challenge, adapt and refine work projects

creatively resolve conceptual and technical issues that arise within the work

- self-management and planning skills to plan and coordinate an independent project from initial concept to realisation
- technical skills to apply and adapt specialised skills related to particular creative form

Required knowledge

- scope of research potential for professional artists within and beyond traditional creative areas
- relationship between ideas, technique, materials and process in the relevant art form
- cultural, sociological, philosophical, aesthetic, political and commercial influences on chosen area of work, in historical and contemporary contexts
- critical and creative thinking techniques and how they work in the context of creative practice
- commercial and professional opportunities for creative work in the context of own practice
- typical problems that occur during the production of a body of creative work, and how to avoid or resolve them
- project management methodologies
- intellectual property issues and legislation associated with artistic professional practice
- sustainability issues associated with the tools and materials used in the chosen creative form
- organisational and legislative OHS procedures in relation to chosen creative form

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • independently originate and realise a coherent body of creative work that effectively communicates the concept • create work of a professional standard for sale, promotion or use in the public domain • independently plan and monitor a creative project • articulate and present ideas about the work • evaluate and discuss work in a professional context.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • appropriate resources for the production of work, including work space, tools, equipment and materials.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • evaluation of a body of work produced by the candidate • evaluation of processes used by the candidate to independently conceive, plan and realise the work • direct observation of work in progress • evaluation of a candidate's visual diary or other forms of documentation showing the development of the work, including research and ideas development • group peer review of the work • questioning and discussion about candidate's intentions and the work outcome • review of portfolios of evidence • review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands (e.g. literacy) and the needs of particular groups (e.g. people with disabilities, and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling).</p>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Individualised or specialised research</i> may involve:</p>	<ul style="list-style-type: none"> • in-depth focus on a particular: <ul style="list-style-type: none"> • idea • material • medium • process • technique • investigation of a perceived deficiency in own work • intensive mentoring with a more experienced peer.
<p><i>New sources and research opportunities</i> may relate to:</p>	<ul style="list-style-type: none"> • analysis of greater subtlety and distinction • areas of research not already explored • component resourcing • consumer trends • current business theories • emerging government policy • emerging research • fashion/design trends • individuals in any fields of endeavour • innovative organisations • international trends • research in greater depth • research of broader scope • social trends.
<p><i>Critical analysis</i> may involve:</p>	<ul style="list-style-type: none"> • adapting • analysing and evaluating actions and policies • challenging • clarifying issues, values and standards • comparing similar situations • comparing and contrasting ideals with practice • comparing and evaluating beliefs, interpretations and theories • critical path process • debate and discussion • developing criteria for evaluation • distinguishing relevant from irrelevant facts • examining and evaluating assumptions

	<ul style="list-style-type: none"> • exploring implications and consequences • generating and assessing solutions • judging • leap of faith • making connections between seemingly unrelated information • making interdisciplinary connections • making plausible inferences and predictions • noting significant similarities and differences • openness • questioning • reading and listening critically.
<i>Established goals and aspirations</i> may be:	<ul style="list-style-type: none"> • commercial • creative • developmental • philosophical • political • social.
<i>Commercial opportunities</i> may include:	<ul style="list-style-type: none"> • collaborative projects • industrial applications • innovative exhibitions • new commercial outlets • public art projects.
<i>Professionals within and outside the arts community</i> may include:	<ul style="list-style-type: none"> • architects • business people • coaches • community services professionals • engineers • government officers • mentors • politicians • scientists • technology experts.
<i>Sustainable ways to support ongoing professional engagement</i> may include:	<ul style="list-style-type: none"> • engaging in community arts activities • establishing professional networks • joining professional associations • participating in cultural debates • speaking at arts events.
<i>Sustainable project management approach</i> would include:	<ul style="list-style-type: none"> • a professional project management plan, including: <ul style="list-style-type: none"> • contingency planning • internal and external resources • objectives and scope

	<ul style="list-style-type: none">• risk management• timelines• monitoring and adjusting the plan to complete work on time and within budget.
<i>Constructive criticism</i> may involve criticism in terms of:	<ul style="list-style-type: none">• aesthetics• philosophical foundations• social context• technique.

CUVPRP602A Collaborate in professional creative projects

Modification History

Version	Comments
CUVPRP602A	This version first released with <i>CUV11 Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to collaborate in creative projects as a professional practitioner. It includes the establishment, realisation and evaluation of collaborative projects.

Application of the Unit

Independent creative practitioners apply the skills and knowledge in this unit, and collaboration is often an integral part of creative practice. Practitioners may collaborate on commercial or community projects in physical or virtual environments. They may work together on individual pieces of work or on thematically connected works in the broader context of a work brief, exhibition, competition or themed event. Projects may be self-generated or developed in response to opportunities presented by others.

This activity is self-directed.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Embrace collaboration as part of professional practice	<p>1.1 Establish and maintain sustainable relationships based on mutual respect and trust</p> <p>1.2 Cultivate <i>collaborative communities and partnerships</i> based on the <i>potential benefits</i> for self and others</p> <p>1.3 Reflect on the <i>blockers</i> to effective collaboration and adopt personal philosophies and behaviours in response</p> <p>1.4 Identify and pursue <i>opportunities for collaboration</i></p>
2. Establish collaborative projects	<p>2.1 Establish shared understandings of project <i>objectives and parameters</i></p> <p>2.2 Agree on ways of working that acknowledge the <i>different contributions</i> of those involved</p> <p>2.3 Acknowledge and integrate ethical approaches to questions of intellectual property for creative content</p> <p>2.4 Identify and respond to <i>professional and practical project considerations</i></p> <p>2.5 Organise and allocate work activities in a cost-effective and equitable manner with clear, agreed outcomes</p>
3. Realise collaborative projects	<p>3.1 Demonstrate a high standard of personal engagement and professionalism to promote the confidence and support of others</p> <p>3.2 Contribute and share own technical and creative expertise from ideas generation to final project realisation</p> <p>3.3 Identify and act on opportunities to extend own expertise and learn from others as projects progress</p> <p>3.4 Challenge, test and share ideas in a supportive way</p> <p>3.5 Embrace technical, creative and organisational challenges and take responsibility for finding new ideas and solutions</p> <p>3.6 Honour own commitments and take responsibility for project outcomes</p>
4. Evaluate collaborative projects	<p>4.1 Engage in an open process of <i>review and evaluation</i> with others involved in projects</p> <p>4.2 Reflect on own level of participation, relationships with others, and personal behaviour</p> <p>4.3 Identify and seek opportunities to refine and expand own expertise</p>

Required Skills and Knowledge

Required skills

- communication skills to:
 - establish and maintain sustainable professional relationships through open and supportive communication in all project stages
 - collaborate on complex issues, ideas and creative challenges
 - encourage others in a collaborative process through effective modelling
- critical thinking and analytical skills to reflect on complex creative, technical and organisational issues and make judgements and decisions about those issues
- initiative and enterprise skills to identify and pursue professional work opportunities
- learning and self-management skills to independently progress a complex project and use the collaborative process as a development tool
- literacy skills to interpret and share varied information dealing with at times complex issues
- planning and organising skills to participate professionally in the set-up, monitoring and completion of a professional collaborative project
- problem-solving skills to evaluate and resolve complex problems of a technical, creative or organisational nature in a collaborative way

Required knowledge

- types of behaviours that support effective collaborative relationships
- benefits of collaboration for individuals, businesses and communities, including the value of collaboration as a problem-solving tool
- typical blockers to the collaborative process, particularly in a creative context
- different roles played by people in a collaborative process
- types of collaboration and collaborative projects that apply to particular areas of creative practice
- key project management systems and procedures that apply to any project
- typical problems encountered in a collaborative process and how they may be avoided or resolved
- ways of evaluating projects in terms of their success as collaborative undertakings
- intellectual property issues that affect the development of creative content, including the concept of shared intellectual property

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • engage with the technical, creative and organisational aspects of a collaborative project to realise creative work of a professional standard • make positive contributions to the collaborative effort by modelling ethical behaviour • use the collaborative process as a means of extending own expertise.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • active participation with others in a professional creative project.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • evaluation of a body of creative work realised by the candidate as part of a collaborative effort • evaluation of presentation or documentation prepared by the candidate detailing the processes and outcomes of a collaborative creative project • questioning and discussion about candidate's participation in the project • participation in discussions with the candidate and others about the project • review of portfolios of evidence • review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands (e.g. literacy) and the needs of particular groups (e.g. people with disabilities, and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling).</p>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Collaborative communities and partnerships</i> may include:</p>	<ul style="list-style-type: none"> • communities of practice • formal and informal relationships • formal and informal groups in collaborative relationships • knowledge communities • knowledge networks • learning communities • physical or virtual relationships • supply chain communities • virtual circles.
<p><i>Potential benefits</i> may include:</p>	<ul style="list-style-type: none"> • capacity to undertake particular projects • community engagement • exploration of new art forms or media • increased professional profile • learning from others • new sources of ideas.
<p><i>Blockers</i> may include:</p>	<ul style="list-style-type: none"> • concerns about loss of intellectual property • cultural considerations • fear • lack of trust • prejudice • unwillingness to share.
<p><i>Opportunities for collaboration</i> may include:</p>	<ul style="list-style-type: none"> • community art or design projects • competition entries • consortia bids for work • exhibitions • public art • transdisciplinary projects.
<p><i>Objectives and parameters</i> may be:</p>	<ul style="list-style-type: none"> • aesthetic • community participation • creative • financial • organisational • timelines.
<p><i>Different contributions</i></p>	<ul style="list-style-type: none"> • different approaches to expressing opinions or ideas

may relate to:	<ul style="list-style-type: none"> • inclinations to lead or follow • influence with others • interpersonal skills • networks • past experience • technical skills and expertise.
<i>Professional and practical project considerations</i> may include:	<ul style="list-style-type: none"> • clarity around who does what • methods of payment • need for project planning • reporting requirements • resources: <ul style="list-style-type: none"> • financial • human • physical.
<i>Review and evaluation</i> may include:	<ul style="list-style-type: none"> • brainstorming • formal reporting • professional critique • reviewing feedback.

CUVPRP603A Engage in the business of creative practice

Modification History

Version	Comments
CUVPRP603A	This version first released with <i>CUV11 Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to adopt a professional approach to creative practice, including engaging in the business aspects of working as a creative practitioner.

Application of the Unit

Independent creative practitioners sometimes work as employees in small and large organisations. Depending on the particular creative practice, they often operate as sole practitioners, in artist cooperatives, or as freelance or contract workers. Regardless of the business model, all practitioners earning income from their practice must engage with the professional business requirements for a sustainable creative practice.

This activity is self-directed.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Adopt professional work practices	<p>1.1 Develop a <i>professional work ethic</i> to support practice</p> <p>1.2 Collaborate and communicate with other professionals about the business aspects of creative practice</p> <p>1.3 Evaluate the <i>skills and knowledge</i> needed to operate as a successful creative practitioner</p> <p>1.4 Evaluate own current skills and abilities and the need for further <i>professional development</i></p> <p>1.5 Assess the potential for using <i>specialist expertise</i> to complement own skills</p> <p>1.6 Evaluate all aspects of own practice on an ongoing basis, as a key component of professional and personal growth</p>
2. Evaluate different business practices	<p>2.1 Investigate the different ways that creative practitioners do business</p> <p>2.2 Investigate the range of <i>business practices, systems and procedures</i> that need to be considered as part of professional creative practice</p> <p>2.3 Assess the relevance and implications of particular <i>business structures</i></p> <p>2.4 Consider the <i>physical resources</i> required by the practice and how they might be accessed</p> <p>2.5 Develop an overall approach to the business aspects of own practice based on evaluation of relevant information</p>
3. Address financial aspects of creative practice	<p>3.1 Investigate <i>financial considerations for creative practice</i></p> <p>3.2 Research and assess different ways of commercialising work and ideas</p> <p>3.3 Evaluate different <i>ways of costing and selling creative work</i></p> <p>3.4 Assess broader <i>financial management requirements</i> and their application to own practice</p> <p>3.5 Develop individual approaches to financial aspects of practice</p>
4. Analyse the rights and obligations of creative practitioners	<p>4.1 Evaluate the legal and moral <i>rights and obligations</i> of professional creative practice</p> <p>4.2 Practise work and business in ways that meet legal and moral obligations</p> <p>4.3 Pursue own rights as a creative practitioner consistent with own professional and ethical standards</p> <p>4.4 Establish and maintain sound approaches to safety and</p>

	sustainability in professional practice
5. Evaluate professional opportunities	<p>5.1 Evaluate work opportunities within and <i>beyond the creative sectors</i></p> <p>5.2 Be open to the potential for work opportunities in unexpected places, beyond established patterns of work</p> <p>5.3 Identify and access sources of professional advice</p> <p>5.4 Consider local and global opportunities for own practice</p> <p>5.5 Identify and evaluate opportunities offered by <i>current and emerging trends</i> in the consumption of culture and creative products</p> <p>5.6 Analyse the experiences of others as a way of discovering different opportunities</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - collaborate with others on practice development issues
 - interact with other creative and business professionals on management and development issues
- critical thinking and analytical skills to:
 - research and evaluate information and ideas from a wide range of sources
 - reflect on complex issues and make judgements and decisions about those issues
- initiative and enterprise skills to identify and pursue professional work opportunities
- learning and self-management skills to engage in and commit to an ongoing process of professional development and lifelong learning
- literacy skills to interpret varied information dealing with complex issues from a range of sources
- planning and organising skills to integrate a range of complex and varied information into a cohesive approach to development and management of own professional practice
- problem-solving skills to assess potentially competing and conflicting issues and develop solutions for own practice
- numeracy skills to manage the financial aspects of a professional practice
- technology skills to use the internet as a research tool
-

Required knowledge

- types of behaviour and practice that constitute a professional way of working in the specific area of creative practice
- professional development opportunities for the specific area of creative practice
- types and sources of external expertise and professional advice for creative practitioners that could be used in professional practice, including different industry organisations
- general business structures, practices, systems and procedures that apply to all professional practitioners, as well as typical ways that business is done in the specific area of creative practice
- physical resources needed for different types of professional practice and different ways they may be set up or accessed
- financial management practices that apply to all professional practitioners, including financial models and structures that apply to the specific area of creative practice
- factors to consider when costing and selling work and methods of selling work, including commissions
- range of professional practice skills needed by creative practitioners
- range of work opportunities open to the creative practitioner, both within and outside the creative sectors
- trends in the consumption of culture and creative products and their impact on professional

creative practice

- legal rights and obligations of creative practitioners, particularly in relation to intellectual property, OHS and duty of care

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • research and evaluate a broad range of business information, including business structures, financial considerations, and legal rights and obligations • develop cohesive approaches and strategies for own practice that are grounded in research and reflection • articulate the range of professional opportunities for creative practice within and beyond the creative sectors • apply a highly developed understanding of the arts industry, including new and emerging trends in work practice.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • industry networks and information • general business information.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • evaluation of presentation or documentation prepared by the candidate detailing professional practice ideas and strategies • questioning and discussion about candidate's professional plans • participation in discussions with the candidate and others about professional practice in a given area • review of portfolios of evidence • review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands (e.g. literacy) and the needs of particular groups (e.g. people with disabilities, and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling).</p>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Professional work ethic may refer to:	<ul style="list-style-type: none"> • building sustainable professional relationships • commitment to ongoing learning and development • ethical behaviours • honouring professional commitments • maintaining work / life balance • meeting timelines.
Skills and knowledge may be:	<ul style="list-style-type: none"> • creative • financial • interpersonal • practical • promotional.
Professional development may include:	<ul style="list-style-type: none"> • attendance at events • further study • industry engagement • mentoring • professional memberships • research.
Specialist expertise may be:	<ul style="list-style-type: none"> • business • financial • legal • marketing.
Business practices, systems and procedures may relate to:	<ul style="list-style-type: none"> • communication • financial management • marketing • operations • safety • sales • technology.
Business structures may include:	<ul style="list-style-type: none"> • cooperatives • companies • partnerships • sole practitioner structures • trusts.
Physical resources may	<ul style="list-style-type: none"> • equipment

include:	<ul style="list-style-type: none"> • materials • tools • work space.
Financial considerations for creative practice may relate to:	<ul style="list-style-type: none"> • costs, including: <ul style="list-style-type: none"> • commissions • consignment fees • exhibition fees • distribution channels for work • income, such as: <ul style="list-style-type: none"> • awards • donations • government grants • residencies • sponsorships.
Ways of costing and selling creative work may include:	<ul style="list-style-type: none"> • consignment • quoting for materials • quoting for time • taking commissions • whole project quotations.
Financial management requirements may relate to:	<ul style="list-style-type: none"> • accounting systems and software • insurance • invoicing • paying accounts • record keeping • reporting requirements • taxation issues.
Rights and obligations may relate to:	<ul style="list-style-type: none"> • copyright and intellectual property • duty of care • moral rights • safety of self and others • taxation responsibilities.
Beyond the creative sectors may refer to contexts such as:	<ul style="list-style-type: none"> • business • community organisations • science • technology.
Current and emerging trends may relate to:	<ul style="list-style-type: none"> • changing social mores • economic climate • habits of different age groups or genders • impact of technology • lifestyle trends

	<ul style="list-style-type: none">• political environment.

CUVPRP604A Publicly present a body of own creative work

Modification History

Version	Comments
CUVPRP604A	This version first released with <i>CUV11 Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to publicly present a body of professional creative work, from ideas generation, to the organisation process, through to the actual preparation of work for presentation. Evaluation is also a key focus of the unit.

Application of the Unit

Professional creative practitioners in many sectors apply the skills and knowledge in this unit.

At this level, practitioners publicly present a coherent body of professional work and may be involved in organisation and promotional processes associated with the presentation.

The presentation may be a physical or virtual exhibition, but may also include presentations such as shows, competitions or performances.

This activity is self-directed.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Create or confirm public presentation opportunity	<p>1.1 Identify and confirm the purpose, scope and objectives of the public presentation in consultation with relevant people</p> <p>1.2 Determine presentation requirements from relevant information</p>
2. Generate public presentation ideas	<p>2.1 Evaluate the nature of the audience, its needs and expectations</p> <p>2.2 Evaluate the place of own work within the broader presentation context</p> <p>2.3 Develop broad parameters for own content based on overall objectives, audience needs and nature of own work</p> <p>2.4 Consider new and different ways of presenting work</p> <p>2.5 Select and develop appropriate themes based on own work practice and presentation requirements</p> <p>2.6 Challenge and refine ideas through collaboration and discussion with others</p>
3. Plan and organise public presentation	<p>3.1 Establish organisational roles and responsibilities, including own role</p> <p>3.2 Evaluate and organise resources required for realising the presentation</p> <p>3.3 Evaluate constraints and risks, and take action to address them</p> <p>3.4 Develop, implement and monitor an action plan for the organisation process based on specific requirements</p> <p>3.5 Consult with relevant people during the organisation process</p>
4. Participate in promotion	<p>4.1 Establish own role in promotion in consultation with relevant people</p> <p>4.2 Undertake promotional activities within scope of individual responsibility</p>
5. Prepare work for public presentation	<p>5.1 Evaluate the actions needed to prepare work for presentation</p> <p>5.2 Prepare the body of creative work for inclusion in presentation</p> <p>5.3 Where appropriate, develop collateral material to support the presentation</p>
6. Evaluate public presentation	<p>6.1 Review and reflect on the overall success of the presentation</p> <p>6.2 Evaluate implications for own creative work based on audience response and own reflection</p> <p>6.3 Build learnings from the presentation into future practice</p>

Required Skills and Knowledge

Required skills

- communication skills to:
 - liaise with others on practical operational issues
 - share ideas about own work
- critical thinking and analytical skills to generate and refine ideas and themes
- initiative and enterprise skills to develop innovative approaches to presentation of own work
- learning and self-management skills to evaluate the presentation and integrate learning into future practice
- literacy skills to interpret a range of practical organisational documentation
- numeracy skills to estimate financial resources required for presentation
- planning and organising skills to coordinate the practical aspects of preparing work for public presentation
- problem-solving skills to evaluate constraints and risks and take action to address them

Required knowledge

- key aspects of the presentation organisation process, including different roles and responsibilities
- basic presentation promotional activities
- current and emerging trends, ideas and theories for presentation of work in chosen area of practice
- intellectual property issues and legislation and how they relate to public presentations of creative work

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • prepare a coherent body of professional creative work for public presentation • participate professionally in the presentation planning, promotion and organisational process • evaluate presentation in terms of implications for future practice.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to a public presentation site (physical or virtual) • interaction with others as a part of the presentation planning and organisational process.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • evaluation of a public presentation of the candidate's work • evaluation of reports prepared by the candidate detailing processes undertaken, challenges encountered and how they were addressed • questioning and discussion about candidate's intentions and the work outcome • review of portfolios of evidence • review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands (e.g. literacy) and the needs of particular groups (e.g. people with disabilities, and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling).</p>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Public presentation may be:	<ul style="list-style-type: none"> • competition • exhibition (virtual or physical) • performance • show.
Relevant people may include:	<ul style="list-style-type: none"> • collaborators • marketing and promotional personnel • mentors • other exhibitors • venue managers.
Presentation requirements may relate to:	<ul style="list-style-type: none"> • information to be supplied • locations • packaging or presentation of work • style or theme of work • timelines.
Place of own work within the broader presentation context may relate to:	<ul style="list-style-type: none"> • cultural considerations • juxtaposition of exhibitors • number of exhibitors • overall objectives of exhibition • potential audience • potential benefits • potential risks • synergies between exhibitors • themes.
New and different ways of presenting work may relate to:	<ul style="list-style-type: none"> • challenging the audience • interpretation of work • involving the audience • physical presentation.
Organisational roles and responsibilities may relate to:	<ul style="list-style-type: none"> • catering responsibility • installation of work • marketing and promotion • project management • venue management.
Resources may be:	<ul style="list-style-type: none"> • financial • human

	<ul style="list-style-type: none"> • physical.
<i>Constraints and risks</i> may relate to:	<ul style="list-style-type: none"> • availability of materials • financial limitations • physical venue constraints • timelines.
<i>Promotional activities</i> may include:	<ul style="list-style-type: none"> • developing background material • developing interpretive material • developing promotional material • inviting people to view presentation • providing lists of invitees to others • placing information on social networking sites.
<i>Collateral material</i> may include:	<ul style="list-style-type: none"> • catalogues • interpretive material • photographs • work documentation.
<i>Implications for own creative work</i> may include:	<ul style="list-style-type: none"> • commercial considerations • confirmation of current approaches • potential new directions for work • need for further research • need for further skill development.

CUVRES502A Analyse cultural history and theory

Modification History

Version	Comments
CUVRES502A	This version first released with <i>CUV11 Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to research, analyse and debate cultural history and theory, and to use those processes to develop individual approaches to creative work.

Application of the Unit

People working across all cultural sectors enrich their professional practice through their understanding of cultural history and theory.

This unit may also apply to individuals working much more broadly in business and community roles.

History and theory may cover a particular period of time, a particular area of cultural practice, a particular social issue, or be broader in nature.

At this level, a person engages in a largely independent research process that begins to inform practice at a professional level. The research may be guided by others in terms of its scope and objectives.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element

Elements describe the essential outcomes of a unit of competency.

Performance Criteria

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

<p>1. Select a focus for cultural research</p>	<p>1.1. Select a focus for research in consultation with others based on <i>individual needs and perspectives</i></p> <p>1.2. Make an initial determination of the information and ideas to be sought</p> <p>1.3. Challenge own <i>assumptions and preconceptions</i> about the research process and potential information sources</p> <p>1.4. Select relevant <i>historical and contemporary sources</i> for investigation</p>
<p>2. Conduct critical analysis</p>	<p>2.1. Seek out and compare the critical views of <i>others</i> in chosen area of inquiry</p> <p>2.2. Investigate issues around the historical and contemporary production, interpretation, promotion and consumption of culture</p> <p>2.3. Allow the process of analysis to take exploration of issues in <i>new and unintended directions</i></p>
<p>3. Discuss cultural history and theory</p>	<p>3.1. Develop <i>substantiated opinions and ideas</i> about cultural history and theory</p> <p>3.2. Make informed contributions to discussions of cultural history and theory</p> <p>3.3. Encourage and participate in open and constructive discussion</p>
<p>4. Develop own practice from research</p>	<p>4.1. Determine potential for <i>integration of research findings</i> into own work</p> <p>4.2. Relate cultural history and theory to <i>professional practice issues</i></p> <p>4.3. Recognise connections and associations between history and theory and contemporary cultural practice</p> <p>4.4. Develop ideas about how research might impact on or enrich own professional practice and its future direction</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to participate in debate and discussion of cultural history and theory
- critical thinking skills to analyse information and develop substantiated positions about cultural history and theory
- initiative and enterprise skills to use, challenge and adapt research to develop own professional practice
- literacy skills to interpret varied information sources dealing with at times complex ideas
- learning and self-management skills to use the research process as a professional development tool
- planning and organising skills to set up and undertake a research process.

Required knowledge

- ways of selecting a meaningful individual research focus
- opportunities offered by cultural history and theory in terms of value to a developing professional practice in the arts and in the broader community
- intellectual property issues and legislation and how they relate to the research process.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • select an appropriate research focus • analyse cultural ideas and information and develop substantiated positions to support professional practice • participate in informed discussion of cultural history and theory.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • a range of cultural history and theory information sources.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • evaluation of presentation or documentation prepared by the candidate explaining research processes and how issues surrounding history and theory have been incorporated into work • evaluation of case studies to assess ability to research and use different types of information • evaluation of the candidate’s cultural literacy skills and ability to recognise, review and analyse different cultural productions, artworks, artistic values, artists, performers or authors • questioning and discussion about candidate’s intentions and the work outcome • review of portfolios of evidence • review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands (e.g. literacy) and the needs of particular groups (e.g. people with disabilities, and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling).</p>
Guidance information	<p>Holistic assessment with other units relevant to the industry</p>

for assessment	sector, workplace and job role is recommended.
-----------------------	--

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Individual needs and perspectives</i> may be influenced by:</p>	<ul style="list-style-type: none"> • art form focus • commercial aspirations or requirements • discussions and ideas of others • materials and processes • presence of a multidisciplinary focus • previous research • techniques used in own practice.
<p><i>Assumptions and preconceptions</i> may relate to:</p>	<ul style="list-style-type: none"> • different cultural responses to research • how information is presented • level of formality required in the research process • own preconceptions • preconceptions of others • what types of research are acceptable • where to find information.
<p><i>Historical and contemporary sources</i> may include:</p>	<ul style="list-style-type: none"> • artworks • commercial brief • critical writing • events • exhibitions • experiences of self or others • films • images • internet • music • objects • other people • performances • presentations • printed texts • technical information.
<p><i>Others</i> may include:</p>	<ul style="list-style-type: none"> • arts critics • other artists • peers • teachers.

<p><i>New and unintended directions</i> may be those which:</p>	<ul style="list-style-type: none"> • challenge preconceptions about work process and outcomes • generate completely new ideas • lead the individual to work in a different medium • take the individual back to earlier ideas.
<p><i>Substantiated opinions and ideas</i> are:</p>	<ul style="list-style-type: none"> • grounded in appropriate research • the result of rational and logical thought • subjected to the analysis of others (e.g. peer review) • supported by relevant information.
<p><i>Integration of research findings</i> may relate to:</p>	<ul style="list-style-type: none"> • design strategies • genres • ideas and themes • materials • media • motifs • processes • styles • techniques • technologies.
<p><i>Professional practice issues</i> may relate to:</p>	<ul style="list-style-type: none"> • marketing and promotion of work • need for collaboration • need for further research and development time • new opportunities.

CUVRES601A Extend cultural research expertise

Modification History

Version	Comments
CUVRES601A	This version first released with <i>CUV11 Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to extend and refine individual cultural research capability, both in the context of own practice and as part of the broader cultural context.

Application of the Unit

Independent professional practice in the creative industries involves the ability to research and engage with current cultural debate and with cultural history and theory.

At this level, the practitioner engages in a self-directed independent research process.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element

Elements describe the essential outcomes of a unit of competency.

Performance Criteria

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

<p>1. Situate own practice in the wider context</p>	<p>1.1. Reflect on the nature of own practice and its relationship to the <i>broader contemporary cultural context</i></p> <p>1.2. Explore the relationship of individual practice to particular aspects of cultural history and theory</p> <p>1.3. Consider how own work connects to or diverges from the work of other professionals</p> <p>1.4. Analyse the ways in which individual practice has evolved, and the influences that have affected this evolution</p>
<p>2. Extend research capability</p>	<p>2.1. Investigate <i>ways to extend individual research</i> to support professional practice and self-development</p> <p>2.2. Develop potential areas of research based on current or planned developments in practice and broader areas of interest</p> <p>2.3. Conduct in-depth analysis of critical writing as part of an ongoing research practice</p>
<p>3. Refine and articulate own positions and ideas</p>	<p>3.1. Evolve personal ideas based on developing research activity and <i>critical analysis</i></p> <p>3.2. Participate in <i>current cultural debate</i> with peers and within the wider community</p> <p>3.3. Seek and apply critical feedback from others</p> <p>3.4. Develop <i>substantiated ideas</i> on cultural topics</p> <p>3.5. Develop and present information in formats that meet <i>professional and relevant academic standards and conventions</i></p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - articulate complex arguments
 - participate in debate and discussion of cultural history and theory
- analytical and literacy skills to:
 - examine the nature of own practice and its place in the wider context
 - analyse varied information sources dealing with complex ideas
- initiative and enterprise skills to seek proactive involvement in cultural debate
- planning and organising skills to set up and undertake a research process
- learning and self-management skills to extend individual research capability through self-directed projects
- technology skills to:
 - present information in appropriate formats
 - use the web as a research tool.

Required knowledge

- potential research opportunities for individual cultural practice
- range of historical and contemporary critical writing relevant to individual research focus
- conventions for the presentation of information and ideas
- intellectual property issues and legislation and how they relate to the research process.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • interrogate own practice to a depth that allows the candidate to make connections with the broader cultural context • develop a professional research capability in the area of cultural history and theory • articulate and present complex ideas following appropriate conventions.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • a range of cultural history and theory information sources.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • evaluation of research projects undertaken by the candidate • evaluation of the candidate’s cultural literacy skills and ability to recognise, review and analyse different cultural productions, artworks, artistic values, artists, performers and authors • questioning and discussion about candidate’s intentions and the work outcome • review of portfolios of evidence • review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands (e.g. literacy) and the needs of particular groups (e.g. people with disabilities, and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling).</p>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Broader contemporary cultural context</i> may be:</p>	<ul style="list-style-type: none"> • economic • environmental • geographic • heritage • historical • local, national and international • political • philosophical • social and cultural • style or design related.
<p><i>Ways to extend individual research</i> may involve:</p>	<ul style="list-style-type: none"> • community engagement • connecting to areas of research beyond the obvious • further study • greater levels of specialisation and depth in research • mentored reflection • self-analysis.
<p><i>Critical analysis</i> may involve:</p>	<ul style="list-style-type: none"> • adapting • analysing and evaluating actions and policies • challenging • clarifying issues, values and standards • comparing similar situations • comparing and contrasting ideals with practice • comparing and evaluating beliefs, interpretations and theories • critical path process • debate and discussion • developing criteria for evaluation • distinguishing relevant from irrelevant facts • examining and evaluating assumptions • exploring implications and consequences • generating and assessing solutions • judging • leap of faith • making connections between seemingly unrelated

	<p>information</p> <ul style="list-style-type: none"> • making interdisciplinary connections • making plausible inferences and predictions • noting significant similarities and differences • openness • questioning • reading and listening critically • reflecting.
<p><i>Current cultural debate</i> may relate to:</p>	<ul style="list-style-type: none"> • arts education • arts funding • artists’ rights • emerging trends and practices • government policy • philosophical issues.
<p><i>Substantiated ideas</i> are:</p>	<ul style="list-style-type: none"> • grounded in appropriate research • the result of rational and logical thought • supported by relevant information • subjected to the analysis of others (e.g. peer review).
<p><i>Professional and relevant academic standards and conventions</i> may relate to:</p>	<ul style="list-style-type: none"> • copyright and intellectual property • cultural considerations • presentation of work • referencing protocols • report writing • use of terminology.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Communicate with people from diverse backgrounds	<p>1.1. People from all cultural groups are valued and treated with respect and sensitivity</p> <p>1.2. Verbal and non-verbal communication takes account of cultural differences</p> <p>1.3. Where language barriers exist, efforts are made to communicate through use of gestures or simple words in the other persons' language</p> <p>1.4. Assistance from colleagues, specialist resources or outside organisations is obtained when required</p>
2. Respond to cross-cultural misunderstandings	<p>2.1. Issues which may cause conflict or misunderstanding in the workplace are identified</p> <p>2.2. Difficulties are addressed with the appropriate people in the workplace</p> <p>2.3. When difficulties or misunderstandings occur, possible cultural differences are considered</p> <p>2.4. Efforts are made to resolve the misunderstanding, taking account of cultural considerations</p> <p>2.5. Issues and problems that cannot be resolved are referred as required for follow up</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify and recognise cultural differences in the workplace
- apply understanding of cultural difference to communicate effectively to achieve work requirements, including selecting appropriate communication style to suit audience
- identify and respond to cross-cultural misunderstandings
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor

Required knowledge

Knowledge of:

- principles of equal employment opportunity (EEO) and anti-discrimination legislation as they apply to company and employee rights and responsibilities in the workplace
- recognition of the different cultural groups in the workplace
- understanding of the basis of cultural difference, including behaviour or practices that can cause offence, and related strategies for interacting in ways that are culturally sensitive
- communication strategies and styles appropriate to diverse audiences related to the workplace

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of ability to:</p> <ul style="list-style-type: none"> • identify responsibilities according to the principles of anti-discrimination legislation • treat people from other cultures with respect and sensitivity • make efforts to communicate and understand others using verbal and non-verbal techniques • seek assistance when required to facilitate understanding • treat cross-cultural misunderstandings with sensitivity and act to resolve the matter with respect.
<p>Context of and specific resources for assessment</p>	<p>Assessment must occur in a real or simulated workplace where the assessee has access to:</p> <ul style="list-style-type: none"> • advice on legal rights and responsibilities relating to anti-discrimination and EEO • related company policies and procedures • opportunities to interact with others using typical workplace communication processes.
<p>Method of assessment</p>	<p>This unit should be assessed together with core units and other units of competency relevant to the function or work role.</p>
<p>Guidance information for assessment</p>	<p>To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements and industrial awards and agreements
Legislative requirements	Legislative requirements are typically reflected in procedures and specifications. Legislation includes: <ul style="list-style-type: none"> • anti-discrimination • EEO
People from diverse backgrounds	People from diverse backgrounds may include: <ul style="list-style-type: none"> • any person involved in or related to the work process, such as work colleagues, managers and external personnel
Cultural differences	Cultural difference may include but is not limited to: <ul style="list-style-type: none"> • race • special needs • disabilities • gender • marital status • sexual preference • age
Examples of cultural differences	Examples of cultural differences may include but are not limited to: <ul style="list-style-type: none"> • language spoken and related communication style • levels of formality/informality • personal grooming • family obligations • recognised holidays • customs

RANGE STATEMENT	
	<ul style="list-style-type: none"> • work ethic • product preferences
Outside organisations	<p>Outside organisations may include but are not limited to:</p> <ul style="list-style-type: none"> • interpretative services • diplomatic services • local cultural organisations • appropriate government agencies • educational institutions

ICTTC136B Install, maintain and modify customer premises communications cabling: ACA Restricted Rule

Modification History

Not applicable.

Unit Descriptor

This unit defines the level of competence that is required for the purpose of the Australian Communications Authority's "**Restricted**" Cabling Provider Rule. Restricted cabling is used in typical domestic premises small office home offices and small business premises situations. Restricted cabling can install cable in large commercial and industrial premises as long as the cabling is behind a compliant device and cabling is not via jumperable distributors or patch panels.

This unit applies to customer cabling terminated on sockets and network termination devices (NTD). It applies to the installation, maintenance and modification of indoor and external cabling at the levels stated in the range of variables.

Customer cabling, for the purpose of this standard, may be used to connect devices for a range of applications including: telecommunications (phones, facsimile and answering machines), simple data and computer use, security alarm panels, and fire control panels.

Assessment by a TITAB registered assessor is recommended.

Prerequisite Units: Nil

Equivalent Units: Nil

Element	Performance Criteria
1 Work within the constraints imposed by commercial premises	1.1 Identify building infrastructure which places critical constraints on cabling 1.2 Develop strategies to manage other infrastructure in relation to cabling
2 Manage Remote Power Feed	2.1 Identify the risks posed by contact with Remote Power Feeding services 2.2 Identify Remote Power Feeding services in a range of commonly encountered circumstances inside customer premises.
3 Install/alter cables and protective earth wires	3.1 Cables/wires handled in accordance with manufacturer's application specifications including tension and bending stress requirements 3.2 Sources of possible damage to cable/wires are identified and avoided including hot pipes, sharp edges and cable burn 3.3 Sufficient excess is allowed at cable ends to facilitate termination 3.4 Cable is placed and secured to maintain safety and

- interference segregation in accordance with legislative and industry standards
- 3.5 Cable ties not tightened to the point of causing cable sheath damage or transmission impairment and trimmed flush to prevent risk of personal damage
 - 3.6 Cables installed underground shall meet minimum depth of cover and segregation from hazardous electrical and other services as per AS/ACIF009
 - 3.7 Aerial cables installed shall meet minimum clearance, segregation from hazardous electrical and other services and minimum height requirements as per AS/ACIF009
 - 3.8 In accordance with AS/ACIF009, overvoltage protection devices are fitted to all cable pairs where required to suppress voltage surges and protect from EPR hazards and the devices protectively earthed
 - 3.9 Earth wire insulation is protected against damage and protective earths segregated in accordance with relevant industry and legislative standards
- 4 Terminate and test cables and earth wires
- 4.1 Cable sheath removed to allow for correct termination length and without damage to underlying conductors and their insulation
 - 4.2 NTD terminating modules are installed in accordance to manufacturer's specifications and cable pairs neatly and sequentially fanned for termination
 - 4.3 Conductors are terminated in accordance with recommended colour code sequence using appropriate termination tools in the manufacturer's specified manner
 - 4.4 Cable shield (if applicable) is earthed to manufacturer's specifications and relevant industry codes of practice and AS/ACIF009
 - 4.5 Visual inspection is undertaken to confirm termination colour code sequence has been followed prior to end to end testing of wire and pair termination integrity

- 4.6 Earth wires are terminated with connectors recommended by manufacturers in accordance with accepted industry codes of practice and AS/ACIF009
- 4.7 Earth wire continuity is maintained through out and interface requirements with electrical systems are observed
- 4.8 Earthing installation shall be tested for continuity, insulation resistance and conductive resistance as per accepted industry standards including AS/ACIF009
- 4.9 Compatibility of alterations with existing systems is confirmed and new wok tested both in isolation and when integrated with existing systems
- 5 Inspect cable route to ensure correct separations
 - 5.1 Check separations along the entirety of the cable route
 - 5.2 Rectify separations which do not comply with regulations
 - 5.3 Install barriers to achieve separations where spatial separation can't be met
- 6 Create records
 - 6.1 Complete TCA1 form and create NTD records
- 7 Monitor work activity
 - 7.1 Supervision of cablers not holding appropriate registration for the task is maintained to ensure installation/maintenance activity is in accordance with legislative requirements for safety and network integrity including AS/ACIF008 and AS/ACIF009

Required Skills and Knowledge

Not applicable.

Evidence Guide

Assessment location and resources

Either

A workplace conducting the operations covered by this competency unit, equipment and resources relevant to the context of the work (See Range Statement) and support from a competent supervisor or mentor.

Or

A simulated environment with similar provisions which conforms to the Assessment Guidelines.

Critical evidence

Assessment candidates should produce evidence of the following:

Demonstration of a cabling installation including 3 types of telephone sockets, one network termination device (NTD) and one alarm panel including TCA1 compliance form.

Accurate application of cable conductor identification codes.

Conduct and interpret cable test results.

Correct interpretation and application of standards and regulations.

Skills and knowledge

Codes refer to the Skill and Knowledge Register included in this training package:

CA2200 Cable Installation

OH2200 Occupational Health and Safety

RE210 ACA Provider Rules, Cabler Registration, Rules and Regulations

TE2210 Basic Telephony

Assessment location and resources

Either

A workplace conducting the operations covered by this competency unit, equipment and resources relevant to the context of the work (See Range Statement) and support from a competent supervisor or mentor.

TE2210 Basic Telephony

Range Statement

The following statements cover a wide range of circumstances. Assessment of candidates should be within the range that applies to the candidate's particular role or workplace. This unit is generally applied to the ACA Restricted Cabling Rule coverage which is used in typical domestic premises but is also found in some small office home office and small business premises situations.

Building infrastructure

Includes but not limited to:

high voltage power

other services

availability and suitability of existing cabling trays and fixing systems.

Strategies to manage infrastructure include:

appropriate separations

fastening techniques

correct use of cable trays and support systems.

Remote power feed

Applies to telecommunications services which operate at above TNV (Telecommunications Network Voltage).

Regulatory environment

Overview **Telecommunications Act 1997**, ACA, ACIF, Labelling, Certified Components List (CCL) accredited registrars and registration.

Cabling environment

Indoor environments include concealed locations such as:

ceilings

false ceilings

internal wall space

under floor

damp situations, and

within modular workstations.

Outdoor environments include cable installations on external walls and underground and/or aerial cabling on private property. Underground cabling would be in an exclusive trench or shared trench with electrical LV cables and/or other utilities. Aerial telecommunications cabling shall not include installations on poles shared with LV/HV electrical power cables/terminations.

Cable type

Copper twisted pair including:

indoor

external

aerial, and

underground.

Cable identification

Cable conductor identification codes may be:

colour coded

banded

numbered

lettered.

Termination systems:

A range of at least 3 different socket types (Australian and US modular sockets and Mode 3 alarm sockets) and at least one network terminating device (NTD) must be individually terminated.

Note: Jumperable distributors not included in this unit requirement.

Earthing and protection

Earthing for protection and surge suppression and must be treated in accordance with AS/ACIF009.

Separations

The distance between communications cable and other services. This includes:

Low Voltage (LV)

High Voltage (HV) - Single core and HV Multi-core

Open terminations.

Regulations

Regulations cover separations will generally be covered by Wiring Rules standard AS/ACIF009.

Spatial separations

The distance between communications cable and other required by regulations where no barrier is installed.

Barriers

Physical barriers installed when there is not enough space to achieve spatial separations.

Records

TCA1 form (and future NTD record cards) must conform with AS/ACIF009.

Relevant legislation, codes, regulations and standards (or their replacements) include relevant components of:

ACA Technical Standards

AS/ACIF008, AS/ACIF009 - or subsequent replacements

SAA Communications Cabling Manual (Restricted)

AS/NZS 3000

The following statements cover a wide range of circumstances. Assessment of candidates should be within the range that applies to the candidate's particular role or workplace.

This unit is generally applied to the ACA Restricted Cabling Rule coverage which is used in typical domestic premises but is also found in some small office home office and small business premises situations.

ICTTC137B Install, maintain and modify customer premises communications cabling: ACA Open Rule

Modification History

Not applicable.

Unit Descriptor

This unit defines the level of competence* that is required for the purpose of the Australian Communications Authority's "Open" Cabling Provider Rule. This rule is associated with small installations connected to sockets and larger commercial and industry installations involving many lines, multi-pair cables, backbone cabling, multi-story buildings and more complicated termination modules and distributors.

This unit applies to customer cabling terminated on distributors. It applies to the installation, maintenance and modification of indoor, external, underground cabling at the levels stated in the range of variables.

Customer cabling, for the purpose of this standard, may be used to connect devices for a range of applications, including for example: telecommunications (phones and facsimile), data including video and multimedia, security and alarms, and fire protection.

This unit meets the minimum ACA "prescribed level of knowledge and skill that safeguards matters of health, safety, network integrity and addresses matters of interoperability where customer equipment and standard telephone service are involved" only.

Note: This does not imply industry competency using specialised cabling such as: Co-axial, Optical Fibre and Structured cabling.

Prerequisite Unit: ICTTC136B Install, maintain and modify customer premises communications cabling: ACA Restricted Rule.

Equivalent Unit/s: Note: Completion of the following 6 cabling units: ICTTC005B, ICTTC006B, ICTTC008B, ICTTC012B, ICTTC017B and ICTTC022B exceeds the requirements of this standard and fulfils the requirements for ACA Cabling Provider Rules: Open Cabling Category for Cabler Registration.

This unit defines the level of competence* that is required for the purpose of the Australian Communications Authority's "Open" Cabling Provider Rule. Elements and Performance Criteria

Elements and Performance Criteria

Element	Performance Criteria
1 Work within the constraints imposed by commercial premises	1.1 Identify building infrastructure which places critical constraints on cabling 1.2 Develop strategies to manage other infrastructure in relation to cabling
2 Manage Remote Power Feed	2.1 Identify the risks posed by contact with Remote Power Feeding services 2.2 Identify Remote Power Feeding services in a range of commonly encountered circumstances inside customer premises.
3 Install/modify cable support, earthing and termination infrastructure	3.1 Ensure site is free of telecommunication hazards 3.2 Fixings and cable support structures of adequate strength are installed safely, aligned with the environment and in accordance with manufacturer's and customer's specifications

- 3.3 Catenary supports are secured to building structure and tensioned where necessary to ensure cable weight can be carried in operating conditions with interference and safety segregation maintained including adherence to AS/ACIF009
- 3.4 Protective earthing of metal work is installed to industry standards where required
- 3.5 Installed support structure is checked to ensure cable will not be exposed to damage during installation and general operation
- 3.6 Terminating equipment positioning and fixing follows accepted industry codes of practice, standards and customer requirements
- 3.7 Back-mount and outlet layout conforms to manufacturer's specifications and allows adequate work space for ease of access and avoid overlaying
- 3.8 Incoming and outgoing cables are segregated to ensure ease of access and avoid overlaying
- 4 Install/alter cables and earth wires
 - 4.1 Cables/wires handled in accordance with manufacturer's application specifications including tension and bending stress requirements
 - 4.2 Sources of possible damage to cable/wires are identified and avoided including hot pipes, sharp edges and cable burn
 - 4.3 Sufficient excess is allowed at cable ends to facilitate termination
 - 4.4 Telecommunication outlet ends of cable is uniquely labelled to match identifier at originating location
 - 4.5 Cable is placed and secured to maintain safety and interference segregation in accordance with legislative and industry standards
 - 4.6 Cable ties not tightened to the point of causing cable sheath damage or transmission impairment and trimmed flush to prevent risk of personal damage
 - 4.7 Cables installed as catenaries or supported by catenaries in external environment shall meet

- minimum above ground clearances and clearances from hazardous electrical services as per AS/ACIF009
- 4.8 Cables installed underground shall meet minimum depth of cover and segregation from hazardous electrical and other services as per AS/ACIF009
 - 4.9 In accordance with AS/ACIF009, over-voltage protection devices are fitted to all cable pairs, where required, to suppress voltage surges with the devices protectively earthed
 - 4.1 TRC/CES/Earth wire insulation is protected against damage and TRC/CES and protective earths segregated in accordance with relevant industry and legislative standards TS 009
- 5 Terminate and test cables and earth wires
- 5.1 Cable sheath removed to allow for correct termination length and without damage to underlying conductors and their insulation
 - 5.2 Terminating modules are installed in accordance to manufacturer's specifications and cable pairs neatly and sequentially fanned for termination
 - 5.3 Conductors are terminated in accordance with recommended colour code sequence using appropriate termination tools in the manufacturer's specified manner
 - 5.4 Cable shield (if applicable) is earthed to manufacturer's specifications and relevant industry codes of practice including AS/ACIF009
 - 5.5 Visual inspection is undertaken to confirm termination colour code sequence has been followed prior to end to end testing of wire and pair termination integrity
 - 5.6 TRC/CES /Earth wires are terminated with connectors recommended by manufacturers in accordance with relevant industry codes of practice including AS/ACIF009
 - 5.7 TRC/CES /Earth wire continuity is maintained through out and interface requirements with electrical systems are observed

- 5.8 TRC/CES /Earthing installation shall be tested for continuity, insulation resistance and conductive resistance as per relevant industry standards including AS/ACIF009
- 5.9 Compatibility of alterations with existing systems is confirmed and new work tested both in isolation and when integrated with existing systems
- 6 Inspect cable route to ensure correct separations
 - 6.1 Check separations along the entirety of the cable route
 - 6.2 Rectify separations which do not comply with regulations
 - 6.3 Install barriers to achieve separations where spatial separation can't be met
- 7 Evaluate earthing needs for cable systems on customer premises
 - 7.1 Identify the role of functional, protective and CES earthing systems in customer premises
 - 7.2 Recognise existing earthing systems in customer premises
 - 7.3 Analyse the earthing needs of cable systems in a range of building types
 - 7.4 Identify cable characteristics relevant to the calculation of earthing requirements
 - 7.5 Calculate the upper and lower limits of resistance for a variety of cable system earths
- 8 Label earthing systems
 - 8.1 Identify label requirements for all types of earthing systems
 - 8.2 Label earthing systems in accordance with industry regulations
- 9 Create/update cable plans and records
 - 9.1 Record sheets and plans of cable location, type and infrastructure are accurately created or updated and stored in accordance with customer requirements
 - 9.2 Cable pairs are clearly labelled to provide an accurate identification in accordance with manufacturer's, industry and client standards
 - 9.3 Cable pair record books are created or updated to provide an accurate record of pair locations, inter-connections and usage in accordance with

industry codes of practice and AS/ACIF009

- 9.4 Complete Cabling Completion Advice/TCA1 form
- 10 Monitor work activity
 - 10. Close supervision of cablers not holding
 - 1 appropriate registration for the task is maintained to ensure installation/maintenance activity is strictly in accordance with legislative requirements and industry standards for safety and network integrity including AS/ACIF008 and AS/ACIF009

Required Skills and Knowledge

Not applicable.

Evidence Guide

Assessment location and resources

Either

A workplace conducting the operations covered by this competency unit, equipment and resources relevant to the context of the work (See Range Statement) and support from a competent supervisor or mentor.

Or

A simulated environment with similar provisions which conforms to the Assessment Guidelines.

Critical evidence

Assessment candidates should produce evidence of the following:

Demonstration of termination systems at both distributor and outlet locations and at least one 50 pair copper cable, including accurate completion of installation records, drawing alterations and compliance forms.

Placement of cables on support structures and building faces for both internal and external locations.

Securing methods for above locations.

Work practices which avoid cable damage such as crushing, burning, kinking, sheath twist, cutting and nicking, bending radius.

Ability to read and interpret drawings related to cable layouts, outlet location, cable coding system and identifiers, distributor locations.

Conduct and interpret cable test results.

Correct interpretation and application of standards and regulations.

Skills and knowledge

Codes refer to the Skill and Knowledge Register included in this training package:

CA200 Cable Installation: Open

CA201 Cable Termination Products

CA202 Cable Conductor Identification Codes

CA210 Cable Support Systems

CA220 Cable Types

PS212 Read Plans and Specifications: General

PS213 Cable Record Systems: General

RE210 ACA Cabling Provider Rules, Cabler Registration, Rules and Regulations

SW210 Basic Switching Systems

TE210 Basic Telephony

Topics not covered in Skill and Knowledge Register:

Telecommunication hazard awareness

Range Statement

The following statements cover a wide range of circumstances. Assessment of candidates should be within the range that applies to the candidate's particular role or workplace.

This unit applies to the ACA Open Cabling Rule coverage for communications cabling installations applications to include larger commercial and industry installations involving many lines, multi-pair cables, backbone cabling, multi-story buildings and more complicated termination modules and distributors.

Building infrastructure

Includes but not limited to:

high voltage power

other services

availability and suitability of existing cabling trays and fixing systems.

Strategies to manage infrastructure include:

appropriate separations

fastening techniques

correct use of cable trays and support systems.

Remote power feed

Applies to telecommunications services which operate at above TNV (Telecommunications Network Voltage).

Regulatory environment

Overview **Telecommunications Act 1997**, ACA, ACIF, Labelling, Certified Components List (CCL) accredited registrars and registration.

Cabling environment

Indoor environments include locations such as:

ceilings

false ceilings

riser shafts

internal wall space

under floor

damp situations, and

within workstations.

Outdoor environments include:

cable installations on external walls and underground, and/or

aerial cabling on private and public property.

Underground cabling including shared trenches with electrical LV cables and/or other

utilities. Aerial cabling installations which may include the sharing of poles with LV/HV electrical power cables/terminations.

Cable support systems include:

suspension catenary wire

ducts

cable tray

line poles

pipes

pits

wall and island mounted patched and jumperable distributors including CDs, BDs, FDs, LDs.

Note: Cable trays may be galvanised steel or PVC: perforated low or high sided, single or multi channel. Cable ducts may be closed, open, PVC, metal, single or multiple channel.

Cable types

Copper twisted pair from 2 pair upwards but must include 2, 3 and 4 pair and at least one larger cable (20 pair or greater).

Note: Cable and topology may be chosen to suit a range of applications including analogue voice (3.4 kHz bandwidth), digital voice (64 kB/s) and digital (2 MB/s ISDN).

Cable identification

Cable conductor identification codes may be:

colour coded

banded

numbered

lettered.

Cable termination systems

Termination of at least one jumperable distributor (CD/BD) with a capacity of 100 pairs or greater. Termination of a non-jumperable distributor (LD). Termination of a patch panel.

Earthing and protection systems

Installation of protective earth(s) for over voltage and surge/spike suppression.

Installation of protective earth barriers for segregation, cable tray, duct and metal equipment enclosures.

Running of equi-potential bonding conductors to MEN (Multiple Earth Neutral) and use of earth stakes.

Installation of functional earth(s) including TRC and CES types to provide customer switching system facilities.

Earthing of screened cable, barriers and cable trays for the reduction/elimination of interference from electromagnetic, radio frequency and power sources.

Records include:

Cabling Completion Advice/TCA1 (sign off form).

Building, cabling and equipment location plans.

BD/CD and FD record books, LD record cards.

Labelling of patch panels, distributor verticals, distributor pairs, equipment closets and rooms.

Labelling of telecommunication outlets.

And in the future possibly NTD record cards.

Note: Record books and cards may be hard copy or software versions but must conform with AS/ACIF009.

Functional, protective and CES earthing

The three common types of earthing system used in customer premises for cabling systems.

Cablers must understand the features and application of each type.

Cable characteristics

This includes the electrical performance of the cable and its physical characteristics. Cabers must be able to identify the critical characteristics for each type of cable they use.

Label requirements

Industry regulations define the labelling requirements in detail. Cablers must meet these requirements whenever installing earthing.

Clearances and segregation:

Clearances and segregation requirements is defined in AS/ACIF009 (or its replacement).

Separations

The distance between communications cable and other services. This includes:

Low Voltage (LV)

High Voltage (HV) - Single core and HV Multi-core

Open terminations.

Spatial separations

The distance between communications cable and other required by regulations where no barrier is installed.

Barriers

Physical barriers installed when there is not enough space to achieve spatial separations.

Relevant legislation, codes, regulations and standards (or their replacements) include relevant components of:

ACA Technical Standards

AS/ACIF008, AS/ACIF009

SAA Communications Cabling Manual (Open)

AS/NZS 3000

Building Codes

The following statements cover a wide range of circumstances. Assessment of candidates should be within the range that applies to the candidate's particular role or workplace.

This unit applies to the ACA Open Cabling Rule coverage for communications cabling installations applications to include larger commercial and industry installations involving many lines, multi-pair cables, backbone cabling, multi-story buildings and more complicated termination modules and distributors.

Building infrastructure

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit specifies the outcomes required to produce ideation drawings from a concept and design brief, to capture the spirit of a product visually, using integral design elements and principles.
------------------------	---

Application of the Unit

Application of the unit	This unit supports the attainment of skills and knowledge required for competent workplace performance in furnishing operations of all sizes. Production of ideation drawings applies to an industry workplace or design studio environment and involves application of skills and knowledge at a supervisory equivalent level. These skills and knowledge are to be used within the scope of the individual's job and authority.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for production of ideation drawings	<p>1.1. Applicable OHS, legislative and organisational requirements relevant to producing ideation drawings are verified and complied with</p> <p>1.2. Design brief is reviewed, confirmed and clarified with appropriate personnel</p> <p>1.3. Type and quantity of ideation drawings to be produced are assessed from the design brief</p> <p>1.4. Drawing equipment is selected appropriate to work requirements and checked for operational effectiveness in accordance with manufacturers recommendation</p> <p>1.5. Communication with others is established and maintained in accordance with OHS requirements</p>
2. Produce ideation drawings	<p>2.1. Multiple concept drawings are produced in keeping with the design brief</p> <p>2.2. Images are represented as thumbnails exploring design ideas and to provide a sense of feeling for the product and materials used</p> <p>2.3. Human figures are included in the drawings to provide a sense of balance</p> <p>2.4. Scale ideation drawings are produced to roughly represent the detail of joints, sections or product details</p> <p>2.5. Specifications are added to the ideation drawings as reference points for working drawings</p> <p>2.6. Ideation drawings are assessed for their elements of design</p> <p>2.7. Ideation drawings are assessed for their principles of design</p> <p>2.8. Ideation drawings are modified according to the design assessment and design brief requirements</p> <p>2.9. Ideation drawing faults are recorded and reported to the appropriate personnel</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- draw designs
- make presentations
- source information
- collect, organise and understand information related to design requirements
- maintain accurate records
- communicate ideas and information
- sequence operations
- carry out work according to ohs practices
- maintain current knowledge of interior decoration and design techniques.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for producing ideation drawings
- organisational and site standards, requirements, policies and procedures for producing ideation drawings
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- elements and principles of design
- ergonomics and aesthetic values
- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- setup and operation of equipment
- computer programs
- product assembly techniques
- sketching and drawing
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively produce ideation drawings to establish the sense and look of a product in story form, working through the design process in readiness for the final working drawings • Effectively apply design elements and principles to the ideation drawings • Effectively produce ideation drawings in accordance with the design brief • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for producing ideation drawings • Communicate effectively and work safely with others in the work area
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to producing ideation drawings • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of

EVIDENCE GUIDE	
	<p>tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <ul style="list-style-type: none"> • Assessment may be applied under project related conditions (real or simulated) and require evidence of process • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances • Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements	<ul style="list-style-type: none"> • are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures • requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling, including lifting and carrying
Legislative requirements	<ul style="list-style-type: none"> • are to be in accordance with applicable legislation from all levels of government that affect organisational operation • requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
Organisational requirements	<ul style="list-style-type: none"> • may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Design brief	<ul style="list-style-type: none"> • is to include the aims, objectives, milestones for the design project, the point of reference for everyone, elements and principles of design and may include organisational or personal profiles, aims, target audience,

RANGE STATEMENT	
	budget, timeline, consultation requirements, colour requirements, image requirements and function
Appropriate personnel	<ul style="list-style-type: none"> may include but not be limited to trainers, supervisors, suppliers, clients, colleagues and managers
Ideation drawings	<ul style="list-style-type: none"> are to include freehand drawings which represent a product as a story and methodology to the design brief solution. These are often drawn as thumbnail sketches
Drawing equipment	<ul style="list-style-type: none"> may include but not be limited to drawing tables, colouring pencils, pens, pastels, paints, pencils, pens, technical drawing pens, computers and computer aided drafting (CAD) software packages
Communication	<ul style="list-style-type: none"> may include verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Concepts	<ul style="list-style-type: none"> are to include ideas generated to respond to the design brief through both ideation drawings or sketching and written explanation
Thumbnails	<ul style="list-style-type: none"> are to include a series of quick line drawings which explore and demonstrate the design ideas in basic terms, these are completed in freehand and can also be used to provide detail of parts in rough scale
Specifications	<ul style="list-style-type: none"> are to include the measurements, procedures by which a product is constructed and materials to be utilised
Working drawings	<ul style="list-style-type: none"> may include but not be limited to drafted technical drawings or drawings produced on computer using CAD software packages. These usually contain project specifications
Elements of design	<ul style="list-style-type: none"> may include but not be limited to line, shape, form (geometric or organic), texture, colour, and function
Principles of design	<ul style="list-style-type: none"> may include but not be limited to balance, proportion (symmetry, asymmetry), harmony,

RANGE STATEMENT	
	contrast, pattern, movement, rhythm, unity, style, focus, scale, dominant, sub dominant or subordinate relationship, emphasis, proximity, alignment, space, anthropometry, ergonomics, arrangement, workload, materials handling capacity, skills, control, equipment capabilities, aesthetic relations, tension and development methods
Records and reports	<ul style="list-style-type: none"> may include but not be limited to the sketching and drawing method, product type, size, inspection and labelling outcomes, storage locations, quality outcomes, hazards, incidents or equipment malfunctions

Co-requisite units

Co-requisite units		

LMTGN4002A Participate in product engineering

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit covers the skills and knowledge required to participate in product engineering in a textiles, clothing and footwear (TCF) enterprise.

Application of the Unit

Application of the Unit

This unit applies to participating in product engineering in a TCF workplace where judgement may be required in planning and selecting appropriate processes or procedures for self and others. Work may be conducted in a variety of environments, including operational workplace activities, restricted space, hazardous, controlled or exposed conditions.

TCF production areas may include:

- textile production
- clothing production
- footwear production
- early stage wool processing
- cotton ginning
- leather production
- millinery
- canvas and sails production
- laundry operations
- dry cleaning operations

Product engineering may occur in relation to repetitive production runs, short runs and quick changes and can relate to fabrics, fibres, yarns, design varieties, weaves, dyes, finishes, etc.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

The unit is applied according to OHS and workplace practices of the enterprise, which may include:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team/section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling

This unit requires the application of skills associated with communication to interpret production specifications, calculate costs, maintain records and prepare reports. Initiative and enterprise, planning and organising and problem solving are required to examine production options and determine required variations to

specifications, processes and schedules. This unit also requires an ability to learn and apply new information. Self management skills are used to ensure work meets quality and work standards.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
1 Identify and confirm specifications	1.1 Sample material or product is examined to confirm structure 1.2 Detail of structure or composition is documented, where required, to assist in production planning
2 Identify options for production	2.1 Evaluation of material or product structure is conducted to identify options for production 2.2 Options are assessed to determine most effective and efficient <i>method of production</i> , ensuring highest quality and yield from raw materials, and ease of production 2.3 Options and recommendations are documented in accordance with workplace practices and <i>OHS practices</i>
3 Identify potential machine or production changes	3.1 Existing resources, machines, production techniques and scheduling arrangements are examined in relation to the production requirements 3.2 Any potential requirements for change are identified and documented in accordance with workplace practices
4 Prepare <i>cost</i> estimates	4.1 Material requirements and economic batch sizes are identified 4.2 Labour hours, times and other statistics required are identified and estimates made 4.3 Available machine hours are determined and estimates made, where required 4.4 Overall costs are estimated and documented in accordance with workplace practices
5 Maintain records	5.1 Production planning records are maintained and reports prepared, where necessary, in accordance with workplace practices

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit

Demonstrates knowledge of:

- machines and their capabilities
- quality assurance processes; production processes and software
- products produced by the workplace and material or fabric structure (techniques)
- work and workplace organisation systems
- safety and environmental aspects of relevant workplace activities
- OHS practices, including hazard identification and control measures
- quality practices
- workplace practices
- recording and reporting practices

Demonstrates skills to:

- determine structure and composition of material or product
- make calculations, interpret and use data from various sources
- read, interpret and follow information on work specifications, standard operating procedures and work instructions and other reference material
- maintain accurate records
- communicate within the workplace
- sequence operations
- meet specifications
- clarify and check task-related information
- carry out work according to OHS practices

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence to be considered	Demonstrates skills and knowledge to: <ul style="list-style-type: none">• confirm specifications• assess options for method of production• establish potential machine and production changes• estimate costs• apply OHS practices in production operations• maintain accurate records
Consistency in performance	Consistently applies skills and knowledge when: <ul style="list-style-type: none">• organising work• completing tasks• identifying improvements• using workplace practices• using OHS practices• recording and reporting accidents and incidents• assessing operational readiness of equipment used and work processes• recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions• completing work systematically with attention to detail without damage to goods and equipment
Resource implications	Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and OHS practices.
Context for assessment	Assessment may occur on the job or in an appropriately simulated environment.
Interdependent Assessment	This unit may be assessed independently or in combination with other relevant units.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Legislative/regulatory requirements All work must comply with relevant Federal and State or Territory legislative or regulatory requirements.

Method of production may include:

- JIT
- VAM
- quick response
- quality circles,
- team processes
- benchmarking

Cost estimating may include:

- written bill of labour, order of work or plant sample

OHS practices OHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and may include:

- manual handling techniques
- standard operating procedures
- personal protective equipment
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other OHS practices relevant to the job and enterprise

Unit Sector(s)

Sector All

MEA101B Interpret occupational health and safety practices in aviation maintenance

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit of competency covers the competencies required to comply with occupational health and safety (OHS) regulations and work safely in aircraft maintenance areas and incorporates the requirements of NOHSC:7025(1998) Generic Competency A. Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen Aircraft Maintenance Engineer licence under CASR Part 66, in accordance with the licensing provisions in the Assessment Guidelines.

Application of the Unit

This unit requires application of OHS practices relevant to aviation maintenance workplaces in order to ensure own safety and that of others in the workplace.

Applications include the performance of maintenance activities on fixed or rotary wing aircraft on the flight line or tarmac, in the hanger, including during functional testing of systems and in the workshop environment.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|---|--|
| 1. Interpret safe work practices | <p>1.1. <i>Relevant regulatory and enterprise policies and procedures</i> that identify the <i>requirements for conduct of safe work</i> are interpreted and understood</p> <p>1.2. Workplace housekeeping measures are identified in accordance with standard enterprise procedures</p> <p>1.3. Use of <i>personal protective equipment</i> and clothing is identified and understood and maintenance measures are interpreted and understood according to regulatory and enterprise procedures</p> <p>1.4. Safety signs and symbols are interpreted and understood, and their directions observed in accordance with enterprise and safety requirements</p> |
| 2. Interpret reporting procedures for workplace hazards | 2.1. Workplace hazards are correctly identified and reporting procedures interpreted and understood according to standard enterprise procedures |
| 3. Interpret emergency procedures | <p>3.1. Method of contacting the appropriate personnel and emergency services in the event of an accident is appropriate to enterprise requirements</p> <p>3.2. Emergency and evacuation procedures are interpreted and understood to ensure safe conduct of personnel according to enterprise procedures</p> <p>3.3. Use of emergency equipment is correctly identified to comply with regulatory or enterprise procedures</p> |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- correctly interpreting OHS regulations, instructions and procedures relevant to the range of applications listed in the Range Statement
- recognising and adhering to aerospace industry signage, including aircraft systems plumbing markings
- recognising and reporting to designated personnel hazardous situations in the workplace
- risk assessment and control
- selecting appropriate protective clothing for the maintenance activity being undertaken
- correct interpretation of enterprise and regulatory emergency procedures
- correct identification and operation of enterprise/industry specific workplace emergency equipment
- application of first aid procedures, such as DRABC

Required knowledge

Look for evidence that confirms knowledge of:

- the applicable sources of OHS requirements and procedures and their application in workplace situations as listed in the Range Statement
- how to recognise and report hazardous situations in the workplace
- methods of risk assessment and control
- the preferred order of ways to control risks (known as the hierarchy of control)
- work operations to control risks, e.g. permit to work systems, such as confined space entry and isolation procedures
- how to determine requirements for personal protective equipment associated with maintenance activities
- the correct selection and use of workplace emergency equipment
- action to be taken in emergency situations
- first aid procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to correctly interpret and apply all relevant OHS procedures and standard processes in the aviation maintenance environment.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>This unit must be related in its assessment and application to all other units. The relationship between general workplace OHS requirements, as included in enterprise procedures, and the relevant federal and/or state and territory legislation must be clearly linked.</p> <p>Evidence of knowledge and skills associated with the application of OHS standards is required to supplement evidence of ability to interpret and apply specific safe practices in the workplace.</p> <p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency under routine supervision on at least one item against each Group 1 to 10 (Groups 11 and 12 must also be included if applicable to the enterprise) as listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry. The relationship between general workplace OHS requirements, as included in enterprise procedures, and the relevant federal and/or state and territory legislation must be clearly linked.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. Should a demonstration of skill application be necessary, the candidate must have access to all necessary tools, equipment, materials and relevant documentation. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Method of assessment	
Guidance information for assessment	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Note</p>	<p>Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide</p>
<p>Requirements for conduct of safe work</p>	<p>The requirements for conduct of safe work may cover:</p> <ol style="list-style-type: none"> 1. Applying general duty of care under OHS legislation and common law 2. Fluid and gas high and low pressure systems, including fluid handling (for example, hydraulic fluids, lubricants, compressed air, nitrogen and oxygen) 3. Fuelling/defuelling and working on fuel systems, including confined space entry 4. Using and handling chemicals, including solvents, battery acids 5. Electrical systems, outlets and leads 6. Noise hazard areas and aircraft safety zones 7. Aircraft handling, towing, jacking, ground equipment operation and signage 8. Personal protection 9. First aid 10. Housekeeping and cleaning, waste disposal and FOD prevention practices and procedures 11. Aircraft strobe lighting 12. Ionising, non-ionising radiation equipment
<p>Application</p>	<p>Application of this unit of competency relates to all aviation maintenance workplace environments</p>
<p>Relevant regulatory and enterprise policies and procedures</p>	<p>Relevant regulatory and enterprise policies and procedures may be found in:</p> <ul style="list-style-type: none"> • Commonwealth, State and Territory OHS Acts, regulations and codes of practice, including regulations and codes of practice relating to hazards present in the workplace or industry • organisational safety manuals that specify provisions

	<p>relating to roles and responsibilities of health and safety representatives and/or OHS committees and provisions relating to OHS issue resolution</p> <ul style="list-style-type: none"> • maintenance organisation manual • procedures manuals • work instructions • relevant Defence Instructions • Civil Aviation Safety Regulations
Personal protective equipment and clothing requirements	<p>Personal protective equipment and clothing requirements may be found in:</p> <ul style="list-style-type: none"> • MSDS • safety manual • procedures manual • maintenance manual • work instructions • relevant defence instructions
Workplace hazards	<p>Workplace hazards are correctly identified through:</p> <ul style="list-style-type: none"> • checking equipment or the work area before work commences and during work • workplace inspections • housekeeping

MEA105C Apply quality standards applicable to aviation maintenance processes

Modification History

Additional knowledge requirements regarding inspection - units are equivalent.

Unit Descriptor

This unit of competency is applicable to all Aeroskills Maintenance training pathways. It covers the competencies required to correctly apply quality standards applicable to the maintenance of aircraft and aircraft components, either individually, or as a member of a team. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in the Assessment Guidelines.

Application of the Unit

This unit requires application of quality standards in the performance of aviation maintenance activities.

Applications include flight line/tarmac, hangar and workshop maintenance tasks.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B Interpret occupational health and safety practices in aviation maintenance

MEA107B Interpret and use aviation maintenance industry manuals and specifications

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

- | | |
|---------------------------------|--|
| 1 Interpret quality standards | <ul style="list-style-type: none"> 1.1 Standards or specifications set out in maintenance documents and process specifications are identified and interpreted 1.2 Enterprise quality requirements are identified and confirmed |
| 2 Apply quality standards | <ul style="list-style-type: none"> 2.1 Standards are applied appropriately for individual and team-related activities 2.2 Defects within the quality system are detected and reported in accordance with standard procedures 2.3 Documentation is handled and completed accurately and clearly to enable information to be easily read or interpreted |
| 3 Interpret quality improvement | <ul style="list-style-type: none"> 3.1 Performance monitoring measures are identified to ensure product or service standards are maintained or improved |

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- typical quality systems and their operation in the workplace
- workplace quality documentation such as quality manuals, procedures manuals, work instructions and worksheets
- the relationship between the quality system and OHS requirements, such as workplace hazard reporting
- the relationship between the quality system and identification systems for aircraft hardware, materials and components
- the role of inspection in maintaining aircraft continuing airworthiness and reliability, including ageing aircraft inspection requirements
- how inspection programs are derived and developed
- individual and organisational responsibility associated with 'on condition' maintenance
- inspection terminology and standards of inspection with regard to the quality system
- identifying potential areas for inspection process improvement as a quality system activity

Look for evidence that confirms skills in:

- the application of workplace hazard reporting and identification procedures
- interpretation and application of information from a range of industry manuals, in particular, amendment status block information, amendment procedures, specification/modification leaflet applicability and changes to drawings
- the correct identification of aircraft hardware, materials and components by marking, part number, size and shape
- being able to differentiate the elements which constitute the system and able to identify processes, workplace regulations and ISO 9000 compliant documentation and specifications within the workplace environment

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to interpret and apply quality systems in the workplace and interface quality requirement with OHS procedures and identification systems for aircraft hardware, materials and components.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The relationship between broader quality standards requirements and service specific procedures must be clearly linked. It is essential that actual and potential defects within the quality system are considered, together with ongoing abnormalities of equipment or systems as they affect the quality system.</p> <p>Evidence of underlying knowledge and skills associated with the general application of quality standards is required to supplement evidence of ability to integrate these processes in conjunction with other personnel in the workplace.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision in both single and multiple tasks involving more than one person. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment, or by use of simulated activities, covering the application of quality standards in situations within the aircraft maintenance environment.</p> <p>This unit must be related in its assessment and application to all other units.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

- | | |
|---|---|
| <p>1. Identify and access industry manuals, specifications and drawings</p> | <p>1.1. <i>Appropriate manuals</i> are identified and accessed for the type of aircraft or component to be maintained</p> <p>1.2. Amendment status is clearly established to ensure the correct specifications and procedures are applied</p> |
| <p>2. Interpret information</p> | <p>2.1. Relevant chapter or section of manual or drawing is located in relation to the work to be carried out</p> <p>2.2. Information is interpreted and procedures to be followed are accurately determined</p> |
| <p>3. Apply information</p> | <p>3.1. Work steps are correctly identified in accordance with manual or specification procedures</p> <p>3.2. All correct sequencing and adjustments are interpreted in accordance with information contained in industry manuals or specifications</p> |
| <p>4. Amend manuals, specifications or drawings</p> | <p>4.1. Manual, specification or drawing changes and/or amendments are incorporated and documented correctly in accordance with <i>statutory regulations and/or enterprise procedures</i></p> |
| <p>5. Store manuals, specifications or drawings</p> | <p>5.1. Manuals, specifications or drawings are stored appropriately to ensure prevention of damage, ready access and updating of information, when required, in accordance with regulatory and/or enterprise procedures</p> |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- accessing and interpreting information from industry manuals, including paper-based, microfiche or computer-based media, relating to work activities, including determination of manual amendment status, knowledge of manual structures and locating relevant information/instructions for work activity
- amending industry manuals to reflect current/approved amendment status
- identifying and interpreting information from drawings and diagrams in aircraft maintenance manuals, including component scaling, section, assembly, location, drawing applicability and amendment status from the title block
- correct handling and storage of drawings, manuals and industry media, i.e. microfiche and digital formats
- calculating allowable dimension variations on a component from information in drawing title blocks and drawings
- calculating dimensions from drawings for the purpose of manufacturing aircraft components and hardware

Required knowledge

Look for evidence that confirms knowledge of:

- the types of industry manuals used in aviation maintenance and types of media
- requirements for custody and upkeep of industry manuals
- techniques for obtaining and applying data contained in industry manuals

Evidence Guide

<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to correctly interpret the information in industry manuals and specifications and apply that information during the performance of aviation maintenance tasks.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The transferability of general manual interpretation and use in accordance with relevant aircraft publications/maintenance regulations/orders and standards and practices must be clearly established.</p> <p>Evidence of underlying knowledge and skills associated with the interpretation and use of manuals is required to supplement understanding of the structure and regulatory requirements associated with the aircraft maintenance environment in this area.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the Unit of Competency are being achieved under routine supervision on at least one manual from each of Groups 1, 2 and 3 listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry .</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment, or by use of simulated activities, covering the interpretation and use of Enterprise Aviation manuals, aircraft publications, process sheets, specifications and drawings applicable to the aircraft maintenance environment.</p> <p>This unit must be linked in its assessment and application to those that apply to the actual maintenance of aircraft.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Note</p>	<p>The Range Statements below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide</p>
<p>Types of manual</p>	<p>Appropriate manuals may include:</p> <ol style="list-style-type: none"> 1. Aircraft publications, maintenance instruction manuals, process specifications, servicing or service bulletins or structural repair manuals 2. Tooling or equipment manuals, manufacturer's manuals, standard practices, enterprise aviation regulations and publications 3. Illustrated parts catalogues, aircraft wiring manuals or drawings
<p>Statutory regulations and/or enterprise procedures</p>	<p>Statutory regulations and/or enterprise procedures may include:</p> <ul style="list-style-type: none"> • civil aviation regulations or civil aviation safety regulations • applicable defence regulations and instructions • maintenance organisation manual • standing instructions
<p>Application</p>	<p>Application of this unit may relate to both on-aircraft and workshop-related activities in the aircraft maintenance environment</p>

Modification History

Release 3 - Typographical error corrected in Required Skills - equivalent

Release 2 - Minor formatting and editorial changes made. Prerequisite unit version updated.

Unit Descriptor

This unit of competency is applicable to all Aeroskills training pathways. It covers the competencies required to correctly interpret, use and complete documentation associated with aircraft and aircraft component maintenance and manufacture. Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in the Assessment Guidelines.

Application of the Unit

This unit requires application of skills and knowledge relating to the requirements for the completion and processing of documentation during, and on completion of, aviation maintenance activities.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA105C Apply quality standards applicable to aviation maintenance processes

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|---------------------------------------|--|
| 1. Interpret documentation | 1.1. <i>Documentation</i> requirements are determined and accessed, where necessary, from relevant sources in accordance with regulatory and enterprise procedures |
| | 1.2. Information contained in existing documentation is interpreted correctly and, where necessary, requirements carried out in accordance with <i>regulatory and enterprise procedures</i> |
| 2. Complete documentation | 2.1. Information requirements for new documentation or updating of existing documentation are determined to allow for accurate completion of records |
| | 2.2. Documentation is completed accurately and clearly to enable information to be easily read or interpreted |
| 3. Store and distribute documentation | 3.1. All procedures for storing and distributing documentation are followed to ensure ready access when required in accordance with regulatory and enterprise procedures |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- identification and accurate completion of industry documentation associated with aircraft/aircraft component maintenance, repair, overhaul and modification activities, industry regulatory reports and OHS hazard reporting formats
- handling industry documentation appropriately to ensure that records are accurately processed, forwarded and/or stored as required by industry and enterprise regulations

Required knowledge

Look for evidence that confirms knowledge of:

- maintenance practice terminology and the associated relationship with industry documentation, i.e. scheduled and unscheduled servicing, aircraft/component lifing, i.e. on condition, life expired, throwaway, repair and overhaul

Evidence Guide

<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to correctly complete and process maintenance documentation applicable to maintenance tasks that are being performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that information generated in the process of completing paperwork is in a form which is acceptable to the workplace environment and regulatory requirements in accordance with the relevant aircraft publications/maintenance regulations/orders and standards and practices.</p> <p>Evidence of underlying knowledge and skills associated with the interpretation and completion of paperwork is required to supplement evidence of appropriate levels of literacy and numeracy, associated with presenting clear and concise information.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on at least one type of documentation from each of Groups 1 and 2 from the Range Statement.</p> <p>This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry .</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment, or by use of simulated activities, covering the interpretation, use and completion of aircraft maintenance documentation in the maintenance environment in accordance with relevant aircraft publications/maintenance regulations/orders and standards and practices.</p> <p>This unit must be linked in its assessment and application to those that apply to the actual maintenance of aircraft.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Note	Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide
Documentation	<p>Documentation may include:</p> <ol style="list-style-type: none"> 1. Maintenance logs, overhaul test/check sheets, job history sheets, traveller cards, maintenance reports, irregularity reports, serviceable tags or removal tags 2. MSDS or material record sheets
Regulatory and enterprise procedures	<p>Regulatory and enterprise procedures may be found in:</p> <ul style="list-style-type: none"> • CARs or CASRs • maintenance organisation manual • procedures manual • work instructions • quality manual • safety manual • applicable defence regulations and instructions • standing instructions
Application	Application of this unit may relate to on-aircraft and workshop-related activities in the aircraft maintenance environment

MEA109B Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Modification History

Minor formatting and editorial changes made. Prerequisite unit version updated.

Unit Descriptor

This unit of competency is applicable to all Aeroskills Maintenance training pathways. It covers the competencies required to perform basic hand skills, apply standard trade practices and fundamentals relevant to the maintenance of aircraft and aircraft components. Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in the Assessment Guidelines.

Application of the Unit

This unit requires application of basic hand skills and standard trade practices in the maintenance of aircraft and aircraft components.

Applications include the use of hand and power tools, and the selection and use of aircraft hardware.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA105C Apply quality standards applicable to aviation maintenance processes

MEA108B Complete aviation maintenance industry documentation

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|-----------------------------------|---|
| 1. Assess task requirements | 1.1. Available information from relevant documentation and/or other sources, including communication with other personnel, is interpreted and assessed to determine the task and tooling requirements |
| 2. Select tools and/or equipment | 2.1. Hand and/or power tools or equipment are selected for appropriate application to the required task
2.2. All tools and/or equipment to be used are checked for condition or calibration, where necessary
2.3. Unsafe or faulty tools or equipment are identified and marked for repair according to enterprise procedures |
| 3. Use tools and/or equipment | 3.1. Tools and/or equipment are used according to standard practices to ensure the correct outcome is produced
3.2. Tools and/or equipment use is carried out without damage to components or tooling in a safe and efficient manner
3.3. Operational maintenance of tools or equipment is undertaken according to standard workshop procedures |
| 4. Store tools and/ or equipment | 4.1. Tools and/or equipment are stored safely and securely in accordance with enterprise procedures |
| 5. Apply standard trade practices | 5.1. Simple items are manufactured using basic engineering hand skills
5.2. Common types of aircraft attachment hardware are correctly selected and used
5.3. Common types of safety locking devices and fasteners are correctly selected and used
5.4. Aircraft components, devices and hardware are lockwired in the correct manner, using the appropriate wire gauge
5.5. Common types of aircraft connectors and plumbing are accurately assembled or connected |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- the correct identification, inspection of, application, use and storage of general and purpose specific hand tools (i.e. spanners, screwdrivers, pliers, hammers, cutting devices, files, punches, drills and marking out tools) that may be found in an aircraft engineering workshop or hangar
- the correct identification, inspection of (including calibration), application, use and storage of precision measuring tools (i.e. micrometers, vernier instruments, feeler gauges, go/no-go gauges) that may be found in an aircraft engineering workshop or hangar. Reading instrument scales must be clearly demonstrated during application of instruments to ensure compliance with specifications
- the correct identification, inspection of, application, operation and storage/servicing of portable and fixed power and machine tools (i.e. drills, presses, grinders, shears, pan breaks) that may be found in an aircraft engineering workshop or hangar
- identification, inspection and use of lubrication equipment
- determination of correct lubricants for specified applications
- identification of common ferrous and non-ferrous aircraft materials
- identification of common aircraft composite and non-metallic materials (other than wood)
- identification of aircraft hardware by markings, part numbers, size, shape and material
- the installation of aircraft hardware using standard practices/techniques to ensure safe security and includes:
 - minimum thread engagement
 - split pinning
 - lockwiring
 - application of locking compounds
 - locking tabs, spring washers
 - lock nuts
- the installation of aircraft hardware using tightening, torquing and tensioning techniques. Calculating setting, reading scales and setting up of torque wrench and/or tensioning devices must be clearly demonstrated before application of wrench or device
- identification of various types of aircraft rigid and flexible plumbing and their connectors
- identification of aircraft control cables and related cable system hardware

Required knowledge

Look for evidence that confirms knowledge of:

- types of standard aircraft hardware and methods of identification, including bolts,

- nuts, washers, pins (cotter, tapered), and fasteners (rivets and camlocs)
- materials from which hardware is manufactured and its applications, including plain, corrosion resistant and temperature/heat resistant
- types of safety locking devices and their application
- common ferrous and non-ferrous aircraft materials, heat treatment and testing
- characteristics and properties of common composite and non-metallic materials other than wood
- types of aircraft cable, turnbuckles, end fittings, tensiometers, pulleys and cable system components, aircraft flexible control systems
- types and characteristics of lubricants
- types and uses of lubrication equipment
- fits and clearances
- hand and power tool storage and maintenance requirements
- tool calibration requirements
- OHS requirements relation to the use of hand and power tools

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to use aviation maintenance hand and power tools to lay out and fabricate simple items, correctly assemble items and apply safety locking devices.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>This unit must be linked in its assessment and application to those units that apply to actual maintenance of aircraft. It is essential that all OHS requirements are met and understood.</p> <p>Evidence of knowledge about how tools and equipment are selected, used and maintained is essential. The ability to manipulate tools and equipment correctly in the performance of tasks is necessary to demonstrate transferability of hand skills across a variety of applications.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on the tasks listed in Groups 1 to 4 in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment, or by use of simulated activities, using tools and equipment specified by aircraft manuals as well as general purpose tools and test equipment found in most routine situations. It is expected that the person operating these tools and equipment would be able to demonstrate a broad application of their skills.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Note	<p>Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide</p>
Application of competency	<p>The competency applies to the selection and use of hand and power tools and equipment associated with on-aircraft or workshop related activities in the aircraft maintenance environment that involve:</p> <ol style="list-style-type: none"> 1. Laying out and fabricating simple items from common aircraft materials 2. Assembling items using a representative range of common types of aircraft attachment hardware for which relevant fits and clearances, appropriate safety locking devices and fasteners, including lockwire, are correctly selected and applied 3. Assembling/connecting a range of common aircraft connectors and plumbing, applying safety locking devices, where applicable 4. Assembling/connecting aircraft control cables and applying safety locking devices, where applicable
The use of tools and equipment	<p>The use of tools and equipment includes the related manipulative skills required to perform maintenance</p>
Application	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual or team-related activities
Procedures and requirements	<p>Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise</p>

Unit Sector(s)

Aviation maintenance

Co-requisite units

Not applicable

MEA270A Lay out avionic systems

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit is part of Diploma and Advanced Diploma training pathways. It covers the basic design and layout to block diagram level of avionic systems.

Application of the Unit

This unit requires application of basic knowledge of avionic system function, design and layout.

Applications include typical electrical and instrument systems.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

1. Lay out to block diagram level an aircraft electrical system
 - 1.1. The *functions of aircraft electrical systems* are identified
 - 1.2. *Aircraft electrical system components* are identified
 - 1.3. A typical aircraft electrical system is sketched at block diagram level
 - 1.4. Aircraft electrical system maintenance requirements are identified
2. Lay out to block diagram level an instrument measuring system
 - 2.1. The various *instrument measuring systems* are identified
 - 2.2. *Measuring system components* are identified
 - 2.3. A typical instrument measuring system is sketched at block diagram level
 - 2.4. Measuring system maintenance requirements are identified
3. Lay out to block diagram level a pressurisation control system
 - 3.1. *Pressurisation control system components* are identified
 - 3.2. A typical pressurisation control system is sketched at block diagram level
 - 3.3. Pressurisation control system maintenance requirements are identified
4. Lay out to block diagram level an aircraft oxygen system
 - 4.1. The various *types of oxygen system* are identified
 - 4.2. *Oxygen system components* are identified
 - 4.3. A typical oxygen system is sketched at block diagram level
 - 4.4. Oxygen system maintenance requirements are identified

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- sketching typical avionic systems at block diagram level

Required knowledge

Look for evidence that confirms knowledge of:

- DC and AC power generation, control and distribution
- aircraft electrical systems and their components
- aircraft electrical system maintenance requirements
- the atmosphere
- use of synchros and servos
- basics of analogue electronics
- aircraft instrument measuring systems and their components
- aircraft instrument measuring system maintenance requirements
- air conditioning and pressurisation systems
- air conditioning and pressurisation system maintenance requirements
- types of aircraft oxygen systems and their applications
- oxygen system maintenance requirements and related cleanliness and safety precautions

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to identify avionic systems and their components, lay out typical systems at block diagram level and identify related maintenance requirements. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed off the job in a training environment equipped to provide exposure to the range of system types and components. The candidate must have access to all tools, equipment, materials and documentation required and must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials. The assessment environment should not disadvantage the candidate.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. MEA272B Apply basic scientific principles and techniques in avionic engineering situations

Modification History

Additional knowledge requirements - equivalent to previous unit.

Unit Descriptor

This unit of competency covers the application of basic scientific principles and techniques to appropriate avionic engineering situations involving component and system design, modification and engineering support of maintenance.

Application of the Unit

This unit requires application of basic avionic scientific principles and techniques as a member of a design and development team or similar in support of the design and development of avionic applications, or as a member of a maintenance organisation engineering department.

Applications include identifying the range of basic avionic scientific principles and techniques relevant to avionic engineering, selecting avionic principles and techniques for particular applications, applying avionic principles and techniques appropriately to engineering tasks, and quoting results appropriately.

|--|---|
| <p>1 Research and identify the range of basic scientific principles and techniques relevant to avionic engineering</p> | <p>1.1 Appropriate <i>sources of information</i> are researched, applications examined and the basic scientific principles relating to avionic engineering reported</p> <p>1.2 Basic avionic techniques and associated technologies, software and hardware required to implement scientific principles relating to avionic engineering situations are identified</p> |
| <p>2 Select basic avionic scientific principles and techniques relevant to particular avionic engineering applications</p> | <p>2.1 The relevant basic avionic scientific techniques and principles for particular <i>avionic engineering</i> situations are selected</p> <p>2.2 The relevant basic aeronautical techniques and associated technologies, software and hardware for particular avionic engineering situations are selected</p> |
| <p>3 Apply the relevant basic avionic scientific principles and techniques</p> | <p>3.1 The <i>basic avionic scientific principles</i> are applied in a consistent and appropriate manner to obtain any required solution</p> <p>3.2 Appropriate calculations and coherent units are used in the solution of engineering calculations</p> <p>3.3 Significant figures are used in engineering calculations</p> <p>3.4 The basic avionic techniques and associated technologies, software and hardware are applied in a consistent and appropriate manner to obtain required solutions</p> |

4 Quote the results of the application of the basic avionic scientific principles and basic techniques

4.1 An appropriate style is used to quote solutions for applications involving engineering calculations

4.2 An appropriate style is used to quote solutions for applications not involving engineering calculations

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- physics for electronics:
 - units and measurements
 - magnetic force
 - vectors
 - electric fields and potential
 - electric current and resistance
 - capacitance
 - work, power and energy
- analogue electronics:
 - negative feedback amplifiers
 - differential amplifiers
 - operational amplifiers
 - amplifier frequency response
 - thermal circuits/heat exchangers
 - active filters
 - fault-finding
- digital electronics:
 - characteristics of digital systems
 - number systems
 - Boolean algebra
 - logic circuits
 - logic families
 - construction and testing techniques
 - flip flop circuits
 - analogue to digital conversion
 - digital to analogue conversion
 - timing and control
 - combinational logic circuits
- circuit theory:
 - Kirchhoff's Current and Voltage Laws
 - Thevenin's Network Theorem
 - Norton's Network Theorem
 - Superposition Network Theorem
 - inductance, capacitance and resistance (LCR) series circuit analysis
 - LCR parallel circuit analysis
 - series and parallel resonance
- electrical systems:

- DC and AC circuit design principles
- generators and motors
- inverters
- power supply, transformer, rectifier, filter and regulator
- solenoids
- circuit protection
- wiring cables and looms
- aerodynamics:
 - Bernoulli's Theorem
 - the atmosphere
 - aerodynamic forces (lift, drag, weight and thrust)
 - stability and control (to a level not requiring the application of calculus)
- thermodynamics – heat transfer principles (conduction, convection and radiation)
- instruments:
 - airspeed measurement
 - altitude measurement
 - attitude indication
 - measurement of quantity, flow, temperature, pressure and position
- control concepts and data communications:
 - servo and synchronous systems and components
 - data communication definitions and terminology
- communications:
 - radio transmission and modulation
 - radio reception
 - microphones, amplifiers and speakers
 - transmission lines and antennas
- pulse:
 - antennas
 - waveguides
 - transmitters/receivers
 - displays
- light, sound and vibration:
 - wave behaviour – standing vs travelling waves, transverse and longitudinal
 - light – reflection, absorption, refraction, diffraction, spectrum, infrared, visible, ultraviolet, transmission medium and engineering applications
 - sound – pitch, frequency, intensity (power), decibel scale, 'noise dose', spectrum, infrasound, audible, ultrasound, speed, natural frequency, resonance, transmission medium and engineering applications
 - vibration – sources, balancing, shaft alignment, measurement, damping and engineering applications

- appropriateness of calculations
- fundamental and derived quantities
- the procedure for carrying out dimensional analysis
- the concept of significant figures
- the uncertainty of computations based on experimental data
- the procedures for determining the significance of figures in calculations
- the procedures for estimating errors in derived quantities

Look for evidence that confirms skills in:

- selecting appropriate basic avionic scientific principles to suit specific applications
- selecting appropriate basic avionic techniques and associated technologies, software and hardware to suit specific applications
- applying basic avionic scientific principles to particular engineering situations
- applying and manipulating appropriate formulas for applications involving engineering calculations
- applying appropriate calculations to engineering situations
- checking the validity of equations using dimensional analysis
- applying basic avionic techniques and associated technologies, software and hardware in a manner appropriate to the application and identified scientific principles
- referring solutions to the original aim of the application
- quoting solutions in appropriate units, using appropriate significant figures
- quoting limitations of solutions, due to assumptions, scientific principles and techniques used
- presenting solutions referring to the original aim of the application

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply basic scientific principles and techniques in avionic engineering situations.</p> <p>This includes working individually and as part of a team and recognising and complying with normal control procedures on engineering projects.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
<p>Method of assessment</p>	<p>This unit could be assessed in conjunction with any other units associated with applying basic scientific principles and techniques in avionic engineering situations.</p>
<p>Guidance information for assessment</p>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Sources of information</p>	<p>Sources of information include:</p> <ul style="list-style-type: none"> • reference texts • manufacturer catalogues and industrial magazines • international aerospace organisation publications • websites • use of phone, email and fax information gathering
<p>Avionic engineering</p>	<p>Avionic engineering refers to:</p> <ul style="list-style-type: none"> • the engineering discipline concerned with the conceptual development, research, design, manufacture, implementation, installation, commissioning and maintenance of aerospace electrical, instrument, radio and electronic systems and components and related test equipment for civil and military applications
<p>Basic avionic scientific techniques and principles</p>	<p>Candidates should apply appropriate basic techniques supported by their mathematical skills and introductory knowledge of scientific principles to design, manufacturing, commissioning and maintenance-related tasks and projects relating to:</p> <ul style="list-style-type: none"> • electrical systems and related wiring and components (power generation, distribution, control interfaces with hydraulic and pneumatic systems, and caution and warning systems) • mechanical and electro-mechanical flight instruments and indication systems (quantity, pressure, temperature and position) and components • electronic systems and components (communications, radio navigation, pulse, display, automatic flight control, flight management and engine management) • automatic test stations, adapters and software <p>The applications may require the use of one or two basic avionic scientific principles together with a fundamental mathematical calculation leading to process, resources and system choices from a limited range of options.</p>

	<p>Basic techniques include:</p> <ul style="list-style-type: none">• basic hand and power tool operations• machining• fitting• welding• moulding• fabricating• wiring and programming techniques

MEA273A Select and test avionic engineering materials

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit of competency covers selecting appropriate materials and materials and components tests for avionic engineering applications.

Application of the Unit

Applications of this unit include selecting engineering materials and materials tests; sourcing materials data; ensuring appropriate performance and physical standards for avionic applications; documenting materials tests; ensuring calibration standards; and interpreting and documenting materials data sheets, as appropriate for mass production, batch production, jobbing shop and prototyping applications.

Activities may be performed as a member of a design and development or engineering support team.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

1. Identify classes of materials, based on properties and materials tests relevant to avionic engineering
 - 1.1. *Classes of materials, based on properties*, required for particular *avionic engineering* applications are identified
 - 1.2. Material properties are related to common production and construction methods and processes
 - 1.3. Common characteristics, faults or flaws in materials and components or product in particular engineering applications are identified
 - 1.4. Test methods for materials and components or product in particular engineering applications are identified
 - 1.5. Specific industrial test standards/codes, calibration requirements, regulations and authorities related to selection of materials and products for particular engineering applications are identified
 - 1.6. The role of *Australia's national measurement system* is investigated
2. Identify and use sources of information on engineering materials, materials tests and test equipment, including manufacturers' catalogues and websites
 - 2.1. Appropriate *sources of information* on materials are identified and used
 - 2.2. Appropriate sources of information on methods of testing of properties of materials are identified and used to ensure suitability for a particular application
 - 2.3. Appropriate sources of information on materials, materials tests, test calibration, test certificates, regulations, standards, *standards councils/societies/authorities/regulatory bodies* are identified and used
 - 2.4. The use of *standards and codes* are investigated and reported on
 - 2.5. Appropriate sources of information on MSDS are identified and used
3. Specify and implement materials for particular avionic engineering applications
 - 3.1. Methods used to test or obtain the properties of engineering materials are specified and implemented
4. Specify and implement methods used to test or obtain the properties of engineering materials
 - 4.1. *Tests of materials* are specified and implemented to ensure quality, safety or suitability for a range of applications
 - 4.2. *Traceability* of measurement standard is ensured
 - 4.3. Test sheets/certificates for appropriate materials are obtained for applications in accordance with organisational procedures and/or codes and regulations
 - 4.4. Appropriate MSDS are obtained for applications in

- accordance with organisational procedures and/or codes and regulations
5. Report on and record materials design data and methods and results of materials tests
- 5.1. Materials selections are reported and recorded against design functional requirements in accordance with organisational procedures, codes and regulations including environmental impact and sustainability assessment
- 5.2. Materials tests and test sheets/certificates are reported and recorded in accordance with organisational procedures, codes and regulations
- 5.3. Appropriate calibration and traceability are ensured
- 5.4. Appropriate MSDS are reported and recorded for applications in accordance with organisational procedures, codes and regulations

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- selecting class of materials for an application based on comparison of properties for a significant range of materials classes
- selecting class of materials for an application suitable to production and construction methods and processes
- identifying, overcoming or compensating for common characteristics, faults or flaws in materials or product
- obtaining appropriate test sheets/certificates for applications
- obtaining appropriate MSDS for application
- completing reports, records and design documentation
- addressing environmental impact and sustainability issues
- reporting, recording and filing test reports and documentation
- implementing materials tests and test sheets/certificates, test calibration and traceability
- identifying test methods for materials and components, specific industrial test standards and regulations for particular engineering applications
- identifying test methods for faults or flaws in materials and components or product
- selecting materials following an extensive search of appropriate sources of information including manufacturer's catalogues and websites
- selecting appropriate tests from a range of possible tests, following an extensive search of appropriate sources of information including manufacturer's catalogues and websites
- satisfying applicable standards and regulations for materials and components
- sourcing materials test certificates and using the material properties information from them
- sourcing and implementing MSDS
- implementing tests correctly for materials and component faults and properties of materials
- selecting testing methods appropriate to applications

Required knowledge

Look for evidence that confirms knowledge of:

- properties of materials classes
- the effect of material properties on production and construction methods and processes
- the effect of characteristics, faults or flaws in materials on product and processes
- test methods for materials and components, specific industrial test standards, regulations and authorities related to particular engineering applications
- test methods for faults or flaws in materials and components or product
- methods of accessing and using alternative information sources
- test procedures and typical applications for tests
- sources and uses of information on materials, materials tests, test certificates, regulations, standards, regulatory bodies and industrial authorities
- methods of accessing MSDS

- identification of materials for an application based on comparison of properties of materials
- identification of test for an application based on an understanding of its ability to measure specific material or product properties
- significance of test sheets/certificates to applications
- the need for obtaining and filing test sheets/certificates
- significance of MSDS and relevance of procedures
- materials selections in relation to design functional requirements
- environmental impact and sustainability assessment
- significance of test reports and documentation to applications
- significance of reporting and recording procedures
- significance of materials tests and test sheets/certificates, test calibration and traceability
- significance of MSDS to applications
- significance of reporting and recording procedures

Evidence Guide

<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to select and test avionic engineering materials.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
<p>Method of assessment</p>	<p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with selecting and testing aeronautical engineering materials or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Guidance information for assessment</p>	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Classes of materials, based on properties

Classes of materials include:

- non-ferrous metals and alloys (copper, aluminium, zinc, lead, tin and their alloys), ferrous metals (carbon steels, alloy steels, cast irons), non-metallic composite materials, bearing materials, lubricants, non-metals (timber, ceramics, polymers and fabrics, adhesives, electrical insulation materials), thermal conductors and insulators, electrical conductors, semiconductors and insulators

Properties of materials include:

- strength, elasticity, plasticity, malleability, toughness, brittleness, fatigue endurance, mouldability, weldability, machinability, formability, resistance to creep and stress relaxation, resistance to degradation (e.g. use of plastic fillers to enhance UV resistance), adhesion (electrical, magnetic, thermal, chemical and optical), material structure and effect on properties

Other factors include:

- corrosion and corrosion protection methods
- the effect of manufacturing and construction processes on material properties
- the effect of property enhancement on design (e.g. adhesives plus sintering replacing some forging and machining of gears on shafts)

Cost includes:

- manufacture of material and source of material, typical applications and possibilities

Avionic engineering

Avionic engineering refers to:

- the engineering discipline concerned with the conceptual development, research, design, manufacture, implementation, installation, commissioning and maintenance of aerospace electrical, instrument, radio and electronic systems and components and related test equipment for civil and military applications

Australia's national measurement system	Australia's national measurement system includes: <ul style="list-style-type: none"> • National Standards Commission (legal metrology) • Commonwealth Scientific and Research Organisation (physical standards) • National Association of Testing Authorities, Aust. (Laboratory accreditation) • Standards Australia International Ltd (AS standards specifications)
Sources of information	Sources of information includes: <ul style="list-style-type: none"> • reference texts, manufacturer's catalogues and industrial magazines • websites, use of phone, email and fax information gathering
Standards councils/societies/authorities/regulatory bodies	Standards councils/societies/authorities include: <ul style="list-style-type: none"> • Australian Standards • ASTM • MIL Spec. • ASME • ISO Regulatory bodies include: <ul style="list-style-type: none"> • CASA • ADF • United States FAA • European Joint Aviation Authority
Standards and codes	Standards and codes include: <ul style="list-style-type: none"> • NDT and mechanical test standards • chemical test standards • electrical test standards • compliance test standards for components
Tests of materials	Tests of materials include: <ul style="list-style-type: none"> • destructive, including tensile, compression, impact, hardness, fatigue, corrosion, stress relaxation and creep, and peel resistance (adhesives) • non-destructive, including hardness, ultrasonics, X-ray, dye penetrant, eddy current, surface friction, conductivity, heat expansion, photoelastic, heat capacity refractive index, and magnetic hysteresis loop
Traceability	Traceability ensures: <ul style="list-style-type: none"> • test calibrations can be traced back to the relevant base

	unit in the relevant measurement system

MEA340A Lay out and set up aircraft systems

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit of competency is part of Diploma and Advanced Diploma training pathways. It covers the basic design and schematic layout of aircraft systems, including mechanical, hydraulic, pneumatic and fuel systems. A basic hydraulic system is set up and operated.

Application of the Unit

Competency in this unit requires application of basic knowledge of aircraft system design and schematic layout, including the relative advantages of the different types of system. The candidate should be able to select appropriate types of systems for given applications and sketch the schematic layout of systems given a list of components.

A simple hydraulic system will also be set up and operated.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	--

Elements and Performance Criteria

1. Select and lay out schematically aircraft mechanical systems
 - 1.1. **Mechanical system applications** in aircraft design and their relative advantages and disadvantages compared to other system types are identified
 - 1.2. Components of mechanical systems are identified
 - 1.3. A mechanical system is selected for an application, the schematic layout is sketched and all components are labelled
 - 1.4. Mechanical system maintenance requirements are identified

2. Select and lay out schematically aircraft hydraulic systems
 - 2.1. **Hydraulic system applications** in aircraft design, their operation and their relative advantages and disadvantages compared to other system types are identified
 - 2.2. Aircraft hydraulic fluids, their characteristics and handling precautions are identified
 - 2.3. **Components of hydraulic systems** are identified and their operation is described in general terms
 - 2.4. A hydraulic system is selected for an application, the schematic layout is sketched and all components are labelled
 - 2.5. Hydraulic system maintenance requirements are identified

3. Select and lay out schematically aircraft pneumatic systems
 - 3.1. **Pneumatic system applications** in aircraft design, their operation and their relative advantages and disadvantages compared to other system types are identified
 - 3.2. **Components of pneumatic systems** are identified and their operation is described in general terms
 - 3.3. A pneumatic system is selected for an application, the schematic layout is sketched and all components are labelled
 - 3.4. Pneumatic system maintenance requirements are identified

4. Select and lay out schematically aircraft fuel storage and distribution systems
 - 4.1. Typical **fuel storage and distribution systems** used in aircraft design are identified.
 - 4.2. **Components of fuel storage and distribution systems** are identified and their operation is described.
 - 4.3. A fuel storage and distribution system is selected for an application, the schematic layout is sketched and all components are labelled.
 - 4.4. Types of aircraft fuel, their characteristics and

handling precautions are identified.

4.5. Fuel storage and distribution system maintenance requirements are identified.

5. Set up and operate a simple hydraulic system

5.1. The hydraulic system is sketched and all components are labelled

5.2. *Required components* are obtained

5.3. The system is assembled and operated

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- laying out a typical aircraft mechanical system
- laying out a typical aircraft hydraulic system
- laying out a typical aircraft pneumatic system
- laying out a typical fuel storage and distribution system
- setting up and operating a basic hydraulic system
- applying relevant OHS precautions, including the use of MSDS and PPE

Required knowledge

Look for evidence that confirms knowledge of:

- fluid power principles
- plumbing identification marking
- mechanical, hydraulic and pneumatic aircraft systems, their components and maintenance requirements
- the relative advantages and disadvantages of mechanical, hydraulic and pneumatic systems
- hydraulic fluid types, characteristics and handling precautions
- aircraft fuel storage and distribution systems and components thereof
- aircraft fuels, their characteristics and handling precautions
- OHS precautions relating to aircraft systems and their operation

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply basic knowledge of aircraft system design and layout for a range of aircraft applications. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, teacher's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed off the job in a training environment equipped to provide exposure to the range of system types and provide for the layout, set-up and operation of basic hydraulic systems. The candidate must have access to all tools, equipment, materials and documentation required and must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials. The assessment environment should not disadvantage the candidate.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Application	Application of this unit may relate to: <ul style="list-style-type: none"> • individual or team-related activities
Mechanical system applications	Mechanical system applications may include: <ul style="list-style-type: none"> • flight controls • flap operation • nose wheel steering • landing gear door operation • entrance door mechanisms
Components of mechanical systems	Components of mechanical systems may include: <ul style="list-style-type: none"> • cables • chains • sprockets • pulleys • fairleads • cable tensioners • gearboxes • screwjacks • rods • universal joints • constant velocity joints • clutches • bearings and bushes
Hydraulic system applications	Hydraulic system applications may include: <ul style="list-style-type: none"> • flight controls • flap and spoiler operation • landing gear retraction and extension • brakes (including anti-skid) • nose wheel steering • shimmy damping • door operation
Components of hydraulic systems	Components of hydraulic systems may include: <ul style="list-style-type: none"> • pumps

	<ul style="list-style-type: none"> • plumbing • valves (manual and electrically operated) • actuators • motors • check valves • pressure gauges (direct reading and electrical) • electrical control circuit micro switches • reservoirs • accumulators • filters • heat exchangers
Pneumatic system applications	<p>Pneumatic system applications may include:</p> <ul style="list-style-type: none"> • landing gear retraction and extension • pneudraulic emergency systems for landing gear extension and brakes • engine bleed air • engine starting • anti-icing • de-icing • pressurisation • air cycle air conditioning
Components of pneumatic systems	<p>Components of pneumatic systems may include:</p> <ul style="list-style-type: none"> • pre-coolers • pressure regulator and shutoff valves • temperature modulating valve • check valves • over-pressure valves • temperature regulating valves • underloading valves • shuttle valves • back pressure valves • outflow valves • moisture separators • chemical driers • filters • mechanical compressors • compressed air bottles • de-icing boots • ducting
Components of fuel storage and	Components of fuel storage and distribution systems may

distribution systems	<p>include:</p> <ul style="list-style-type: none"> • integral fuel cells • rigid and flexible fuel cells • external fuel tanks • rigid and flexible plumbing and couplings • manifolds • selector valves • anti-surge valves • anti-gravity valves • fuel quantity indication • fuel flow indication • boost pumps • transfer pumps • filters • strainers • fuel heaters
Required components	<p>Required components may include:</p> <ul style="list-style-type: none"> • hydraulic rig • manual selector valve • filter • accumulator • check valve • linear actuators • rigid and flexible plumbing

| 5. Apply basic aircraft design characteristics | <ul style="list-style-type: none"> 5.1. Given required aircraft use and performance characteristics, an appropriate aerodynamic shape is determined 5.2. An appropriate method of construction, materials of construction and fabrication method are proposed |

5.3. An appropriate landing gear configuration is proposed

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying basic aircraft design characteristics

Required knowledge

Look for evidence that confirms knowledge of:

- theory of flight, including rotary wing
- loads acting on aircraft structures and structural fatigue, including rotary wing
- aircraft design characteristics, including rotary wing
- types of aircraft structure
- methods of aircraft construction
- materials of construction
- structural maintenance requirements
- use of NDT in structural maintenance
- basic landing gear design characteristics
- use of ultra high strength steels in landing gear design and related maintenance requirements

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to identify and apply basic aircraft design characteristics. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, teacher's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed off the job in a training environment equipped to provide exposure to the relevant aircraft design characteristics and to theory of flight. The candidate must have access to all tools, equipment, materials and documentation required and must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials. The assessment environment should not disadvantage the candidate.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Application	Application of this unit may relate to: <ul style="list-style-type: none"> • individual or team-related activities
Common wing plan forms	Common wing plan forms may include: <ul style="list-style-type: none"> • straight • tapered • swept • delta • variable geometry • canard
Common wing configurations	Common wing configurations may include: <ul style="list-style-type: none"> • mid-wing • low wing • high wing
Common rotor configurations	Common rotor configurations may include: <ul style="list-style-type: none"> • main rotor and tail rotor • two main rotors • two blade main rotor • multiple blade main rotor • hinged main rotor blades • rigid rotor
Configurations of landing gear	Configurations of landing gear may include: <ul style="list-style-type: none"> • tricycle • tail wheel • tail skid • floats • skis • helicopter skids • helicopter wheels and brakes

Unit Sector(s)

Aeronautical engineering

Competency field

Co-requisite units

Not applicable

MEA342A Apply basic aircraft power plant design characteristics

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit of competency is part of Diploma and Advanced Diploma training pathways. It covers the basics of aircraft power plant selection and propulsion.

Application of the Unit

This unit requires application of basic knowledge of propulsion and power plant selection.

Applications include aeroplanes and rotary wing aircraft, piston engines and propellers/rotors, turbo prop, gas turbines and gas turbine/rotor.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

1. Research and evaluate the types of aeroplane and rotary wing aircraft power plant and their relative advantages and disadvantages
 - 1.1. The ***types of aeroplane and rotary wing aircraft power plant*** are identified and compared in terms of relative advantages and disadvantages
 - 1.2. ***Types of propeller*** are identified and compared in terms of relative advantages and disadvantages
 - 1.3. Turbojet and turbofan performance is compared in terms of relative advantages and disadvantages
 - 1.4. Maintenance requirements for aircraft power plants are identified
2. Apply basic power plant and propulsion system selection processes
 - 2.1. Given required aeroplane use and performance characteristics, an appropriate type of power plant is determined
 - 2.2. An appropriate type of propulsion system is selected
 - 2.3. Given required rotary wing aircraft use and performance characteristics, an appropriate type of power plant is determined

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying basic power plant and propulsion system design characteristics

Required knowledge

Look for evidence that confirms knowledge of:

- basic power plant characteristics
- basic propeller theory and characteristics
- use of NDT in power plant maintenance
- power plant maintenance requirements, including the use of engine condition monitoring

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Unit Sector(s)

Aeronautical engineering

Competency field

Co-requisite units

Not applicable

MEA349B Apply basic scientific principles and techniques in aeronautical engineering situations

Modification History

Knowledge requirements expanded - equivalent to previous version.

Unit Descriptor

This unit of competency covers applying basic scientific principles and techniques to appropriate aeronautical engineering situations.

Application of the Unit

This unit requires application of basic aeronautical scientific principles and techniques as a member of a design and development team or similar in support of the design and development of aeronautical applications, or within the engineering department of an aircraft maintenance organisation.

Applications include identifying the range of basic aeronautical scientific principles and techniques relevant to aeronautical engineering, selecting aeronautical principles and techniques for particular applications, applying aeronautical principles and techniques appropriately to engineering tasks, quoting results appropriately.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|---|---|
| 1 Research and identify the range of basic scientific principles and techniques relevant to aeronautical engineering | 1.1 The basic scientific principles relating to aeronautical engineering are researched and reported on from appropriate <i>sources of information</i> and examination of applications

1.2 The basic aeronautical techniques and associated technologies, software and hardware required to implement scientific principles relating to <i>aeronautical engineering</i> situations are identified |
| 2 Select basic aeronautical scientific principles and techniques relevant to particular aeronautical engineering applications | 2.1 For particular aeronautical engineering situations, the <i>relevant basic aeronautical scientific techniques and principles</i> can be selected

2.2 For particular aeronautical engineering situations, the relevant basic aeronautical techniques and associated technologies, software and hardware can be selected |
| 3 Apply the relevant basic aeronautical scientific principles and techniques appropriately | 3.1 The basic aeronautical scientific principles are applied in a consistent and appropriate manner to obtain any required solution

3.2 Appropriate calculations and coherent units are used in the solution of engineering calculations

3.3 Significant figures are used in engineering calculations

3.4 The basic aeronautical techniques and associated technologies, software and hardware are applied in a consistent and appropriate manner to obtain required solutions |

- 4 Quote the results of the application of the basic aeronautical scientific principles and basic techniques correctly
 - 4.1 For applications involving engineering calculations, the solution is quoted in an appropriate style
 - 4.2 For applications not involving engineering calculations, the solution is quoted in an appropriate style

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- basic aeronautical scientific principles including:
 - statics – complete tasks requiring analysis and application of:
 - forces and moments of forces
 - systems of concurrent and non-concurrent forces
 - dry sliding friction
 - dynamics – complete tasks requiring analysis and application of:
 - Newton's Laws
 - kinematics and kinetics of uniformly accelerated linear motion
 - kinematics and kinetics of uniformly accelerated rotation
 - curvilinear motion and centrifugal force
 - work, energy, power and torque
 - mechanical advantage and efficiency
 - strength of materials:
 - axial tension and compression
 - direct shear
 - bolted, riveted, bonded and welded connections
 - shear in beams
 - bending stresses and bending deflections (by standard formulas only)
 - torsion
 - aerodynamics:
 - Bernoulli's Theorem
 - the atmosphere
 - aerodynamic forces (lift, drag, weight and thrust)
 - stability and control (to a level not requiring the application of calculus)
 - airscrews and propulsion (to a level not requiring the application of calculus)
 - aircraft performance (to a level not requiring the application of calculus)
 - fluid mechanics:
 - properties of fluids including mineral and synthetic hydraulic fluids
 - fluid statics, Archimedes' Principle and Pascal's Principle
 - fluid flow – continuity and energy conservation
 - fluid power – pumps
 - thermodynamics:
 - heat transfer principles (conduction, convection and radiation)
 - perfect gas laws
 - kinetic theory of gases
 - laws of thermodynamics
- control concepts including closed and open loop control

- electricity and electronics:
 - basic electrical concepts
 - Ohm's Law
 - Kirchhoff's Current and Voltage Laws
 - basic DC circuits
 - basic power supply, transformer, rectifier, filter and regulator
 - PLC concepts – I/O, timing, counting, programming
 - electronic devices (discrete) – resistors, diodes, capacitors, inductors, transistors and rectifiers
 - microprocessor concepts
- light, sound and vibration:
 - wave behaviour – standing vs travelling waves, transverse and longitudinal
 - light – reflection, absorption, refraction, diffraction, spectrum, infrared, visible, ultraviolet, transmission medium and engineering applications
 - sound – pitch, frequency, intensity (power), decibel scale, 'noise dose', spectrum, infrasound, audible, ultrasound, speed, natural frequency, resonance, transmission medium and engineering applications
 - vibration – sources, balancing, shaft alignment, measurement, damping and engineering applications
- basic aeronautical techniques and related technologies, software and hardware associated with implementing scientific principles in mechanical engineering solutions
- the applicability and limitations of basic aeronautical scientific principles
- the applicability and limitations of basic aeronautical techniques and associated technologies, software and hardware
- appropriateness of calculations
- fundamental and derived quantities
- common systems of units
- the procedure for converting between systems of units
- common prefixes used with units and their values
- the procedure for carrying out dimensional analysis
- the concept of significant figures
- the uncertainty of computations based on experimental data
- the procedures for determining the significance of figures in calculations
- the procedures for estimating errors in derived quantities

Look for evidence that confirms skills in:

- selecting appropriate basic aeronautical scientific principles to suit specific applications
- selecting appropriate basic aeronautical techniques and associated technologies, software and hardware to suit specific applications
- applying basic aeronautical scientific principles to particular engineering situations
- applying and manipulating appropriate formulas for applications involving engineering calculations
- applying appropriate calculations to engineering situations

- checking the validity of equations is using dimensional analysis
- applying basic aeronautical techniques and associated technologies, software and hardware in a manner appropriate to the application and identified scientific principles
- referring solutions to the original aim of the application
- quoting solutions in appropriate units, using appropriate significant figures
- quoting limitations of solutions, due to assumptions, scientific principles and techniques used
- presenting solutions referring to the original aim of the application

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to apply basic scientific principles and techniques in aeronautical engineering situations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Method of assessment	This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying basic scientific principles and techniques in aeronautical engineering situations or other units requiring the exercise of the skills and knowledge covered by this unit.

MEA350A Select and test aeronautical engineering materials

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit of competency covers selecting appropriate materials and materials and components tests for aeronautical engineering applications.

Application of the Unit

Applications of this unit include selecting engineering materials and materials tests, sourcing materials data; ensuring appropriate performance and physical standards for aeronautical applications; documenting materials tests, ensured calibration standards; interpreting and documenting materials data sheets as appropriate for mass production, batch production, jobbing shop, and prototyping applications.

Activities may be performed as a member of a design and development or engineering support team.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

1. Identify classes of materials, based on properties and materials tests relevant to aeronautical engineering
 - 1.1. *Classes of materials* are identified, *based on properties*, required for particular *aeronautical engineering* applications
 - 1.2. Relate material properties are related to common production and construction methods and processes
 - 1.3. Common characteristics, faults or flaws in materials and components or product are identified in particular engineering applications
 - 1.4. Test methods for materials and components or product are identified in particular engineering applications
 - 1.5. Specific industrial test standards/codes, calibration requirements, regulations and authorities related to selection of materials and products are identified for particular engineering applications
 - 1.6. The role of *Australia's national measurement system* is investigated
2. Identify and use sources of information on engineering materials, materials tests and test equipment, including manufacturers' catalogues and websites
 - 2.1. Appropriate *sources of information* on materials are identified and used
 - 2.2. Appropriate sources of information on methods of testing of properties of materials are identified and used to ensure suitability for a particular application
 - 2.3. Appropriate sources of information on materials, materials tests, test calibration, test certificates, regulations, standards, *standards councils/societies/authorities/regulatory bodies* are identified and used
 - 2.4. The use of *standards and codes* are investigated and reported on
 - 2.5. Appropriate sources of information on MSDS are identified and used
3. Specify and implement materials for particular aeronautical engineering applications.
 - 3.1. Materials for particular applications are specified and implemented
4. Specify and implement methods used to test or obtain the properties of engineering materials
 - 4.1. *Tests of materials* are specified and implemented to ensure quality, safety or suitability for a range of applications
 - 4.2. *Traceability* of measurement standard is ensured
 - 4.3. Test sheets/certificates for appropriate materials are obtained for applications in accordance with organisational procedures and/or codes and regulations
 - 4.4. Appropriate MSDS are obtained for applications in

accordance with organisational procedures and/or codes and regulations

5. Report on and record materials design data and methods and results of materials tests

5.1. Materials selections are reported and recorded against design functional requirements in accordance with organisational procedures, codes and regulations, including environmental impact and sustainability assessment.

5.2. Materials tests and test sheets/certificates are reported and recorded in accordance with organisational procedures, codes and regulations

5.3. Appropriate calibration and traceability are ensured

5.4. Appropriate MSDS are reported and recorded for applications in accordance with organisational procedures, codes and regulations

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- selecting class of materials for an application based on comparison of properties for a significant range of materials classes
- selecting class of materials for an application suitable to production and construction methods and processes
- identifying, overcoming or compensating for common characteristics, faults or flaws in materials or product
- identifying test methods for materials and components, specific industrial test standards and regulations for particular engineering applications
- identifying test methods for faults or flaws in materials and components or product
- selecting materials following an extensive search of appropriate sources of information, including manufacturer's catalogues and websites
- selecting appropriate tests from a range of possible tests, following an extensive search of appropriate sources of information, including manufacturer's catalogues and websites
- satisfying applicable standards and regulations for materials and components
- sourcing materials test certificates and using the material properties information from them
- sourcing and implementing MSDS
- implementing tests correctly for materials and component faults and properties of materials
- selecting testing methods appropriate to applications
- obtaining appropriate test sheets/certificates for applications
- obtaining appropriate MSDS for application
- completing reports, records and design documentation
- addressing environmental impact and sustainability issues
- reporting, recording and filing test reports and documentation
- implementing materials tests and test sheets/certificates, test calibration and traceability

Required knowledge

Look for evidence that confirms knowledge of:

- properties of materials classes
- the effect of material properties on production and construction methods and processes
- the effect of characteristics, faults or flaws in materials on product and processes
- test methods for materials and components, specific industrial test standards, regulations and authorities related to particular engineering applications
- test methods for faults or flaws in materials and components or product
- methods of accessing and using alternative information sources
- test procedures and typical applications for tests
- sources and uses of information on materials, materials tests, test certificates, regulations, standards, regulatory bodies and industrial authorities
- methods of accessing MSDS

- identification of materials for an application based on comparison of properties of materials
- identification of test for an application based on an understanding of its ability to measure specific material or product properties
- significance of test sheets/certificates to applications
- the need for obtaining and filing test sheets/certificates
- significance of MSDSs and relevance of procedures
- materials selections in relation to design functional requirements
- environmental impact and sustainability assessment
- significance of test reports and documentation to applications
- significance of reporting and recording procedures
- significance of materials tests and test sheets/certificates, test calibration and traceability
- significance of MSDS to applications
- significance of reporting and recording procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to select and test aeronautical engineering materials.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.
Method of assessment	This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with selecting and testing aeronautical engineering materials or other units requiring the exercise of the skills and knowledge covered by this unit.
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Classes of materials, based on properties

Classes of materials include:

- non-ferrous metals and alloys (copper, aluminium, zinc, lead, tin and their alloys), ferrous metals (carbon steels, alloy steels and cast irons), non-metallic composite materials, bearing materials, lubricants, non-metals (timber, ceramics, polymers and fabrics, adhesives and electrical insulation materials), thermal conductors and insulators, electrical conductors, semiconductors and insulators

Properties of materials include:

- strength, elasticity, plasticity, malleability, toughness, brittleness, fatigue endurance, mouldability, weldability, machinability, formability, resistance to creep and stress relaxation, resistance to degradation (e.g. use of plastic fillers to enhance UV resistance), adhesion, electrical, magnetic, thermal, chemical and optical, material structure and effect on properties, and flammability of fabrics

Other factors include:

- corrosion and corrosion protection methods.
- aging of metals
- the effect of manufacturing and construction processes on material properties.
- the effect of property enhancement on design (e.g. adhesives plus sintering replacing some forging and machining of gears on shafts)
- lay-up methods for composite structures.

Cost includes:

- manufacture of material and source of material, typical applications and possibilities

Aeronautical engineering

Aeronautical engineering refers to:

- the engineering discipline concerned with the conceptual development, research, design, manufacture, implementation, installation, commissioning and maintenance of aerospace

	mechanical, hydraulic, pneumatic, fuel and fire products, processes, systems or services for civil and military applications
Australia's national measurement system	Australia's national measurement systems includes: <ul style="list-style-type: none"> • National Standards Commission (legal metrology) • Commonwealth Scientific and Research Organisation (physical standards) • National Association of Testing Authorities, Aust. (Laboratory accreditation) • Standards Australia International Ltd (AS standards specifications)
Standards councils/ societies/ authorities/regulatory bodies	Standards councils/societies/authorities/regulatory bodies include: <ul style="list-style-type: none"> • Australian Standards Council • ASTM • MIL Spec • ASME • ISO Regulatory bodies include: <ul style="list-style-type: none"> • CASA • ADF • United States Federal Aviation Authority, • European Joint Aviation Authority
Standards and codes	Standards and codes include: <ul style="list-style-type: none"> • NDT and mechanical test standards • chemical test standards • electrical test standards • compliance test standards for components
Tests of materials	Tests of materials include: <ul style="list-style-type: none"> • destructive, including tensile, compression, impact, hardness, fatigue, corrosion, stress relaxation and creep, and peel resistance (adhesives) • non-destructive, including hardness, ultrasonics, X-ray, dye penetrant, eddy current, surface friction, conductivity, heat expansion, photoelastic, heat capacity refractive index, magnetic hysteresis loop
Traceability	Traceability ensures test calibrations can be traced back to the relevant base unit in the relevant measurement system

MEMPE001A Use engineering workshop machines

Modification History

New unit - Release 1

Unit Descriptor

This unit of competency involves setting up and machining components using lathes and other machines, such as milling machines, cut off saws, pedestal grinders and fixed position drilling machines. Tooling might need to be re-sharpened but not ground up from a blank.

The settings for the machines will be calculated by the learner from given formulas, surface speeds and feed rates.

Application of the Unit

This unit is designed for use in a pre-employment skills introduction program and is suitable for use in institutional-based vocational programs. Skills development will take place under direct supervision.

This unit is not to be used in a traineeship or apprenticeship training program or associated qualifications. It is only to be used in pre-employment programs and carries no credit towards apprenticeship/trade and other qualification types in manufacturing and engineering.

This unit should be integrated with the work in the project unit, *MEMPE006A Undertake a basic engineering project*, and skills developed when required by the project.

Licensing/Regulatory Information

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|-----------------------|-----|---|
| 1 | Prepare a job plan | 1.1 | Identify job requirements from drawings or <i>other relevant materials</i> in consultation with an instructor/teacher/trainer |
| | | 1.2 | Identify <i>appropriate machines</i> in accordance with job requirements |
| | | 1.3 | Identify appropriate tooling in accordance with job requirements |
| | | 1.4 | Calculate cutting speeds and feeds |
| | | 1.5 | Prepare a job/project plan showing machines, tooling, cutting speeds and feeds and an appropriate sequence of operations |
| | | 1.6 | Confirm plan with instructor |
| 2 | Prepare for machining | 2.1 | Obtain appropriate tooling and materials |
| | | 2.2 | Set up tools and materials as required |
| | | 2.3 | Set speeds and feeds |
| 3 | Perform machining | 3.1 | Use and wear appropriate personal protective equipment |
| | | 3.2 | Follow safe machining practices |

- operations
 - 3.3 Machine materials to job requirements
 - 3.4 Use *measuring equipment* as required
 - 3.5 Store completed work in a manner which will prevent/minimise potential damage

- 4 Complete work requirements
 - 4.1 Clear work area of waste and clean according to requirements
 - 4.2 Maintain and/or store machines, tools and equipment according to instructions

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- preparing a job plan
- preparing for machining
- performing machining
- calculating speeds and feeds
- using measuring equipment as required
- appropriately cleaning and storing of equipment
- applying safe working practices
- using and applying personal protective equipment

Required knowledge

Required knowledge includes:

- safe machine operation procedures
- material and equipment preparation requirements
- basic marking out techniques
- use and care of measuring tools
- types of machines for cutting, grinding, drilling, turning and milling
- work and tool holding methods for each machine
- safe working practices
- use and application of personal protective equipment

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to prepare materials and use engineering workshop machines to produce engineering components.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can:</p> <ul style="list-style-type: none"> • work safely • prepare job plans • prepare for machining • perform machining • calculate speeds and feeds • use measuring equipment as required • clean and store equipment as instructed.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit must be assessed in a learning institution. • Assessment must cover the successful use of a lathe and other relevant workshop machines. • The skills covered by this unit would usually be demonstrated by an individual working alone under direct supervision. • The assessment environment should not disadvantage the candidate. • This unit may be assessed in conjunction with any other units addressing the safety, quality, communication, hand tools, machine operation, recording and reporting associated with using workshop machines.
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied

	<p>under the particular circumstance, but is able to be transferred to other circumstances.</p> <ul style="list-style-type: none">• Assessment should be in conjunction with assessment of the project unit and other units integrated into the project.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Other relevant materials</p>	<p>Other relevant materials may include but are not limited to:</p> <ul style="list-style-type: none"> • drawings • sketches • job instructions • schematics • diagrams • technical manuals
<p>Appropriate machines</p>	<p>Appropriate machines may include but are not limited to:</p> <ul style="list-style-type: none"> • milling machines • cut off saws • pedestal grinders • fixed position drilling machines • computer controlled machines
<p>Measuring equipment</p>	<p>Measuring equipment may include but is not limited to:</p> <ul style="list-style-type: none"> • micrometers • vernier scaled measuring devices • rules • calipers • gauges

MEMPE002A Use electric welding machines

Modification History

New unit - Release 1

Unit Descriptor

The unit of competency covers the use of manual metal arc, gas metal arc and gas tungsten arc welding machines depending on their availability in the learning institution.

The welding is not required to meet any Australian Standard. Fillet and butt welds would typically be performed on low carbon/mild steels and aluminium if required. The basic settings for the welding machine and the welding materials will be supplied to the learner.

Application of the Unit

This unit is designed for use in a pre-employment skills introduction program and is suitable for use in institutional-based vocational programs. Skills development will take place under direct supervision.

This unit is not to be used in a traineeship or apprenticeship training program or associated qualifications. It is only to be used in pre-employment programs and carries no credit towards apprenticeship/trade and other qualification types in manufacturing and engineering.

This unit should be integrated with the work in the project unit, *MEMPE006A Undertake a basic engineering project*, and skills developed when required by the project.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Identify weld requirements	1.1	Identify <i>weld requirements</i> in consultation with an instructor/teacher/trainer
		1.2	Identify which <i>type of welding</i> is suitable for the job
		1.3	Identify location of welds in accordance with job requirements
		1.4	Confirm weld locations with instructor
2	Prepare for welding	2.1	Clean and prepare low and mild carbon steel or similar ready for welding
		2.2	Set up welding equipment according to given instructions
3	Perform welding	3.1	Use and wear appropriate personal protective equipment
		3.2	Follow safe welding practices
		3.3	Weld materials to job requirements
		3.4	Clean welds safely
		3.5	Store completed work as instructed

- | | | | |
|---|----------------------------|-----|---|
| 4 | Complete work requirements | 4.1 | Clear work area of waste and clean according to requirements |
| | | 4.2 | Maintain and/or store machines, tools and equipment according to instructions |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- preparing materials
- setting welding equipment according to given instructions
- using electric welding machines to weld metal pieces together
- reading and interpreting routine information on written job instructions
- using measuring skills as required
- applying safe working and welding practices
- using and applying personal protective equipment

Required knowledge

Required knowledge includes:

- safe machine operation procedures
- material and equipment preparation requirements
- basic marking out techniques
- use and care of measuring tools
- behaviour of metals under heat
- welding processes and properties
- post-welding treatments
- safe working and welding practices
- use and application of personal protective equipment

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to prepare welding materials and equipment and weld metal materials.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can:</p> <ul style="list-style-type: none"> • work safely • prepare materials • set welding equipment according to given instructions • use electric welding machines to weld metal pieces together • read and interpret routine information on written job instructions • use measuring equipment as required • clean and store equipment as instructed.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit must be assessed in a learning institution. • Assessment must cover the successful use of one or more electric welding machines. • The skills covered by this unit would be demonstrated by an individual working alone under direct supervision. • The assessment environment should not disadvantage the candidate. • This unit may be assessed in conjunction with any other units addressing the safety, quality, communication, hand tools, machine operation, recording and reporting associated with using electric welding machines.
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.

	<ul style="list-style-type: none">• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.• Assessment should be in conjunction with assessment of the project unit and other units integrated into the project.

MEMPE003A Use oxy-acetylene and soldering equipment

Modification History

New unit - Release 1

Unit Descriptor

This unit of competency covers the use of an oxy-acetylene torch to cut low carbon/mild steels and to heat the steel to enable bending. It also covers basic silver soldering and brazing.

The settings for the oxy-acetylene and heating equipment as well as the materials will be supplied to the learner. No assembly of the oxy-acetylene hoses and gauges will be required.

Application of the Unit

This unit is designed for use in a pre-employment skills introduction program and is suitable for use in institutional-based vocational programs. Skills development will take place under direct supervision.

This unit is not to be used in a traineeship or apprenticeship training program or associated qualifications. It is only to be used in pre-employment programs and carries no credit towards apprenticeship/trade and other qualification types in manufacturing and engineering.

This unit should be integrated with the work in the project unit *MEMPE006A Undertake a basic engineering project*, and skills developed when required by the project.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Identify cutting and heating requirements	1.1	Identify cutting and <i>heating requirements</i> in consultation with an instructor/teacher/trainer
		1.2	Identify location of heat application in accordance with job requirements
		1.3	Confirm application of heat locations with instructor
2	Perform cutting and heating	2.1	Use and wear appropriate personal protective equipment
		2.2	Start equipment following given instructions
		2.3	Set equipment following given instructions
		2.4	Cut and heat materials to pre-determined specifications
		2.5	Follow safe working practices
		2.6	Store and/or dispose of work materials as instructed
3	Identify silver soldering/brazing requirements	3.1	Identify silver soldering/brazing requirements in consultation with an instructor/teacher/trainer
		3.2	Identify location of silver soldering/brazing in accordance with job requirements
		3.3	Confirm silver soldering/brazing locations with

instructor

- | | | | |
|---|--------------------------------------|-----|--|
| 4 | Prepare for silver soldering/brazing | 4.1 | Clean and prepare low and mild carbon steel and copper, or similar, ready for silver soldering and brazing |
| | | 4.2 | Set up heating equipment according to given instructions |
| 5 | Perform silver soldering and brazing | 5.1 | Use and wear appropriate personal protective equipment. |
| | | 5.2 | Apply <i>safe silver soldering and brazing practices</i> |
| | | 5.3 | Silver solder and braze materials to job requirements |
| | | 5.4 | Clean welds safely |
| | | 5.5 | Store and/or dispose of work materials as instructed |
| 6 | Complete work requirements | 6.1 | Clear work area of waste and clean according to requirements |
| | | 6.2 | Maintain and/or store machines, tools and equipment according to instructions |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- preparing materials
- setting up oxy-acetylene/heating equipment according to given instructions
- using oxy-acetylene equipment to heat, braze and cut metal
- silver soldering
- reading and interpreting routine information on written job instructions
- using measuring skills as required
- applying safe working practices
- using and applying personal protective equipment

Required knowledge

Required knowledge includes:

- safe equipment operation practices
- material and equipment preparation requirements
- basic marking out techniques
- use and care of measuring tools
- heating and cutting processes
- post-heating and cutting treatments
- safe working practices
- use and application of personal protective equipment

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package

MEMPE004A Use fabrication equipment

Modification History

New unit - Release 1

Unit Descriptor

This unit of competency involves setting up and using fabrication equipment to make engineered components.

Application of the Unit

This unit is designed for use in a pre-employment skills introduction program and is suitable for use in institutional-based vocational programs. Skills development will take place under direct supervision.

This unit is not to be used in a traineeship or apprenticeship training program or associated qualifications. It is only to be used in pre-employment programs and carries no credit towards apprenticeship/trade and other qualification types in manufacturing and engineering.

This unit should be integrated with the work in the project unit, *MEMPE006A Undertake a basic engineering project*, and skills developed when required by the project.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|----------------------------------|-----|---|
| 1 | Prepare a job plan | 1.1 | Identify job requirements from drawings and <i>other relevant documents</i> in consultation with an instructor/teacher/trainer |
| | | 1.2 | Identify appropriate machines/equipment in accordance with job requirements |
| | | 1.3 | Prepare a job/project plan showing machines, tooling, cutting speeds and feeds and an appropriate sequence of operations |
| | | 1.4 | Confirm plan with instructor |
| 2 | Fabricate components as required | 2.1 | Use and wear appropriate personal protective equipment |
| | | 2.2 | Perform marking out and measuring as required |
| | | 2.3 | Use <i>fabrication machinery</i> to bend, roll or shape material to requirements |
| | | 2.4 | Check/measure work for conformance to requirements at each stage |
| | | 2.5 | Store completed work in a manner which will prevent/minimise potential damage |
| | | 2.6 | Work safely |

- | | | | |
|---|----------------------------|-----|---|
| 3 | Complete work requirements | 3.1 | Clear work area of waste and clean according to requirements |
| | | 3.2 | Maintain and/or store machines, tools and equipment according to instructions |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- preparing materials, including marking out, as required
- setting fabrication equipment according to given instructions
- using fabrication equipment to bend, roll and shape metal
- reading and interpreting routine information on written job instructions
- using measuring skills as required
- applying safe working practices
- using and applying personal protective equipment

Required knowledge

Required knowledge includes:

- safe operation of machines/equipment
- material and equipment preparation
- basic marking out techniques
- measuring tools
- machine types for bending, rolling and shaping
- work and tool holding methods for each machine
- safe working practices
- use and application of personal protective equipment

MEMPE005A Develop a career plan for the engineering and manufacturing industry

Modification History

New unit - Release 1

Unit Descriptor

This unit of competency is intended to provide the opportunity to research careers, and training and career path options in the manufacturing and engineering industry. It involves research into the range of activities the industry and occupational streams cover, including engineering opportunities in industries not generally considered as engineering or manufacturing. For example, maintenance people in hospitals, teachers, and so on.

Application of the Unit

This unit is designed for use in a pre-employment skills introduction program and is suitable for use in institutional-based vocational programs. Skills development will take place under direct supervision.

This unit is not to be used in a traineeship or apprenticeship training program or associated qualifications. It is only to be used in pre-employment programs and carries no credit towards apprenticeship/trade and other qualification types in manufacturing and engineering.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Research engineering and manufacturing occupations	1.1	Identify <i>industries</i> involved in manufacturing and engineering
		1.2	Determine and describe the types of <i>occupations</i> in manufacturing and engineering industries
		1.3	Identify and list, including the requirements/methods of achieving, an appropriate qualification or qualifications for each occupation
2	Develop a career plan	2.1	Determine career paths within manufacturing and engineering
		2.2	Develop a training plan for entry into and progression through the determined career paths
		2.3	Assess and describe own skills and interests
		2.4	Develop a strategy for gaining access to an identified occupation
3	Review plan	3.1	Discuss plan with appropriate people
		3.2	Amend plan as necessary

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- researching employment opportunities in manufacturing and engineering
- developing a personal career plan
- reviewing the career plan

Required knowledge

Required knowledge includes:

- the variety of manufacturing industries
- the variety of engineering industries
- industries that employ engineering people
- jobs/work roles in manufacturing and engineering
- types of learning institutions that support skills development in manufacturing and engineering

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	<p>A person who demonstrates competency in this unit must be able to research engineering and manufacturing career options in manufacturing, engineering and related industries.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can:</p> <ul style="list-style-type: none"> • work safely • explore employment opportunities in manufacturing and engineering • develop a personal career plan • review the career plan • clean and store equipment as instructed.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit must be assessed in a learning institution. • Assessment must cover the successful development of a career plan. • The skills covered by this unit would be demonstrated by an individual working alone under direct supervision. • The assessment environment should not disadvantage the candidate. • This unit may be assessed in conjunction with any other units addressing the safety, quality, communication and reporting associated with developing a career plan.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Industries</p>	<p>Research into industries should not be limited to manufacturing and engineering. The research should look at all types of industries that employ engineering personnel with all levels of qualifications. For example, apart from manufacturing and engineering, and this list is not exhaustive, engineering personnel are employed in:</p> <ul style="list-style-type: none"> • hospitals • mines • power generation plants • maintenance of road plant • sugar mills • oil refineries • defense forces • marine vessels • railways • wine making
<p>Occupations</p>	<p>Occupations may include but are not limited to:</p> <ul style="list-style-type: none"> • general duties • production work • electrical, electronic, fabrication and mechanical trades • para-professional engineers • engineers

MEMPE006A Undertake a basic engineering project

Modification History

New unit - Release 1

Unit Descriptor

This unit of competency is intended to provide the learner with the opportunity to plan and undertake an engineering project which can be completed in an institutional environment.

Included in this unit is the opportunity to use a basic computer-aided drafting (CAD) system to produce engineering type drawings. The drawings produced have to be fit for purpose but do not necessarily need to conform to drawing standard, such as *AS 1100.101-1992 Technical drawing - General principles*.

This unit is also intended to provide the learner with the opportunity to incorporate the skills available in other units to produce a functional engineering product in an institutional environment. Skills such as welding and machining do not need to be pre-developed but can be developed in an integrated way as required throughout the project progress.

Application of the Unit

This unit is designed for use in a pre-employment skills introduction program and is suitable for use in institutional based vocational programs. Skills development will take place under direct supervision.

This unit is not to be used in a traineeship or apprenticeship training program or associated qualifications. It is only to be used in pre-employment programs and carries no credit towards apprenticeship/trade and other qualification types in manufacturing and engineering.

This unit should be integrated with the skills development undertaken through other units in this qualification.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---|-----|---|
| 1 | Research engineering materials and components | 1.1 | Determine the uses of <i>engineering materials</i> , such as types and forms of metals, polymers (thermo setting and thermo plastic) and fibres |
| | | 1.2 | Describe the advantages of the engineering materials when compared to each other |
| | | 1.3 | Determine commonly available <i>shapes of metal materials</i> , such as sheet, plate, bar, angle iron and other common shapes |
| | | 1.4 | Determine <i>methods used to join metal</i> pieces, such as, threads, pins, circlips, rivets, welding, folded joints and adhesives |
| | | 1.5 | Describe the advantages of the different metal joining methods |
| | | 1.6 | Determine the types of plain and anti-friction bearings, including type of materials, used in machines |
| | | 1.7 | Describe the advantages and disadvantages of the different types of bearings |
| 2 | Develop a metals-based project | 2.1 | Research and decide on a realistic project that can be completed in the institution in the available time |
| | | 2.2 | Determine the types of material required for the project |

- 2.3 Determine the amount of material and components required
 - 2.4 Gain approval for the project
- 3 Determine drawing requirements
 - 3.1 Research engineering drawing practices
 - 3.2 Decide how drawings will be produced, e.g. using a CAD systems and/or hand drawing equipment, and/or freehand sketches
 - 3.3 Decide on appropriate dimensioning methods for the drawings produced
 - 3.4 Decide on methods and conventions for naming and saving new or modified drawings
- 4 Create project drawings
 - 4.1 Produce drawings of the completed project using either CAD systems, hand drawing equipment or freehand sketches
 - 4.2 Produce drawings of the individual project components using either CAD systems, hand drawing equipment or freehand sketches
 - 4.3 Review drawings with teacher/instructor and peers
 - 4.4 Modify drawings as required
 - 4.5 Produce an items and materials list using the either the CAD system or other computer software
- 5 Plan the manufacture of the product
 - 5.1 Determine the machines, tools and equipment required
 - 5.2 Determine the sequence of individual component manufacture and measures needed to protect manufactured components from damage
 - 5.3 Develop a plan for the assembly of the project
 - 5.4 Get advice and approval for the project and plan

- | | | | |
|---|----------------------------|-----|---|
| 6 | Manufacture the product | 6.1 | Use and wear appropriate personal protective equipment |
| | | 6.2 | Follow safe working practices and procedures |
| | | 6.3 | Manufacture and store components and acquire stock components according to the developed plan |
| | | 6.4 | Assemble product according to the developed and approved plan |
| | | 6.5 | Check for conformance to requirements throughout the manufacture and assembly process |
| | | 6.6 | Submit the project for final endorsement |
| | | | |
| 7 | Complete work requirements | 7.1 | Clear work area of waste and clean according to requirements |
| | | 7.2 | Maintain and/or store machines, tools and equipment according to instructions |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- working safely
- selecting engineering materials for a project
- selecting engineering components for a project
- determining appropriate joining methods for engineering materials and components
- researching and evaluating engineering projects for their appropriateness in an educational institution
- producing drawings of an assembled project and its components
- planning the manufacture of an engineering project, including all necessary calculations
- producing components following created drawings
- assembling project
- tidying/cleaning work area as appropriate
- returning tools, equipment and project items to designated storage areas and/or conditions
- using and applying personal protective equipment

Required knowledge

Required knowledge includes:

- safe working practices in an engineering workshop
- sources of information on engineering materials and components
- sources of information on engineering projects
- engineering drawing practices
- methods of joining metals
- the need for drawings that others can follow

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to research, plan and make an engineering project in a learning institution.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can</p> <ul style="list-style-type: none"> • work safely • select engineering materials for a project • select engineering components for a project • determine appropriate joining methods for engineering materials and components • research and evaluate engineering projects for their appropriateness in an educational institution • produce drawings of an assembled project and its components • plan the manufacture of an engineering project, including all necessary calculations • produce components following created drawings • assemble project • clean and store equipment as instructed.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit must be assessed in a learning institution. • Assessment must cover the successful manufacture of a project. • The skills covered by this unit would be demonstrated by an individual working alone or in a team and under direct supervision. • The assessment environment should not disadvantage the candidate. • This unit may be assessed in conjunction with any other units addressing the safety, quality, communication, hand tools, machine operation, equipment operation, recording and reporting associated with making the project.
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment

	<p>Guidelines of the MEM05 Metal and Engineering Training Package.</p> <ul style="list-style-type: none">• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.• Assessment should be in conjunction with assessment of the all skills and units integrated into the project.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Engineering materials</p>	<p>Engineering materials may include but are not limited to:</p> <ul style="list-style-type: none"> • types of metal • thermo setting and thermo plastic polymers • fibre glass • carbon fibre
<p>Shapes of metal materials</p>	<p>Metal material shapes may include but are not limited to:</p> <ul style="list-style-type: none"> • sheet • plate • bar • angle iron • extruded forms • channel • beams
<p>Methods used to join metal</p>	<p>Methods used to join metal may include but are not limited to:</p> <ul style="list-style-type: none"> • threaded fasteners • pins • circlips • rivets • welding • folded joints • adhesives

MEMPE007A Pull apart and re-assemble engineering mechanisms

Modification History

New unit - Release 1

Unit Descriptor

This unit of competency involves pulling apart engineering mechanisms, such as small compressors, small two and four stroke engines, industrial gear boxes, mechanical winches, or any mechanism made up of a number of components, determining the types and quantity of components in the mechanism, and re-assembling the mechanism.

The mechanisms must have an associated maintenance/instruction manual for the learner to reference.

Application of the Unit

This unit is designed for use in a pre-employment skills introduction program and is suitable for use in conjunction with institutional-based vocational programs. Skills development will take place under direct supervision.

This unit is not to be used in a traineeship or apprenticeship training program or associated qualifications. It is only to be used in pre-employment programs and carries no credit towards apprenticeship/trade and other qualification types in manufacturing and engineering.

This unit could be integrated with the work in the project unit, *MEMPE006A Undertake a basic engineering project*, and skills developed when required by the project. It would certainly be integrated with the development of skills for the unit *MEM18001B Use hand tools* and could be used to enhance the research learning about components in the project unit.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--------------------------|-----|--|
| 1 | Prepare a job plan | 1.1 | Identify job requirements by inspecting the mechanism, <i>associated</i> manual and other relevant materials, in consultation with an instructor/teacher/trainer |
| | | 1.2 | Identify required tools and machines in accordance with job requirements |
| | | 1.3 | Prepare a job/project plan showing tools and machines to be used and an appropriate sequence of operations |
| | | 1.4 | Confirm plan with instructor |
| 2 | Pull the mechanism apart | 2.1 | Use and wear appropriate personal protective equipment |
| | | 2.2 | Clear the work area |
| | | 2.3 | Obtain appropriate tools and equipment |
| | | 2.4 | Follow safe working practices |
| | | 2.5 | Pull the mechanism apart marking components to aid correct re-assembly |
| | | 2.6 | Identify and record the name and quantity of each component |
| | | 2.7 | Use <i>measuring equipment</i> as required |

- | | | | |
|---|----------------------------|-----|---|
| 3 | Re-assemble the mechanism | 3.1 | Use and wear appropriate personal protective equipment |
| | | 3.2 | Follow safe working practices |
| | | 3.3 | Re-assemble the mechanism following markings and associated manual |
| | | 3.4 | Use measuring equipment as required |
| | | | |
| 4 | Complete work requirements | 4.1 | Clear work area of waste and clean according to requirements |
| | | 4.2 | Maintain and/or store machines, tools and equipment according to instructions |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- preparing a job plan
- preparing for disassembly
- performing disassembly
- identifying components
- performing re-assembly
- using measuring equipment as required
- cleaning and storing equipment appropriately
- applying safe working practices
- using and applying personal protective equipment

Required knowledge

Required knowledge includes:

- safe working procedures
- non-destructive methods for marking components
- basic disassembly techniques
- use and care of tools
- types of tools and machines used to pull components apart
- safe working practices
- use and application of personal protective equipment

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to safely use engineering tools and equipment to pull engineering mechanisms apart, record information about the components and put the mechanism back together again.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can</p> <ul style="list-style-type: none"> • work safely • prepare job plans • identify and follow a sequence of work • prepare for pulling a mechanism apart • pull a mechanism apart • record information • use measuring equipment as required • re-assemble an engineering mechanism • clean and store equipment as instructed.
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • This unit must be assessed in a learning institution. • Assessment must cover the successful disassembly and re-assembly of an engineering mechanism. • The skills covered by this unit would usually be demonstrated by an individual working alone under direct supervision. • The assessment environment should not disadvantage the candidate. • This unit may be assessed in conjunction with any other units addressing the safety, quality, communication, hand tools, machine operation, recording and reporting associated with working on engineering mechanisms.
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must be by direct observation of tasks and include questioning on underpinning

	<p>knowledge to ensure correct interpretation and application.</p> <ul style="list-style-type: none">• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.• Assessment should be in conjunction with assessment of the project unit and other units integrated into the project.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Mechanism	<p>A mechanism is any piece of equipment, plant or machinery made up of a number of engineering components. The mechanism should be of a size that can be safely handled by the students and may include but are not limited to:</p> <ul style="list-style-type: none"> • small compressors • small two and four stroke engines • industrial gear boxes • mechanical winches
Measuring equipment	<p>Measuring equipment may include but is not limited to:</p> <ul style="list-style-type: none"> • micrometers • vernier scaled measuring devices • rules • calipers • gauges

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify current resource use and environmental issues.	1.1. Identify workplace <i>environmental and resource efficiency issues</i> . 1.2. Identify resources used in own work role. 1.3. <i>Measure</i> and record current usage of resources using <i>appropriate techniques</i> . 1.4. Identify and report workplace environmental hazards to appropriate personnel.
2. Comply with environmental regulations.	2.1. Follow <i>procedures</i> to ensure <i>compliance</i> . 2.2. Report environmental incidents to appropriate personnel.
3. Seek opportunities to improve environmental practices and resource efficiency.	3.1. Follow <i>enterprise plans</i> to improve environmental practices and resource efficiency. 3.2. Make <i>suggestions</i> for improvements to workplace practices in own work area.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include the ability to:

- report as required by procedures
- follow procedures and instructions and respond to change
- ask questions and seek clarifications relating to work requirements

Reading and writing is required in order to interpret required procedures and complete required workplace forms/reports.

Numeracy is required to interpret numeric workplace information, readings and measurements, handle data as required and complete numeric components of workplace forms/reports.

Required knowledge

Competency includes sufficient knowledge to:

- have a basic understanding of sustainability
- know the environmental hazards/risks, resource use and inefficiencies associated with own workplace (at an appropriate level)
- know the relevant environmental and resource efficiency systems and procedures for own work area
- know the impact of laws and regulations to a level relevant to the work context

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competence in this unit must be able to provide evidence of the ability to follow workplace procedures according to instructions given and to participate in the improvement of environmental and resource efficient work practices at own level of responsibility. Evidence must be strictly relevant to the particular workplace role.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:</p> <ul style="list-style-type: none"> • identify and measure resources used in their job • identify situations likely to lead to an environmental incident • follow procedures related to environmental performance. <p>Consistent performance should be demonstrated. For example, look to see that:</p> <ul style="list-style-type: none"> • work is routinely to procedures • the minimum of resources is used consistent with the job requirements, good practice and the procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.</p> <p>Depending on the selected methods of assessment access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans • documentation in relation to production, waste, overheads, hazard control/management • reports from supervisors/managers • case study/scenarios
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed:</p> <ul style="list-style-type: none"> • by demonstration in the workplace

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • using targeted questioning for appropriate portions • by use of a suitable simulation and/or a range of case studies/scenarios • by a combination of these techniques. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment.</p>
Guidance information for assessment	Assessors need to be aware of any cultural issues that may affect responses to questions. Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Procedures

All operations are performed in accordance with procedures including all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Environmental and resource efficiency issues

Environmental and resource efficiency issues include minimisation of environmental risks and maximisation of opportunities to improve business environmental performance and to promote more efficient production and consumption of natural resources, for example by:

- minimisation of waste, through implementation of the waste management hierarchy
- efficient and effective use of energy and other resources
- seeking alternative sources of energy
- efficient use of materials and appropriate disposal of waste
- use of controls to minimise the risk of environmental damage from hazardous substances
- efficient water use
- reducing emissions
- life cycle analysis applied to issues such as energy supply, materials, transport, production

Measure

Measure should be interpreted in a manner consistent with the scope of the job and may include things like:

- counting the number of items entering/leaving a work area
- reading indicators in the work area
- obtaining relevant information from support

RANGE STATEMENT	
	<p>personnel</p> <ul style="list-style-type: none"> • other simple means
Appropriate techniques	<p>Appropriate techniques include:</p> <ul style="list-style-type: none"> • material fed to/consumed by plant/equipment • plant meters and gauges • job cards including kanbans • examination of invoices from suppliers • measurements made under different conditions • examination of relevant information and data.
Compliance	<p>Compliance includes meeting relevant federal, state and local government laws, by-laws, regulations and mandated codes of practice. It also includes any codes and standards that the enterprise applies voluntarily.</p>
Incidents	<p>Incidents include:</p> <ul style="list-style-type: none"> • breaches or potential breaches of regulations • occurrences outside of standard procedure which may lead to lower environmental performance.
Enterprise plans	<p>Enterprise plans include:</p> <ul style="list-style-type: none"> • documented policies and procedures • work plans to minimise waste, increase efficiency of water/energy use, minimise environmental hazards
Suggestions	<p>Suggestions include ideas that help to:</p> <ul style="list-style-type: none"> • prevent and minimise environmental risks and maximise opportunities • reduce emissions of greenhouse gases • reduce use of non-renewable resources • improve energy efficiency • increase use of renewable, recyclable, reusable and recoverable resources • reduce waste • increasing the reusability/recyclability of wastes/products • reduce water usage and/or water wastage.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Investigate current practices in relation to resource usage.	1.1 Identify environmental regulations applying to the enterprise. 1.2 Assess procedures for assessing <i>compliance</i> with environmental regulations. 1.3 Collect information on environmental and resource efficiency systems and procedures, and provide to the work group where appropriate. 1.4 Measure and record current resource usage by members of the work group. 1.5 Analyse and record current purchasing strategies. 1.6 Analyse current work processes to access information and data and assist in identifying areas for improvement.
2. Set targets for improvements.	2.1 Seek input from stakeholders, key personnel and specialists. 2.2 Access external sources of information and data as required. 2.3 Evaluate alternative solutions to workplace environmental issues. 2.4 Set efficiency targets.
3. Implement performance improvement strategies.	3.1 Source <i>techniques/tools</i> to assist in achieving targets. 3.2 Apply continuous improvement strategies to own work area of responsibility and communicate ideas and possible solutions to the work group and management. 3.3 Integrate environmental and resource efficiency improvement plans for own work group with other operational activities and implement them. 3.4 Seek suggestions and ideas about environmental and resource efficiency management from stakeholders and act upon them where appropriate. 3.5 Implement costing strategies to fully value environmental assets.
4. Monitor performance.	4.1 Document outcomes and communicate reports on targets to key personnel and stakeholders. 4.2 Evaluate strategies. 4.3 Set new targets and investigate and apply new tools and strategies. 4.4 Promote successful strategies and reward participants where possible.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- using relevant environmental and resource efficiency systems, tools and procedures
- applying quality assurance systems relevant to own work area
- applying relevant supply chain procedures
- measurement and calculation techniques
- communication/consultation skills to ensure information is supplied to the work group

Reading and writing is required to comprehend documentation and interpret environmental and energy efficiency requirements and to document and maintain records

Numeracy is required to interpret numeric workplace information, readings and measurements, handle data as required and complete numeric components of workplace forms/reports.

Required knowledge

Required knowledge includes:

- how to access and use relevant environmental and resource efficiency systems, tools and procedures
- understanding of best practice approaches relevant to own area of responsibility
- strategies to maximise opportunities and minimise impacts relevant to own work area
- relevant environmental and resource efficiency issues specific to industry practices
- methods for measuring and calculating resource usage

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competence in this unit must be able to provide evidence of the ability to implement and monitor integrated environmental and resource efficiency management policies and procedures within an organisation.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:</p> <ul style="list-style-type: none"> • monitor and investigate current resource usage • develop plans to improve sustainability • implement environmental improvements. <p>Consistent performance should be demonstrated. For example, look to see that:</p> <ul style="list-style-type: none"> • environmental performance is routinely monitored and investigated • areas for improvements are followed through and the implemented changes are in turn monitored and investigated.
<p>Context of and specific resources for assessment</p>	<p>This section should be read in conjunction with the range of variables for this unit of competency. Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.</p> <p>Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation.</p> <p>A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.</p> <p>Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified</p>

EVIDENCE GUIDE	
	for people with disabilities.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed:</p> <ul style="list-style-type: none"> • by demonstration in the workplace • using targeted questioning for appropriate portions • through use of specific project(s) • by use of a suitable simulation and/or a range of case studies/scenarios • by a combination of these techniques. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment.</p>
Guidance information for assessment	<p>Assessors need to be aware of any cultural issues that may affect responses to questions.</p> <p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Environmental and resource efficiency issues

Environmental and resource efficiency issues include:

- addressing environmental and resource sustainability initiatives such as Environmental Management Systems, action plans, surveys and audits
- reference to standards, guidelines and approaches such as:
 - ISO 14001 Environmental Management Systems
 - Life Cycle Analyses
 - Cradle to cradle
 - Global Reporting Initiative
 - Ecological footprinting
 - Triple Bottom Line reporting
 - Product Stewardship
- determining enterprise's most appropriate waste treatment including waste to landfill, recycling, re-use and wastewater treatment
- applying the waste management hierarchy in the workplace
- initiating and/or maintaining appropriate enterprise procedures for operational energy consumption, including stationary energy and

RANGE STATEMENT	
	<p>non stationary (transport)</p> <ul style="list-style-type: none"> • efficient use of water • minimising greenhouse gas emissions • use of controls to minimise the risk of environmental damage from hazardous substances
Measure	<p>Measuring techniques include:</p> <ul style="list-style-type: none"> • material fed to/consumed by plant/equipment • plant meters and gauges • job cards including kanbans • examination of invoices from suppliers • measurements made under different conditions • examination of relevant information and data • others as appropriate to the specific industry contexts.
Techniques and tools	<p>Techniques and tools may include:</p> <ul style="list-style-type: none"> • visual workplace concepts • measurement, display and/or recording devices • changed work practices/procedures • competence development and awareness training • process and equipment items
Compliance	<p>Compliance includes meeting relevant federal, state and local government laws, by-laws, regulations and codes of practice.</p>
Incidents	<p>Incidents include:</p> <ul style="list-style-type: none"> • breaches or potential breaches of regulations • occurrences outside of standard procedure which may lead to lower environmental performance
Purchasing strategies	<p>Purchasing strategies include:</p> <ul style="list-style-type: none"> • influencing suppliers to take up environmental sustainability • selecting materials/components with a lower environmental profile.
Stakeholders, key personnel and specialists	<p>Stakeholders, key personnel and specialists include individuals and groups both inside and outside the organisation that have some direct interest in the</p>

RANGE STATEMENT	
	<p>enterprise's conduct, actions, products and services, including:</p> <ul style="list-style-type: none"> • employees at all levels of the organisation • customers • suppliers • other organisations • key personnel within the organisation, and specialists outside it who may have particular technical expertise
Suggestions	<p>Suggestions includes ideas that help to:</p> <ul style="list-style-type: none"> • prevent and minimise environmental risks and maximise opportunities • reduce emissions of greenhouse gases • reduce use of non-renewable resources • make more efficient use of energy, water and other resources • maximise opportunities to re use and recycle materials • identify strategies to offset or mitigate environmental impacts. e.g. purchasing of carbon credits • express purchasing power through the selection of suppliers with improved environmental performance. e.g. purchasing renewable energy and materials with lower embedded carbon • eliminate the use of hazardous and toxic materials increasing the reusability/recyclability of wastes/products.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop workplace sustainability policy.	1.1 Define <i>scope of sustainability policy</i> . 1.2 Identify and consult <i>stakeholders</i> as a key component of the policy development process. 1.3 Review environmental sustainability <i>strategies</i> relevant to all stages of work covered by the policy 1.4 Make recommendations for policy options based on likely effectiveness, timeframes and cost. 1.5 Develop policy is that reflects the organisation's commitment to sustainability as an integral part of the business planning and as a business opportunity. 1.6 Agree upon appropriate methods of implementation.
2. Communicate the policy.	2.1 Promote the policy, including its expected outcome to key stakeholders. 2.2 Inform those involved in implementing the policy as to outcomes expected, activities to be undertaken and responsibilities assigned.
3. Implement the policy.	3.1 Develop and communicate procedures to help implement the policy. 3.2 Implement <i>strategies</i> for continuous improvement in resource efficiency. 3.3 Establish record systems for tracking continuous improvements in sustainability approaches and assign responsibilities.
4. Review policy implementation	4.1 Record outcomes and provide feedback to key personnel and stakeholders. 4.2 Investigate success or otherwise of policy. 4.3 Monitor records to identify trends that may require remedial action, and use to promote continuous improvement of performance. 4.4 Modify policy and or <i>procedures</i> as required to ensure improvements are made.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- developing and implementing systems and procedures to aid in the achievement of sustainability in the workplace
- applying quality assurance systems relevant to own enterprise
- accessing and applying other relevant enterprise policies, procedures and protocols
- relevant industry competency
- interpreting business/strategic plans

This unit requires the ability to:

- read and evaluate complex and formal documents such as policy and legislation
- research, analyse and present information
- prepare written reports requiring precision of expression and language and structures suited to the intended audience
- adjust communication to suit different audiences
- deal with different points of view and dissenting stakeholders.

Required knowledge

Required knowledge includes:

- understanding of relevant policy development and implementation processes and practices
- understanding of the principles, practices and available tools and techniques of sustainability management relevant to the particular industry context
- best practice approaches relevant to own work area
- equal employment opportunity, equity and diversity principles and occupational health and safety implications of policy/s being developed

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competence in this unit must be able to provide evidence of the ability to develop and implement integrated sustainability policies and procedures within an enterprise. The review of the policy after implementation will also need to be evidenced.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:</p> <ul style="list-style-type: none"> • develop relevant policy and procedures that comply with the regulatory requirements and business plans • develop a workable implementation strategy • include measurable criteria for reviewing improvement. <p>Consistent performance should be demonstrated. For example, look to see that:</p> <ul style="list-style-type: none"> • policy implementation is reviewed • policy is developed to become part of the routine practices of the organisation.
<p>Context of and specific resources for assessment</p>	<p>This section should be read in conjunction with the range of variables for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation.</p> <p>A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.</p> <p>Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</p>
<p>Method of assessment</p>	<p>Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by</p>

EVIDENCE GUIDE	
	<p>the Elements, Performance Criteria and skills and knowledge.</p> <p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed:</p> <ul style="list-style-type: none"> • by demonstration in the workplace • using targeted questioning for appropriate portions • through use of specific project(s) • by use of a suitable simulation and/or a range of case studies/scenarios • by a combination of these techniques. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment.</p>
<p>Guidance information for assessment</p>	<p>Assessors need to be aware of any cultural issues that may affect responses to questions.</p> <p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Procedures	<p>All operations are performed in accordance with procedures.</p> <p>Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.</p> <p>Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.</p>
Scope of sustainability policy	<p>Scope of sustainability policy include:</p> <ul style="list-style-type: none"> • The area/s of environmental sustainability to be targeted and whether social and economic sustainability will be incorporated • The parts of the enterprise to which it is to apply, including whether it is for the whole enterprise, one site, one work area or combinations of these • An investigation of the particular business and market context of the industry/ enterprise • Addressing sustainability initiatives through reference to standards, guidelines and approaches such as: <ul style="list-style-type: none"> • ISO 14001 Environmental Management Systems • Life Cycle Analyses • Cradle to grave/cradle to cradle • Global Reporting Initiative • Ecological Footprint Assessment • Triple Bottom Line reporting • Product Stewardship.
Stakeholders	<p>Stakeholders include individuals and groups both inside and outside the organisation that have some</p>

RANGE STATEMENT	
	<p>direct interest in the enterprise's conduct, actions, products and services, including:</p> <ul style="list-style-type: none"> • employees at all levels of the organisation • customers • suppliers • regulators • other organisations.
Strategies	<p>Implementation strategies include:</p> <ul style="list-style-type: none"> • awareness raising among stakeholders • training of staff in principles and techniques of sustainability • promotional activities. <p>Continuous improvement strategies include ongoing measuring, improving and monitoring such as:</p> <ul style="list-style-type: none"> • Plan, do, check, act cycles • Kaizen (continuous improvement) • Kaizen blitz (breakthrough improvement event) • Six sigma approaches <p>Environmental sustainability strategies include:</p> <ul style="list-style-type: none"> • reducing toxic material and hazardous chemical use • minimising resource use through changes in processes, facility design and management • supply chain and life cycle management approaches • sourcing renewable energy and low carbon footprint materials • reducing, re-using, recycling and waste reduction • product and process improvements • carbon offsets • reducing greenhouse gas and other emissions

Co-requisite units

Co-requisite units		

MSAPCI101A Adapt to work in industry

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit covers the fundamental knowledge and skills needed when taking up employment within the manufacturing industry. It includes the application of industry and workplace guidelines and procedures in a day to day work context as well as appropriate work behaviour.

The elements of this unit should always be assessed in conjunction with other units that form part of a specified job function.

Training and assessment against this competency unit must incorporate all relevant legislative and regulatory requirements.

Application of the Unit

Application of the Unit

The unit has applications in qualifications for all occupations in the manufacturing industry and it should be regarded as an integrating unit. When delivered/assessed as part of a qualification, the unit will be customised to ensure its relevance to the real or simulated work activities and related workplaces.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Manage one's own learning

- 1.1 One's personal goals or vision are considered and articulated
- 1.2 Opportunities for learning new ideas and techniques in relation to personal goals are identified
- 1.3 Personal learning needs and **skill gaps** are recognised
- 1.4 Opportunities for **skills development activities** are identified in liaison with relevant personnel
- 1.5 A range of **learning tools and practices** are accessed and applied to the job
- 1.6 Advantage is taken of **on-the-job** and **off-the-job learning opportunities**

2 Adapt to and demonstrate appropriate work practice

- 2.1 Work requirements are identified and interpreted with advice from appropriate persons
- 2.2 **Appropriate dress and behaviour** are observed in the workplace
- 2.3 Work and personal priorities are identified and a balance is achieved
- 2.4 **Time management strategies** are applied to work

ELEMENT	PERFORMANCE CRITERIA
	duties
	2.5 Interactions with others is tailored to take into account different backgrounds, cultures and languages
3 Work within organisational requirements	3.1 Organisational requirements and key activities of the workplace are identified
	3.2 Relevant workplace policies and guidelines are identified and applied to work undertaken
	3.3 The range of organisational values and cultural norms are interpreted
	3.4 Any uncertainties are discussed with key personnel and clarified
4 Identify the sectors of the industry	4.1 The main sectors of the manufacturing industry, their key activities and the way in which they inter-relate are identified
	4.2 The roles and responsibilities of the manufacturing industry are clarified
	4.3 Key industry representatives and their roles are identified
	4.4 Current issues or events impacting on the industry are identified
5 Identify industry sector products and services	5.1 The products provided by the industry sector are identified
	5.2 The services provided by the industry sector are identified
	5.3 Appropriate standards of service across the industry sector are identified
	5.4 Quality standards for products and services as identified by the industry are clarified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge required for this unit.

REQUIRED KNOWLEDGE

Knowledge and understanding are essential to apply this competency standard in the industry and workplace. The requirements for this competency standard are a knowledge and basic understanding of:

- current events, activities, products and services of the manufacturing industry
- workplace policies, procedures and guidelines
- time management strategies and appropriate workplace etiquette
- workplace equipment, tools and other technologies used in the manufacturing industry and where and how to obtain information and instructions on their safe use and basic care and servicing
- sources of information on the industry sector and skills development activities

REQUIRED SKILLS

To achieve the performance criteria, some complementary skills are required. These are the ability to:

- following directions
- literacy skills in regard to written and verbal communication in the workplace
- basic interpersonal and communication skills (including listening and questioning, receiving feedback)
- workplace technology skills where appropriate or required
- following relevant OHS and environmental protection procedures and responsibilities
- time management strategies (
- adapt and modify activities depending on differing workplace contexts and environment
- apply relevant industrial or other legislative requirements
- recognise and adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions among staff and others
- recognise limitations, ask for help and seek clarification or information about work requirements and procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm appropriate knowledge and skills to:
- identify and interpret information on sectors in the manufacturing industries
- identify and interpret information on the range of products and services produced by manufacturing industries
- complete work tasks in accordance with workplace requirements, standards and applicable regulations
- adapt to and apply workplace procedures and practice
- identify and take advantage of learning opportunities in the workplace
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Consistently applies required knowledge and skills when adapting to workplace requirements:
- Consistently shows evidence of application of relevant workplace procedures, policies, instructions and regulations, including:
 - relevant regulatory requirements
 - workplace procedures, policies and standards
 - relevant manufacturer's guidelines relating to the operation and use of equipment
- Action is taken promptly to report and/or rectify any workplace problems in accordance with workplace procedures
- Recognises and adapts appropriately to cultural differences in the workplace, including modes of behaviour and interactions among staff and others
- Work is completed systematically with required attention to detail without damage to goods, equipment or personnel

Context of assessment

- Assessment of this unit must be carried out or managed by a registered training organisation:
- assessment of knowledge must be conducted through appropriate written/oral examinations and questions
- practical assessment must occur:
- in suitable simulations of a work environment

EVIDENCE GUIDE

	organised by the registered training organisation, and/or
	<ul style="list-style-type: none">• in an appropriate workplace
Specific resources required for assessment	Access is required to opportunities and appropriate resources to either: <ul style="list-style-type: none">• carry out a range of suitably simulated practical and knowledge assessments that demonstrate the skills and knowledge to adapt to workplace requirements(usually as part of a holistic assessment involving other competency units)• participate in actual workplace activities that demonstrate the skills and knowledge to adapt to workplace requirements

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

RANGE STATEMENT

1. What are **skill gaps**?

Skill gaps include a range of skills needed for the workplace or for a particular job which are currently not developed within an individual. They are different from an individual's 'personal learning needs' as they are skills specifically relevant and required for a particular job. They may include:

- physical capacity skills
- workplace technology skills such as business equipment, computer technology, machinery, hand tools, bags, security systems
- numeracy and literacy skills
- customer service skills
- communication skills such as listening and understanding, speaking clearly/directly, reading, writing
- technical skills

2. What are **skill development activities**?

Skill development activities may include:

- training courses
- IT courses
- human resources programs
- coaching and mentoring programs
- having access to a mentor for questions and advice
- having the chance to learn a new task or to operate a new piece of equipment or workplace technology
- participating in an external or internal training program
- guided workplace experience

3. What are **learning tools and practices**?

Learning tools and practices may include:

- learning through note taking
- reviewing manuals and training guides
- discussion
- practice
- observation
- trial and error
- or a combination of any of these

4. What **on-the-job opportunities** might be accessed and used?

On-the-job opportunities may include:

- filling in for a co-worker in a new area
- attending talks or seminars arranged by the

RANGE STATEMENT

- workplace
- shadowing another co-worker in a different area
 - receiving on the job training and supervised practice
5. What **off-the-job opportunities** might be accessed and used?
- Off-the-job opportunities** may include:
- taking a course with a training provider
 - attending conferences or seminars
 - attending site visits with supervisor
 - participating in workplace social events
 - participating in community events
6. What is appropriate **dress and behaviour**?
- Appropriate dress and behaviour** may include:
- personal dress, safety equipment and dress, presentation
 - demeanour and attitude displayed to customers and fellow employees
7. What are **time management strategies**?
- Time management strategies** may include:
- being punctual
 - goal setting
 - balancing work and personal priorities or agendas
 - prioritisation of required tasks or activities
 - planning daily or weekly work
 - overcoming procrastination
 - dealing with interruptions (contingency planning)
 - organising your work environment
8. What are **organisational requirements**?
- Organisational requirements** may include:
- organisational policies and guidelines
 - common organisational practice
 - performance plans
 - OHS policies, procedures and programs
9. What are **workplace policies and guidelines**?
- Workplace policies and guidelines** may include but are not limited to:
- attendance
 - punctuality
 - standards for health and fitness

RANGE STATEMENT

- obeying orders
- confidentiality
- dress codes
- alcohol and drug restrictions
- personal safety and duty of care related to OHS
- terms and conditions of employment

10. What are **organisational values**?

Organisational values generally refers to those mentioned in a mission or vision statement of a company and may include:

- innovation
- community responsibility
- environment responsibility

11. What are **cultural norms**?

Cultural norms may include:

- manners
- meanings specific to the language of the workplace
- history
- workplace etiquette

12. What are the **main sectors** of the industry?

Main sectors of industry may include:

- textiles, clothing & footwear
- furniture
- chemical manufacturing
- plastics and rubber products manufacturing
- maintenance and engineering
- manufacture of glass or concrete products

13. What are the **roles and responsibilities** of the industry?

The **roles and responsibilities of the industry** may include:

- providing quality products and services
- providing quality customer service
- providing proper training to those in the industry

14. Who are **key industry representatives**?

Key industry representatives may include:

- industry associations
- enterprises
- unions
- legislative bodies

15. What might **current issues or events** include?

Current issues or events may include:

- economic

RANGE STATEMENT

- environmental
- political
- technological
- supply and demand

16. What are **industry products**?

Industry products are the outcomes of manufacturing processes and may include:

- clothing and footwear
- concrete and glass products
- tyres and plastic car components
- electronic components
- metal products

17. What are **industry services**?

Industry services may include:

- customer support
- product advice
- health, diet advice
- delivery services
- consulting services
- warranties and/or guarantees

18. What are **service standards**?

Service standards will vary from industry to industry and even from workplace to workplace depending on the job role and context. It may include:

- developing and maintaining product and service knowledge
- identifying customer needs and expectations correctly
- meeting reasonable needs and request of customers within acceptable time frames
- taking opportunities to enhance the quality of products and services
- dealing with conflict situations
- responding to customer complaints
- maintaining a positive and cooperative manner
- establishing relationships with customers
- following appropriate hygiene and safety procedures
- referring difficult complaints to appropriate persons

19. What are **quality**

Quality standards may include:

RANGE STATEMENT

standards?

- consistency standards
- quality specifications
- time requirements
- meeting customer requirements

Manufacturing Pathways

MSAPMSUP106A Work in a team

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the organisation of team activities to fit in with the scheduling of work to meet operational guidelines.

Application of the Unit

Application of this unit

This competency is typically performed by people who work within a team structure with limited discretionary powers

The worker will:

- plan and organise activities in accordance with instructions
- use appropriate interpersonal skills to contribute to effective teamwork
- seek assistance from other team members where appropriate
- complete logs and reports.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Individual organisations may choose to add prerequisites and corequisites relevant to their processes.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify work activities.	1.1 Identify task requirements of the team. 1.2 Identify individual tasks that are part of the team requirement. 1.3 Prioritise team and individual activities as directed.
2. Organise daily work plan.	2.1 Break work activities down into small achievable components. 2.2 Record activities as required by procedures/work instructions. 2.3 Seek assistance from other team members when difficulties in achieving allocated tasks arise.
3. Participate in a team.	3.1 Use interpersonal skills appropriate to the effective teamwork of the shift/crew/section within the workplace. 3.2 Acknowledge information and feedback provided by other team members in work group. 3.3 Acknowledge team roles and support team members in achieving their role. 3.4 Practise teamwork within and between groups to contribute to the achievement of company work standards.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of organisation information systems, procedures and equipment sufficient to plan daily work activities in order to meet timelines.

Knowledge of organisation standard procedures and work instructions and relevant regulatory requirements, along with the ability to implement them within appropriate time constraints and in a manner relevant to the operation of the system.

Competence also includes the ability to:

- use effective communication techniques
- identify where teams fit into the organisational structure
- apply organisation quality and safety procedures
- complete required workplace documentation
- distinguish between urgent and non-urgent tasks.

Language, literacy and numeracy requirements

This unit requires the ability to read and understand typical product specifications, job sheets, procedures and work instructions, material labels and safety information as provided.

Writing is required to the level of completing workplace forms.

Basic numeracy is required to the extent required by work instructions and procedures.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to identify work activities and prioritise work in order to meet timelines, whilst interacting as a member of a group.

Consistent performance should be demonstrated. For example, look to see that:

- activities are planned in accordance with instructions
- willingness to participate as part of a team is demonstrated
- relevant procedures are accessed and utilised in completing activities
- timelines are adhered to
- assistance is sought from relevant personnel when difficulties arise.

Assessment method and context

Assessment will occur on-the-job or in a simulated workplace.

Competence in this unit may be assessed:

- by observation over time on a processing plant or in a manufacturing environment
- in a situation allowing the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required.

Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all work environments and sectors in the manufacturing industries.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as PPE.

Hazards

Typical workplace hazards include:

- chemicals and hazardous materials
- gases and liquids under pressure
- moving machinery
- materials handling

- working at heights, in confined spaces, or in environments subjected to heat, noise, dust or vapours.

Problems

Respond to routine problems means 'apply known solutions to a limited range of predictable problems'. Typical problems include:

- required information/materials not available
- required tool/equipment not available
- conflict of work priorities
- interpersonal conflict within the team.

Appropriate action for non-routine problems may be reported to designated person or other action specified in the procedures.

Unit Sector(s)

Not applicable.

MSATCM304A Interpret basic binary phase diagrams

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor	This unit covers the knowledge and skills needed to interpret phase diagrams and so predict the microstructures of binary alloys.
------------------------	---

Application of the Unit

Application of the unit	This unit applies to the interpretation of cooling phase diagrams as used in metallurgy. The application will primarily be to phase diagrams of metals and alloys showing temperature and composition variables. In a typical scenario, a metallurgical technician will be required to recommend a phase transition process in order to obtain a required microstructure, or to predict a microstructure from a known phase transition process.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Pre-requisite Units	

Employability Skills Information

Employability Skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the microstructures from an equilibrium cooling phase diagram	<p>1.1. Phase diagram for metal or alloy is obtained from internal or external sources</p> <p>1.2. Identify number, composition, proportion and structural arrangement of phases in binary alloys.</p> <p>1.3. Describe structural changes due to varying proportion of alloying elements and temperature.</p> <p>1.4. Describe the phase changes and final microstructures of binary alloys cooled under equilibrium conditions from the melt or during heat treatment operations.</p>
2. Identify the microstructures from a non equilibrium cooling phase diagram	<p>2.1. Identify number, composition, proportion and structural arrangement of phases in binary alloys.</p> <p>2.2. Describe structural changes due to varying proportion of alloying elements and temperature.</p> <p>2.3. Describe the phase changes and final microstructures of binary alloys cooled under equilibrium conditions from the melt or during heat treatment operations.</p>
3. Recognise characteristic microstructures of binary alloys	<p>3.1. Recognise characteristic structures of dendrites (homogeneous and cored) columnar and equiaxed grains.</p> <p>3.2. Recognise characteristic structures resulting from eutectic, eutectoid and peritectic reactions.</p> <p>3.3. Recognise characteristic structures resulting from solid state precipitation.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills:

- produce a basic cooling phase diagram from supplied data
- estimate composition from the structure of a phase diagram
- predict structure from the composition from a phase diagram

Required knowledge:

Competency includes sufficient knowledge of:

- methods of construction of phase diagrams for binary alloys.
- the phase changes that occur in binary alloy systems as recorded by the appropriate phase diagrams.
- the equilibrium and non equilibrium cooling of binary alloys and the resulting microstructures in cast and heat treated material.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Overview of assessment

The person will be able to interpret binary phase diagrams. Assessment may be by workplace project, case study or suitable alternative.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the ability to:

- recognise and use correct scientific terminology in regards to phase diagrams
- source phase diagrams and other reference material from internal or external sources
- use phase diagrams to interpret intermediate and final phase structures of binary alloys

Relationship to other units

This unit may be assessed concurrently with other relevant units.

Assessment method and context

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the elements, performance criteria, skills and knowledge. A holistic approach should be taken to the assessment.

Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or numeracy skills beyond those required for the unit.

The assessee will have access to all techniques, procedures, information, resources and aids which would normally be available in the workplace. The method of assessment should be discussed and agreed with the assessee prior to the commencement of assessment.

Resource implications

This section should be read in conjunction with the range of variables for this unit of competency.

EVIDENCE GUIDE

	Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Codes of practice/standards	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used.
Scientific techniques and principles of cooling phase diagrams relate to	<ul style="list-style-type: none"> • Equilibrium phase diagrams • Non-equilibrium phase diagrams • Effect of temperature and alloying elements on structural changes • Structures of homogenous and cored dendrites • Structures of columnar and equiaxed grains • Eutectic, eutectoid and peritectic reactions

MSATCS301A Interpret architectural and engineering design specifications for structural steel detailing

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the skills and knowledge required to interpret design related information required for the commencement of a structural steel detailing project.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to the initial receiving and checking of design related information by structural steel detailers including obtaining additional information or clarifying information already received. Structural steel detailers must obtain and interpret design related information from architects and consulting engineers in order to carry out structural steel detailing. The unit may apply to structural steel detailing carried out for residential, commercial, industrial or mining fabrication and construction projects.</p> <p>The unit assumes that knowledge of basic technical drawing conventions and procedures such as view, dimensioning, drawing layout, etc. is already held.</p> <p>Work is conducted according to defined procedures.</p> <p>Work may be conducted in small to large scale enterprises and may involve individual and team activities.</p> <p>This unit requires the application of skills associated with planning and organising to complete structural steel detail drawings. Communication and numeracy skills are used to refer to patterns and specifications and complete and label sketches. Self management skills are used to ensure conformance of own work to quality standards.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Obtain and check adequacy of design related information for structural steel detailing purposes	1.1. General arrangement drawings are obtained and interpreted including standard symbols, terms and figures used by designers 1.2. Adequacy of arrangement information is checked against detailer and client requirements 1.3. Design information is checked for any drawings or descriptions of any members, connections, components or details that lie outside the scope of standard structural practice 1.4. Information on suspended floors is obtained and checked 1.5. Column base layouts and schedules, if any, are checked 1.6. Specifications for grades of steel and bolt grades are obtained and checked 1.7. Information on standards and other design related specifications to be shown on detail drawings is checked
2. Obtain additional information where required	2.1. Requests for further information (RFIs) are submitted according to enterprise and project procedures 2.2. Adjustments to design information are made based on RFI responses and noted according to standard drawing office procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- assess design information for adequacy of information needed for structural steel detailing
- liaise with architects and engineers
- assess scope of structural steel detailing tasks and priorities
- interpret design drawings, sketches and schedules
- work according to OHS practices of the enterprise and workplace which may include requirements prescribed by legislation, awards, agreements and conditions of employment, standard operating procedures, or oral, written or visual instructions
- communicate at all levels about technical issues related to patterns and specifications
- reading and numeracy is required to the level of interpreting workplace documents and technical information

Required knowledge

- architectural and engineering design drawings including standard symbols, terms, abbreviations and sketches
- structural steel members and connections used in structural steel construction
- the difference between design and detail drawing processes
- drawing office procedures
- fabrication processes and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Demonstrates skills and knowledge to:</p> <ul style="list-style-type: none"> • identify and interpret architect and engineer design specifications for structural steel constructions including constructions with suspended floors • relate design information to structural steel detailing processes including checking of adequacy of design information for the construction • establish efficient administrative arrangements for liaison with designers including arrangements for formal requests for further information • establish drawing and document control procedures
Context of and specific resources for assessment	<p>Assessment may occur on the job or in an appropriately simulated environment</p> <p>Resource implications for this unit include:</p> <ul style="list-style-type: none"> • access to real or appropriately simulated detailing of structural steel constructions including provision of suitable design information • computer with suitable CAD software or manual drafting equipment and material including work areas, materials and equipment • access to steel and component manufacturers' catalogues or websites • access to relevant standards through either hard copy or internet access. <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</p>
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Manufacturing Training Package

EVIDENCE GUIDE

	<ul style="list-style-type: none">• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency where structural steel detailing is involved
<p>Guidance information for assessment</p>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements
Drawings	For the purposes of this unit drawings refers to both hard copy and software files including CAD files
Designers	Designers include architects and consulting engineers. The design information may also be provided via drawings produced by design draftspersons
Adequacy	Adequacy means that sufficient design information is provided to enable the structural steel detailer to prepare drawings that will provide all information required for fabrication and erection
Adequacy of arrangement information	<p>Adequacy of arrangement information refers to the information normally provided on arrangement or layout drawings provided by architects and/or consulting engineers. This information includes:</p> <ul style="list-style-type: none"> • building orientation • layout on a site and relationship to any other structures • primary dimensions • floor levels • beam spacing • column centres • sizes for all members, for example, beams, trusses, columns, rafters, purlins, girts, braces, crane beams • dimensions and layout drawing for any special features, for example, stairs, landings,

RANGE STATEMENT	
	fire escapes, and so on
Client requirements	<p>Client requirements may include:</p> <ul style="list-style-type: none"> • shop detail drawings, erection diagrams and material schedules and lists • program and format for CAD files and models • downloading by the structural steel detailer of files direct to client computers and CNC machines • size and number of hard copy drawings • specification of programs and requirements for word processed documents, spreadsheets, presentations, invoices, and so on
Suspended floors	Suspended floors may consist of reinforced concrete slab, composite slab, pre-cast planks and topping, steel plate or grating, or other specified material
Work environment	<p>Detailing may be undertaken in a variety of work environments including commercial, home office or fabrication or construction enterprise.</p> <p>Work may be performed individually on a contracting/project basis or as part of a project team and in response to combinations of paper based and electronic instructions.</p>

MSATCS302A Detail bolts and welds for structural steelwork connections

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the skills and knowledge required to detail bolts and welds for structural steelwork connections consistent with design specifications.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to a structural steel detailer who has to detail various types of bolts and welds for structural steelwork connections. The detailing may be done manually or by using CAD and/or proprietary steel detailing software.</p> <p>The unit may apply to structural steel detailing carried out for residential, commercial, industrial or mining fabrication and construction projects.</p> <p>The unit assumes that knowledge of basic technical drawing conventions and procedures such as view, dimensioning, drawing layout, etc. is already held.</p> <p>Work is conducted according to defined procedures.</p> <p>Work may be conducted in small to large scale enterprises and may involve individual and team activities.</p> <p>This unit requires the application of skills associated with planning and organising to complete structural steel detail drawings. Communication and numeracy skills are used to refer to patterns and specifications and complete and label sketches. Self management skills are used to ensure conformance of own work to quality standards.</p>
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	<i>MEM09002B</i>	<i>Interpret technical drawing</i>
	<i>MEM05051A</i>	<i>Select welding processes</i>
	<i>MSATCS301A</i>	<i>Interpret architectural and engineering design specifications for structural steel detailing</i>

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine shop and field connections from design drawings	1.1. Fabrication shop capabilities and preferences are discussed with fabricator 1.2. Connections are allocated as shop or field welded in conjunction with fabricator 1.3. Connections to be field bolted are allocated and extent of shop preparation of connections decided 1.4. Connection fittings are allocated to either columns or beams to suit fabrication efficiency or design requirements 1.5. A request for further information (RFI) is made to design engineer where clarification of requirements is needed
2. Detail bolts for connections	2.1. Knowledge of standard bolting category identification system is demonstrated 2.2. Bolt types and sizes for each connection are specified using design information and consideration of commercial availability 2.3. Bolt and thread lengths are selected according to design specifications, and connection requirements 2.4. Bolt and bolt holes are detailed taking into account AS 4100 requirements, tightening and tensioning specifications and clearances 2.5. Field bolt list is prepared and checked and sent to fabricator
3. Detail welds for connections	3.1. Knowledge of joint and weld types is demonstrated 3.2. Shop and field welds are identified 3.3. Standard welding symbols are used 3.4. Clearances for welding are applied 3.5. Field weld details are placed on erection plans and shop drawings and submitted to design engineer for approval

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- assess design information for adequacy of information needed for structural steel detailing
- liaise with design engineers
- assess scope of structural steel detailing tasks and priorities
- interpret design drawings, sketches and schedules
- determine bolt and thread length taking into account:
 - shank lengths as defined in AS 1111 and AS 1252
 - whether the thread is to be included or excluded in the shear plane
 - grip and ply thicknesses
 - thread projection as per AS 4100
 - nut and washer requirements
- detail welds consistent with design information and AS4100 and AS 1101 Part 3
- work according to OHS practices of the enterprise and workplace which may include requirements prescribed by legislation, awards, agreements and conditions of employment, standard operating procedures, or oral, written or visual instructions
- communicate at all levels about technical issues related to patterns and specifications
- reading and numeracy is required to the level of interpreting workplace documents and technical information

Required knowledge

- architectural and engineering design drawings including standard symbols, terms, abbreviations and sketches
- structural steel members and connections used in structural steelwork
- the difference between design and detail drawing processes
- drawing office procedures
- fabrication processes and procedures
- the Australian steel structures limit state design code's (AS4100) requirements in so far as they impact on steel detailing
- Australian standard bolting category identification system
- bolt and thread length considerations including:
 - shank lengths as defined in AS 1111 and AS 1252
 - inclusion or exclusion of the shear plane in the thread
 - grip and ply thicknesses
 - thread projection requirements as per AS 4100

Co-requisite units		

MSATCS501A Detail standardised structural connections

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the skills and knowledge required to identify bolted or welded connections for structural steelwork that is consistent with design specifications and to detail these connections in structural steelwork detailed drawings. Both steel to steel and steel to non-steel connections are covered by this unit. Portal frame haunch connections, column base plate and holding down bolt layouts, and steel to non-steel connections are also covered by this unit.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to a structural steel detailer who has to detail the various types of standard connections used in structural steelwork. Standard connections are those listed in the latest edition of the Australian Steel Institute's <i>Standardised Structural Connections</i> publication.</p> <p>Connections covered include flexible and rigid connections and purlin cleats.</p> <p>The unit may apply to structural steel detailing carried out for residential, commercial, industrial or mining fabrication and construction projects. The detailing may be done manually or by using CAD and/or proprietary steel detailing software.</p> <p>The unit assumes that knowledge of basic technical drawing conventions and procedures such as view, dimensioning, drawing layout, etc. is already held.</p> <p>Work is conducted according to defined procedures.</p> <p>Work may be conducted in small to large scale enterprises and may involve individual and team activities.</p> <p>This unit requires the application of skills associated with planning and organising to complete structural steel detail drawings. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine shop and field connections from design drawings	1.1. Fabrication shop capabilities and preferences are discussed with fabricator 1.2. Connections are allocated as shop or field welded in conjunction with fabricator 1.3. Connections to be field bolted are allocated and extent of shop preparation of connections decided 1.4. Connection fittings for structural connections are allocated to either columns or beams to suit fabrication efficiency or design requirements
2. Identify required connections	2.1. Members requiring connections are identified from design information and any potential or specified non standard connections are identified 2.2. Design information is checked for specification of standard and non standard connections 2.3. Adequacy of design information for non standard connections is checked and request for further information made if necessary 2.4. Standard connections not specified by the designer are identified and connection type specified in conjunction with the fabricator 2.5. Approval is sought from designer before detailing and fabrication
3. Detail connections	3.1. Connections suitable for standard detailing parameters are identified and detailed 3.2. Connection components are detailed using standard detailing parameters 3.3. Copes and notches are detailed for beams and columns as required 3.4. Non standard connections are detailed according to supplied design information
4. Detail purlin and girt cleats	4.1. Purlins and girts are identified on design information 4.2. Cleat length and bolt spacing is identified from purlin or girt manufacturer's instructions or design information 4.3. Cleats are detailed
5. Detail haunches for portal frame buildings	5.1. Haunch specifications, bolting information, eave and apex information supplied by designer are checked 5.2. Exact haunch sizes and dimension haunches on shop drawings and erection diagrams are calculated

ELEMENT	PERFORMANCE CRITERIA
	5.3.Pre-sets for column tops are inserted into shop drawings and erection plans where specified in design information
6. Detail column base plates	<p>6.1.Holding down bolt layout plan is prepared according to design information</p> <p>6.2.Grouts and shims are specified for column base plates</p> <p>6.3.Holding down bolts are specified from design information</p>
7. Detail steel to non-steel connections	<p>7.1.Edge clearances for concrete and other non-steel members or components are determined from designer or non-steel detailer</p> <p>7.2.Casting plates types are identified from design information</p> <p>7.3.Reinforcement locations are identified and clashes with connections avoided</p> <p>7.4.Interference with post tensioning cables and holding down bolts is avoided for upper floor connections</p> <p>7.5.Fixings are identified from design information</p> <p>7.6.Steel to non-steel connections are detailed according to design information</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- assess design information for adequacy of information needed for structural steel detailing
- liaise with architects and engineers
- assess scope of structural steel detailing tasks and priorities
- interpret design drawings, sketches and schedules, to determine dimensions, layouts, types and grades of materials
- interpret manufacturers catalogues and product information
- use basic trigonometry to determine dimensions not given in design information
- work according to OHS practices of the enterprise and workplace which may include requirements prescribed by legislation, awards, agreements and conditions of employment, standard operating procedures, or oral, written or visual instructions
- communicate at all levels about technical issues related to patterns and specifications
- reading and numeracy is required to the level of interpreting workplace documents and technical information

Required knowledge

- architectural and engineering design drawings including standard symbols, terms, abbreviations and sketches
- connections used in structural steel construction
- the difference between design and detail drawing processes
- drawing office procedures
- fabrication processes and procedures
- the Australian steel structures limit state design code's (AS4100) requirements in so far as they impact on steel detailing
- characteristics of portal frame construction especially the behaviour of the frame under load and points of high stress

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<ul style="list-style-type: none"> •
Critical aspects of for assessment and evidence required to demonstrate competency in this unit	<p>Demonstrates skills and knowledge to:</p> <ul style="list-style-type: none"> • identify and interpret architect and engineer design specifications for structural steel constructions including design information for steel to steel and steel to non-steel connections • relate design information to structural steel detailing processes for connections • establish efficient administrative arrangements for liaison with designers including arrangements for formal requests for further information • establish drawing and document control procedures • identify standard components and connections from industry publications, manufacturers' catalogues and Australian or other relevant standards
Context of and specific resources for assessment	<p>Assessment may occur on the job or in an appropriately simulated environment</p> <p>Resource implications for this unit include:</p> <ul style="list-style-type: none"> • access to real or appropriately simulated detailing of structural steel connections including provision of suitable design information • computer with suitable CAD software or manual drafting equipment and material including work areas, materials and equipment • access to steel and component manufacturers' catalogues or websites • access to relevant standards through either hard copy or internet access. <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified</p>

EVIDENCE GUIDE	
	for people with disabilities.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Manufacturing Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application • Assessment may be applied under project related conditions (real or simulated) and require evidence of process • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances • Assessment may be in conjunction with assessment of other units of competency where structural steel detailing is involved
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements
Connections	All connections are steel to steel unless specifically noted
Design information	Design information is the information provided to the detailer and fabricator by the architects and consulting engineers for a project. For some projects the design information may only be provided by an engineer. The design information will usually be in the form of design drawings or sketches but may also be via material lists and written instructions and computer files
Standard connections	Standard connections are those specified in the Australian Steel Institute's publication ' <i>Standardised Structural Connections</i> '
Connection type	<ul style="list-style-type: none"> • Connections may be standard flexible or rigid connections • Flexible connections may include: <ul style="list-style-type: none"> • angle seats • bearing pads • flexible end plates • angle cleats • web side plates • Rigid connections may include: <ul style="list-style-type: none"> • fully welded end plates • bolted moment end plates
Standard detailing parameters	Standard detailing parameters are connections suitable to be detailed using the standard bolting and welding specifications contained in the Australian Steel Institute's publication

RANGE STATEMENT	
	<p>'Standardised <i>Structural Connections</i>'. These details include:</p> <ul style="list-style-type: none"> • size of fillet welds • electrode and MIG welding wire specification • bolt type and size • arrangement of holes for bolts • back gauge dimensions and minimum edge distances • distance from beam top to the first row of bolts • detailing parameters for components such as cleat plates, gussets, end plates, base plates and angle plates
Components	Components may include cleat plates, gussets, end plates, base plates and angle plates
Standard welding symbols	Standard welding symbols as described in AS 1101 Part 3
Non-steel connections	<p>Non-steel connections are those between steel members and concrete, timber, glass or plastic or other building or fabricated component required to be shown on a structural steel detail drawing. The connection may be for structural or decorative purposes. An example would be steel supports for a timber deck</p>
Haunch specifications	<p>Haunches are special connections used in portal frame buildings. Haunch specifications supplied by designers will normally include:</p> <ul style="list-style-type: none"> • roof slope • details of haunch location and size sufficient to ensure design requirements • end plate specification • bolting information • location and sizes of welds • fly bracing requirements
Fixings	Fixings may include standard bolts, dynabolts, chemsets, female internal thread tube bolts, and other specialist steel to non-steel fixings
Work environment	Detailing may be undertaken in a variety of work environments including commercial, home office

RANGE STATEMENT

	<p>or fabrication or construction enterprise.</p> <p>Work may be performed individually on a contracting/project basis or as part of a project team and in response to combinations of paper based and electronic instructions.</p>

Co-requisite units

Co-requisite units		

MSATCS502A Detail structural steel members

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the skills and knowledge required to detail structural steel members in steel framed constructions. These members can include beams, girders, columns, trusses, rafters, rakers, tie beams and temporary and permanent braces.
------------------------	---

Application of the Unit

<p>Application of the unit</p>	<p>This unit applies to a structural steel detailer who has to detail structural steel members used in steel constructions. These members can include beams, girders, columns, trusses and braces. Only the most common structural members are considered in this unit. However, the detailing principles and skills covered in this unit can usually be applied to any non standard members specified by designers.</p> <p>In this unit the term beam is interchangeable with the term girder and only 'beam' or 'beams' are used.</p> <p>The unit may apply to structural steel detailing carried out for residential, commercial, industrial or mining fabrication and construction projects. The detailing may be done manually or by using CAD and/or proprietary steel detailing software.</p> <p>The unit assumes that knowledge of basic technical drawing conventions and procedures such as view, dimensioning, drawing layout, etc. is already held.</p> <p>Work is conducted according to defined procedures.</p> <p>Work may be conducted in small to large scale enterprises and may involve individual and team activities.</p> <p>This unit requires the application of skills associated with planning and organising to complete structural steel detail drawings. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Detail beams	1.1. Location and number of beams are identified from design information 1.2. Beam direction marks are inserted according to industry practice or specific project needs 1.3. Beam dimensions are obtained from design information and inserted into shop drawings 1.4. Beam section designation and cut length are inserted into elevation detail and material list along with any general notes 1.5. Beam levels and beam erection marks and erection clearances are inserted 1.6. Any surface treatment notes are inserted as per design information
2. Detail columns	2.1. Timing and process for detailing of columns is discussed with fabricator to ensure suitability for fabrication schedules 2.2. Column design information is analysed to identify all column connections 2.3. Vertical or horizontal detailing position and viewing direction is elected to suit client requirements and drawing office practice 2.4. Dimensions for columns are inserted from design information 2.5. Sectional views for splices are drawn as per design information 2.6. Plan views for intermediate sections are drawn to illustrate required connections 2.7. Direction and level marks as well as shim and lifting hitches are inserted as required according to design information
3. Detail beam and column splices	3.1. Welded and bolted splices are identified from design information 3.2. Splices to be field welded are identified and checked with fabricator 3.3. Access for welder and electrode is considered for field welded splices 3.4. Column or beam splice is detailed according to design information
4. Detail trusses	4.1. Working points and bevels are established from design information

ELEMENT	PERFORMANCE CRITERIA
	<p>4.2.Layouts for joints are drawn using appropriate scale</p> <p>4.3.Opportunities for symmetry and rotation are noted and used in layouts with approval of fabricator</p> <p>4.4.Trusses are dimensioned including placement of working dimensions, intermediate panel points, other reference points and camber allowances for cambered trusses</p> <p>4.5.Bolted gussets for node points are set out using design information and fabricator preferences</p> <p>4.6.Node points for welded trusses are detailed including set back of member ends and landing for welds using design information and fabricator preferences</p>
5. Detail bracing	<p>5.1.Layout and size of bracing are determined from design information</p> <p>5.2.Setting out points and distances between setting out points are determined</p> <p>5.3.Braces are detailed including bracing connections, allowances for clearances and draw if any</p>
6. Detail purlins, girts and eaves struts	<p>6.1.Layout and type of purlins, girts and eave struts to be used is determined from design information, manufacturers' catalogues and fabricator preferences</p> <p>6.2.Bridging for purlins and girts is determined from design information</p> <p>6.3.Purlins, girts and eaves are detailed consistent with design information</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- assess design information for adequacy of information needed for structural steel detailing
- liaise with architects and engineers
- assess scope of structural steel detailing tasks and priorities
- interpret design drawings, sketches and schedules
- work according to OHS practices of the enterprise and workplace which may include requirements prescribed by legislation, awards, agreements and conditions of employment, standard operating procedures, or oral, written or visual instructions
- communicate at all levels about technical issues related to patterns and specifications
- reading and numeracy is required to the level of interpreting workplace documents and technical information

Required knowledge

- architectural and engineering design drawings including standard symbols, terms, abbreviations and sketches
- connections used in structural steel construction
- the difference between design and detail drawing processes
- drawing office procedures
- fabrication processes and procedures
- the Australian steel structures limit state design code's (AS4100) requirements in so far as they impact on steel detailing

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects of assessment and evidence required to demonstrate competency in this unit	<p>Demonstrates skills and knowledge to:</p> <ul style="list-style-type: none"> • identify and interpret architect and engineer design specifications for structural steel members and their connections • relate design information to detailing of structural steel members • establish efficient administrative arrangements for liaison with designers • establish drawing and document control procedures • identify standard components and connections from industry publications, manufacturers' catalogues and Australian or other relevant standards
Context of and specific resources for assessment	<p>Assessment may occur on the job or in an appropriately simulated environment</p> <p>Resource implications for this unit include:</p> <ul style="list-style-type: none"> • access to real or appropriately simulated detailing of structural steel members including provision of suitable design information • computer with suitable CAD software or manual drafting equipment and material including work areas, materials and equipment • access to steel and component manufacturers' catalogues or websites • access to relevant standards through either hard copy or internet access. <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</p>

EVIDENCE GUIDE	
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Manufacturing Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application • Assessment may be applied under project related conditions (real or simulated) and require evidence of process • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances • Assessment may be in conjunction with assessment of other units of competency where structural steel detailing is involved
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements
Design information	Design information is the information provided to the detailer and fabricator by the architects and consulting engineers for a project. For some projects the design information may only be provided by an engineer. The design information will usually be in the form of design drawings or sketches but may also be via material lists, written instructions or computer files
Direction marks	Direction marks are indicated on the shop drawings and on the beam or girder by the words 'North' or 'West' as applicable. Industry standard practice is to determine the placement of these marks by viewing and numbering the beams and girders from the bottom or right hand edge of the floor plan. Variations from this practice may occur on specific projects and should be noted on the erection plan
Beam dimensions	<p>Beam dimensions are obtained from design information in conjunction with Design Capacity Tables (see below) and manufacturers' catalogues. Beam dimensions to be inserted into shop drawings should include:</p> <ul style="list-style-type: none"> • longitudinal dimensions <ul style="list-style-type: none"> • centre to centre distance between supports • overall length of the beam • overall cut length of the beam • dimensions of holing and other details occurring along the length of the beam. The method of showing hole dimensions may be centre to centre, consecutively

RANGE STATEMENT	
	<p>from end to end of beam or as running dimensions according to the needs of the fabricator</p> <ul style="list-style-type: none"> • longitudinal dimensions to groups of holes in the web or flange • vertical dimensions to top most holes for end connection elements <p>Additional dimensions and symbols may be required for non-proprietary welded plate girders. These dimensions and symbols would be specified by the designer and would normally include web and flange dimensions, web stiffener locations and welding symbols</p>
Working points	Working points for trusses may also be referred to as setting out points or intersection points
Design Capacity Tables	Design Capacity Tables refers to the publication 'Design Capacity Tables for Structural Steel, Volume 1: Open Sections' published by the Australian Steel Institute
Connections	All connections are steel to steel unless specifically noted
Standard connections	Standard connections are those specified in the Australian Steel Institute's publication 'Standardised Structural Connections'
Connection type	<ul style="list-style-type: none"> • Connections may be standard flexible or rigid connections • Flexible connections may include: <ul style="list-style-type: none"> • angle seats • bearing pads • flexible end plates • angle cleats • web side plates • Rigid connections may include: <ul style="list-style-type: none"> • fully welded end plates • bolted moment end plates
Standard detailing parameters	Standard detailing parameters are connections suitable to be detailed using the standard bolting and welding specifications contained in the

RANGE STATEMENT	
	<p>Australian Steel Institute's publication 'Standardised <i>Structural Connections</i>'. These details include:</p> <ul style="list-style-type: none"> • size of fillet welds • electrode and MIG welding wire specification • bolt type and size • arrangement of holes for bolts • back gauge dimensions and minimum edge distances • distance from beam top to the first row of bolts • detailing parameters for components such as cleat plates, gussets, end plates, base plates and angle plates
Components	Components may include cleat plates, gussets, end plates, base plates and angle plates
Standard welding symbols	Standard welding symbols as described in AS 1101 Part 3
Non-steel connections	Non-steel connections are those between steel members and concrete, timber, glass or plastic or other building or fabricated component required to be shown on a structural steel detail drawing. The connection may be for structural or decorative purposes. An example would be steel supports for a timber deck
Fixings	Fixings may include standard bolts, dynabolts, chemsets, female internal thread tube bolts, and other specialist steel to non-steel fixings
Work environment	<p>Detailing may be undertaken in a variety of work environments including commercial, home office or fabrication or construction enterprise.</p> <p>Work may be performed individually on a contracting/project basis or as part of a project team and in response to combinations of paper based and electronic instructions.</p>

Co-requisite units		

MSATCS503A Incorporate structural steel detailing into fabrication and construction project management

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the skills and knowledge required to undertake structural steel detailing in a manner consistent with procedures and timelines for fabrication and construction projects. The unit requires knowledge of the roles of architects, engineers, builders and fabricators and the skill to interpret project schedules and timelines and their implications for structural steel detailing.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to structural steel detailers who are required to liaise with architects, consulting engineers, builders and fabricators at the commencement of a project to establish structural steel detailing arrangements that are consistent with the policies, procedures and timelines of fabrication or construction projects. The unit may apply to structural steel detailing carried out for residential, commercial, industrial or mining projects.</p> <p>Work is conducted according to defined procedures.</p> <p>Work may be conducted in small to large scale enterprises and may involve individual and team activities.</p> <p>This unit requires the application of skills associated with planning and organising to complete structural steel detail drawings. Communication and numeracy skills are used to refer to patterns and specifications and complete and label sketches. Self management skills are used to ensure conformance of own work to quality standards.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Demonstrate knowledge of steel construction and fabrication processes and roles	1.1. Steel construction stages of design, detailing, fabrication and erection are understood 1.2. Major codes and standards relevant to steel construction activities can be identified 1.3. Roles and responsibilities of architects, engineers, draftspersons and detailers, fabricators and builders can be explained
2. Determine client requirements for structural steel detailing	2.1. Client for structural steel detailing is determined 2.2. Contacts for architect, consulting engineer, builder and fabricator are obtained 2.3. Project timeline and schedules are obtained and delivery dates for detail drawings determined 2.4. Procedures for making requests for further information (RFIs) from designers are agreed 2.5. Requirements for attendance at team meetings and site visits are determined 2.6. Client requirements in relation to format, number and type of shop and erection drawings and other required detailing information is determined
3. Obtain design information for project	3.1. Design information is obtained from architect and consulting engineer 3.2. Design information and project schedules are used to assess the scope and complexity of detailing tasks
4. Establish structural steel detailing arrangements for project	4.1. Details of structural steel detailing team are communicated to client 4.2. Document control procedures including numbering, access, filing and revision and updating approval procedures are established according to enterprise procedures and client requirements 4.3. Steel detailing tasks and deadlines are established and checked against construction project schedules 4.4. Capabilities of proprietary CAD and steel detailing software for project is assessed and decision is made to use computer based or manual structural detailing methods

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communicate own and team capabilities
- negotiate with clients
- assess scope of structural steel detailing tasks and priorities
- use Gantt charts and other project management scheduling tools
- assess suitability of specialist software for particular steel detailing projects
- work according to OHS practices of the enterprise and workplace which may include requirements prescribed by legislation, awards, agreements and conditions of employment, standard operating procedures, or oral, written or visual instructions
- communicate at all levels about technical issues related to patterns and specifications
- reading and numeracy is required to the level of interpreting workplace documents and technical information

Required knowledge

- roles and responsibilities of owners, architects, engineers, fabricators, builders and structural steel detailers in construction projects
- construction and fabrication project management practices including use of Gantt charts and other scheduling tools
- difference between design and detail drawing processes
- drawing office procedures
- proprietary and non-proprietary CAD and specialist steel detailing programs

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Demonstrates skills and knowledge to:</p> <ul style="list-style-type: none"> • identify client and design requirements for a structural steel detailing project • establish structural steel detailing task schedule and timelines and integrate them into the broader project plan and timelines • establish efficient administrative arrangements for liaison with clients and designers • establish drawing and document control procedures
Context of and specific resources for assessment	<p>Assessment may occur on the job or in an appropriately simulated environment</p> <p>Resource implications for this unit include:</p> <ul style="list-style-type: none"> • access to real or appropriately simulated detailing of structural steelwork constructions including provision of suitable design information • access to real or simulated fabrication and construction schedules • computer with suitable CAD software or manual drafting equipment and material including work areas, materials and equipment • access to steel and component manufacturers catalogues or web sites • access to relevant standards through either hard copy or internet access. <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</p>
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Manufacturing Training Package

EVIDENCE GUIDE

	<ul style="list-style-type: none">• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency where structural steel detailing is involved
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements
Client	The term client in this unit refers to the organisation commissioning the production of structural steel detail drawings and will normally be the fabricator of structural steel elements of a construction project. However, depending on the project the client may vary and could be the consulting engineer, or in the case of mining projects, it could be the mining company. The client may commission structural steel detail drawing from either internal or external structural steel detailers
Schedules	Schedules may include Gantt charts, contract schedules, lists of contractors, contracted suppliers and any other lists or diagrams relevant to determining the required delivery dates for structural steel detail drawings
Client requirements	<p>Client requirements may include:</p> <ul style="list-style-type: none"> • shop detail drawings, erection diagrams and material schedules and lists • program and format for CAD files and models • downloading by the structural steel detailer of files direct to client computers and CNC machines • size and number of hard copy drawings • specification of programs and requirements for word processed documents, spreadsheets, presentations, invoices and so on
Design information	Design information is the information provided to the detailer and fabricator by the architects and

RANGE STATEMENT	
	consulting engineers for a project. For some projects the design information may only be provided by an engineer. The design information will usually be in the form of design drawings or sketches but may also be via material lists and written instructions.
Work environment	<p>Detailing may be undertaken in a variety of work environments including commercial, home office or fabrication or construction enterprise.</p> <p>Work may be performed individually on a contracting/project basis or as part of a project team and in response to combinations of paper based and electronic instructions.</p>

Co-requisite units

Co-requisite units		

MSATCS504A Detail ancillary steelwork

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the skills and knowledge required to detail steelwork ancillary to, or separate from, the main structural elements and their connections in a steel framed building or industrial construction.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to a structural steel detailer who has to detail ancillary structural steelwork including steelwork used in stairways, ladders, landings, platforms for personnel and machinery, and other ancillary steel structures such as cages, lift guide rails and crane rails. The unit can also apply to the detailing of stand alone steel constructions that are not part of or attached to plant or buildings, and which do not require additional specialist knowledge. Examples include:</p> <ul style="list-style-type: none"> • steel tankage rolled plates • chimney flumes • exhaust pipe flumes • pipe supports • conveyor structures. <p>The unit assumes that knowledge of basic technical drawing conventions and procedures such as view, dimensioning, drawing layout, and so on is already held.</p> <p>Work is conducted according to defined procedures.</p> <p>The detailing covered by this unit may be done manually or by using CAD and/or proprietary steel detailing software.</p> <p>Work may be conducted in small to large scale enterprises and may involve individual and team activities.</p> <p>This unit requires the application of skills associated with planning and organising to complete structural steel detail drawings. Communication and numeracy skills are used to refer to patterns and specifications and complete and label sketches. Self management skills are used to ensure conformance of own work to quality standards.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Detail stairways, platforms, ladders and landings	<p>1.1.Scheduling of detail drawings for stairways, platforms, ladders and landings are discussed with fabricator</p> <p>1.2.Design information is checked and any requests for further information (RFIs) are made</p> <p>1.3.Large scale set-out or 3D model of stairway is prepared and setting out points established</p> <p>1.4.Stairway is dimensioned and detailed consistent with design information and the Building Code of Australia and AS 1657</p> <p>1.5.Holding down bolt layout and base plate details are prepared for ground floor supports or plinths</p>
2. Detail other ancillary steel structures	<p>2.1.Design information is received from client and fabrication schedule and requirements including allocation of components for shop and site fabrication confirmed</p> <p>2.2.Size limitations of any sections requiring corrosion treatment or other surface finishing processes are determined</p> <p>2.3.Transport limitations, erection procedures and limitations, and any relevant codes and regulations are determined</p> <p>2.4.Rough large scale layout and 3D model is combined with trial assembly if required</p> <p>2.5.Design information is used to directly insert or calculate and insert all dimensions, clearances, bolt layouts, weld types and dimensions, direction marks and surface finishes on shop drawings and erection diagrams</p> <p>2.6.Detail drawings are sent for approval by designer</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- assess design information for adequacy of information needed for structural steel detailing
- liaise with architects and engineers
- assess scope of structural steel detailing tasks and priorities
- interpret design drawings, sketches and schedules
- produce shop detail drawings and erection drawings
- research and obtain relevant Australian Standards, codes and regulations
- work according to OHS practices of the enterprise and workplace which may include requirements prescribed by legislation, awards, agreements and conditions of employment, standard operating procedures, or oral, written or visual instructions
- communicate at all levels about technical issues related to patterns and specifications
- reading and numeracy is required to the level of interpreting workplace documents and technical information

Required knowledge

- architectural and engineering design drawings including standard symbols, terms, abbreviations and sketches
- structural members used in steel constructions
- the difference between design and detail drawing processes
- drawing office procedures
- fabrication processes and procedures
- the Australian steel structures limit state design code's (AS4100) requirements in so far as they impact on steel detailing

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Demonstrates skills and knowledge to:</p> <ul style="list-style-type: none"> • identify and interpret architect and engineer design specifications for structural steel components of ancillary steelwork including members and connections • relate design information to structural steel detailing processes • establish efficient administrative arrangements for liaison with designers • establish drawing and document control procedures • identify standard sizes and specifications of structural members and components from industry publications, manufacturers' catalogues and Australian or other relevant standards
Context of and specific resources for assessment	<p>Assessment may occur on the job or in an appropriately simulated environment</p> <p>Resource implications for this unit include:</p> <ul style="list-style-type: none"> • access to real or appropriately simulated detailing of ancillary structural steelwork including provision of suitable design information • computer with suitable CAD software or manual drafting equipment and material including work areas, materials and equipment • access to steel and component manufacturers catalogues or web sites • access to relevant standards through either hard copy or internet access. <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified</p>

EVIDENCE GUIDE	
	for people with disabilities.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Manufacturing Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application • Assessment may be applied under project related conditions (real or simulated) and require evidence of process • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances • Assessment may be in conjunction with assessment of other units of competency where structural steel detailing is involved
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements
Design information	Design information is the information provided to the detailer and fabricator by the architects and consulting engineers for a project. For some projects the design information may only be provided by an engineer. The design information will usually be in the form of design drawings or sketches but may also be via material lists, written instructions and computer files
Other ancillary steel structures	<p>Other ancillary structures as defined in this unit are steel constructions that are not part of the structural framework or exterior of a building or part of the structural support for plant and which could be part of a steel construction detailing contract. Examples include:</p> <ul style="list-style-type: none"> • crane rails and connections • lift guide rails • cages • steel tankage rolled plates • chimney flumes • exhaust pipe flumes • pipe supports • conveyor structures
Direction marks	Direction marks are indicated on the shop drawings and on the beam or girder by the words 'North' or 'West' as applicable. Industry standard practice is to determine the placement of these marks by viewing and numbering the beams and girders from the bottom or right hand edge of the floor plan. Variations from this practice may occur on specific projects and should be noted on

RANGE STATEMENT	
	the erection plan.
Work environment	<p>Detailing may be undertaken in a variety of work environments including commercial, home office or fabrication or construction enterprise.</p> <p>Work may be performed individually on a contracting/project basis or as part of a project team and in response to combinations of paper based and electronic instructions.</p>

Co-requisite units		

MSL976003A Evaluate and select appropriate test methods and/or procedures

Modification History

Not applicable.

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit of competency covers the ability to evaluate and select test methods and/or procedures that are relevant to the current and evolving scope of the laboratory's operations. Selection of test methods and/or procedures may involve the appraisal of new and emerging technologies and may inform decision making about possible extension of the laboratory's scope. Alternatively, it may relate to existing testing requirements, 'one-off' tests, client's special requirements or new tests required to satisfy new legislative, accreditation, licensing or regulatory requirements.</p>
-------------------------------	--

Application of the Unit

<p>Application of the unit</p>	<p>This unit of competency is applicable to senior technical officers, technical specialists and laboratory supervisors working in all industry sectors. They are required to demonstrate wide ranging, highly specialised technical skills. They are expected to execute sound judgement in the selection of appropriate methodology under the broad guidance of scientists/medical staff/engineers. All operations must comply with relevant standards, appropriate procedures and/or enterprise requirements.</p> <p>Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These can be found at the end of this unit of competency under the section 'This competency in practice'.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine sample characteristics and testing requirements	1.1. Confirm drivers for evaluation and selection of test methods and/or procedures 1.2. Examine sample documentation and/or consult with sample supplier to determine nature of samples 1.3. Identify sample characteristics which may affect testing requirements 1.4. Determine testing requirements and their compatibility with existing standard operating procedures (SOPs)
2. Evaluate possible test methods and/or procedures	2.1. Identify appropriate standards, reference materials, test methods and/or procedures which may be applicable 2.2. Assess suitability of available standards, reference materials, test methods and/or procedures against testing requirements 2.3. Identify environmental and occupational health and safety (OHS) risks 2.4. Identify the need for specific equipment, instrumentation, and/or specialised facilities 2.5. Estimate materials, personnel and possible training requirements
3. Recommend appropriate test methods and/or procedures	3.1. Select appropriate test methodology consistent with testing requirements and resource availability 3.2. Identify any changes to SOPs required prior to implementation of selected method and/or procedure 3.3. Recommend selected method and/or procedure to appropriate personnel and seek authorisation to proceed
4. Confirm and document selected methods and/or procedures	4.1. Obtain standards and/or reference materials for the method and/or procedure 4.2. Conduct tests to verify the performance of the method and/or procedure, standards and reference materials 4.3. Analyse the measurements and estimate uncertainties 4.4. Determine if legal traceability is required and develop appropriate chain of custody procedures 4.5. Document all safety, sample preparation, testing, data handling and reporting procedures 4.6. Submit all documentation to appropriate personnel

ELEMENT	PERFORMANCE CRITERIA
	for review and approval

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- evaluating and selecting appropriate test methods and/or procedures to satisfy the range of testing situations normally encountered in the laboratory
- identifying reference standards or SOPs appropriate to testing requirements of the laboratory
- identifying standards that support compliance with regulatory and/or licensing requirements
- applying enterprise procedures to select appropriate standards
- using method performance analysis measures, such as accuracy, precision, uncertainty, linearity, selectivity, range, limit of detection and matrix characteristics in method selection
- documenting method selection procedures
- maintaining records of published methods
- following OHS procedures and principles of good laboratory practice (GLP)

Required knowledge

Required knowledge includes:

- principles, concepts and enterprise/regulatory requirements related to method selection
- regulatory/licensing testing requirements
- relative advantages/disadvantages of test methods for a range of testing situations
- cost advantages/disadvantages of enterprise test methods
- scientific/technical principles underpinning test method and their application to selection of testing methods for different materials
- metrological principles
- significance of normal, physiological or reference ranges
- enterprise and/or legal requirements for traceability
- enterprise/regulatory requirements regarding recording and reporting
- relevant health, safety and environment requirements

Specific industry

Additional knowledge requirements may apply for different industry sectors. For example:

Biomedical, biotechnology and food processing:

- effects of biologically inert or active chemicals, such as food and drug metabolites in test selection, testing and test data interpretation

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> • evaluate and select appropriate test methods and/or procedures to satisfy the range of testing situations normally encountered in the laboratory • identify reference standards or SOPs appropriate to testing requirements of the laboratory • identify standards that support compliance with regulatory and/or licensing requirements • apply enterprise procedures to select appropriate standards • use method performance measures, such as accuracy, precision, uncertainty, linearity, selectivity, range, limit of detection and matrix characteristics in method selection • clearly document method selection procedures • maintain records of published methods • follow OHS procedures and principles of GLP.
Context of and specific resources for assessment	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> • <i>MSL925002A Analyse measurements and estimate uncertainties</i> • <i>MSL916003A Supervise laboratory operations in work/functional area.</i> <p>Resources may include:</p> <ul style="list-style-type: none"> • standard laboratory equipped with appropriate equipment and reagents • SOPs and test methods • appropriate Australian and international regulatory standards.
Method of assessment	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> • completion of selection brief or selection proficiency test

EVIDENCE GUIDE

	<ul style="list-style-type: none"> • review of records completed by the candidate over a period of time to confirm consistency in method selection • feedback from peers and supervisors • oral questioning to establish basis of selection of test methods and/or procedures. <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
This competency in practice	<p>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting.</p> <p>Biotechnology</p> <p>The choice of analytical method for protein assay is influenced by the amount of protein likely to be present and the impurities present. During an extraction procedure, the yield of protein is monitored. At any stage there will be a range of substances used in the extraction. When the extraction is complete and the protein required has been isolated, the amount of protein recovered could range from bulk or gram quantities down to microgram quantities. The technical officer will check through the available methodologies and select procedures that will take account of the above problems. The Biuret assay is used for bulk assay protein, but will require reagent blanks to compensate for the impurities. At later stages of the monitoring, the Bradford reagent will be chosen because of its greater sensitivity and detection of smaller concentrations. It will be chosen over the Folins reagent because the Bradford reagent is not affected by buffer</p>

EVIDENCE GUIDE

reagents and detergent.

Biomedical

A technician is asked to detect, identify and quantify a blood group antibody using a range of physical, chemical and immunological tests. During the test evaluation and selection process he/she identifies performance parameters, such as test tolerance, sensitivity, specificity and reproducibility along with the effect of possible interfering serum pigments, such as dissolved haemoglobin and bilirubin. The technician prepares a report for the supervising scientist that explains the selection rationale, reports the performance test results and cites product information and recent literature to validate the test results and substantiate his/her conclusions and recommendations.

Food processing

A technician working in a food company must be able to select test methods appropriate to requirements. For example, if a quick determination of unsaturation in an oil mixture is required, the technician will probably use an appropriate method for determining the iodine value of the mix and compare this with specification. However, at a margarine manufacturing plant where the technician may be required to perform an analysis of fats and oils to determine the % saturated, % monounsaturated and % polyunsaturated components, then a gas chromatographic method would be run using appropriate computer software and the results checked against specification.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Codes of practice

Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used

Standards, codes, procedures and/or enterprise requirements

Standards, codes, procedures and/or enterprise requirements may include:

- Australian and international standards, such as:
- AS ISO 1000-1998 The international system of units (SI) and its application
 - AS ISO 17025-2005 General requirements for the competence of testing and calibration laboratories
 - AS/NZS 2243 Set:2006 Safety in laboratories set
- AS/NZS ISO 10005:2006 Quality management systems - Guidelines for quality plans
- AS/NZS ISO 10012:2004 Measurement management systems - Requirements for measurement processes and measuring equipment
 - AS/NZS ISO 14000 Set:2005 Environmental management standards set
 - AS/NZS ISO 9000 Set:2008 Quality management systems set
 - ISO 5725 Accuracy (trueness and precision) of measurement methods and results
 - ISO/IEC Guide 98-3:2008 Uncertainty of measurement - Part 3 Guide to the expression of uncertainty in measurement (GUM)
- Eurachem/CITAC Guide CG4 Quantifying uncertainty in analytical measurement
- Australia New Zealand Food Standards (ANZFS) Code

RANGE STATEMENT	
	<ul style="list-style-type: none"> • Australian code of good manufacturing practice for medicinal products (GMP) • Australian Dangerous Goods Code • Australian Quarantine and Inspection Service (AQIS) Export Control (Orders) Regulations 1982 and Import Guidelines • ethics committee requirements • gene technology regulations • intellectual property and copy right • material safety data sheets (MSDS) • material, production and product specifications • National Association of Testing Authorities (NATA) Accreditation programs requirements • national environment protection measures • National Health and Medical Research Council (NHMRC) Guidelines • national measurement regulations and guidelines • OHS national standards and codes of practice • principles of GLP • quality manuals, equipment and procedures manuals • Therapeutic Goods Regulations 1009
Tests and procedures	<p>Tests and procedures may be:</p> <ul style="list-style-type: none"> • routine • infrequent • 'one-off' • quantitative or qualitative • identification or quantification of biological, chemical or physical activity • gross characteristics of a sample, including in vitro and in vivo • detection of chemical, physical or biological characteristics, features, markers or responses
Drivers for the evaluation and selection of test methods and/or procedures	<p>Drivers for the evaluation and selection of test methods and/or procedures may include the:</p> <ul style="list-style-type: none"> • new or amended legislation, regulation and licensing, accreditation requirements • public, political and commercial pressures • 'one-off' testing of potentially hazardous or contaminated materials following an

Co-requisite units

Co-requisite units		

MSS402002A Sustain process improvements

Modification History

New unit, superseding MSACMS201A Sustain process improvements - Not equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to prevent process improvements in their own work from slipping back to former practices or digressing to less efficient practices.

Application of the Unit

This unit applies to organisations implementing competitive systems and practices and continuous improvement. It covers the skills needed to ensure that process improvements are sustained and opportunities taken to suggest further improvements.

Improvement initiatives can be made by any of a number of methods and by teams or individuals. The unit assumes that desired levels of performance or quality are known to employees.

The unit can be applied to all areas of an organisation, including production, maintenance, logistics and office functions.

This unit requires the application of skills associated with problem solving, initiative and enterprise and self-management in order to understand implement and monitor improvement practices. It also requires the ability to identify and address personal skill gaps in order to manage own ability to implement change.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--------------------------------|-----|--|
| 1 | Examine previous improvements | 1.1 | Identify impact of previous process improvements to equipment, operations, services or products in own work area |
| | | 1.2 | Identify improvements where objectives have not been met |
| 2 | Implement corrective actions | 2.1 | Identify corrective actions that can be taken by self on process improvements that have not met objectives |
| | | 2.2 | Obtain any required approvals |
| | | 2.3 | Identify any additional, personal skill gaps and seek skill development |
| | | 2.4 | Adopt improved processes |
| 3 | Check changes | 3.1 | Identify claimed improvements |
| | | 3.2 | Identify methods of observing and measuring claimed improvements in own work area |
| | | 3.3 | Check if claimed improvements are occurring and report problems in accordance with procedures |
| 4 | Check for further improvements | 4.1 | Look for areas of possible further improvement |
| | | 4.2 | Discuss further improvements with peers and supervisors |
| | | 4.3 | Take action to implement improvements in accordance |

with procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating with others to clarify scope and stage of implementation of competitive systems and practices and contribute suggestions for further improvements in implementation
- visualising normal operational procedures in terms of flow and contribution to customer outcomes
- planning own tasks to support competitive systems and practices implementation
- implementing competitive systems and practices in own work area according to instructions
- identifying waste (muda)
- monitoring competitive systems and practices performance indicators in own work and work area

Required knowledge

Required knowledge includes:

- internal and external customers and the value they derive from own work area operations
- suppliers to own work area, their capabilities and contribution to customer benefit
- waste (muda)
- relevant competitive systems and practices for own job and how to apply and monitor the outcomes
- factors impacting on product, operations and waste, particularly those wholly or partially under their control (and how to control them)

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person being assessed against this unit will be able to demonstrate their willing adoption of new equipment, processes, procedures and practices as well as their expertise at implementing them and making critical
------------------------	--

	reviews of their performance in line with their level of competence and authority.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • implement and monitor process improvements in own work area against objectives • contribute suggestions for further improvement/s • apply procedures for seeking approvals and reporting non-conformances.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to</p>

	accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures
--	---

	<ul style="list-style-type: none"> • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and industry sector
Customers	<p>Customers may be:</p> <ul style="list-style-type: none"> • internal or external customers and should be sufficiently close to the individual's work as to be easily identifiable • final customers used as the basis for the identification of value and waste <p>The individual does not need to interface directly with the external customer, but should be provided with sufficient information to enable them to identify customer benefits and customer features</p>
Suppliers	<p>Suppliers may be:</p> <ul style="list-style-type: none"> • internal or external suppliers and should be sufficiently close to the individual's work as to be easily identifiable <p>The operator does not need to interface directly with external suppliers, but should be provided with sufficient information to enable them to identify supplier contribution to their own work and to customer benefit</p>
Measuring improvements	<p>Measuring improvements may include:</p> <ul style="list-style-type: none"> • personally taking measurements • arranging for measurements to be taken/made by appropriate personnel
Procedures	<p>Procedures may include:</p> <ul style="list-style-type: none"> • work instructions • standard operating procedures • formulas/recipe • batch sheets • temporary instructions and similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) and

	<p>government regulations</p> <p>Procedures may be:</p> <ul style="list-style-type: none"> written, verbal, computer-based or in some other format
Improvements	<p>Improvements include:</p> <ul style="list-style-type: none"> techniques for preventing mistakes by designing the operations process, equipment and tools so that an operation literally cannot be performed incorrectly (e.g. baka-yoke) techniques that generate warning signals were a mistake is about to be performed (poka-yoke)

MSS402030A Apply cost factors to work practices

Modification History

New unit, superseding MSACMT230A Apply cost factors to work practices - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required by an individual to identify cost components in their work and to be able to determine, in general terms, the cost impacts of alternative actions.

Application of the Unit

This unit applies to an individual who is required to contribute to, and be involved in, the assessment of cost factors in their work. This may be done individually or in a team environment.

The unit covers the skills to be able to assess the relative costs of the alternatives and use this as one of the key factors in making decisions. Decisions are made within the scope of the employee's authority and according to procedures. Typical decisions include those that contribute to the efficient organisation of own work and the improvement of production time and cycle times.

This unit requires the application of skills associated with problem solving to identify cost factors and cost implications of own work and self-management to apply cost-effective practices.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---|-----|---|
| 1 | Identify the major cost components of product or process in own work area | 1.1 | Identify cost components in the product or process in own work area |
| | | 1.2 | Recognise the impact of current or alternative actions on costs |
| 2 | Identify constraints to cost-efficiency | 2.1 | Identify required production/process rate and major costs |
| | | 2.2 | Identify costs factors under individual or team control |
| | | 2.3 | Relate identified costs factors to impact on overall cost of production/process |
| | | 2.4 | Identify cost factors that are a constraint to cost-efficiency in own work area |
| 3 | Apply cost-efficient work practices | 3.1 | Identify and explain to relevant people the implications of possible actions/changes to improve cost-efficiency in simple financial terms |
| | | 3.2 | Identify non-financial implications of proposed changes in discussion with relevant people |
| | | 3.3 | Select actions which minimise overall costs |
| | | 3.4 | Monitor actions to ensure cost-efficiency in own work area is maintained |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating with others to clarify cost factors and contribute suggestions for improvement
- visualising normal operational procedures in terms of flow
- distinguishing between fixed and variable costs
- identifying fixed and variable cost components relevant to own work, including where applicable:
 - power/energy
 - materials, plant and equipment
 - production or process time, including impact on salary and wages
 - office expenses
 - government taxes and charges

Required knowledge

Required knowledge includes:

- cost components of products made
- costs concepts, such as expense and income
- major cost contributors to product (e.g. energy)
- the difference between internally and externally controlled costs
- difference between overhead, labour and consumables

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • identify the scope of their own and their teams work
--	---

	<p>and relate it to the overall flow of work in the organisation</p> <ul style="list-style-type: none"> • express cost factors in specific terms (e.g. cost per item, process and task) and not just in a general manner • identify and express costs factors in simple financial terms • use cost factors to select lower cost alternatives when making decisions.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and</p>

	disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

MSS402051A Apply quality standards

Modification History

New unit, superseding MSACMT251A Apply quality standards - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to apply quality standards to work operations in an organisation. The unit is designed to complement competitive systems and practices units.

Application of the Unit

This unit applies to an individual who is expected to take responsibility for the quality of their own work, and to take actions specified in the procedures and within the scope of their job and authority to ensure that quality standards are met.

This unit requires the application of skills associated with interpreting and applying workplace standards and identifying and addressing problems that interfere with quality outcomes. The unit requires initiative, enterprise and self-management to ensure quality standards are achieved.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---|-----|--|
| 1 | Assess own work | 1.1 | Continuously check completed work against workplace standards relevant to the operation being undertaken |
| | | 1.2 | Demonstrate an understanding of how the work activities and completed work relate to the next production process or processes and to the final products or services concerned |
| | | 1.3 | Identify and isolate faulty components, products or processes |
| | | 1.4 | Record and/or report faults and any identified causes to the supervisor concerned, where required, in accordance with workplace procedures |
| 2 | Assess quality of received components, parts or materials | 2.1 | Continuously check received components, parts, materials, information, service or final products against workplace standards and specifications for conformance |
| | | 2.2 | Demonstrate an understanding of how the received components, parts or materials, information or service relate to the current operation and how they contribute to the final quality of the product or service |
| | | 2.3 | Identify and isolate faulty components, parts, materials or information that relate to the operator's work |
| | | 2.4 | Record and/or report faults and any identified causes in accordance with workplace procedures |
| | | 2.5 | Identify causes of any identified faults and take corrective action as specified in workplace procedures |

- | | | | |
|---|--|-----|--|
| 3 | Measure components, parts or materials | 3.1 | Measure materials, component parts, information, service or products, as required, using the appropriate measuring instruments in accordance with workplace procedures |
| 4 | Record information on production indicator | 4.1 | Record basic information on quality and other indicators of process performance in accordance with workplace procedures |
| 5 | Investigate causes of quality deviations | 5.1 | Investigate and report causes of deviations from specified quality standards for components |
| | | 5.2 | Recommend suitable preventative action based on workplace quality standards and the identified causes of deviations from specified quality standards of materials |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting work instructions, specifications, standards and patterns appropriate to own work
- carrying out relevant visual inspections of materials, component parts and final products
- carrying out relevant physical/chemical measurements or tests
- maintaining accurate work records in accordance with procedures
- carrying out work in accordance with occupational health and safety (OHS) policies and procedures
- meeting work specifications
- communicating effectively within defined workplace procedures
- interpreting and applying defined procedures

Required knowledge

Required knowledge includes:

- relevant quality standards, policies and procedures
- relevant production processes, materials and products
- basic characteristics of materials used in the relevant production processes
- safety and environmental aspects of relevant production processes
- relevant measurement techniques and quality checking procedures
- workplace procedures
- reporting procedures

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • interpret, relevant work instructions, standards and specifications appropriate to own work
--	--

	<ul style="list-style-type: none"> • check and measure relevant quality parameters • interpret results of quality checks in terms of specifications, patterns and work standards • take required action where standards of materials, component parts, final product or work processes are found to be unacceptable • maintain accurate records.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>

MSS402060A Use planning software systems in operations

Modification History

New unit, superseding MSACMT260A Use planning software systems in manufacturing -
Not equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to access planning software (often known as Enterprise resource Planning (ERP), Materials Resource Planning (MRP and MRPII), and often by a proprietary name, to make routine business decisions required of the person as a regular part of their job.

Application of the Unit

This unit applies to an individual in an organisation using a planning software system and who must interface with that system. The unit applies to both accessing information from the planning software system and using it as an aid to decision making. This unit requires the application of communication, planning, and problem solving associated with using planning software in own work.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Use interface	<p>1.1 Identify terminals relevant to own work station and functions</p> <p>1.2 Use keyboards, track ball/mouse and monitor and/or other peripherals to access system</p> <p>1.3 Navigate through system and screens to find program menu and data relevant to own work</p> <p>1.4 Identify and input information on own work processes at required frequency and to required detail</p> <p>1.5 Access message section and acknowledge messages</p> <p>1.6 Identify problems and make suggestions for improvements to relevance of planning software to own work</p>
2	Access information	<p>2.1 Identify work processes that require information from planning software system</p> <p>2.2 Obtain relevant data and information on current operations from the planning software system</p> <p>2.3 Identify the status of items in the value stream</p> <p>2.4 Access historical data and information</p> <p>2.5 Interpret information and identify and prioritise any</p>

actions required in response to information

- | | | | |
|---|--|-----|---|
| 3 | Take appropriate actions in accordance with procedures | 3.1 | Take actions in response to information obtained from planning software |
| | | 3.2 | Follow up as appropriate to ensure anticipated results have occurred |
| | | 3.3 | Record adjustments and variations according to procedures |
| | | 3.4 | Identify any learning needs to use planning software and seek appropriate support |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- reading and interpreting electronic and hard copy operating instructions and documents, including where used:
 - work instructions
 - standard operating procedures
 - formulas/recipes
 - production and batch sheets
 - temporary instructions
 - other provided operating instructions
- working within access control requirements of the planning software system
- identifying modules, screens, files, and so on, of software relevant to own work
- logging in and using terminals and planning software at a level of access appropriate to own work
- accurately inputting data
- searching and retrieving data
- accessing nominated assistance with planning software

Required knowledge

Required knowledge includes:

- technical knowledge needed to operate own work processes
- planning software system and operation, including:
 - terminal locations and types
 - security and access arrangements
 - range of information held in planning software relevant to own work
 - data collection methods for operations in work area
 - assistance arrangements for users of planning software
 - business activities exercised by/through the planning software system
- value created by operations for customers

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the

performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • identify the scope and relevance of planning software system to their own work • enter and retrieve data, including normal performance and variations • use planning software system to assist in own work • contribute suggestions for improvement to performance and relevance of planning software to own work area.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess</p>

	<p>underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping
--	---

	<ul style="list-style-type: none"> • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Planning software	<p>Planning software includes:</p> <ul style="list-style-type: none"> • software systems which integrate a range of business information, such as finance, logistics maintenance and production (frequently referred to as ERP, MRP, MRPII or a range of proprietary names)
Relevant data and information	<p>Relevant data and information may include:</p> <ul style="list-style-type: none"> • technical and other drawings • standard operating procedures and other work instructions • production schedules including historical data • orders and order tracking information • stock control • contact lists • occupational health and safety (OHS) information
Value stream	<p>The value stream begins with the customer and includes all actions (both value-adding and non-value added) by both internal sections/departments and external organisations to meet a customer requirement.</p> <p>Depending on the operations and the customer requirement, stages where value stream actions may occur include:</p> <ul style="list-style-type: none"> • sales outlet/representative • information gathering, data analysis and research • product design • raw material sourcing • intermediate processing • final assembler/collation/preparation • support services (e.g. accounting, finance and legal) • storage and delivery to customer • after market support

Items in the value stream	<p>Items in the value stream refer to information held within the planning software system that contributes to creating value as determined by the customer. Depending on the organisation it may include:</p> <ul style="list-style-type: none"> • physical elements of the production system, such as sites, work stations, equipment, material, including stock, work in progress and finished products • information needed to meet customer requirements, such as designs, drawings, work instructions, standard operating procedures, standards, material lists and pricing • information not directly related to current customer requirements but required by the organisation
Procedures	<p>Procedures may include:</p> <ul style="list-style-type: none"> • work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) • government regulations <p>Procedures may be:</p> <ul style="list-style-type: none"> • written, verbal, computer-based or in some other format

MSS402061A Use SCADA systems in operations

Modification History

New unit, superseding MSACMT261A Use SCADA systems in manufacturing - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required by an individual to interact with a System Control and Data Acquisition (SCADA) system as part of their job.

Application of the Unit

This unit applies to an individual in an organisation using a SCADA system and the individual must interface with that system. The individual will need to access this system as part of their routine and take actions based on the information they obtain from the SCADA system in accordance with procedures.

This unit requires the application of skills associated with using communication tools and technology for management of own work, planning and problem solving.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | |
|---|---|---|
| 1 | Use operator interface | 1.1 Identify SCADA terminals relevant to own work station and functions |
| | | 1.2 Use keyboards, track ball, monitor and/or stand alone controllers to access/interrogate system |
| | | 1.3 Use correct level of access and find all relevant screens and information |
| | | 1.4 Access message section and acknowledge messages |
| | | 1.5 Input and output information correctly according to program and organisation requirements |
| 2 | Use information | 2.1 Obtain data and information from SCADA, as required, including process, supply and product chain data |
| | | 2.2 Interpret data and information as required by own job |
| | | 2.3 Find and use relevant historical data and information |
| | | 2.4 Use manufacturer manuals or specifications, as required, to expand knowledge of SCADA system relevant to own work |
| | | 2.5 Determine and prioritise required actions |
| 3 | Make required changes in accordance with procedures | 3.1 Adjust production/process in response to SCADA information |
| | | 3.2 Record adjustments and variations to specifications/schedules and report to appropriate personnel |
| | | 3.3 Seek feedback and information on adjustments to further improve procedures, where required |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- using SCADA terminals and other input devices
- reading and interpreting electronic and hard copy SCADA operating instructions and documents, including where used:
 - work instructions
 - standard operating procedures
 - temporary instructions
 - other provided operating instructions
- working within security and access control requirements of the SCADA system
- identifying modules, screens, and so on, of SCADA system relevant to own work
- accurately inputting and outputting data
- searching and retrieving data
- accessing SCADA system nominated assistance, when required

Required knowledge

Required knowledge includes:

- technical knowledge needed to operate own work processes
- hierarchy of SCADA system and operation
- information available from and controls exercised by/through the SCADA system

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • identify the scope and relevance of the SCADA system to their own work
--	---

	<ul style="list-style-type: none"> • access correct levels of the SCADA system • enter and retrieve data, including normal performance and variations • use SCADA system to assist in own work.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented ,or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being</p>

	performed.
--	------------

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as SCADA software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise
--	--

	<ul style="list-style-type: none"> the work organisation, culture, regulatory environment and the industry sector
SCADA	<p>SCADA refers to:</p> <ul style="list-style-type: none"> a number of systems which automatically collect critical process data, perform required mathematical manipulations on it and then make control decisions and/or give required information to personnel for action <p>In some industry sectors, the SCADA system is sometimes integrated into other sophisticated computer control systems, such as Distributed Control System (DCS). These sectors may simply refer to their SCADA as the DCS or other similar term (such as the proprietary name of the computer system).</p> <p>SCADA systems may provide information from outside of the process, such as stock/material levels in a customer plant and/or available supply, supply rates and pricing from a supplier plant. This information may all be accessed by the SCADA system and the employee using it in order to make production rate and other control decisions (either automatically or human assisted) about their own operations and work processes</p>
Supply and product chains	<p>The supply chain Includes:</p> <ul style="list-style-type: none"> all suppliers in the chain from the initial raw material up to the current step in the operations process <p>The product chain includes:</p> <ul style="list-style-type: none"> all steps after the current step up to the final customer <p>Competitive systems and practices organisations encompass the entire production system, beginning with the customer, and includes:</p> <ul style="list-style-type: none"> the product sale outlet the final assembler product design raw material mining and processing all tiers of the value stream (sometimes called the supply chain) <p>Any truly 'competitive' system is highly dependent on the demands of its customers and the reliability of its suppliers. No implementation of competitive systems and practices can reach its full potential without including the entire 'organisation' in its planning</p>

Procedures	<p>Procedures may include:</p> <ul style="list-style-type: none"> • work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) • government regulations <p>Procedures may be:</p> <ul style="list-style-type: none"> • written, verbal, computer-based or in some other format

MSS402080A Undertake root cause analysis

Modification History

New unit, superseding MSACMT280A Undertake root cause analysis - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to undertake root cause analysis (RCA) by any person. This will often be undertaken by people working in a team. This unit also covers the competencies needed by operators to contribute to an advanced maintenance strategy using RCA coupled with diagrams and charts.

Application of the Unit

This unit applies to individuals working in an organisation which is applying competitive systems and practices strategies. The unit applies to the formal problem solving to root cause that the individual must undertake in their own work area or where the individual contributes to problem solving to root cause as part of a team.

This unit requires an ability to seek and apply information from a variety of sources in order to inform RCAs. Initiative and enterprise is also required to identify quick fix and permanent solutions to problems.

Where training in a wider range of problem solving techniques and tools is required the unit MSAPMSUP390A Use structured problem solving tools should be selected.

Licensing/Regulatory Information

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Recognise problems	1.1	Identify features or occurrences indicative of a problem
		1.2	Use appropriate tools, techniques and charts to define the problem
2	Implement quick fix	2.1	Recommend a quick fix within the scope of competency and authority
		2.2	Use technology or processes relevant to the problem to implement quick fix
3	Determine root cause	3.1	Identify a range of possible causes
		3.2	Gather data and other information to eliminate or confirm possible causes
		3.3	Use available data and information to link causes and effects
		3.4	Seek assistance, as required
		3.5	Identify root cause

- 4 Develop permanent solution
 - 4.1 Identify a range of methods to eliminate the root cause or break the cause tree
 - 4.2 Select the most appropriate solution
 - 4.3 Liaise with relevant people
 - 4.4 Recommend or implement solution within the limits of competency and authority
 - 4.5 Monitor impact of solution and make further recommendations, as required

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- cooperating and working with others on problem solving
- assessing and recording information from a variety of sources
- defining potential problems factually, including:
 - location and extent of problem or incident
 - sequence of events where relevant
 - extent of deviation from normal operation or performance
- analysing potential problems across a range of varied activities and knowledge applications
- reading and constructing simple charts, such as cause and effect diagrams

Required knowledge

Required knowledge includes:

- RCA methodology, including difference between quick fixes and root cause elimination or breaking of causal tree
- principles and normal operation of equipment, plant and processes in own work area sufficient to undertake a RCA and propose solutions
- common variances to normal performance that are indicators of a problem
- use of relevant analysis tools (e.g. cause/effect diagrams, Pareto charts and 5 Whys)
- operations in own work area

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • undertake problem identification • use appropriate processes to achieve root cause
--	--

	<p>identification</p> <ul style="list-style-type: none"> • prioritise solutions • recommend solutions and implementation procedures to problems within own area and range of technical skills and knowledge • evaluate implementation of solutions.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess response to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for	Assessment processes and techniques must be culturally

assessment	appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.
-------------------	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p>
--	--

	<ul style="list-style-type: none"> the stage of implementation of competitive systems and practices the size of the enterprise the work organisation, culture, regulatory environment and the industry sector
Features or occurrences indicative of a problem	<p>Examples of features or occurrences indicating problems include:</p> <ul style="list-style-type: none"> variation to normal plant or equipment operation unplanned or non-conforming process or operations outcomes out of specification products excess scrap accidents and emergencies regulatory breaches customer returns and complaints reduction or loss of sales
Root cause	<p>There are many possible causes of any problem. The root cause contrasts with other possible causes of a problem which when eliminated have no impact or only ameliorate the problem. Elimination of the root cause permanently eliminates the problem. There should only be one root cause for any problem and so the analysis should continue until this one cause is found.</p>
Cause tree	<p>The series of causes is referred to as the cause tree. Not all root causes are accessible and able to be eliminated. Breaking the cause tree is such a way that the problem cannot recur is an acceptable alternative.</p> <p>Not all situations can wait for the RCA and eventual elimination of the root cause as there may be serious current impacts. The quick fix will control these immediate impacts, but does not eliminate the root cause.</p>
Quick fix	<p>A quick fix is not a short cut or side step for a permanent solution to the root cause. It is a necessary step designed to control the immediate impacts of a problem, for example, to prevent ongoing errors or to ameliorate damage.</p>
Appropriate techniques/charts	<p>Appropriate techniques/charts may include:</p> <ul style="list-style-type: none"> control charts Pareto charts run charts flow charts

	<ul style="list-style-type: none">• cause and effect diagrams• tree diagrams• 5 Whys analysis

MSS403001A Implement competitive systems and practices

Modification History

New unit, superseding MSACMS400A Implement a competitive manufacturing system - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to implement and review competitive systems and practices in a person's own work within a team or work area, including the consideration of the impact on the work of others. The unit focuses on the holistic application of competitive systems and practices to achieve improved performance in own work and in activities with others in the team or work area that contribute to improving customer benefit.

Application of the Unit

This unit applies to individuals who are applying competitive systems and practices to their own work in a way that integrates with others in the team or work area who are also implementing competitive systems and practices. Depending on the operations or processes in the team or work area the unit may also include interaction with other teams and work areas. The unit is suitable for individuals who have formal responsibility for the work of others, such as team leaders. It is also suitable for individuals, such as technicians and tradespeople, who must integrate the application of their technical skills with the implementation of competitive systems and practices in an organisation.

The unit applies to the areas of cost, quality, delivery, safety/environment, and employee capability including continuous reviewing of performance against these five areas in liaison with other relevant people. Improvement initiatives in these five areas are usually developed and implemented with the support of technical support staff. Whereas other units may emphasise the competence to use one or more competitive practices, this unit emphasises the ability to advance on all five key areas over a moderate time period.

This unit requires the application of skills associated with problem solving and initiative and enterprise in order to identify opportunities to make improvements and maximise performance. Communication, the ability to work in a team and planning and organising skills are required to implement improvements and address any conflicts that arise. This unit also requires an ability to identify appropriate technology, and to consider and integrate feedback on how personal performance can be improved.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Contribute to the improvement of the operations system in team or work area	1.1	Identify key performance indicators for area of operations
		1.2	Implement and review competitive systems and practices to improve health, safety and environment (HSE) performance of self and others
		1.3	Implement and review competitive systems and practices to maximise quality consistency
		1.4	Implement and review competitive systems and practices and identify any skill and training issues that need to be addressed to improve capability of self and others
		1.5	Implement and review competitive systems and practices to maximise customer benefit/cost ratio
		1.6	Implement and review competitive systems and practices to reduce lead time to delivery within the scope of authority and responsibility
		1.7	Work with relevant stakeholders to resolve conflicts which arise from implementation of competitive systems and practices

- 1.8 Select improvements which will deliver the greatest overall benefit for the resources required/available without reducing current performance on individual factors

- 2 Implement improvements
 - 2.1 Implement the chosen improvement/s
 - 2.2 Check the selected improvements improve the system as a whole and do not result in unintended consequences
 - 2.3 Monitor implementation and make adjustments, as required

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating with others to clarify scope of implementation of competitive systems and practices, including:
 - value stream mapping
 - 5S
 - Just in Time (JIT)
 - mistake proofing
 - process mapping
 - establishing customer pull
 - kaizen and kaizen blitz
 - setting of key performance indicators/metrics
 - identification and elimination of waste (muda)
- monitoring performance in key areas, including:
 - HSE performance
 - quality consistency
 - capability and performance by team members
 - customer benefit/cost ratio
 - reduce lead time to delivery
- contributing suggestions for improvement
- analysing operational procedures in terms of flow and contribution to customer outcomes
- planning tasks to support competitive systems and practices implementation
- identifying and implementing appropriate data gathering and analysis techniques within area of responsibility to identify change over time in indicators relating to:
 - cost
 - quality
 - delivery
 - safety/environment
 - employee capability and support for competitive systems and practices
- solving problems to root causes

Required knowledge

Required knowledge includes:

- customers and the value they derive from products and processes of the organisation or area
- cost components and their relationship to customer benefits/features
- suppliers and their capabilities
- waste (muda)
- factors causing variability in a product and how to control them
- factors that promote standardisation
- relevant competitive systems and practices tools for area and how to apply them
- factors impacting on the product, process and waste, particularly those wholly or partially under own and other immediate area employees control (and how to control them)
- good HSE practice and factors impacting on HSE performance
- own capability and how to improve it
- optimisation techniques appropriate to the organisation and the job
- application of quality standards and processes

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> • identify key performance indicators appropriate to their own work area • implement and review competitive systems and practices in own work, including interaction with others in the work area in the areas of: <ul style="list-style-type: none"> • HSE performance • quality consistency • capability and performance by team members • customer benefit/cost ratio • reduce lead time to delivery • select improvements that deliver the greatest overall benefit • monitor the implementation of improvements and make appropriate adjustments.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p>

	<p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning for appropriate portions • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<p>Guidance information for assessment</p>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the

performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Competitive systems and practices</p>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
<p>Competitive systems and practices tools</p>	<p>Competitive systems and practices tools include:</p> <ul style="list-style-type: none"> • 5S • 6 sigma • continuous improvement • cause effect diagrams

Customer	<p>Competitive systems and practices organisations encompass the entire production system, beginning with the customer, and includes:</p> <ul style="list-style-type: none"> • the product sales outlet • the final assembler • product design • raw material mining and processing • all tiers of the value stream (sometimes called the supply chain) <p>Customer may include:</p> <ul style="list-style-type: none"> • internal or external customers, and should also include the final customer as the basis for the identification of waste <p>The unit does not require interfacing directly with the external customer, but there should be sufficient information to identify customer benefits and features</p>
Supplier	<p>Supplier may include:</p> <ul style="list-style-type: none"> • an internal supplier • an external supplier <p>The unit does not require interfacing directly with external suppliers, but there should be sufficient information to enable identification of supplier abilities</p>
Waste	<p>Waste (also known as muda in the Toyota Production System and its derivatives) is any activity which does not contribute to customer benefit/features in the product. Categories of waste include:</p> <ul style="list-style-type: none"> • excess production and early production • delays • movement and transport • poor process design • inventory • inefficient performance of a process • making defective items • other activities which do not yield any benefit to the organisation or any benefit to the organisations customers
Operations	<p>Operations indicate:</p> <ul style="list-style-type: none"> • the holistic combination of the process, plant and equipment, procedures and practices, including the skills and work organisation of the workforce, which

	make up the productive organisation
Implement improvements	Implementation of improvements may be undertaken: <ul style="list-style-type: none">• within own job role• as part of processes and operations in the work area or team

MSS403002A Ensure process improvements are sustained

Modification History

New unit, superseding MSACMS401A Ensure process improvements are sustained - Not equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to ensure that the gains which have been made by using improved methods, processes and equipment are sustained as the new baseline/standard for an area of work and so prevent regression to former practices, or digression to less efficient practices.

Application of the Unit

This unit applies to individuals working in a team or work area who have already implemented competitive systems and practices related improvements in their own work and who must work effectively with others implementing competitive systems and practices to ensure that performance improvement gains are sustained.

The unit is also suitable for individuals who have formal or informal responsibility for the work of others, such as team leaders; individuals, such as senior operators, who must mentor others; or individuals, such as technicians and tradespeople, who must integrate the application of their technical skills with the implementation of competitive systems and practices in an organisation.

The unit can be applied to all areas of an organisation, including production, maintenance, logistics and office functions.

The unit covers the implementation of practices to ensure that process improvements are sustained and opportunities taken to suggest further improvements. If mistake proofing is used as one of the methods for ensuring that process improvements are sustained, the unit MSS403051A Mistake proof a production process should be selected.

Improvement initiatives can be made by any of any number of methods and by teams or individuals. The unit assumes that desired levels of performance or quality are known.

This unit requires the application of skills associated with problem solving, initiative and enterprise, and planning and organising in order to check and monitor the impacts of change. It also requires communication and the ability to work with others to assess the impact of change in own work and on other's work, as well as self-management and learning to adapt improvements according to new information and feedback.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Examine previous improvements	1.1	Identify impact of previous process improvements to systems, equipment, operations or products in work area
		1.2	Identify improvements that have not met objectives
2	Ensure corrective actions are implemented	2.1	Identify corrective actions that can be taken on process improvements that have not met objectives
		2.2	Liaise with relevant people associated with the anticipated corrective action
		2.3	Obtain any required approvals
		2.4	Ensure the supply of resources
		2.5	Check impacts of corrective action on occupational health and safety (OHS), quality and environmental systems in work area and take action in accordance with procedures, if required
		2.6	Check that self and others in team or work area have required skills for corrective actions
		2.7	Monitor implementation of corrective action

- 2.8 Make required adjustments
- 3 Verify systems support improvement
 - 3.1 Ensure procedures reflect improvements
 - 3.2 Check that training and assessment activities in team or work area reflect improvements
 - 3.3 Liaise with relevant people to ensure their support of the new or modified system/s
- 4 Audit the change
 - 4.1 Determine an appropriate audit period/cycle
 - 4.2 Agree relevant measures/indicators for the improvement
 - 4.3 Measure performance at agreed times using agreed measures
 - 4.4 Investigate causes of under-performance
 - 4.5 Take appropriate corrective action to improve performance
 - 4.6 Re-audit the improvement on an agreed basis

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating with others to clarify scope and stage of implementation of competitive systems and practices and contribute suggestions for further improvements in implementation
- examining normal operational procedures in terms of flow and contribution to customer benefit
- planning own tasks, including the impact on others to support competitive systems and practices implementation
- implementing competitive systems and practices in own work area according to instructions
- identifying waste (muda)
- monitoring competitive systems and practices performance indicators for own work and work area

Required knowledge

Required knowledge includes:

- overall procedures for and process of operations relative to improvements being made
- appropriate measures of performance
- business performance goals sufficient to determine best measures of improved performance

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • identify process and operational changes as a result of implementation of competitive systems and practices • identify and assess impact of performance improvements in a work area against objectives • identify actions and resources required for further improvements • communicate and negotiate with others on
--	--

	<p>improvements</p> <ul style="list-style-type: none"> • apply procedures for seeking approvals and reporting non-conformances • determine appropriate period and procedures for monitoring implemented changes.

MSS403010A Facilitate change in an organisation implementing competitive systems and practices

Modification History

New unit superseding MSACMC410A Lead change in a manufacturing environment - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required by individuals responsible for facilitating change processes in an organisation implementing competitive operational practices.

Application of the Unit

This unit applies to people who facilitate the change process resulting from implementing one or more competitive systems or practices. This implementation may also be associated with other changes, such as the introduction of new products, processes or equipment. The unit will usually apply to people whose responsibility is at the team, area or section level rather than the whole organisation. The responsibility may be formally designated or be informal, as in mentoring and assisting fellow employees.

This unit assumes that consultation and agreement on the implementation of the competitive systems and practices and other associated changes has already occurred and the nature and extent of the change has been agreed.

This unit does not cover the negotiation of change in a formal industrial relations sense but does cover the skills needed to identify real or potential change implementation issues, including those that may need to be referred to formal consultation and/or dispute settlement procedures.

This unit has a strong emphasis on planning, encouraging and facilitating in a changing environment within the organisation, including using appropriate communication, teamwork, problem solving, initiative and self-management.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--|-----|--|
| 1 | Define nature and impact of change for designated area and processes | 1.1 | Identify the organisation's aims and objectives for the competitive systems and practices techniques related to the change process |
| | | 1.2 | Identify opportunities for implementation of change within work area |
| | | 1.3 | Determine impacts of change for work area, including potential benefits and impacts on own work and work of fellow employees |
| 2 | Identify key performance indicators (KPIs) | 2.1 | Liaise, where required, with managers, engineers and other staff responsible for designing and/or implementing change |
| | | 2.2 | Identify KPIs for own work responsibility and that of the work area |
| | | 2.3 | Communicate KPIs to fellow employees |
| | | 2.4 | Check that data collection and processing are appropriate for KPIs |
| | | 2.5 | Raise and resolve issues related to KPIs with relevant personnel |

- | | | |
|---|---|---|
| 3 | Liaise with key stakeholders | 3.1 Identify key stakeholders impacted by the change |
| | | 3.2 Communicate with key stakeholders within scope of authority |
| | | 3.3 Identify and address issues and concerns of each stakeholder if within scope of authority |
| | | 3.4 Develop and/or locate information required to address key concerns |
| | | 3.5 Refer issues and concerns outside of scope of authority to appropriate personnel |
| 4 | Develop a strategy to help implement change | 4.1 Identify or develop a work plan for implementing change |
| | | 4.2 Make information required to support change available to team members |
| | | 4.3 Communicate/circulate draft work plan to other employees in work area, supervisors, technical experts and other appropriate personnel for comment |
| | | 4.4 Assess suggested changes and incorporate into work plan, where appropriate |
| 5 | Implement change | 5.1 Obtain authorisation to commence change implementation in accordance with organisation procedures |
| | | 5.2 Implement change in accordance with work plan and organisational occupational health and safety (OHS) and consultation procedures |
| 6 | Monitor implementation of change | 6.1 Maintain open communication channels with all stakeholders during implementation |
| | | 6.2 Monitor KPIs during implementation |
| | | 6.3 Encourage and facilitate improvement suggestions of team members |
| | | 6.4 Identify areas requiring improvement in change |

implementation

- 6.5 Make improvements to implementation according to organisation procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying the competitive operational practices being implemented in the organisation, including:
 - Just in Time (JIT) and kanban systems
 - preventative maintenance
 - 5S housekeeping
 - continuous improvement processes (e.g. kaizen)
 - waste (muda) elimination
 - formal problem solving procedures (e.g. root cause analysis (RCA))
- identifying other products, processes or equipment changes being implemented within area of responsibility
- identifying the work and culture changes required for effective implementation of the competitive systems and practices being implemented and other products, processes or equipment changes
- identifying organisation KPIs and contextualise for area of responsibility to determine successful change implementation
- planning strategies for change implementation, including:
 - required communication with others
 - negotiations if any required with internal and external suppliers, customers and delegates
 - analysis of any skill gaps in self and others
 - required training
 - data collection
 - work organisation and procedure changes
 - risk identification and contingency measures
- monitoring performance against KPIs and taking appropriate corrective action in the event of a non-conformance
- identifying and communicating with sources of assistance if difficulty is experienced with changes

Required knowledge

Required knowledge includes:

- features of common competitive operational practices, including:

- JIT and kanban systems
- preventative maintenance
- 5S housekeeping
- continuous improvement processes (e.g. kaizen)
- waste (muda) elimination
- formal problem solving procedures (e.g. RCA)
- health, safety and environment (HSE) principles and requirements for area of responsibility
- change implementation contacts and procedures relevant to work area
- employee assistance mechanisms in the organisation
- processes to develop work plans, including consideration of timetable, KPIs, training needs, OHS implications, contingency plans and responsibilities (the work plan must be capable of being coherently communicated to others)

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • identify the competitive systems and practices used in their own work • identify changes to their own work flowing from the implementation of the relevant competitive systems and practices • implement changes • know when and how to seek assistance with work changes • make suggestions for improvements.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard

	<p>control/management</p> <ul style="list-style-type: none"> • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using some combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations
--	---

	<ul style="list-style-type: none"> • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Team	<p>Team may include:</p> <ul style="list-style-type: none"> • work teams from all sections of an organisation, including production or other operational areas, maintenance, technical, administration/finance, and sales/marketing
Change	<p>The philosophy of continual improvement is that every process can and should be continually evaluated and improved in terms of time required, resources used, resultant quality, and other aspects relevant to the process.</p> <p>Superimposed on this is the concept of breakthrough change when a large change/improvement is made which can shift the direction or operation of the organisation.</p>

	Once such breakthrough change is the introduction of competitive operational practices.
Work plan for change	<p>The work plan for change covers the designated work area and may include, depending on the organisation and work area processes:</p> <ul style="list-style-type: none"> • timetable • KPIs • training needs • OHS implications • contingency plans • responsibilities with team members and senior managers, engineers and other staff responsible for designing and/or implementing change
Issues and concerns	<p>Issues and concerns may be communicated formally and informally and may include:</p> <ul style="list-style-type: none"> • individual and group concerns • those expressed by and through industrial processes
Gathering and monitoring performance data	<p>Performance data may be gathered and monitored:</p> <ul style="list-style-type: none"> • manually by individual employees through charts, tally sheets or keypad/board entry • automatically through software, such as SCADA software, ERP systems, MRP and proprietary systems

MSS403021A Facilitate a Just in Time system

Modification History

New unit, superseding MSACMT421A Facilitate a Just in Time (JIT) system - Equivalent

Unit Descriptor

This unit of competency covers skills and knowledge required to facilitate the implementation/operation of a Just in Time (JIT)/kanban system in a team or work area.

Application of the Unit

This unit applies to a person who needs to monitor the operation of a JIT system and facilitate its working in a team or work area. This will involve liaison with stakeholders as well as examining the data generated. They will need to be alert to potential problems and areas for improvement.

This unit requires the application of skills associated with gathering, analysing and communicating information to facilitate implementation of the JIT system. It requires planning and organising skills and has a strong emphasis on communication and teamwork skills to ensure the JIT system is being effectively implemented. This unit also requires the ability to problem solve and take the initiative to consider performance issues and learn from experience to improve future performance.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Monitor the operation of the JIT system	1.1	Track value of key measures
		1.2	Recognise indicators of poor performance
		1.3	Take appropriate quick fix action
2	Liaise with relevant stakeholders	2.1	Regularly communicate with team or work group members regarding the operation of the JIT system
		2.2	Review JIT key performance indicators (KPIs) with team or work group members
		2.3	Communicate with relevant personnel up and down the value stream regarding the operation of the JIT system
		2.4	Identify issues with stakeholders and take appropriate quick fix action
3	Improve the JIT system	3.1	Identify areas requiring improvement in the JIT system
		3.2	Identify root cause of JIT-related problems
		3.3	Review value of key measures
		3.4	Recognise skill gaps in team members and other stakeholders
		3.5	Determine any other issues in team or work group, other stakeholders and JIT system leading to poor performance indicators
		3.6	Develop appropriate improvement solutions

- 3.7 Liaise with relevant people regarding improvement solutions
- 3.8 Implement and/or assist with the implementation of the solutions

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying KPIs for JIT system in team or area of responsibility
- analysing the JIT/kanban implementation in the team or area and the relevant sections of the internal and external value stream, including identifying people-related needs and issues
- identifying and implementing quick fix to JIT problems
- using formal problem solving procedures (e.g. root cause analysis (RCA))
- developing formal and informal communication procedures with others in work area, team leaders, other employees and value stream members relevant to JIT implementation
- establishing sources of assistance in the organisation for people experiencing difficulty with competitive systems and practices changes
- interpreting procedures and instructions relevant to own expertise for others
- establishing KPIs for own work

Required knowledge

Required knowledge includes:

- JIT principles relevant to operations and processes in own area or team and in the organisation generally
- procedures for making/recommending improvements
- typical reasons for delays/storages/inventories in the team or area of responsibility and methods of reducing/eliminating them
- skill gap analysis and methods of filling skill gaps
- principles of the operations process relevant to the section/team
- production data generated by the process and its application to JIT

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	Evidence should be available of the person's facilitation of the operation of the JIT system and their making of recommendations for/making improvements.
-------------------------------	---

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • identify the JIT system and practices used in their team or area of responsibility • identify and monitor JIT key measures • solve JIT-related problems to root cause • implement and monitor JIT-related changes to operations and practices.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and</p>

	disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree
--	--

	<p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
JIT	<p>JIT refers to:</p> <ul style="list-style-type: none"> • a production scheduling concept that calls for any item needed at a production operation (whether raw material, finished item, or anything in between) to be produced and available precisely when needed, neither a moment earlier nor a moment later
Kanban	<p>Kanban is a card or sheet used to authorise production or movement of an item; when fully implemented, kanban operates according to the following rules:</p> <ul style="list-style-type: none"> • all production and movement of parts and material take place only as required by a downstream operation (i.e. all operations and procurement are ultimately driven by the requirements of final assembly or the equivalent) • the specific tool which authorises production or movement is called a kanban. The word literally means card or sign, but it can legitimately refer to a container or other authorising device. Kanban have various formats and content as appropriate for their usage (e.g. a kanban for a vendor is different than a kanban for an internal machining operation) <p>Kanban is typically applied to batch type operation and the production is measured in units produced. In continuous processing organisations, production is measured in terms of production rate (e.g. kg/h, tonne/day) and rate is increased/decreased according to the flow authorisation which may be a kanban (e.g. ticket, order from a supplier) or may be a SCADA signal from a remote facility (e.g. customer tank) saying that resupply is required or similar</p>
SCADA	<p>SCADA refers to:</p> <ul style="list-style-type: none"> • a number of systems which automatically collect critical process data, perform required mathematical manipulations on it and then make control decisions and/or give required information to personnel for action

Key measures	<p>Key measures may include:</p> <ul style="list-style-type: none"> • inventory levels • lead time • In Full, On Time and In Specification (IFOTIS) delivery • productivity/production rate • other measures of pull through the value stream • quality
Quick fix	<p>Quick fix refers to:</p> <ul style="list-style-type: none"> • action taken to immediately and cheaply control a problem, prevent it getting worse and/or ameliorate its impact, but which does not necessarily solve it long term
Pull system	<p>Pull refers to:</p> <ul style="list-style-type: none"> • a system of making to demand rather than for stock or to a forecast
Value stream	<p>The value stream begins with the customer and includes all actions (both value-adding and non-value added) by both internal sections/departments and external organisations to meet a customer requirement.</p> <p>Depending on the operations and the customer requirement, stages where value stream actions may occur include:</p> <ul style="list-style-type: none"> • sales outlet/representative • information gathering, data analysis and research • product design • raw material sourcing • intermediate processing • final assembler/collation/preparation • support services (e.g. accounting, finance and legal) • storage and delivery to customer • after market support

MSS403023A Monitor a levelled pull system of operations

Modification History

New unit, superseding MSACMT423A Monitor a manufacturing levelled pull system* - Not equivalent

* Prerequisite *MSACMT280A- Undertake root cause analysis* - removed

Unit Descriptor

This unit of competency covers the skills and knowledge required to monitor the operation of a pull system in a work area and recommend improvements.

Application of the Unit

This unit covers the skills needed to monitor a pull operations system in a work area or team operation although knowledge of the overall pull system in the enterprise is also required. The unit is targeted at individuals, such as team leaders and senior operators, who have an overview of the work area or team operation and the ability to implement corrective action in the event of discrepancies.

The unit covers the skills needed to monitor daily working of the system, identify problems and take appropriate action on problems. The operations system may be a total demand pull system or it may be a mixed push/pull system.

This unit primarily requires the application of skills associated with using information and problem solving skills to monitor pull system and analyse discrepancies. It also requires skills in initiative and enterprise, and planning and organising to determine and act on opportunities for improvement. Aspects of self-management and learning are required to ensure own ability to improve systems.

The unit is based on manufacturing principles but can be contextualised for other types of organisations. For pull systems in an office environment the unit MSS405033A Optimise office systems to deliver to customer demand, should be used.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Monitor the pull system	1.1	Identify the pacemaker process
		1.2	Identify rate of production set by the pull system
		1.3	Determine actual rate of production at key parts of the process
		1.4	Identify types of inventories within process
		1.5	Compare actual inventories with planned inventories
		1.6	Note discrepancies between actual and planned rates and inventories
2	Take corrective action	2.1	Determine causes of discrepancies
		2.2	Determine action required to rectify causes of discrepancies
		2.3	Take appropriate action in conjunction with relevant stakeholders
3	Test/improve the pull system	3.1	Identify recurrent discrepancies
		3.2	Determine causes of discrepancies
		3.3	Determine action required to rectify cause

- 3.4 Identify unnecessary levels of inventories
- 3.5 Discuss impacts of reduced inventories with relevant stakeholders
- 3.6 Take/initiate appropriate action to rectify recurrent discrepancies/reduce levels of unnecessary inventory
- 3.7 Monitor the system to determine the effects of changes

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying order process used by the team or in work area
- analysing processes and cycle times and determining the pacemaker process
- distinguishing between pacemaker process and bottlenecks
- distinguishing between cycle stock, buffer stock and safety stock
- leading processes to identify causes of discrepancies
- considering a range of appropriate action in the event of discrepancy, including considering the appropriateness of changes to:
 - production processes
 - cycle times
 - equipment and set-up
 - work organisation
 - training and skill development of employees
 - the delegations and authority of the team members or employees in work area and team or work group leader to influence the actions required, for example:
 - actions which can be sanctioned by the individual team member
 - actions which can be sanctioned by the team or work group leader
 - actions requiring management sanction
 - actions requiring expert intervention

Required knowledge

Required knowledge includes:

- operations and equipment used in the enterprise
- capabilities of equipment
- abilities and skills of personnel
- ultimate customer order process and relationship to demand pull for team or area
- inventories held by enterprise
- stakeholders relevant to team or area
- a range of possible actions available to address discrepancies

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • identify the demand pull system used in their area or team • identify pacemaker process • identify types of inventories used by team or area • determine appropriate actions to rectify discrepancies between actual and planned rates of production • implement and monitor changes to rectify discrepancies.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence

	<p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE)
--	---

	<ul style="list-style-type: none"> • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Pull system	<p>A pull system in a operations system is one where:</p> <ul style="list-style-type: none"> • operations are done to order and not for holding large inventories of parts and completed stock • work flow is done according to demand pull from the next work stage • operations are in response to customer demand <p>The pull system must be flexible and have cycle times set by parameters calculated from customer demand indicators</p>
Production	<p>Production in this unit is primarily used in a manufacturing sense and may include:</p> <ul style="list-style-type: none"> • repetitive production of items (e.g. components and whitegoods) • continuous or batch production (e.g. hydrocarbons, chemicals and cement) <p>The term production may also be contextualised to allow for the unit to be applied to divisions or organisations supplying supporting services (e.g. transport and logistics, and utilities)</p>
Pacemaker	<p>Pacemaker processes refer to:</p> <ul style="list-style-type: none"> • process or scheduling points which sets the pace for the flow of operations through the enterprise. It needs to be distinguished from processes which are temporarily setting the pace for other processes because of faults, breakdowns, inefficiencies, poor design and/or waste. These should be categorised as bottlenecks and made targets for corrective action.

Types of inventories	<p>Inventories within process may include:</p> <ul style="list-style-type: none"> • cycle stock which reflects the replenishment quantity and frequency • buffer stock to meet demand variability and forecast errors • safety stock required to guard against quality and delivery failures upstream
Determine cause	<p>Determine cause may include the individual/team leader:</p> <ul style="list-style-type: none"> • analysing cause themselves • identifying that expert analysis is required and requesting this analysis • setting up an improvement team to analyse cause • identifying that the cause of the discrepancy is upstream or downstream of the team or area
Action required	<p>Action required includes:</p> <ul style="list-style-type: none"> • actions to align actual and planned rates of production and inventories. The actions will vary and will depend on assessment of the discrepancy and the nature of the operation
Stakeholders	<p>Stakeholders include:</p> <ul style="list-style-type: none"> • managers • supervisors • employees • shareholders • occupational health and safety (OHS) mechanisms/representatives • industrial relations mechanisms/representatives • suppliers • customers • service providers

MSS403030A Improve cost factors in work practices

Modification History

New unit, superseding MSACMT430A Improve cost factors in work practices - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to evaluate the product or process outcomes of a team in terms of their cost components and to be able to determine, in general terms, the cost impacts of alternative actions.

Application of the Unit

This unit applies to a person who is required to assess the relative costs of alternatives and use this as one of the key factors in decision making. Typical decisions include the efficient organisation of own work and that of others in a work area or within a team and the improvement of throughput and cycle times.

Decisions are made within the scope of the authority of the individual and other employees in the area or team and according to procedures.

This unit primarily requires the application of skills associated with communication and information gathering, teamwork and problem solving to analyse the cost components of work processes. Initiative and enterprise, and planning and organising are also required to identify opportunities for improved cost-efficiency. This unit also requires a degree of self-management and learning to effectively operate and maintain skills and performance.

Licensing/Regulatory Information

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Analyse cost components of work area or team function	1.1	Identify cost components in the product or process
		1.2	Identify costs factors under control of area or employees in the team
		1.3	Identify causes of variability in costs
		1.4	Analyse impact of costs on production or process activities undertaken
2	Improve cost-efficiency of processes and procedures	2.1	Identify methods of improving productivity and/or reducing costs within area or team's responsibility
		2.2	Determine cost/benefit ratio of alternative methods of improving productivity and/or reducing costs
		2.3	Consult with all relevant stakeholders regarding possible changes
		2.4	Recommend changes which will increase productivity and reduce cost and variability
		2.5	Implement recommended changes in consultation with relevant stakeholders

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying fixed and variable costs in products or processes
- analysing costs and determining those that can be controlled by the individuals in an area or team
- analysing costs over time and identifying variability in cost components
- determining cost/benefit ratios
- communicating and negotiating with others on changes using a variety of mediums

Required knowledge

Required knowledge includes:

- cost components of products made
- costs concepts, such as expense, income and cost/benefit
- major cost contributors to product (e.g. energy, materials, labour and distribution, and so on) depending on the product and process)
- the difference between internally and externally controlled costs
- difference between overhead, labour and consumables

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • identify the scope of their own work and the team or area work and relate it to the overall flow of work in the organisation • express cost factors in specific terms (e.g. cost per item, process and task) • identify and express cost factors in basic financial

MSS403032A Analyse manual handling processes

Modification History

New unit, superseding MSACMT432A Analyse manual handling processes - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to analyse manual handling in terms of its efficiency and safety.

Application of the Unit

This unit applies to an individual who is required to examine the manual handling component of a job and improve it in terms of safety, effort required and efficiency. This may be conducted for a job performed by others or it may be for the person's own job.

This unit primarily requires the application of skills associated with problem solving, initiative and enterprise to identify safe and efficient manual handling, and planning and organising to ensure processes are implemented. This unit also requires communication with, and involvement of, others to ensure they understand the approach and to facilitate training.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Assess manual handling risks	1.1	Identify manual handling hazards in work area
		1.2	Assess risks arising from manual handling hazards
2	Analyse physical effort requirements of job	2.1	Determine basic manual handling requirements of job
		2.2	Analyse requirements in terms of components, such as lift, move, place and hold
		2.3	Analyse items to be handled in terms such as weight, size, shape or other hazards
3	Determine time/effort components of physical effort	3.1	Break required movement pattern down into movement components
		3.2	Determine time and effort requirements for movements
		3.3	Develop alternative movement patterns
		3.4	Determine time and effort requirements for alternative movements
		3.5	Determine handling aids required to assist movement
		3.6	Determine preferred movement pattern

- | | | | |
|---|---|-----|---|
| 4 | Analyse the ergonomics of physical effort | 4.1 | Analyse the ergonomics of the preferred movement pattern |
| | | 4.2 | Develop substitute movements for any movement which is not ergonomically sound |
| | | 4.3 | Determine handling aids required to improve ergonomics of required movements |
| 5 | Optimise application of physical effort | 5.1 | Select movement patterns which are ergonomically sound and time and effort efficient |
| | | 5.2 | Ensure all relevant people are trained to use these methods |
| | | 5.3 | Ensure procedures and practices reflect the optimum methods |
| | | 5.4 | Communicate with team members and involve them in development of alternatives to ensure awareness and facilitate learning |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating with others about work processes and jobs
- identifying ergonomically sound and unsound movements both at a general level and related to individual capability
- analysing manual handling processes
- working cooperatively with others
- demonstrating or arranging to have demonstrated ergonomically correct movements
- applying basic mathematics
- solving problems

Required knowledge

Required knowledge includes:

- relevant occupational health and safety (OHS) Acts and regulations as applied to manual handling
- principles of job and work method design as applied to efficient and safe movement
- principles of work analysis
- principles of ergonomics/safe movement
- aids that can assist with or substitute for manual handling

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> • analyse manual handling requirements and risks in jobs • distinguish between ergonomically sound and unsound movement
--	---

	<ul style="list-style-type: none"> analyse manual handling movements and risks for an individual relate manual handling requirements to job efficiency.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> workplace procedures and plans relevant to work area specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee documentation and information in relation to production, waste, overheads and hazard control/management reports from supervisors/managers case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using some combination of the following to generate evidence:</p> <ul style="list-style-type: none"> demonstration in the workplace workplace projects suitable simulation case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) targeted questioning reports from supervisors, peers and colleagues (third-party reports) portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>

MSS403040A Facilitate and improve implementation of 5S

Modification History

New unit, superseding MSACMT440A Lead 5S in a manufacturing environment - Not equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to facilitate the implementation and improvement of the 5S by self and others in a team or work area.

Application of the Unit

This unit applies to individuals who facilitate 5S in a team or work area, including implementation, monitoring and improvement. The facilitation may be undertaken by formally designated supervisory staff, such as team leaders or other individuals in a competitive systems and practices implementation role, who need to provide support and encouragement to others to facilitate the achievement of 5S outcomes in the workplace. This unit requires the application of skills associated with communication, teamwork, problem solving, initiative and enterprise, planning and organising, and self-management in order to provide leadership in a 5S environment. This unit has a strong emphasis on planning and change management, but also requires an ability to learn from experience and feed new information back into strategies to improve performance. For planning, implementing and leading the application of 5S in an office environment see unit *MSS403039A Facilitate and improve 5S in an office*.

| 2 | Facilitate the implementation of 5S | <ul style="list-style-type: none"> 2.1 Ensure procedures reflect 5S practices 2.2 Assess skill base of team or work group members in 5S and arrange for any required training 2.3 Ensure that any damage and/or safety risks reported by the team or work group are addressed through correct mechanisms |

- 3 Monitor 5S
 - 3.1 Check work area for 5S implementation as part of normal routine
 - 3.2 Identify non-conformances
 - 3.3 Negotiate solutions to non-conformances

- 4 Improve 5S
 - 4.1 Work with others to find areas for improvement
 - 4.2 Assist others to develop improvement solutions
 - 4.3 Facilitate the availability of resources required for the improvement solution
 - 4.4 Facilitate the implementation of the improvement solution

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating with other employees and managers to engender commitment to achieving 5S outcomes, conduct formal and informal meetings and to explain 5S and related concepts
- facilitating team or work area goals, activities and communications and accessing resources
- visualising normal operational procedures in terms of flow and contribution to customer outcomes
- planning and prioritising activities
- problem solving to determine potential improvements to the 5S system
- reading and interpreting the application of operating procedures for jobs within team or target work area
- analysing work practices, procedures and 5S principles to facilitate setting up the 5S system and to identify improvements
- identifying gaps in skills and/or knowledge and options to address them

Required knowledge

Required knowledge includes:

- principles and purpose of 5S
- methods of identifying waste in the work area, such as:
 - waste walk
 - document tagging
 - tracking/log sheets
 - spaghetti diagrams
 - existing information technology and enterprise resource systems (e.g. Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems
- organisational policies, plans and procedures
- processes for identifying and addressing skill gaps
- ways of encouraging team members to find and suggest areas for improvement
- methods of identifying and evaluating options and making/recommending improvements
- methods of accessing required resources
- OHS requirements relevant to team and work area

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • identify the scope of the services and/or functions supplied to and by the team or work area and the deliverables expected by customers, including the ultimate customer • facilitate a systematic approach to implementing 5S • lead and motivate others in achieving 5S outcomes and making improvements to the 5S systems • set up systems for monitoring and improving 5S implementation • manage non-conformances in implementation of 5S.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)

	<ul style="list-style-type: none"> • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as SCADA software, ERP systems MRP and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz)
--	--

	<ul style="list-style-type: none"> • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Procedures	<p>Procedures may include:</p> <ul style="list-style-type: none"> • work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and Responsible Care) • government regulations <p>Procedures may be:</p> <ul style="list-style-type: none"> • written, verbal, computer-based or in some other format
5S	<p>5S is a system of work organisation originally developed in Japan based around a close translation of the five stages in the housekeeping approach is:</p> <ul style="list-style-type: none"> • sort • set in order • shine • standardise • sustain
Sort	<p>Sort involves keeping only what is absolutely necessary for the work processes that comprise the job and includes:</p>

	<ul style="list-style-type: none"> clearing the work area of all non-essential items <p>Non-essential items are items not required to either produce product, conduct process or operations or make required adjustments to equipment during process or operations</p>
Set in order	<p>Set in order includes:</p> <ul style="list-style-type: none"> assigning required equipment and materials appropriate locations in the work area
Shine	<p>Shine includes:</p> <ul style="list-style-type: none"> keeping the work area clean at all times. This should be carried out to a regular daily schedule against allowed time, usually at the end of the day or of a particular process <p>Cleaning includes:</p> <ul style="list-style-type: none"> noting any signs of wear, damage, leakage, safety risks or other issues that require immediate attention
Standardise	<p>Standardising includes:</p> <ul style="list-style-type: none"> activities that help maintain the order and the housekeeping standards using procedures and checklists developed from a procedure
Sustain	<p>Sustain includes:</p> <ul style="list-style-type: none"> making sure that daily activities are completed every day regardless of circumstance undertaking inspections, including: <ul style="list-style-type: none"> informal inspections that should be carried often, at least weekly generating continuous improvement actions from daily activities formal inspections that should be carried out at least monthly
Items in work area	<p>Items in work area may include:</p> <ul style="list-style-type: none"> tools jigs/fixtures materials/components plant and equipment manuals personal items (e.g. bags, lunch boxes and posters) safety equipment and personal protective equipment

	<ul style="list-style-type: none"> • other items which happen to be in the work area
Team	The term team is used to apply to all individuals in the target work area who are involved in the implementation of 5S. The team may or may not be a formally designated team working to a team leader
Work area	<p>The work area includes:</p> <ul style="list-style-type: none"> • all areas where aspects of the job are performed and that are under the direct control of the employee. In a team environment 5S should be applied to all work areas under the control of the team
Target work area	<p>The target work area may be identified as a physical and/or virtual work space:</p> <ul style="list-style-type: none"> • used by a person, a team or a cross-functional group • common to part/s of a process or value stream (already defined) • shared by people who undertake a defined procedure or set of procedures • needed to support a particular function
Appropriate place	<p>Appropriate places may include areas designated for:</p> <ul style="list-style-type: none"> • recycling • rubbish removal • staff room/lunch room/kitchen • storage • holding area until status is confirmed
Optimum assigned location	<p>The optimum assigned location may include:</p> <ul style="list-style-type: none"> • making changes to the layout of furniture, equipment and personnel in order to facilitate the smooth and continuous flow of work through process steps taking into account OHS considerations
Non-conformance	<p>Non-conformance includes:</p> <ul style="list-style-type: none"> • incorrect or incomplete application of 5S procedures, including any daily tasks, scheduled inspections and continuous improvement procedures

MSS403051A Mistake proof an operational process

Modification History

New unit, superseding MSACMT451A Mistake proof a production process - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to make changes to own and others work in a work area which prevents errors and/or backsliding to a pre-improvement level of practice.

Application of the Unit

This unit applies to a person who needs to analyse a process that a team is responsible for and determine methods of mistake proofing it (e.g. ensuring it only produces product within an acceptable range or error-free transport and storage of goods). The person will typically be a technical expert, team leader or be in a role where they have sufficient technical understanding of processes in their own work and that of others to be able to mistake proof the production process in their area. After improvement activities have been undertaken these improvements need to be sustained.

This unit requires the application of skills associated information gathering and analysis. Initiative, enterprise and problem solving are also required to identify mistakes and determine strategies for eliminating them. This unit also requires communication and teamwork skills to ensure mistake proofing strategies are implemented and self-management and learning skills to continually reflect on and integrate feedback about the effectiveness of strategies.

Licensing/Regulatory Information

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Analyse process	1.1	Identify sources of variability/non-conformance in the process
		1.2	Identify critical control points in process
		1.3	Analyse causes of variability/non-conformance
2	Develop preventative techniques/systems	2.1	Liaise with team members and other people to develop mistake proof options for performing operation
		2.2	Test and validate mistake proofing options
3	Implement permanent fix	3.1	Liaise with relevant people to have systems/procedures changed to implement solution
		3.2	Liaise with relevant people to implement the solution
		3.3	Liaise with relevant people to ensure self and others in the team or work area have an appropriate skills set
		3.4	Follow through to ensure implementation occurs
4	Monitor implementation	4.1	Critically observe the implementation
		4.2	Compare the results of the implementation against the expected outcomes

- 4.3 Modify solution to improve outcomes
 - 4.4 Ensure procedures reflect change
 - 4.5 Ensure training/assessment reflects change
 - 4.6 Audit change at agreed period/cycle
 - 4.7 Take action on any observed deviation
-
- 5 Seek improvements
 - 5.1 Observe changes
 - 5.2 Analyse process again, if required, to ensure improvements are sustained

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating with team or work group members, technical support personnel and other relevant staff
- explaining mistake proofing and related concepts
- facilitating input of others and encouraging acceptance of changes
- analysing and visualising operations in terms of flow and contribution to customer outcomes
- solving problems to determine root cause of errors and possible solutions
- analysing and interpreting information about errors and mistake proofing options in terms of cost, feasibility, regulations and value to the customer
- suggesting design changes to operations and products that eliminate the potential for errors
- suggesting mechanisms or procedures that warn of errors where operations cannot be designed to eliminate errors,

Required knowledge

Required knowledge includes:

- mistake proofing concepts, including, in priority order:
 - eliminate the possibility of the error via changes to the process
 - prevent the error from occurring via physical or virtual barriers
 - reduce likelihood of the error by encouraging correct action
 - mitigate the impact of the error if it does occur
- understanding of processes undertaken by team
- factors in the processes which may cause variability
- methods of controlling the variability in the process
- mistake proofing methods relevant to the process/product

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • analyse variability and non-conformances • identify, analyse and evaluate information from a variety of sources to identify errors and options for mistake proofing • facilitate implementation of mistake proofing activities that reduce waste • facilitate sustaining the mistake proofing activities.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and</p>

	disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree
--	---

	<p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Mistake proofing	<p>Mistake proofing is based on the concept of zero defects. The first priority is to eliminate the possibility of an error occurring. However, where this is not feasible mistake proofing can be used to reduce the occurrence of errors and/or to minimise their impact.</p> <p>Mistake proofing should target an error in the following priority order:</p> <ul style="list-style-type: none"> • eliminate the possibility of the error via changes to the process • prevent the error from occurring via physical or virtual barriers, • reduce likelihood of the error by encouraging correct action (e.g. through warning systems) • mitigate the impact of the error if it does occur <p>Mistake proofing is also called error proofing or baka-yoke or poka-yoke</p>
Options for mistake proofing	<p>Factors to consider when prioritising options for mistake proofing will vary according to the process and may include:</p> <ul style="list-style-type: none"> • success rate in eliminating errors • feasibility • skills required by employees • cost • capacity to reduce waste
Procedures	<p>Procedures may include:</p> <ul style="list-style-type: none"> • all work instructions • standard operating procedures • formulas/recipes • batch sheet • temporary instructions and similar instructions provided for the operation of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care)

	<ul style="list-style-type: none">• government regulations Procedures may be: <ul style="list-style-type: none">• written, verbal, computer-based or in some other format

MSS404050A Undertake process capability improvements

Modification History

New unit, superseding MSACMT450A Undertake process capability improvements* - Equivalent

* New prerequisite *MSS404052A Apply statistics to operational processes* superseding MSACMT452A Apply statistics to processes in manufacturing

Unit Descriptor

This unit of competency covers the skills and knowledge required to make process capability improvements, including analysing data from the process, developing improvements to eliminate variation due to assignable causes, and then implementing actions.

Application of the Unit

This unit applies to a person who reviews a range of process capability data and information, makes/arranges for changes to be made to procedures, equipment or process and then recalculates the process capability and monitors resulting improvement actions. The person will typically be a technical expert, team leader or be in a role where they have sufficient technical understanding of processes in their own work and that of others to be able to suggest and justify process capability improvements.

Process capability may have been determined using either a six sigma or three sigma processes. This unit applies to the application of statistical methods and the determination of capability based on those methods. Other related units may be *MSS404052A Apply statistics to operational processes* and *MSS404053A Use six sigma techniques*

This unit primarily requires the application of skills associated with communication, information gathering and analysis. Initiative, enterprise and problem solving are also required to identify opportunities to improve process capacity. This unit also requires aspects of self-management and learning to validate own analysis.

For a qualitative approach to improvement (one not using statistics) see *MSS403051A Mistake proof an operational process*.

Licensing/Regulatory Information

MSS404052A Apply statistics to operational processes

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Obtain required data	1.1	Identify process for study
		1.2	Obtain/organise process to obtain required data/information
2	Analyse information	2.1	Analyse data and determine assignable causes
		2.2	Develop possible improvements to eliminate assignable causes
		2.3	Incorporate own experience and learning into proposed process improvement proposals
		2.4	Develop process improvement proposals
3	Improve process capability	3.1	Obtain required authorities to implement improvements
		3.2	Liaise with relevant people to implement improvements
		3.3	Obtain/organise required data for improved process
		3.4	Recalculate process capability

- 3.5 Implement revised data collection/processing and new capability information
- 3.6 Monitor improvement actions and make adjustments, as necessary

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- performing relevant mathematical operations
- identifying and using relevant statistical methods
- communicating and explaining data-related changes and procedures to individuals and groups
- negotiating with other employees and managers on proposed improvement actions
- analysing procedures and data to establish variation
- solving problems to root cause where assignable cause of variation is not obvious
- working in a team
- using computer software relevant to required analyses and process

Required knowledge

Required knowledge includes:

- data collection methods
- data processing techniques required
- variability and normal distribution
- three sigma or six sigma processes, as relevant
- random and non-random results (recognition of assignable causes)
- causes of different types of non-random results
- causes of random variation
- process understanding sufficient to translate the data into variations in the process and determine methods of controlling them

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate	A person who demonstrates competency in this unit must be able to provide evidence of the ability to:
---	---

competency in this unit	<ul style="list-style-type: none"> • analyse process information • calculate process capability/trial limits • improve process capability (or organise for it to be improved) • analyse revised process information and recalculate process capability.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>

assessment	appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.
-------------------	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p>
--	--

	<ul style="list-style-type: none"> the stage of implementation of competitive systems and practices the size of the enterprise the work organisation, culture, regulatory environment and the industry sector
Process capability	<p>Process capability is:</p> <ul style="list-style-type: none"> the measurable ability of a process to reliably produce within calculated limits (the limits depend on the variation of the process)
Variation	<p>All processes have variation. The approach in this unit is to separate random variation (no assignable cause) from non-random variation (which has an assignable cause). By finding and eliminating assignable causes, total variation is reduced and process capability will be improved</p>
Six sigma	<p>Six sigma refers to:</p> <ul style="list-style-type: none"> a statistical tool for recording defects and determining capability. Six sigma limits equate to 3.4 defects per million opportunities for each product or service transaction. Six sigma is also used as a general term covering a competitive systems and practices approach. Six sigma training typically covers several units of competency in this Training Package
Three sigma	<p>Three sigma refers to:</p> <ul style="list-style-type: none"> a traditional statistical process control. Three sigma limits equate to 3 defects per thousand opportunities for each product or service transaction
Required data	<p>The calculation of three sigma or six sigma limits requires process data. The data required depends on the nature of the limits being calculated</p>
Assignable cause	<p>Any non-random variation is said to have an 'assignable cause'. The methods of data analysis common to statistical capability analysis as well as other methods of root cause analysis should be used to determine the cause of this non-random variation</p>
Improved process capability	<p>Improvements to process capability result from eliminating the causes of non-random variation. The improvements made may be:</p> <ul style="list-style-type: none"> as a result of continuous improvement with the process capability being recalculated periodically

	<ul style="list-style-type: none"> as a result of an improvement project with the process capability recalculated as part of that project
Procedures	<p>Procedures may include:</p> <ul style="list-style-type: none"> work instructions standard operating procedures formulas/recipes batch sheets temporary instructions and similar instructions provided for the smooth running of the plant good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) government regulations <p>Procedures may be:</p> <ul style="list-style-type: none"> written, verbal, computer-based or in some other format

MSS404052A Apply statistics to operational processes

Modification History

New unit, superseding MSACMT452A Apply statistics to processes in manufacturing - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to apply statistical theory and principles to the analysis and control of processes and operations.

Application of the Unit

This unit applies to a person working in an organisation applying statistical process control on processes or operations. The statistical process control will usually be used to monitor the processes or operations and determine when action needs to be taken. The appropriate action will then be taken in accordance with standard procedures.

The unit includes applying knowledge of frequency distribution and variation to the data/chart to distinguish between random and non-random variation and assumes understanding of the process and/or equipment to help interpret those results.

This unit primarily requires the application of skills associated with gathering and analysing data and communicating statistical information to others. This unit also has a strong emphasis on problem solving, initiative and enterprise, planning and organising, and self-management to solve problems and manage processes.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Collect process data	1.1	Interpret sampling scheme
		1.2	Obtain measurements in accordance with standard procedures
		1.3	Handle data, as required
2	Interpret data	2.1	Plot data on appropriate control chart
		2.2	Distinguish between random and non-random patterns of results
		2.3	Identify results outside the control limits
		2.4	Recognise situations requiring action
		2.5	Take appropriate action in accordance with standard procedures
		2.6	Determine cost of non-conformance
3	Calculate control limits	3.1	Consult relevant stakeholders to determine appropriate limits
		3.2	Use relevant methods to calculate/revise control limits
		3.3	Plot limits on control chart

3.4 Explain impact of limit to relevant stakeholders

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- applying a range of sampling procedures
- analysing samples and data for variation, relevance, reliability and representativeness
- problem solving the causes of variation in a process
- communicating with other employees to obtain samples/data and to explain results and limits
- plotting or documenting results
- undertaking calculations, including:
 - basic arithmetic functions
 - mean, range, mean of means, standard deviation (using appropriate calculation aids)
- using statistics to support process and operations control

Required knowledge

Required knowledge includes:

- sampling techniques
- purpose of sampling and measurement
- random, systematic and stratified sampling
- purpose of replication of data for statistical control
- samples, populations, finite and infinite populations and the differences
- methods of calculating means, standard deviations and the like and their purpose in statistical control
- the meaning of broad/narrow frequency distributions/range/standard deviations and skewed distributions in process terms
- concept of limits, including:
 - 1 sigma warning limits
 - 2 sigma warning limits
 - 3 sigma control limits
 - 6 sigma limits
- types of control charts and their applications to different types of process/product and for different purposes
- process causes of variation and typical cause types of non-random variation
- non-process (e.g. measurement) causes of variation
- recognition of stable and unstable processes

- causes of stability/instability in the process
- calculation of control limits/process capability and the applications of different control limits
- the standard distribution curve and confidence limits

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • follow sampling procedures • apply basic statistical processes • analyse data to identify variations and non-conformances • plot or document results.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)

	<ul style="list-style-type: none"> targeted questioning reports from supervisors, peers and colleagues (third-party reports) portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> lean operations agile operations preventative and predictive maintenance approaches monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems statistical process control systems, including six sigma and three sigma Just in Time (JIT), kanban and other pull-related operations control systems supply, value, and demand chain monitoring and analysis 5S
--	---

	<ul style="list-style-type: none"> • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Sampling scheme	<p>Sampling scheme may include:</p> <ul style="list-style-type: none"> • sampling for attributes or sampling for variables • batch, continuous or custom made products • number of items/samples • size of sample • timing of sampling • location of sampling points • type of sample • number/type of measurements to be done on each sample • sampling equipment • measurement/testing equipment/methods
Procedures	<p>Procedures may include:</p> <ul style="list-style-type: none"> • work instructions • standard operating procedures • formulas/ recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) • government regulations

	<p>Procedures may be:</p> <ul style="list-style-type: none"> written, verbal, computer-based or in some other format
Handle data	<p>Handle data may include:</p> <ul style="list-style-type: none"> calculating means, ranges, mean of means and standard deviations (using appropriate calculation aids) entering data into a software package recording data either in writing or electronically other required manipulations of the data
Control chart	<p>Control charts may include:</p> <ul style="list-style-type: none"> run tally mean/range attributes other relevant charts
Random	<p>Random variation is the term used in statistical control to refer to those variations for which no cause can be found</p>
Non-random	<p>Non-random (also called identifiable cause, assignable cause or special cause) are those variations for which a cause can be found and so the cause of the variation eliminated. Non-random variation may also be used to predict possible breaches of the control limits</p>
Control limits	<p>Control limits (also referred to as process capability) are those limits within which the process will operate if it is 'under control'</p>
Cost of non-conformance	<p>Cost of non-conformance includes:</p> <ul style="list-style-type: none"> reprocessing/rework expediting unplanned service excess inventory complaint handline downtime returns scrap labour costs material costs infrastructure costs/overhead utility costs

Appropriate limits	Appropriate limits may include: <ul style="list-style-type: none">• 1 sigma warning limits• 2 sigma warning limits• 3 sigma control limits• 6 sigma limits

MSS404060A Facilitate the use of planning software systems in a work area or team

Modification History

New unit, superseding MSACMT460A Facilitate the use of planning software systems in manufacturing* - Not equivalent

* Prerequisite *MSACMT260A Use planning software systems in manufacturing* - removed

Unit Descriptor

This unit of competency covers the skills and knowledge required to facilitate the use of planning software in an organisation in a person's work area or team. These systems are known by various generic names, such as Enterprise Resource Planning (ERP), Materials Resource Planning (MRPII, MRP III etc.) or by proprietary names.

Application of the Unit

This unit applies to a person who will access the planning software system for their own work, but will also need to provide support and organise skill development programs for their team or work group members. The person will typically be a technical expert, team leader or be in a role where they have sufficient technical understanding of processes in their own work and that of others to be able to facilitate the use of the planning software system.

The planning software system will be used routinely in the work of the team or work group. This unit primarily requires the application of skills associated with using communication technology and supporting team use of planning software. Problem solving, initiative and enterprise, and planning and organisational skills are required to ensure that planning software is used efficiently. This requires aspects of learning and self-management to ensure own performance and that of the team.

Licensing/Regulatory Information

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Identify scope of planning software	1.1	Identify categories of information held by planning software
		1.2	Identify information categories relevant to team and area processes
		1.3	Identify range of information able to be provided to planning software by team or work group
		1.4	Identify range of information able to be provided to team or work group by planning software
2	Communicate using the planning software system	2.1	Send and receive information using planning software
		2.2	Send and receive messages using planning software
3	Make decisions using planning software	3.1	Interrogate the planning software system to find required current, historical or predicted information
		3.2	Take actions appropriate to the information in accordance with procedures
4	Monitor the use of planning software	4.1	Routinely monitor planning software information
		4.2	Review performance and use of planning software with team

- 5 Support others to use planning software
 - 5.1 Regularly communicate with team or other work group members, both using planning software and face to face
 - 5.2 Identify improvements required
 - 5.3 Take appropriate actions to implement improvements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- entering and receiving information via planning software terminals
- communicating with team and organisation planning software support personnel
- engaging and motivating team in use of planning software
- identifying team or work group area information requirements
- identifying scope of information relevant to team and area available in planning software by categories
- planning and organising improvements in team's use of planning software

Required knowledge

Required knowledge includes:

- hierarchy of planning software system and operation
- information available from/through the planning software system
- query facilities and information analysis capabilities offered by planning software
- support/training/skill development mechanisms available for access by team members

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • identify team or work group area information requirements and relate to planning software categories • lead and motivate others in using planning software • ensure information sent to planning software is accurate and appropriate • obtain regular and one-off information from planning
--	--

	<p>software</p> <ul style="list-style-type: none"> • make decisions using planning software generated information.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<p>Guidance information for assessment</p>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Competitive systems and practices</p>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, ERP systems, MRP and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
---	--

<p>Planning software</p>	<p>Planning software is a general term applied to a number of software systems which integrate a range of business information, such as:</p> <ul style="list-style-type: none"> • sales/order taking • finance/accounting • logistics • maintenance • human resources • production <p>It is frequently referred to by names such as ERP or MRP/MRP II. In some cases it can be integrated with engineering applications, such as SCADA systems. In such cases the unit MSS402061A Use SCADA systems in operations may also be required</p>
<p>Information and messages</p>	<p>Information and messages able to be sent and received via the planning software will vary between programs and organisations. This unit assumes that a range of discretion is available to the team leader over the information and messages that can be sent or received. Examples of information and message categories include:</p> <ul style="list-style-type: none"> • orders • production/operations processes • scheduling (e.g. daily/weekly) • finance and accounting • human resources (e.g. rosters, reserves, training completed and scheduled) • quality requirements • customers • suppliers
<p>Value stream</p>	<p>The value stream begins with the customer and includes all actions (both value-adding and non-value added) by both internal sections/departments and external organisations to meet a customer requirement.</p> <p>Depending on the operations and the customer requirement stages where value stream actions may occur include:</p> <ul style="list-style-type: none"> • sales outlet/representative • information gathering, data analysis and research • product design • raw material sourcing • intermediate processing

	<ul style="list-style-type: none">• final assembler/collation/preparation• support services (e.g. accounting, finance and legal)• storage and delivery to customer• after market support

MSS404061A Facilitate the use of SCADA systems in a team or work area

Modification History

New unit, superseding MSACMT461A Facilitate SCADA systems in a manufacturing team or work area* - Not equivalent

* Prerequisite *MSACMT261A Use SCADA systems in manufacturing* - removed

Unit Descriptor

This unit of competency covers the skills and knowledge required by a team leader or technical expert to personally use and facilitate the use of System Control and Data Acquisition (SCADA), or other similar systems, and support the team in their use of SCADA.

Application of the Unit

This unit applies to team leaders and others who are providing guidance and support to assist employees to use SCADA. The person will access the SCADA system for their own work, but will also need to provide support and organise skill development programs for their team members.

This competency is also relevant to maintenance personnel using a SCADA system to coordinate maintenance activities.

This unit primarily requires the application of skills associated with using communication technology and supporting team use of SCADA systems. Problem solving, initiative and enterprise, and planning and organisational skills are required to ensure that system is used efficiently. This requires aspects of learning and self-management to ensure own performance and that of the team.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Identify scope of SCADA system	1.1	Identify categories of information held in and control options of SCADA system relevant to team or area
		1.2	Identify range of information able to be provided to SCADA system by team
		1.3	Identify range of information able to be provided to team by SCADA system
		1.4	Identify team or area functions impacted by SCADA system
2	Communicate using SCADA system	2.1	Send and receive information using SCADA
		2.2	Send and receive messages using SCADA
3	Make decisions using SCADA	3.1	Interrogate the SCADA system to find required current, historical or predicted information
		3.2	Take actions appropriate to the information
4	Monitor the use of SCADA	4.1	Routinely monitor SCADA information
		4.2	Identify poor uses of SCADA system within team and system inadequacies

- 4.3 Identify system improvements required
 - 4.4 Take appropriate action to improve SCADA system and its use

- 5 Support team use of SCADA
 - 5.1 Regularly communicate with team, both using SCADA-based communication and face to face
 - 5.2 Identify skill improvement needs
 - 5.3 Identify team members who require additional support
 - 5.4 Take appropriate action to provide support

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- entering and receiving information via SCADA terminals
- communicating with team and organisation SCADA support personnel
- engaging and motivating team in use of SCADA system
- identifying team or work area information requirements
- identifying scope of team or area processes controlled by SCADA system
- planning and organising improvements in team's use of SCADA

Required knowledge

Required knowledge includes:

- hierarchy of SCADA system and operation
- information available from and controls exercised by/through the SCADA system
- query, control and other facilities and information offered by SCADA
- support/training/skill development mechanisms available for access by team member

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

MSS404081A Undertake proactive maintenance analyses

Modification History

New unit, superseding MSACMT481A Undertake proactive maintenance analyses - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to undertake the most common forms of analyses associated with predictive/preventative/reliability centred maintenance strategies.

Application of the Unit

This unit applies to a technical expert (usually an engineer, technician or tradesperson) who is required to undertake analyses for the purpose of predictive/preventative/reliability centred maintenance as part of a competitive systems and practices strategy.

This unit primarily requires the application of skills associated with communication, teamwork, problem solving, initiative and enterprise, and planning and organising in order to undertake maintenance analyses. This is normally done in the context of using computer technology, and requires aspects of learning and self-management to ensure team involvement and facilitation of learning.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Liaise with operator	1.1	Establish a relationship with the operator of equipment/plant
		1.2	Ensure the operator has the required skills and resources to keep the equipment/plant clean
		1.3	Ensure the operator is able to effectively monitor the operation of the equipment/plant
		1.4	Regularly communicate with operator about the overall equipment effectiveness (OEE) of their equipment/plant
		1.5	Involve operator, team leader and other key personnel in identification of skill needs and means of skill acquisition to fill any identified gaps
2	Analyse history	2.1	Analyse mean time between failures (MTBF) from maintenance records
		2.2	Analyse performance data of the equipment/plant
		2.3	Identify causes of changes to historic trends/status
		2.4	Determine methods of ensuring causes of improvements and resolution of deterioration are locked in

- 3 Undertake failure mode effects analysis (FMEA) or similar failure effects analysis
 - 3.1 Undertake analysis
 - 3.2 Record results of analysis
 - 3.3 Investigate methods of eliminating possibility of failure and/or minimising the impact of the failure
 - 3.4 Liaise with operator, team leader and other key personnel regarding possible solutions
 - 3.5 Select most appropriate solution
 - 3.6 Implement selected solutions

- 4 Undertake condition monitoring analysis
 - 4.1 Obtain data for condition monitoring analysis
 - 4.2 Interpret condition monitoring data
 - 4.3 Predict required maintenance type and timing from condition monitoring data
 - 4.4 Liaise with operator, team leader and other key personnel regarding implications of condition monitoring report
 - 4.5 Involve team members in development of changes to maintenance strategy to ensure awareness, learning and commitment

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating with operators and team leaders in a variety of situations and with different media
- adapting personal communication strategy to different levels of operator and team leader literacy and numeracy
- working in formal and ad-hoc teams to undertake proactive maintenance related analyses
- analyse data to determine trends, variations, equipment history and to prioritise methods of eliminating or minimising equipment failure
- solving problems to root cause
- applying basic arithmetic and statistical methods
- planning for effective data collection
- reading and interpreting engineering specifications/drawings
- reading and interpreting charts and diagrams
- using information system terminals and computer
- recording data in hard or soft formats

Required knowledge

Required knowledge includes:

- cleaning needs, techniques and principles of equipment in area of responsibility
- methods of assessing operator and maintenance skill gaps and filling them
- techniques for determining MTBF or similar
- techniques for undertaking FMEA or similar
- underpinning principles of competitive systems and practices strategies being implemented and how to adapt them to maintenance
- root cause analysis
- techniques to analyse condition monitoring data

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • identify and analyse data and other information on the historical performance of equipment • involve operators, maintenance and other stakeholders in decisions on proactive maintenance strategies • identify root cause of failure and deterioration in equipment performance • select and implement failure elimination or minimisation solutions.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess</p>

	<p>underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • OEE • takt time • process mapping
--	---

	<ul style="list-style-type: none"> • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
OEE	<p>OEE is the combination of the main factors causing loss of productive capacity from equipment/plant and is:</p> $OEE = \text{availability} \times \text{performance} \times \text{quality rate}$ <p>where:</p> <ul style="list-style-type: none"> • availability takes into account losses due to breakdown, set up and adjustments • performance takes into account losses due to minor stoppages, reduced speed and idling • quality rate takes into account losses due to rejects, reworks and start-up waste
MTBF	<p>MTBF is one key measure of the effectiveness of a maintenance procedure, and is an indicator as to whether root causes are being found and resolved. If MTBF is reducing, then it is an indicator that the maintenance regime is failing.</p> <p>There are many possible causes of any problem. Eliminating some will have no impact, others will ameliorate the problem. However, elimination of the root cause will eliminate the problem. There should only be one root cause for any problem and so the analysis should continue until this one cause is found. Elimination of the root cause permanently eliminates the problem.</p> <p>Depending on the equipment, operations and procedures of the organisation, alternative statistical records of maintenance and maintenance related events may be substituted for MTBF providing they relate strategies for improving OEE.</p>
FMEA	<p>FMEA is a systematic approach that identifies potential failure modes in a system, product, or operations/assembly operation caused by either design or operations/assembly process deficiencies. It also</p>

	<p>identifies critical or significant design or process characteristics that require special controls to prevent or detect failure modes. FMEA is a tool used to prevent problems from occurring.</p> <p>Some industry sectors have highly adapted forms of FMEA and may practice traditional FMEA in say their routine maintenance while using another technique, such as Hazard and Operability Studies (HAZOP) for design and modification.</p> <p>HAZOP is a form of FMEA which has been practiced by the process industries for over 30 years and examines the implications of changes in process conditions to process stability.</p>
<p>Condition monitoring</p>	<p>In this unit condition monitoring is used to describe the process of analysing the implications of condition monitoring data for proactive maintenance, whether it be obtained from non-destructive testing (NDT) reports, visual assessment by experts, diagnostic reports obtained from SCADA or other enterprise or equipment software and product or process quality analyses. It does not require the actual undertaking of the NDT or condition monitoring assessment or test. If this is required appropriate units from other Training Packages will be required.</p>

New unit, superseding MSACMT482A Assist in implementing a proactive maintenance strategy - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required by a maintenance person to assist in the implementation of a proactive maintenance strategy in an organisation. This unit includes the interaction between a maintenance worker and operators, as appropriate.

Application of the Unit

This unit applies to a maintenance person in an organisation that has adopted or is implementing total preventative/productive maintenance (TPM), reliability centred maintenance (RCM) or similar strategies. As part of this, the maintenance person is expected to assist in the implementation by determining appropriate maintenance related schedules and also by providing maintenance related assistance to non-maintenance personnel, such as assisting production personnel to fulfil their role in the TPM/RCM strategy.

This unit requires the application of skills associated with problem solving and initiative and enterprise in order to analyse maintenance requirements. Communication, teamwork and planning and organising skills will be required to implement reliability strategies. This requires aspects of self-management to ensure improvement of own performance and learning.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Develop components of reliability strategy for a work/plant area	1.1	Determine manufacturer's recommended inspection, servicing and related schedules for relevant plant
		1.2	Consult with relevant people with regard to appropriate inspections, services and schedules
		1.3	Discuss any conflicts with relevant people and seek resolution of conflicts
		1.4	Develop schedules in liaison with relevant people
		1.5	Identify inspections and servicing which may be done by operations personnel in liaison with relevant stakeholders
2	Assess current practice for maintenance implications	2.1	Identify the overall equipment effectiveness (OEE) or other organisation targets for equipment/plant
		2.2	Evaluate procedures for plant/equipment reliability implications
		2.3	Discuss current practices with relevant people to determine any plant/equipment reliability implications
		2.4	Recommend changes to improve plant/equipment reliability in accordance with procedures

- 3 Assist in implementing the reliability strategy
 - 3.1 Arrange for schedules to be incorporated in relevant work plans
 - 3.2 Identify training needs in discussion with relevant personnel
 - 3.3 Assist personnel to develop required skills for inspections/servicing within scope of authority
 - 3.4 Collect data/information as required by own work plan
 - 3.5 Compare data/information with performance indicators
 - 3.6 Recommend improvements to reliability strategy in accordance with procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- explaining concepts and processes of chosen proactive maintenance strategy used by the organisation and distinguishing from traditional (breakdown) maintenance strategies
- communicating with operators, other maintenance personnel, team leaders and technical experts in a variety of situations and using different media
- adapting personal communication strategy to different levels of operator and team leader literacy and numeracy
- working in formal and ad-hoc teams to implement proactive maintenance
- solving problems to root cause
- planning proactive maintenance tasks to fit in with maintenance and production schedules and the needs of other staff
- assessing the ability of operations personnel with regard to inspections and servicing of equipment
- reading and interpreting charts and diagrams, manufacturer manuals and specifications and operating procedures

Required knowledge

Required knowledge includes:

- requirements of the proactive maintenance strategy being implemented
- operating principles and procedures for equipment/plant subject to proactive maintenance strategy
- purpose and processes for data collection in proactive maintenance strategies
- procedures relevant to own job and organisation implementation of proactive maintenance
- methods of making/recommending improvements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and	A person who demonstrates competency in this unit must
--	--

<p>evidence required to demonstrate competency in this unit</p>	<p>be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • source information from manuals and other technical documentation or software • effectively communicate with users on equipment operational and maintenance history • develop schedules for maintenance activities including seeking technical assistance, where appropriate • differentiate between proactive and traditional maintenance strategies.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to</p>

	accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • OEE • takt time • process mapping • problem solving • run charts • standard procedures
--	---

	<ul style="list-style-type: none"> • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise, the work organisation, culture • regulatory environment and the industry sector
TPM	TPM is an application of total quality management to maintenance with the intention of increasing reliability, getting it right first time and increasing OEE
RCM	RCM moves maintenance from reactive, or even planned/programmed, towards a focus on uptime and OEE
Similar strategies	<p>Similar strategies may include:</p> <ul style="list-style-type: none"> • mean time between failure (MTBF) which is one key measure of the effectiveness of a maintenance procedure, and is an indicator as to whether root causes are being found and resolved. If MTBF is reducing, then it is an indicator that the maintenance regime is failing • failure mode and effects analysis (FMEA) which is a systematic approach that identifies potential failure modes in a system, product, or equipment based operations caused by either design or operation/process deficiencies. It also identifies critical or significant design or process characteristics that require special controls to prevent or detect failure modes. FMEA is a tool used to prevent problems from occurring • industry sectors have highly adapted forms of FMEA and which may practice traditional FMEA in say their routine maintenance while using another technique, such as Hazard and Operability Studies (HAZOP) for design and modification. HAZOP is a form of FMEA which has been practiced by the process industries for over 30 years and examines the implications of changes in process conditions to process stability • condition monitoring which often involves quite sophisticated monitoring of equipment, including such things as vibration monitoring, instrumental analysis of lubricating oil, and so on, to determine the current state of the equipment, monitor the change in

	<p>this condition and predict when it needs servicing/maintenance to maintain reliability.</p>
OEE	<p>OEE is the combination of the main factors causing loss of productive capacity from equipment/plant and is:</p> $OEE = \text{availability} \times \text{performance} \times \text{quality rate}$ <p>where:</p> <ul style="list-style-type: none"> • availability takes into account losses due to breakdown, set-up and adjustments • performance takes into account losses due to minor stoppages, reduced speed and idling • quality rate takes into account the losses due to rejects, reworks and start-up waste
Uptime	<p>Uptime refers to the overall availability of the plant (it is the inverse of downtime) or the unavailability of the plant. Ideal uptime is 100%</p>
Inspection	<p>Inspection may include:</p> <ul style="list-style-type: none"> • reading dials, gauges and meters • observations, including those using sight, hearing, smell and feel • observations of product quality/faults/rejects
Servicing	<p>Servicing may include:</p> <ul style="list-style-type: none"> • cleaning • lubricating • topping up • adjusting
Procedures	<p>Procedures may include:</p> <ul style="list-style-type: none"> • work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) • government regulations <p>Procedures may be:</p> <ul style="list-style-type: none"> • written, verbal, computer based or in some other format

MSS405001A Develop competitive systems and practices for an organisation

Modification History

New unit, superseding MSACMS600A Develop a competitive manufacturing system - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to develop new strategies for competitive systems and practices or make improvements to existing systems and practices.

Application of the Unit

This unit applies to a manager, technical specialist or similar in an organisation implementing competitive systems and practices, or in an organisation wishing to embark on the competitive systems and practices path. The person needs to be able to analyse the needs of the organisation and develop strategies and systems for effective implementation and continuous improvement of competitive systems and practices in the organisation.

This unit primarily requires the application of skills associated with communication in gathering, analysing and applying information and consulting with stakeholders. Problem solving, initiative and enterprise, and planning and organising are required to determine effective competitive systems and practices strategies for the organisation. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into competitive systems and practices strategies.

Licensing/Regulatory Information

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Determine appropriate analytical techniques	1.1	Liaise with key stakeholders to determine objectives of operations strategy
		1.2	Examine current operations to determine major areas requiring improvement
		1.3	Compare possible strategies, techniques and tools against organisation needs
		1.4	Select possible strategies, techniques and tools
		1.5	Consult with key stakeholders to confirm selected strategies, techniques and tools
2	Develop competitive systems and practices strategies	2.1	Estimate benefit/cost ratio for major stakeholders and the value stream overall
		2.2	Determine preferred operations strategy
		2.3	Examine and adapt strategy to organisation needs and priorities
		2.4	Examine and adapt competitive systems and practices techniques and tools required to implement strategy
		2.5	Negotiate with key stakeholders to develop an implementation plan
		2.6	Determine key information and performance indicators

- required
- 3 Implement strategy
 - 3.1 Determine data collection required
 - 3.2 Identify and evaluate methods of collecting and processing required data
 - 3.3 Determine hardware and other resources required
 - 3.4 Evaluate skill needs required
 - 3.5 Ensure all resources/training are available and completed
 - 3.6 Implement strategy

 - 4 Monitor implementation of strategy
 - 4.1 Compare information/performance indicators with desired levels
 - 4.2 Liaise with key stakeholders regarding strategy issues
 - 4.3 Identify areas requiring adjustment
 - 4.4 Make required adjustments

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in a wide variety of contexts
- analysing current state/situation of the organisation and value stream, including appropriateness of strategy, operations and internal and external relationships, including value stream members
- determining appropriate key performance indicators (KPIs) and overseeing data collection
- selecting appropriate competitive systems and practices tools and techniques, such as:
 - value stream mapping
 - 5S
 - Just in Time (JIT)
 - mistake proofing
 - process mapping
 - establishing customer pull
 - kaizen and kaizen blitz
 - setting of KPIs/metrics
 - identification and elimination of waste
- communicating at all levels in the organisation and value stream and to audiences of different levels of literacy and numeracy
- prioritising situations and actions based on:
 - customer benefit
 - cost/benefit analysis
- reviewing and modifying strategies and KPIs, as required

Required knowledge

Required knowledge includes:

- competitive systems and practices principles and tools, including:
 - value stream mapping
 - 5S
 - JIT
 - mistake proofing

- process mapping
- establishing customer pull
- kaizen and kaizen blitz
- setting of key performance indicators/metrics
- identification and elimination of waste
- methods of estimating costs/benefits
- acceptable benefit/cost ratios
- continuous improvement principles
- principles of motivation and leadership
- characteristics and strengths of different types of strategies, techniques and tools, such as 5S, JIT, six sigma, lean operations and agile operations
- business goals sufficient to match the strategy to the business needs
- strategic thinking
- principles of process equipment and how to improve its reliability
- resources required and how to obtain them

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> • determine appropriate analytical techniques • develop strategies that deliver the greatest overall benefit • implement the strategies • monitor the implementation of the strategy.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard

	<p>control/management</p> <ul style="list-style-type: none"> • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations

MSS405002A Analyse and map a value stream

Modification History

New unit, superseding MSACMS601A Analyse and map a value chain* - Not equivalent

* Prerequisite *MSACMT631A Undertake value analysis of product costs in terms of customer requirements* - removed

Unit Descriptor

This unit of competency covers the skills and knowledge required to analyse and map a value stream, including the clear identification of the place of an organisation in the value stream and its contribution to the value stream. The unit includes the identification of an organisation in a value stream, their relationships and the activities undertaken by value stream organisations. The identification skills include identification at the virtual or information level, the technical or process level, and at the physical or logistic level.

The unit includes the analysis of value-adding and non-value adding activities and the information needs for successful value stream mapping, including information technology (IT) needs.

This unit covers the analysis of the supply chain, the demand chain as well as the overall value stream.

Application of the Unit

This unit applies to a person in a senior role in an organisation, such as an operations manager, purchasing manager, senior technical officer performing planning or scheduling or similar who needs to analyse and map a value stream, a supply chain, or a demand chain in order to understand the interactions between all members and determine the value added/potential value added by each member. The value stream is represented visually according to organisation format requirements.

This information is the basis for the design of Just in Time (JIT) and for the determination of waste. Value stream analysis is not a one-off activity but rather an ongoing activity of re-analysis as the value stream changes and its members progress towards excellence in competitive systems and practices.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Map the value stream	1.1	Select a product/product group for analysis
		1.2	Identify ultimate customer
		1.3	Identify ultimate supplier
		1.4	Identify all organisations between ultimate supplier and ultimate customer
		1.5	Identify all steps in own organisation
		1.6	Map value stream
2	Define customer need	2.1	Determine the features/benefits obtained by customers from product
		2.2	Determine methods of measuring the contribution to each features/benefits
		2.3	Identify possible data sources for required measures
		2.4	Implement measurement of contribution to features/benefits
3	Assess the value added at each step	3.1	Identify value contributed by each external organisation
		3.2	Determine value added by each internal step

- 3.3 Determine method of measuring value added
- 4 Reduce waste
 - 4.1 Compare value added to customer benefit/feature
 - 4.2 Identify activities on value stream map which do not add to customer benefit/features
 - 4.3 Liaise with external value stream members to determine methods to reduce overall waste
 - 4.4 Take required actions to reduce waste

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying for an individual organisation its place in the value stream, including immediate upstream and downstream organisations
- determining flow of materials and information along the value stream, including:
 - output quantities and qualities
 - variability in quality and quantity
 - uptime
 - other key performance indicators (KPIs) indicators appropriate to the organisation and customer requirements
- classifying steps and processes into value adding and non-value adding, including determining appropriate methods for measuring value added
- mapping value stream showing flow of information and materials in either hard copy or using software
- communicating at all levels in the organisation and value stream and to audiences of different levels of literacy and numeracy

Required knowledge

Required knowledge includes:

- purpose of value stream analysis
- methods of value stream analysis and mapping
- concept of waste and value in terms of customer benefit
- types of waste and methods of reducing it
- processes, and operations used in own organisation to make products or deliver services to internal and external customers
- processes employed by other members of the value stream sufficient to have meaningful dialogue with them

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> • review activities of organisations to determine: <ul style="list-style-type: none"> • their place in value stream • value added by each organisation • non-value added steps within each organisation • determine methods of measuring value added • prepare a map of a value stream that includes all value creating and non value adding steps.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p>

	Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving
--	--

	<ul style="list-style-type: none"> • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Value stream	<p>The value stream begins with the customer and includes all actions (both value-adding and non-value added) by both internal sections/departments and external organisations to meet a customer requirement.</p> <p>Depending on the operations and the customer requirement stages where value stream actions may occur include:</p> <ul style="list-style-type: none"> • sales outlet/representative • information gathering, data analysis and research • product design • raw material sourcing • intermediate processing • final assembler/collation/preparation • support services (e.g. accounting, finance and legal) • storage and delivery to customer • after market support
Value-added	<p>Value-added is measured against its contribution to the customer benefits/features and may be in the form of:</p> <ul style="list-style-type: none"> • technical benefits/features • location benefits/features • aesthetic benefits/features • information benefits/features
Map value stream	<p>The map of the value stream can be completed using:</p> <ul style="list-style-type: none"> • hard copy (e.g. paper or whiteboard) • appropriate software tools <p>The map should show all participants and stages of materials and information flow and the value creating and non-value adding steps and processes</p>
JIT	<p>JIT refers to:</p> <ul style="list-style-type: none"> • a production scheduling concept that calls for any

	item needed at a production operation (whether raw material, finished item, or anything in between) to be produced and available precisely when needed, neither a moment earlier nor a moment later
Waste	<p>Waste (also known as muda in the Toyota Production System and its derivatives) is any activity which does not contribute to customer benefit/features in the product. Within operations, categories of waste include:</p> <ul style="list-style-type: none"> • excess production and early production • delays • movement and transport • poor process design • inventory • inefficient performance of a process • making defective items • activities which do not yield any benefit to the organisation or any benefit to the organisations customers

MSS405003A Manage a value stream

Modification History

New unit, superseding MSACMS602A Manage a value chain* - Not equivalent

* Prerequisites MSACMS601A Analyse and map a value chain and MSACMT631A Undertake value analysis of product costs in terms of customer requirements - removed

Unit Descriptor

This unit of competency covers the skills and knowledge required to manage a value stream, a supply chain or a demand chain, including close liaison with suppliers and customers.

This unit covers the managing of the supply chain, the demand chain as well as the overall value stream and may be applied to the managing of the chain internally/externally within an organisation.

Application of the Unit

This unit applies to a person in a senior role in an organisation, such as a manager, technical specialist or similar, who needs to manage the value/supply/demand chain on an ongoing basis to achieve the best overall contribution of value added to their product in terms of customer benefit/features. The unit can be applied to value streams of large or small organisations and to internal and external value streams or a combination value stream.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Evaluate the value stream	1.1	Identify all members in the value stream for products in area of responsibility
		1.2	Identify value added by each member of the chain
		1.3	Identify non-value adding steps in the value stream
		1.4	Identify acute and chronic issues which impact on the value stream
		1.5	Develop priority list of items for improvement
2	Liaise regularly with chain members	2.1	Establish and maintain regular liaison with all chain members
		2.2	Identify current and forecast issues with each member
		2.3	Work with members to help them address their issues
		2.4	Build trust and confidence in the relationship
		2.5	Develop with each chain member a priority list of items for improvement
		2.6	Negotiate with all chain members to ensure improvements benefit chain members and improve the benefits/features perceived by the ultimate customer

- 3 Monitor the value added at each step
 - 3.1 Identify changes in value added by each chain member
 - 3.2 Identify areas where changes to value added are required
 - 3.3 Develop a priority list of required value-added changes
 - 3.4 Work with chain member to bring about improvements to value added

- 4 Continue to reduce waste
 - 4.1 Identify waste in value stream
 - 4.2 Work with chain members to continually reduce waste

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- reading and interpreting a value stream map
- identifying, monitoring and managing flow of materials, information and services in the value stream, including:
 - output quantities and qualities
 - variability
 - uptime
 - other key performance indicators (KPIs) indicators appropriate to the value stream organisations and customer benefit/requirements
- communicating and negotiating at all levels in the organisation and value stream and with individuals of different levels of literacy and numeracy
- identifying steps and processes as value adding and non-value adding
- using appropriate methods for measure value added at steps in the value stream

Required knowledge

Required knowledge includes:

- purpose of value stream analysis
- methods of value stream analysis and mapping
- concept of waste and value in terms of customer benefit
- types of waste and methods of reducing it
- processes, and operations used in own organisation to make products or deliver services to internal and external customers
- processes employed by other members of the value stream sufficient to have meaningful dialogue with them

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> • review activities of organisations to determine: • their place in value stream • value added by each organisation • non-value added steps within each organisation • determine priorities for improvement in own organisation • negotiate with value stream members on improvements • monitor improvements to determine value added.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p>

	Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving
--	--

	<ul style="list-style-type: none"> • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Value stream	<p>The value stream begins with the customer and includes all actions (both value-adding and non-value added) by both internal sections/departments and external organisations to meet a customer requirement.</p> <p>Depending on the operations and the customer requirement stages where value stream actions may occur include:</p> <ul style="list-style-type: none"> • sales outlet/representative • information gathering, data analysis and research • product design • raw material sourcing • intermediate processing • final assembler/collation/preparation • support services (e.g. accounting, finance and legal) • storage and delivery to customer • after market support
Value added	<p>Value added is measured against its contribution to the customer benefits/features and may be in the form of:</p> <ul style="list-style-type: none"> • technical benefits/features • location benefits/features • aesthetic benefits/features • information benefits/features
Value stream map	<p>The map of the value stream may include:</p> <ul style="list-style-type: none"> • hard copy (e.g. paper or whiteboard) • using appropriate software <p>The map should show all participants and stages of materials and information flow and the value creating and non-value adding steps and processes</p>
Waste	<p>Waste (also known as muda in the Toyota Production System and its derivatives) is any activity which does not</p>

	<p>contribute to customer benefit/features in the product. Within operations, categories of waste include:</p> <ul style="list-style-type: none">• excess production and early production• delays• movement and transport• poor process design• inventory• inefficient performance of a process• making defective items• activities which do not yield any benefit to the organisation or any benefit to the organisation's customers

MSS405004A Develop business plans in an organisation implementing competitive systems and practices

Modification History

New unit, superseding MSACMS603A Develop manufacturing related business plans -
Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to develop business plans in an organisation implementing competitive systems and practices.

Application of the Unit

This unit applies to a person in an organisation implementing competitive systems and practices (e.g. a production/plant manager, purchasing/technical officer or similar) who is required to develop a section business plan to meet the requirements of the overall strategic plan of the organisation. The plan includes the impact on the value stream and other critical competitive systems and practices factors. Due to competitive pressures this may be a reasonably frequent activity and can occur at any time over the business cycle. The plan may be in response to a specific change, or it may be a plan for the next period.

This unit assumes that up-to-date information about the organisation's role in the value stream is available. For detailed mapping and analysis of the value stream refer to MSS405002A Analyse and map a value stream.

This unit primarily requires the application of skills associated with gathering, analysing and applying information and consulting with stakeholders. Problem solving, initiative and enterprise, and planning and organising are required to develop an effective and measurable business plan. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into competitive systems and practices strategies.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Determine purpose of plan	1.1	Confirm reason for developing plan and expected outcomes from plan
		1.2	Confirm purpose of plan with all relevant stakeholders
		1.3	Check expected outcomes from plan with overall strategic plan for organisation
		1.4	Identify any potential areas for conflict between proposed plan and strategic directions
		1.5	Negotiate with relevant stakeholders to resolve issues
2	Develop objectives and strategies	2.1	Draft objectives for business plan
		2.2	Draft strategies to achieve these objectives
		2.3	Determine implications for value stream
		2.4	Determine capital or workplace layout/organisation implications for objectives and strategies
3	Develop plans to meet objectives and strategies	3.1	Negotiate with relevant stakeholders over implications for objectives and strategies
		3.2	In liaison with relevant stakeholders, develop plans to meet objectives

- 3.3 Determine relevant key performance indicators (KPIs) for plan
 - 3.4 Check KPIs are appropriate for purpose of plan
 - 3.5 Check plan will deliver planned purpose
 - 3.6 Map plan to changed value stream
 - 3.7 Adjust plan to optimise value stream
 - 3.8 Validate plan with relevant stakeholders
- 4 Monitor the implementation of the plan
- 4.1 Release plan for implementation
 - 4.2 Check the key progress points against the key stages of the plan
 - 4.3 Note any discrepancies
 - 4.4 Take appropriate action to ensure correct implementation of plan

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating at all levels in the organisation and value stream and to audiences of different levels of literacy and numeracy
- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in a wide variety of contexts
- analysing organisation overall strategic plan for implications relevant to competitive systems and practices implementation
- determining appropriate KPIs and methods of data collection
- determining best means of gathering data, including data from monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems
- identifying value stream members and performance
- determining implications of business plan for value stream
- analysing data, including competitive systems and practices indicators and verifying results with stakeholders
- determining key parameters for business plan, including:
 - scope
 - period
 - objectives in terms of customer benefit
 - relationship to overall organisation objectives
 - targets
 - KPIs
 - implementation strategy
 - risk management
 - monitoring and adjustment strategy
 - approval process

Required knowledge

Required knowledge includes:

- organisation strategic directions
- business planning methods and types of plans

- contingency planning and other risk mitigating planning tools
- the organisation's value stream
- analysis of value stream
- competitive systems and practices
- application of quality principles
- human resources and industrial relations
- occupational health and safety (OHS)

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> • develop a business plan that conforms to organisation overall strategic directions • determine implications of business plan for competitive systems and practices practice in organisation • determine KPIs appropriate for business plan • monitor the implementation of a business plan and make adjustments as necessary.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p>

	<p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<p>Guidance information for assessment</p>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Competitive systems and practices</p>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as SCADA software, ERP systems, MRP and proprietary systems • statistical process control systems, including six sigma and three sigma
---	--

	<ul style="list-style-type: none"> • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Plan	<p>Plan may include:</p> <ul style="list-style-type: none"> • any sort of business plan and may emphasise any of the areas for sub-plans over the others
Objectives	<p>Objectives may include performance in terms of:</p> <ul style="list-style-type: none"> • sales • profit • quality • OHS • environment • competitive systems and practices • human, physical, financial and environmental/resource use
Objectives and strategies	<p>Objectives and strategies may include:</p> <ul style="list-style-type: none"> • human and industrial relations practice • material/component and resources use • sustainable environmental practices • sales and marketing • financial

	<ul style="list-style-type: none"> • regulatory compliance
Relevant stakeholders	<p>Relevant stakeholders may include:</p> <ul style="list-style-type: none"> • other team members • other workers • management • technical specialists • other members of the value stream
Value stream	<p>The value stream begins with the customer and includes all actions (both value adding and non value added) by both internal sections/departments and external organisations to meet a customer requirement.</p> <p>Depending on the operations and the customer requirement stages where value stream actions may occur include:</p> <ul style="list-style-type: none"> • sales outlet/representative • information gathering, data analysis and research • product design • raw material sourcing • intermediate processing • final assembler/ collation/preparation • support services (e.g. accounting, finance and legal) • storage and delivery to customer • after market support

MSS405005A Manage competitive systems and practices responding to individual and unique customer orders

Modification History

New unit, superseding MSACMS604A Manage competitive manufacturing processes in a jobbing shop environment* - Not equivalent

* Prerequisites *MSACMS601A Analyse and map a value chain, MSACMT280A Undertake root cause analysis, MSACMT631A Undertake value analysis of product costs in terms of customer requirements* - removed

Unit Descriptor

This unit of competency covers the skills and knowledge required to prepare for and manage the introduction of competitive systems and practices processes in an organisation that does not undertake repetitive processes or mass produce products and instead responds to individual and unique customer orders.

Application of the Unit

This unit applies to the introduction of competitive systems and practices processes in an environment where the organisation or part of the organisation specialises in one-off or small batch product or operations driven by individual and unique customer orders (e.g. overhaul of equipment, jobbing manufacture, supply of customised/bespoke services or product).

This unit describes the skills needed to restructure the process and work organisation to allow the application of competitive systems and practices tools and techniques.

This unit requires the application of skills associated with problem solving, initiative, enterprise, planning and organising in order to manage competitive systems and practices processes in a jobbing shop environment. This unit also requires communication and teamwork skills to gather information about processes and implement redesign plans.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | |
|---|---------------------------------|--|
| 1 | Analyse the existing operations | 1.1 Identify organisation capability for products and processes |
| | | 1.2 Identify the major processing steps in meeting customer order or orders |
| | | 1.3 Consult with employees, managers and other major stakeholders on major expected benefits from a move to a competitive systems and practices strategy |
| | | 1.4 Identify lead times, throughput times and waiting times throughout process of meeting a customer order |
| | | 1.5 Identify variations within the process |
| | | 1.6 Identify causes of the variations |
| 2 | Draft a virtual flow process | 2.1 Consider similarities in materials, processes and services for orders |
| | | 2.2 Map flow of information, material, processes and people for each product family/cluster of similar customised products/services |
| | | 2.3 Draw a current state value stream map for the process as a virtual flow process |
| | | 2.4 Analyse the current value stream map for waste |

- 2.5 Draft possible future state value stream map
- 2.6 Calculate benefits flowing from future state map
- 2.7 Consult with stakeholders to validate benefits

- 3 Prepare proposals for process redesign
 - 3.1 Identify options for the delivery of competitive systems and practices and other changes required to move to future state value stream map
 - 3.2 Plan as to how these changes might be implemented
 - 3.3 Cost the proposed changes and determine benefit/cost ratios
 - 3.4 Prepare recommendations for change
 - 3.5 Negotiate/consult with relevant stakeholders to establish the preferred option

- 4 Implement the plan
 - 4.1 Arrange for altered process, as required
 - 4.2 Arrange for altered infrastructure needs, as required
 - 4.3 Monitor the implementation of the plan, making adjustments as required
 - 4.4 Review the new value stream and check that expected benefits have been obtained
 - 4.5 Put in place a continuous improvement mechanism for the new value stream

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying and draw current state maps for jobs/processes
- analysing current targets for jobs (e.g. quality, time and cost) and identifying variations from targets
- analysing current processes used in the organisation, including appropriateness of strategy, operations, and internal and external relationships, including value stream members
- identifying waste
- proposing changes and determine cost/benefit of each change
- selecting and adapting appropriate competitive systems and practices tools and techniques for a jobbing environment, such as:
 - value stream mapping
 - 5S
 - Just in Time (JIT)
 - mistake proofing
 - process mapping
 - kaizen and kaizen blitz
 - setting of key performance indicators(KPIs)/metrics
 - identification and elimination of waste
- communicating at all levels in the organisation and value stream and to audiences of different levels of literacy and numeracy
- developing future state maps

Required knowledge

Required knowledge includes:

- competitive systems and practices principles and tools, including:
 - value stream mapping
 - 5S
 - JIT
 - mistake proofing
 - process mapping
 - kaizen and kaizen blitz

- setting of KPIs/metrics
- identification and elimination of waste
- establishing customer pull
- standardisation
- processes used in jobbing manufacture and other non-repetitive operations businesses
- capabilities of equipment
- methods of estimating costs/benefits
- acceptable benefit/cost ratios
- continuous improvement principles
- abilities and skills of personnel in organisation

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> • analyse existing operations and draft virtual flow process • determine improvements that deliver the greatest overall benefit • plan the implementation of competitive systems and practices strategy, techniques and tools • produce a current state value stream map • draft possible future state value stream map • monitor a continuous improvement strategy.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers

	<ul style="list-style-type: none"> case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> demonstration in the workplace workplace projects suitable simulation case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) targeted questioning reports from supervisors, peers and colleagues (third-party reports) portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>

MSS405007A Introduce competitive systems and practices to a small or medium enterprise

Modification History

New unit, superseding MSACMS606A Introduce competitive manufacturing to a small or medium enterprise - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to introduce competitive systems and practices into a small or medium operations enterprise (SME)

Application of the Unit

This unit applies to the introduction of competitive systems and practices into a SME. The unit may also apply to any small or medium not-for-profit organisation seeking to improve their processes through competitive systems and practices. The unit covers any constraints that may be placed on how competitive systems and practices are introduced and which aspects of competitive systems and practices are introduced due to the limitations of being a SME.

This unit requires the application of skills associated with problem solving, initiative, enterprise, planning and organising in order to determine competitive systems and practices processes appropriate for a small business environment. This unit also requires communication and analysis skills to gather information about processes and implement competitive systems and practices strategies.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Analyse the current operations systems and processes	1.1	Review the reasons for introducing competitive systems and practices and confirm the expected benefits with relevant stakeholders
		1.2	Determine any internal limiting factors which will constrain the introduction of competitive systems and practices
		1.3	Determine any external limiting factors which will constrain the introduction of competitive systems and practices
		1.4	Quantify expected returns from achieving the benefits of introducing competitive systems and practices
2	Develop strategic and tactical plans to introduce competitive systems and practices to the SME	2.1	Develop a strategic plan for the SME that takes into account the nature of its business and relationships with suppliers and customers
		2.2	Where required, seek authority for the implementation of the strategic plan
		2.3	Identify components of competitive strategy which will yield quick returns
		2.4	Identify actions which will free up required resources to allow for the introduction of competitive systems and practices

- 2.5 Develop achievable tactical plans which are compatible with strategy
 - 2.6 Develop key performance indicators (KPIs) for strategic and tactical plans
 - 2.7 Consult with relevant stakeholders to confirm tactical plans
 - 2.8 Prioritise plans for order of implementation
- 3 Implement competitive systems and practices
- 3.1 Implement priority tactical plan
 - 3.2 Determine benefits from change
 - 3.3 Use benefits from priority plan to assist in the implementation of further tactical plans
 - 3.4 Review progress towards strategic objectives and adjust plans, as appropriate, in consultation with relevant stakeholders

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- analysing current processes used in the SME, including appropriateness of strategy, operations, and internal and external relationships, including value stream members
- distinguishing between and prepare strategic and tactical plans
- selecting and adapting appropriate competitive systems and practices and techniques for an SME environment, such as:
 - value stream mapping
 - 5S
 - Just in Time
 - mistake proofing
 - process mapping
 - kaizen and kaizen blitz
 - setting of KPIs/metrics
 - identification and elimination of waste
- developing KPIs appropriate for an SME
- communicating to individuals with different levels of literacy and numeracy
- monitoring implementation and establishing continuous improvement

Required knowledge

Required knowledge includes:

- competitive systems and practices principles and tools, including:
 - value stream mapping
 - 5S
 - JIT
 - mistake proofing
 - process mapping
 - kaizen and kaizen blitz
 - setting of KPIs/metrics
 - identification and elimination of waste
 - establishing customer pull
 - standardisation

- quick changeovers
- continuous improvement principles
- principles for deciding acceptable benefit/cost ratios in a SME

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	Evidence of the ability to organise implementation of competitive systems and practices in a SME should be available.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> • analyse existing SME operations • determine competitive systems and practices key performance indicators for a SME organisation • determine improvements that deliver the greatest overall benefit • develop and supervise the implementation of competitive systems and practices strategy, techniques and tools in a SME.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a</p>

	<p>combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<p>Guidance information for assessment</p>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Competitive systems and practices</p>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six
---	--

	<p>sigma and three sigma</p> <ul style="list-style-type: none"> • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector

MSS405010A Manage relationships with non-customer external organisations

Modification History

New unit, superseding MSACMS606A Manage relationships with non-customer external organisations - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to identify and manage relationships with non-customer external organisations, such as community groups, other businesses, training providers, research organisations and government departments.

Application of the Unit

This unit applies to a person who has policy responsibility in an organisation for managing external relationships that may impact on the performance, community standing or regulatory compliance of the organisation. Examples of the application of this unit include department leaders, managers or similar. The unit covers managing a range of external organisations to the maximum benefit of the organisation and the organisation's customers while also identifying areas of mutual interest and benefit with the external organisations. Relationships may or may not be initiated by the person's own organisation.

This unit does not cover the analysis and improvement of relationships between members of a value stream, such as suppliers and customers.

This unit primarily requires the application of skills associated with communication in gathering, analysing and applying information and consulting with stakeholders. Problem solving, initiative and enterprise, and planning and organising are also required. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into relationship systems and expectations.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--|-----|--|
| 1 | Identify mutual interest | 1.1 | Clarify the reason contact was/is to be made for each relevant external organisation |
| | | 1.2 | Gather information on extent of past contact and any positive or negative outcomes for own and external organisation |
| | | 1.3 | Identify expectations of initiating organisation |
| | | 1.4 | Analyse the breadth, depth and complexity of external organisations' expectations |
| | | 1.5 | Discuss expectations, ability to meet those expectations, and areas of mutual interest with relevant internal and external representatives |
| 2 | Determine contribution of relationship | 2.1 | Identify any value contributions from relationship |
| | | 2.2 | Identify waste arising from relationship |
| | | 2.3 | Classify waste as necessary or unnecessary |
| | | 2.4 | Set key performance indicators (KPIs) for future relationship |
| 3 | Manage the relationship | 3.1 | Measure current performance of relationship against expectations and KPIs |
| | | 3.2 | Develop systems to enhance mutual benefit and value contributions from relationship |
| | | 3.3 | Develop systems to minimise and control necessary |

waste without causing harm

- 3.4 Eliminate unnecessary waste, where possible, without causing harm
- 3.5 Monitor KPIs and determine future strategy for the relationship
- 3.6 Continue to manage terminate the relationship in a manner which enhances the organisation

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- using formal problem solving procedures, such as root cause analysis (RCA)
- analysing contributions to value from external relationships
- identifying waste (muda)
- developing formal and informal communication procedures with other individuals and organisations
- establishing sources of assistance in own organisation for external individuals and organisations
- interpreting documents, procedures and instructions for others
- establishing KPIs for relationships

Required knowledge

Required knowledge includes:

- strategic requirements of own organisation
- strategic benefits to the organisation from liaisons with external organisations
- possible external organisations which may offer benefits
- benefits which can be offered to the external organisations
- customer benefits/features from products and processes of own organisation
- waste (muda) elimination
- formal problem solving procedures (e.g. RCA)

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • analyse the value and waste in relationships • implement changes to relationships to improve

MSS405011A Manage people relationships

Modification History

New unit, superseding MSACMC611A Manage people relationships - Not equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to manage the human relationship aspects of implementing and operating competitive systems and practices.

Application of the Unit

This unit applies to a person (who may be a manager, technical specialist or other person) who is required to work with employees and relevant people, encourage them to accept change and also to increase the quality, quantity and reliability of output consistent with customer requirements.

This unit primarily requires strong communication, teamwork and problem solving skills to achieve effective relationships that support a competitive systems and practices environment. Initiative, enterprise, planning and organising are also required to ensure relationships are monitored and issues are resolved proactively. The unit also includes aspects of self-management and learning to ensure improvement of own performance and communication skills.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Confirm organisation competitive systems and practices status	1.1	Establish number and status of competitive systems and practices techniques being used within the organisation
		1.2	Identify key performance indicators (KPIs) for each technique
		1.3	Identify key sections and value stream members responsible for each KPI
		1.4	Identify key personnel for communications
2	Develop an open environment	2.1	Establish and maintain regular dialogue between all levels and all relevant sections of the organisation
		2.2	Encourage a flow of communications in both directions
		2.3	Develop and maintain a formal mechanism for the flow of issues, concerns and suggestions in both directions
		2.4	Develop and maintain regular and frequent communication with all key stakeholders
3	Identify significant issues	3.1	In liaison with relevant team members/stakeholders, identify current and potential issues
		3.2	Assist team members/stakeholders to formulate issues

- 3.3 Identify and define boundary and non-negotiable issues for all team members/stakeholders
 - 3.4 Negotiate with relevant team members/stakeholders over actual and potential issues
- 4 Proactively resolve issues
 - 4.1 Liaise with team members/stakeholders to develop agreed, and where possible, win-win solutions
 - 4.2 Negotiate acceptable solutions, as required, in accordance with company practices/procedures
 - 4.3 Obtain any required official authorisations
 - 4.4 Consult with relevant stakeholders to develop implementation plan
 - 4.5 Implement solution
- 5 Monitor ongoing situation
 - 5.1 Determine relevant KPIs for plan
 - 5.2 Check that implementation is proceeding to plan
 - 5.3 Check for unforeseen consequences
 - 5.4 Take appropriate action to resolve any arising issues

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- analysing the competitive operational techniques being implemented in the organisation and the stage of implementation, including identifying people, related needs and issues
- using formal problem solving procedures, such as root cause analysis (RCA)
- analysing work procedures
- developing formal and informal communication procedures with others in work area, team leaders and other employees relevant to competitive systems and practices changes
- establishing sources of assistance in the organisation for people experiencing difficulty with competitive systems and practices changes
- interpreting procedures and instructions relevant to own expertise for others
- establishing KPIs for own work

Required knowledge

Required knowledge includes:

- features and benefits of common competitive operational practices, including:
 - Just in Time (JIT) and kanban systems
 - preventative maintenance
 - 5S housekeeping
 - continuous improvement processes (kaizen)
 - waste (muda) elimination
 - formal problem solving procedures (e.g. RCA)
 - standardised work
- health, safety and environment (HSE) principles and requirements for organisation
- change implementation contacts and procedures for the organisation
- employee assistance mechanisms in the organisation
- current processes and principles of operation sufficient to enable communication with others on the impact of competitive operational changes
- sources of data on the process/plant and possible applications to information distribution
- methods of determining own skill needs and developing skills, if required

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify the processes used and scope of products/ services supplied by the organisation and the deliverables expected by customers
- relate processes and products/services to the competitive systems and practices implementation process and the stage of implementation
- communicate and gain support for changes made as a result of the implementation of the competitive systems and practices implementation
- develop formal and informal channels of communication, including feedback mechanisms
- proactively resolve issues and problems raised by people with the competitive systems and practices implementation process.

Context of and specific resources for assessment

Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.

Access may be required to:

- workplace procedures and plans relevant to work area
- specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee
- documentation and information in relation to production, waste, overheads and hazard control/management
- reports from supervisors/managers
- case studies and scenarios to assess responses to contingencies.

Method of assessment

A holistic approach should be taken to the assessment.

Competence in this unit may be assessed by using a combination of the following to generate evidence:

- demonstration in the workplace
- workplace projects
- suitable simulation

	<ul style="list-style-type: none"> • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and
--	--

	<p>analysis</p> <ul style="list-style-type: none"> • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Key personnel	<p>Key personnel for communication include:</p> <ul style="list-style-type: none"> • formally identified managers, supervisors and workforce delegates as well as key opinion shapers (e.g. employees with specialist technical knowledge) on the issue being communicated
Formal mechanisms	<p>Formal mechanisms for communication will vary according to the organisation but may include:</p> <ul style="list-style-type: none"> • noticeboards • employee circulars • consultative committees • staff associations • union representatives • team leaders
Stakeholders	<p>Stakeholders may include:</p> <ul style="list-style-type: none"> • team members • personnel officers • industrial officers • union delegates • production management • human relations management • financial management

	<ul style="list-style-type: none">• engineering/technical personnel

MSS405012A Manage workplace learning

Modification History

New unit, superseding MSACMC612A Manage workplace learning - Not equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to manage the learning and skill development for employees within an organisation implementing competitive systems and practices.

Application of the Unit

This unit applies to a person responsible for management of the identification of skills needed by employees to undertake required work in implementing competitive systems and practices, including arranging for any required learning processes. The unit does not cover trainer and assessor skills.

This unit primarily requires the application of skills associated with communication, teamwork, problem solving, initiative and enterprise in order to assess and address skill needs in an individual and in the organisation. Planning and organising is required to ensure skill development meets the needs of the organisation and aspects of self-management and learning are required to ensure improvement of performance.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Determine current skill requirements for employees	1.1	Establish range and stage of implementation of competitive systems and practices techniques in the organisation
		1.2	Consult with relevant stakeholders on skill requirements for effective implementation of competitive systems and practices techniques used in the organisation
		1.3	Ensure records/database of skill mix currently required by employees are maintained in accordance with procedures
		1.4	Re-assess and monitor the skills required by employees as organisation requirements change
		1.5	Consult with relevant stakeholders to predict any new/different skill requirements arising from changes to products, processes, equipment or work organisation
2	Determine current skill mix of employees	2.1	Ensure current records/database of skill profile of individuals are maintained
		2.2	Consult with relevant stakeholders and monitor the application of these skills in the workplace to ensure they remain current and valid
		2.3	Review the actual skill mix of employees compared to the required skill mix

- | | | | |
|---|---|-----|--|
| 3 | Make arrangements for skill development | 3.1 | Consult with employees and identify any mismatch of skills possessed and used and skills required |
| | | 3.2 | Identify any new skills required due to anticipated changes |
| | | 3.3 | Consult with relevant stakeholders to determine the best way to refresh existing skills/develop new skills |
| | | 3.4 | Develop individual skill development program |
| | | 3.5 | Ensure skill development arrangements are implemented in accordance with procedures |
| | | | |
| 4 | Forecast possible future skill needs | 4.1 | Examine strategic directions of organisation |
| | | 4.2 | Discuss possible future directions with relevant stakeholders |
| | | 4.3 | Determine possible long-term future skill requirements in consultation with relevant stakeholders |
| | | 4.4 | Develop plan to ensure skills are developed in advance of when they are required |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- analysing the competitive operational techniques being implemented in the organisation and the stage of implementation, including establishing skill needs to support implementation
- using formal problem solving procedures, such as root cause analysis (RCA)
- analysing work procedures
- developing formal and informal communication procedures with others in work area, team leaders and other employees relevant to competitive systems and practices changes
- establishing sources of assistance in the organisation for people experiencing difficulty with competitive systems and practices changes
- interpreting procedures and instructions relevant to own expertise for others
- establishing key performance indicators (KPIs) for own work

Required knowledge

Required knowledge includes:

- features and benefits of common competitive operational practices, including:
 - Just in Time (JIT) and kanban systems
 - preventative maintenance
 - 5S housekeeping
 - continuous improvement processes (kaizen)
 - waste (muda) elimination
 - formal problem solving procedures (e.g. RCA)
 - standardised work
- skill analysis methods or how to access skill analysis from relevant experts
- skill development methods or how to access skill development programs from relevant experts
- electronic and other systems to record and maintain training and skills records
- formal qualifications and skill standards relevant to competitive systems and practices and the processes and products of the organisation
- current processes and principles of operation sufficient to enable communication with others on the impact of competitive operational changes
- sources of data on the processes and/or products of the organisation and implications for workplace learning

- methods of determining own skill needs and developing skills, if required

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • identify the processes used and scope of products/ services supplied by the organisation and the deliverables expected by customers • relate processes and products/services to the competitive systems and practices implementation process and the stage of implementation • establish skill needs from processes/products and competitive implementation process in the organisation • use formal and informal channels of communication, including feedback mechanisms to assist in identification of skill needs • manage delivery and recording of training to ensure required skills are gained by employees.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to past and current skill development for employees • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.

MSS405020A Develop quick changeover procedures

Modification History

New unit, superseding MSACMT620A Develop quick changeover procedures - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to develop/improve changeovers for equipment, processes or operations. It includes critically analysing existing changeovers, applying quick changeover principles, and developing improved changeover procedures.

Application of the Unit

This unit applies to managers, technical specialists or similar in an organisation that has adopted or is adopting a quick changeover approach to its changeovers. The changeovers may be to equipment, processes or operations. This unit applies to the structured development and/or improvement of the changeover procedures.

This unit requires the application of skills associated with communication, problem solving, initiative, enterprise, planning and organising in order to analyse and determine changeover procedures. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into the development of procedures.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Analyse changeover	1.1	Critically observe changeover process
		1.2	Identify steps in changeover
		1.3	Identify start situation and required finish situation for changeover
2	Apply quick changeover principles	2.1	Identify changes to the start situation and required finish situation which are possible
		2.2	Identify internal and external changeover activities
		2.3	Identify activities which could be improved/eliminated
		2.4	Eliminate/reduce adjustments required after changeover
		2.5	Develop improved changeover process and recommendations for implementation procedure
		2.6	Liaise with relevant people to validate recommendations
3	Assess and minimise risks in changeover	3.1	Analyse hazards and risks from all steps in changeover
		3.2	Apply ergonomic principles and hierarchy of control to each equipment and manual hazard
		3.3	Assess any regulatory risk in changeover

- 3.4 Minimise hazards during changeover ensuring final risk profile is acceptable
- 4 Implement improved changeover
 - 4.1 Acquire any required resources and approvals
 - 4.2 Organise trials of improved changeover
 - 4.3 Monitor trial
 - 4.4 Make adjustments to changeover process
 - 4.5 Implement improved changeover process

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- critically analysing an existing changeover, including a detailed examination of all actions and delays and the times taken
- determining key steps in changeover
- identifying regulatory implications and other risks changes to procedures
- differentiating between habitual practice and necessary activity
- identifying opportunities to maximise external set up work
- communicating with others to explain and supervise changed procedures

Required knowledge

Required knowledge includes:

- principles of quick changeover
- equipment and operating environment of activities subject to quick changeover
- regulatory and commercial obligations and risk environment for operations subject to quick changeover analysis
- safe movement and other relevant occupational health and safety (OHS) principles
- relevant procedures
- purposes/requirements of changeover
- sourcing of resources
- trialling procedures

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> • observe and analyse steps in an existing changeover • manage risks in adjusting changeover procedures
--	---

	<ul style="list-style-type: none"> • develop changeover adjustments that deliver the greatest overall benefit • supervise changeover procedure trials.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenario, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Competitive systems and practices</p>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory
---	---

	environment and the industry sector
Changeover	<p>Changeover may refer to:</p> <ul style="list-style-type: none"> • equipment exchanges, such as an exchange of dies/tools (traditional) • change between batches • change between campaigns (process manufacturing) • quantum equipment/process change to produce a different product
Quick changeover	<p>Quick changeovers may be known by a number of alternative titles depending on the industry sector. In manufacturing quick changeovers may be referred to as:</p> <ul style="list-style-type: none"> • single minute exchange of die (SMED) • single-digit set-up – performing a set-up activity in a single-digit number of minutes (i.e. fewer than ten) • one touch exchange of die (OTED) – literally, changing a die with one physical motion, such as pushing a button – broadly, an extremely simple procedure for performing a set-up activity <p>While the term die is the traditional term, organisations that require changeovers using other equipment are also covered by this unit.</p> <p>This unit may not be applicable to a totally continuous operation producing only the one product, or simultaneous range of products. This is not applicable to a maintenance/pressure vessel inspection (PVI) shutdown as experienced by the continuous process manufacturers. However, where there are continuous operations on a campaign basis, it may be applied to the development of changeover procedures between campaigns or similar changeovers</p>
Set-up work	<p>Set-up time is the work required to change over a machine or process from one item or operation to the next item or operation. It can be divided into two types:</p> <ul style="list-style-type: none"> • internal set-up work that can be done only when the machine or process is not actively engaged • external set-up work that can be done concurrently with the machine or process performing productive duties
Principles	<p>The principles of quick changeover include:</p> <ul style="list-style-type: none"> • the principles of efficient movement as well as an understanding of equipment features and aids, including jigs, fixtures, locating devices and

	mechanical aids which will reduce human effort and time required
Improved/eliminated	<p>Activities which should be improved/eliminated include:</p> <ul style="list-style-type: none"> • those which take time or are unreliable in terms of outcome • those which are difficult to do or have adverse OHS implications (e.g. repetitive strain injury, back injury and finger injuries)
Hazards and risks	<p>Hazards and risks include those related to:</p> <ul style="list-style-type: none"> • OHS • regulatory compliance • environment • commercial and contractual obligations <p>An acceptable risk profile for changeovers is one which, at the minimum, meets regulatory and organisation requirements and does not increase the current risk profile</p>
Procedures	<p>Procedures may include:</p> <ul style="list-style-type: none"> • work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of the plan • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) • government regulations <p>Procedures may be:</p> <ul style="list-style-type: none"> • written, verbal, computer-based or in some other format

MSS405021A Develop a Just in Time system

Modification History

New unit, superseding MSACMT621A Develop a Just in Time (JIT) system* - Not equivalent

* Prerequisite MSACMC410A Lead change in a manufacturing environment - removed

Unit Descriptor

Not applicable.

Application of the Unit

This unit applies to a person responsible for planning and implementing a JIT system. It includes consulting with employees, suppliers and customers regarding the change. This may require identification of training and other employee support as well as identifying possible logistical support.

The unit includes kanban-based JIT systems but also applies to other sectors and systems where a traditional kanban-type JIT may not be suitable through the unit's coverage of JIT principles.

This unit requires the application of skills associated with communication in gathering, analysing and applying information, consulting with stakeholders, problem solving, and demonstrating initiative and enterprise. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into the JIT design.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Design the JIT system/system improvements	1.1	Identify value chain members
		1.2	Consult with internal and external value chain members
		1.3	Identify current storage/inventory in value chain
		1.4	Determine flow authorisation indicators
		1.5	Determine minimum and maximum operations rate
		1.6	Determine lead time for product or service
		1.7	Determine number of units per kanban
		1.8	Draft workable procedures to implement JIT
2	Implement the JIT system/improvements	2.1	Consult with key internal stakeholders to develop solutions to JIT issues
		2.2	Ensure all stakeholders have required JIT-related skills and related issues have been resolved
		2.3	Liaise with key external members of the value chain to develop solutions to JIT issues
		2.4	Develop implementation plan for JIT
		2.5	Determine key measures of JIT

- 3 Monitor the JIT system
 - 3.1 Monitor key measures of JIT
 - 3.2 Regularly liaise with key stakeholders seeking areas for improvement
 - 3.3 Identify areas in need of improvement

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating at all levels in the organisation and value stream and to audiences of different levels of literacy and numeracy
- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in a wide variety of contexts
- analysing equipment, operations and value stream and determining best flow authorisation strategy, including:
 - form of kanban or flow authorisation indicator
 - integration with operations and other competitive systems and practices tools and techniques
 - key measures and monitoring strategy for JIT system
 - procedures to be adopted in the event of a non-conformance
- problem solving JIT issues and non-conformances to root cause

Required knowledge

Required knowledge includes:

- needs of internal and external value chain members
- principles of JIT, including:
 - demand pull
 - flow authorisation
 - kanban
 - capability rate
 - monitoring
 - non-conformance procedures
- reasons for delays/storages/inventories in the value stream and methods of reducing/eliminating them
- methods of identifying skill gaps and methods of filling skill gaps
- key business objectives associated with implementing JIT
- principles of the operational processes relevant to the JIT implementation
- production data generated by the process and its application to JIT

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> • develop a complete JIT system, including: <ul style="list-style-type: none"> • implementation strategy • key measures • training and support strategy for employees and value chain members • procedures in the event of a non-conformance • communicate and negotiate complex issues to a wide variety of individuals • supervise JIT implementation and suggest improvements.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning

	<ul style="list-style-type: none"> • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<p>Guidance information for assessment</p>	<p>This unit may be assessed concurrently with:</p> <ul style="list-style-type: none"> • MSS405002A Analyse and map a value stream, and/or • MSS405050A Determine and improve process capability. <p>This unit is related to:</p> <ul style="list-style-type: none"> • MSS402021A Apply Just in Time procedures • MSS403021A Facilitate a Just in Time system <p>which cover the lowest and intermediate skill levels in competitive systems and practices respectively.</p> <p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Competitive systems and practices</p>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA)
---	--

	<p>software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</p> <ul style="list-style-type: none"> • statistical process control systems, including six sigma and three sigma • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
JIT	<p>JIT is a production scheduling concept that calls for any item or service needed at a production operation, whether raw material, components, fuel, power, finished item, or anything else in between raw material and delivery to the final customer, to be produced and available precisely when needed, neither a moment earlier nor a moment later. JIT principles may also be applied to non-product based manufacturing operations (e.g. where services must be delivered on demand, such as transport)</p>
Kanban	<p>Kanban is a signal to authorise production or movement of an item to the next stage of production or operations. It is often a physical item for example a card, bin or sheet. When fully implemented, kanban operates according to the following rules:</p> <ul style="list-style-type: none"> • all production and movement of parts, material or other necessary items takes place only as required by

	<p>a downstream operation</p> <ul style="list-style-type: none"> the specific tool which authorises production or movement is called a kanban <p>Kanban is typically applied to batch type operations and the production is measured in units produced. In continuous operations organisations, production is measured in terms of production rate (e.g. kg/h, tonne/day) and rate is increased/decreased according to the flow authorisation which may be a kanban (e.g. ticket or order from a supplier) or may be a SCADA signal from a remote facility (e.g. customer tank) saying that resupply is required or similar.</p> <p>In service operations a physical kanban may not be used – see flow authorisation indicator</p>
SCADA	<p>SCADA refers to:</p> <ul style="list-style-type: none"> a number of systems which automatically collect critical process data, perform required mathematical manipulations on it and then make control decisions and/or give required information personnel for action
Value stream	<p>The value stream begins with the customer and includes all actions (both value-adding and non-value added) by both internal sections/departments and external organisations to meet a customer requirement.</p> <p>Depending on the operations and the customer requirement stages where value stream actions may occur include:</p> <ul style="list-style-type: none"> sales outlet/representative information gathering, data analysis and research product design raw material sourcing intermediate processing final assembler/ collation/preparation support services (e.g. accounting, finance and legal) storage and delivery to customer after market support
Flow authorisation indicator	<p>Flow authorisation indicator may include:</p> <ul style="list-style-type: none"> kanban bin, ticket or similar other indicator of demand pull
Pull system	<p>Pull system includes:</p> <ul style="list-style-type: none"> an operations planning system which makes to demand, rather than for stock or to a forecast

Cards/bins	<p>Cards/bins include:</p> <ul style="list-style-type: none"> • the indicators used for production authorisation and may be physical cards or bins or some other suitable indicator
Procedures	<p>Procedures may include:</p> <ul style="list-style-type: none"> • work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) • government regulations <p>Procedures may be:</p> <ul style="list-style-type: none"> • written, verbal, computer-based or in some other format
Key measures	<p>Key measures may include:</p> <ul style="list-style-type: none"> • inventory levels • lead time • in full, on time and in specification (IFOTIS) delivery • productivity/production rate • other measures of pull through the value chain • quality

MSS405022A Design a process layout

Modification History

New unit, superseding MSACMT622A Design a process layout - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to design a process layout, typically a cellular flow, for either a jobbing shop or a continuous process manufacturer.

Application of the Unit

This unit provides the skill for a technical expert to apply the principles of competitive systems and practices to process design layout as distinct from volume production layout. While the application of the unit may be for an initial layout, in many cases it is likely to be for the redesign of an existing layout.

The unit is written on the assumption that there is an existing process. Where this is not the case, then additional competency in equipment/process design and selection will also be required through units from an appropriate technical qualification or Training Package. This unit requires the application of skills associated with problem solving, initiative, enterprise, planning and organising in order to design a process for the manufacture of enterprise products that incorporates team operations, product flow, infrastructure and the layout of the physical environment and related technology. This unit has a strong emphasis gathering, analysing and applying information.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Identify the products and processes used in the organisation	1.1	Obtain or develop a process map of the existing process
		1.2	Identify all/main products/classes of products
		1.3	Obtain forecast sales and sales pattern of products/classes
		1.4	Obtain profiles of products/classes
		1.5	Group the products/classes into compatible families
2	Engineer the process	2.1	Make a preliminary selection of required equipment/technology/process for each process or product family
		2.2	Estimate required resource times for each family
		2.3	Calculate total resourcing required for each family
		2.4	Estimate appropriate lot size
		2.5	Determine viability of proposed families
		2.6	Examine draft proposal for possible improvements in process consistent with the competitive systems and practices strategy of the organisation

- 3 Design the infrastructure
 - 3.1 Consult on layout needs with all stakeholders
 - 3.2 Identify physical infrastructure required by system
 - 3.3 Identify information and control infrastructure required
 - 3.4 Identify work organisation required
 - 3.5 Identify occupational health and safety (OHS) and regulatory requirements to be taken into account
 - 3.6 Identify workforce development and training requirements
 - 3.7 Check the availability of required infrastructure and compatibility with requirements

- 4 Layout the process
 - 4.1 Draft proposed process flow map
 - 4.2 Draft proposed configuration diagram
 - 4.3 Draft proposed space plan/layout
 - 4.4 Check availability of services/structural suitability, as appropriate
 - 4.5 Validate proposed layout with all relevant stakeholders
 - 4.6 Layout the process/work cell
 - 4.7 Develop implementation plan in liaison with relevant stakeholders
 - 4.8 Review layout after implementation

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating at all levels in the organisation and to individuals of different levels of literacy and numeracy
- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in a wide variety of contexts
- producing process flow maps
- analysing the relationship between equipment, components, products, services and operators for existing and future layouts
- problem solving layout-related problems to root cause
- planning and organising implementation plans, including communication to stakeholders and any necessary training
- calculating and estimating size, volume and area and other layout related measures

Required knowledge

Required knowledge includes:

- typical customer requirements, including:
 - order size
 - order pattern
- processing requirements of products and jobs
- capabilities and maintenance requirements (e.g. access and services) of equipment
- abilities and skills of workforce
- OHS and regulatory requirements that may affect layout
- business requirements from layout

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

MSS405023A Develop a levelled pull system for operations and processes

Modification History

New unit, superseding MSACMT623A Develop a levelled pull system of manufacturing - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to develop and level a customer-driven demand pull system for operations and processes in order to balance the flow of work and minimise inventories.

Application of the Unit

This unit primarily applies to volume-based manufacturing organisations. However, the skills covered by the unit may also be applied in other organisations where the business is based on high volume processes initiated by customer demand signals (e.g. orders). The unit covers the production planning skills needed to develop and level a demand pull system which meets the business needs of the organisation. This may apply to the initial development of a pull system, or the continuous improvement of an existing system.

This unit primarily requires the application of skills associated with communication in gathering, analysing and applying information and consulting with stakeholders. Problem solving, initiative and enterprise, and planning and organising are required to determine effective operations sequences and flow systems. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into system designs.

Depending on the organisation and its operations the following units may also be relevant:

- *MSS402080A Undertake root cause analysis*
- *MSS405002A Analyse and map a value stream*
- *MSS405021A Develop a Just in Time system*
- *MSS405022A Design a process layout*
-

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Analyse production systems	1.1	Acquire an 'as is' value map of the process for all major products
		1.2	Separate repeated products from specials
		1.3	Consult with production, maintenance, supervisory and management workforce on current production system and processes
		1.4	Establish rate of flow required to meet customer demand
		1.5	Identify process steps causing problems
		1.6	Analyse inventories within process and determine causes of high inventories
		1.7	Determine costs of problems and inventories
		1.8	Develop improved flow sequence and future value map
2	Establish sequence	2.1	Identify equipment and processes which can be sequenced by co-location
		2.2	Identify equipment which is not suitable for co-location
		2.3	Identify pacemaker process
		2.4	Establish/review location of equipment for desired sequencing

- 3 Initiate or develop flow system
 - 3.1 Determine rate and variability of demand for product
 - 3.2 Compare capability of flow sequence to demand rate and variability
 - 3.3 Set flow rate to level demand at pacemaker and handle variability
 - 3.4 Identify trigger for pacemaker process
 - 3.5 Establish kanban system for other process parts

- 4 Balance the work
 - 4.1 Determine target time per product
 - 4.2 Standardise work processes and operations and establish procedures to monitor variation
 - 4.3 Adjust product/batch production to balance work
 - 4.4 Arrange for any required competency development of workforce
 - 4.5 Arrange for implementation of system
 - 4.6 Monitor operation of system and take appropriate action

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying and analysing production and other processes to identify variation from specifications
- solving problems to determine causes of variations to root cause
- communicating at all levels in the organisation and value stream and to audiences of different levels of literacy and numeracy
- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in a wide variety of contexts
- analysing long or critical process steps and determine if they are pacemaker step
- setting and standardising operational processes around the requirements of the pacemaker process
- planning and organising implementation of a levelled pull production system
- documenting process steps
- performing calculations and interpreting data, including charts and diagrams related to establishing rate of flow and variation in process steps

Required knowledge

Required knowledge includes:

- technical and regulatory limits that must be adhered to in operations
- processing requirements of products or services offered by the organisation
- capabilities of equipment
- capabilities and skills of the workforce
- production planning techniques
- methods of calculating rates of demand and flow of work (e.g. takt and pitch)
- techniques for achieving a smooth and consistent flow of work, such as:
 - identifying pacemaker process
 - levelling the flow of work
 - balancing the allocation of resources
 - balancing the allocation of work
 - Just in Time (JIT)
 - Heijunka boxes
 - visual displays

- relationship of level of inventory to efficiency and waste

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> • acquire a value stream map for current products and processes • analyse process • perform required calculations to determine flow rate and variability • correctly identify pacemaker process • balance the work • monitor implementation of a levelled pull system and suggest improvements.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation

	<ul style="list-style-type: none"> • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and
--	---

	<p>analysis</p> <ul style="list-style-type: none"> • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Product	<p>Product includes:</p> <ul style="list-style-type: none"> • individual products and product groups/families
Inventories	<p>Inventories within process may include:</p> <ul style="list-style-type: none"> • cycle stock which reflects the replenishment quantity and frequency • buffer stock to meet demand variability and forecast errors • safety stock required to guard against quality and delivery failures upstream
Pacemaker	<p>Pacemaker processes is that process which sets the pace for the flow of operations/work through the enterprise. Pacemaker processes may include, but are not limited to:</p> <ul style="list-style-type: none"> • process steps which are significantly longer than other production stages • critical technical or quality steps in the production process
Takt time	<p>Takt time is the time required to complete one job cycle if the customer's time and volume expectations are to be met, i.e. the available time divided by the number of units required, and so may include, but is not limited to:</p> <ul style="list-style-type: none"> • time per piece where applied to piece work

	<ul style="list-style-type: none"> • time per tonne or litre when applied to bulk product • time per work item when applied to an office or service environment • deadlines required to meet delivery dates when applied to project work
Pitch	Pitch is the takt time averaged over a defined period and with available resources giving the rate of flow required to meet customer demand
Balance work	<p>Balance work means balancing:</p> <ul style="list-style-type: none"> • time of production • effort required by workforce and equipment • work organisation • job design • quality considerations • waste and other cost considerations between stations/equipment/processes to achieve levelled pull within allowable time per product <p>Balance work consideration also means:</p> <ul style="list-style-type: none"> • undertaking adequate consultation with stakeholders • meeting occupational health and safety (OHS) and environmental requirements • any other regulatory and legislative requirements

MSS405030A Optimise cost of a product or service

Modification History

New unit, superseding MSACMT630A Optimise cost of product* - Not equivalent

* Prerequisite *MSACMT631A Undertake value analysis of product costs in terms of customer requirements* - removed

Unit Descriptor

This unit of competency covers the skills and knowledge required to examine the costs of a product or service and determine methods of reducing costs.

Application of the Unit

This unit applies to an individual who is required to undertake a detailed study of a product or service's costs, including analysing it by its cost components to determine the best method of lowering the cost overall. This unit differs from *MSS405031A Undertake value analysis of a product or process costs in terms of customer requirements*, in that it looks at all costs, including overheads and takes a wider and more traditional approach to the cost of the product. Information and cost reduction strategies gained from the application of this unit may support other cost approaches in the enterprise, including value stream costing.

This unit primarily requires the application of skills associated with communication in gathering, analysing and applying information. Problem solving, initiative and enterprise, and planning and organising are required to calculate cost components and determine cost optimisation strategies. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into costing methods.

Licensing/Regulatory Information

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Analyse total cost components of a product or service	1.1	Identify all cost components of product or service
		1.2	Allocate cost components to major categories, such as overhead, depreciation, energy, consumables and labour
		1.3	Distinguish between costs which directly deliver customer features/benefits and waste
2	Optimise costs	2.1	Analyse causes of costs which lead to customer features/benefit
		2.2	Determine methods of increasing the customer benefit/cost ratio
		2.3	Analyse causes of waste costs
		2.4	Determine methods of reducing/eliminating waste costs
		2.5	Analyse interactions between cost components
		2.6	Check that one method of reducing costs does not cause an increase in another cost/reduction in consumer benefit
		2.7	Check that cost reduction plans do not reduce required levels of regulatory compliance or occupational health and safety (OHS)

- 3 Implement cost optimisation
 - 3.1 Develop cost optimisation plans
 - 3.2 Negotiate with relevant people to agree on implementation plans
 - 3.3 Take actions to implement the cost optimisation
 - 3.4 Monitor the implementation of the cost optimisation
 - 3.5 Make adjustments to the plan, as required

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in a wide variety of contexts
- communicating at all levels in the organisation and value chain and to audiences of different levels of literacy and numeracy
- identifying relevant cost component categories for organisation, product and process
- identifying customers, including final customer and features/benefits as valued by customers
- expressing customer features/benefits in cost terms
- determining application scope of cost reduction plan, including product/s, areas, employees and suppliers included in plan

Required knowledge

Required knowledge includes:

- cost components of product
- major costs which are controllable (and how to control them)
- concept and types of waste (muda)
- interrelationship of cost components and costs and benefits, including:
 - methods of estimating costs/benefits
 - acceptable benefit/cost ratios

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> • determine relevant cost categories for a product or service • determine which costs are waste
--	---

	<ul style="list-style-type: none"> • develop a cost optimisation plan • implement and monitor the plan .
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads, hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace project(s) • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Competitive systems and practices</p>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
---	---

Waste	<p>Waste (also known as muda in the Toyota Production System and its derivatives) is any activity which does not contribute to customer benefit/features in the product. Within operations, categories of waste include:</p> <ul style="list-style-type: none"> • excess production and early production • delays • movement and transport • poor process design • inventory • inefficient performance of a process • making defective items • activities which do not yield any benefit to the organisation or any benefit to the organisations customers
Cost	<p>Cost includes:</p> <ul style="list-style-type: none"> • the monetary value of expenditures able to be directly identified for supplies, services, direct labour, materials, components, cost of inventory, faults and reworks, rejects/scrap, equipment and other items used in the production of the product • allocations and estimates for indirect costs (e.g. indirect labour, rent, energy, water and cost of capital) where a direct monetary value cannot be identified
Cost optimisation plans	<p>Cost optimisation plans should include:</p> <ul style="list-style-type: none"> • application scope (e.g. product/s, services, areas, employees and suppliers included in plan) • target costs and target cost reductions • implementation period • method of monitoring • method of communicating progress to stakeholders

MSS405031A Undertake value analysis of product or process costs in terms of customer requirements

Modification History

New unit, superseding MSACMT631A Undertake value analysis of product costs in terms of customer requirements* - Not equivalent

* Prerequisite *MSACMT230A Apply cost factors to work practices* - removed

Unit Descriptor

This unit of competency covers the skills and knowledge required by an employee who is required to analyse products and processes to determine the value-adding factors, including design and processing costs that most impact on meeting customer requirements and which may also include competitor benchmarking. The unit also includes implementing identified changes that increase cost-efficiency. The unit may be applied individually or in a team environment.

In this unit an employee uses an analysis of the benefits/features which a customer perceives to be in a product or service as a basis for determining appropriate or unnecessary cost and so identifying and reducing waste.

Application of the Unit

This unit applies to an individual who undertakes the value analysis of a product or service, establishing the features/benefits obtained by customers from the cost components relating to those benefits. From this appropriate or waste cost will be determined and actions taken to either reduce waste or improve saleability.

This unit differs from *MSS405030A Optimise cost of a product or service*, in that it requires costs to be measured against customer features/benefits and is designed to contribute to value stream costing. *MSS405030A Optimise cost of a product or service* complements this unit by allowing detailed analysis of all costs, including overheads.

This unit primarily requires the application of skills associated with communication in gathering, analysing and applying information. Problem solving, initiative and enterprise, and planning and organising are required to determine cost-efficiencies. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into costing methods.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---|-----|--|
| 1 | Analyse customer benefits to determine appropriate or waste costs | 1.1 | Analyse product or service to determine features/benefits perceived by customer in product |
| | | 1.2 | Analyse cost components of product or service and determine those which deliver customer features/benefits and those which are either appropriate or waste |
| | | 1.3 | Determine any additional features that may be added to improve saleability |
| | | 1.4 | Analyse waste cost components and allocate to direct and indirect cost categories |
| | | 1.5 | Determine options for reducing direct and indirect waste costs |
| | | 1.6 | Select cost-related actions which maximise customer benefits and minimise costs |
| | | 1.7 | Where required, undertake competitor benchmarking to provide reference points |

- 2 Analyse performance variance
 - 2.1 Identify waste processing or operational steps for product or service following completion of customer benefit analysis
 - 2.2 Analyse all costs and determine methods of reducing costs/waste
 - 2.3 Develop plan and recommendations for actions required to achieve cost improvement or added customer benefits to improve saleability
 - 2.4 Submit plan and recommendations to stakeholders

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in a wide variety of contexts
- communicating at all levels in the organisation and value chain and to audiences of different levels of literacy and numeracy
- determining customer features/benefits added to products at each operational step
- relating cost components to customer features/benefits
- distinguishing between direct and indirect costs
- identifying relevant cost component categories for product
- determining application scope of cost reduction plan, including products, areas, employees and suppliers included in plan
- undertaking competitor benchmarking for reference in cost analysis

Required knowledge

Required knowledge includes:

- customer features/benefits from products
- impact of customer features/benefits on sales, market share and firms profitability
- performance and cycle times for products made or service provided
- major costs which are controllable (and how to control them)
- types of waste (muda)
- methods of reducing waste
- methods of reducing cycle time
- desirability of improving performance and methods of reducing cycle time

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and	A person who demonstrates competency in this unit must
--	--

<p>evidence required to demonstrate competency in this unit</p>	<p>be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> • identify customer features/benefits for a product and their impact on market share or saleability of the product • determine direct/indirect costs in a product • determine which costs are waste • analyse cycle times and make suggestions for reduction in cycle time • develop a cost/waste reduction plan.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and</p>

	disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree
--	---

	<p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Waste	<p>Waste (also known as muda in the Toyota Production System and its derivatives) is any activity which does not contribute to customer benefit/features in the product.</p> <p>Within operations, categories of waste include:</p> <ul style="list-style-type: none"> • excess production and early production • delays • movement and transport • poor process design • inventory • inefficient performance of a process • making defective items • activities which do not yield any benefit to the organisation or any benefit to the organisations customers
Cost	<p>Cost includes:</p> <ul style="list-style-type: none"> • the monetary value of expenditures able to be directly identified for supplies, services, direct labour, components, cost of inventory, faults and reworks, rejects/scrap, equipment and other items used in the production of the product • allocations and estimates for indirect costs (e.g. indirect labour, rent, power and water) where a direct monetary value cannot be identified
Determine customer feature/benefits	<p>This unit does not require that customer features/benefits must be obtained by the person undertaking the unit directly contacting customers. The features/benefits may have already been determined by sales and marketing personnel and passed on to operations. However, the unit requires that the product or process must be analysed to determine how the product or process supplies the features/benefits and by which step/feature of the product or process</p>
Performance	<p>Performance is may be thought of as the rate of output or delivery of the performance or service compared to the</p>

	rate required to meet demand for the product or service
Cycle time	Cycle time includes: <ul style="list-style-type: none">• the normal time to complete an operation on a product
Pull	Pull is the concept of producing to demand, rather than for stock or some forecast

MSS405032A Analyse cost implications of maintenance strategy

Modification History

New unit, superseding MSACMT632A Analyse cost implications of maintenance strategy - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to analyse the cost implications of different maintenance strategies and to adjust or adopt a strategy to minimise or eliminate unnecessary costs.

Application of the Unit

This unit applies to an individual in an organisation who is selecting or reviewing its proactive maintenance strategy. While technical factors are significant in the choice of maintenance strategy and tools, cost factors will also impact on the selection of a maintenance strategy. This unit covers the cost analysis of maintenance strategies and complements the technical analysis covered in MSS405081A Develop a proactive maintenance strategy. The technical analysis may be performed by the same or a different person to the person undertaking the cost analysis.

This unit primarily requires the application of skills associated with communication in gathering, analysing and applying costing information and consulting with maintenance personnel. Problem solving, initiative and enterprise, and planning and organising are required to analyse and estimate the cost of maintenance strategies.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Analyse cost components of maintenance	1.1	Determine cost of failure of plant/equipment
		1.2	Determine cost of a planned maintenance shutdown activity, including costs of re-start
		1.3	Determine cost of maintenance for a planned activity
		1.4	Determine cost of maintenance for an unplanned activity
		1.5	Determine costs of condition monitoring
		1.6	Identify cost implications of different maintenance strategies
2	Estimate life cycle costs of plant/equipment	2.1	Determine initial capital cost
		2.2	Estimate servicing, maintenance and repair costs
		2.3	Estimate production and other costs associated with service, maintenance and repair
		2.4	Determine depreciation and other applicable allowances
		2.5	Estimate ancillary costs, such as training, commissioning and productivity loss
		2.6	Estimate technological life and costs of changing to current technology/costs of retaining obsolete equipment

- 2.7 Estimate annualised costs in present value terms
 - 2.8 Identify life cycle cost implications for strategy
- 3 Liaise with proactive maintenance strategy developer
 - 3.1 Identify cost implications for different strategies
 - 3.2 Negotiate a strategy which minimises total costs
 - 3.3 Monitor the implementation of the strategy to ensure the costs are minimised
 - 3.4 Make required adjustments to strategy

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- undertaking financial modelling and calculations relevant to different maintenance scenarios
- reading and interpreting charts and diagrams
- communicating with stakeholders, including technical and production staff to identify implications of maintenance strategies
- identifying sources of information on depreciation, allowances and ancillary costs
- analysing data and qualitative information on impact of different maintenance strategies on meeting customer needs
- solving problems to root cause
- preparing strategies and recommendations for stakeholders

Required knowledge

Required knowledge includes:

- techniques, calculations and data used in different maintenance strategies
- cost components of maintenance strategies
- interrelationship of cost components and maintenance activities

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • identify and analyse data and other information on current and potential maintenance strategies • communicate effectively with operators, maintenance personnel, engineers and other stakeholders on implications of maintenance strategies • make recommendations on optimal maintenance
--	--

	strategies from a cost perspective.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Competitive systems and practices</p>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
<p>Maintenance strategies and</p>	<p>Maintenance strategies and techniques may include:</p>

techniques	<ul style="list-style-type: none"> total productive maintenance (TPM) reliability centred maintenance (RCM) root cause analysis (RCA) mean time between failures (MTBF) failure mode and effects analysis (FMEA) condition monitoring
Cost components of maintenance	<p>For costing purposes, maintenance strategies should include:</p> <ul style="list-style-type: none"> direct costs, such as labour and materials, and also include comparison with cost of equipment replacement, re-engineering, and breakdown repair strategies, as well as cost of lost production under different maintenance strategies
TPM	TPM is an application of total quality management to maintenance with the intention of increasing reliability, getting it right first time and increasing OEE
RCM	RCM moves maintenance from reactive, or even planned/programmed towards a focus on uptime and OEE
RCA	RCA is a formal problem solving technique. In RCA there are many possible causes of any problem. Eliminating some will have no impact, while eliminating others will ameliorate the problem. However, elimination of the root cause will eliminate the problem completely. There should only be one root cause for any problem and so the analysis should continue until this one cause is found. Elimination of the root cause permanently eliminates the problem
OEE	<p>OEE is the combination of the main factors causing loss of productive capacity from equipment/plant and is:</p> $OEE = \text{availability} \times \text{performance} \times \text{quality rate}$ <p>where:</p> <ul style="list-style-type: none"> availability takes into account losses due to breakdown, set-up and adjustments performance takes into account losses due to minor stoppages, reduced speed and idling quality rate takes into account losses due to rejects, reworks and start-up waste
Uptime	Uptime refers to the overall availability of the plant (it is the inverse of downtime) or the unavailability of the

	plant. Ideal uptime is 100%
MTBF	<p>MTBF is one key measure of the effectiveness of a maintenance procedure, and is an indicator as to whether root causes are being found and resolved. If MTBF is reducing, then it is an indicator that the maintenance regime is failing.</p> <p>There are many possible causes of any problem. Eliminating some will have no impact, others will ameliorate the problem. However, elimination of the root cause will eliminate the problem. There should only be one root cause for any problem and so the analysis should continue until this one cause is found. Elimination of the root cause permanently eliminates the problem.</p> <p>Depending on the equipment, operations and procedures of the organisation, alternative statistical records of maintenance and maintenance related events may be substituted for MTBF providing they relate strategies for improving OEE.</p>
FMEA	<p>FMEA is a systematic approach that identifies potential failure modes in a system, product, or process caused by either design or operations/assembly process deficiencies. It also identifies critical or significant design or process characteristics that require special controls to prevent or detect failure modes. FMEA is a tool used to prevent problems from occurring.</p> <p>Some industry sectors have highly adapted forms of FMEA and may practice traditional FMEA in say their routine maintenance while using another technique, such as Hazard and Operability Studies (HAZOP) for design and modification.</p> <p>HAZOP) is a form of FMEA which has been practiced by the process industries for over 30 years and examines the implications of changes in process conditions to process stability.</p>
Condition monitoring	<p>In this unit condition monitoring is used to describe the process of analysing the implications of condition monitoring data for proactive maintenance whether it be obtained from non-destructive testing (NDT) reports, visual assessment by experts, diagnostic reports obtained from SCADA or other enterprise or equipment software and product or process quality analyses</p>

MSS405040A Manage 5S system in an organisation

Modification History

New unit, superseding MSACMT640A Manage 5S system in a manufacturing environment - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required for the overall management of the 5S system in an organisation.

Application of the Unit

This unit applies to an individual who is responsible for ensuring the smooth operation and continuous improvement of the 5S system in an organisation. This may be for an initial introduction of, or for the ongoing implementation and continuous improvement resulting from, 5S.

This unit requires the application of skills associated with problem solving, planning, communication and teamwork.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Organise an appropriate environment for 5S	1.1	Ensure managers and other key stakeholders support and understand 5S
		1.2	Arrange for team leaders to develop/maintain skills required for 5S
		1.3	Ensure team leaders are developing/maintaining skills required in their team members
		1.4	Ensure procedures and work practices reflect 5S needs and regulatory requirements
		1.5	Practise 5S in own work
		1.6	Eliminate roadblocks to 5S
2	Audit 5S implementation	2.1	Undertake spot checks of compliance
		2.2	Review workplace and records for indicators of compliance/non-compliance
		2.3	Encourage all levels of the workforce to routinely suggest areas for improvement
		2.4	Discuss 5S routinely with team leaders to seek ideas for implementation of improvement suggestions and encourage identification of non-conformance

- 3 Improve 5S
 - 3.1 Negotiate solutions to non-conformances
 - 3.2 Implement agreed solutions
 - 3.3 Work with team leaders to develop opportunities for improvements
 - 3.4 Provide necessary resources for improvements
 - 3.5 Ensure procedures and practices change to reflect improvements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating with stakeholders on aims and objectives of 5S program in the organisation
- mentoring and monitoring team leaders in their skills and knowledge of 5S and the organisations objectives for 5S
- conducting formal and informal meetings and explaining 5S and related concepts
- reviewing regulatory requirements for implications for 5S implementation
- facilitating team goals, activities and communications and accessing resources
- problem solving 5S poor performance and problems to root cause
- identifying requirements and negotiating resources for 5S implementation across the organisation
- planning and prioritising activities of teams
- identifying problems in 5S implementation caused by gaps in skills and/or knowledge and developing options to address them

Required knowledge

Required knowledge includes:

- organisation operations and structure
- principles of efficient workplace organisation
- purposes and methodology of 5S
- operation procedures relevant to jobs in the organisation
- relevant regulatory requirements
- processes for identification of skill gaps
- methods of addressing skill gaps
- ways of encouraging team leaders and operators to find and suggest areas for improvement
- methods of making/recommending improvements
- methods of accessing required resources
- non-conformance, what they are, assessment of severity and action to be taken

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • encourage and monitor a systematic approach to implementing 5S • analyse areas and records for evidence of 5S conformance/non-conformances • manage non-conformances in implementation of 5S • lead and motivate others in achieving 5S outcomes and making improvements to the 5S systems.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads, hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess</p>

	<p>underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping
--	---

	<ul style="list-style-type: none"> • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Procedures	<p>Procedures may include:</p> <ul style="list-style-type: none"> • work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) • government regulations <p>Procedures may be:</p> <ul style="list-style-type: none"> • written, verbal, computer-based or in some other format
Roadblocks	<p>Roadblocks include:</p> <ul style="list-style-type: none"> • all factors which are inhibiting the smooth implementation of 5S
5S	<p>5S is a system of work organisation originally developed in Japan based around housekeeping principles. A close translation of the five stages in the housekeeping approach is:</p> <ul style="list-style-type: none"> • sort • set in order • shine • standardise • sustain
Sort	<p>Sort involves keeping only what is absolutely necessary for the processes in the work area. Sort includes:</p> <ul style="list-style-type: none"> • clearing the work area of all non-essential equipment

	<p>and materials</p> <p>Non-essential items include:</p> <ul style="list-style-type: none"> those not required to either produce product, conduct process or operations or make required adjustments to equipment during process or operations
Set in order	<p>Set in order includes:</p> <ul style="list-style-type: none"> assigning required equipment and materials appropriate locations in the work area (locations should be clearly marked and labelled to show the item and proper location)
Shine	<p>Shine includes:</p> <ul style="list-style-type: none"> keeping the work area clean at all times. This should be carried out to a regular daily schedule against allowed time and, on most occasions, at the end of a job
Standardise	<p>Standardising includes:</p> <ul style="list-style-type: none"> activities that help maintain the order and the housekeeping standards using procedures and checklists developed from a procedure
Sustain	<p>Sustain includes:</p> <ul style="list-style-type: none"> making sure that daily activities are completed every day regardless of circumstance undertaking inspections, including: <ul style="list-style-type: none"> informal inspections carried out often, at least weekly formal inspections carried out at least monthly <p>Specific actions should be followed up to generate continuous improvement</p>
Items in work area	<p>Items in work area may include:</p> <ul style="list-style-type: none"> tools jigs/fixtures materials/components plant and equipment manuals personal items (e.g., lunch boxes and posters) safety equipment and personal protective equipment other items which happens to be in the work area

MSS405050A Determine and improve process capability

Modification History

New unit, superseding MSACMT650A Determine and improve process capability* - Equivalent

* New prerequisite *MSS404052A Apply statistics to operational processes* superseding MSACMT452A Apply statistics to processes in manufacturing

Unit Descriptor

This unit of competency covers the skills and knowledge required to determine the actual (as distinct from design) capability of a process and then to analyse that process to remove assignable causes and reduce random causes. This would typically be done by a manager or technical expert support person either working in a team, or in close liaison with key stakeholders. Process capability is typically calculated using standard deviations.

Application of the Unit

This unit applies to an individual (who may be a production manager, plant/process engineer, technical specialist or similar) who is responsible for developing plans to stabilise and then improve process capability and following agreement the implementation of the plans to improve process capability. The organisation may use either a six sigma or three sigma process.

This unit primarily requires the application of skills associated with communication in gathering and analysing data and consulting with relevant personnel. Teamwork, problem solving, initiative and enterprise, and planning and organising are required to determine causes to variations and implement solutions. This is done in an environment using computer technology and also requires aspects of self-management and learning to ensure feedback and new learning is integrated into process improvements and operations management control systems.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MSS404052A Apply statistics to operational processes

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--|-----|--|
| 1 | Obtain data for process capability study | 1.1 | Identify the process requiring capability analysis including relevant procedures |
| | | 1.2 | Identify customer specifications for product or service |
| | | 1.3 | Obtain process capability data |
| 2 | Analyse data | 2.1 | Identify assignable causes of variation in liaison with relevant personnel |
| | | 2.2 | Develop solutions to eliminate variation due to assignable causes in liaison with relevant personnel |
| | | 2.3 | Analyse random variations for possible causes in liaison with relevant personnel |
| | | 2.4 | Confirm causes of random variation |
| | | 2.5 | Develop solutions to reduce random variations in liaison with relevant personnel |

- 3 Take action to improve process capability
 - 3.1 Develop plans to implement solutions
 - 3.2 Liaise with relevant personnel to implement solutions
 - 3.3 Gain necessary approvals, as required
 - 3.4 Monitor implementation and make adjustments, as required
 - 3.5 Determine new/revised process capability
 - 3.6 Implement revised process capability regime

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- using a variety of statistical methods and calculations
- communicating and negotiating at all levels in the organisation and value stream and with individuals of different levels of literacy and numeracy
- negotiating with employees, suppliers and customers, where necessary, to achieve access to, or collection of, data
- planning process and data collection changes required for process improvement, including:
 - objectives
 - performance indicators to be monitored to indicate success of change
 - resources required
 - training required
 - communication and liaison required with employees, suppliers and customers
 - implementation period required
- analysing variations and categorising into assignable and random cause
- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in a wide variety of contexts
- working in and leading teams for data collection and process improvement
- using software computers and terminals, as required, to collect and analyse data

Required knowledge

Required knowledge includes:

- data collection methods
- data processing techniques required to establish variability and normal distribution
- calculate three sigma or six sigma processes, as relevant
- random and non-random results and processes for recognition of assignable causes
- causes of different types of non-random results
- causes of random variation
- process understanding sufficient to translate the data into variations in the process and determine methods of controlling them

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> • collect or obtain data relevant process capability data from a variety of sources data • work with people and analyse data to determine assignable causes • plan and prepare improvement proposals • monitor implementation of improvement proposals.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will</p>

	<p>be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>

MSS405052A Design an experiment

Modification History

Release 2 - Prerequisite unit code corrected - MSS404052A

Release 1 - New unit, superseding MSACMT652A Design an experiment* - Equivalent

* New prerequisite *MSS404052A Apply statistics to operational processes* superseding MSACMT452A Apply statistics to processes in manufacturing

Unit Descriptor

This unit of competency covers the skills and knowledge required to design experiments. The design of experiments is generally undertaken as part of black-belt six sigma but may also be undertaken independently.

Application of the Unit

This unit applies to a technical expert who is required to design and implement experiments aimed at making breakthrough improvements in the process. They will work with other members of the process team in doing this.

This unit primarily requires the application of skills associated with problem solving, initiative and enterprise, and planning and organising skills in order to identify, implement and evaluate an experiment. Communication skills associated with gathering, interpreting and documenting information are required.

Where this unit forms part of a suite of six sigma then the following units will also be relevant:

- *MSS403010A Facilitate change in an organisation implementing competitive systems and practices*
- *MSS403051A Mistake proof an operational process*
- *MSS404081A Undertake proactive maintenance analyses*
- *MSS405002A Analyse and map a value stream*
- *MSS405011A Manage people relationships*
- *MSS405050A Determine and improve process capability*
- *MSS405053A Manage application of six sigma for process control and improvement*
- *MSAPMSUP390A Use structured problem solving tools.*

Pre-Requisites

MSS404052A Apply statistics to operational processes

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Choose an improvement project	1.1	Review a process/value stream map
		1.2	Identify areas in need of improvement
		1.3	Select a process/value stream area for analysis and improvement
		1.4	Determine the objective of the experiment in consultation with relevant stakeholders
2	Design the experiment	2.1	Select appropriate factorial design
		2.2	Estimate signal to noise ratio
		2.3	Determine required number of runs and factorial fraction
		2.4	Determine resolution
		2.5	Design a sequential series of experiments
		2.6	Calculate resource requirement for this design
		2.7	Determine whether resource requirements are practical

- in consultation with relevant stakeholders
 - 2.8 Modify experiment, if required, to match available resources
 - 2.9 Determine/develop required metrics
 - 3 Conduct the experiment
 - 3.1 Conduct first run of experiment
 - 3.2 Replicate in random order for required number of runs
 - 3.3 Block out known sources of variation
 - 3.4 Conduct other experiments in series
 - 3.5 Record data/have data recorded
 - 4 Analyse and confirm the experimental results
 - 4.1 Identify aliases/confounding of variables/results
 - 4.2 Analyse data using statistics pack or similar
 - 4.3 Interpret analysed data in line with objectives
 - 4.4 Identify confidence level of analysed data
 - 4.5 Design experiment to confirm correlations identified
 - 4.6 Conduct confirming experiment
 - 4.7 Analyse data from confirming experiment
 - 4.8 Confirm results (or conduct further experiments)

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- analysing existing statistics and other data for relevance to the experiment
- determining where additional data is required and developing strategies for acquisition
- undertaking self-directed problem solving and decision-making
- solving problems
- communicating complex issues and techniques to stakeholders
- documenting procedures and results
- producing a range of charts and generating and validating required data for inclusion
- using statistics packs

Required knowledge

Required knowledge includes:

- charting, such as:
 - Pareto charts
 - main effects plots
 - scatter plots
 - interaction plots
 - contour plots
 - response surface plots
- statistical principles and analysis, such as:
 - analysis of means (ANOM)
 - prediction equations
 - analysis of variance (ANOVA)/one-way ANOVA
 - desirability function
 - hit a target
 - advanced graphical data analysis
 - multi-variate planning
 - variation trees and funneling
 - hypothesis testing
 - central limit theorem
 - statistical analysis roadmap

- analysis for means and t-test
- correlation and regression
- factorial analysis principles and methods, such as:
 - multi-variate analysis
 - Taguchi S/N ratios
 - 2/3 level factorial
 - Taguchi L8
 - 2/4-1 half fraction
 - Plackett-Burman 8-run
 - full factorial
- acceptance criteria/confidence levels

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> • design an experiment relevant to improvement strategies and targets of the organisation • conduct an experiment • confirm results, including conduct of confirming experiments.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.

<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<p>Guidance information for assessment</p>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Competitive systems and practices</p>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP)
---	---

	<p>systems, Materials Resource Planning (MRP) and proprietary systems</p> <ul style="list-style-type: none"> • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Improvement	<p>Improvement includes:</p> <ul style="list-style-type: none"> • an improvement in performance of an area/section or the whole enterprise as measured in terms of customer features/benefits
Objective of the experiment	<p>Objective of the experiment may include:</p> <ul style="list-style-type: none"> • screen factors to find the critical few • optimise a few critical factors • solve process problems • reduce waste • increase reliability
Factorial design	<p>Factorial design may include:</p> <ul style="list-style-type: none"> • 2/3 level factorial • Taguchi L8 • 2/4-1 half fraction • Plackett-Burman 8-run

	<ul style="list-style-type: none"> • full factorial
Signal-to-noise ratio	<p>Signal-to-noise ratio may be estimated from:</p> <ul style="list-style-type: none"> • previous experiment design experience • previous process capability studies • statistical process control data • estimated from other sources
Resolution	<p>Resolution is typically:</p> <ul style="list-style-type: none"> • Resolution III design: A design where main factor effects are confounded with two factor and higher order interactions • Resolution IV design: A design where main effects are confounded with three factor and higher order interactions and all two factor interactions are confounded with two factor interactions and higher order interactions • Resolution V design: A design where main effects are confounded with four factor and higher order interactions and two factor interactions are confounded with three factor interactions and higher order interactions
Sequential series of experiments	<p>A typical series of experiments consists of:</p> <ul style="list-style-type: none"> • a screening design (fractional factorial) to identify the significant factors • a full factorial or response surface design to fully characterise or model the effects • confirmation runs to verify results
Required metrics	<p>Required metrics may include:</p> <ul style="list-style-type: none"> • quantitative measures normally associated with the process • other quantitative measures relevant to the experiment • ranking systems for normally qualitative measures, such as defectives
Statistics pack	<p>Typical statistics packs include:</p> <ul style="list-style-type: none"> • minitab • JMP • spreadsheets, such as Excel, particularly with specific add-ons, such as Sigma XL, Analyse It or other add-ons

MSS405060A Develop the application of enterprise control systems in an organisation

Modification History

New unit, superseding MSACMT660A Develop the application of enterprise systems in manufacturing - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to continuously modify and improve or develop new enterprise-wide information technology (IT) based control systems, such as Supervisory Control and Data Acquisition (SCADA), Enterprise Resource Planning (ERP), Materials Resource Planning (MRPII) and similar. Typically the development of such a system will be in liaison with an appropriate technical expert who may be an internal expert or an external consultant.

Application of the Unit

This unit applies to an individual responsible for the development and implementation of new systems or modifications/changes to the current system. While the individual might generate the ideas for change themselves and also undertake a significant part of the final implementation, they may also be working closely with an appropriate technical expert (such as the software system supplier) who may actually make the modifications.

This unit primarily requires the application of skills associated with communication in gathering, analysing and applying information and consulting with stakeholders. Teamwork, problem solving, initiative and enterprise, and planning and organising skills are required to determine and implement effective enterprise systems and modifications. This unit also requires computer skills and aspects of self-management and learning to ensure feedback and new learning is integrated into system planning.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---|-----|---|
| 1 | Monitor information and control needs of organisation | 1.1 | Check the use of current information |
| | | 1.2 | Check the operation of current control systems |
| | | 1.3 | Communicate regularly with key information users regarding any new or changed information control needs, including information needs from and to value stream |
| | | 1.4 | Identify short comings in information and control provision |
| | | 1.5 | Take appropriate action on information and control needs to meet organisational needs |
| 2 | Check the current system against organisation needs | 2.1 | Check the routine use of the system |
| | | 2.2 | Check any system alarm or non-conformance notification and control operation |
| | | 2.3 | Communicate regularly with key stakeholders about current system use and application |
| | | 2.4 | Determine effect of non-conformance on enterprise system |
| | | 2.5 | Identify problems/issues |

- 2.6 Take appropriate action on problems and issues

- 3 Determine developments needed in a new or significantly modified system
 - 3.1 Identify needs requiring a new system or development of modifications to the current system
 - 3.2 Draft scope, specifications and outcomes required
 - 3.3 Liaise with key stakeholders and relevant technical experts to refine scope, specifications and outcomes needed in new or modified system
 - 3.4 Agree final scope, specifications and outcomes

- 4 Develop system
 - 4.1 Develop project plan
 - 4.2 Ensure ongoing consultation with all relevant stakeholders
 - 4.3 Manage development project
 - 4.4 Manage trialling of modified system
 - 4.5 Ensure modified system meets organisational requirements

- 5 Implement modified system
 - 5.1 Liaise with all affected personnel
 - 5.2 Develop and agree an implementation strategy
 - 5.3 Ensure all personnel have required skills
 - 5.4 Implement modified system
 - 5.5 Monitor implementation and modify, as required

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying organisation needs from enterprise control system, including:
 - critical features (e.g. occupational health and safety (OHS), regulatory compliance and emergency shutdown)
 - essential features and operation controls
 - access levels and access security
 - cost of installation and operation
 - interfaces (e.g. human-machine, machine-machine, and system-system, e.g. SCADA with financial control systems)
- correctly accessing and inputting information
- communicating with stakeholders on information and control requirements
- matching monitoring, control and reporting capability of system to organisation requirements
- analysing features of enterprise system and determining training needs
- solving problems to root cause
- monitoring trials and initial implementation of enterprise control system

Required knowledge

Required knowledge includes:

- capability of resource planning/SCADA systems, as appropriate
- information and control needs of organisation/process
- project management
- support/training/skill development mechanisms available for access by personnel

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate	A person who demonstrates competency in this unit must
---	--

<p>competency in this unit</p>	<p>be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> • analyse organisation needs and match to enterprise control system features • determine critical features required in enterprise control system • modify system as a result of trials or changing needs.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<p>Guidance information for</p>	<p>Assessment processes and techniques must be culturally</p>

assessment	appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.
-------------------	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as SCADA software, ERP systems, MRP and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices
--	---

	<ul style="list-style-type: none"> • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
SCADA	<p>SCADA refers to:</p> <ul style="list-style-type: none"> • a number of systems which automatically collect critical process data, perform required mathematical manipulations on it and then make control decisions and/or give required information personnel for action <p>In the continuous operations sector, the SCADA system is sometimes integrated into other sophisticated computer control systems, such as distributed control system (DCS) and indeed these systems do merge in advanced systems. These organisations may simply refer to their SCADA as the DCS or other similar term (such as the proprietary name of the computer system)</p>
Resource planning	<p>Planning software is a general term applied to a number of software systems which integrate a range of business information, such as:</p> <ul style="list-style-type: none"> • finance • logistics maintenance and production <p>It is frequently referred to by names, such as ERP and MRP/MRP II</p>
Value stream	<p>The value stream begins with the customer and includes all actions (both value adding and non value added) by both internal sections/departments and external organisations to meet a customer requirement.</p> <p>Depending on the operations and the customer requirement stages where value stream actions may occur include:</p> <ul style="list-style-type: none"> • sales outlet/representative • information gathering, data analysis and research • product design • raw material sourcing • intermediate processing • final assembler/collation/preparation • support services (e.g. accounting, finance and legal) • storage and delivery to customer • after market support

MSS405061A Determine and establish information collection requirements and processes

Modification History

New unit, superseding MSACMT661A Determine and establish information collection requirements and processes - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to determine what information is needed to support decision-making in a competitive systems and practices environment and then to set about establishing required information collection systems. This would usually be done as part of a team and would require consultation with all key stakeholders.

Application of the Unit

This unit covers the determination of data needs and collection methods for an organisation or specific plant or process. This will typically be done in liaison with a wide range of people, each of whom will have their own specific information requirements. There will need to be balanced and interpreted into a workable set of data to be collected.

This unit is primarily focused on those decisions which are non-routine and so need specific collection of data, or for those decisions which are routine, the establishment of a routine data collection protocol to allow for the decisions to be made based on appropriate, reliable data. This unit primarily requires the application of communication and problem solving skills associated with determining information requirements and processes of information collection. Initiative and enterprise, and planning and organising are also required to ensure information targets specific factors. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into the development of processes.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--|-----|--|
| 1 | Analyse decisions to be made | 1.1 | Identify personnel to be included in the analysis process |
| | | 1.2 | Determine the consequences of the decisions in liaison with relevant personnel |
| | | 1.3 | Determine the variables which can be controlled |
| | | 1.4 | Determine the variables which cannot be controlled |
| | | 1.5 | Determine the consequences of a change in these variables in liaison with affected personnel |
| 2 | Define factors which cause variables to change | 2.1 | Identify factors which are able to be controlled |
| | | 2.2 | Identify factors which are not able to be controlled |
| | | 2.3 | Identify means of measuring these factors, or indicators for the values of these factors |
| | | 2.4 | Compile a list of measurements/indicators required. |
| | | 2.5 | Communicate with team members and involve them in development of factors and changes to ensure awareness and facilitate learning |
| 3 | Develop data collection protocols | 3.1 | Determine methods of making measurements |
| | | 3.2 | Determine methods of quantifying indicators |
| | | 3.3 | Determine the benefit/cost of automated (or other) collection of data |

- 4 Develop systems to produce required information
 - 4.1 Identify user of information and their needs and abilities
 - 4.2 Determine data processing needs to produce required information
 - 4.3 Determine information distribution channels
 - 4.4 Determine skill development need for recipients of information
 - 4.5 Implement systems to produce information
 - 4.6 Monitor implementation and make adjustments, as required

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating and negotiating at all levels in the organisation and value stream and with individuals of different levels of literacy and numeracy
- negotiating with employees, suppliers and customers, where necessary, to achieve access to, or collection of, data
- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in a wide variety of contexts
- developing or sourcing indicators for factors not easily measured
- liaising with stakeholders on acceptable limits for benefits and costs in data collection procedures

Required knowledge

Required knowledge includes:

- business needs of the organisation/section
- information needs of individuals within the organisation
- possible data available/potentially available to the organisation
- methods of collecting available data
- relationship between data available and information required
- methods of converting data into useful information
- methods of developing indicators for factors resistant to measurement

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of their ability to: <ul style="list-style-type: none">• determine relevant data, including variables for decisions
---	--

	<ul style="list-style-type: none"> • determine factors and variables subject to control • develop strategies for data collection that deliver the greatest overall benefit • implement data collection systems.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>

MSS405070A Develop and manage sustainable energy practices

Modification History

New unit, superseding MSACMT670A Develop and manage sustainable energy practices - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to identify opportunities for, and make improvements in, sustainable energy practices in an organisation. Areas covered include efficient use of raw materials, management of waste, electricity conservation, heat conservation and management, water management, environment protection and environment obligations of enterprises.

Application of the Unit

This unit applies to an individual who is required to establish systems for improved energy practices in an organisation. The unit involves analysis of energy used in processes and operations and categorising the energy use according to lean principles. The unit covers categorising energy into necessary use and waste with the waste being further categorised into necessary waste and unnecessary waste. Strategies for eliminating or minimising energy waste are covered with benefit/cost analyses being required for strategies.

This unit primarily requires the application of communication and problem solving skills associated with collecting and analysing information. An ability to analyse energy use of technology or processes will be applied. Initiative and enterprise, and planning and organising are also required to develop plans for efficient energy use. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into the development of processes.

Where the quantum of energy used is not easily available or a formal calculation of energy use is required through an energy balancing calculation (e.g. for regulatory purposes) the unit *MSS015011A Conduct a sustainability energy audit* may also be required.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Analyse energy use	1.1	Identify all energy consuming processes
		1.2	Determine quantity and nature of energy consumed
		1.3	Analyse energy consumed and generated in different parts of the process
		1.4	Determine source of energy consumed in process
2	Develop energy conservation plans	2.1	Determine the efficiency of use of energy by all energy consuming processes
		2.2	Determine causes of low efficiency of use
		2.3	Develop plans for increasing the efficiency of energy use
		2.4	Determine benefit/cost of plans
3	Develop energy trading plans	3.1	Compare energy generating activities with energy consuming activities
		3.2	Determine feasibility of energy consuming activities using energy generated by other activities
		3.3	Develop plans for energy trading

- 3.4 Determine benefit/cost of plans
- 4 Investigate alternative sources of energy
 - 4.1 Develop a specification for energy required
 - 4.2 Identify a range of sources for that energy
 - 4.3 Determine benefit/cost for alternative energy sources
- 5 Develop plans for more efficient energy use
 - 5.1 Compare benefit/costs for different alternatives developed
 - 5.2 Rank proposals based on benefit/cost compare to limited resources
 - 5.3 Check proposals meet regulatory requirements
 - 5.4 Recommend proposals for improving energy efficiency
- 6 Implement selected plans
 - 6.1 Liaise with relevant people to implement energy efficiency plans
 - 6.2 Follow through to ensure implementation occurs
 - 6.3 Monitor implementation and make adjustments, as required
 - 6.4 Check new energy usage to ensure improvements have occurred

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- using common units, symbols and formulae common in energy-related calculations
- applying mathematics
- communicating with a variety of groups and individuals using different media
- solving complex problems individually and as part of a team
- reviewing range of existing data for suitability and determining where new data gathering is required
- planning and organising complex whole of organisation activities relating to energy use, including objectives, timelines, implementation procedures and monitoring strategy
- determining where energy balancing techniques are required
- accessing manufacturers' data and other sources of energy consumption for individual equipment and processes
- mapping processes and energy flows
- calculating, manipulating and interpreting numerical data
- ranking energy consumption and waste for area, sites or processes
- calculating the efficiency of use of energy by equipment and processes
- consulting with technical and operative staff on possible non-obvious energy wastes
- consulting and negotiating with stakeholders on implementation process for sustainability improvement

Required knowledge

Required knowledge includes:

- types and sources of energy
- methods of analysing energy efficiency for different types of energy
- methods of converting energy values from one form to another
- alternative sources of energy
- principles of energy efficiency
- relevant regulatory/legislative requirements
- energy trading schemes and procedures
- organisation and process needs for energy

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> • gather appropriate data to allow energy analyses • categorise energy use into necessary use and waste • develop options for energy reduction including presenting of alternatives and benefit/cost analyses • develop strategies and plans for energy use and monitor implementation.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will</p>

	<p>be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time
--	--

	<ul style="list-style-type: none"> • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Waste	<p>Waste (also known as muda in the Toyota Production System and its derivatives) is any activity which does not contribute to customer benefit/features in the product.</p> <p>Within operations, categories of waste include:</p> <ul style="list-style-type: none"> • excess production and early production • delays • movement and transport • poor process design • inventory • inefficient performance of a process • making defective items • activities which do not yield any benefit to the organisation or any benefit to the organisations customers
Necessary waste	<p>Necessary waste is:</p> <ul style="list-style-type: none"> • any activity or cost which does not contribute directly to customer benefit/feature in the product, and which cannot be avoided (e.g. regulatory compliance and fixed costs). Necessary waste cannot be eliminated but should be managed
Unnecessary waste	<p>Unnecessary waste is:</p> <ul style="list-style-type: none"> • any activity or cost which does not contribute directly to customer benefit/features in the product and can be avoided. Unnecessary waste should be eliminated as quickly as practical
Energy	<p>Energy includes:</p> <ul style="list-style-type: none"> • all sources of energy used by the process be it electricity, gas or mobile transport fuel

	<p>The uses of the energy will also be potentially wide and include:</p> <ul style="list-style-type: none"> • heating and cooling • moving materials (e.g. pumps and conveyors) • modifying materials (e.g. cutting, forming, weaving, knitting, reacting, moulding, extruding and mixing) • generating pressure/vacuum or providing motive power for equipment and transport
Energy trading	<p>Energy trading means both formal trading where the organisation investigates alternatives to:</p> <ul style="list-style-type: none"> • the buying of energy through alternative suppliers and tender processes • selling of excess energy produced by the organisation to energy companies or other producers <p>and</p> <ul style="list-style-type: none"> • internal trading of excess energy from one area to an energy consuming area elsewhere in the organisation

Modification History

Release 2 - Content error in Range and Evidence Guide corrected. Prerequisite unit code corrected - MSS404052A

Release 1 - New unit, superseding MSACMT675A Facilitate the development of a new product* - Equivalent

* New prerequisite *MSS404052A Apply statistics to operational processes* superseding MSACMT452A Apply statistics to processes in manufacturing

Unit Descriptor

This unit of competency covers the skills and knowledge required to facilitate the development of a new or evolutionary product within an existing range of products and encompasses design for manufacture, determining the process capability and the facilitation of its initial production.

Application of the Unit

This competency applies to an individual responsible for the development of a new product. The unit assumes an initial product design has been prepared by a designer and also assumes a working knowledge of all main processes and materials so that an informed choice can be made between them. The person will normally be a manager or technical expert and be required to work closely with a range of other management and operations personnel. The unit requires balancing the business and technical sides of the new product and would typically be done as part of a cross-functional team. This unit primarily requires the application of skills associated with communication in gathering, analysing and applying information and consulting with stakeholders. Teamwork, problem solving, initiative and enterprise, and planning and organising are required to facilitate the development of a new product. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into competitive systems and practices.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Confirm design brief of new product in consultation with relevant people	1.1	Review product design with customer and other key stakeholders and agree on technical specification, aesthetic requirements, timelines, cost and other market requirements
		1.2	Determine any regulatory, industry code/intellectual property requirements for product
		1.3	Identify any required tooling, process or equipment needs
		1.4	Confirm design brief, including relevant drawings, to meet needs
		1.5	Determine design brief conforms to organisation objectives and capability
		1.6	Obtain approval on total design brief from all relevant personnel

- | | | | |
|---|--|-----|---|
| 2 | Determine material requirements for product | 2.1 | Select appropriate materials or combination of materials/components in liaison with key stakeholders |
| | | 2.2 | Determine material/component testing and evaluation regime required to meet product end use requirements, including regulatory/industry code requirements |
| | | 2.3 | Arrange for testing and evaluation of trial materials/components |
| | | 2.4 | Guide material trial process and interpret material trial results |
| | | 2.5 | Determine final materials/components specifications and details of value chain |
| 3 | Determine process requirements for product | 3.1 | Select appropriate process to make product in liaison with key stakeholders and based on relevant factors |
| | | 3.2 | Determine any special process/equipment requirements for this product |
| | | 3.3 | Communicate with production personnel to determine any concerns and/or training or other needs |
| | | 3.4 | Adjust the design, as required, to satisfy customer and production needs |
| 4 | Ensure process needs for new product have been met | 4.1 | Liaise with equipment design/procurement personnel |
| | | 4.2 | Interpret hardware specifications and ensure they are appropriate for the job required |
| | | 4.3 | Liaise with process personnel to ensure appropriate draft procedures for new product have been developed |
| | | 4.4 | Validate product cost and design meets organisation requirements and capability |
| 5 | Trial new product through the process | 5.1 | Design trialing procedure to deliver required information |
| | | 5.2 | Liaise with relevant stakeholders |
| | | 5.3 | Ensure health safety and environment (HSE) |

- requirements are observed
- 5.4 Coordinate the trialling of the new product
 - 5.5 Interpret product trial results and guide product trial process
 - 5.6 Tune process to optimise production of new product
- 6 Determine process capability
- 6.1 Plot appropriate statistical process control charts
 - 6.2 Determine confidence limits
 - 6.3 Compare confidence limits with product specification
- 7 Coordinate product trials
- 7.1 Determine product testing and evaluation regime required to meet end use requirements, including regulatory/industry code requirements
 - 7.2 Arrange for testing and evaluation of trial product/prototype
 - 7.3 Interpret product trial results and guide product trial process
 - 7.4 Determine final product specification in liaison with key stakeholders
 - 7.5 Make required changes to materials, process and equipment
- 8 Implement standard procedures for new product
- 8.1 Monitor initial production and, in liaison with appropriate team members, adjust process, conditions and materials to ensure the product and process outcomes conform to customer, regulatory and organisation requirements
 - 8.2 Ensure process specifications are updated and reflect the optimised operation developed
 - 8.3 Ensure standard operating procedures are correct for the new product
 - 8.4 Ensure equipment and other hardware records are updated to reflect additions/changes

- 8.5 Ensure project records are complete and all required reports have been completed and submitted
- 8.6 Archive records according to company procedure

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- selecting and justifying the selection of:
 - type of material/material specification
 - appropriate process for a range of product/market applications
 - material and product testing procedures
- applying theoretical principles to predict:
 - properties of product based on materials selected
- identifying effects of processes and processing on the final properties of the product mathematically determine:
 - product cost estimates
 - process time
 - cost/benefit to organisation of new product
- communicating at all levels in the organisation and value stream and to audiences of different levels of literacy and numeracy
- interpreting and making recommendations based on:
 - field test results
 - market analysis data
 - trialling data
 - organisation objectives and business plan
 - equipment and operations capacity

Required knowledge

Required knowledge includes:

- materials, equipment and process sufficient to choose an appropriate combination of materials and process to achieve the end use function of the product
- enterprise procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> • ensure the development of a new product meets general organisation guidelines and objectives • liaise with the required people • optimise the process for the new product at the completion of the development phase • assess materials and components characteristics required in a design including material grades and properties and the effects of processing on materials and components • use trial outcomes to determine standard procedures for manufacture and/or operation of new product.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning

	<ul style="list-style-type: none">• reports from supervisors, peers and colleagues (third-party reports)• portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Competitive systems and practices</p>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
<p>Organisation objectives and</p>	<p>Organisation objectives and requirements may include:</p>

requirements	<ul style="list-style-type: none"> • Board or management guidelines on: <ul style="list-style-type: none"> • cost/profit requirements for new products (e.g. minimum return and capital expenditure limits) • encouragement/discouragement of different types of products (e.g. on sustainability, ethical or other non-individual customer related criteria) • potential or actual capacity conflicts with other customers or product/process activities • activities that require/may require community consultation (e.g. on noise or other environmental grounds)
Tools and equipment	<p>Tools and equipment may include:</p> <ul style="list-style-type: none"> • understanding of use of all standard processing equipment • relevant personal protective equipment
Typical regulatory requirements	<p>Typical regulatory requirements may include:</p> <ul style="list-style-type: none"> • occupational health and safety (OHS) • environmental regulations • structural codes • product/industry specific requirements
Typical problems	<p>Typical problems may include:</p> <ul style="list-style-type: none"> • defining product end-use requirements in terms meaningful to the product design and manufacture • matching suitable materials and processes to the product needs and company expertise and facilities • matching (and improving) process capability to product tolerances
Relevant factors	<p>Relevant factors may include:</p> <ul style="list-style-type: none"> • type of material • dimensional precision of product • length of run/number of products • required aesthetics • size and complexity of product • available capital funding • process equipment available • HSE factors

MSS405081A Develop a proactive maintenance strategy

Modification History

New unit, superseding MSACMT681A Develop a proactive maintenance strategy - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to develop and implement a proactive maintenance strategy for an organisation. The unit recognises that there are a number of predictive or proactive maintenance strategies, such as total productive maintenance (TPM) and reliability centred maintenance (RCM).

Application of the Unit

This unit applies to an individual responsible for developing a proactive maintenance strategy for an organisation. Typically the organisation will also be implementing other competitive systems and practices. The unit applies to the selection of appropriate strategies, initial development and implementation as well as application of the strategies to new areas and the improvement of operation in existing areas. This would typically be done in a team environment and in consultation with all key stakeholders.

This unit primarily requires the application of skills associated with communication in gathering, analysing and applying information and consulting with stakeholders. Teamwork, problem solving, initiative and enterprise, and planning and organising are required to develop and implement a predictive maintenance strategy. Strategies will incorporate the maintenance requirements of relevant technologies. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into maintenance strategies.

Licensing/Regulatory Information

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Determine appropriate analytical techniques	1.1	Liaise with key stakeholders to determine objectives of maintenance strategy
		1.2	Examine current maintenance situation to determine major areas requiring improvement
		1.3	Compare possible strategies, techniques and tools against organisation needs
		1.4	Select possible strategies, techniques and tools
		1.5	Confirm selected strategies, techniques and tools with key stakeholders
2	Develop reliability strategies	2.1	Select preferred maintenance strategy
		2.2	Examine and adapt strategy to organisation needs and priorities
		2.3	Examine and adapt techniques and tools required to implement strategy
		2.4	Liaise with key stakeholders to develop an implementation plan
		2.5	Identify key information and performance indicators required
3	Implement strategy	3.1	Identify data collection required
		3.2	Identify hardware and other resources required
		3.3	Identify skill needs required in consultation with key

- stakeholders
- 3.4 Ensure all resources/training are available
- 3.5 Implement strategy
- 4 Monitor implementation of strategy
 - 4.1 Compare information/performance indicators with desired levels
 - 4.2 Liaise with key stakeholders regarding strategy issues
 - 4.3 Identify areas requiring adjustment
 - 4.4 Make required adjustments

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating with others using a variety of media and techniques
- adapting personal communication strategy to different levels of literacy and numeracy in target individuals and groups
- working in a team
- analysing quantitative and qualitative information to determine proactive maintenance strategy options
- solving problems to root cause
- applying basic arithmetic and statistical techniques
- planning complex strategies, including consideration of timelines, resources, benefit/cost, implementation requirements, and monitoring and adjustment considerations
- reading and interpreting engineering specifications, drawings and charts
- using information system terminals and computers
- prioritising options, including reasons and recommendations
- recording data

Required knowledge

Required knowledge includes:

- characteristics and strengths of different types of strategies, techniques and tools, such as:
 - TPM
 - RCM
 - mean time between failure (MTBF)
 - failure mode effects analysis (FMEA)
 - condition monitoring
 - root cause analysis (RCA)
- holistic costs of different strategies combining cost of maintenance with costs of lost production, sales, and so on, as relevant to the organisation
- business goals sufficient to match the strategy to the business needs
- strategic thinking and its application to proactive maintenance
- principles of process equipment and how to improve its reliability
- resources required and how to obtain them

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • consider a variety of proactive maintenance strategies for suitability to an organisation • consult operators, maintenance, management and other stakeholders in decisions on proactive maintenance strategies • implement selected strategies • monitor performance to selected indicators and make improvements to selected proactive maintenance strategies.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning for appropriate portions

	<ul style="list-style-type: none"> • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen)
--	--

	<ul style="list-style-type: none"> • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
OEE	<p>OEE is the combination of the main factors causing loss of productive capacity from equipment/plant and is:</p> $OEE = \text{availability} \times \text{performance} \times \text{quality rate}$ <p>where:</p> <ul style="list-style-type: none"> • availability takes into account losses due to breakdown, set-up and adjustments • performance takes into account losses due to minor stoppages, reduced speed and idling • quality rate takes into account losses due to rejects, reworks and start-up waste
MTBF	<p>MTBF is one key measure of the effectiveness of a maintenance procedure, and is an indicator as to whether root causes are being found and resolved. If MTBF is reducing, then it is an indicator that the maintenance regime is failing.</p> <p>There are many possible causes of any problem. Eliminating some will have no impact, others will ameliorate the problem. However, elimination of the root cause will eliminate the problem. There should only be one root cause for any problem and so the analysis should continue until this one cause is found. Elimination of the root cause permanently eliminates the problem.</p> <p>Depending on the equipment, operations and procedures of the organisation, alternative statistical records of maintenance and maintenance-related events may be substituted for MTBF providing they relate strategies for</p>

	improving OEE.
FMEA	<p>FMEA is a systematic approach that identifies potential failure modes in a system, product, or operations/assembly operation caused by either design or operations/assembly process deficiencies. It also identifies critical or significant design or process characteristics that require special controls to prevent or detect failure modes. FMEA is a tool used to prevent problems from occurring.</p> <p>Some industry sectors have highly adapted forms of FMEA and may practice traditional FMEA in say their routine maintenance while using another technique, such as Hazard and Operability Studies (HAZOP) for design and modification.</p> <p>HAZOP is a form of FMEA which has been practiced by the process industries for over 30 years and examines the implications of changes in process conditions to process stability.</p>
Condition monitoring	<p>Condition monitoring is used to describe the process of analysing the implications of condition monitoring data for proactive maintenance whether it be obtained from non destructive testing (NDT) reports, visual assessment by experts, diagnostic reports obtained from SCADA or other enterprise or equipment software and product or process quality analyses. It does not require the actual undertaking of the NDT or condition monitoring assessment or test. If this is required appropriate units from other Training Packages will be required.</p>

MSS405083A Adapt a proactive maintenance strategy for a seasonal or cyclical business

Modification History

New unit, superseding MSACMT683A Adapt a proactive maintenance strategy for a seasonal or cyclical manufacturing operation* - Equivalent

* New prerequisite *MSS405081A Develop a proactive maintenance strategy* superseding MSACMT681A Develop a proactive maintenance strategy

Unit Descriptor

This unit of competency covers the skills and knowledge required to develop a standard proactive maintenance strategy for a seasonal or cyclical operational processes or similar.

Application of the Unit

This unit applies to an individual responsible for developing a proactive maintenance strategy for an organisation that operates seasonal/cyclical plant and also adopts proactive maintenance strategies. The organisation will also usually be implementing other competitive systems and practices. Typical applications include many food processing enterprises, cotton ginning, sugar refineries, and so on. The unit covers changing the normal priority of some of the choices which need to be made in implementing a proactive maintenance strategy. The unit applies to the selection of appropriate strategies, initial development and implementation will need to be managed as well as application of the strategies to new areas and the improvement of operation in existing areas.

This would typically be done in a team environment and in consultation with all key stakeholders.

This unit requires the application of skills associated with problem solving, initiative, enterprise, planning and organising in order to adapt a proactive maintenance strategy to meet seasonal or cyclical needs of the enterprise. This work is done in the context of using computer technology and also requires aspects of self-management and learning to ensure improvement of own performance.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MSS405081A Develop a proactive maintenance strategy

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Interpret proactive maintenance strategy	1.1	Analyse proactive maintenance strategy
		1.2	Identify areas which may conflict with cyclical requirements
		1.3	Identify critical conditions which must be met in order to maintain plant reliability until season end
		1.4	Compile cycle requirements for proactive maintenance strategy
2	Identify cyclical requirements of the process	2.1	Establish when the season finishes and the expected cycle duration
		2.2	Identify plant items and maintenance activities which production imperatives dictate can only be completed after season end
		2.3	Identify critical conditions which must be met in order to maintain plant reliability until season end
		2.4	Compile cycle requirements for proactive maintenance strategy

- | | | | |
|---|--|-----|--|
| 3 | Identify maintenance requirements of ancillary equipment | 3.1 | Identify proactive maintenance requirements of ancillary equipment |
| | | 3.2 | Identify maintenance which can only be done at season end |
| | | 3.3 | Compile ancillary equipment requirements for proactive maintenance strategy |
| 4 | Identify maintenance requirements during season | 4.1 | Identify critical maintenance activities which must be done during season |
| | | 4.2 | Negotiate conflicts with seasonal or cyclical processing requirements |
| | | 4.3 | Compile proactive maintenance strategy requirements during season |
| 5 | Adapt proactive maintenance strategy | 5.1 | Compare identified requirements to the proactive maintenance strategy |
| | | 5.2 | Negotiate a proactive maintenance strategy which meets these requirements |
| | | 5.3 | Involve team members in relating identified problems and opportunities for improvement to the maintenance strategy, and involve them in developing any required changes to ensure awareness, learning and commitment |
| | | 5.4 | Monitor the implementation of the strategy to ensure the identified requirements are met |
| | | 5.5 | Make required adjustments and arrange review schedule |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- considering the impact of seasonal and cyclical production requirements on equipment availability requirements
- prioritising maintenance activities critical to production
- communicating with others using a variety of media and techniques
- adapting personal communication strategy to different levels of literacy and numeracy in target individuals and groups
- working in a team
- analysing quantitative and qualitative information to determine proactive maintenance strategy options
- solving problems to root cause
- applying basic arithmetic and statistical techniques
- planning complex strategies, including consideration of timelines, resources, benefit/cost, implementation requirements, and monitoring and adjustment considerations
- reading and interpreting engineering specifications, drawings and charts
- using information system terminals and computers
- prioritising options, including reasons and recommendations
- recording data

Required knowledge

Required knowledge includes:

- processing equipment and products of the organisation
- start-up, shutdown and isolation considerations for the organisation
- skills required by operators and maintenance personnel to achieve effective proactive maintenance strategy implementation
- characteristics and strengths of different types of strategies, techniques and tools, such as:
 - total productive maintenance (TPM)
 - reliability centred maintenance (RCM)
 - mean time between failure (MTBF)
 - failure mode effects analysis (FMEA)
 - condition monitoring
 - root cause analysis (RCA)

- holistic costs of different strategies combining cost of maintenance with costs of lost production, sales, and so on, as relevant to the organisation
- business goals sufficient to match the strategy to the business needs
- strategic thinking and its application to proactive maintenance
- principles of process equipment and how to improve its reliability
- resources required and how to obtain them

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • analyse the equipment availability requirements of a seasonal or cyclical operation • consider a variety of proactive maintenance strategies for suitability to a seasonal or cyclical operation • consult operators, maintenance, management and other stakeholders in decisions on proactive maintenance strategies • monitor the implementation of selected proactive maintenance strategies and make required adjustments.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p>

	<p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<p>Guidance information for assessment</p>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Competitive systems and practices</p>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems
---	--

	<ul style="list-style-type: none"> • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
<p>Critical conditions</p>	<p>Critical conditions are those factors which must be undertaken or determined in order to maintain plant reliability during processing season. These may include:</p> <ul style="list-style-type: none"> • maximum load factors • lubrication schedules • correct operating temperatures • cleaning and waste removal schedules • equipment inspection and test schedules • development of standard operating procedures and training of operators
<p>Ancillary equipment</p>	<p>Ancillary equipment includes other plant, such as:</p> <ul style="list-style-type: none"> • boilers • utilities • plants • waste treatment and hazard control equipment (e.g. fire ring mains, fire monitors, steam curtains, gas (or other loss of containment) monitors, blast protection and flare stacks)

TPM	<p>TPM refers to:</p> <ul style="list-style-type: none"> • an application of total quality management to maintenance with the intention of increasing reliability, getting it right first time and increasing OEE
RCM	<p>RCM includes:</p> <ul style="list-style-type: none"> • moving maintenance from reactive, or even planned/programmed towards a focus on uptime and OEE
RCA	<p>RCA is a structured problem solving technique. Typically there are many possible causes of any problem. Eliminating some will have no impact, others will ameliorate the problem. However, elimination of the root cause will eliminate the problem. There should only be one root cause for any problem and so the analysis should continue until this one cause is found. Elimination of the root cause permanently eliminates the problem.</p>
MBTF	<p>MBTF is one key measure of the effectiveness of a maintenance procedure, and is an indicator as to whether root causes are being found and resolved. If MBTF is reducing, then it is an indicator that the maintenance regime is failing.</p>
FMEA	<p>FMEA is a systematic approach that identifies potential failure modes in a system, product, or operations/assembly operation caused by either design or operations/assembly process deficiencies. It also identifies critical or significant design or process characteristics that require special controls to prevent or detect failure modes. FMEA is a tool used to prevent problems from occurring. Some industry sectors have highly adapted forms of FMEA and may practice traditional FMEA in say their routine maintenance while using another technique, such as Hazard and Operability Studies (HAZOP) for design and modification.</p>
Uptime	<p>Uptime refers to:</p> <ul style="list-style-type: none"> • the overall availability of the plant (it is the inverse of downtime) or the unavailability of the plant. Ideal uptime is 100%
OEE	<p>OEE is the combination of the main factors causing loss of productive capacity from equipment/plant and is where:</p>

	<p><i>OEE = availability x performance x quality rate</i></p> <ul style="list-style-type: none"> • availability takes into account losses due to breakdown, set-up and adjustments • performance takes into account losses due to minor stoppages, reduced speed and idling • quality rate takes into account losses due to rejects, reworks and start-up waste
Condition monitoring	<p>Condition monitoring involves often quite sophisticated monitoring of equipment, including such things as:</p> <ul style="list-style-type: none"> • vibration monitoring • instrumental analysis of lubricating oil, and so on, to determine the current state of the equipment, monitor the change in this condition and predict when it needs servicing/maintenance to maintain reliability
HAZOP	<p>HAZOP is a form of FMEA which has been practiced by the process industries for over 30 years and examines the implications of changes in process conditions to process stability.</p>

MSS407001A Prepare for and implement change

Modification History

New unit, superseding MSACMG701A Prepare for and implement change - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to establish the preconditions for the implementation of a change, such as a 'step change' or a change resulting from a problem solving exercise, such as a kaizen blitz. The unit can be applied to subsections of an organisation, such as a team, area or department, or a small or medium sized enterprise (SME).

Application of the Unit

This unit is intended for team leaders and people with a similar sphere of influence/scope of authority and responsibility. It applies to individuals who are already familiar with change leadership in a competitive systems and practices environment through either previous study or industry experience. Where this is not the case, MSS403010A Facilitate change in an organisation implementing competitive systems and practices, may be completed to supply the necessary skills.

Skills covered by this unit are applied in an organisation after a desired change has already been identified. This unit may also be applied in service organisations applying competitive systems and practices principles.

Licensing/Regulatory Information

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---|-----|---|
| 1 | Define the change | 1.1 | Determine the purpose of the change |
| | | 1.2 | Identify key change project personnel |
| | | 1.3 | Record the current state that the change is addressing |
| | | 1.4 | Develop a consensus view of the intended future state, including indicators of a successful change |
| | | 1.5 | Develop an agreed statement of the solution |
| | | 1.6 | Identify the health, safety and environment (HSE) impacts of the change |
| | | 1.7 | Determine the scope of the change project, including taking into account the impact of the solution on any codes of practice, standards, contracts, commercial or industrial agreements |
| | | 1.8 | Obtain sign-off from key change project personnel |
| 2 | Identify personnel required to implement the change and their roles | 2.1 | Develop a high level change network map |
| | | 2.2 | Identify employees, suppliers or customers who may be required to implement the change |
| | | 2.3 | Identify other demands on these people during the change |
| | | 2.4 | Investigate priorities, synergies and conflicts |
| | | 2.5 | Take appropriate action to resolve conflicts |

- | | | |
|---|--|---|
| 3 | Assess and manage the change-related risks | 3.1 Identify organisational capacity for the change, including available resources and ability to absorb any disruption during the change |
| | | 3.2 Clarify specific risk dimensions for this change |
| | | 3.3 Develop appropriate transition approach |
| 4 | Build high level change plans | 4.1 Develop high level involvement plan |
| | | 4.2 Develop high level communication plan to all stakeholders |
| | | 4.3 Develop high level competency development plan for all implementers |
| | | 4.4 Develop high level alignment plan |
| 5 | Implement and sustain the change | 5.1 Implement change plans |
| | | 5.2 Check change objectives have been met |
| | | 5.3 Transfer ownership of post-change operations from change agents, where relevant |
| | | 5.4 Ensure support structures are in place |
| | | 5.5 Check alignments have been obtained |
| | | 5.6 Check competencies have been developed and will be maintained |
| | | 5.7 Ensure base line is defined for continuous improvement |
| | | 5.8 Review project and capture learning from the project |
| | | 5.9 Take action to sustain improvement by standardising |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- undertaking self-directed problem solving and decision-making
- communicating across all levels in an organisation
- presenting to others the benefits of change
- initiating, planning and executing change across broad and specialised contexts
- developing strategies to counter resistance to change
- adjusting change strategies on the basis of review findings and feedback

Required knowledge

Required knowledge includes:

- competitive systems and practices principles, including:
 - value stream mapping
 - 5S
 - Just in Time (JIT)
 - mistake proofing
 - process mapping
 - establishing customer pull
 - kaizen and kaizen blitz
 - setting of key performance indicators (KPIs)/metrics
 - identification and elimination of waste (muda)
- change management
- workplace strategy and vision
- methods of determining competency gaps in team members
- project planning and management

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

MSS407002A Review operations practice tools and techniques

Modification History

New unit, superseding MSACMG702A Review manufacturing practice tools and techniques - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to apply continuous improvement to the use of competitive systems and practices tools and techniques, that is, facilitating the right use of the right tool at the right time and reviewing its application.

Application of the Unit

This unit is intended for team leaders and people with a similar sphere of influence and scope of authority and responsibility. It covers the reviewing of competitive tools used by an organisation which has already embarked on a competitive systems and practices path and is driven by the pull of its customers.

The unit includes checking that the relevant competitive systems and practices practice tools are being consistently and correctly applied across the entire organisation to enhance customer and organisation value. It also includes reviewing the processes used to identify when additional or different competitive systems and practices tools should be applied.

This unit applies to individuals who have a broad knowledge of all major competitive tools with in-depth application knowledge of several tools which are relevant to the organisation and familiarity with a define, measure, analyse, improve, control (DMAIC) approach.

This unit may also be applied to service organisations applying competitive systems and practices principles.

Licensing/Regulatory Information

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Review the use of competitive systems and practices tools	1.1	Identify which competitive tools are being used in the work area
		1.2	Define the outcomes expected from each tool
		1.3	Observe and measure the actual outcomes being achieved
		1.4	Identify gaps between actual outcomes and planned outcomes
		1.5	Determine if the tools are being used as intended
		1.6	Review tool use and determine if the most appropriate tool is being used
		1.7	Audit health, safety and environment (HSE) impacts from the use of tools
		1.8	Identify any system/process issues impeding the tools delivering their expected outcomes
		1.9	Identify any gaps between tool capability and customer benefit requirements
2	Recommend changes to the use of competitive	2.1	Define required further improvements identified
		2.2	Prioritise required further improvements

- systems and practices tools
 - 2.3 Identify gaps inhibiting tool use
 - 2.4 Recommend system and process changes, as required, to improve tool use
 - 2.5 Recommend alternative or additional tools, as required, to achieve organisation requirements
 - 2.6 Obtain required authorisations for changes

- 3 Facilitate the better use of competitive systems and practices tools
 - 3.1 Facilitate training or other resources needed, as required, to improve tool use
 - 3.2 Facilitate system and process changes, as required, to improve tool use
 - 3.3 Facilitate the introduction and use of new tools, as required
 - 3.4 Initiate procedures for sustaining the changes

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- analysing organisation processes and products and match to appropriate competitive systems and practices tools
- undertaking self-directed problem solving and decision-making
- analysing current state/situation
- defining improvement outcomes expected in own area of responsibility from the implementation of competitive systems and practices tools
- communicating across all levels in an organisation
- analysing occupational health and safety (OHS) impacts from implementation of competitive systems and practices tools
- preparing reports and recommendations in regards to implementation of competitive systems and practices tools
- measuring improvement outcomes

Required knowledge

Required knowledge includes:

- competitive systems and practices tools, including:
 - value stream mapping
 - 5S
 - Just in Time (JIT)
 - mistake proofing
 - process mapping
 - establishing customer pull
 - kaizen and kaizen blitz
 - setting of key performance indicators/metrics
- identification and elimination of waste (muda) organisation processes and products applications and limitations of different competitive systems and practices tools
- typical benefits for customers from implementation of competitive systems and practices tools
- DMAIC process applied to competitive systems and practices tool use
- approvals and delegations within the organisation
- procedures, including processes for updating and drafting of procedures

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • critically review the use of competitive tools • take a DMAIC approach • compare actual outcomes to planned outcomes • discriminate between the causes of suboptimal performance • recommend appropriate changes to tools used, tool usage and/or tool implementation.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues

	<p>(third-party reports)</p> <ul style="list-style-type: none"> • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams
--	---

	<ul style="list-style-type: none"> • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Review tool use	<p>Review of tool use includes:</p> <ul style="list-style-type: none"> • identifying whether a better tool could have been used and whether there is an appropriate balance between daily continuous improvement and kaizen blitz
Codes of practice/standards	<p>Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used</p>
HSE	<p>All changes implemented are expected to be at least neutral, or preferably beneficial, in their impact on HSE</p>
Outcomes	<p>Outcomes include:</p> <ul style="list-style-type: none"> • the benefits both to the organisation and also the customers
Define improvements	<p>The definition of improvements may include:</p> <ul style="list-style-type: none"> • a specification of the problem/capability gap being addressed • a specification of how that problem/gap will be solved/filled • a statement of the intended benefits of the solution • a statement of the indicators of progress and success
DMAIC approach	<p>DMAIC is an approach to improving an existing business process to reduce defects. It stands for:</p> <ul style="list-style-type: none"> • define • measure • analyse

	<ul style="list-style-type: none"> • improve • control
Organisation	<p>Organisation includes:</p> <ul style="list-style-type: none"> • any part of a operations or service organisation • companies, government bodies or other body of people aiming to produce a product to service a customer
Team leader	<p>Team leader may include:</p> <ul style="list-style-type: none"> • any person who may have either a permanent or an ad hoc role in facilitating the function of a team in a workplace
Gaps inhibiting tool use	<p>Gaps inhibiting tool use may include:</p> <ul style="list-style-type: none"> • competency gap of employees in own or other value stream organisation • lack of management or employee support • lack of financial or other resources • inadequate data
<ul style="list-style-type: none"> • Sustaining improvement 	<p>Improvement may be sustained by including it in:</p> <ul style="list-style-type: none"> • standard procedures and work instructions • standard practice • other relevant documents and practices

MSS407003A Analyse process changes

Modification History

New unit, superseding MSACMG703A Analyse process changes - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to quantitatively analyse past changes made in an organisation's the operations, systems, process or environment to ensure the quantum of expected change has been achieved and that gains are maintained and are used as a basis for further gains.

The unit includes statistical and other mathematical analysis of data, methods for capturing data on implemented changes (quantitative and qualitative) and producing useful information from this data. It includes consultation with stakeholders both for data validation and consensus decision-making for future improvements.

Application of the Unit

This unit applies to team leaders, technical experts and people with a similar sphere of influence/scope of authority and responsibility who are already have a knowledge of statistics used in managing operations and of process capability improvement and some knowledge of factorial design, the selection and analysis of appropriate metrics, and the discrimination between valid and invalid interpretations of data. Where this is not the case *MSS404050A Undertake process capability improvements* and *MSS404052A Apply statistics to operational processes* may be completed to supply the necessary statistical skills.

If this unit is being applied to a complex change process or a complex operations process, it may be an advantage to have completed *MSS405052A Design an experiment* before completing this unit. Where this unit is being applied in a six sigma environment then knowledge and skill in six sigma techniques may also be an advantage. *MSS405053A Manage application of six sigma for process control and improvement* can be completed to supply these skills.

The unit applies to reviews of both intended and unintended consequences of change and the effectiveness of the implementation of the change. This unit is not intended to be applied to a technical or engineering review of a major capital expenditure or similar.

This unit takes a largely quantitative approach to the review. For skills associated with a more qualitative review refer to *MSS407005A Undertake a qualitative review of a process change*.

This unit may also be applied to service organisations applying competitive systems and practices principles.

Licensing/Regulatory Information

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|------------------|------|---|
| 1 | Analyse a change | 1.1 | Identify changes which have occurred |
| | | 1.2 | Select a change or group of related changes to analyse |
| | | 1.3 | Determine the initiation of the selected change |
| | | 1.4 | Identify relevant metrics and predicted values for these metrics |
| | | 1.5 | Gather data for these metrics prior to the change |
| | | 1.6 | Gather data and information on the implementation of the change |
| | | 1.7 | Gather data for these metrics after the change |
| | | 1.8 | Survey all key metrics and identify any where variations may correlate with the change being analysed |
| | | 1.9 | Discuss results of change with key stakeholders and identify other possible (qualitative or quantitative) results of the change |
| | | 1.10 | Analyse this data to determine the results of the change |

- 2 Review results of change with stakeholders
 - 2.1 Identify trends over time in all relevant metrics
 - 2.2 Analyse correlated metrics to determine causal relationship
 - 2.3 Audit health, safety and environment (HSE) impacts as a result of the change
 - 2.4 Present information in a form understandable by stakeholders
 - 2.5 Discuss analysed information with relevant stakeholders
 - 2.6 Modify information based on stakeholder input, as required
 - 2.7 Develop a consensus view of the result of the change which is supported by the information available
 - 2.8 Validate the consensus view with stakeholders

- 3 Identify future improvements
 - 3.1 Discuss lessons learned from the change with stakeholders
 - 3.2 Capture key knowledge in accordance with systems and procedures
 - 3.3 Identify future improvements in collaboration with team members
 - 3.4 Validate identified changes with stakeholders
 - 3.5 Obtain sign off from process/system owner
 - 3.6 Start the process for implementing future improvements
 - 3.7 Check that the planned improvements are occurring
 - 3.8 Take action to sustain improvement by standardising

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- researching past performance of plant, operations, products and procedures, including metrics used
- identifying trends, causal relationships and correlations in metrics
- communicating and explaining quantitative data with others across a range of numeracy and literacy levels
- analysing views and reasons put forward by others on past performance and relating to evidence
- analysing views and reasons put forward by others for future changes and improvements and form recommendations
- identifying key HSE strategies and risks for area of responsibility and identifying sources of expert assistance
- preparing submissions and presenting case for future changes

Required knowledge

Required knowledge includes:

- competitive systems and practices principles, processes and techniques
- organisational goals, products and processes
- processes and procedures for continuous improvement in the workplace
- statistical process control (SPC) and principles
- methods of determining the impact of a change using quantitative analysis of process data, including advanced statistical/mathematical analysis and basic qualitative techniques
- organisation metrics
- sources of data (actual and possible) within the organisation and the value stream
- range of typical metrics, their applications and limitations

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • analyse process changes • identify changes • gather data and information over a period and range that will provide a valid basis for analysis • select and use appropriate data analysis tools • present information in a suitable form • obtain a consensus view of the results of the change • determine the lessons to be learned and future improvements to be undertaken.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p>

	Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts
--	--

	<ul style="list-style-type: none"> • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Codes of practice/standards	Where changes include areas covered by industry codes of practice, and/or Australian/international standards, the latest version must be used
Gather prior data	Where all suitable data was not collected prior to the change a suitable proxy for the data will be needed
HSE	All changes implemented are expected to be at least neutral, or preferably beneficial, in their impact on HSE
Change	<p>Changes may:</p> <ul style="list-style-type: none"> • be to plant, operations, products, procedures or practice • arise from continuous improvement (or an improvement event/project) or implementing new products, technology or systems • may have been intended to make an improvement or to implement new products, technology or systems • include the implementation of a change <p>Changes do not include an engineering review of a major capital expenditure or similar review</p>
Initiation of change	Changes need to be identified as either deliberately or not deliberately initiated. Where a change was not deliberately initiated then the causal factors for the change need to be identified
Correlated metrics	<p>Correlated metrics include:</p> <ul style="list-style-type: none"> • any metric which appears to show a chronological correlation with the change being analysed. These metrics need to be examined to determine if the change has a causal relationship or is simply coincidental
Presentation of information	<p>Information may be presented:</p> <ul style="list-style-type: none"> • in appropriate visual forms (e.g. graphs, charts and

	<p>noticeboards</p> <ul style="list-style-type: none"> verbally or other forms able to be understood and used by stakeholders
Stakeholders	<p>Stakeholders may include:</p> <ul style="list-style-type: none"> work team members value stream members managers
Results of change	<p>The change results may include:</p> <ul style="list-style-type: none"> an initial improvement followed by a return to previous performance continued improvement continued detriment or other variations over time
Improvements	<p>Improvements may:</p> <ul style="list-style-type: none"> be to operations, process, plant, procedures or practice include changes to ensure positive benefits are maintained
Sustaining improvement	<p>Improvement may be sustained by including it in:</p> <ul style="list-style-type: none"> standard procedures and work instructions standard practice other relevant documents and practices
Team leader	<p>Team leader may include:</p> <ul style="list-style-type: none"> any person who may have either a permanent or an ad hoc role in facilitating the function of a team in a workplace

MSS407004A Facilitate improvements in the internal value stream

Modification History

New unit, superseding MSACMG704A Facilitate improvements in the internal value chain - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to deal with internal value stream members in order to improve the overall effectiveness of the value stream, so delivering greater value to the customer. This unit applies to improvement practices which a person might have used within their own team or work area to other teams or work areas within the value stream and covers areas where value stream issues impact on the overall ability of the organisation to continue to improve and offer better value to the customers.

Application of the Unit

This unit applies to team leaders or people in equivalent positions who have contact with internal value stream members outside their own team and who are already familiar with competitive systems and practices, formal problem solving and root cause analysis, leading change, and reducing costs. Where this is not the case the following units can be completed to supply the necessary skills:

- MSS402080A Undertake root cause analysis
- MSS403001A *Implement competitive systems and practices*
- MSS403011A *Facilitate implementation of competitive systems and practices*
- MSS403030A *Improve cost factors in work practices.*

The unit applies to 'gate-to-gate' value streams. For skills associated with a source to destination value streams refer to *MSS407009A Facilitate improvements in the external value stream*.

This unit does not apply to mapping or managing value streams (refer to *MSS405002A Analyse and map a value stream* and *MSS405003A Manage a value stream*). Where previous improvements need to be evaluated refer to *MSS407005A Undertake a qualitative review of a process change* and *MSS407003A Analyse process changes*.

This unit may also be applied to service organisations applying competitive systems and practices principles

Licensing/Regulatory Information

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Identify opportunities for continued improvement	1.1	Identify past improvements which have been implemented but have not delivered intended benefits
		1.2	Identify suggested improvements which have not yet been implemented
		1.3	Discuss and identify with team members new improvement opportunities
		1.4	Determine which of these improvements have been or may be restricted by other value stream members
		1.5	Suggest possible factors causing this restriction
		1.6	Select possible improvements for further study
2	Study restrictions to further improvement with value stream member	2.1	Arrange meeting with suitable representatives of the value stream member
		2.2	Outline the opportunities for improvement and any current or anticipated restrictions
		2.3	Work with value stream representatives to determine

- root cause of restrictions
- 2.4 Work with value stream member to identify possible solutions to problem
- 2.5 Define outcomes from any proposed changes
- 3 Develop a consensus approach to implementing improvements
 - 3.1 Determine benefits/costs to value stream member from the proposed changes
 - 3.2 Determine benefits/costs to own process from the proposed changes
 - 3.3 Decide whether the proposed improvements will result in an valuable improvement to the end customer
 - 3.4 Determine health, safety and environment (HSE) impacts as a result of the change
 - 3.5 Agree on proposed change/program of changes with all key stakeholders
- 4 Obtain required approvals
 - 4.1 Draft a formal proposal for the proposed changes
 - 4.2 Submit proposal for all required approvals from stakeholders
 - 4.3 Modify proposal, as required, in liaison with all key stakeholders
 - 4.4 Obtain sign-off from process/system owner
- 5 Measure and communicate gains
 - 5.1 Agree indicators/metrics of success of proposed changes
 - 5.2 Make arrangements to collect the necessary data
 - 5.3 Make arrangements for the data to be analysed and presented in an agreed format to the agreed stakeholders
 - 5.4 Agree the communication plan
 - 5.5 Liaise with stakeholders to implement changes as agreed and approved

- 6 Review change
 - 6.1 Analyse results of change
 - 6.2 Identify areas which have not met predicted outcome (positive or negative)
 - 6.3 Determine cause of target not being met
 - 6.4 Take appropriate action to improve the value stream
 - 6.5 Take action to sustain improvement by standardising

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- analysing proposed and past changes to operations, products and processes within own team and the internal value stream to determine if change adds or has added value to the customer
- making significant, high level, independent judgements on required improvements in the internal value stream
- demonstrating responsibility and broad-ranging accountability for decisions
- communicating and explaining quantitative and qualitative concepts and data with others across a range of numeracy and literacy levels
- analysing views and reasons put forward by others on past performance of the internal value stream and relating to metrics and other evidence
- prioritising improvement proposals and actions and justifying priorities to others
- negotiating with others using analysis of information, including past and proposed metrics and concepts to achieve a consensus position
- analysing restrictions and non-conformances to root cause
- standardising team-level processes

Required knowledge

Required knowledge includes:

- competitive systems and practices principles, processes and techniques
- organisational goals, products and processes
- processes and procedures for continuous improvement in the workplace
- processes and procedures used in members of the internal value stream
- value stream mapping and analysis techniques
- approval processes within own organisation
- benefit/cost analysis methods
- methods of determining the impact of a change
- communication methods across a variety of media and formats, including preparation of formal proposals and negotiations
- customer perception of value

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • facilitate improvements in the value stream • identify value stream restrictions to further improvement • develop consensus solutions • jointly implement and monitor solutions with others, including team members and value stream members.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will</p>

	<p>be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping
--	---

	<ul style="list-style-type: none"> • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Opportunities for continuous improvement	<p>Opportunities for continuous improvement may be:</p> <ul style="list-style-type: none"> • beyond those arising just from within the team and will usually be within the site (gate-to-gate) or at least the organisation
Codes of practice/standards	<p>Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used</p>
HSE	<p>All changes implemented are expected to be at least neutral, or preferably beneficial, in their impact on HSE</p>
Change	<p>Changes may:</p> <ul style="list-style-type: none"> • be to plant, procedures or practice • arise from continuous improvement (or an improvement event/project) • may have been intended to make an improvement or to implement new products, technology or systems • include the implementation of a change <p>Changes do not include an engineering review of a major capital expenditure or similar review</p>
Presentation of information	<p>Information may be presented:</p> <ul style="list-style-type: none"> • in terms of graphs or other appropriate visual forms
Stakeholders	<p>Stakeholders may include:</p> <ul style="list-style-type: none"> • work team members • value stream members
Results of change	<p>The change may have results in:</p> <ul style="list-style-type: none"> • an initial improvement followed by a return to previous performance • a change which has resulted in continued

	<p>improvement</p> <ul style="list-style-type: none"> continued detriment or other variations over time
Improvements	<p>Improvements may:</p> <ul style="list-style-type: none"> be to process, plant, procedures or practice include changes to ensure positive benefits are maintained
Changes which have not met target	<p>Changes which have not met target may include:</p> <ul style="list-style-type: none"> those that fall short and those that exceed expectations <p>Appropriate action is to remove restrictions on those items which fell short, and make standard/further implement those which exceeded expectation</p>
Sustaining improvement	<p>Improvement may be sustained by including it in:</p> <ul style="list-style-type: none"> standard procedures and work instructions standard practice other relevant documents and practices
<ul style="list-style-type: none"> Team leader 	<p>Team leader may include:</p> <ul style="list-style-type: none"> any person who may have either a permanent or an ad hoc role in facilitating the function of a team in a workplace

MSS407005A Undertake a qualitative review of a process change

Modification History

New unit, superseding MSACMG705A Undertake a qualitative review of a process change - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to review changes made in the operations systems, process or environment to ensure they result in improvement, that gains are maintained and that gains are used as a basis for further gains. The unit includes consensus decision-making and methods for capturing information on implemented changes, including quantitative and qualitative reports and informal talking to people to make sure gains are maintained and ways are found to build on them.

Application of the Unit

This unit applies intended for team leaders and people with a similar sphere of influence and scope of authority and responsibility and who have knowledge of competitive systems and practices, continuous improvement and locking in improvements. Where this is not the case the following units can be completed to supply the necessary skills:

- *MSS403001A Implement competitive systems and practices*
- *MSS403002A Ensure process improvements are sustained*
- *MSS403041A Facilitate breakthrough improvements*
- *MSS403051A Mistake proof a production process.*

This unit covers the skills required for a qualitative approach to the review of a process change. This unit reviews both intended and unintended consequences of change and the effectiveness of the implementation of the change. For a more quantitative review of a process change refer to *MSS407003A Analyse process changes*.

This unit is not intended to be applied to a technical or engineering review of a major capital expenditure or similar review.

While this unit covers a qualitative review, some basic mathematics may be required although not sophisticated statistical or mathematical analysis.

This unit may also be applied to service organisations applying competitive systems and practices principles.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|----------------|-----|--|
| 1 | Study a change | 1.1 | Identify changes which have occurred |
| | | 1.2 | Select a change or group of related changes to analyse |
| | | 1.3 | Determine the initiation of the selected change |
| | | 1.4 | Gather information on the situation within the organisation and along the value stream prior to the change |
| | | 1.5 | Gather information on the implementation of the change |
| | | 1.6 | Gather information on the intended benefits of the change |
| | | 1.7 | Gather information on the situation within the organisation and along the value stream after the change |
| | | 1.8 | Determine whether results of change have been constant or have changed over time |
| | | 1.9 | Collate and prepare gathered information for distribution |

- 2 Agree results of change with stakeholders
 - 2.1 Present and discuss collected information with relevant stakeholders
 - 2.2 Modify collected information, as required, based on stakeholder input
 - 2.3 Develop a consensus view of the result of the change which is supported by the information available
 - 2.4 Validate the consensus view with stakeholders

- 3 Identify future improvements
 - 3.1 Discuss lessons learned from the reviewed change with stakeholders
 - 3.2 Capture key knowledge from the review of the change in accordance with systems and procedures
 - 3.3 Identify future improvements in collaboration with team members
 - 3.4 Validate identified future improvements with stakeholders
 - 3.5 Obtain sign-off from process/system owner
 - 3.6 Start the process for implementing future improvements
 - 3.7 Check that planned improvements have occurred
 - 3.8 Take action to sustain improvement by standardising

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- determining and using qualitative research techniques appropriate for area of responsibility and relevant change process, including:
 - surveys
 - interviews
 - walking around (gemba walk)
 - structured and unstructured interviews
 - formal and informal interviews
 - review of organisation records
 - review of process 'history', such as might be obtained from a control panel or other process records
- undertaking qualitative research on past performance of plant, operations, products and procedures
- identifying trends and causal relationships and evidence offered by people consulted
- communicating and explaining results of quantitative research with others across a range of numeracy and literacy levels
- analysing views and reasons put forward by others on past performance and relating to evidence
- analysing views and reasons put forward by others for future changes and improvements and forming recommendations
- identifying key HSE strategies and risks for area of responsibility and identifying sources of expert assistance
- preparing recommendations, submissions and presenting a case for future changes

Required knowledge

Required knowledge includes:

- competitive systems and practices principles, processes and techniques
- organisational goals, products and processes
- qualitative research techniques, including:
 - surveys
 - interviews
 - walking around (gemba walk)

- structured and unstructured interviews
- formal and informal interviews
- review of organisation records
- review of process ‘history’ such as might be obtained from a control panel or other process records
- workplace continuous improvement processes and procedures
- variety of communication techniques, including:
 - face-to-face formal and informal interviews
 - surveys
 - telephone interviews
 - formal reports
 - presentations

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • determine and use appropriate qualitative research techniques • identify changes appropriate for qualitative research • undertake a qualitative review of a process change • gather information and undertake analyses over appropriate periods and ranges that will provide a valid basis for conclusions and recommendations • obtain a consensus view of the results of the change • determine the lessons to be learned and future improvements to be undertaken.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee

	<ul style="list-style-type: none"> documentation and information in relation to production, waste, overheads and hazard control/management reports from supervisors/managers case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> demonstration in the workplace workplace projects suitable simulation case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) targeted questioning reports from supervisors, peers and colleagues (third-party reports) portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> lean operations
--	---

	<ul style="list-style-type: none"> • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Codes of practice/standards	Where changes include areas covered by industry codes of practice, and/or Australian/international standards, the latest version must be used
HSE	All changes implemented are expected to be at least neutral, or preferably beneficial, in their impact on HSE
Change	<p>Changes may:</p> <ul style="list-style-type: none"> • be to equipment, operations, procedures or practice • arise from continuous improvement (or an improvement event or project) • may have been intended to make an improvement or

	<p>to implement new products, technology or systems</p> <ul style="list-style-type: none"> include the implementation of a change <p>Changes do not include an engineering or technical review of a major capital expenditure or similar review</p>
Initiation of change	<p>A change may have been deliberately initiated to improve capability, deal with a problem, or a similar intended change. Where a change was not deliberately initiated then the causal factors for the change need to be identified and may include:</p> <ul style="list-style-type: none"> a drift in efficiency or quality a change in materials, rate of supply, quality of supply, or, components which was being compensated for a change in personnel which brought different practices
Stakeholders	<p>Stakeholders may include:</p> <ul style="list-style-type: none"> work team members value stream members
Qualitative research	<p>Qualitative research aims to gather information that may not be apparent from quantitative analysis techniques including the why and how of events relating to the change process. Examples of information gathered include:</p> <ul style="list-style-type: none"> employee support for a change before and after the change other stakeholder support understanding of employees of the intended benefits and the situation after the change customer support for change testing of possible contingencies and scenarios in the change process, including non-conformances (e.g. impact of breakdowns and absences)
Prior situation	<p>The prior situation would include an analysis of culture and value alignment between:</p> <ul style="list-style-type: none"> downstream and upstream members of the value stream and the organisation management and employees skills required versus skills possessed process capability process and plant/equipment performance

Intended benefits	Intended benefits include impacts on: <ul style="list-style-type: none"> • customer perceived value • stakeholders upstream and downstream • organisation personnel • process capability • plant/equipment reliability/performance
Results of change	The change may have resulted in: <ul style="list-style-type: none"> • an initial improvement followed by a return to previous performance • a change which has resulted in continued improvement • continued detriment or other variations over time Results of change should include HSE changes
Improvements	Improvements may: <ul style="list-style-type: none"> • be to process, plant, procedures or practice • include changes to ensure positive benefits are maintained
Sustaining improvement	Improvement may be sustained by including it in: <ul style="list-style-type: none"> • standard procedures and work instructions • standard practice • other relevant documents and practices
• Team leader	Team leader may include: <ul style="list-style-type: none"> • any person who may have either a permanent or an ad hoc role in facilitating the function of a team in a workplace

MSS407006A Build relationships between teams in an operations environment

Modification History

New unit, superseding MSACMG706A Build relationships between teams in a manufacturing environment - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to develop an attitude of respect for individuals in teams and trust between individuals, teams, supervisors and management in order to develop a suitable culture for implementing and sustaining competitive systems and practices initiatives.

Application of the Unit

This unit is intended for team leaders and people with a similar sphere of influence/scope of authority and responsibility. It builds on more general competitive systems and practices graduate units and specifically addresses inter-team issues. The unit also encompasses intra-team issues where these are a barrier. The unit envisages a specialist facilitation role in assisting with implementing an organisation competitive systems and practices culture. It is also about developing a 'whole of value stream' view so that there is not competition between individuals or teams, but rather cooperation to achieve organisation and value stream goals with competition being directed towards other organisations competing in the marketplace.

This unit may also be applied to service organisations applying competitive systems and practices principles.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Identify organisational relationships	1.1	Map actual and intended process flows within and between teams
		1.2	Map actual and intended communication/information/data flows within and between teams
		1.3	Identify and map other interactions (actual and intended) within and between teams
		1.4	Determine the consequences in terms of customer benefit of intended flows/interactions
		1.5	Determine the consequences in terms of customer benefit of the actual flows/interactions
2	Foster cooperation within team	2.1	Present relationships information to team members
		2.2	Discuss areas where greater cooperation would yield benefits
		2.3	Agree on ways to achieve greater cooperation in these areas
		2.4	Facilitate team implementation of agreed changes

- | | | | |
|---|--|-----|--|
| 3 | Foster cooperation between teams | 3.1 | Present relationships information to teams/team representatives |
| | | 3.2 | Discuss areas where greater cooperation would yield benefits |
| | | 3.3 | Agree on ways to achieve greater cooperation in these areas |
| | | 3.4 | Obtain any necessary approvals for proposed changes |
| | | 3.5 | Facilitate implementation by teams of agreed changes |
| | | | |
| 4 | Identify sources of tension, conflict or competition | 4.1 | Examine team and individual key performance indicators (KPIs) for sources of conflict/competition |
| | | 4.2 | Examine flows and interactions for possible sources of conflict and competition |
| | | 4.3 | Observe interactions between team members and identify tensions, conflicts and competition |
| | | 4.4 | Observe interactions between teams and identify tensions, conflicts and competition |
| | | 4.5 | Observe response to change and resistance to change |
| | | | |
| 5 | Reduce causes of tension, conflict or competition | 5.1 | Draft modified KPIs to reduce causes of conflict and competition |
| | | 5.2 | Draft modified systems causing conflicting flows and interactions |
| | | 5.3 | Facilitate discussions within and between teams to identify causes of tensions, conflicts and competition |
| | | 5.4 | Facilitate discussions to develop a consensus solution to identified causes of tensions, conflicts and competition |
| | | 5.5 | Obtain any required approvals for suggested/drafted changes |
| | | 5.6 | Facilitate the implementation of the agreed solutions |
| | | 5.7 | Take actions to ensure agreed changes become standard practice |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying competitive systems and practices techniques and tools used by downstream, upstream and support teams, including:
 - value stream mapping
 - 5S
 - Just in Time (JIT)
 - mistake proofing
 - process mapping
 - six sigma
 - establishing customer pull
 - kaizen and kaizen blitz
 - setting of KPIs/metrics
 - identification and elimination of waste (muda)
- determining value in terms of customer benefit for downstream, upstream and support teams
- determining impact on value of each team from operations of other teams
- communicating with other teams and team leaders, other employees and external representatives relevant to competitive systems and practices
- communicating using different media and format and to audiences and individuals from a variety of literacy and numeracy levels
- maximising cooperation between teams on:
 - setting of KPIs
 - solving problems to root cause
 - disruptions to flow
 - variations of flow level/volume
 - variations in quality/quantity/timeliness
 - implementing standardisation
- ensuring awareness of teams of performance requirements
- communicating sources of assistance to own and other team members

Required knowledge

Required knowledge includes:

- competitive systems and practices principles, strategies and techniques, including:
 - value stream mapping
 - 5S
 - JIT
 - mistake proofing
 - process mapping
 - six sigma
 - establishing customer pull
 - kaizen and kaizen blitz
 - setting of KPIs/metrics
 - identification and elimination of waste (muda)
- organisational goals, products and processes
- types of KPIs, their applications and limits
- approval processes within organisation
- communication methods across a variety of media and formats, including preparation of formal proposals and negotiations
- continuous improvement
- process mapping, communication and people interaction mapping
- customer perception of value

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • critically examine relationships within and between downstream, upstream and support teams and to take action to improve them • identify relationships/relationship maps • identify sources of conflict/tension • consensus development of improvement plans, including setting of KPIs • implement improvement plans and rechecking subsequent relationships.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p>

	<p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>

MSS407007A Respond to a major non-conformance

Modification History

Release 2 - Missing text in PCs reinstated

Release 1 - New unit, superseding MSACMG707A Respond to a major non-conformance - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to lead a response at a team or area level to a major non-conformance which could have severe business impacts.

The unit can be applied to subsections of an organisation, such as a team, area or department, or in the case of a small or medium sized enterprise (SME), to the whole organisation.

Application of the Unit

This unit applies to team leaders and people with a similar sphere of influence and scope of authority and responsibility and covers the skills required to respond to a situation where people, processes, equipment or systems fail to meet requirements (there is a major non-conformance) for whatever reason, and this will have significant business consequences. The non-conformance may be anywhere in the value stream, not necessarily in the team, department or area which needs to respond. Many teams, departments or areas may need to respond. However, this unit applies to the skills needed to lead a single team, department or area response.

This unit is not primarily about identification of the cause of the non-conformance but rather about skills for appropriate responses to contain the situation, including not allowing it to accelerate or cascade. It is also about skills to minimise the adverse consequences while doing what can be done at the team, department or area level to remedy the situation.

This unit does not cover the specialist skills required to contain/remediate an emergency non-conformance such as a fire or explosion. Relevant emergency management skills from other Training Packages should be accessed for these skills.

This unit may be also applied to service organisations applying competitive systems and practices principles.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Define extent and nature of non-conformance	1.1	Identify target performance prior to non-conformance
		1.2	Determine commencement and expected duration of non-conformance
		1.3	Determine impact of non-conformance on target performance
		1.4	Determine impact of non-conformance with health, safety and environment (HSE) performance
		1.5	Determine impact of non-conformance on maintenance performance
		1.6	Liaise with customers to determine minimum acceptable performance during period of non-conformance
		1.7	Define non-conformance in terms of customer requirements and target performance
2	Determine priorities and actions	2.1	Develop possible responses appropriate to the situation
		2.2	Determine possible timing of possible responses
		2.3	Identify required resources for the responses developed
		2.4	Evaluate possible responses and select or shortlist responses

- 2.5 Select responses and obtain necessary approvals
- 2.6 Organise resources, as appropriate
- 3 Identify information needs
 - 3.1 Determine the information needs of stakeholders
 - 3.2 Identify the sources of required information
 - 3.3 Arrange to collect required information
 - 3.4 Obtain authorisation to disseminate information
 - 3.5 Report information to stakeholders, as appropriate
- 4 Implement response
 - 4.1 Initiate response and establish data and information collection procedures
 - 4.2 Analyse data and other information as it comes to hand
 - 4.3 Determine progress of response to achieving required outcomes
 - 4.4 Modify response, including deployment of resources, as required, to better achieve desired outcomes
- 5 Establish plan to return to normal conformance
 - 5.1 Determine root cause of non-conformance and analyse to determine likely preventative measures
 - 5.2 Develop remedial plan to eliminate root cause
 - 5.3 Obtain sign-off from process/system owner for planned action
 - 5.4 Implement remedial plan and establish normal conformance
- 6 Conclude and review response
 - 6.1 Conduct a debrief and complete reports as required
 - 6.2 Evaluate and review response and procedures
 - 6.3 Evaluate and document effectiveness of the response function and its interaction/communication with stakeholders

- 6.4 Recommend improvements to prevent a recurrence and improve response for other non-conformances
- 6.5 Communicate reports in accordance with company procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- undertaking self-directed problem solving and decision-making
- communicating across all levels in an organisation
- identifying obvious and not obvious non-conformances based on analyses of team or area key performance indicators (KPIs)
- determining and prioritising business impacts of non-conformance based on analysis of key indicators, such as:
 - effect on error rates and defects
 - loss of or delay in supply of materials or components
 - loss or severe restriction of process capability
 - loss of transport from or to operational centre or process facility
 - unplanned increases in costs of materials or services
 - increases in the cost of finance/capital
 - sudden change in regulatory requirements
- determining and prioritising responses based on:
 - customer requirements
 - the philosophies and strategies of the organisation
 - HSE requirements
 - delivery, statutory and contractual requirements
- negotiating formally and informally in highly varied and/or highly specialised contexts and while under time constraints and pressure from others
- solving problems to root cause, including analysis of implications of root cause
- establishing HSE environment of the team or area and determine HSE impact of a non-conformance

Required knowledge

Required knowledge includes:

- the importance of standardisation in competitive systems and practices
- organisation processes and products
- customer needs as distinct from wants
- communication using a variety of media and formats methods
- sources of additional assistance and resources within the organisation

- approvals and delegations within the organisation

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • recognise extent and nature of a major non-conformance and deal effectively with a • define the impact of the non-conformance on operations and customers • develop and prioritise appropriate responses to contain the impacts of the non-conformance • implement, monitor and modify responses.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)

	<ul style="list-style-type: none"> • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen)
--	--

	<ul style="list-style-type: none"> • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Codes of practice/standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used
Major non-conformance	<p>A major non-conformance may be:</p> <ul style="list-style-type: none"> • a failure to receive a delivery • receiving a delivery which is out of specification • a failure of the transport system to make deliveries to customers or from suppliers • a problem in the process which fails to produce product or only produces non-conforming product • a major incident, such as a fire or loss of containment • a breakdown of critical plant/equipment • a commercial or legal problem which affects the ability to produce to requirements • excessive absences of key personnel due to illness or transport breakdown • a security situation preventing key personnel from performing their duties and/or deliveries being made • a major supply shortage or price increase
<ul style="list-style-type: none"> • Business impacts 	<p>Business impacts may include:</p> <ul style="list-style-type: none"> • sudden increase in defect rates • loss of supply of materials or components • loss or severe restriction of operational capability • loss of transport from process • increases in fuel energy costs

	<ul style="list-style-type: none"> • increases in the cost of finance/capital
Performance	<p>Performance includes:</p> <ul style="list-style-type: none"> • the production volume, quality, cost, HSE and similar measures as appropriate at the team level
Response	<p>Response includes all those strategies which will minimise the impact of the non-conformance on the customer and must be consistent with:</p> <ul style="list-style-type: none"> • the philosophies and strategies of the organisation • HSE requirements • delivery, statutory and contractual requirements <p>Response may include:</p> <ul style="list-style-type: none"> • supply from another source • production from other areas • agreements for reduced supply • agreements to accept different quality <p>Response duration may include:</p> <ul style="list-style-type: none"> • short term response to cover immediate situation • different long and medium term response • transition strategies where there are different strategies at different phases of the response
<ul style="list-style-type: none"> • Timing of responses 	<p>Timing of response may be controlled by the nature of the non-conformance and may include:</p> <ul style="list-style-type: none"> • implementation following initial containment/stabilisation of situation (e.g. where the non-conformance is a major incident, such as a fire or loss of containment) • immediate initiation but delayed implementation (e.g. where the non-conformance is a breakdown of critical plant/equipment which will require repair/replacement before implementation) • immediate implementation (e.g. when the non-conformance does not prevent the response from starting or there is an alternative which bypasses the non-conformance)
HSE	All changes implemented are expected to be at least neutral, or preferably beneficial, in their impact on HSE
Stakeholders	<p>Stakeholders may include:</p> <ul style="list-style-type: none"> • work team members, value stream members as well as other stakeholders and may be internal and external to the team and possibly the organisation

Team leader	Team leader may include: <ul style="list-style-type: none">• any person who may have either a permanent or an ad hoc role in facilitating the function of a team in a workplace

MSS407008A Capture learning from daily activities in a organisation

Modification History

New unit, superseding MSACMG708A Capture learning from daily activities in a manufacturing organisation - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to capture learning from the shop floor, suppliers and customers in order to contribute to a learning organisation.

Application of the Unit

This unit is intended for team leaders and people with a similar sphere of influence/scope of authority and responsibility. It applies to individuals who already have knowledge of competitive systems and practices, leading teams, analysing root cause and locking in improvements. Where this is not the case the following units may be completed to supply the necessary skills:

- MSS402080A Undertake root cause analysis
- *MSS403002A Ensure process improvements are sustained*
- *MSS403006A Facilitate implementation of competitive systems and practices*
- *MSS403013A Lead team culture improvement.*

This unit takes a largely qualitative view of information and knowledge. For a more quantitative approach of capturing and analysing data and applying the knowledge deduced from that refer to *MSS408008A Analyse data for relevance to organisational learning*. This unit may also be applied to service organisations applying competitive systems and practices principles.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---|-----|--|
| 1 | Identify potential learning opportunities | 1.1 | Identify formal and informal opportunities for feedback from normal daily activities |
| | | 1.2 | Assess feedback for potential to lead to organisational learning |
| | | 1.3 | Identify opportunities for learning from abnormal events |
| | | 1.4 | Review communications with value stream members for learning opportunities |
| 2 | Extract learning from opportunities | 2.1 | Review information gained from potential learning opportunities for relevance to performance improvement |
| | | 2.2 | Discuss potential for learning with stakeholders |
| | | 2.3 | Confirm additional knowledge/learning |
| | | 2.4 | Confirm methods for institutionalising learning/standardising |
| 3 | Capture and disseminate learning | 3.1 | Identify methods of capturing and disseminating learning |
| | | 3.2 | Obtain required authorisations from appropriate people |
| | | 3.3 | Record learning according to organisation procedures |
| | | 3.4 | Communicate learning to relevant stakeholders |
| | | 3.5 | Ensure all relevant stakeholders are able to access and apply relevant knowledge/learning |

- 4 Review use of learning
 - 4.1 Check learning is used in daily operations
 - 4.2 Review use of learning and update in organisation knowledge system
 - 4.3 Identify implications for training and procedures
 - 4.4 Recommend improvements to organisation knowledge system
 - 4.5 Confirm methods for institutionalising learning/standardising

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- undertaking self-directed problem solving and decision-making
- communicating across all levels in an organisation
- preparing reports and recommendations
- identifying and evaluating opportunities for feedback and learning, including:
 - tool box and other regular team, section and area meetings
 - ad hoc discussions/meetings with team members, sales and marketing employees, other employees, value stream members, regulators and visitors
 - interviews with employees and external organisation representatives
 - operations records which may include:
 - clip boards on the line
 - problem solving templates
 - procedures templates
 - whiteboards or other noticeboards
 - computers or terminals that allow access to data bases and other electronic records
 - maintenance records
 - quality records
 - suggestions from employees (e.g. suggestion schemes)
 - warranty and other returns
 - continuous improvement and breakthrough improvement activities (kaizen and kaizen blitz)
 - complaints from customers, employees and members of the community
 - equipment downtime/maintenance records
- selecting key information from feedback and learning opportunities and determining value for organisational learning
- analysing performance outside the normal range (good or bad) and assignable cause
- capturing learning through paper-based, electronic or other means (e.g. film and video)
- reviewing the use of learning, including analysing the cause and effect of integrating learning into current or future procedures

Required knowledge

Required knowledge includes:

- competitive systems and practices tools, including:

- value stream mapping
- 5S
- Just in Time (JIT)
- mistake proofing
- process mapping
- establishing customer pull
- kaizen and kaizen blitz
- setting of key performance indicators(KPIs)/metrics
- identification and elimination of waste (muda)
- organisational goals, strategies, operations and processes
- continuous improvement strategies and processes
- communication methods and media for a range of audiences
- root cause analysis
- expected range of performance for operations and products
- types of knowledge capture and retrieval systems and their applicability

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • recognise, extract and record learning from daily activities • make and record ongoing additions to the organisation learning systems • determine best means of communicating learning to stakeholders • integrate learning with implementation of competitive systems and practices • establish continuous improvement for the learning system.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned,

	<p>currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</p> <ul style="list-style-type: none"> • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Codes of practice/standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used
Health, safety and environment (HSE)	All changes implemented are expected to be at least neutral, or preferably beneficial, in their impact on HSE
Opportunities for feedback	<p>Opportunities for feedback include:</p> <ul style="list-style-type: none"> • tool box meetings

	<ul style="list-style-type: none"> • ad hoc discussions/meetings with team members, sales and marketing employees, other employees, value stream members, regulators and visitors • interviews • process/production records • quality records • plant equipment downtime/maintenance records
Problem recognition and resolution	<p>Problem recognition and resolution may be expected to include such approaches as:</p> <ul style="list-style-type: none"> • stopping operations or part of an operation • go and see (gemba walk in lean operations) • team/consensus problem solving • root cause analysis (RCA)
Learning	<p>Learning is something which can be passed on and is a recordable event or method which leads to change in work practices and/or process or product performance that is able to be standardised/institutionalised</p>
Record	<p>Appropriate records include systems which ensure knowledge:</p> <ul style="list-style-type: none"> • is not just retained by an individual • is available to others • survives beyond the departure of individual • has an allocated level of importance
Systems for the capture of knowledge	<p>Systems for the capture of knowledge may be:</p> <ul style="list-style-type: none"> • paper-based, electronic or other <p>They may also require knowledge of method of knowledge entry and retrieval and possibly of searching/filing/cataloguing.</p>
Stakeholders	<p>Stakeholders may include:</p> <ul style="list-style-type: none"> • work team members • value stream members • supervisors
Team leader	<p>Team leader may include:</p> <ul style="list-style-type: none"> • any person who may have either a permanent or an ad hoc role in facilitating the function of a team in a workplace

MSS407009A Facilitate improvements in the external value stream

Modification History

New unit, superseding MSACMG709A Facilitate improvements in the external value chain - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to work with value stream members to improve the overall effectiveness of the value stream, so delivering greater value to the customer. It includes other organisations within the value stream/supply chain.

Application of the Unit

This unit applies to managers and team leaders with appropriate authority and others with similar authority and responsibility for working with value stream members outside their own organisation. The value streams are referred to as 'source-to-destination' value streams. For skills associated with a 'gate-to-gate' (internal) value streams refer to *MSS407004A Facilitate improvements in the internal value stream*.

The unit includes the use of skills to resolve issues from one or more value stream members which impact on the overall ability of the value stream to continue to improve and offer better value to the customers. The improvement practices may (or may not) have used previously within their own organisation, other teams and organisations within the value stream. The unit does not cover mapping or managing value streams (refer to *MSS405002A Analyse and map a value stream* and *MSS405003A Manage a value stream*).

The unit applies to individuals who are familiar with competitive systems and practices, formal problem solving and root cause analysis (RCA), leading change and reducing costs. Where this is not the case the following units can be completed to supply the necessary skills:

- *MSS402080A Undertake root cause analysis*
- *MSS403001A Implement competitive systems and practices*
- *MSS403011A Facilitate implementation of competitive systems and practices*
- *MSS403030A Improve cost factors in work practices*.

Where previous improvements need to be evaluated refer to *MSS407005A Undertake a qualitative review of a process change* and *MSS407003A Analyse process changes*.

This unit may also be applied to service organisations applying competitive systems and practices principles.

Licensing/Regulatory Information

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--|-----|--|
| 1 | Establish scope of value stream activity | 1.1 | Identify key individuals within value stream organisations |
| | | 1.2 | Jointly identify possible areas of study |
| | | 1.3 | Agree on a protocol for undertaking value stream improvement activities |
| | | 1.4 | Confirm any special conditions of activity (e.g. confidentiality) |
| 2 | Study possible value stream improvements | 2.1 | Arrange meeting with suitable representatives of the value stream members |
| | | 2.2 | Agree on extent of current implementation of competitive systems and practices in value stream |
| | | 2.3 | Agree opportunities for improvement and any current or anticipated restrictions |
| | | 2.4 | Work with value stream representatives to determine root cause of restrictions |
| | | 2.5 | Work with value stream member to identify possible |

- solutions to problem
- 2.6 Define outcomes from any proposed changes
- 3 Develop a consensus approach to implementing improvements
- 3.1 Determine benefits/costs to each value stream member from the proposed changes
- 3.2 Decide whether the proposed improvements will result in a perceived improvement to the end customer
- 3.3 Determine health, safety and environment (HSE) impacts as a result of the change
- 3.4 Agree on proposed change/program of changes with all key stakeholders
- 4 Obtain required approvals
- 4.1 Draft a formal proposal for the proposed changes
- 4.2 Submit proposal for all required approvals from stakeholders
- 4.3 Modify proposal, as required, in liaison with all key stakeholders
- 4.4 Obtain sign off from all process/system owners
- 5 Measure and communicate gains
- 5.1 Agree indicators/metrics of success of proposed changes
- 5.2 Make arrangements to collect necessary data
- 5.3 Make arrangements for the data to be analysed and presented in an agreed format to the agreed stakeholders
- 5.4 Agree on the communication plan
- 5.5 Liaise with stakeholders to implement changes as agreed and approved
- 6 Review change
- 6.1 Analyse results of change
- 6.2 Identify areas where planned improvements have occurred
- 6.3 Take action to sustain improvement by standardising

- 6.4 Identify areas which have not met predicted outcome (positive or negative)
- 6.5 Determine cause of target not being met
- 6.6 Take appropriate action to improve the value stream

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- undertaking self-directed problem solving and decision-making
- examining possible improvements and determine costs and benefits to customers, shareholders, employees and other stakeholders
- prioritising improvements in terms of benefits to ultimate customers
- communicating across all levels in organisations
- presenting to others the benefits of change in a manner that develops consensus (win/win)
- developing strategies and metrics to monitor the implementation of improvements
- initiating, planning and executing change across broad and specialised contexts
- adjusting improvement strategies on the basis of review findings and feedback
- analysing restrictions and non-conformances in value stream to root cause

Required knowledge

Required knowledge includes:

- competitive systems and practices principles, including:
 - value stream mapping
 - 5S
 - Just in Time (JIT)
 - mistake proofing
 - process mapping
 - establishing customer pull
 - kaizen and kaizen blitz
 - setting of key performance indicators (KPIs)/metrics
 - identification and elimination of waste (muda)
- own organisation goals, operations and processes
- confidentiality and other sensitivities of value stream members
- any regulatory, issues which may be relevant to the value stream, including:
 - HSE
 - Trade Practices
 - contract and commercial Acts and regulations
- continuous improvement and the workplace improvement processes and procedures

- value stream members' processes
- value stream mapping and analysis
- approval processes within each organisation
- benefit/cost analysis methods
- methods of determining the impact of a change
- communication methods
- customer perception of benefits

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • identify competitive systems and practices techniques used by value stream members • create consensus on and facilitate improvements in the value stream. • identify value stream restrictions to further improvement and determining root cause • develop consensus solutions • jointly implement and monitor solutions.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p>

	<p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<p>Guidance information for assessment</p>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Competitive systems and practices</p>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six
---	--

	<p>sigma and three sigma</p> <ul style="list-style-type: none"> • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Opportunities for continuous improvement	Opportunities for continuous improvement may be beyond those arising just from within the organisation
Codes of practice/standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used
HSE	All changes implemented are expected to be at least neutral, or preferably beneficial, in their impact on HSE
Change	<p>Changes may:</p> <ul style="list-style-type: none"> • be to plant, procedures or practice • be to logistics, communication systems (e.g. ordering, supplying and quality certification) • include kanban/systems, SCAD) supply/resupply systems across the chain • arise from continuous improvement or an improvement event/project • have been intended to make an improvement or to implement new products, technology or systems

	<ul style="list-style-type: none"> include the implementation of a change <p>Changes do not include an engineering review of a major capital expenditure or similar review</p>
Presentation of information	<p>Information may be presented:</p> <ul style="list-style-type: none"> in terms of graphs or other appropriate visual forms
Stakeholders	<p>Stakeholders may include:</p> <ul style="list-style-type: none"> work team members value stream members
Results of change	<p>Results of change may include:</p> <ul style="list-style-type: none"> an initial improvement followed by a return to previous performance a change which has resulted in continued improvement continued detriment or other variations over time
Improvements	<p>Improvements may:</p> <p>be to process, plant, procedures or practice</p> <ul style="list-style-type: none"> include changes to ensure positive benefits are maintained
Changes which have not met target	<p>Changes which have not met target may include:</p> <ul style="list-style-type: none"> those that fall short and those that exceed expectations <p>Appropriate action is to remove restrictions on those items which fell short, and make standard/further implement those which exceeded expectation</p>
Sustaining improvement	<p>Improvement may be sustained by including it in:</p> <ul style="list-style-type: none"> standard procedures and work instructions standard practice other relevant documents and practices
<ul style="list-style-type: none"> Team leader 	<p>Team leader may include:</p> <ul style="list-style-type: none"> any person who may have either a permanent or an ad hoc role in facilitating the function of a team in a workplace

MSS407010A Improve visual management in the workplace

Modification History

New unit, superseding MSACMG710A Improve visual management in the workplace - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to assess current visual management strategies and techniques in the workplace and improve the application of visual management strategies and techniques and their integration into the overall competitive improvement approach of the organisation.

Application of the Unit

This unit applies to improving an organisation's visual management in the workplace. The level of existing visual management is not required to be extensive for the unit to apply. This unit covers examining the workplace to determine the effectiveness of current visual management strategies and tools, the determination of additional/alternative visual management strategies and tools and their integration into overall improvement strategies within the organisation.

The visual management may be applied to the whole organisation or a production area or a support area and can either be active visual management strategies, such as operator controlled status indicators, or passive, such as information boards or information islands containing production and other data, to give employees access to production, occupational health and safety (OHS), equipment availability or other data.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Determine current visual management activities and information needs	1.1	Identify current visual management activities and provided information
		1.2	Establish extent of linkage of visual management activities and provided information to other competitive systems and practices strategies and techniques
		1.3	Identify problems and improvements which could be made
		1.4	Determine root cause of problems
		1.5	Determine visual management techniques and information needs for improvement to occur
		1.6	Determine benefit which would accrue from improvement and cost of providing the information
2	Choose which things to display visually	2.1	List all valuable information identified
		2.2	Rank possible information based on benefit/cost or other agreed basis
		2.3	Agree on the critical information and possible information sources which should be included in the visual management system
		2.4	Negotiate the provision of this critical information to an adequate precision and in a timely manner

- | | | | |
|---|---|-----|---|
| 3 | Choose display method | 3.1 | Choose the most appropriate display method for each item of critical information |
| | | 3.2 | Determine the most appropriate location for the visual display of each item of critical information |
| | | 3.3 | Determine the appropriate source and approving authority for display information |
| | | 3.4 | Review the chosen information, information source, display method and location to ensure the right display of the right information |
| | | 3.5 | Validate data/information as required by methodology |
| 4 | Review the results of visual management | 4.1 | Review actual benefit gained and the actual cost of providing the information |
| | | 4.2 | Validate the appropriateness of the information provided for delivering the intended outcome |
| | | 4.3 | Initiate appropriate improvements to the visual management system |
| | | 4.4 | Follow through on improvement actions to ensure they are fully implemented |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- cooperating and working with others, both internally and externally to the work group
- determining the information to be displayed and location of displays through:
 - discussions with users
 - discussion with generators of information (e.g. sales, marketing, production planning or maintenance departments to determine available information)
 - comparing current state with future state
 - identifying information-related causes of current problems and non-conformances
- determining and communicating to others the purpose of visual management techniques and indicators in the operation, including:
 - making the problems, abnormalities or deviations from standard visible to everyone and thus corrective action can be taken immediately
 - displaying the operating or progress status in a easy to see format
 - providing instruction
 - conveying information
 - providing immediate feedback to people
 - support and create structure and links in process
 - improving health, safety and environment (HSE) performance
- developing agreement on standards and indicators to be used
- analysing and planning
- communicating across all levels in an organisation using a variety of techniques and media
- solving problems to root cause
- prioritising improvements and problems according to impact on value creation

Required knowledge

Required knowledge includes:

- concept of value and value add in terms of the customer
- understanding of the organisation's operations and processes subject to visual management
- visual management techniques, including:
 - comparators, status and indicators
 - colour standards and standard signalling tools

- and-on lights (visual alarm of a problem – manual or automatic actuation, may also include audible alarm)
- the use of tags, labels and similar
- visual management strategies to provide information to employees, including:
 - to provide status at a glance (normal versus abnormal conditions/quality)
 - to reinforce standard work
 - to predict quality/productivity problems
 - to provide instructions, directions and reminders
 - to inform, alert and motivate workers
 - as a safety and environmental tool
- the application of visual management as part of:
 - 5S and, 5S audits
 - quick changeover
 - proactive maintenance
 - kanban
 - flow
 - waste walks
 - kaizen and kaizen blitz events

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • assess current visual management displays, strategies and effectiveness • determine visual management improvement strategy • undertake visual management improvement • implement (or initiate and follow through on the implementation of) the actions which flow from the visual management project • examine the outcomes and identify improvements.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p>

	<ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of

the item, and local industry and regional contexts) may also be included.

<p>Competitive systems and practices</p>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
<p>Method for displaying information</p>	<p>Method for displaying information may include:</p> <ul style="list-style-type: none"> • colour coding • pictures/graphics • kanban cards • coloured lines • signage

	<ul style="list-style-type: none"> • labelling • control boards • area information boards • gauges and dials • checklists • Gantt charts
<ul style="list-style-type: none"> • Where to display 	<p>Information may be displayed:</p> <ul style="list-style-type: none"> • at the machine or cell/on the plant or equipment (e.g. performance feedback and process conditions) • at a workstation (e.g. work instructions) • on a control panel • centrally (e.g. general plant or team information) • visible to all (e.g. and-on lights and HSE alarms)

MSS407011A Manage benchmarking studies

Modification History

New unit, superseding MSACMG711A Manage benchmarking studies - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to undertake benchmarking studies, either directly or as a leader in a team undertaking benchmarking. It covers both performance and process benchmarking. It does not cover product or strategic benchmarking.

Application of the Unit

This unit applies to individuals who undertake benchmarking as an input to an improvement process. The benchmarking may be used to find areas for improvement or to provide information as to how to make the improvements.

The benchmarking process would:

- decide the nature of the benchmarking to be undertaken
- collect the benchmarking data and information
- determine what actions to be taken based on the benchmarking
- take the required steps to have those actions implemented
- identify the ongoing nature of these benchmarking activities.

Benchmarking may be undertaken by a team or be largely the responsibility of an individual. This unit applies either to that individual or to a leader in the team. The benchmarking activity may use benchmarks which are derived either internally to the organisation or externally from the organisation although some degree of externality would be expected in most applications. This unit does not require the statistical or financial analysis of data, but does require the interpretation and application of information derived from such analyses.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Identify nature of benchmarking activity	1.1	Identify operations or area to be benchmarked
		1.2	Determine the core set of benchmark measures required
2	Develop the benchmarking methodology	2.1	Determine baseline in area of study for core measures
		2.2	Confirm nature and source of data/information to be collected
		2.3	Agree on likely suitable sources of benchmarking data/information
		2.4	Confirm required survey methodology
3	Conduct benchmarking survey	3.1	Establish required communication channels for survey
		3.2	Obtain required data/information
		3.3	Validate data/information as required by methodology
4	Apply results of benchmarking	4.1	Interpret the analysed results of the survey
		4.2	Agree required improvement actions resulting from the survey
		4.3	Analyse health, safety and environment (HSE)

- implications from proposed actions
- 4.4 Modify proposed actions as required to ensure they are at least HSE neutral
 - 4.5 Initiate the implementation of the improvement actions
 - 4.6 Follow through on improvement actions to ensure they are fully implemented
- 5 Improve the benchmarking process
- 5.1 Analyse the benchmarking process just undertaken
 - 5.2 Analyse the changes which have resulted from the benchmarking
 - 5.3 Identify areas for improvement
 - 5.4 Agree ways of improving future benchmarking activities

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- undertaking self-directed problem solving and decision-making
- communicating across all levels in an organisation
- determining operations or area to be benchmarked by:
 - previous benchmarking
 - identification by other studies or processes of area of need
 - informal conversations with customers, employees or suppliers
 - exploratory research techniques such as focus groups
 - in-depth marketing research, quantitative research, surveys, questionnaires, engineering analysis, process mapping, quality control variance reports, or financial ratio analysis
- interpreting data and qualitative information gained from benchmarking
- cooperating and working with others, both internally and externally to the work group
- analysing and planning
- communicating effectively (both receiving and sending communications)
- solving problems to root cause
- prioritising benchmarking needs and data in relation to organisation goals, objectives and strategies

Required knowledge

Required knowledge includes:

- the organisation's performance data and/or processes subject to the benchmarking to a level needed to identify appropriate applications for benchmarking and apply the benchmarking results to it
- benchmarking protocols
- benchmarking code of practice
- legal and ethical issues involved in benchmarking
- different approaches to benchmarking and their applications
- performance versus process benchmarking
- criterion referenced versus qualitative versus quantitative benchmarking and the applications of each
- group processes
- own organisation's intellectual property and stance on confidentiality

- benchmarking partners' attitudes to confidentiality
- application of benchmarking to continuous improvement and the concept of continually improving best practice
- distinction between measurable data and useful information
- validity of benchmarking measures, data and information
- measures of data quality and methods of improving the quality of benchmarking information
- application of benchmarking data and information to Balanced Scorecard approaches

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • determine priority operations or areas for benchmarking • undertake benchmarking • implement (or initiate and follow through on the implementation of) the actions which flow from the benchmarking • examine the outcomes and identify improvements.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads, and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.

MSS407012A Lead a problem solving process to determine and solve root cause

Modification History

New unit, superseding MSACMG712A Lead a problem solving process to determine and solve root cause - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to guide or lead a problem solving process to solve complex and/or unusual problems. The problem solving process will usually involve the use of either real or nominal groups to determine the root cause and propose the solution.

Application of the Unit

This unit will typically be undertaken by managers and/or technical experts who are confronted by a complex problem to which they need to develop a solution. The problem may be related to any area or process within the organisation or in the value stream and may have been formally presented to the individual for consideration or arise as part of other work. The person may or may not have the required technical expertise for the particular problem, although the problem will require technical expertise to be solved. The problem may be capable of being adequately defined at the beginning of the problem solving activity, or may be progressively defined through continued iterations of the problem solving activity.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Recognise complex problem	1.1	Identify a complex issue which needs to be addressed
		1.2	Undertake an initial investigation of the issue
		1.3	Determine initial areas of expertise and data which may be required to analyse the problem
		1.4	Develop an initial definition of the problem
2	Develop problem solving methodology	2.1	Draft a problem solving methodology
		2.2	Develop required approaches and protocols for obtaining required data and information
		2.3	Establish group to assist with problem solving
		2.4	Allocate tasks, responsibilities and reporting arrangements to group
		2.5	Develop arrangements for consultation with required people outside of group
3	Analyse problem	3.1	Apply methodology
		3.2	Obtain data/information
		3.3	Review problem definition

- 3.4 Review methodology
- 3.5 Obtain additional data/information as required
- 4 Identify root cause
 - 4.1 Map causal links for the problem
 - 4.2 Determine indicators of the problem or the problem precursors
 - 4.3 Identify causes which can be controlled/brought under control
- 5 Develop a solution
 - 5.1 Develop solutions for controllable causes
 - 5.2 Determine benefit/cost for proposed solutions
 - 5.3 Investigate proposed solutions for efficacy
 - 5.4 Select the best available solution
 - 5.5 Obtain necessary support and authorisations for proposed solution
- 6 Check problem is solved and standardised
 - 6.1 Monitor indicators of problem/problem precursor
 - 6.2 Review problem solution/implementation as required
 - 6.3 Ensure appropriate solution is standardised

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- cooperating and working with others, both internally and externally to the work group
- researching and collating information from a variety of sources, including non-obvious sources
- analysing and planning in highly varied and/or highly specialised contexts
- quantitative and qualitative data interpretation and application skills
- communicating effectively (both receiving and sending communications)
- applying problem solving methodology, including:
 - cross-functional problem solving team
 - cross-functional nominal group (virtual team)
 - consulting and or brainstorming with members from outside the organisation on some basis
 - input from other members of the value stream
 - the use of known/proprietary problem solving approaches or some synthesis of methods
 - own or commissioned research either in whole or in part
- prioritising possible solutions on benefit/cost basis and value to the customer
- selecting solution and checking efficacy, including checking:
 - the solution breaks the causal tree
 - other causes are not able to cause the problem
 - benefit/cost ratio is acceptable
 - solution can be implemented
 - permanence of solution
- standardising solutions by:
 - checking that implemented solution solves the problem
 - solution can be applied to all relevant standards within the organisation, including:
 - standard operating procedures/work instructions
 - actual work practice
 - maintenance manuals and similar
 - product and/or process specifications

Required knowledge

Required knowledge includes:

- organisational goals, products and processes
- sources of data (actual and possible) within the organisation and the value stream
- understanding of the techniques and methodologies of formal problem solving
- data required for problem solving and alternative/proxy data sources
- benefit/cost analysis

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • undertake complex problem identification • establish appropriate methodologies, including establishing team responsibilities, to achieve root cause identification • prioritise solutions • recommend solutions and implementation procedures within the organisation and the value stream • evaluate implementation of solutions • standardise solutions.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p>

	<p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six
--	--

	<p>sigma and three sigma</p> <ul style="list-style-type: none"> • Just in Time (JIT), kanban and other pull- related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
<p>Complex problem</p>	<p>A complex problem may be described as one which has several of the following characteristics:</p> <ul style="list-style-type: none"> • requires going into the value stream for data/information • is wider than just applying to a single job • applies to less common solutions or problems • requires a higher level of knowledge and skill (which may or may not be possessed directly by the person solving the problem), such as: <ul style="list-style-type: none"> • significant specialist knowledge • significant specialist skill • more theory/understanding of technology or process • data is not easily available and may need particular strategies to obtain, such as: <ul style="list-style-type: none"> • overcoming resistance from people including employees, customers or suppliers • extracting data not regularly reported from SCADA or similar systems

	<ul style="list-style-type: none"> the problem and/or proposed solutions require reporting or authorisations from a Board or external authorities, such as licensing or regulatory bodies
<ul style="list-style-type: none"> Problem recognition 	<p>The problem recognition may include:</p> <ul style="list-style-type: none"> an obvious and current complex problem an intractable problem which has been known about and 'lived with' for some time a complex problem which has not been previously recognised <p>The problem may, or may not be capable of complete definition at the start of the problem solving process (so requiring an iterative process)</p>
Group	<p>Problem will be such that it is beyond the scope of an individual to solve and so a group is required. The group may be:</p> <ul style="list-style-type: none"> real (i.e. physical or face to face) nominal (i.e. never meets and may not know who each other is) or any combination in between

MSS407013A Review continuous improvement processes

Modification History

New unit, superseding MSACMG700A Review continuous improvement processes - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to undertake the local level review and further development of an existing continuous improvement process.

Application of the Unit

This unit is intended for team leaders and people with a similar sphere of influence/scope of authority and responsibility. It applies to individuals who are already familiar with change leadership in a competitive systems and practices environment through either previous study or industry experience. Where this is not the case MSS403010A Facilitate change in an organisation implementing competitive systems and practices may be completed to supply the necessary skills.

Skills covered by this unit apply to the review of existing continuous improvement processes in a team, area or department environment, or a small or medium sized enterprise (SME). This unit may also be applied to service organisations applying competitive systems and practices principles.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Review continuous improvement practice	1.1	Review performance against current key performance indicators (KPIs)
		1.2	Review KPIs for ongoing relevance
		1.3	Review current state of continuous improvement processes
		1.4	Audit health, safety and environment (HSE) changes as a result of continuous improvement activity
		1.5	Analyse problems to determine root cause
		1.6	Identify areas for improvement to KPIs and continuous improvement processes
2	Develop plan for enhancing improvement processes	2.1	Prioritise areas requiring action
		2.2	Develop a range of possible solutions, including taking into account the impact of the solution on any codes of practice, standards, contracts, commercial or industrial agreements
		2.3	Discuss possible solutions and implications with stakeholders
		2.4	Compare outcomes from possible solutions to competitive systems and practices philosophy

- 2.5 Choose actions which are most compatible with competitive philosophy
 - 2.6 Draft implementation plan for chosen action
 - 2.7 Obtain required approvals and modify plan, as required
- 3 Implement enhanced improvement process
- 3.1 Communicate changes to improvement processes to team members
 - 3.2 Resolve issues and problems identified by team members
 - 3.3 Obtain sign off from process/system owner
 - 3.4 Arrange for skills development as necessary
 - 3.5 Arrange for required resources to be available
 - 3.6 Establish and implement KPIs for modified continuous improvement process
 - 3.7 Implement planned changes
 - 3.8 Check the planned improvements have occurred
 - 3.9 Take action to sustain improvement by standardising

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- reviewing continuous improvement in a variety of contexts (e.g. supportive and non-supportive team environments)
- undertaking self-directed problem solving and decision-making
- communicating across all levels in the organisation
- analysing current state/situation
- analysing workplace strategy and vision statements and principles and linking these to current processes, performance and indicators

Required knowledge

Required knowledge includes:

- competitive systems and practices tools, including:
 - value stream mapping
 - 5S
 - Just in Time (JIT)
 - mistake proofing
 - process mapping
 - establishing customer pull
 - kaizen and kaizen blitz
 - setting of KPIs/metrics
 - identification and elimination of waste (muda)
- methods of determining competency gaps in team members
- continuous improvement processes, including implementation, monitoring and evaluation strategies
- types of KPIs and their impacts on performance
- relationship between service departments (e.g. maintenance and continuous improvement in a production or operational environment)
- difference between breakthrough improvement and continuous improvement

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • critically review existing or proposed continuous improvement processes • establish ongoing review processes, including setting and monitoring of KPIs • develop consensus for implementation of improvement plans • implement improvement plans.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence.

	<p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time
--	---

	<ul style="list-style-type: none"> • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Codes of practice/standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used
HSE	All changes implemented should be at least neutral, or preferably beneficial, in their impact on HSE
Relevance	<p>Relevance of KPIs includes:</p> <ul style="list-style-type: none"> • appropriateness (did they lead to/encourage desirable performance?) • currency (are they still encouraging desirable performance?) • unintended consequences (do they lead to outcomes which are not desirable, even if some performance is desirable?) • signal/noise (is the balance between desirable and undesirable outcomes strong and positive?)
Compare outcomes	<p>Outcomes include comparing:</p> <ul style="list-style-type: none"> • cost/benefit • timing • value stream implications • HSE issues • process reliability issues • benefit to customer/perceived customer benefit
Required resources	<p>Required resources include:</p> <ul style="list-style-type: none"> • plant • materials (e.g. raw materials, components, work in progress and other consumables) • energy (e.g. heating, cooling and fuel) • people

	<ul style="list-style-type: none"> • skills • finances • feedback/visual enterprise resources • measuring equipment
Sustaining improvement	<p>Improvement may be sustained by including it in:</p> <ul style="list-style-type: none"> • standard procedures and work instructions • standard practice • other relevant documents and practices
Team leader	<p>Team leader may include:</p> <ul style="list-style-type: none"> • any person who may have either a permanent or an ad hoc role in facilitating the function of a team in a workplace

Custom Content Section

Not applicable.

MSS408001A Develop the competitive systems and practices approach

Modification History

New unit, superseding MSACMG801A Develop the competitive manufacturing approach - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to take a strategic view and further develop the organisation's competitive systems and practices philosophies and approaches.

Application of the Unit

This unit applies to organisation leaders and is intended for managers and people with a similar sphere of influence and scope of authority and responsibility. It is a global unit covering the analysis and further development of the overall competitive systems and practices approach adopted by an organisation to ensure that the development fits with customer and other value stream member requirements. For a greater focus on reviewing and developing specific competitive systems and practices refer to *MSS408002A Audit the use of competitive tools*.

The unit applies to individuals who are familiar with competitive systems and practices as applied at an organisational level. Where this is not the case the following units can be completed to supply the necessary skills:

- *MSS405001A Develop competitive systems and practices for an organisation*
- *MSS405002A Analyse and map a value stream*
- *MSS405004A Develop business plans in an organisation implementing competitive systems and practices*
- *MSS405011A Manage people relationships.*

The following units may also be relevant in some circumstances:

- *MSS405005A Manage competitive systems and practices responding to individual and unique customer orders*
- *MSS405007A Introduce competitive systems and practices to a small or medium organisation.*

This unit may also be applied to service organisations applying competitive systems and practices principles.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Analyse organisation's current competitive systems and practices approach	1.1	Identify the organisation's competitive advantages and weaknesses
		1.2	Identify current health, safety and environment (HSE) profile
		1.3	Determine current competitive systems and practices/proactive maintenance strategy and analyse for consistency of application across organisation
		1.4	Compare the strategy to current competitive needs
		1.5	Determine potential changes which might impact on competitive systems and practices strategy
		1.6	Identify areas where improvement is necessary
		1.7	Discuss potential improvement areas with relevant managers
2	Analyse fit with value stream	2.1	Review value stream map against current competitive and strategic position
		2.2	Determine the impact of changes which have occurred

- 2.3 Identify areas where improvement is necessary
- 3 Review and modify the competitive systems and practices approach
 - 3.1 Determine required strategy changes
 - 3.2 Negotiate changes with relevant stakeholders
 - 3.3 Develop an agreed revised strategy
 - 3.4 Develop an agreed implementation plan
 - 3.5 Obtain support from process/system owners
 - 3.6 Manage the development of cascading tactical implementation plans
- 4 Implement modified strategy
 - 4.1 Obtain necessary permissions and authorities
 - 4.2 Monitor the implementation of the modified strategy and tactical plans
 - 4.3 Take required actions to achieve planned outcomes
 - 4.4 Check that planned improvements have occurred
 - 4.5 Take action to sustain improvement by standardising

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- **undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in highly varied and/or highly specialised contexts**
- analysing current state/situation of the organisation and value stream, including appropriateness of vision, strategy, operations and internal and external relationships especially with value stream members
- overseeing the setting of appropriate key performance indicators (KPIs)
- generating and evaluating complex proposals for improvement based on qualitative and quantitative data
- communicating at all levels in the organisation and value stream and to audiences of different levels of literacy and numeracy
- prioritising situations and actions based on:
 - value for customers
 - cost/benefit analysis
 - readiness analysis
 - tactical survival response
- reviewing and modifying strategies and KPIs, as required

Required knowledge

Required knowledge includes:

- competitive systems and practices at both a strategic and tools level, including advantages and limitations of:
 - value stream mapping
 - 5S
 - Just in Time (JIT)
 - mistake proofing
 - process mapping
 - establishing customer pull
 - breakthrough improvement and continuous improvement (kaizen and kaizen blitz)
 - setting of KPIs/metrics
 - identification and elimination of waste (muda)
- six sigma and lean six sigma

- continuous improvement processes, including implementation, monitoring and evaluation strategies
- types of KPIs and their impacts on performance

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • critically review current competitive systems and practices strategy and tactical implementation initiatives and plans in organisation and, where relevant, the value stream • determine appropriateness of current KPIs • establish process for ongoing review of strategies and tactical implementation initiatives • implementation of improvement plans • modify strategies, tactics and KPIs, as required.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace

	<ul style="list-style-type: none"> • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • JIT, kanban and other pull-related operations control systems
--	---

	<ul style="list-style-type: none"> • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Codes of practice/standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used
HSE	All changes implemented are expected to be at least neutral, or preferably beneficial, in their impact on HSE
Organisation	<p>Organisation includes:</p> <ul style="list-style-type: none"> • any part of a operations or service organisation • companies, government bodies or other body of people aiming to produce a product to service a customer
Sustaining improvement	<p>Improvement may be sustained by including it in:</p> <ul style="list-style-type: none"> • standard procedures and work instructions • standard practice • other relevant documents and practices
Manager	<p>Manager may include:</p> <ul style="list-style-type: none"> • any person who may have either a permanent or an ad hoc role in facilitating the function of multiple teams in a workplace, departments or entire organisations

MSS408002A Audit the use of competitive tools

Modification History

New unit, superseding MSACMG802A Audit the use of competitive tools - Not equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to audit the use of competitive systems and practices tools, modify a tool or its application and change the mix of tools used as appropriate. It also covers changing the emphasis and culture away from the use of competitive systems and practices tools as the main focus to taking a whole of enterprise approach with the tools being seen as supporting measures to strategic goals. The unit has a more strategic focus than MSS407002A Review operations practice tools and techniques.

Application of the Unit

This unit is intended for managers and people with a similar sphere of influence and scope of authority and responsibility. It is focused on auditing the practice of competitive systems and practices and implementing changes identified through the audit. For a more global unit covering developing the strategic approach adopted by the organisation refer to *MSS408001A Develop the competitive systems and practices approach*.

The unit includes monitoring workplace practice and the application of selected tools and taking action to ensure progress is continuing towards the desired future state.

The unit applies to individuals who are familiar with competitive systems and practices and with a broad range of competitive tools with depth in a moderate range of tools. Where this is not the case the following units which deal more with the selection and introduction of the correct tools for the organisation may be completed:

- *MSS405001A Develop competitive systems and practices for an organisation*
- *MSS405007A Introduce competitive systems and practices to a small or medium enterprise.*

This unit may also be applied to service organisations applying competitive systems and practices principles.

Licensing/Regulatory Information

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Establish systems to monitor progress towards becoming competitive	1.1	Determine agreed indicators of progress towards desired future state
		1.2	Establish contribution to future state indicators by internal and external value stream contributors
		1.3	Capture information showing progress towards desired future state
		1.4	Analyse information to determine continued progress towards desired future state
		1.5	Ensure there are systems which allow monitoring to proceed routinely
2	Identify areas of operations practice to improve in consultation with work teams and other employees	2.1	Identify work teams, areas and value stream members which could be making better progress towards desired future state
		2.2	Examine competitive tools being used and their contribution towards progress
		2.3	Examine other work practices and their contribution towards progress
		2.4	Manage required stakeholder consultations
		2.5	Agree on the cause or causes of progress which is not to plan

- 2.6 Determine appropriate competitive tools use to improve progress
 - 2.7 Develop an implementation plan
- 3 Facilitate the improvement to operations practice across the organisation
 - 3.1 Obtain support and necessary approvals from process/system owners
 - 3.2 Arrange for the introduction of new tools or modifications to existing tool practice as required
 - 3.3 Arrange for skills and other infrastructure development, as required
 - 3.4 Consult with stakeholders including value stream members about the impact of these changes
 - 3.5 Manage implementation of proposed changes to tools use

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- undertaking self-directed problem solving and decision making on issues of a broad and/or highly specialised nature and in highly varied and/or highly specialised contexts
- communicating at all levels in the organisation and value stream and to audiences of different levels of literacy and numeracy
- analysing current state/situation of the organisation and value stream
- overseeing the setting of key performance indicators (KPIs) for future state
- interpreting data and qualitative information gained from benchmarking
- analysing individually and collectively the implementation of competitive systems and practices tools in the organisation and determining strategies for improved implementation
- relating implementation and use of tools to customer benefit
- solving highly varied and highly specialised problems related to competitive systems and practices implementation to root cause
- negotiating with stakeholders, where required, to obtain information required for improvements, including management, unions, value stream members, employees and members of the community
- analysing operational processes in the organisation and value stream and relating to competitive systems and practices tools

Required knowledge

Required knowledge includes:

- competitive systems and practices at both a strategic and tools level, including advantages and limitations of:
 - value stream mapping
 - 5S
 - Just in Time (JIT)
 - mistake proofing
 - process mapping
 - establishing customer pull
 - breakthrough improvement and continuous improvement (kaizen and kaizen blitz)
 - setting of KPIs/metrics
 - identification and elimination of waste (muda)

- six sigma and lean six sigma
- best practice in implementation of competitive systems and practices tools
- customer benefit as used in competitive systems and practices
- ways of determining competency gaps that may act as restrictions in achieving best practice in operations
- define, measure, analyse, improve and control (DMAIC) process applied to competitive systems and practices tool use
- organisation desired future state in both quantitative and qualitative terms
- how to measure progress towards desired future state
- formal problem solving tools, including root cause analysis (RCA)

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • critically examine existing operations and determine correlations to implementation of competitive systems and practices tools • supervise introduction of new tools or modification of the use of existing tools • integrate tools with the overall operations strategy and future state.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.

Method of assessment	<p>A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and
--	--

	<p>proprietary systems</p> <ul style="list-style-type: none"> • statistical process control systems, including six sigma and three sigma • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Future state	<p>Future state may include:</p> <ul style="list-style-type: none"> • process reliability • waste • health, safety and environment (HSE) • maintenance • systems
Codes of practice/standards	<p>Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used</p>
HSE	<p>All changes implemented are expected to be at least neutral, or preferably beneficial, in their impact on HSE</p>
Organisation	<p>Organisation includes:</p> <ul style="list-style-type: none"> • any part of a operations or service organisation • companies, government bodies or other body of people aiming to produce a product to service a

	customer
Desired future state	Desired future state refers to: <ul style="list-style-type: none"> the agreed position of where the organisation wants to be as measured by performance indicators
Progress not to plan	Progress not to plan includes: <ul style="list-style-type: none"> both progress which falls short of plan and which exceeds plan
Improvements	Improvements include: <ul style="list-style-type: none"> the use of different or additional tools the application of the current tools in use in a different way a change of emphasis from 'tools' to an accepted part of the organisation's culture
Manager	Manager may include: <ul style="list-style-type: none"> any person who may have either a permanent or an ad hoc role in facilitating the function of multiple teams in a workplace, departments or entire organisations

MSS408003A Develop models of future state operations practice

Modification History

New unit, superseding MSACMG803A Develop models of future state manufacturing practice - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to establish processes for identifying future state models of best practice for operations that are then used as the template for both strategic decision-making and goal setting. It may be applied to whole organisations or significant sections of the value stream.

Application of the Unit

This unit applies in an environment where operations practices are standardised and there is a culture that accepts sustaining improvements and building on them. It is intended for managers and people with a similar sphere of influence.

This unit applies to individuals who are familiar with competitive systems and practices, value stream mapping, and culture improvement. Where this is not the case the following units can be completed to supply the necessary skills:

- *MSS405001A Develop competitive systems and practices for an organisation*
- *MSS405002A Analyse and map a value stream*
- *MSS405013A Facilitate holistic culture improvement in an organisation.*

This unit may also be applied to non-production areas and service organisations applying competitive systems and practices principles.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Develop a shared future state model	1.1	Establish an appropriate representative team
		1.2	Analyse a value stream map of an appropriate section of the value stream
		1.3	Determine the current state of practice across the value stream
		1.4	Identify overall organisation strategy, direction and competitive systems and practices philosophy
		1.5	Validate view with process/system owner
2	Develop and review a collaborative best practice model	2.1	Develop a future state model of practice
		2.2	Review model with process/system owners and other stakeholders across the value stream as appropriate
		2.3	Modify model to deliver better results for the customer and reduce wastes
		2.4	Develop implementation plan in consultation with stakeholders
3	Provide the resources necessary to move	3.1	Identify changes required to infrastructure
		3.2	Determine benefit/cost for required changes

- to the future state
 - 3.3 Prioritise required changes
 - 3.4 Obtain required authorisations
 - 3.5 Facilitate the provision of resources needed to implement plan

- 4 Review future state model
 - 4.1 Manage the implementation of improvements
 - 4.2 Identify measures of progress towards agreed future state
 - 4.3 Review progress towards future state
 - 4.4 Agree methods of improving areas which could progress better
 - 4.5 Agree on methods for evaluating future state
 - 4.6 Validate measures and methods with relevant managers

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in highly varied and/or highly specialised contexts
- communicating at all levels in the organisation and value stream and to audiences of different levels of literacy and numeracy
- determining current state of operations in the organisation or selected portion of the value stream across a range of key indicators, including:
 - output quantities and qualities
 - variability in quality and quantity
 - uptime
 - causes and times for the different wastes (muda)
 - investment hurdle rates and actual rates of return
 - health, safety and environment (HSE) indicators
 - reliability indicators
 - other key performance indicators (KPIs) indicators appropriate to the organisation and its technology and processes
- identifying desirable future state across a range of indicators of operations in the organisation or selected portion of the value stream, including forecasts of:
 - output quantities and qualities
 - variability in quality and quantity
 - HSE indicators
 - reliability/uptime
 - rates of return
 - other indicators appropriate to the organisation and its technology and processes
- analysing data, including indicators of progress to future state
- prioritising actions according to:
 - benefit/cost analysis
 - readiness analysis
 - tactical survival response

Required knowledge

Required knowledge includes:

- competitive systems and practices at both a strategic and tools level, including advantages and limitations of:
 - value stream mapping
 - 5S
 - Just in Time (JIT)
 - mistake proofing
 - process mapping
 - establishing customer pull
 - breakthrough improvement and continuous improvement (kaizen and kaizen blitz)
 - setting of KPIs/metrics
 - identification and elimination of waste (muda)
 - six sigma and lean six sigma
- best practice in implementation of competitive systems and practices tools
- customer benefit as used in competitive systems and practices
- formal problem solving tools, including root cause analysis (RCA)
- workplace strategy and vision
- ways of determining competency gaps that may act as restrictions in achieving best practice in operations

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • review current and future state maps with stakeholders • analyse value stream maps • review progress towards future state and take corrective action • align the future state with organisation strategy.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area

	<ul style="list-style-type: none"> • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Codes of practice/standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used
HSE	All changes implemented are expected to be at least neutral, or preferably beneficial, in their impact on HSE
Organisation	<p>Organisation includes:</p> <ul style="list-style-type: none"> • any part of a manufacturing or service organisation

	<ul style="list-style-type: none"> companies, government bodies or other body of people aiming to produce a product to service a customer
Representative team	<p>Representative team includes:</p> <ul style="list-style-type: none"> members from the value stream representing key parts of that chain and may, or may not, include members from outside the organisation
Infrastructure	<p>Infrastructure includes:</p> <ul style="list-style-type: none"> policies and procedures plant and equipment materials, energy, utilities and other consumables workforce arrangements, including employee numbers, organisation structure, competencies and competency mix
Future state model of practice	<p>The model of practice will be an improved future state model which will:</p> <ul style="list-style-type: none"> help achieve the required organisation strategy and philosophy give direction to improvements and actions include forecasts of key indicators
Measures of progress	<p>Measures of progress include:</p> <ul style="list-style-type: none"> those metrics and other indicators defined and agreed before the commencement of implementation which provide feedback on the progress towards the future state
Manager	<p>Manager may include:</p> <ul style="list-style-type: none"> any person who may have either a permanent or an ad hoc role in facilitating the function of multiple teams in a workplace, departments or entire organisations

MSS408004A Develop the value stream

Modification History

New unit, superseding MSACMG804A Develop the value chain - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to develop or further develop a positive relationship with all value stream members so that they can work cooperatively to their mutual benefit and so deliver better value for the customer.

Application of the Unit

The unit applies to managers and people with a similar sphere of influence and scope of authority and responsibility who are responsible for the further development of the value stream. Individuals completing this unit should be familiar with competitive systems and practices, value stream mapping and have an ability to relate to personnel in external organisations. Where this is not the case the following units may be completed to supply the necessary skills:

- *MSS405002A Analyse and map a value stream*
- *MSS405010A Manage relationships with non-customer external organisations.*

This unit applies where the value stream has been analysed and mapped and is already being managed. This unit is more about the relationships along the value stream than the direct flow of value, materials or goods. All value stream members are potentially covered.

This unit may also be applied to service organisations applying competitive systems and practices principles.

The equivalent team leader level unit to this unit is *MSS407004A Facilitate improvements in the internal value stream.*

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---|-----|---|
| 1 | Review relationship with value stream members | 1.1 | Identify areas which could be improved |
| | | 1.2 | Develop position of own organisation with regard to these areas |
| | | 1.3 | Discuss areas of interest (within relevant regulatory framework) with relevant value stream personnel and develop position of own organisation with regard to any issues raised |
| | | 1.4 | Develop an agreed list of areas for action |
| | | 1.5 | Validate list with own management |
| | | 1.6 | Agree on a framework for progressing agreed list |
| 2 | Manage changes | 2.1 | Take required actions within own organisation to implement changes |
| | | 2.2 | Monitor progress of changes within own organisation |
| | | 2.3 | Take required actions to ensure changes achieve their objective |
| | | 2.4 | Monitor changes across value stream and their impacts |
| | | 2.5 | Provide appropriate assistance to value stream members implementing agreed changes |

- 3 Manage ongoing relationship with value stream members
 - 3.1 Undertake regular review of value stream relationships
 - 3.2 Review benefits obtained and costs incurred by value stream members
 - 3.3 Review benefits obtained by customer/value stream as a whole
 - 3.4 Optimise benefit/cost distributions and ratios across the value stream
 - 3.5 Explore areas of mutual benefit
 - 3.6 Analyse value stream synergies and conflicts
 - 3.7 Develop approaches to maximise customer benefit flowing from the value stream

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- analysing proposed and past changes to operations, products and processes within the value stream to determine if change adds or has added value to the customer
- making significant, high level, independent judgements on required improvements in the value stream
- demonstrating responsibility and broad-ranging accountability for decisions
- communicating and explaining quantitative and qualitative concepts and data with representatives of the value stream across a range of numeracy and literacy levels
- analysing views and reasons put forward by others on past performance of the value stream and relating to metrics and other evidence
- prioritising value stream improvement proposals and related actions and justifying priorities to others
- negotiating with others using analysis of information, including past and proposed metrics and concepts, to achieve a consensus position
- analysing restrictions and non-conformances to root cause
- standardising processes along the value stream

Required knowledge

Required knowledge includes:

- competitive systems and practices principles, processes and techniques
- organisational goals, operations, products and processes
- operations, products and processes of value stream members
- continuous improvement and workplace improvement processes and procedures
- approval processes within own organisation and value stream members
- cost/benefit analysis methods
- methods of determining the impact of a change
- communication methods across a variety of media and formats, including preparation of formal proposals and negotiations
- customer perception of value

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • critically review value stream relationships and maximise the benefit flowing from them • present and facilitate consensual improvements across the value stream • critically evaluate the strengths and weaknesses of the value stream and its members • facilitate and monitor changes along the value stream • monitor changes and improvements against qualitative and quantitative indicators.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports)

	<ul style="list-style-type: none"> • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE)
--	---

	<ul style="list-style-type: none"> • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Value stream	<p>The value stream begins with the customer and includes all actions (both value-adding and non-value added) by both internal sections/departments and external organisations to meet a customer requirement.</p> <p>Depending on the operations and the customer requirement stages where value stream actions may occur include:</p> <ul style="list-style-type: none"> • sales outlet/representative • information gathering, data analysis and research • product design • raw material sourcing • intermediate processing • final assembler/collation/preparation • support services (e.g. accounting, finance and legal) • storage and delivery to customer • after market support
Codes of practice/standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used
Health, safety and environment (HSE)	All changes implemented are expected to be at least neutral, or preferably beneficial, in their impact on HSE
Areas of interest	<p>Areas of interest include:</p> <ul style="list-style-type: none"> • commercial and contractual relationships with value stream members and include common regulatory and commercial frameworks
Change	<p>Changes may:</p> <ul style="list-style-type: none"> • be to plant, procedures or practice

	<ul style="list-style-type: none"> • arise from continuous improvement (or an improvement event/project) • have been intended to make an improvement or to implement new products, technology or systems • include the implementation of a change <p>Changes do not include an engineering review of a major capital expenditure or similar review</p>
Presentation of information	<p>Information may be presented:</p> <ul style="list-style-type: none"> • in terms of graphs or other appropriate visual forms
Stakeholders	<p>Stakeholders may include:</p> <ul style="list-style-type: none"> • work team members, value stream members as well as other stakeholders
Results of change	<p>Results of change may include:</p> <ul style="list-style-type: none"> • an initial improvement followed by a return to previous performance • a change which has resulted in continued improvement • continued detriment or other variations over time
Improvements	<p>Improvements may:</p> <ul style="list-style-type: none"> • be to process, plant, products, procedures or practice • include changes to ensure positive benefits are maintained
Manager	<p>Manager may include:</p> <ul style="list-style-type: none"> • any person who may have either a permanent or an ad hoc role in facilitating the function of multiple teams in a workplace, departments or entire organisations

MSS408005A Develop the learning processes of the operations organisation

Modification History

New unit, superseding MSACMG805A Develop the learning processes of the manufacturing organisation - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to ensure that knowledge relevant to performance improvement and the meeting of customer requirements is gathered, applied and retained by the organisation and individuals. This unit focuses on the processes in an organisation for extracting learning as it appears, capturing it in a manner which makes it available for future use and applying it to work.

Application of the Unit

The unit is intended for managers and people with a similar sphere of influence and scope of authority and responsibility who are familiar with competitive systems and practices and workplace learning. Where this is not the case *MSS405012A Manage workplace learning* may be completed to supply the necessary skills.

The equivalent team leader unit is *MSS407008A Capture learning from daily activities in a organisation*.

This unit may also be applied to service organisations applying competitive systems and practices principles.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---|-----|--|
| 1 | Identify processes generating new knowledge | 1.1 | Identify any existing systems for organisational learning |
| | | 1.2 | Encourage the open discussion of current performance and problems |
| | | 1.3 | Facilitate consensus problem solving |
| | | 1.4 | Ensure both qualitative and quantitative knowledge are captured |
| | | 1.5 | Validate findings with relevant managers |
| 2 | Develop knowledge capture and retrieval systems | 2.1 | Obtain required approvals |
| | | 2.2 | Provide useable systems for recording of problems, causes and solutions |
| | | 2.3 | Facilitate the extraction of knowledge from records |
| | | 2.4 | Ensure all project work captures generated knowledge |
| | | 2.5 | Ensure knowledge is in a form able to be applied by the organisation and its personnel |
| | | 2.6 | Develop knowledge storage and retrieval systems |
| | | 2.7 | Monitor knowledge capture system use and suitability |
| 3 | Improve the application of organisational knowledge | 3.1 | Ensure knowledge is distributed to and available where needed |
| | | 3.2 | Ensure knowledge system is part of standard procedures and practices |

- 3.3 Encourage the routine use of the knowledge system
 - 3.4 Facilitate open discussion of knowledge and knowledge system
 - 3.5 Identify inhibitors to greater use of knowledge
 - 3.6 Take actions to improve application of organisational knowledge
- 4 Evaluate and improve learning processes
- 4.1 Review use of knowledge system
 - 4.2 Evaluate benefits obtained from knowledge system
 - 4.3 Identify areas where the knowledge system is not being fully utilised
 - 4.4 Identify areas where greater benefits could be obtained from the knowledge system
 - 4.5 Discuss areas of possible improvements with relevant managers and other stakeholders
 - 4.6 Develop consensus improvement plans for the knowledge system
 - 4.7 Obtain required approvals
 - 4.8 Train personnel, as required, to improve use
 - 4.9 Implement improvement plans

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- undertaking self-directed problem solving and decision-making
- communicating across all levels in an organisation
- preparing reports and recommendations
- implementing knowledge capture systems that cover:
 - existing plant and equipment modifications
 - changes to procedures and operations for information technology (IT) related systems and equipment
 - operations procedure and practice changes
 - new plant, equipment and processes
 - daily problem solving and continuous improvement activities
 - specific improvement events (e.g. kaizen blitz)
 - incident reports
 - reliability/maintenance reports
 - customer feedback
 - feedback from value stream members
- accessing and analysing current performance, including:
 - output indicators
 - input indicators
 - health, safety and environment (HSE) indicators
 - reliability/maintenance indicators
 - continuous improvement indicators
- implementing, monitoring and adjusting improvements to the knowledge system, including:
 - improving integration of knowledge system with other organisation and value stream development processes
 - improving identification of new knowledge
 - improving capture ease and efficiency
 - improving search and application functionality
- analysing performance outside the normal range (good or bad) and assignable cause

Required knowledge

Required knowledge includes:

- competitive systems and practices principles and tools, including:
 - value stream mapping
 - 5S
 - Just in Time (JIT)
 - mistake proofing
 - process mapping
 - establishing customer pull
 - incremental and breakthrough improvement
 - setting of key performance indicators (KPIs)/metrics
 - identification and elimination of waste (muda)
- organisational goals strategies, operations and processes
- approval processes within organisation
- cost/benefit analysis methods
- methods of determining the impact of a change
- communication methods and media for a range of audiences
- customer perception of value
- reward systems
- learning and knowledge management systems

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • review learning process across the organisation • relate learning processes to implementation of competitive systems and practices • identify components of current system that require improvement • develop improvements to current learning system, including setting of system metrics • manage implementation of improvements.
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p>

	<p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<p>Guidance information for assessment</p>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with

training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Codes of practice/standards	<p>Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used</p>
HSE	<p>All changes implemented are expected to be at least neutral, or preferably beneficial, in their impact on HSE</p>

Problems	Problems may include: <ul style="list-style-type: none"> • non-conformances and other opportunities for improvement
Develop	Develop includes: <ul style="list-style-type: none"> • establishing and improving
Organisational learning	Organisational learning refers to learning intended to be applied across the whole organisation or by specific teams, work areas or individuals
Knowledge forms	Knowledge may be: <ul style="list-style-type: none"> • quantified or otherwise modified to make its outcomes measurable or observable as appropriate to the knowledge and its application
Improvements	Improvements may: <ul style="list-style-type: none"> • be to process, plant, service, procedures or practice • include changes to ensure positive benefits are maintained
Manager	Manager may include: <ul style="list-style-type: none"> • any person who may have either a permanent or an ad hoc role in facilitating the function of multiple teams in a workplace, departments or entire organisations

MSS408006A Develop and refine systems for continuous improvement in operations

Modification History

New unit, superseding MSACMG806A Develop and refine systems for continuous improvement in manufacturing organisations - Equivalent

Unit Descriptor

This unit of competency covers the skills, knowledge and processes required to ensure that continuous improvement systems do not stultify and continue to improve along with other operational systems in an organisation.

This unit is about improving the process yield/unit of effort or cost, reducing process variation and increasing process reliability, upgrading, enhancing or refining process outputs, and includes developing a culture of reviewing and sustaining change ensuring improvements are maintained and built on.

Application of the Unit

This unit applies to managers and people with a similar sphere of influence and scope of authority and responsibility and who are familiar with competitive systems and practices, continuous improvement and locking in improvements. Where this is not the case the following units may be completed to supply the necessary skills:

MSS405001A Develop competitive systems and practices for an organisation

MSS405013A Facilitate holistic culture improvement in a operations organisation.

The equivalent team leader level unit is MSS407013A Review continuous improvement processes.

This unit may also be applied to service organisations applying competitive systems and practices principles.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Establish parameters of current internal improvement systems	1.1	Describe organisation systems that impact on continuous improvement
		1.2	Identify current relevant metrics and their values
		1.3	Check that metrics are collected for all improvements
		1.4	Determine yield of current improvement processes
		1.5	Review results of improvements
2	Distinguish breakthrough improvement processes	2.1	Identify all improvements which have occurred over an agreed period of time
		2.2	Distinguish between breakthrough improvements and continuous improvements
		2.3	Determine the timing of breakthrough improvement processes
		2.4	Analyse factors controlling the timing and selection of breakthrough improvements
		2.5	Analyse continuous improvements to identify cases where breakthrough improvements were required
		2.6	Validate findings with process/system owners and obtain required approvals

- 2.7 Improve timing/selection of breakthrough improvements
 - 2.8 Improve other factors limiting the gains from breakthrough improvements
- 3 Develop continuous improvement practice
 - 3.1 Check that levels of delegated authority and responsibility are appropriate for continuous improvement from the shop floor
 - 3.2 Ensure all personnel have appropriate capabilities for continuous improvement processes
 - 3.3 Ensure personnel and systems recognise potential breakthrough improvement projects
 - 3.4 Ensure sufficient resources are available for the operation of continuous and breakthrough improvement processes
 - 3.5 Check that relevant information flows from improvement changes to all required areas and stakeholders
 - 3.6 Check data collection and metrics analysis capture changes which result from improvement actions
 - 3.7 Check that improvement changes are standardised and sustained
 - 3.8 Check review processes for routine continuous improvements
 - 3.9 Remove or change factors limiting gains from improvements
 - 3.10 Modify systems to ensure appropriate possible changes are referred to other improvement processes
 - 3.11 Institutionalise breakthrough
- 4 Establish parameters of current external improvement
 - 4.1 Review value stream systems that impact on improvement
 - 4.2 Review procedures for deciding improvement methodologies

- systems
 - 4.3 Identify current relevant metrics and their values, as appropriate
 - 4.4 Determine yield of current improvement processes
 - 4.5 Review results of improvements

- 5 Explore opportunities for further development of value stream improvement processes
 - 5.1 Review mechanisms for consultation with value stream members
 - 5.2 Develop mechanisms for further improving joint problem solving
 - 5.3 Develop mechanisms for increased sharing of organisational knowledge
 - 5.4 Obtain support and necessary authorisations from process/system owners
 - 5.5 Capture and standardise improvements
 - 5.6 Improve factors limiting gains from continuous improvements

- 6 Review systems for compatibility with improvement strategy
 - 6.1 Review all systems which impact or are impacted on improvements and the improvement system
 - 6.2 Analyse relationships between improvement systems and other relevant systems
 - 6.3 Analyse practices caused by and results from the systems
 - 6.4 Negotiate changes to the systems to improve the outcomes from improvement systems
 - 6.5 Obtain necessary approvals to implement changes
 - 6.6 Monitor the implementation of the changes

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in highly varied and/or highly specialised contexts
- communicating at all levels in the organisation and value stream and to audiences of different levels of literacy and numeracy
- analysing current state/situation of the organisation and value stream
- determining and implementing the most appropriate method for capturing value stream improvements
- collecting and interpreting data and qualitative information from a variety of sources
- analysing individually and collectively the implementation of competitive systems and practices tools in the organisation and determining strategies for improved implementation
- relating implementation and use of competitive systems and practices and continuous improvement to customer benefit
- solving highly varied and highly specialised problems related to competitive systems and practices implementation and continuous improvement to root cause
- negotiating with stakeholders, where required, to obtain information required for implementation and refinement of continuous improvements, including management, unions, value stream members, employees and members of the community
- reviewing relevant metrics, including all those measures which might be used to determine the performance of the improvement system, including:
 - key performance indicators (KPIs) for existing processes
 - quality statistics
 - delivery timing and quantity statistics
 - process/equipment reliability ('uptime')
 - incident and non-conformance reports
- implementing continuous improvement to support systems and areas, including maintenance, office, training and human resources

Required knowledge

Required knowledge includes:

- competitive systems and practices tools, including:
 - value stream mapping
 - 5S

- Just in Time (JIT)
- mistake proofing
- process mapping
- establishing customer pull
- kaizen and kaizen blitz
- setting of KPIs/metrics
- identification and elimination of waste (muda)
- continuous improvement processes including implementation, monitoring and evaluation strategies for a whole organisation and its value stream
- difference between breakthrough improvement and continuous improvement
- organisational goals, processes and structure
- approval processes within organisation
- cost/benefit analysis methods
- methods of determining the impact of a change
- advantages and disadvantages of communication media, methods and formats for different messages and audiences
- customer perception of value
- define, measure, analyse, improve, and control and sustain (DMAIC) process

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • critically review current continuous improvement processes • establish ongoing review of continuous improvement processes • implement improvements in the practice of continuous improvement • better align internal and external systems • gather data through interviews with stakeholders • review existing data • obtain additional data through a variety of techniques • communicate and negotiate at all levels within the organisation
<p>Context of and specific resources</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more</p>

<p>for assessment</p>	<p>competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning for appropriate portions • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<p>Guidance information for assessment</p>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work

environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Competitive systems and practices</p>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
<p>Codes of practice/standards</p>	<p>Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used</p>
<p>Health, safety and environment</p>	<p>All changes implemented are expected to be at least</p>

(HSE)	neutral, or preferably beneficial, in their impact on HSE
Organisation systems	<p>Organisation systems may include:</p> <ul style="list-style-type: none"> • problem recognition and solving • operational/process improvement • improvement projects • product/process design and development • processes for making incremental improvements
Relevant metrics	<p>Relevant metrics include all those measures which might be used to determine the performance of the improvement system and may include:</p> <ul style="list-style-type: none"> • hurdle rates for new investments • KPIs for existing processes • quality statistics • delivery timing and quantity statistics • process/equipment reliability ('uptime') • incident and non-conformance reports • complaints, returns and rejects
Improvement process yield	<p>Improvement process yield may be regarded as:</p> <ul style="list-style-type: none"> • the benefit achieved for the effort invested
Breakthrough improvements	<p>Breakthrough improvements include:</p> <ul style="list-style-type: none"> • those which result from a kaizen blitz or other improvement project or event and are a subset of all improvements
Timing of breakthrough improvements	<p>Timing of breakthrough improvements includes:</p> <ul style="list-style-type: none"> • frequency (which should be maximised) and duration (which should be minimised) of events/projects
Continuous improvement	<p>Continuous improvement is part of normal work and does not require a special event to occur (although may still require authorisations) and contrasts with breakthrough improvement/kaizen blitz which occurs by way of an event or project</p>
Resources for improvement	<p>Resources for improvements include:</p> <ul style="list-style-type: none"> • improvement budget • guidelines for trialling of possible improvements • mechanism for approvals for possible improvements • business case guidelines for proposed improvements • indicators of success of proposed improvement • mechanisms for tracking and evaluation of changes

	<ul style="list-style-type: none"> • forum for the open discussion of the results of the implementation • mechanisms for the examination of the improvement for additional improvements • organisation systems to sustain beneficial changes
Capturing value stream improvements	<p>Capturing value stream improvements includes:</p> <ul style="list-style-type: none"> • revised contractual arrangements • revised specifications • signed agreements • other documented arrangements which formalise the raised base line
Systems impacting improvements	<p>Systems which impact/are impacted on improvements and the improvement system include:</p> <ul style="list-style-type: none"> • office • purchasing • rewards (individual or team at all levels) • sales • marketing • maintenance • process/product • transport and logistics
Organisational knowledge	<p>Organisational knowledge should:</p> <ul style="list-style-type: none"> • be able to be quantified or otherwise modified to make its outcomes measurable or observable • be able to be expressed in an accessible and distributable form appropriate to the organisation operations and stakeholders
Improvements	<p>Improvements may:</p> <ul style="list-style-type: none"> • be to process, plant, procedures or practice • include changes to ensure positive benefits to stakeholders are maintained
Manager	<p>Manager may include:</p> <ul style="list-style-type: none"> • any person who may have either a permanent or an ad hoc role in facilitating the function of multiple teams in a workplace, departments or entire organisations

MSS408007A Develop problem solving capability of an organisation

Modification History

New unit, superseding MSACMG807A Develop problem solving capability of a manufacturing organisation - Not equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to develop problem solving skills of individuals within an organisation and as a consequence the problem solving capability of the organisation as a whole. The unit does not supply the skills to undertake formal problem solving on individual problems.

Application of the Unit

This unit is intended for organisation leaders/managers and people with a similar sphere of influence and scope of authority and responsibility. It applies where problem solving is already routine in the organisation and improving individual and organisational problem solving capability has been accepted as part of the organisation's improvement processes. The unit applies to individuals who are already familiar with formal problem solving processes. Where this is not the case the following units may be completed to supply the necessary skills:

- *MSS402080A Undertake root cause analysis*
- *MSAPMSUP390A Use structured problem solving tools.*

For high level complex problem solving skills refer to *MSS407012A Lead a problem solving process to determine and solve root cause.*

This unit may also be applied to service organisations applying competitive systems and practices principles.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Develop an appropriate organisational framework	1.1	Determine or review available problem finding strategies in the organisation
		1.2	Analyse the current selection and application of problem solving tools and gauge effectiveness
		1.3	Determine preferred problem solving strategies for the organisation
		1.4	Determine or review the desired outcomes from use of selected problem solving strategies
		1.5	Review organisational structure to facilitate improvement in problem solving
		1.6	Develop a training strategy to improve problem solving ability
		1.7	Develop reporting framework and guidelines
		1.8	Develop corrective action identification and tracking systems
		1.9	Obtain support from relevant process/system owners for proposed changes
2	Improve problem solving ability	2.1	Implement training strategy
		2.2	Ensure problem solving occurs using groups or teams

- 2.3 Provide resources to ensure problem solving occurs
 - 2.4 Confirm with teams and groups that training and resources deliver capability to solve complex problems
 - 2.5 Monitor problem solving to determine if improvement in developing problem solving solutions is achieved
 - 2.6 Provide resources to ensure solutions are implemented
 - 2.7 Ensure reporting and corrective action tracking occurs
- 3 Review problem solving effectiveness
- 3.1 Review corrective action tracking
 - 3.2 Determine benefit/cost from solutions
 - 3.3 Analyse interactions of multiple problems with each other and the organisation
 - 3.4 Review problem solving strategy
 - 3.5 Make improvements to problem solving strategy and approach

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- reviewing current operations and procedures to determine if problems are being identified as early as possible
- reviewing current operations and procedures to determine if problems are being defined appropriately
- identifying and quantifying desired outcome from improved problem solving capability, such as:
 - improved customer service and delivery
 - defect elimination
 - capacity improvement
 - cost reduction
 - safety improvement
 - improved complaint resolution
- establishing appropriate reporting arrangements for formal problem solving, including:
 - appropriate metrics (e.g. incident frequency and incident consequences)
 - trigger criteria for conducting problem solving activity
 - problem definition and quantification
 - cause and effect diagrams (or similar)
- solutions identified
- reviewing organisational structure, value stream and customer alignment in order to set performance indicators for organisation problem solving capability

Required knowledge

Required knowledge includes:

- competitive systems and practices principles
- competitive systems and practices at both a strategic and tools level, including:
 - value stream mapping
 - 5S
 - Just in Time (JIT)
 - mistake proofing
 - process mapping

- establishing customer pull
- breakthrough improvement and continuous improvement (kaizen and kaizen blitz)
- setting of key performance indicators (KPIs)/metrics
- identification and elimination of waste (muda)
- six sigma and lean six sigma
- a range of problem solving methodologies, including:
 - cross-functional problem solving team
 - cross-functional nominal group (virtual team)
 - consulting and or brainstorming with members from outside the organisation on some basis
 - input from other members of the value stream
 - the use of known/proprietary problem solving approaches or some synthesis of methods
 - own or commissioned research either in whole or in part
- organisation strategy and vision, value stream and value as defined by the organisation's customers
- corrective action tracking methods

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • analyse and improve problem finding capabilities of the organisation • improve the problem solving capability of the organisation • set KPIs for organisation problem solving • ongoing review of systems and processes relevant to problem solving • increasing problem solving capability through identification of appropriate strategies, including where required, identifying: <ul style="list-style-type: none"> • training needs in problem finding and solving • changes in organisational structure, decision making and processes • appropriate metrics • need for outside assistance.
--	---

<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<p>Guidance information for assessment</p>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Codes of practice/standards	<p>Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used</p>

Health, safety and environment (HSE)	All changes implemented are expected to be at least neutral, or preferably beneficial, in their impact on HSE
Organisational structure	<p>A review of organisational structure may include:</p> <ul style="list-style-type: none"> • operational and support functions and departments • links with value stream members • super-users and facilitators • roles and responsibilities with regard to problem solving • plans to broaden the users of problem solving approach • plans to improve the problem solving performance of personnel
Problem finding strategies	<p>Problem finding strategies are the strategies used to identify:</p> <ul style="list-style-type: none"> • problems before they become obvious or cause significant non-conformance or risk • situations not initially considered a problem but which may be hindering greater performance • strategies for finding opportunities for improvement
Complex problem	<p>A complex problem may be described as one which has several of the following characteristics:</p> <ul style="list-style-type: none"> • requires going into the extended value stream for data/information • is wider than just applying to a single job • applies to less common solutions or problems • requires a higher level of knowledge and skill (which may or may not be possessed directly by the person solving the problem), such as: <ul style="list-style-type: none"> • significant specialist knowledge • significant specialist skill • more theory/understanding of technology or process • data is not easily available and may need particular strategies to obtain, such as: <ul style="list-style-type: none"> • overcoming resistance from people, including employees, customers or suppliers • extracting data not regularly reported from SCADA or similar systems • the problem and/or proposed solutions require reporting or authorisations from a Board or external authorities, such as licensing or

	regulatory bodies
Effective solutions	<p>Effective solutions will:</p> <ul style="list-style-type: none"> • prevent recurrence • be within the control/ability of the organisation to implement • meet organisation goals and objectives
Required resources	<p>Required resources may include:</p> <ul style="list-style-type: none"> • plant • data processing equipment • measuring and diagnostic equipment • materials (e.g. raw materials, components, work in progress, other consumables, paper and forms in electronic or hard format) • energy (e.g. heating, cooling, fuel and power) • appropriately skilled people as employees and in the value stream • finances • feedback/visual operations resources • measuring equipment
Manager	<p>Manager may include:</p> <ul style="list-style-type: none"> • any person who may have either a permanent or an ad hoc role in facilitating the function of multiple teams in a workplace, departments or entire organisations

MSS408008A Analyse data for relevance to organisational learning

Modification History

New unit, superseding MSACMG800A Analyse data for relevance to organisational learning - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to analyse data generated from formal information monitoring and management systems, such as statistical process control (SPC) and six sigma, or Systems Control and Data Acquisition (SCADA) software and determining its relevance for organisational learning.

Application of the Unit

This unit is intended for managers, team leaders and people with a similar sphere of influence and scope of authority and responsibility. It covers the capturing of knowledge from data generated within organisation systems and takes a largely quantitative view of information. The unit applies to individuals who are familiar with the application and use of statistics in operations. Where this is not the case the unit *MSS404052A Apply statistics to operational processes* may be completed to supply the necessary skills.

For a more qualitative approach of capturing and analysing data and applying the knowledge deduced from that to organisational learning see *MSS407008A Capture learning from daily activities in an organisation*.

This unit may also be applied to service organisations applying competitive systems and practices principles.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Identify learning from own organisation data	1.1	Obtain data from appropriate data systems
		1.2	Examine data for discontinuities, trends and other possible signs of assignable cause
		1.3	Examine selected data events to determine root causes of data events
		1.4	Communicate root causes of data events to relevant stakeholders
2	Identify learning from value stream data	2.1	Identify data which is or could be available from other value stream members
		2.2	Identify data which might be useful but is not available and seek access to it
		2.3	Obtain and examine available data for discontinuities, trends and other possible signs of assignable cause
		2.4	Examine selected data events to determine root causes of data events in liaison with appropriate value stream personnel
		2.5	Communicate root causes of data events to relevant stakeholders

-
- | | | | |
|---|-------------------------------------|-----|--|
| 3 | Capture learning | 3.1 | Review root causes to determine implications for organisational learning |
| | | 3.2 | Ensure learning is captured by organisation's systems |
| | | 3.3 | Obtain involvement and required approvals from relevant process/system owners |
| | | 3.4 | Check that learning flows to all relevant stakeholders |
| 4 | Apply learning to team/organisation | 4.1 | Review management systems for their impact on organisational learning |
| | | 4.2 | Brief relevant process/system owners on changes and obtain required approvals |
| | | 4.3 | Check learning is used in daily operations |
| | | 4.4 | Review use of learning in liaison with appropriate value stream personnel and update in knowledge system |
| | | 4.5 | Identify implications for training and procedures |
| | | 4.6 | Recommend improvements to value stream/organisation knowledge system |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- undertaking self-directed problem solving and decision-making
- communicating across all levels in an organisation
- preparing reports and recommendations
- researching and collating data from a variety of organisation systems and sources, including:
 - data presented at tool box and other regular team, section and area meetings
 - data available through ad hoc discussions/meetings with team members, sales and marketing employees, other employees, value stream members, regulators and visitors
 - data available from interviews with employees and external organisation representatives
 - operations records which may include data from:
 - clip boards on the line
 - problem solving templates
 - procedures templates
 - whiteboards or other noticeboards
 - computers or terminals that allow access to data bases and other electronic records
 - maintenance records
 - quality records
 - warranty and other returns
 - data from continuous improvement and breakthrough improvement activities (kaizen and kaizen blitz)
 - complaints from customers, employees and members of the community
 - equipment down time/maintenance records
 - non-obvious sources
- determining significant data correlations and changes from those which may coincidentally be chronologically correlated
- analysing data-related problems and events to root cause
- determining value of data for organisational learning, including establishing procedures for monitoring effectiveness of improvement actions based on data
- capturing learning through paper-based, electronic or other means (e.g. film and video)

Required knowledge

Required knowledge includes:

- competitive systems and practices tools, including:
 - value stream mapping
 - 5S
 - Just in Time (JIT)
 - mistake proofing
 - process mapping
 - establishing customer pull
 - kaizen and kaizen blitz
 - setting of key performance indicators (KPIs)/metrics
 - identification and elimination of waste (muda)
- organisational goals, strategies, operations and processes
- continuous improvement strategies and processes
- communication methods using arrange of media
- root cause analysis (RCA)
- mathematics and statistics
- expected range of performance for operations and processes, including any KPIs
- types of knowledge capture and retrieval systems used in the organisation and their applicability, including where used:
 - SPC processes
 - six sigma processes
 - quality processes
 - plant instrumentation and control data (e.g. SCADA) systems

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	Competence must be demonstrated in the ability to recognise, extract and record learning from workplace generated data.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • sort relevant from irrelevant data, including establishing correlations • find and collate data from less obvious sources • translate data into information relevant to operational

	<p>and improvement activities</p> <ul style="list-style-type: none"> • make ongoing additions to the learning system • use the learning system to validate data-based improvement activities.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being</p>

	performed.

PMBPROD291B Operate resin infusion moulding equipment

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the operation of resin infusion moulding equipment and the resolving of routine problems to procedure in the production process.

Application of the Unit

Application of this unit

This competency applies to operators who are required to undertake the routine operation of resin infusion moulding equipment. This competency is typically performed by operators working either independently or as part of a work team.

The operator:

- takes product off mould table
- checks raw material infusion
- checks product for quality and conformity to specifications
- notices any problems and takes required action (e.g. reporting)
- deals with non-conforming products, waste and scrap
- completes logs and reports.

They may record key variables such as vacuum bag conditions and production rate and reasons for interruptions.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

The required outcomes described in this unit contain applicable Employability Skills. The Employability Skills Summary of the qualification(s) in which this unit is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Check work requirements.	1.1 Identify work requirements from procedures. 1.2 Check product, materials and equipment meet requirements for job(s). 1.3 Recognise requirements which may not be in accordance with usual practice. 1.4 Ask questions of appropriate person to confirm non standard job specifications. 1.5 Ensure housekeeping is to requirements. 1.6 Identify hazards associated with the job and take appropriate action. 1.7 Perform other pre-operational checks in accordance with procedures.
2. Conduct pre-operational checks as required.	2.1 Check safety equipment is in position and working. 2.2 Check moulds, closures and fittings to procedures. 2.3 Check moulds for cracks, chips, marks and cleanliness. 2.4 Check materials, including fibre preforms, resins, additives and release agents are correct. 2.5 Undertake other pre-operational checks in accordance with procedures.
3. Operate resin infusion equipment, to procedure.	3.1 Check process is operating within required limits. 3.2 Check product is in specification and to required quality standard. 3.3 Ensure product is consistently ready for next operation. 3.4 Maintain supply of material(s) as required. 3.5 Complete logs and records as required. 3.6 Collect and segregate scrap, waste and other materials as required. 3.7 Keep equipment and work area clean. 3.8 Pause infusion cycle and perform emergency stop as required.
4. Resolve routine problems, to procedure.	4.1 Recognise known faults that occur during the operation.

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	4.2 Identify and take action on causes of routine faults. 4.3 Log problems as required. 4.4 Identify non-routine process and quality problems and take appropriate action.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of an operational knowledge of the materials, equipment and process sufficient to recognise out of specification products, process problems and materials faults. For example, if the vacuum bag has a hole this will affect the flow of resin during infusion. Therefore care needs to be taken of the equipment to reduce damage, and resin flow should be monitored to reduce production time, if problems occur.

Knowledge of organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to the resin infusion process. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup.

Knowledge of and skills in the operation of resin infusion equipment and main components sufficient for consistent production of quality products including:

- production workflow sequences and materials demand
- the reasons for checking process control panels and reporting readings which do not conform to the work instructions
- accurately monitoring equipment operation and product quality
- the potential effects of variations in raw materials and equipment operation in relation to quality of product
- processing behaviour of polymers and the role of additives
- waste management and knowing the importance of re-using non-conforming products wherever possible
- correct selection and use of equipment, materials, processes and procedures
- explain the effect of unauthorised or emergency shutdown in relation to safety and production requirements
- identify factors which may affect product quality or production output and appropriate remedies.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- identify and describe own role and role of others involved directly in the process.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is required, eg to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- apply the required skills and knowledge to operate resin infusion moulding equipment
- apply approved procedures.

Consistent performance should be demonstrated. For example, look to see that resin infusion moulding production standards are met consistently.

Assessment method and context

Assessment will occur on industrial resin infusion moulding equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- by using appropriate, industrial resin infusion moulding equipment requiring demonstration of operation and emergency stop procedures
- in a situation allowing for the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts. Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to the operation of resin infusion moulding equipment including moulds, pumps and programmable logic controllers (PLC) if fitted. It includes the operation of all relevant additional equipment where that equipment is integral to the process.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- moulds
- vacuum pumps and fittings (eg hoses and couplings)
- controller (eg PLC if fitted)
- vacuum bags
- hand tools used in the this process (eg dispensing equipment)
- material loading equipment used for loading of raw materials
- relevant personal protective equipment.

Hazards

Typical hazards may include:

- spills (eg dripping of resin)
- dusts/vapours (eg resin vapours)
- slip and fall
- temperature (eg during the curing process)
- hazardous substances
- moving equipment
- manual handling hazards.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process problems may include:

- equipment malfunction
- vacuum leaks
- vacuum bag bridging
- vacuum switch-off timing
- stoppage of resin flow
- variations in process conditions, especially temperature
- variations affecting cure rate
- variations in materials or contamination of materials
- equipment, tool, or mould damage.

Typical product problems may include:

- dry spots
- resin pooling
- under-saturation of resin
- poor surface finish
- routine product faults
- variations in materials and/or contamination of materials.

Appropriate action for non-routine problems may be reporting to designated person or other action specified in the procedures.

Unit Sector(s)

Not applicable.

PMBPROD294B Operate resin transfer moulding equipment

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the operation of resin transfer moulding equipment and the resolving of routine problems to procedure.

Application of the Unit

Application of this unit

This competency applies to operators who are required to undertake the routine operation of resin transfer moulding equipment for the production of composites.

It is typically performed by operators working either independently or as part of a work team. The operator will:

- check product for quality and conformity to specifications
- check materials are correct
- notice any problems and take required action (e.g. reporting)
- deal with non-conforming products, waste and scrap.
- complete logs and reports.

They may record key variables such as machine conditions and production rate and reasons for interruptions.

These unit does not include :

- packing of product - see *MSASUP204A Pack products or materials*
- finishing of product - see *PMBFIN201 Finish products and components*
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

The required outcomes described in this unit contain applicable Employability Skills. The Employability Skills Summary of the qualification(s) in which this unit is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Check work requirements.	1.1 Identify work requirements from production plan or request. 1.2 Check product, materials and equipment meet requirements for job/s. 1.3 Recognise requirements which may not be in accordance with usual practice. 1.4 Ask questions of appropriate person to confirm non standard job specifications. 1.5 Ensure housekeeping is to requirements. 1.6 Identify hazards associated with the job and take appropriate action. 1.7 Undertake other pre-operational checks in accordance with procedures.
2. Conduct pre-operational checks as required.	2.1 Check safety equipment is in position and working. 2.2 Check moulds, closures and fittings to procedures. 2.3 Check moulds for cracks, chips, marks and cleanliness. 2.4 Check materials including fibre preforms, resins additives and release agents are correct. 2.5 Undertake other pre-start checks in accordance with procedures.
3. Operate equipment to procedures.	3.1 Check process is operating within required limits. 3.2 Check product is in specification and to required quality standard. 3.3 Maintain supply of material(s) as required. 3.4 Complete logs and records as required. 3.5 Collect and segregate scrap, waste and other materials as required. 3.6 Complete logs and records as required. 3.7 Keep equipment and work area clean. 3.8 Pause cycle or stop equipment in an emergency, as required.
4. Resolve routine problems.	4.1 Recognise known faults that occur during the operation.

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	4.2 Identify and take action on causes of routine faults. 4.3 Log problems as required. 4.4 Identify non-routine problems and report to designated person.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise out of specification products, process problems and materials faults.

Knowledge and ability to implement organization procedures and relevant regulatory requirements; within appropriate time constraints and work standards.

Application of knowledge of managing risks using hierarchy of controls applied to the resin transfer moulding process. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup.

Knowledge and skills in the operation of resin transfer moulding process and equipment sufficient for consistent production of quality products including:

- production workflow sequences and materials demand
- reasons for checking process control panels and reporting readings which do not conform to the work instructions
- correct selection and use of equipment, materials, processes and procedures
- accurately monitoring equipment operation and product quality
- potential effects of variations in raw materials and equipment operation in relation to quality of product
- processing behaviour of polymers and the role of additives
- waste management and knowing the importance of re-using non-conforming products wherever possible
- effects of unauthorised or emergency shutdown in relation to safety and production requirements
- identifying factors which may affect product quality or production output and appropriate remedies.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- identify and describe own role and role of others involved directly in the resin transfer moulding process.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, material labels, basic machine control panels, and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Numeracy is required to the level of reading tables of figures and graphs (and applying the resultant information), using formula percentages/ratios to determine the required mass of an additive (catalyst, pigment etc.) for a given amount of resin, and similar manipulations and interpretation.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- apply the required skills and knowledge to operate resin transfer moulding equipment
- apply approved procedures

Consistent performance should be demonstrated. For example, look to see that:

- resin transfer moulding production standards are met consistently
- all safety procedures are followed

Assessment method and context

Assessment will occur on a resin transfer moulding equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- by using appropriate resin transfer moulding equipment requiring demonstration of operation and emergency stop procedures
- in a situation allowing for the generation of evidence of the ability to respond to problems
 - by using a suitable simulation and/or a range of case studies/scenarios
 - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts. Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all resin transfer moulding operations within the plastics and rubber sectors. It includes the operation of all relevant additional equipment integral to the process.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- resin transfer moulding equipment such as moulds, resin pumps and fittings
- components of resin transfer moulding equipment such as closures, couplings, hoses, breathers, bleeders
- controller (such as PLC), if fitted
- hand tools used in this process
- material loading equipment used for loading of raw materials
- relevant personal protective equipment.

Hazards

Typical hazards include:

- spills
- dusts/vapours
- slip and fall
- temperature
- hazardous substances
- moving equipment
- manual handling hazards.

Problems

'Respond to routine problems' means apply known solutions to a limited range of predictable problems. Typical process and product problems may include:

- resin, over or undersupplied to mould
- equipment malfunction
- variations in process conditions, especially temperature variations affecting cure rate
- variations in materials or contamination of materials
- equipment, tool or mould damage
- routine product faults
- mould/tooling problems.

Appropriate action for non-routine problems may be reporting to designated person or other action specified in the procedures.

Variables

Key variables to be monitored include:

- operating temperatures
- cycle time
- output rate
- surface finish and condition
- product weight
- product integrity and general conformance to specification/ sample.
-

Unit Sector(s)

Not applicable.

PMBPROD298B Operate equipment using pre-preg material

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the operation of equipment using pre-preg materials to produce composite products and the resolving of routine problems to procedure in the production process.

This competency is typically performed by operators working either independently or as part of a work team.

Application of the Unit

Application of this unit

This competency applies to operators who are required to undertake the routine operation of equipment using pre-preg materials. The key factors are the making of products to meet quality standards and workplace requirements.

It includes:

- checking job sheets for work requirements
- following approved hazard minimisation procedures for any hazards connected with materials and process, using work instructions, labels and materials safety data sheets, and in accordance with occupational health and safety legislative responsibilities
- monitoring equipment operation and reporting process variations
- checking product for quality and conformity to specifications
- discarding non-conforming products ensuring discarded materials are reused where possible and waste and scrap is disposed of in accordance with workplace instructions
- identifying and taking action on routine process problems
- completing logs and reports.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

The required outcomes described in this unit contain applicable Employability Skills. The Employability Skills Summary of the qualification(s) in which this unit is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT ELEMENT	PERFORMANCE CRITERIA
1. Check work requirements.	<p>Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.</p> <p>1.1 Identify work requirements from procedures. 1.2 Identify product, materials and equipment requirements for job(s). 1.3 Recognise hazards and adopt steps required to ensure safety. 1.4 Check with supervisor/appropriate person if requirements are not in accordance with usual practice.</p>
2. Conduct pre-start checks as required.	<p>2.1 Check safety gates and guards are in position and working. 2.2 Check moulds, closures and fittings to procedures. 2.3 Check moulds for cracks, chips, marks and cleanliness. 2.4 Check pre-preg materials and other raw materials are correct. 2.5 Undertake other pre-start checks in accordance with procedures.</p>
3. Operate equipment.	<p>3.1 Start equipment safely and correctly when required. 3.2 Check process is within required limits. 3.3 Collect products and store as required. 3.4 Check product/process is in specification/to required quality standard. 3.5 Maintain supply of material(s) as required. 3.6 Complete logs and records when required. 3.7 Collect and reprocess/discard scrap/trim, waste and other materials in accordance with procedures. 3.8 Clean up equipment and work area in accordance with procedures. 3.9 Pause or stop equipment in an emergency, following workplace and emergency procedures.</p>
4. Respond to routine problems to procedures.	<p>4.1 Recognise known faults that occur during the operation. 4.2 Identify and take action on causes of routine faults. 4.3 Log problems as required. 4.4 Identify non-routine process and quality problems</p>

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	and take appropriate action.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise out of specification products, process problems and materials faults.

Knowledge of organization procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to equipment using pre-preg materials. Application of approved hazard control, safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup.

Knowledge of and skills in the operation of equipment using pre-preg materials and main components sufficient for consistent production of quality products including:

- operation of moulding equipment and components
- production workflow sequences and materials demand
- reasons for checking process control panels and reporting readings which do not conform to the work instructions
- approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and clean up
- potential effects of variations in raw materials and equipment operation in relation to quality of product
- waste management and importance of reusing non-conforming products wherever possible
- correct selection and use of equipment, materials, processes and procedures
- identify factors which may affect product quality or production output and appropriate remedies.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- monitor equipment operation and product quality
- identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- identify and describe own role and role of others involved directly in the process
- distinguish between possible causes of routine faults.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Numeracy is required to the level of reading tables of figures and graphs (and applying the resultant information), using formula percentages/ratios to determine the required mass of an additive(catalyst, pigment etc.) for a given amount of resin, and similar manipulations and interpretation.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- recognise the importance of material properties and qualities
- apply approved procedures
- take appropriate action to resolve faults or report faults to appropriate personnel
- explain and implement emergency shutdown procedures.

Consistent performance should be demonstrated. For example, look to see that:

- production standards are met consistently
- upstream and down stream communication is timely and effective
- operating procedures and work instructions are read and interpreted correctly
- problems are identified and appropriate action is taken (ie the problem is fixed or reported)
- all safety procedures are followed.

Assessment method and context

Assessment will occur using industrial pre-preg on industrial equipment and will be undertaken in a work like environment.

Competence in this unit may be assessed:

- by using an appropriate, industrial moulding machine
- in a situation allowing for the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method.

Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required.

Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts. Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to the operation of equipment using pre-preg materials to manufacture composite products. It includes moulds, equipment and programmable logic controllers (PLCs) if fitted.

Processes using pre-preg materials may include vacuum bagging or other closed mould processes.

It includes the operation of all relevant additional equipment where that equipment is integral to the process.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- moulds
- moulding equipment and closures controllers, such as PLCs if fitted
- hand tools used in the this process
- material loading equipment used for loading of raw materials
- relevant personal protective equipment.

Hazards

Typical hazards include:

- spills
- dusts/vapours
- slip and fall
- temperature
- hazardous substances
- moving equipment
- manual handling hazards.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process problems may include:

- equipment malfunction
- poor handling or storage of pre-preg materials
- pre-preg incorrectly applied to mould
- variations in process conditions, especially temperature

- variations affecting cure rate
- variations in materials or contamination of materials
- equipment, tool or mould damage
- incorrect quantity of materials
- contaminated materials/additives
- equipment faults
- mould damage
- wrong raw materials/additives
- incorrect quantity of materials/additives
- machine failure.

Typical product problems may include:

- routine product faults
- machine malfunction
- mould/tooling problems
- variations in materials and/or contamination of materials.
-

Unit Sector(s)

Not applicable.

PMBPROD391B Produce composites using resin infusion

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the operation of resin infusion equipment to make composite products and the solving of problems.

Application of the Unit

Application of this unit

This competency is typically performed by advanced operators applying knowledge of materials, product purpose and processes to the operation of resin infusion equipment to produce products conforming to requirements. It also requires using a range of well developed skills requiring some discretion and judgement to recognise and resolve a range of problems. The operator should:

- set up and start resin infusion equipment
- check settings and adjustments of equipment
- identify and plan own work requirements from production requests
- monitor equipment operation
- make appropriate adjustments to correct materials, equipment or process variations
- solve resin infusion equipment, material and process problems, seeking guidance where necessary or appropriate.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has the prerequisite of *PMBPROD291B Operate resin infusion moulding equipment*.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Plan own work requirements.	1.1 Identify the most appropriate equipment to be used for production and upstream and downstream operations from production plan or request. 1.2 Identify and check materials required including additives. 1.3 Implement measures to control hazards in line with procedures and duty of care. 1.4 Identify requirements for materials, quality, production, and equipment checks.
2. Start resin infusion moulding process to procedures.	2.1 Identify process settings for required product. 2.2 Set process to required settings. 2.3 Check materials are correct. 2.4 Take appropriate action for non-conforming materials. 2.5 Set up date, batch and materials markings to specifications, as required. 2.6 Complete pre-start checks. 2.7 Start up resin infusion moulding process
3. Operate and make adjustments to the resin infusion process to procedures.	3.1 Operate resin infusion equipment, noting key variables. 3.2 Monitor controls/displays/terminals for production and process data. 3.3 Take samples as required and identify product out of specification. 3.4 Monitor product/process quality. 3.5 Make adjustments to remedy faults and non-conformity to standard as required. 3.6 Establish a stable resin infusion process. 3.7 Adjust process to minimise scrap and trim. 3.8 Clean, adjust and check equipment damage as required.
4. Shut down machine to procedures.	4.1 Determine type of shut down. 4.2 Select appropriate cleaning method. 4.3 Clean efficiently and adequately as required.

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	<p>4.4 Leave machine in appropriate condition and with appropriate locks, tags or notices.</p> <p>4.5 Complete relevant documentation.</p> <p>4.6 Ensure area is clean and clear after the shutdown, in readiness for the next start-up.</p>
5. Anticipate and solve problems.	<p>5.1 Recognise a problem or a potential problem.</p> <p>5.2 Determine problems needing priority action.</p> <p>5.3 Refer problems outside area of responsibility to appropriate person, with possible causes.</p> <p>5.4 Seek information and assistance as required to solve problems.</p> <p>5.5 Solve problems within area of responsibility.</p> <p>5.6 Follow through items initiated until final resolution has occurred.</p>

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise material and equipment conditions which may lead to out of specification production. For example, once resin infusion begins there is very little that can be done to rectify a problem at this point. If a leak were to occur, even the smallest amount of air introduced could potentially destroy a composite part. There are some cases where problems can be corrected, but the best solution is to check and monitor equipment and set up before infusion.

Knowledge of organization procedures, quality requirements at each production stage, and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Application of knowledge of managing risks using the hierarchy of controls applied to the resin infusion process. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup.

Skills to identify the range of possible causes of product faults.

Knowledge as a basis for solving processing and material problems including:

- characteristics of materials and behaviour in relation to heat, pressure and time
- function and operating principles of composites forming equipment, machine components and ancillary equipment including the mechanical, hydraulic, pneumatic, electrical and electronic principles which effect machine operation
- impact of temperature, pressure, time during cycles on product quality and production output
- phases of the resin infusion composite forming cycle and the effect of the key variables on product quality, in order to make appropriate adjustments to equipment settings. For example, the vacuum is applied while reinforcements are still dry, which allows for any possible leaks to be sought out before resin is infused. If something is not sitting properly, the vacuum need only be released and readjusted. This decreases the possibility of damaged composite products.
- changes to materials at various stages of production
- waste management and importance of non-conforming materials
- impact of variations in raw materials and equipment operation in relation to final product.
- polymer properties and their interactions with process conditions
- relationships between polymer properties and process conditions
- changes to polymer properties to better suit process requirements.
- product problems related to polymer properties
- product problems related to process conditions
- adjustments to process conditions to meet polymer and product requirements

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- maintain output and product quality using appropriate instruments, controls, test information and readings
- identify and describe own role and role of others involved directly in the process
- identify factors which may affect product quality or production output and appropriate remedies
- identify when assistance is required to solve problems.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms and production reports.

Numeracy is required to the level of determining required weights/volumes of materials in a resin mix for different circumstances (say using a data sheet), number of layers of impregnated matrix required to yield the required product laminate thickness, and similar activities.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Where the assessee does not currently possess evidence of competency in

PMBPROD291B Operate resin infusion moulding equipment, it may be co-assessed with this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- identify critical materials properties and resin infusion process variables in relation to the process requirements and the end product
- make adjustments to the process as required
- identify and take action on problems and potential problems.

Consistent performance should be demonstrated. For example, look to see that:

- the process runs consistently and smoothly, with the minimum need for human intervention
- all safety procedures are always followed.

Assessment method and context

Assessment will occur on an industrial infusion moulding equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- using appropriate, industrial resin infusion equipment requiring demonstration of starting, operating and completing the composite moulding process
- in a situation allowing for the generation of evidence of the ability to recognise, anticipate and respond to problems
 - by using a suitable simulation and/or a range of case studies/scenarios
 - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice and/or Australian/international standards, the latest version must be used.

Context

This competency applies to manufacture of composite products using resin infusion equipment within the plastics and rubber industries.

It includes all moulds, pumps and programmable logic controllers (PLCs) if fitted and all relevant ancillary equipment integral to the composites forming process.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- moulds, closures and fittings
- vacuum pumps and fittings (such as couplings, hoses, breathers, bleeders)
- additional equipment (such as resin bucket, resin line holder, zip-strips)
- controller (such as PLC if fitted)
- relevant personal protective equipment (PPE)
- hand tools used in the production process (such as clamps to stop resin moving up vacuum hose)
- ancillary materials (such as release films and fabrics, sealant tapes, preforms, cores, and pre-pregs)
- material loading equipment used for loading of raw materials.

Hazards

Typical hazards include:

- hazardous vapours and materials
- fibres, airborne and handled
- humidity, air temperatures, radiant heat, hot moulds
- stationary and moving machinery, parts and components
- manual handling hazards.

Problems

'Anticipate and solve problems' means resolve a wide variety of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/ a solution recorded in the procedures.

Typical routine faults may include:

- resin pooling
- under-saturation of resin
- dry reinforcements not sitting flat
- leaks in vacuum bag
- poor colour dispersion
- poor surface finish
- dry spots
- vacuum switch-off timing incorrect.

Non-routine faults which may have multiple causes include:

- mould release problems
- stoppage of resin flow
- excess resin
- warping or cracking after moulding
- variations in vacuum
- variations affecting cure rate.

Typical process and product problems may include:

- resin, over or under supplied to mould
- release agents performance
- contamination
- temperature variations, affecting resin cure-rate
- blemishes
- missing detail
- warped moulds or dies
- worn or damaged mould parts or fittings
- variations in materials and/or contamination of materials.

Appropriate action for problems outside of area of responsibility may be reporting to an appropriate person.

Appropriate action for solving problems within area of responsibility includes asking questions and seeking assistance from appropriate persons/sources.

Variables

Key variables to be monitored include:

- operating temperatures

- cycle time (such as the resin filling time)
- output rate
- vacuum pressure
- surface finish and condition
- equipment - adjustments/setup
- product weight
- product integrity and general conformance to specification/sample.
-

Unit Sector(s)

Not applicable.

PMBPROD394B Produce composites using resin transfer moulding

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the operation and adjustment of resin transfer moulding processes and the solving of problems.

Application of the Unit

Application of this unit

This competency is typically performed by advanced operators applying knowledge of materials, product purpose and processes to the operation of resin transfer moulding equipment for the production of composites. It also requires using a range of well developed skills requiring some discretion and judgment to recognize and resolve a range of problems. The operator will:

- start up resin transfer moulding equipment
- check materials for conformity to job requirements
- make appropriate adjustments to correct materials, equipment or process variations
- solve resin transfer moulding equipment, material and process problems, seeking guidance where necessary or appropriate
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has the prerequisite of *PMBPROD294B Operate resin transfer moulding equipment*.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Plan own work requirements.	1.1 Identify the most appropriate equipment to be used for production and upstream and downstream operations from production plan or request. 1.2 Identify and check materials required including additives. 1.3 Implement measures to control identified hazards in line with procedures and duty of care. 1.4 Identify requirements for materials, quality, production and equipment checks.
2. Start up resin transfer moulding process to procedures.	2.1 Identify process settings required for the product. 2.2 Adjust control panel (eg, cycle time, heating, cooling) as required for factors such as temperature, material. 2.3 Check materials, resins, fibres, cores are correct. 2.4 Take appropriate action for non-conforming materials. 2.5 Set up date, batch and materials markings to specifications, as required. 2.6 Complete pre-start checks. 2.7 Start up process.
3. Operate and make adjustments as required to the resin transfer moulding process to procedures.	3.1 Operate resin transfer moulding process, noting key variables. 3.2 Monitor controls/displays/terminals for production/process data. 3.3 Monitor product/process quality, thickness and integrity to procedures. 3.4 Take samples as required and identify product out of specification. 3.5 Make adjustments to remedy faults and nonconformity to standard, as required. 3.6 Establish a stable resin transfer moulding process. 3.7 Adjust process to minimise scrap and waste. 3.8 Clean, adjust and lubricate equipment as required.
4. Shut down machine to procedures.	4.1 Determine type of shutdown. 4.2 Select appropriate purging method.

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	<p>4.3 Purge efficiently and adequately as required.</p> <p>4.4 Leave machine in appropriate condition and with appropriate locks, tags or notices.</p> <p>4.5 Complete relevant documentation.</p> <p>4.6 Ensure area is clean and clear after the shutdown, in readiness for the next start-up.</p>
5. Anticipate and solve problems.	<p>5.1 Recognise a problem or anticipate potential problems.</p> <p>5.2 Determine problems needing priority action.</p> <p>5.3 Refer problems outside area of responsibility to appropriate person, with possible causes.</p> <p>5.4 Seek information and assistance as required to solve problems.</p> <p>5.5 Solve problems within area of responsibility.</p> <p>5.6 Follow through items initiated until final resolution has occurred.</p>

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit. Application of knowledge of the materials, equipment and process sufficient to recognise material and equipment conditions which may lead to out of specification production. Knowledge of organization procedures, quality and safety requirements at each production stage and relevant regulatory requirements; and the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to the resin transfer moulding process. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup.

Knowledge as a basis for problem solving process and material problems, including:

- characteristics of materials and behaviour in relation to heat, pressure, flow rate and time
- function and operating principles of resin transfer moulding equipment, machine components and ancillary equipment, including the mechanical, hydraulic, pneumatic, electrical and electronic principles which affect machine operations
- impact of machine speed, temperature, pressure, time during cycles on product quality and production output
- impact of variations in raw material and equipment operation in relation to the final product
- changes to materials at various stages of production
- waste management and significance of non-conforming materials
- polymer properties and their interactions with process conditions
- relationships between polymer properties and process conditions
- changes to polymer properties to better suit process requirements
- product problems related to polymer properties
- product problems related to process conditions
- adjustments to process conditions to meet polymer and product requirements.

Competence also includes the ability to :

- plan own work, including predicting consequences and identifying improvements
- maintain output and product quality using appropriate instruments, controls, test information and readings
- identify and describe own role and role of others involved directly in the process
- identify factors which may affect product quality or production output and appropriate remedies
- identify when assistance is required to solve problems.

Knowledge and ability to identify and take appropriate action on the range of possible causes of product faults.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets, material labels, and machine control panels such as those displaying PLC information, if fitted.

Writing is required to the level of completing workplace forms, quality assurance records and production reports.

Numeracy is required to the level of determining required weights/volumes of materials in a resin mix for different circumstances (say using a data sheet), number of layers of impregnated matrix required to yield the required product laminate thickness, and similar activities.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Where the assessee does not currently possess evidence of competency in *PMBPROD294B Operate resin transfer moulding equipment*, it may be co-assessed with this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- identify critical materials properties and composites moulding process characteristics in relation to the process requirements and the end product
- identify and take appropriate action on problems and potential problems.

Consistent performance should be demonstrated. For example, look to see that:

- the process runs smoothly, with the minimum need for intervention
- all safety procedures are always followed.

Assessment method and context

Assessment will occur on an industrial resin transfer moulding equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- using appropriate resin transfer moulding equipment requiring demonstration of start-up, operation and shutdown procedures
- in a situation allowing for the generation of evidence of the ability to recognise, anticipate and respond to problems
 - by using a suitable simulation and/or a range of case studies/scenarios
 - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required. Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts. Where reference is made to industry codes of practice and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all resin transfer moulding within the plastics and rubber industries. It includes the operation of all relevant additional equipment integral to the composites forming process.

Procedures

All operations are performed in accordance with procedures. Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- resin transfer moulding equipment such as moulds, resin pumps and fittings
- components of resin transfer moulding equipment such as closures, couplings, hoses, breathers, bleeders
- controller, such as PLC if fitted
- relevant personal protective equipment (PPE)
- hand tools used in the production process
- material loading equipment used for loading of raw materials.

Hazards

Typical hazards include:

- hazardous vapours and materials
- fibres, airborne and handled
- humidity, air temperatures, radiant heat, hot moulds
- stationary and moving machinery, parts and components
- manual handling hazards.

Problems

'Anticipate and solve problems' means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/s recorded in the procedures.

Typical process and product problems may include:

- resin, over or undersupplied to mould
- release agents performance
- contamination
- temperature variations, affecting resin cure-rate
- blemishes
- missing detail
- warped moulds or dies
- worn or damaged mould parts or fittings
- variations in materials and/or contamination of materials
- processing problems.

Appropriate action for problems outside of area of responsibility may be reporting to an appropriate person.

Appropriate action for problems within of area of responsibility includes asking questions and seeking assistance from appropriate persons/sources.

Variables

Key variables to be monitored include:

- operating temperatures
- cycle time
- output rate
- surface finish and condition
- product weight
- product integrity and general conformance to specification/sample.
-

Unit Sector(s)

Not applicable.

PMBPROD398B Produce composites using pre-pregs

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the operation of equipment using pre-pregs to make composite products and the solving of non-routine problems. This competency is typically performed by advanced operators demonstrating some relevant theoretical knowledge and using a range of well developed skills requiring some discretion and judgement.

Application of the Unit

Application of this unit

This competency applies to advanced operators who are required to apply knowledge of materials, product purpose and processes to the operation of equipment for the production of composites using pre-pregs. The key factors are the production of material meeting quality standards and product requirements and the recognition and resolving of a range of routine and non-routine problems.

It includes:

- identifying and planning own work requirements from production requests
- identifying and minimising any hazards connected with materials and process from materials safety data sheets, labels and workplace procedures
- checking settings and adjustments of equipment
- checking materials for conformity to job requirements
- monitoring equipment operation and correcting process variations
- correcting materials, equipment or process variations and making appropriate adjustments
- discarding non-conforming products ensuring discarded materials are reused where possible and waste and scrap is disposed of in accordance with workplace instructions
- solving routine and non-routine composites production equipment and process problems, seeking guidance where necessary or appropriate
- completing logs and reports.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has the prerequisite of *PMBPROD298A Operate equipment using pre-pregs material*.

Employability Skills Information

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Plan own work requirements.	1.1 Identify equipment and processes used for production process and upstream and downstream operations from production plan or request. 1.2 Identify materials required, including additives. 1.3 Recognise hazards and follow appropriate hazard control/minimisation methods. 1.4 Identify and check emergency stops, guards and controls. 1.5 Identify requirements for materials, quality, production and equipment checks. 1.6 Identify materials, waste management and housekeeping needs.
2. Start up pre-preg process.	2.1 Determine equipment requirements. 2.2 Adjust control panel (eg cycle time, heating, cooling) as required for factors such as temperature, material etc. 2.3 Check equipment, raw material and die/tool all match job requirements. 2.4 Check materials, pre-pregs, release agents etc, are correct. 2.5 Discard, or make adjustments to the process for, non-conforming materials. 2.6 Set up date, batch and materials markings to specifications, as required. 2.7 Complete other pre-start checks in accordance with procedures. 2.8 Start up pre-preg process
3. Operate and make adjustments as required to the process.	3.1 Operate composites forming equipment, noting key variables. 3.2 Monitor controls/displays/terminals for production/process data. 3.3 Monitor product/process quality, thickness and integrity to procedures. 3.4 Make adjustments to remedy faults and nonconformity to standard as required.

ELEMENT ELEMENT	PERFORMANCE CRITERIA
	<p>Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.</p> <p>3.5 Maintain continuity of process.</p> <p>3.6 Collect and reprocess/discard scrap/waste and other materials in accordance with procedures.</p> <p>3.7 Clean, adjust and lubricate equipment as required.</p> <p>3.8 Pause or stop equipment in an emergency, following procedures.</p>
4. Shut down machine to procedures	<p>4.1 Determine type of shut down</p> <p>4.2 Select appropriate cleaning method</p> <p>4.3 Clean efficiently and adequately as required</p> <p>4.4 Leave machine in appropriate condition and with appropriate locks, tags or notices</p> <p>4.5 Complete relevant documentation</p> <p>4.6 Ensure area is clean and clear after the shutdown, in readiness for the next start-up</p>
5. Anticipate and solve problems	<p>5.1 Recognise a problem or a potential problem.</p> <p>5.2 Determine problems needing priority action.</p> <p>5.3 Refer problems outside area of responsibility to appropriate person, with possible causes.</p> <p>5.4 Seek information and assistance as required to solve problems.</p> <p>5.5 Solve problems within area of responsibility.</p> <p>5.6 Follow through items initiated until final resolution has occurred.</p>

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit. Application of knowledge of the materials, equipment and process sufficient to recognise material and equipment conditions which may lead to out of specification production. Knowledge of organization procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards. Application of the knowledge of managing risks using the hierarchy of controls applied to the pre-preg moulding process. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup. Knowledge as a basis for solving processing and material problems including:

- products, materials and material characteristics
- behaviour of materials in relation to heat, pressure and time
- quality requirements at each production stage
- function and operating principles of composites forming equipment, machine components and ancillary equipment
- impact of temperature, pressure, time during cycles on product quality and production output
- nature of mechanical, hydraulic, pneumatic, electrical and electronic principles which effect machine operation and product development
- safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup
- the hierarchy of control, including engineering controls
- impact of variations in raw materials and equipment operation in relation to final product
- changes to materials at various stages of production
- waste management and importance of non-conforming materials
- make adjustments to equipment operation to rectify variations in equipment operation or product quality
- check composites forming equipment for correct set-up to job specifications and implement adjustments or report deviations immediately
- make measurements when required and identify product out of specification
- distinguish between causes of faults
- polymer properties and their interactions with process conditions
- relationships between polymer properties and process conditions
- changes to polymer properties to better suit process requirements
- product problems related to polymer properties
- product problems related to process conditions
- adjustments to process conditions to meet polymer and product requirements.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- interpret from production requests the correct selection and use of equipment, materials, processes and procedures
- maintain output and product quality using appropriate instruments, controls, test information and readings
- identify and describe own role and role of others involved directly in the process

- identify factors which may affect product quality or production output and appropriate remedies
- identify when the operator is able to rectify faults and when assistance is required.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms and production reports.

Numeracy is required to the level of determining required weights/volumes of materials in a resin mix for different circumstances (say using a data sheet), number of layers of impregnated matrix required to yield the required product laminate thickness, and similar activities.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Where the assessee does not currently possess evidence of competency in *PMBPROD298A Operate equipment using pre-pregs material*, it may be co-assessed with this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- identify critical materials properties and composites moulding process characteristics in relation to the process requirements and the end product
- plan own work process within workplace procedures and explain the reasons for the steps in the process
- take appropriate action to observe equipment, materials and products for out of specification results, make adjustments and identify problems to be reported.

Consistent performance should be demonstrated. For example, look to see that:

- production quality and output standards are met consistently
- problems are anticipated from process observations
- problems are efficiently resolved
- the process runs consistently and smoothly.

Assessment method and context

Assessment will occur on an industrial pre-pregs and equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- using an appropriate, industrial pre-preg and equipment

- in a situation allowing for the generation of evidence of the ability to recognise, anticipate and respond to problems
 - by using a suitable simulation and/or a range of case studies/scenarios
 - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method.

Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required.

Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to manufacture of composites products using pre-pregs within the plastics and rubber industries.

It includes all moulds, pumps and programmable logic controllers (PLCs) if fitted and all relevant ancillary equipment integral to the composites forming process.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- moulds, formers, closures and fittings
- equipment including presses and ancillaries
- controller, such as PLC if fitted
- relevant personal protective equipment (PPE)

- hand tools used in the production process
- material loading equipment used for loading of raw materials
- release films and fabrics
- pre-pregs.

Hazards

Typical hazards include:

- hazardous vapours and materials
- fibres, airborne and handled
- humidity, air temperatures, radiant heat, hot moulds
- stationary and moving machinery, parts and components
- manual handling hazards.

Problems

Respond to/rectify 'non-routine problems' means 'apply known solutions to a variety of predictable problems'.

Typical process and product problems may include:

- pre-preg incorrectly applied to mould
- release agents performance
- contamination
- temperature variations, affecting resin cure-rate
- blemishes
- missing detail
- warped moulds or dies
- worn or damaged mould parts or fittings
- variations in materials and/or contamination of materials
- processing
- heat
- poor handling or storage of pre-pregs
- equipment - adjustments/set-up
- equipment - maintenance requirements incorrect quantity of materials
- contaminated materials.

Variables

Key variables to be monitored include:

- operating temperatures
- cycle time
- output rate
- surface finish and condition
- product weight
- product integrity and general conformance to specification/sample.

PRSTS202A Install security equipment/system

Modification History

Not applicable.

Unit Descriptor

This competency standard covers the skills and knowledge required to install a range of types of security equipment and systems. It requires the ability to select and use materials, tools and equipment appropriate to job requirements, effectively install security equipment/systems for the intended purpose, and complete documentation in an accurate and timely manner.

This work applies in extra low voltage as defined through the Australian Standards AS 2201 (1986) environments. These work functions would be carried out under routine supervision within organisational guidelines.

Functional Area: Core, Technical Security

This competency standard covers the skills and knowledge required to install a range of types of security equipment and systems. It requires the ability to select and use materials, tools and equipment appropriate to job requirements, effectively install security equipment/systems for the intended purpose, and complete documentation in an accurate and timely manner.

This work applies in extra low voltage as defined through the Australian Standards AS 2201 (1986) environments. These work functions would be carried out under routine supervision within organisational guidelines.

Elements and Performance Criteria

Elements and Performance Criteria

Element	Performance Criteria
1 Prepare for installation	<p>1.1 Work order and client requirements are reviewed and clarified with appropriate person(s) as required in accordance with organisational requirements</p> <p>1.2 Security equipment / system to be installed is identified and checked against work order in accordance with organisational procedures</p> <p>1.3 Tools, equipment and materials are selected appropriate to job requirements and checked for operational effectiveness in accordance with manufacturer's specifications and organisational procedures</p> <p>1.4 Suitable personal protective equipment is selected and maintained in accordance with OHS and organisational requirements</p> <p>1.5 Potential and existing risks and hazards in the work area are identified and controlled in accordance with OHS, legislative and organisational requirements</p>
2 Install security equipment / system	<p>2.1 All work is conducted using safe operating practices in accordance with OHS, legislative and organisational requirements</p> <p>2.2 Security equipment / system is installed in specified positions and locations to maximise security coverage in accordance with manufacturer's specifications and client requirements</p> <p>2.3 Security equipment / system is fixed securely and is terminated and connected to cable as required in accordance with manufacturer's specifications and relevant industry standards</p>

- 2.4 Security equipment / systems are installed without damage or distortion to the surrounding environment or services and in a manner that maximises safety of self and others
 - 2.5 Factors affecting the achievement of assignment instructions are promptly identified and recommendations for variation to installation plans are negotiated with and approved by appropriate person(s)
- 3 Complete installation
- 3.1 Final inspections are undertaken to ensure operational effectiveness of installed security equipment / system in accordance with industry, legislative and work order requirements
 - 3.2 Notification of work completion is made to appropriate person(s) in accordance with organisational procedures
 - 3.3 Work area, tools and equipment are cleaned and stored in accordance with OHS and organisational requirements
 - 3.4 Malfunctions, faults, wear or damage to tools is accurately documented and reported for repair or replacement in accordance with organisational policies and procedures
 - 3.5 Relevant documentation is completed in an accurate and timely manner in accordance with industry, legislative and organisational requirements

Required Skills and Knowledge

Not applicable.

Evidence Guide

The Evidence Guide identifies the requirements to be demonstrated to confirm competence for this unit. Assessment must confirm sufficient ability to use appropriate skills and knowledge to install security equipment and systems. Assessment of performance should be over a period of time covering all categories within the Range of Variables statements that are applicable in the learning environment.

What critical aspects are required for evidence of competency?

Select correct tools and equipment and apply appropriate methods and safe operating practices to install, locate and position security equipment/system to satisfy client job and organisational requirements.

Methodically organise own work tasks, safely and efficiently follow installation procedures and carry out checks to ensure integrity, security and safety of security equipment/systems. Clean and safely store tools and equipment and reinstate work sites in a clear and tidy condition.

Interpret and comply with all applicable statutory and legislative guidelines and accurately complete all relevant documentation.

What specific knowledge is needed to achieve the performance criteria?

Knowledge and understanding are essential to apply this standard in the workplace, to transfer the skills to other contexts and to deal with unplanned events. The knowledge requirements for this competency standard are listed below:

building construction methods and types

technical terminology

types, functions and requirements of security equipment/systems

types, functions and uses of end-of-line devices and resistors

methods of equipment/system installation

installation hazards

methods of fixing equipment/systems

cable termination and connection

methods of sealing cable entries

electrical concepts, electrical connections

cable identification and handling requirements

earthing systems arrangements and requirements

confined space procedures

organisational and client confidentiality requirements

OHS requirements and safe work practices

requirements for compliance with Australian building codes and regulations and Australian

Communications Authority cabling standards.

What specific skills are needed to achieve the performance criteria?

To achieve the performance criteria, some specific skills are required. These include the ability to:

communicate in a clear and concise manner

read and interpret plans and specifications

use suitable tools and equipment, including hand and power tools

fit end-of-line devices

install and fix security equipment/systems

terminate and connect cable

identify cable

hand cable
 solder, drill
 carry out basic carpentry
 conduct 'fix and make good' practices
 methodically organise and prioritise work tasks
 solve routine problems
 work in confined spaces
 apply safe and environmentally aware work practices.

What resources may be required for assessment?

Access to a suitable venue and equipment.
 Access to plain English version of relevant statutes and procedures.
 Assignment instructions, work plans and schedules, policy documents and duty statements.
 Assessment instruments, including personal planner and assessment record book.
 Access to a registered provider of assessment services.

What is required to achieve consistency of performance?

For valid and reliable assessment of this unit, the competency should be demonstrated over a period of time and observed by the assessor. The competency is to be demonstrated in a range of situations, which may include involvement in related activities normally experienced in the workplace.

Evidence of underpinning knowledge understanding of processes and principles can be gained through thorough questioning and by observation of previous work.

Assessment against this unit may involve the following:

Continuous assessment in a setting that simulates the conditions of performance described in the elements, performance criteria and range of variables statement that make up the unit.
 Continuous assessment in the workplace, taking into account the range of variables affecting performance.

Self-assessment on the same terms as those described above.

Simulated assessment or critical incident assessment, provided that the critical incident involves assessment against performance criteria and an evaluation of underpinning knowledge and skill required to achieve the required performance outcomes.

Key competency levels

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the key competencies, although others may be added.

Information below highlights how these processes are applied in this competency standard.

1 - perform the process

2 - perform and administer the process

3 - perform, administer and design the process

How can **communication of ideas and information** be applied? **(1)**

Appropriate notification is made to relevant persons upon completion of installation work.

How can **information be collected, analysed and organised**? **(1)**

Client requirements and work order instructions may be reviewed to estimate and arrange materials, tools and equipment suitable to carry out installation of security equipment/systems.

How are **activities planned and organised**? **(1)**

Ongoing checks of the quality of the installation work are undertaken to ensure the installed security equipment/system conforms to work order and client requirements.

How can **team work** be applied? **(1)**

Additional information and advice may be sought from relevant persons to ensure the most efficient and effective procedures may be applied in the installation of security equipment/systems.

How can the use of **mathematical ideas and techniques** be applied? (1)

Mathematical techniques may be used to plan and schedule work tasks and arrange adequate tool and equipment provisioning.

How can **problem solving skills** be applied? (1)

Variations to installation plans may be negotiated and implemented in situations where unplanned events or conditions occur.

How can the **use of technology** be applied? (1)

Technology may be used to communicate, schedule and document information. It may also be used to carry out installation testing.

The Evidence Guide identifies the requirements to be demonstrated to confirm competence for this unit. Assessment must confirm sufficient ability to use appropriate skills and knowledge to install security equipment and systems. Assessment of performance should be over a period of time covering all categories within the Range of Variables statements that are applicable in the learning environment.

What critical aspects are required for evidence of competency?

Select correct tools and equipment and apply appropriate methods and safe operating practices to install, locate and position security equipment/system to satisfy client job and organisational requirements.

Methodically organise own work tasks, safely and efficiently follow installation procedures and carry out checks to ensure integrity, security and safety of security equipment/systems. Clean and safely store tools and equipment and reinstate work sites in a clear and tidy condition.

Interpret and comply with all applicable statutory and legislative guidelines and accurately complete all relevant documentation.

What specific knowledge is needed to achieve the performance criteria?

Knowledge and understanding are essential to apply this standard in the workplace, to transfer the skills to other contexts and to deal with unplanned events. The knowledge requirements for this competency standard are listed below:

building construction methods and types

technical terminology

types, functions and requirements of security equipment/systems

types, functions and uses of end-of-line devices and resistors

methods of equipment/system installation

installation hazards

methods of fixing equipment/systems

cable termination and connection

methods of sealing cable entries

electrical concepts, electrical connections

cable identification and handling requirements

earthing systems arrangements and requirements

confined space procedures

organisational and client confidentiality requirements

OHS requirements and safe work practices

requirements for compliance with Australian building codes and regulations and Australian Communications Authority cabling standards.

What specific skills are needed to achieve the performance criteria?

To achieve the performance criteria, some specific skills are required. These include the ability to:

- communicate in a clear and concise manner
- read and interpret plans and specifications
- use suitable tools and equipment, including hand and power tools
- fit end-of-line devices
- install and fix security equipment/systems
- terminate and connect cable
- identify cable
- hand cable
- solder, drill
- carry out basic carpentry
- conduct 'fix and make good' practices
- methodically organise and prioritise work tasks
- solve routine problems
- work in confined spaces
- apply safe and environmentally aware work practices.

What resources may be required for assessment?

Access to a suitable venue and equipment.

Access to plain English version of relevant statutes and procedures.

Assignment instructions, work plans and schedules, policy documents and duty statements.

Assessment instruments, including personal planner and assessment record book.

Access to a registered provider of assessment services.

What is required to achieve consistency of performance?

For valid and reliable assessment of this unit, the competency should be demonstrated over a period of time and observed by the assessor. The competency is to be demonstrated in a range of situations, which may include involvement in related activities normally experienced in the workplace.

Evidence of underpinning knowledge understanding of processes and principles can be gained through thorough questioning and by observation of previous work.

Assessment against this unit may involve the following:

Continuous assessment in a setting that simulates the conditions of performance described in the elements, performance criteria and range of variables statement that make up the unit.

Continuous assessment in the workplace, taking into account the range of variables affecting performance.

Self-assessment on the same terms as those described above.

Simulated assessment or critical incident assessment, provided that the critical incident involves assessment against performance criteria and an evaluation of underpinning knowledge and skill required to achieve the required performance outcomes.

Key competency levels

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the key competencies, although others may be added.

Information below highlights how these processes are applied in this competency standard.

- 1 - perform the process
- 2 - perform and administer the process
- 3 - perform, administer and design the process

How can **communication of ideas and information** be applied? (1)

Appropriate notification is made to relevant persons upon completion of installation work.

How can **information be collected, analysed and organised**? (1)

Client requirements and work order instructions may be reviewed to estimate and arrange materials, tools and equipment suitable to carry out installation of security equipment/systems.

How are **activities planned and organised**? (1)

Ongoing checks of the quality of the installation work are undertaken to ensure the installed security equipment/system conforms to work order and client requirements.

How can **team work** be applied? (1)

Additional information and advice may be sought from relevant persons to ensure the most efficient and effective procedures may be applied in the installation of security equipment/systems.

How can the use of **mathematical ideas and techniques** be applied? (1)

Mathematical techniques may be used to plan and schedule work tasks and arrange adequate tool and equipment provisioning.

How can **problem solving skills** be applied? (1)

Variations to installation plans may be negotiated and implemented in situations where unplanned events or conditions occur.

How can the **use of technology** be applied? (1)

Technology may be used to communicate, schedule and document information. It may also be used to carry out installation testing.

Range Statement

The Range of Variables provides information about the context in which the unit of competency is carried out. It allows for different work practices and work and knowledge requirements as well as for differences between organisations and workplaces. The following variables may be present for this particular unit:

Work order information may include:

- work schedules
- completion dates
- job requirements and tasks
- specific client requirements
- access to site and specific site requirements
- resource requirements
- OHS requirements
- legislative requirements
- budget allocations
- warranties and service information.

Client requirements may relate to:

- requirements as detailed in security assessment or client brief
- system capabilities and functions
- equipment and/or system type
- equipment locations and positions
- installation procedures and schedule
- service and maintenance requirements
- monitoring requirements
- warranties/guarantees.

Appropriate persons may include:

- clients
- site managers, project managers
- engineers and technicians
- technical experts
- line managers/supervisors
- colleagues
- regulatory personnel
- security consultants.

Organisational requirements may relate to:

- legal and organisational policies and procedures including personnel practices and guidelines
- organisational goals, objectives, plans, systems and processes
- employer and employee rights and responsibilities
- policies and procedures relating to own role, responsibility and delegation
- quality and continuous improvement processes and standards
- client service standards
- defined resource parameters
- Occupational Health and Safety policies, procedures and programs
- emergency and evacuation procedures
- duty of care, code of conduct, code of ethics
- access and equity policy, principles and practice.

Security equipment and systems may include:

detection devices, audible/visual warning devices
cameras, monitors and control equipment
control panels, intercoms
wireless equipment, car alarms
electronic readers, electronic recognition controls
electronic locks and locking systems
low voltage lighting, boom gates, turnstiles
bank pop-up screens
biometrics
electric/mechanical fire safety and fire locking systems
low voltage power supplies, batteries
security doors and door controls.

Security systems may be:

electronic
mechanical
computerised
procedural.

Tools and equipment may include:

multimeter, F-set, cable testing equipment
hand tools, power tools, fixing tools, crimp tools, IDS tools
flexible rods, fishing tools
strippers, router, file, followers, spirit level
soldering iron
ladder, scaffold, scissor lift, hoist, drop sheet, batteries
personal protective equipment
communications equipment.

Materials may include:

fixings:
saddles, conduit, loxins, girderclips, wall plugs, hollow wall anchors, silicon, screws, parts
and components

wire and cable
solder, insulation tape
glue, paint, patch materials, sealing compounds
electronic components.

Personal protective clothing and equipment may include:

masks, safety glasses, head protection, ear muffs
safety boots, knee pads
gloves
warning hats, flashing lights
warning signs and tapes
fire extinguisher
first aid kit.

OHS policies and procedures may relate to:

hazardous and risk assessment mechanisms
implementation of safety regulations
safety training
safety systems incorporating:

work clearance procedures
isolation procedures
gas and vapour
monitoring/testing procedures
use of protective equipment and clothing

use of codes of practice.

Risks and hazards may include:

non-compliance with building codes and regulations
exposed electrical wiring
manual handling
chemical hazards (battery corrosion)
exposure to:
asbestos, dust, noise, live power, vermin, water, glass fibre, building debris, natural and other gas build-up.

Applicable legislation, codes and national standards may relate to:

relevant Commonwealth/State/Territory legislation which affect organisational operation:
Occupational Health and Safety and safe work practices
environmental issues
equal employment opportunity
industrial relations
anti-discrimination and diversity

Australian building codes and regulations
Australian Communications Authority cabling standards
licensing requirements
Australian Standards, quality assurance and certification requirements
relevant industry Codes of Practice
trade practices, award and enterprise agreements
privacy requirements.

Safe operating practices may relate to:

working with electrical wiring, cables and overhead power lines
working with tools and equipment
risk and hazard recognition
emergency procedures
following confined spaces procedures.

Environment may include:

atmosphere
soils
drains
underground water tables
the ecosystem.

Factors may include:

competing work demands
technology/equipment breakdowns
workplace hazards, risks and controls
environmental factors (time, weather)
non-availability of resource and materials

budget constraints.

Documentation may include:

records of security equipment/system positioning
section lists, zone lists, equipment lists
cable identification records, fixings, job card
records of any adjustments to original cable plan
records of faulty or malfunctioning tools and equipment
testing and inspection results
records of materials used.

The Range of Variables provides information about the context in which the unit of competency is carried out. It allows for different work practices and work and knowledge requirements as well as for differences between organisations and workplaces. The following variables may be present for this particular unit:

Work order information may include:

work schedules
completion dates
job requirements and tasks
specific client requirements
access to site and specific site requirements
resource requirements
OHS requirements
legislative requirements
budget allocations
warranties and service information.

Client requirements may relate to:

requirements as detailed in security assessment or client brief
system capabilities and functions
equipment and/or system type
equipment locations and positions
installation procedures and schedule
service and maintenance requirements
monitoring requirements
warranties/guarantees.

Appropriate persons may include:

clients
site managers, project managers
engineers and technicians
technical experts
line managers/supervisors
colleagues
regulatory personnel
security consultants.

Organisational requirements may relate to:

legal and organisational policies and procedures including personnel practices and guidelines
organisational goals, objectives, plans, systems and processes
employer and employee rights and responsibilities
policies and procedures relating to own role, responsibility and delegation
quality and continuous improvement processes and standards

client service standards
defined resource parameters
Occupational Health and Safety policies, procedures and programs
emergency and evacuation procedures
duty of care, code of conduct, code of ethics
access and equity policy, principles and practice.

Security equipment and systems may include:

detection devices, audible/visual warning devices
cameras, monitors and control equipment
control panels, intercoms
wireless equipment, car alarms
electronic readers, electronic recognition controls
electronic locks and locking systems
low voltage lighting, boom gates, turnstiles
bank pop-up screens
biometrics
electric/mechanical fire safety and fire locking systems
low voltage power supplies, batteries
security doors and door controls.

Security systems may be:

electronic
mechanical
computerised
procedural.

Tools and equipment may include:

multimeter, F-set, cable testing equipment
hand tools, power tools, fixing tools, crimp tools, IDS tools
flexible rods, fishing tools
strippers, router, file, followers, spirit level
soldering iron
ladder, scaffold, scissor lift, hoist, drop sheet, batteries
personal protective equipment
communications equipment.

Materials may include:

fixings:
saddles, conduit, loxins, girderclips, wall plugs, hollow wall anchors, silicon, screws, parts
and components

wire and cable
solder, insulation tape
glue, paint, patch materials, sealing compounds
electronic components.

Personal protective clothing and equipment may include:

masks, safety glasses, head protection, ear muffs
safety boots, knee pads
gloves
witches hats, flashing lights
warning signs and tapes

fire extinguisher

first aid kit.

OHS policies and procedures may relate to:

hazardous and risk assessment mechanisms

implementation of safety regulations

safety training

safety systems incorporating:

work clearance procedures

isolation procedures

gas and vapour

monitoring/testing procedures

use of protective equipment and clothing

use of codes of practice.

Risks and hazards may include:

non-compliance with building codes and regulations

exposed electrical wiring

manual handling

chemical hazards (battery corrosion)

exposure to:

asbestos, dust, noise, live power, vermin, water, glass fibre, building debris, natural and other gas build-up.

Applicable legislation, codes and national standards may relate to:

relevant Commonwealth/State/Territory legislation which affect organisational operation:

Occupational Health and Safety and safe work practices

environmental issues

equal employment opportunity

industrial relations

anti-discrimination and diversity

Australian building codes and regulations

Australian Communications Authority cabling standards

licensing requirements

Australian Standards, quality assurance and certification requirements

relevant industry Codes of Practice

trade practices, award and enterprise agreements

privacy requirements.

Safe operating practices may relate to:

working with electrical wiring, cables and overhead power lines

working with tools and equipment

risk and hazard recognition

emergency procedures

following confined spaces procedures.

Environment may include:

atmosphere

soils

drains

underground water tables

the ecosystem.

Factors may include:

competing work demands
technology/equipment breakdowns
workplace hazards, risks and controls
environmental factors (time, weather)
non-availability of resource and materials
budget constraints.

Documentation may include:

records of security equipment/system positioning
section lists, zone lists, equipment lists
cable identification records, fixings, job card
records of any adjustments to original cable plan
records of faulty or malfunctioning tools and equipment
testing and inspection results
records of materials used.

Unit Sector(s)

Not applicable.

PRSTS302A Program security equipment/system

Modification History

Not applicable.

Unit Descriptor

This competency standard covers the skills and knowledge required to program and configure a range of security equipment/systems. It requires the ability to clearly identify programming requirements and configuration parameters for the type of security equipment or system, use safe and efficient work practices, maintain a hazard-free work area, and maintain accurate records and information systems. This work applies in extra low voltage as defined through the Australian Standards As 2201 (1986) environments and would be carried out under routine supervision within organisational guidelines.

Functional Area: Core, Technical Security

This competency standard covers the skills and knowledge required to program and configure a range of security equipment/systems. It requires the ability to clearly identify programming requirements and configuration parameters for the type of security equipment or system, use safe and efficient work practices, maintain a hazard-free work area, and maintain accurate records and information systems. This work applies in extra low voltage as defined through the Australian Standards As 2201 (1986) environments and would be carried out under routine supervision within organisational guidelines.

Functional Area: Core, Technical Security

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Not applicable.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

Elements and Performance Criteria

Element	Performance Criteria
1 Prepare for programming	<p>1.1 Work order is reviewed and clarified with appropriate person(s) as required in accordance with organisational requirements</p> <p>1.2 Security equipment / system programming requirements and configuration parameters are identified and accurately understood</p> <p>1.3 Tools, equipment and materials are selected appropriate to job requirements and checked for operational effectiveness in accordance with manufacturer's specifications and organisational procedures</p> <p>1.4 Suitable personal protective equipment is selected, used and maintained in accordance with OHS and organisational requirements</p> <p>1.5 Potential and existing risks and hazards to programming are identified and managed in accordance with OHS and organisational requirements</p>
2 Program security equipment / system	<p>2.1 All work is conducted using safe operating practices in accordance with legislative, OHS and organisational requirements</p> <p>2.2 Security equipment / system is powered, programmed and configured in accordance with work order, manufacturer's specifications and relevant industry standards</p> <p>2.3 Correct security equipment / system operational procedures and compliance requirements are observed and followed in accordance with manufacturer's specifications and organisational requirements</p>

- 2.4 Security equipment / system configuration is checked to confirm required operation and functioning in accordance with organisational requirements
 - 2.5 Alterations or changes to programming requirements are confirmed with appropriate person(s) in accordance with organisational procedures
- 3 Complete programming activities
- 3.1 Final inspections are undertaken to ensure security equipment / system programming conforms to work order and client requirements
 - 3.2 Notification of work completion is made to appropriate person(s) in accordance with organisational procedures
 - 3.3 Documentation is completed promptly and accurately and processed in accordance with client and organisational requirements
 - 3.4 Work area, tools and equipment are cleaned and stored in secure and safe locations in accordance with organisational requirements
 - 3.5 Waste from programming activities is collected, treated and disposed of or recycled in accordance with organisational procedures and environmental policies

Required Skills and Knowledge

Not applicable.

Evidence Guide

The Evidence Guide identifies the requirements to be demonstrated to confirm competence for this unit. Assessment must confirm sufficient ability to use appropriate skills and knowledge to program a range of security equipment/systems. Assessment of performance should be over a period of time covering all categories within the Range of Variables statements that are applicable in the learning environment.

What critical aspects are required for evidence of competency?

Clearly identify programming requirements and configuration parameters of security equipment/systems and organise appropriate tools, equipment and materials to carry out work. Follow safe and efficient work practices in the use of tools and equipment and accurately identify and manage risks and hazards to programming work and work areas.

Access security equipment/systems and methodically carry out programming and configuration procedures with minimal disruption to client, services or normal work routines. Clean and store tools and equipment, reinstate work area in a clear and safe condition, and prepare and submit all required documentation in an accurate and prompt manner.

What specific knowledge is needed to achieve the performance criteria?

Knowledge and understanding are essential to apply this standard in the workplace, to transfer the skills to other contexts and to deal with unplanned events. The knowledge requirements for this competency standard are listed below:

- building construction methods and types
- powering systems types, functions and requirements of security equipment/systems
- keypad and control panel types and functions
- methods of equipment/system programming
- security equipment/system configurations
- computer software types and functions
- electrical concepts (voltage, current, resistance, impedance)
- cable identification and handling requirements
- earthing systems arrangements and requirements
- technical terminology
- organisational and client confidentiality requirements
- OHS requirements and safe work practices.

What specific skills are needed to achieve the performance criteria?

To achieve the performance criteria, some specific skills are required. These include the ability to:

- communicate in a clear and concise manner
- read and interpret plans and specifications
- select and use suitable tools and equipment
- power systems
- program and configure security equipment/systems
- methodically prioritise and organise work tasks
- operate security equipment/systems
- download/upload information
- test security equipment systems and read a multimeter
- accurately identify and handle cables
- solve routine problems
- estimate resource requirements
- apply safe and efficient work practices.

What resources may be required for assessment?

Access to a suitable venue and equipment.

Access to plain English version of relevant statutes and procedures.

Assignment instructions, work plans and schedules, policy documents and duty statements.

Assessment instruments, including personal planner and assessment record book.

Access to a registered provider of assessment services.

What is required to achieve consistency of performance?

For valid and reliable assessment of this unit, the competency should be demonstrated over a period of time and observed by the assessor. The competency is to be demonstrated in a range of situations, which may include involvement in related activities normally experienced in the workplace.

Evidence of underpinning knowledge understanding of processes and principles can be gained through thorough questioning and by observation of previous work.

Assessment against this unit may involve the following:

Continuous assessment in a setting that simulates the conditions of performance described in the elements, performance criteria and range of variables statement that make up the unit.

Continuous assessment in the workplace, taking into account the range of variables affecting performance.

Self-assessment on the same terms as those described above.

Simulated assessment or critical incident assessment, provided that the critical incident involves assessment against performance criteria and an evaluation of underpinning knowledge and skill required to achieve the required performance outcomes.

Key competency levels

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the key competencies, although others may be added.

Information below highlights how these processes are applied in this competency standard.

1 - perform the process

2 - perform and administer the process

3 - perform, administer and design the process

How can **communication of ideas and information** be applied? (2)

Programming requirements and configuration parameters may be clarified and confirmed with relevant persons to ensure client needs are accurately met.

How can **information be collected, analysed and organised**? (2)

Conducted inspections and checks of programming and configuration work may be accurately documented and organised by records or reports.

How are **activities planned and organised**? (2)

Notification may be made to relevant persons upon completion of programming and configuration work.

How can **team work** be applied? (2)

Requirements for alterations or changes to programming or configuration of security equipment/systems may be discussed with relevant persons.

How can the use of **mathematical ideas and techniques** be applied? (2)

Mathematical techniques may be used to accurately estimate resource requirements and prioritise work tasks.

How can **problem solving skills** be applied? (2)

Potential and existing risks and hazards associated with programming work are promptly identified and controlled.

How can the **use of technology** be applied? (2)

Technology may be used to communicate, source and record information. It may also be used to carry out testing activities.

The Evidence Guide identifies the requirements to be demonstrated to confirm competence for this unit. Assessment must confirm sufficient ability to use appropriate skills and knowledge to program a range of security equipment/systems. Assessment of performance should be over a period of time covering all categories within the Range of Variables statements that are applicable in the learning environment.

What critical aspects are required for evidence of competency?

Clearly identify programming requirements and configuration parameters of security equipment/systems and organise appropriate tools, equipment and materials to carry out work. Follow safe and efficient work practices in the use of tools and equipment and accurately identify and manage risks and hazards to programming work and work areas.

Access security equipment/systems and methodically carry out programming and configuration procedures with minimal disruption to client, services or normal work routines. Clean and store tools and equipment, reinstate work area in a clear and safe condition, and prepare and submit all required documentation in an accurate and prompt manner.

What specific knowledge is needed to achieve the performance criteria?

Knowledge and understanding are essential to apply this standard in the workplace, to transfer the skills to other contexts and to deal with unplanned events. The knowledge requirements for this competency standard are listed below:

- building construction methods and types
- powering systems types, functions and requirements of security equipment/systems
- keypad and control panel types and functions

Potential and existing risks and hazards associated with programming work are promptly identified and controlled.

How can the **use of technology** be applied? (2)

Technology may be used to communicate, source and record information. It may also be used to carry out testing activities.

Range Statement

The Range of Variables provides information about the context in which the unit of competency is carried out. It allows for different work practices and work and knowledge requirements as well as for differences between organisations and workplaces. The following variables may be present for this particular unit:

Work order information may relate to:

work schedules
completion dates
job requirements and tasks
specific client requirements
access to site and specific site requirements
resource requirements
OHS requirements
compliance with relevant legislation
budget allocations
warranties and service information.

Appropriate person(s) may include:

clients
site managers, project managers
engineers and technicians
technical experts
line managers/supervisors
colleagues, security consultants
regulatory personnel.

Organisational requirements may relate to:

legal and organisational operational policies and procedures
operations manuals, induction and training materials
insurance policy agreements
client and organisational confidentiality requirements
organisational goals, objectives, plans, systems and processes
employer and employee rights and responsibilities
own role, responsibility and delegation
quality and continuous improvement processes and standards
client service standards
defined resource parameters
OHS policies, procedures and programs
emergency and evacuation procedures
duty of care, code of conduct, code of ethics
access and equity policy, principles and practice
records and information systems and processes
communication channels and reporting procedures.

Security equipment and systems may include:

detection devices, audible/visual warning devices
cameras, monitors and control equipment
control panels, intercoms
wireless equipment, car alarms
electronic readers, electronic recognition controls

locks and locking systems
grills, lighting, boom gates, turnstiles
bank pop-up screens
smoke detection devices
electric/mechanical fire safety and fire locking systems
power supplies, batteries.

Security systems may be:

electronic
mechanical
computerised
procedural.

Programming requirements and configuration parameters:

may be found in:

work order
system plans and specifications
manufactures specifications

may include:

alarm types
reporting
access controls
alerting monitoring station.

Tools and equipment may include:

multimeter, F-set, cable testing equipment
hand tools, power tools, fixing tools, crimp tools, IDS tools
flexible rods, fishing tools
strippers, router, file, followers, spirit level
soldering iron, welder
lockpick, pick gun
ladder, scaffold, scissor lift, hoist, drop sheet, batteries
personal protective equipment
communications equipment.

Materials may include:

computer disks.

Personal protective equipment may include:

safety boots
masks
safety glasses
knee pads
gloves
first aid kit, fire extinguisher.

Risks and hazards may include:

non-compliance with building codes and regulations
exposed electrical wiring
manual handling
chemical hazards (battery corrosion)
exposure to:
asbestos

dust
noise
live power
vermin
water
glass fibre
building debris
natural and other gas build-up.

Safe operating practices may include:

working safely around electrical wiring, cables and overhead power lines
working safely around tools and equipment
hazard recognition
emergency procedures
awareness of electrical hazards
following confined spaces procedures
administering first aid.

Applicable legislation, codes and national standards may relate to:

compliance with Australian building codes and regulations
compliance with Australian Communications Authority (ACA) cabling standards
relevant Commonwealth/State/Territory legislation which affect organisational operation:
Occupational Health and Safety and safe work practices
environmental issues
equal employment opportunity
industrial relations
anti-discrimination and diversity.

licensing arrangements
Australian Standards, quality assurance and certification requirements
relevant industry Codes of Practice
trade practices, award and enterprise agreements
privacy requirements and privacy related legislation.

Documentation may include:

completion of work log
security equipment/system positioning
cable identification
adjustments to original cable plan
section lists, zone lists, equipment lists
fixings, job card.

The Range of Variables provides information about the context in which the unit of competency is carried out. It allows for different work practices and work and knowledge requirements as well as for differences between organisations and workplaces. The following variables may be present for this particular unit:

Work order information may relate to:

work schedules
completion dates
job requirements and tasks
specific client requirements
access to site and specific site requirements

resource requirements
OHS requirements
compliance with relevant legislation
budget allocations
warranties and service information.

Appropriate person(s) may include:

clients
site managers, project managers
engineers and technicians
technical experts
line managers/supervisors
colleagues, security consultants
regulatory personnel.

Organisational requirements may relate to:

legal and organisational operational policies and procedures
operations manuals, induction and training materials
insurance policy agreements
client and organisational confidentiality requirements
organisational goals, objectives, plans, systems and processes
employer and employee rights and responsibilities
own role, responsibility and delegation
quality and continuous improvement processes and standards
client service standards
defined resource parameters
OHS policies, procedures and programs
emergency and evacuation procedures
duty of care, code of conduct, code of ethics
access and equity policy, principles and practice
records and information systems and processes
communication channels and reporting procedures.

Security equipment and systems may include:

detection devices, audible/visual warning devices
cameras, monitors and control equipment
control panels, intercoms
wireless equipment, car alarms
electronic readers, electronic recognition controls
locks and locking systems
grills, lighting, boom gates, turnstiles
bank pop-up screens
smoke detection devices
electric/mechanical fire safety and fire locking systems
power supplies, batteries.

Security systems may be:

electronic
mechanical
computerised
procedural.

Programming requirements and configuration parameters:

may be found in:

work order
system plans and specifications
manufactures specifications

may include:

alarm types
reporting
access controls
alerting monitoring station.

Tools and equipment may include:

multimeter, F-set, cable testing equipment
hand tools, power tools, fixing tools, crimp tools, IDS tools
flexible rods, fishing tools
strippers, router, file, followers, spirit level
soldering iron, welder
lockpick, pick gun
ladder, scaffold, scissor lift, hoist, drop sheet, batteries
personal protective equipment
communications equipment.

Materials may include:

computer disks.

Personal protective equipment may include:

safety boots
masks
safety glasses
knee pads
gloves
first aid kit, fire extinguisher.

Risks and hazards may include:

non-compliance with building codes and regulations
exposed electrical wiring
manual handling
chemical hazards (battery corrosion)
exposure to:
asbestos
dust
noise
live power
vermin
water
glass fibre
building debris
natural and other gas build-up.

Safe operating practices may include:

working safely around electrical wiring, cables and overhead power lines
working safely around tools and equipment
hazard recognition

emergency procedures
awareness of electrical hazards
following confined spaces procedures
administering first aid.

Applicable legislation, codes and national standards may relate to:

compliance with Australian building codes and regulations
compliance with Australian Communications Authority (ACA) cabling standards
relevant Commonwealth/State/Territory legislation which affect organisational operation:
Occupational Health and Safety and safe work practices
environmental issues
equal employment opportunity
industrial relations
anti-discrimination and diversity.

licensing arrangements
Australian Standards, quality assurance and certification requirements
relevant industry Codes of Practice
trade practices, award and enterprise agreements
privacy requirements and privacy related legislation.

Documentation may include:

completion of work log
security equipment/system positioning
cable identification
adjustments to original cable plan
section lists, zone lists, equipment lists
fixings, job card.

Unit Sector(s)

Not applicable.

PRSTS303A Test installed security equipment/system

Modification History

Not applicable.

Unit Descriptor

This competency standard covers the skills and knowledge required to test a range of security equipment and systems including cable systems, equipment components and programming. It requires the ability to select and carry out tests suitable to confirm the integrity, security and safety of the security equipment/system. Competency also requires the ability to interpret and accurately document the test results. This work applies in extra low voltage as defined through the Australian Standards As 2201 (1986) environments and would be carried out under routine supervision within organisational guidelines.

Functional Area: Core, Technical Security

This competency standard covers the skills and knowledge required to test a range of security equipment and systems including cable systems, equipment components and programming. It requires the ability to select and carry out tests suitable to confirm the integrity, security and safety of the security equipment/system. Competency also requires the ability to interpret and accurately document the test results. Elements and Performance Criteria

Elements and Performance Criteria

Element	Performance Criteria
1 Prepare for testing	<p>1.1 Work order is reviewed and clarified with appropriate person(s) as required in accordance with organisational requirements</p> <p>1.2 Type and location of security equipment / system to be tested is identified and checked against the work order</p> <p>1.3 Testing parameters are identified and confirmed in accordance with manufacturer's specifications</p> <p>1.4 Tools, equipment and materials are selected appropriate to job requirements and checked for operational effectiveness in accordance with manufacturer's specifications and organisational procedures</p> <p>1.5 Potential and existing risks and hazards involved with testing security equipment / systems are identified and managed in accordance with OHS policies and procedures and organisational requirements</p> <p>1.6 Suitable personal protective equipment is selected, used and maintained in accordance with OHS and organisational requirements</p>
2 Test security equipment / system	<p>2.1 Safe operating practices are observed to remove risk of injury to self, others or security equipment / system in accordance with OHS and organisational requirements</p> <p>2.2 Parts or connections of security equipment / system are removed as required in accordance with manufacturer's specifications and safely stored to protect against loss or damage</p> <p>2.3 Tests are conducted in accordance with manufacturer's specifications and provide reliable</p>

- and accurate test data on the operation and functioning of security equipment / systems
- 2.4 Security equipment / system is reassembled as required and returned to pre-test conditions in accordance with manufacturer's specifications
 - 2.5 Personal limitations in conducting testing are promptly identified and assistance is sought from appropriate person(s) in accordance with organisational procedures
- 3 Complete testing
- 3.1 Tests results are accurately recorded and relevant documentation is completed and processed in accordance with legislative, industry and organisational requirements
 - 3.2 Notification of work completion is made to appropriate person(s) in accordance with organisational procedures
 - 3.3 Malfunctions or deficiencies in the operation of security equipment / system and / or components are reported in accordance with industry standards and organisational procedures
 - 3.4 Work area, tools and equipment are cleaned and stored in a secure and safe location in accordance with organisational requirements
 - 3.5 Waste from testing activities is collected, treated and disposed of or recycled in accordance with organisational procedures and environmental policies

Required Skills and Knowledge

Not applicable.

Evidence Guide

The Evidence Guide identifies the requirements to be demonstrated to confirm competence for this unit. Assessment must confirm sufficient ability to use appropriate skills and knowledge to test installed security equipment/systems. Assessment of performance should be over a period of time covering all categories within the Range of Variables statements that are applicable in the learning environment.

What critical aspects are required for evidence of competency?

Identify testing parameters appropriate to type of security equipment/system and organise appropriate tools, equipment and materials to carry out testing procedures.

Select and carry out suitable tests and methods to check and confirm security equipment/system performance and operational effectiveness.

Prepare and submit correctly interpreted test results and other relevant documentation in a prompt and accurate manner.

Reinstate work area to pre-test condition and clean and safely store tools and equipment.

What specific knowledge is needed to achieve the performance criteria?

Knowledge and understanding are essential to apply this standard in the workplace, to transfer the skills to other contexts and to deal with unplanned events. The knowledge requirements for this competency standard are listed below:

powering systems types, functions and requirements of security equipment/systems

keypad and control panel types and functions

types and functions of tools and equipment

isolating and testing procedures

cable identification techniques

earthing systems, arrangements and requirements

electrical concepts (voltage, current, resistance and impedance)

electrical connections and types of electrical circuits

circuit protection requirements

cable handling requirements

computer software types and functions

technical terminology

organisational and client confidentiality requirements

OHS requirements and safe work practices

Requirements for compliance with Australian building codes and regulations and Australian

Communications Authority (ACA) cabling standards.

What specific skills are needed to achieve the performance criteria?

To achieve the performance criteria, some specific skills are required. These include the ability to:

read and interpret plans and specifications

communicate in a clear and concise manner

select and use relevant testing tools and equipment

test security equipment/systems

evaluate test results

identify, isolate, test and tag cables

power security equipment/system

download and upload information

use keypads and control panels

methodically prioritise and organise work tasks

solve routine problems
estimate resource requirements
apply safe and efficient work practices.

What resources may be required for assessment?

Access to a suitable venue and equipment.
Access to plain English version of relevant statutes and procedures.
Assignment instructions, work plans and schedules, policy documents and duty statements.
Assessment instruments, including personal planner and assessment record book.
Access to a registered provider of assessment services.

What is required to achieve consistency of performance?

For valid and reliable assessment of this unit, the competency should be demonstrated over a period of time and observed by the assessor. The competency is to be demonstrated in a range of situations, which may include involvement in related activities normally experienced in the workplace.

Evidence of underpinning knowledge understanding of processes and principles can be gained through thorough questioning and by observation of previous work.

Assessment against this unit may involve the following:

Continuous assessment in a setting that simulates the conditions of performance described in the elements, performance criteria and range of variables statement that make up the unit.
Continuous assessment in the workplace, taking into account the range of variables affecting performance.

Self-assessment on the same terms as those described above.

Simulated assessment or critical incident assessment, provided that the critical incident involves assessment against performance criteria and an evaluation of underpinning knowledge and skill required to achieve the required performance outcomes.

Key competency levels

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the key competencies, although others may be added.

Information below highlights how these processes are applied in this competency standard.

- 1 - perform the process
- 2 - perform and administer the process
- 3 - perform, administer and design the process

How can **communication of ideas and information** be applied? (2)

Notification may be made to relevant persons upon the completion of testing procedures of security equipment/systems.

How can **information be collected, analysed and organised**? (2)

Tests results may be interpreted, accurately recorded and organised in suitable formats for analysis.

How are **activities planned and organised**? (2)

Security equipment/systems for testing may be accessed with minimal disruption to client services, property or normal work routines.

How can **team work** be applied? (2)

Personal limitations in carrying out testing procedures may be promptly identified and assistance sought from relevant persons.

How can the use of **mathematical ideas and techniques** be applied? (2)

Mathematical techniques may be used to accurately estimate resource requirements and prioritise work tasks.

How can **problem solving skills** be applied? (2)

Malfunctions or deficiencies in the operation of security equipment/system and/or components are promptly reported for remedial action.

How can the **use of technology** be applied? (2)

Technology may be used to communicate, source and record information. It may also be used to carry out testing activities.

The Evidence Guide identifies the requirements to be demonstrated to confirm competence for this unit. Assessment must confirm sufficient ability to use appropriate skills and knowledge to test installed security equipment/systems. Assessment of performance should be over a period of time covering all categories within the Range of Variables statements that are applicable in the learning environment.

What critical aspects are required for evidence of competency?

Identify testing parameters appropriate to type of security equipment/system and organise appropriate tools, equipment and materials to carry out testing procedures.

Select and carry out suitable tests and methods to check and confirm security equipment/system performance and operational effectiveness.

Prepare and submit correctly interpreted test results and other relevant documentation in a prompt and accurate manner.

Reinstate work area to pre-test condition and clean and safely store tools and equipment.

What specific knowledge is needed to achieve the performance criteria?

Knowledge and understanding are essential to apply this standard in the workplace, to transfer the skills to other contexts and to deal with unplanned events. The knowledge requirements for this competency standard are listed below:

powering systems types, functions and requirements of security equipment/systems

keypad and control panel types and functions

types and functions of tools and equipment

isolating and testing procedures

cable identification techniques

earthing systems, arrangements and requirements

electrical concepts (voltage, current, resistance and impedance)

electrical connections and types of electrical circuits

circuit protection requirements

cable handling requirements

computer software types and functions

technical terminology

organisational and client confidentiality requirements

OHS requirements and safe work practices

Requirements for compliance with Australian building codes and regulations and Australian Communications Authority (ACA) cabling standards.

What specific skills are needed to achieve the performance criteria?

To achieve the performance criteria, some specific skills are required. These include the ability to:

read and interpret plans and specifications

communicate in a clear and concise manner

select and use relevant testing tools and equipment

test security equipment/systems

evaluate test results

identify, isolate, test and tag cables

power security equipment/system
 download and upload information
 use keypads and control panels
 methodically prioritise and organise work tasks
 solve routine problems
 estimate resource requirements
 apply safe and efficient work practices.

What resources may be required for assessment?

Access to a suitable venue and equipment.
 Access to plain English version of relevant statutes and procedures.
 Assignment instructions, work plans and schedules, policy documents and duty statements.
 Assessment instruments, including personal planner and assessment record book.
 Access to a registered provider of assessment services.

What is required to achieve consistency of performance?

For valid and reliable assessment of this unit, the competency should be demonstrated over a period of time and observed by the assessor. The competency is to be demonstrated in a range of situations, which may include involvement in related activities normally experienced in the workplace.

Evidence of underpinning knowledge understanding of processes and principles can be gained through thorough questioning and by observation of previous work.

Assessment against this unit may involve the following:

Continuous assessment in a setting that simulates the conditions of performance described in the elements, performance criteria and range of variables statement that make up the unit.
 Continuous assessment in the workplace, taking into account the range of variables affecting performance.

Self-assessment on the same terms as those described above.

Simulated assessment or critical incident assessment, provided that the critical incident involves assessment against performance criteria and an evaluation of underpinning knowledge and skill required to achieve the required performance outcomes.

Key competency levels

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the key competencies, although others may be added. Information below highlights how these processes are applied in this competency standard.

1 - perform the process

2 - perform and administer the process

3 - perform, administer and design the process

How can **communication of ideas and information** be applied? **(2)**

Notification may be made to relevant persons upon the completion of testing procedures of security equipment/systems.

How can **information be collected, analysed and organised?** **(2)**

Tests results may be interpreted, accurately recorded and organised in suitable formats for analysis.

How are **activities planned and organised?** **(2)**

Security equipment/systems for testing may be accessed with minimal disruption to client services, property or normal work routines.

How can **team work** be applied? **(2)**

Personal limitations in carrying out testing procedures may be promptly identified and assistance sought from relevant persons.

How can the use of **mathematical ideas and techniques** be applied? (2)

Mathematical techniques may be used to accurately estimate resource requirements and prioritise work tasks.

How can **problem solving skills** be applied? (2)

Malfunctions or deficiencies in the operation of security equipment/system and/or components are promptly reported for remedial action.

How can the **use of technology** be applied? (2)

Technology may be used to communicate, source and record information. It may also be used to carry out testing activities.

Range Statement

The Range of Variables provides information about the context in which the unit of competency is carried out. It allows for different work practices and work and knowledge requirements as well as for differences between organisations and workplaces. The following variables may be present for this particular unit:

Work order information may include:

- work schedules
- completion dates
- job requirements and tasks
- specific client requirements
- access to site and specific site requirements
- resource requirements
- OHS requirements
- compliance with relevant legislation
- budget allocations
- warranties and service information.

Appropriate person(s) may include:

- clients
- site managers, project managers
- engineers and technicians
- technical experts
- line managers/supervisors
- colleagues, security consultants
- regulatory personnel.

Organisational requirements may relate to:

- legal and organisational operational policies and procedures
- operations manuals, induction and training materials
- insurance policy agreements
- client and organisational confidentiality requirements
- organisational goals, objectives, plans, systems and processes
- employer and employee rights and responsibilities
- own role, responsibility and delegation
- quality and continuous improvement processes and standards
- client service standards
- defined resource parameters
- OHS policies, procedures and programs
- emergency and evacuation procedures
- duty of care, code of conduct, code of ethics
- access and equity policy, principles and practice
- records and information systems and processes
- communication channels and reporting procedures.

Security equipment and systems may include:

- detection devices, audible/visual warning devices
- cameras, monitors and control equipment
- control panels, intercoms
- wireless equipment, car alarms
- electronic readers, electronic recognition controls

locks and locking systems
grills, lighting, boom gates, turnstiles
bank pop-up screens
smoke detection devices
electric/mechanical fire safety and fire locking systems
power supplies, batteries
security doors and door controls.

Security systems may be:

electronic
mechanical
computerised
procedural.

Tests may involve/include :

cables
wiring and connections (continuity, resistance, earth leakage, voltage)
walk tests, coverage tests, safety tests, calibration tests
correct relaying of information/data
testing to specifications
detection tests, alarm tests, functional tests.

Tools and equipment may include:

computer, software
testing equipment
ladder, scaffold, scissor lift, hoist
batteries
personal protective equipment
communications equipment.

Materials may include:

computer disks
test board
test tape.

Manufacturers specifications may be found in:

printed instruction leaflets
operators manuals
equipment specifications
attachments to equipment
plans and diagrams
warranty documents.

Risks and hazards may include:

non-compliance with building codes and regulations
exposed electrical wiring
manual handling
chemical hazards (battery corrosion)
exposure to:
asbestos
dust
noise
live power
vermin

water

glass fibre

building debris

natural and other gas build-up.

OHS policies and procedures may relate to:

hazardous and risk assessment mechanisms

implementation of safety regulations

safety training

safety systems incorporating:

work clearance procedures

isolation procedures

gas and vapour

monitoring/testing procedures

use of protective equipment and clothing

use of codes of practice.

Personal protective equipment may include:

safety boots

masks

safety glasses

knee pads

gloves

first aid kit, fire extinguisher.

Safe operating practices may include:

working safely around electrical wiring, cables and overhead power lines

working safely around tools and equipment

hazard recognition

emergency procedures

awareness of electrical hazards

following confined spaces procedures

administering first aid.

Documentation may include:

work log

records of equipment/system positioning

section lists, zone lists, equipment lists

cable identification records, fixings, job card

records of any adjustments to original cable plan

records of faulty or malfunctioning tools and equipment

testing and inspection results

records of materials used

costings.

Applicable legislation, codes and national standards may relate to:

compliance with Australian building codes and regulations

compliance with Australian Communications Authority (ACA) cabling standards

relevant Commonwealth/State/Territory legislation which affect organisational operation:

Occupational Health and Safety and safe work practices

environmental issues

equal employment opportunity

industrial relations
anti-discrimination and diversity

licensing arrangements
Australian Standards, quality assurance and certification requirements
relevant industry Codes of Practice
award and enterprise agreements
trade practices
privacy requirements
freedom of information.

The Range of Variables provides information about the context in which the unit of competency is carried out. It allows for different work practices and work and knowledge requirements as well as for differences between organisations and workplaces. The following variables may be present for this particular unit:

Work order information may include:

work schedules
completion dates
job requirements and tasks
specific client requirements
access to site and specific site requirements
resource requirements
OHS requirements
compliance with relevant legislation
budget allocations
warranties and service information.

Appropriate person(s) may include:

clients
site managers, project managers
engineers and technicians
technical experts
line managers/supervisors
colleagues, security consultants
regulatory personnel.

Organisational requirements may relate to:

legal and organisational operational policies and procedures
operations manuals, induction and training materials
insurance policy agreements
client and organisational confidentiality requirements
organisational goals, objectives, plans, systems and processes
employer and employee rights and responsibilities
own role, responsibility and delegation
quality and continuous improvement processes and standards
client service standards
defined resource parameters
OHS policies, procedures and programs
emergency and evacuation procedures
duty of care, code of conduct, code of ethics
access and equity policy, principles and practice

records and information systems and processes
communication channels and reporting procedures.

Security equipment and systems may include:

detection devices, audible/visual warning devices
cameras, monitors and control equipment
control panels, intercoms
wireless equipment, car alarms
electronic readers, electronic recognition controls
locks and locking systems
grills, lighting, boom gates, turnstiles
bank pop-up screens
smoke detection devices
electric/mechanical fire safety and fire locking systems
power supplies, batteries
security doors and door controls.

Security systems may be:

electronic
mechanical
computerised
procedural.

Tests may involve/include:

cables
wiring and connections (continuity, resistance, earth leakage, voltage)
walk tests, coverage tests, safety tests, calibration tests
correct relaying of information/data
testing to specifications
detection tests, alarm tests, functional tests.

Tools and equipment may include:

computer, software
testing equipment
ladder, scaffold, scissor lift, hoist
batteries
personal protective equipment
communications equipment.

Materials may include:

computer disks
test board
test tape.

Manufacturers specifications may be found in:

printed instruction leaflets
operators manuals
equipment specifications
attachments to equipment
plans and diagrams
warranty documents.

Risks and hazards may include:

non-compliance with building codes and regulations
exposed electrical wiring

manual handling
chemical hazards (battery corrosion)
exposure to:
asbestos
dust
noise
live power
vermin
water
glass fibre
building debris
natural and other gas build-up.

OHS policies and procedures may relate to:

hazardous and risk assessment mechanisms
implementation of safety regulations
safety training
safety systems incorporating:
work clearance procedures
isolation procedures
gas and vapour
monitoring/testing procedures
use of protective equipment and clothing

use of codes of practice.

Personal protective equipment may include:

safety boots
masks
safety glasses
knee pads
gloves
first aid kit, fire extinguisher.

Safe operating practices may include:

working safely around electrical wiring, cables and overhead power lines
working safely around tools and equipment
hazard recognition
emergency procedures
awareness of electrical hazards
following confined spaces procedures
administering first aid.

Documentation may include:

work log
records of equipment/system positioning
section lists, zone lists, equipment lists
cable identification records, fixings, job card
records of any adjustments to original cable plan
records of faulty or malfunctioning tools and equipment
testing and inspection results
records of materials used

costings.

Applicable legislation, codes and national standards may relate to:

compliance with Australian building codes and regulations

compliance with Australian Communications Authority (ACA) cabling standards

relevant Commonwealth/State/Territory legislation which affect organisational operation:

Occupational Health and Safety and safe work practices

environmental issues

equal employment opportunity

industrial relations

anti-discrimination and diversity

licensing arrangements

Australian Standards, quality assurance and certification requirements

relevant industry Codes of Practice

award and enterprise agreements

trade practices

privacy requirements

freedom of information.

1 Prepare for commissioning / decommissioning	<p data-bbox="644 607 1382 712">1.1 Work order is reviewed and clarified with appropriate person(s) as required in accordance with organisational requirements</p> <p data-bbox="644 752 1382 891">1.2 Commissioning / decommissioning requirements of security equipment / systems are identified and confirmed in accordance with organisational procedures</p> <p data-bbox="644 931 1382 1106">1.3 Tools, equipment and materials are selected appropriate to job requirements and checked for operational effectiveness in accordance with manufacturer's specifications and organisational procedures</p> <p data-bbox="644 1146 1382 1285">1.4 Potential and existing risks and hazards associated with security equipment / systems are identified and managed in accordance with OHS policies and procedures and organisational requirements</p> <p data-bbox="644 1326 1382 1431">1.5 Suitable personal protective equipment is selected, used and maintained in accordance with OHS and organisational requirements</p> <p data-bbox="644 1471 1382 1641">1.6 Personal limitations in commissioning / decommissioning security equipment / systems are promptly identified and assistance is sought from appropriate person(s) in accordance with organisational procedures</p>
2 Commission security equipment / system	<p data-bbox="644 1682 1382 1821">2.1 Correct security equipment / system operational and testing procedures are observed and followed in accordance with manufacturer's specifications and work order</p> <p data-bbox="644 1861 1382 1964">2.2 Testing confirms that security equipment / system meets installation performance specifications, industry and legislative requirements</p>

- 2.3 Customisation of security equipment / system to match client requirements is completed as required in accordance with manufacturer's specifications and work order
 - 2.4 Malfunctions or deviations from specifications are identified and rectified or reported in accordance with organisational procedures
 - 2.5 Client hand-over of commissioned security equipment / system is undertaken in accordance with legislative and organisational requirements and relevant industry standards
 - 2.6 Safe operating practices are observed to remove risk of injury to self, others or security equipment / system in accordance with OHS and organisational requirements
- 3 Decommission security equipment / system
- 3.1 Isolation procedures to protect the functioning or operation of existing structures are confirmed with appropriate person(s) and implemented in accordance with site procedures
 - 3.2 Security equipment / system to be decommissioned is accessed in accordance with manufacturer's specifications and minimises disruption to client, services or normal work routines
 - 3.3 Correct security equipment / system decommissioning procedures are observed and followed in accordance with manufacturer's specifications, OHS, legislative and organisational requirements
 - 3.4 Clear and concise communication is maintained with appropriate person(s) during decommissioning procedures in accordance with client and organisational requirements
 - 3.5 Safe operating practices are observed to remove risk of injury to self, others or security equipment / system in accordance with OHS and organisational requirements

- 4 Complete commissioning / decommissioning activities
- 4.1 Removal of decommissioned security equipment / system or components is arranged in accordance with work order, OHS and organisational procedures
 - 4.2 Notification of work completion is made to appropriate person(s) in accordance with client and organisational procedures
 - 4.3 Results of commissioning and other relevant documentation is completed and processed in accordance with industry, legislative and organisational requirements
 - 4.4 Work area, tools and equipment are cleaned and stored in a secure and safe location in accordance with organisational requirements
 - 4.5 Waste from commissioning / decommissioning activities is collected, treated and disposed of or recycled in accordance with organisational procedures and environmental policies

Required Skills and Knowledge

Not applicable.

Evidence Guide

The Evidence Guide identifies the requirements to be demonstrated to confirm competence for this unit. Assessment must confirm sufficient ability to use appropriate skills and knowledge to commission or decommission a range of security equipment and systems. Assessment of performance should be over a period of time covering all categories within the Range of Variables statements that are applicable in the learning environment.

What critical aspects are required for evidence of competency?

Clearly identify commissioning/decommissioning requirements of security equipment/systems from work order and organise appropriate tools, equipment and materials to carry out work.

Follow safe and efficient work practices in the use of tools and equipment and accurately identify and manage risks and hazards to commissioning/decommissioning work and work areas.

Access security equipment/systems and methodically carry out commissioning/decommissioning procedures with minimal disruption to client services, existing structures or normal work routines.

Hand-over security equipment/system to client ensuring a full and complete understanding of equipment/system operations and functions through the provision of clear and effective instructions, information and/or training.

Clean and store tools and equipment, reinstate work area in a clear and safe condition, and prepare and submit all required documentation in an accurate and prompt manner.

What specific knowledge is needed to achieve the performance criteria?

Knowledge and understanding are essential to apply this standard in the workplace, to transfer the skills to other contexts and to deal with unplanned events. The knowledge requirements for this competency standard are listed below:

types, functions and requirements of security equipment/systems

methods and procedures to commission/decommission security equipment/systems

security equipment/system configurations and programs

risks and hazards associated with commissioning/decommissioning work

types and functions of tools, equipment and testing devices

types and functions of keypad and control panels

earthing systems, arrangements and requirements

electrical concepts (voltage, current, resistance and impedance)

electrical connections and types of electrical circuits

cable identification and handling requirements

building construction methods and types

types and functions of computer software

technical terminology

procedures for working in confined spaces

organisational and client confidentiality requirements

OHS requirements and safe work practices

relevant legislative including Australian Standards, building codes and Australian

Communications Authority (ACA) cabling standards.

What specific skills are needed to achieve the performance criteria?

To achieve the performance criteria, some specific skills are required. These include the ability to:

read and interpret plans and specifications

select and use suitable tools and equipment
methodically prioritise and organise work tasks
effectively operate security equipment/systems
download/upload information
test security equipment systems and read a multimeter
accurately identify and correctly handle cables
customise equipment/systems to client requirements
communicate in a clear and concise manner and provide effective training/instructions to clients
safely disable security equipment/systems
solder, weld and carry out basic carpentry
solve routine problems
estimate resource requirements
apply safe and efficient work practices.

What resources may be required for assessment?

Access to a suitable venue and equipment.
Access to plain English version of relevant statutes and procedures.
Assignment instructions, work plans and schedules, policy documents and duty statements.
Assessment instruments, including personal planner and assessment record book.
Access to a registered provider of assessment services.

What is required to achieve consistency of performance?

For valid and reliable assessment of this unit, the competency should be demonstrated over a period of time and observed by the assessor. The competency is to be demonstrated in a range of situations, which may include involvement in related activities normally experienced in the workplace.

Evidence of underpinning knowledge understanding of processes and principles can be gained through thorough questioning and by observation of previous work.

Assessment against this unit may involve the following:

Continuous assessment in a setting that simulates the conditions of performance described in the elements, performance criteria and range of variables statement that make up the unit.
Continuous assessment in the workplace, taking into account the range of variables affecting performance.

Self-assessment on the same terms as those described above.

Simulated assessment or critical incident assessment, provided that the critical incident involves assessment against performance criteria and an evaluation of underpinning knowledge and skill required to achieve the required performance outcomes.

Key competency levels

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the key competencies, although others may be added. Information below highlights how these processes are applied in this competency standard.

1 - perform the process

2 - perform and administer the process

3 - perform, administer and design the process

How can **communication of ideas and information** be applied? (2)

Clear instructions, explanations and training may be provided to clients to ensure a complete understanding of the functions and operations of security equipment/systems.

How can **information be collected, analysed and organised**? (2)

Test data may be interpreted and analysed to confirm commissioned security equipment/system meets installation performance specifications.

How are **activities planned and organised?** (2)

Access to security equipment/systems may be organised with minimal disruption to client services, existing structures or normal work routines.

How can **team work** be applied? (2)

Communication may be organised and maintained with relevant persons throughout decommissioning procedures.

How can the use of **mathematical ideas and techniques** be applied? (2)

Mathematical techniques may be used to accurately estimate resource requirements and prioritise work tasks.

How can **problem solving skills** be applied? (2)

Malfunctions or deficiencies in the performance or operational effectiveness of security equipment/system and/or components are promptly identified and reported for remedial action.

How can the **use of technology** be applied? (2)

Technology may be used to communicate, source and record information. It may also be used to carry out testing activities.

The Evidence Guide identifies the requirements to be demonstrated to confirm competence for this unit. Assessment must confirm sufficient ability to use appropriate skills and knowledge to commission or decommission a range of security equipment and systems.

Assessment of performance should be over a period of time covering all categories within the Range of Variables statements that are applicable in the learning environment.

What critical aspects are required for evidence of competency?

Clearly identify commissioning/decommissioning requirements of security equipment/systems from work order and organise appropriate tools, equipment and materials to carry out work.

Follow safe and efficient work practices in the use of tools and equipment and accurately identify and manage risks and hazards to commissioning/decommissioning work and work areas.

Access security equipment/systems and methodically carry out commissioning/decommissioning procedures with minimal disruption to client services, existing structures or normal work routines.

Hand-over security equipment/system to client ensuring a full and complete understanding of equipment/system operations and functions through the provision of clear and effective instructions, information and/or training.

Clean and store tools and equipment, reinstate work area in a clear and safe condition, and prepare and submit all required documentation in an accurate and prompt manner.

What specific knowledge is needed to achieve the performance criteria?

Knowledge and understanding are essential to apply this standard in the workplace, to transfer the skills to other contexts and to deal with unplanned events. The knowledge requirements for this competency standard are listed below:

types, functions and requirements of security equipment/systems

methods and procedures to commission/decommission security equipment/systems

security equipment/system configurations and programs

risks and hazards associated with commissioning/decommissioning work

types and functions of tools, equipment and testing devices

types and functions of keypad and control panels

earthing systems, arrangements and requirements
electrical concepts (voltage, current, resistance and impedance)
electrical connections and types of electrical circuits
cable identification and handling requirements
building construction methods and types
types and functions of computer software
technical terminology
procedures for working in confined spaces
organisational and client confidentiality requirements
OHS requirements and safe work practices
relevant legislative including Australian Standards, building codes and Australian Communications Authority (ACA) cabling standards.

What specific skills are needed to achieve the performance criteria?

To achieve the performance criteria, some specific skills are required. These include the ability to:

read and interpret plans and specifications
select and use suitable tools and equipment
methodically prioritise and organise work tasks
effectively operate security equipment/systems
download/upload information
test security equipment systems and read a multimeter
accurately identify and correctly handle cables
customise equipment/systems to client requirements
communicate in a clear and concise manner and provide effective training/instructions to clients
safely disable security equipment/systems
solder, weld and carry out basic carpentry
solve routine problems
estimate resource requirements
apply safe and efficient work practices.

What resources may be required for assessment?

Access to a suitable venue and equipment.
Access to plain English version of relevant statutes and procedures.
Assignment instructions, work plans and schedules, policy documents and duty statements.
Assessment instruments, including personal planner and assessment record book.
Access to a registered provider of assessment services.

What is required to achieve consistency of performance?

For valid and reliable assessment of this unit, the competency should be demonstrated over a period of time and observed by the assessor. The competency is to be demonstrated in a range of situations, which may include involvement in related activities normally experienced in the workplace.

Evidence of underpinning knowledge understanding of processes and principles can be gained through thorough questioning and by observation of previous work.

Assessment against this unit may involve the following:

Continuous assessment in a setting that simulates the conditions of performance described in the elements, performance criteria and range of variables statement that make up the unit.
Continuous assessment in the workplace, taking into account the range of variables affecting performance.

Self-assessment on the same terms as those described above.

Simulated assessment or critical incident assessment, provided that the critical incident involves assessment against performance criteria and an evaluation of underpinning knowledge and skill required to achieve the required performance outcomes.

Key competency levels

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the key competencies, although others may be added.

Information below highlights how these processes are applied in this competency standard.

1 - perform the process

2 - perform and administer the process

3 - perform, administer and design the process

How can **communication of ideas and information** be applied? (2)

Clear instructions, explanations and training may be provided to clients to ensure a complete understanding of the functions and operations of security equipment/systems.

How can **information be collected, analysed and organised**? (2)

Test data may be interpreted and analysed to confirm commissioned security equipment/system meets installation performance specifications.

How are **activities planned and organised**? (2)

Access to security equipment/systems may be organised with minimal disruption to client services, existing structures or normal work routines.

How can **team work** be applied? (2)

Communication may be organised and maintained with relevant persons throughout decommissioning procedures.

How can the use of **mathematical ideas and techniques** be applied? (2)

Mathematical techniques may be used to accurately estimate resource requirements and prioritise work tasks.

How can **problem solving skills** be applied? (2)

Malfunctions or deficiencies in the performance or operational effectiveness of security equipment/system and/or components are promptly identified and reported for remedial action.

How can the **use of technology** be applied? (2)

Technology may be used to communicate, source and record information. It may also be used to carry out testing activities.

Range Statement

The Range of Variables provides information about the context in which the unit of competency is carried out. It allows for different work practices and work and knowledge requirements as well as for differences between organisations and workplaces. The following variables may be present for this particular unit:

Work order information may relate to:

- work schedules
- completion dates
- job requirements and tasks
- specific client requirements
- access to site and specific site requirements
- resource requirements
- OHS requirements
- compliance with relevant legislation
- budget allocations
- warranties and service information.

Appropriate person(s) may include:

- clients
- site managers
- project managers
- engineers and technicians
- technical experts
- line managers/supervisors
- colleagues
- regulatory personnel
- security consultants.

Organisational requirements may relate to:

- legal and organisational operational policies and procedures
- operations manuals, induction and training materials
- insurance policy agreements
- client and organisational confidentiality requirements
- organisational goals, objectives, plans, systems and processes
- employer and employee rights and responsibilities
- own role, responsibility and delegation
- quality and continuous improvement processes and standards
- client service standards
- defined resource parameters
- OHS policies, procedures and programs
- emergency and evacuation procedures
- duty of care, code of conduct, code of ethics
- access and equity policy, principles and practice
- records and information systems and processes
- communication channels and reporting procedures.

Commissioning requirements may relate to:

- equipment/system to be commissioned
- persons to be trained
- scheduling of commissioning

information/documentation to be handed over to client
customisation
monitoring and response procedures to be determined/clarified.

Decommissioning may involve:

disconnection
disablement
hardware/software changes
adjustments
reconnecting components to ensure correct operation and compliance with building codes and regulations
removal of components
downloading system information
default system-held information.

Security equipment and systems may include:

detection devices, audible/visual warning devices
cameras, monitors and control equipment
control panels, intercoms
wireless equipment, car alarms
electronic readers, electronic recognition controls
locks and locking systems
grills, lighting, boom gates, turnstiles
bank pop-up screens
smoke detection devices
electric/mechanical fire safety and fire locking systems
power supplies, batteries
security doors and door controls.

Security systems may be:

electronic
mechanical
computerised
procedural.

Tools and equipment may include:

multimeter, F-set, cable testing equipment
hand tools, power tools, fixing tools, crimp tools, IDS tools
flexible rods, fishing tools
strippers, router, file, followers, spirit level
soldering iron, welder
insulation mega
ladder, scaffold, scissor lift, hoist, drop sheet, batteries
personal protective equipment
communications equipment.

Materials may include:

computer disks
computer leads/cables
interface PCBs
keypads
handheld programmers
software.

Risks and hazards may include:

non-compliance with building codes and regulations
exposed electrical wiring
manual handling
chemical hazards (battery corrosion)
exposure to:
asbestos
dust
noise
live power
vermin
water
glass fibre
building debris
natural and other gas build-up.

OHS policies and procedures may relate to:

hazardous and risk assessment mechanisms
implementation of safety regulations
safety training
safety systems incorporating:
work clearance procedures
isolation procedures
gas and vapour
monitoring/testing procedures
use of protective equipment and clothing

use of codes of practice.

Personal protective clothing and equipment may include:

masks, safety glasses, head protection, ear muffs
safety boots, knee pads
gloves
warning hats, flashing lights
warning signs and tapes
fire extinguisher
first aid kit.

Applicable legislation, codes and national standards may relate to:

compliance with Australian building codes and regulations
compliance with Australian Communications Authority (ACA) cabling standards
relevant Commonwealth/State/Territory legislation which affect organisational operation:
Occupational Health and Safety and safe work practices
environmental issues
equal employment opportunity
industrial relations
anti-discrimination and diversity

Australian Standards, quality assurance, licensing and certification requirements
relevant industry Codes of Practice
trade practices, award and enterprise agreements

privacy requirements, freedom of information.

Customisation may involve:

changing password or user code
modifying system functions
adding system functions
changing volume or length of alarms.

Hand-over procedures may include:

comprehensive explanation/demonstration of security equipment/system operations and functions
effective user training:
verbal and written explanations, demonstration, practice, question and answer session.

clear instructions on security equipment/system maintenance

provision of all relevant information and documentation:

manufacturer's and user manuals, maintenance requirements and contract, monitoring procedures and contract, keying plan, warranty requirements and contract, company contact details.

Safe operating practices may include:

working safely around electrical wiring, cables and overhead power lines
working safely around tools and equipment
hazard recognition
emergency procedures
awareness of electrical hazards
following confined spaces procedures
administering first aid.

Removal may include:

disconnection
dismantling
removal
reconnecting components to ensure correct operation and compliance with building codes and regulations.

Results of commissioning may include:

commissioning undertaken
persons equipment/system commissioned to
date and time of commissioning
information/documentation handed over to client
job card
customisation of equipment/system.

Documentation may include:

completion of work log
details of system decommissioning/commissioning
client approval for decommissioning
client sign-off for commissioning
adjustments made to security equipment/system
section lists, zone lists, equipment lists
fixings, job card
adjustments to original cable plan.

Disposal may involve:

return to client
destruction
return to manufacturer
special disposal requirements for hazardous components (radioactive components and batteries)
return to store
special storage and/or disposal requirements for classified or high security equipment/systems.

The Range of Variables provides information about the context in which the unit of competency is carried out. It allows for different work practices and work and knowledge requirements as well as for differences between organisations and workplaces. The following variables may be present for this particular unit:

Work order information may relate to:

work schedules
completion dates
job requirements and tasks
specific client requirements
access to site and specific site requirements
resource requirements
OHS requirements
compliance with relevant legislation
budget allocations
warranties and service information.

Appropriate person(s) may include:

clients
site managers
project managers
engineers and technicians
technical experts
line managers/supervisors
colleagues
regulatory personnel
security consultants.

Organisational requirements may relate to:

legal and organisational operational policies and procedures
operations manuals, induction and training materials
insurance policy agreements
client and organisational confidentiality requirements
organisational goals, objectives, plans, systems and processes
employer and employee rights and responsibilities
own role, responsibility and delegation
quality and continuous improvement processes and standards
client service standards
defined resource parameters
OHS policies, procedures and programs
emergency and evacuation procedures
duty of care, code of conduct, code of ethics
access and equity policy, principles and practice

records and information systems and processes
communication channels and reporting procedures.

Commissioning requirements may relate to:

equipment/system to be commissioned
persons to be trained
scheduling of commissioning
information/documentation to be handed over to client
customisation
monitoring and response procedures to be determined/clarified.

Decommissioning may involve:

disconnection
disablement
hardware/software changes
adjustments
reconnecting components to ensure correct operation and compliance with building codes and regulations
removal of components
downloading system information
default system-held information.

Security equipment and systems may include:

detection devices, audible/visual warning devices
cameras, monitors and control equipment
control panels, intercoms
wireless equipment, car alarms
electronic readers, electronic recognition controls
locks and locking systems
grills, lighting, boom gates, turnstiles
bank pop-up screens
smoke detection devices
electric/mechanical fire safety and fire locking systems
power supplies, batteries
security doors and door controls.

Security systems may be:

electronic
mechanical
computerised
procedural.

Tools and equipment may include:

multimeter, F-set, cable testing equipment
hand tools, power tools, fixing tools, crimp tools, IDS tools
flexible rods, fishing tools
strippers, router, file, followers, spirit level
soldering iron, welder
insulation mega
ladder, scaffold, scissor lift, hoist, drop sheet, batteries
personal protective equipment
communications equipment.

Materials may include:

computer disks
computer leads/cables
interface PCBs
keypads
handheld programmers
software.

Risks and hazards may include:

non-compliance with building codes and regulations
exposed electrical wiring
manual handling
chemical hazards (battery corrosion)
exposure to:
asbestos
dust
noise
live power
vermin
water
glass fibre
building debris
natural and other gas build-up.

OHS policies and procedures may relate to:

hazardous and risk assessment mechanisms
implementation of safety regulations
safety training
safety systems incorporating:
work clearance procedures
isolation procedures
gas and vapour
monitoring/testing procedures
use of protective equipment and clothing

use of codes of practice.

Personal protective clothing and equipment may include:

masks, safety glasses, head protection, ear muffs
safety boots, knee pads
gloves
warning hats, flashing lights
warning signs and tapes
fire extinguisher
first aid kit.

Applicable legislation, codes and national standards may relate to:

compliance with Australian building codes and regulations
compliance with Australian Communications Authority (ACA) cabling standards
relevant Commonwealth/State/Territory legislation which affect organisational operation:
Occupational Health and Safety and safe work practices
environmental issues
equal employment opportunity

industrial relations
anti-discrimination and diversity

Australian Standards, quality assurance, licensing and certification requirements
relevant industry Codes of Practice
trade practices, award and enterprise agreements
privacy requirements, freedom of information.

Customisation may involve:

changing password or user code
modifying system functions
adding system functions
changing volume or length of alarms.

Hand-over procedures may include:

comprehensive explanation/demonstration of security equipment/system operations and functions
effective user training:
verbal and written explanations, demonstration, practice, question and answer session.

clear instructions on security equipment/system maintenance
provision of all relevant information and documentation:
manufacturer's and user manuals, maintenance requirements and contract, monitoring procedures and contract, keying plan, warranty requirements and contract, company contact details.

Safe operating practices may include:

working safely around electrical wiring, cables and overhead power lines
working safely around tools and equipment
hazard recognition
emergency procedures
awareness of electrical hazards
following confined spaces procedures
administering first aid.

Removal may include:

disconnection
dismantling
removal
reconnecting components to ensure correct operation and compliance with building codes and regulations.

Results of commissioning may include:

commissioning undertaken
persons equipment/system commissioned to
date and time of commissioning
information/documentation handed over to client
job card
customisation of equipment/system.

Documentation may include:

completion of work log
details of system decommissioning/commissioning
client approval for decommissioning

client sign-off for commissioning
adjustments made to security equipment/system
section lists, zone lists, equipment lists
fixings, job card
adjustments to original cable plan.

Disposal may involve:

return to client
destruction
return to manufacturer
special disposal requirements for hazardous components (radioactive components and batteries)
return to store
special storage and/or disposal requirements for classified or high security equipment/systems.

Unit Sector(s)

Not applicable.

PRSTS305A Identify and diagnose electronic security equipment/system fault

Modification History

Not applicable.

Unit Descriptor

This competency standard covers the skills and knowledge required to identify and diagnose faults in electronic security equipment/systems. It requires the ability to ascertain normal operational functions and performance of a range of security equipment/systems, conduct fault-finding inspections and checks, systematically identify and diagnose faults, and accurately document and maintain information systems. This work applies in extra low voltage as defined through the Australian Standards As 2201 (1986) environments and would be carried out under routine supervision within organisational guidelines.

Functional Area: Core, Technical Security

This competency standard covers the skills and knowledge required to identify and diagnose faults in electronic security equipment/systems. It requires the ability to ascertain normal operational functions and performance of a range of security equipment/systems, conduct fault-finding inspections and checks, systematically identify and diagnose faults, and accurately document and maintain information systems. This work applies in extra low voltage as defined through the Australian Standards As 2201 (1986) environments and would be carried out under routine supervision within organisational guidelines.

Application of the Unit

Not applicable.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Not applicable.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

Elements and Performance Criteria

Element	Performance Criteria
1 Prepare for diagnosis of faults	<ul style="list-style-type: none">1.1 Work order is reviewed and clarified with appropriate person(s) as required in accordance with organisational requirements1.2 Tools, equipment and materials are selected appropriate to job requirements and checked for operational effectiveness in accordance with manufacturer's specifications and organisational procedures1.3 Suitable personal protective equipment is selected, used and maintained in accordance with OHS and organisational requirements1.4 Potential and existing risks and hazards associated with security equipment / systems are identified and managed in accordance with OHS and organisational requirements1.5 Site access and specific site requirements are identified and appropriate arrangements made as required in accordance with client and organisational requirements
2 Diagnose faults	<ul style="list-style-type: none">2.1 Safe operating practices are followed to remove risk of injury to self, others or security equipment / system in accordance with OHS and organisational requirements2.2 Reported faults are confirmed and normal operational functions and performance of security equipment / systems are ascertained in accordance with manufacturer's specifications2.3 Operational data and relevant information is accessed and appropriate inspections and tests are carried out in accordance with manufacturer's specifications and relevant industry standards

- 2.4 Faults are systematically identified and diagnosed on the basis of an accurate assessment of inspection and test results, operational data and relevant information
 - 2.5 Personal limitations in identifying and diagnosing faults are promptly identified and assistance is sought from appropriate person(s) in accordance with organisational procedures
- 3 Complete and report diagnosis
- 3.1 Work is completed in an efficient and timely manner in accordance with work order and organisational requirements
 - 3.2 Notification of work completion is made to appropriate person(s) in accordance with organisational procedures
 - 3.3 Documentation is completed promptly and accurately and processed in accordance with client, legislative and organisational requirements
 - 3.4 Work area, tools and equipment are cleaned and stored in a secure and safe location in accordance with organisational requirements
 - 3.5 Waste from work activities is collected, treated and disposed of or recycled in accordance with organisational procedures and environmental policies

Required Skills and Knowledge

Not applicable.

Evidence Guide

The Evidence Guide identifies the requirements to be demonstrated to confirm competence for this unit. Assessment must confirm sufficient ability to use appropriate skills and knowledge to identify and diagnose electronic security equipment/system faults. Assessment of performance should be over a period of time covering all categories within the Range of Variables statements that are applicable in the learning environment.

What critical aspects are required for evidence of competency?

Clearly identify job requirements and organise appropriate tools, equipment and materials to carry out checks and testing of a range of security equipment and systems.

Confirm reported faults with client and ascertain normal performance of security equipment/system against manufacturer's specifications.

Follow safe and efficient work practices in the use of tools and equipment and effectively manage risks and hazards in the work area.

Conduct inspections and tests of security equipment/systems in a methodical manner and accurately identify and diagnose faults based on an assessment of test data, site variables, operational and historical information.

Clean and store tools and equipment, reinstate work area in a clear and safe condition, and update and submit all required documentation in an accurate and prompt manner.

What specific knowledge is needed to achieve the performance criteria?

Knowledge and understanding are essential to apply this standard in the workplace, to transfer the skills to other contexts and to deal with unplanned events. The knowledge requirements for this competency standard are listed below:

types, functions and specifications of security equipment/systems

operational principles of security equipment/systems

operational principles of data transmission networks

basics of circuit diagrams

electrical connections

electrical concepts (voltage, current, resistance and impedance)

common test equipment

tests to confirm equipment/system operation

fault finding techniques

common equipment/system faults

technical terms

common security equipment/system faults

building construction methods and types

cable identification and handling requirements

earthing systems arrangements and requirements

confined space procedures.

What specific skills are needed to achieve the performance criteria?

To achieve the performance criteria, some specific skills are required. These include the ability to:

read and interpret specifications, charts and diagrams

communicate in a clear and concise manner

demonstrate basic logic and lateral thinking processes

use appropriate tools and equipment

test security equipment/systems

read and interpret a multimeter

accurately identify and diagnose faults
identify and correctly handle cables
carry out soldering, welding, drilling and basic carpentry
work in confined spaces
methodically prioritise and organise work tasks
solve routine problems and trouble shoot
estimate resource requirements
apply safe and efficient work practices
prepare orders, invoices and supply requisitions.

What resources may be required for assessment?

Access to a suitable venue and equipment.
Access to plain English version of relevant statutes and procedures.
Assignment instructions, work plans and schedules, policy documents and duty statements.
Assessment instruments, including personal planner and assessment record book.
Access to a registered provider of assessment services.

What is required to achieve consistency of performance?

For valid and reliable assessment of this unit, the competency should be demonstrated over a period of time and observed by the assessor. The competency is to be demonstrated in a range of situations, which may include involvement in related activities normally experienced in the workplace.

Evidence of underpinning knowledge understanding of processes and principles can be gained through thorough questioning and by observation of previous work.

Assessment against this unit may involve the following:

Continuous assessment in a setting that simulates the conditions of performance described in the elements, performance criteria and range of variables statement that make up the unit.
Continuous assessment in the workplace, taking into account the range of variables affecting performance.

Self-assessment on the same terms as those described above.

Simulated assessment or critical incident assessment, provided that the critical incident involves assessment against performance criteria and an evaluation of underpinning knowledge and skill required to achieve the required performance outcomes.

Key competency levels

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the key competencies, although others may be added.

Information below highlights how these processes are applied in this competency standard.

- 1 - perform the process
- 2 - perform and administer the process
- 3 - perform, administer and design the process

How can **communication of ideas and information** be applied? (2)

Reported faults of security equipment/system may be verified in consultation with relevant persons.

How can **information be collected, analysed and organised**? (2)

Results of conducted inspections and tests may be accurately documented and organised in reports for analysis.

How are **activities planned and organised**? (2)

Fault-finding tests may be carried out systematically to ensure fault is effectively isolated and identified.

How can **team work** be applied? (2)

Personal limitations in identifying and diagnosing faults may be promptly identified and assistance sought from relevant persons.

How can the use of **mathematical ideas and techniques** be applied? (2)

Mathematical techniques may be used to accurately estimate resource requirements and prioritise work tasks.

How can **problem solving skills** be applied? (2)

Hazards and risks in the work area may be promptly identified and controlled to ensure safety of self, property and others.

How can the **use of technology** be applied? (2)

Technology may be used to communicate, source and record information. It may also be used to carry out testing activities.

The Evidence Guide identifies the requirements to be demonstrated to confirm competence for this unit. Range Statement

The Range of Variables provides information about the context in which the unit of competency is carried out. It allows for different work practices and work and knowledge requirements as well as for differences between organisations and workplaces. The following variables may be present for this particular unit:

Work order information may relate to:

- work schedules
- completion dates
- job requirements and tasks
- specific client requirements
- access to site and specific site requirements
- resource requirements
- OHS requirements
- compliance with relevant legislation
- budget allocations
- warranties and service information.

Appropriate person(s) may include:

- clients
- site managers, project managers
- engineers and technicians
- technical experts
- line managers/supervisors
- colleagues, security consultants
- regulatory personnel.

Organisational requirements may relate to:

- legal and organisational operational policies and procedures
- operations manuals, induction and training materials
- insurance policy agreements
- client and organisational confidentiality requirements
- organisational goals, objectives, plans, systems and processes
- employer and employee rights and responsibilities
- own role, responsibility and delegation
- quality and continuous improvement processes and standards
- client service standards
- defined resource parameters
- OHS policies, procedures and programs
- emergency and evacuation procedures
- duty of care, code of conduct, code of ethics
- access and equity policy, principles and practice
- records and information systems and processes
- communication channels and reporting procedures.

Tools and equipment may include:

- computer, software, back-up disks
- test equipment (multimeter)
- hand tools, fixing tools, crimp tools, IDC tools
- strippers, router, file, drill, power saw
- lockpick, pick gun, followers

glass break tester, spirit level
soldering iron, welder
ladder, hoist, drop sheet, batteries
personal protective equipment
communications equipment.

Materials may include:

computer disks
circuit board cleaner
computer cables/leads
software
interface PCBs.

Personal protective clothing and equipment may include:

masks, safety glasses, head protection, ear muffs
safety boots, knee pads
gloves
warning hats, flashing lights
warning signs and tapes
fire extinguisher
first aid kit.

Risks and hazards may include:

non-compliance with building codes and regulations
exposed electrical wiring
manual handling
chemical hazards (battery corrosion)
exposure to:
asbestos
dust
noise
live power
vermin
water
glass fibre
building debris
natural and other gas build-up.

Security equipment and systems may include:

detection devices, audible/visual warning devices
cameras, monitors and control equipment
control panels, intercoms
wireless equipment, car alarms
electronic readers, electronic recognition controls
locks and locking systems
grills, lighting, boom gates, turnstiles
bank pop-up screens
smoke detection devices
electric/mechanical fire safety and fire locking systems
power supplies, batteries
security doors and door controls.

Security systems may be:

electronic
mechanical
computerised
procedural.

Site access and specific site requirements may relate to:

access and egress points, time of access
access codes, keys, passes, security clearances
union requirements
OHS requirements
building codes and regulations
heritage listings
noise control.

Safe operating practices may include:

working safely around electrical wiring, cables and overhead power lines
working safely around tools and equipment
hazard recognition
emergency procedures
awareness of electrical hazards
following confined spaces procedures
administering first aid.

Faults may be:

electronic, mechanical, procedural
software related
due to operational misuse
environmental
due to previous installation.

Operational data may be found in:

central monitoring station records
maintenance documentation
manufacturer's specifications
visual inspections
software records
back-ups.

Relevant information may include:

site variables:
equipment/system usage
environmental conditions
building structures
client habits

historical information of past performance
operational data.

Inspections may involve:

a visual inspection of:
equipment/system malfunctioning
parts and components
mechanisms
connections

using computer tools
client demonstration
environmental assessment.

Systematic fault-finding may involve:

using a methodical approach
progressively isolating fault
using testing equipment
verifies continued existence of problem
reviews all available information
identifies fault in shortest time possible.

Documentation may detail:

completion of work log
equipment/system problem
fault diagnosis
warranty conditions and allowances
recommendations for repair
circuit diagrams and flow charts
keying plans.

Applicable legislation, codes and national standards may relate to:

compliance with Australian building codes and regulations
compliance with Australian Communications Authority (ACA) cabling standards
relevant Commonwealth/State/Territory legislation which affect organisational operation:
Occupational Health and Safety and safe work practices
environmental issues
equal employment opportunity
industrial relations
anti-discrimination and diversity

licensing arrangements
Australian Standards, quality assurance and certification requirements
relevant industry Codes of Practice
trade practices, award and enterprise agreements
privacy requirements and related legislation.

The Range of Variables provides information about the context in which the unit of competency is carried out. It allows for different work practices and work and knowledge requirements as well as for differences between organisations and workplaces. The following variables may be present for this particular unit:

Work order information may relate to:

work schedules
completion dates
job requirements and tasks
specific client requirements
access to site and specific site requirements
resource requirements
OHS requirements
compliance with relevant legislation
budget allocations

warranties and service information.

Appropriate person(s) may include:

clients

site managers, project managers

engineers and technicians

technical experts

line managers/supervisors

colleagues, security consultants

regulatory personnel.

Organisational requirements may relate to:

legal and organisational operational policies and procedures

operations manuals, induction and training materials

insurance policy agreements

client and organisational confidentiality requirements

organisational goals, objectives, plans, systems and processes

employer and employee rights and responsibilities

own role, responsibility and delegation

quality and continuous improvement processes and standards

client service standards

defined resource parameters

OHS policies, procedures and programs

emergency and evacuation procedures

duty of care, code of conduct, code of ethics

access and equity policy, principles and practice

records and information systems and processes

communication channels and reporting procedures.

Tools and equipment may include:

computer, software, back-up disks

test equipment (multimeter)

hand tools, fixing tools, crimp tools, IDC tools

strippers, router, file, drill, power saw

lockpick, pick gun, followers

glass break tester, spirit level

soldering iron, welder

ladder, hoist, drop sheet, batteries

personal protective equipment

communications equipment.

Materials may include:

computer disks

circuit board cleaner

computer cables/leads

software

interface PCBs.

Personal protective clothing and equipment may include:

masks, safety glasses, head protection, ear muffs

safety boots, knee pads

gloves

witches hats, flashing lights

warning signs and tapes
fire extinguisher
first aid kit.

Risks and hazards may include:

non-compliance with building codes and regulations
exposed electrical wiring
manual handling
chemical hazards (battery corrosion)
exposure to:
asbestos
dust
noise
live power
vermin
water
glass fibre
building debris
natural and other gas build-up.

Security equipment and systems may include:

detection devices, audible/visual warning devices
cameras, monitors and control equipment
control panels, intercoms
wireless equipment, car alarms
electronic readers, electronic recognition controls
locks and locking systems
grills, lighting, boom gates, turnstiles
bank pop-up screens
smoke detection devices
electric/mechanical fire safety and fire locking systems
power supplies, batteries
security doors and door controls.

Security systems may be:

electronic
mechanical
computerised
procedural.

Site access and specific site requirements may relate to:

access and egress points, time of access
access codes, keys, passes, security clearances
union requirements
OHS requirements
building codes and regulations
heritage listings
noise control.

Safe operating practices may include:

working safely around electrical wiring, cables and overhead power lines
working safely around tools and equipment
hazard recognition

emergency procedures
awareness of electrical hazards
following confined spaces procedures
administering first aid.

Faults may be:

electronic, mechanical, procedural
software related
due to operational misuse
environmental
due to previous installation.

Operational data may be found in:

central monitoring station records
maintenance documentation
manufacturer's specifications
visual inspections
software records
back-ups.

Relevant information may include:

site variables:
equipment/system usage
environmental conditions
building structures
client habits

historical information of past performance
operational data.

Inspections may involve:

a visual inspection of:
equipment/system malfunctioning
parts and components
mechanisms
connections

using computer tools
client demonstration
environmental assessment.

Systematic fault-finding may involve:

using a methodical approach
progressively isolating fault
using testing equipment
verifies continued existence of problem
reviews all available information
identifies fault in shortest time possible.

Documentation may detail:

completion of work log
equipment/system problem
fault diagnosis
warranty conditions and allowances

recommendations for repair
circuit diagrams and flow charts
keying plans.

Applicable legislation, codes and national standards may relate to:

compliance with Australian building codes and regulations
compliance with Australian Communications Authority (ACA) cabling standards
relevant Commonwealth/State/Territory legislation which affect organisational operation:
Occupational Health and Safety and safe work practices
environmental issues
equal employment opportunity
industrial relations
anti-discrimination and diversity

licensing arrangements
Australian Standards, quality assurance and certification requirements
relevant industry Codes of Practice
trade practices, award and enterprise agreements
privacy requirements and related legislation.

Unit Sector(s)

Not applicable.

PRSTS307A Maintain and service security equipment/system

Modification History

Not applicable.

Unit Descriptor

This competency standard covers the skills and knowledge required to carry out routine servicing and repairs of a range of security equipment, systems, plant and equipment. It requires the ability to identify maintenance requirements, follow correct procedures, use safe and efficient work practices, maintain a hazard-free work area, accurately document and maintain information systems. This work applies in extra low voltage as defined through the Australian Standards As 2201 (1986) environments and would be carried out under routine supervision within organisational guidelines.

Functional Area: Core, Technical Security

This competency standard covers the skills and knowledge required to carry out routine servicing and repairs of a range of security equipment, systems, plant and equipment. It requires the ability to identify maintenance requirements, follow correct procedures, use safe and efficient work practices, maintain a hazard-free work area, accurately document and maintain information systems. This work applies in extra low voltage as defined through the Australian Standards As 2201 (1986) environments and would be carried out under routine supervision within organisational guidelines.

Pre-Requisites

Not applicable.

Employability Skills Information

Not applicable.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

Elements and Performance Criteria

Element	Performance Criteria
1 Prepare for maintenance	<p>1.1 Maintenance requirements of security equipment / systems are confirmed against work order</p> <p>1.2 Types of security equipment / systems to be inspected, serviced and / or repaired are identified and checked against work order</p> <p>1.3 Tools, equipment and materials are selected appropriate to job requirements and checked for operational effectiveness in accordance with manufacturer's specifications</p> <p>1.4 Faulty or unsafe tools are identified and segregated for repair or replacement in accordance with organisational procedures</p> <p>1.5 Potential and existing risks and hazards associated with maintenance activities are identified and controlled in accordance with OHS policies and procedures and organisational requirements</p> <p>1.6 Suitable personal protective equipment is selected, used and maintained in accordance with OHS and organisational requirements</p>
2 Carry out service and repair of security equipment / systems	<p>2.1 All work is conducted using safe operating practices in accordance with OHS, legislative and organisational requirements</p> <p>2.2 Security equipment / systems identified for maintenance are accessed with minimal disruption to client, services or normal work routines</p> <p>2.3 Inspections and checks are conducted to identify any damage, obstruction or component wear in accordance with manufacturer's specifications and OHS requirements</p> <p>2.4 Security equipment / systems are serviced and</p>

- repaired in accordance with manufacturer's specifications, work order and OHS requirements
- 2.5 Complex faults or repair requirements outside area of responsibility or competence are reported to appropriate person(s) for specialist advice in accordance with organisational procedures
- 3 Complete maintenance activities
- 3.1 Serviced and / or repaired security equipment / systems are checked and confirmed for correct operation and serviceability in accordance with manufacturer's specifications and OHS requirements
- 3.2 Relevant documentation is promptly and accurately completed and processed in accordance with industry, legislative and organisational requirements
- 3.3 Work area, tools and equipment are cleaned and stored in accordance with OHS and organisational requirements
- 3.4 Malfunctions, faults, wear or damage to tools is reported for repair or replacement in accordance with organisational policy and procedures
- 3.5 Waste from service and repair activities is collected, treated and disposed or recycled in accordance with organisational and environmental requirements

Required Skills and Knowledge

Not applicable.

Evidence Guide

The Evidence Guide identifies the requirements to be demonstrated to confirm competence for this unit. Assessment must confirm sufficient ability to use appropriate skills and knowledge to maintain and service security equipment and systems. Assessment of performance should be over a period of time covering all categories within the Range of Variables statements that are applicable in the learning environment.

What critical aspects are required for evidence of competency?

Clearly identify maintenance requirements of security equipment/systems and organise appropriate tools, equipment and materials to carry out work.

Follow safe and efficient work practices in the use of tools and equipment and accurately identify and manage risks and hazards to maintenance work and work areas.

Access security equipment/systems and methodically carry out maintenance procedures appropriate to the security equipment or system with minimal disruption to client, services or normal work routines.

Clean and store tools and equipment, reinstate work area in a clear and safe condition, and update and submit all required documentation in an accurate and prompt manner.

What specific knowledge is needed to achieve the performance criteria?

Knowledge and understanding are essential to apply this standard in the workplace, to transfer the skills to other contexts and to deal with unplanned events. The knowledge requirements for this competency standard are listed below:

types, functions and specifications of security equipment/systems and plant and equipment

operational principles of security equipment/systems

security equipment/system maintenance requirements

spare parts availability and supply

equipment calibration requirements

maintenance schedules

technical terms

common security equipment/system faults

tests to confirm equipment/system operation

building construction methods and types

electrical concepts

cable identification and handling requirements

earthing systems arrangements and requirements

confined space procedures.

What specific skills are needed to achieve the performance criteria?

To achieve the performance criteria, some specific skills are required. These include the ability to:

read and interpret specifications, charts and diagrams

communicate in a clear and concise manner

use appropriate testing tools and equipment

use appropriate maintenance equipment

service and repair security equipment/systems and plant and equipment

test security equipment/systems

read and interpret a multimeter

identify faults

identify and correctly handle cables

work in confined spaces

methodically prioritise and organise work tasks
solve routine problems
estimate resource requirements
apply safe and efficient work practices
prepare orders, invoices and supply requisitions.

What resources may be required for assessment?

Access to a suitable venue and equipment.
Access to plain English version of relevant statutes and procedures.
Assignment instructions, work plans and schedules, policy documents and duty statements.
Assessment instruments, including personal planner and assessment record book.
Access to a registered provider of assessment services.

What is required to achieve consistency of performance?

For valid and reliable assessment of this unit, the competency should be demonstrated over a period of time and observed by the assessor. The competency is to be demonstrated in a range of situations, which may include involvement in related activities normally experienced in the workplace.

Evidence of underpinning knowledge understanding of processes and principles can be gained through thorough questioning and by observation of previous work.

Assessment against this unit may involve the following:

Continuous assessment in a setting that simulates the conditions of performance described in the elements, performance criteria and range of variables statement that make up the unit.
Continuous assessment in the workplace, taking into account the range of variables affecting performance.

Self-assessment on the same terms as those described above.

Simulated assessment or critical incident assessment, provided that the critical incident involves assessment against performance criteria and an evaluation of underpinning knowledge and skill required to achieve the required performance outcomes.

Key competency levels

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the key competencies, although others may be added.

Information below highlights how these processes are applied in this competency standard.

1 - perform the process

2 - perform and administer the process

3 - perform, administer and design the process

How can **communication of ideas and information** be applied? (2)

Maintenance requirements of security equipment/systems may be clarified with relevant persons

How can **information be collected, analysed and organised**? (2)

Results of conducted inspections and checks may be accurately documented and organised in reports for review.

How are **activities planned and organised**? (2)

Access to security equipment/systems may be organised with minimal disruption to client, services or normal work routines.

How can **team work** be applied? (2)

Team work may be applied in methods and procedures to complete maintenance tasks within designated timeframes.

How can the use of **mathematical ideas and techniques** be applied? (2)

Mathematical techniques may be used to accurately estimate resource requirements and prioritise work tasks

How can **problem solving skills** be applied?(2)

Complex faults or repair requirements may be accurately identified and promptly reported for specialist advice.

How can the **use of technology** be applied? (2)

Technology may be used to communicate, source and record information. It may also be used to carry out testing activities.

The Evidence Guide identifies the requirements to be demonstrated to confirm competence for this unit. Assessment must confirm sufficient ability to use appropriate skills and knowledge to maintain and service security equipment and systems. Assessment of performance should be over a period of time covering all categories within the Range of Variables statements that are applicable in the learning environment.

What critical aspects are required for evidence of competency?

Clearly identify maintenance requirements of security equipment/systems and organise appropriate tools, equipment and materials to carry out work.

Follow safe and efficient work practices in the use of tools and equipment and accurately identify and manage risks and hazards to maintenance work and work areas.

Access security equipment/systems and methodically carry out maintenance procedures appropriate to the security equipment or system with minimal disruption to client, services or normal work routines.

Clean and store tools and equipment, reinstate work area in a clear and safe condition, and update and submit all required documentation in an accurate and prompt manner.

What specific knowledge is needed to achieve the performance criteria?

Knowledge and understanding are essential to apply this standard in the workplace, to transfer the skills to other contexts and to deal with unplanned events. The knowledge requirements for this competency standard are listed below:

types, functions and specifications of security equipment/systems and plant and equipment

operational principles of security equipment/systems

security equipment/system maintenance requirements

spare parts availability and supply

equipment calibration requirements

maintenance schedules

technical terms

common security equipment/system faults

tests to confirm equipment/system operation

building construction methods and types

electrical concepts

cable identification and handling requirements

earthing systems arrangements and requirements

confined space procedures.

What specific skills are needed to achieve the performance criteria?

To achieve the performance criteria, some specific skills are required. These include the ability to:

read and interpret specifications, charts and diagrams

communicate in a clear and concise manner

use appropriate testing tools and equipment

use appropriate maintenance equipment

service and repair security equipment/systems and plant and equipment
test security equipment/systems
read and interpret a multimeter
identify faults
identify and correctly handle cables
work in confined spaces
methodically prioritise and organise work tasks
solve routine problems
estimate resource requirements
apply safe and efficient work practices
prepare orders, invoices and supply requisitions.

What resources may be required for assessment?

Access to a suitable venue and equipment.

Access to plain English version of relevant statutes and procedures.

Assignment instructions, work plans and schedules, policy documents and duty statements.

Assessment instruments, including personal planner and assessment record book.

Access to a registered provider of assessment services.

What is required to achieve consistency of performance?

For valid and reliable assessment of this unit, the competency should be demonstrated over a period of time and observed by the assessor. The competency is to be demonstrated in a range of situations, which may include involvement in related activities normally experienced in the workplace.

Evidence of underpinning knowledge understanding of processes and principles can be gained through thorough questioning and by observation of previous work.

Assessment against this unit may involve the following:

Continuous assessment in a setting that simulates the conditions of performance described in the elements, performance criteria and range of variables statement that make up the unit.

Continuous assessment in the workplace, taking into account the range of variables affecting performance.

Self-assessment on the same terms as those described above.

Simulated assessment or critical incident assessment, provided that the critical incident involves assessment against performance criteria and an evaluation of underpinning knowledge and skill required to achieve the required performance outcomes.

Key competency levels

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions.

Some of these are covered by the key competencies, although others may be added.

Information below highlights how these processes are applied in this competency standard.

1 - perform the process

2 - perform and administer the process

3 - perform, administer and design the process

How can **communication of ideas and information** be applied? (2)

Maintenance requirements of security equipment/systems may be clarified with relevant persons

How can **information be collected, analysed and organised**? (2)

Results of conducted inspections and checks may be accurately documented and organised in reports for review.

How are **activities planned and organised**? (2)

Access to security equipment/systems may be organised with minimal disruption to client, services or normal work routines.

How can **team work** be applied? (2)

Team work may be applied in methods and procedures to complete maintenance tasks within designated timeframes.

How can the use of **mathematical ideas and techniques** be applied? (2)

Mathematical techniques may be used to accurately estimate resource requirements and prioritise work tasks

How can **problem solving skills** be applied?(2)

Complex faults or repair requirements may be accurately identified and promptly reported for specialist advice.

How can the **use of technology** be applied? (2)

Technology may be used to communicate, source and record information. It may also be used to carry out testing activities.

Range Statement

The Range of Variables provides information about the context in which the unit of competency is carried out. It allows for different work practices and work and knowledge requirements as well as for differences between organisations and workplaces. The following variables may be present for this particular unit:

Maintenance may include:

inspections, lubrication, cleaning and adjustments
routine repairs
identification and replacement of worn parts
confirmation of operational effectiveness
back-ups
changing user codes.

Security equipment and systems may include:

detection devices, audible/visual warning devices
cameras, monitors and control equipment
control panels, intercoms
wireless equipment, car alarms
electronic readers, electronic recognition controls
locks and locking systems
grills, lighting, boom gates, turnstiles
bank pop-up screens
smoke detection devices
electric/mechanical fire safety and fire locking systems
power supplies, batteries
security doors and door controls.

Security systems may be:

electronic
mechanical
computerised
procedural.

Equipment may include:

personal protective equipment
electronic instruments and equipment
diagnostics and testing equipment
installation tools and equipment
staple guns, ladders, cherrypickers
generators, extension cords, torches and lighting
mobile phones and communications equipment
cameras, computers
motor vehicles.

Security systems may be:

electronic
mechanical
computerised
procedural.

Work order information may include:

work schedules and completion dates

job requirements and tasks
specific client requirements
access to site and specific site requirements
resource requirements
OHS requirements
compliance with relevant legislation
budget allocations
warranties and service information.

Tools and equipment may include:

compute, software, back-up disks
test equipment (multimeter)
hand tools, fixing tools, crimp tools, IDC tools
strippers, router, file, drill, power saw
lockpick, pick gun, followers
glass break tester, spirit level
soldering iron, welder
ladder, hoist, drop sheet, batteries
personal protective equipment
communications equipment.

Materials may include:

resistors, parts and components
wire and cable, fixings, solder, insulation tape
springs, pins, oil, silicon, grease
glass cleaner/lens cleaner
glue, paint, patch materials
sealing compound, cleaning compounds
electronic components.

Risks and hazards may include:

non-compliance with building codes and regulations
exposed electrical wiring
manual handling
chemical hazards (battery corrosion)
exposure to:
asbestos
dust
noise
live power
vermin
water
glass fibre
building debris
natural and other gas build-up.

OHS policies and procedures may relate to:

hazardous and risk assessment mechanisms
implementation of safety regulations
safety training
safety systems incorporating:
work clearance procedures

isolation procedures
gas and vapour
monitoring/testing procedures
use of protective equipment and clothing

use of codes of practice.

Organisational requirements may relate to:

legal and organisational operational policies and procedures
operations manuals, induction and training materials
insurance policy agreements
client and organisational confidentiality requirements
organisational goals, objectives, plans, systems and processes
employer and employee rights and responsibilities
own role, responsibility and delegation
quality and continuous improvement processes and standards
client service standards
defined resource parameters
OHS policies, procedures and programs
emergency and evacuation procedures
duty of care, code of conduct, code of ethics
access and equity policy, principles and practice
records and information systems and processes
communication channels and reporting procedures.

Personal protective clothing and equipment may include:

masks, safety glasses, head protection, ear muffs
safety boots, knee pads
gloves
warning hats, flashing lights
warning signs and tapes
fire extinguisher
first aid kit.

Safe operating practices may include:

working safely around electrical wiring, cables and overhead power lines
working safely around tools and equipment
hazard recognition
emergency procedures
awareness of electrical hazards
following confined spaces procedures
administering first aid .

Applicable legislation, codes and national standards may relate to:

compliance with Australian building codes and regulations
compliance with Australian Communications Authority (ACA) cabling standards
relevant Commonwealth/State/Territory legislation which affect organisational operation:
Occupational Health and Safety and safe work practices
environmental issues
equal employment opportunity
industrial relations
anti-discrimination and diversity

licensing arrangements
Australian Standards, quality assurance and certification requirements
relevant industry Codes of Practice
trade practices, award and enterprise agreements
privacy requirements, freedom of information.

Access may involve:

use of access code
disablement of system
removal of housing
access token, keys
phone line access, modem.

Disruptions may affect:

security
time
access
noise
use of communications equipment
business operations.

Appropriate person(s) may include:

clients
site managers
project managers
engineers and technicians
technical experts
line managers/supervisors
colleagues
regulatory personnel
security consultants.

Documentation may relate to:

work log
service/maintenance records
equipment/system problems/faults
warranty conditions and allowances
recommendations for repairs
operational checks and maintenance conducted
testing and commissioning results
parts and components replaced, materials used
costings, receipts, invoice.

The Range of Variables provides information about the context in which the unit of competency is carried out. It allows for different work practices and work and knowledge requirements as well as for differences between organisations and workplaces. The following variables may be present for this particular unit:

Maintenance may include:

inspections, lubrication, cleaning and adjustments
routine repairs
identification and replacement of worn parts
confirmation of operational effectiveness

back-ups

changing user codes.

Security equipment and systems may include:

detection devices, audible/visual warning devices

cameras, monitors and control equipment

control panels, intercoms

wireless equipment, car alarms

electronic readers, electronic recognition controls

locks and locking systems

grills, lighting, boom gates, turnstiles

bank pop-up screens

smoke detection devices

electric/mechanical fire safety and fire locking systems

power supplies, batteries

security doors and door controls.

Security systems may be:

electronic

mechanical

computerised

procedural.

Equipment may include:

personal protective equipment

electronic instruments and equipment

diagnostics and testing equipment

installation tools and equipment

staple guns, ladders, cherrypickers

generators, extension cords, torches and lighting

mobile phones and communications equipment

cameras, computers

motor vehicles.

Security systems may be:

electronic

mechanical

computerised

procedural.

Work order information may include:

work schedules and completion dates

job requirements and tasks

specific client requirements

access to site and specific site requirements

resource requirements

OHS requirements

compliance with relevant legislation

budget allocations

warranties and service information.

Tools and equipment may include:

compute, software, back-up disks

test equipment (multimeter)

hand tools, fixing tools, crimp tools, IDC tools
strippers, router, file, drill, power saw
lockpick, pick gun, followers
glass break tester, spirit level
soldering iron, welder
ladder, hoist, drop sheet, batteries
personal protective equipment
communications equipment.

Materials may include:

resistors, parts and components
wire and cable, fixings, solder, insulation tape
springs, pins, oil, silicon, grease
glass cleaner/lens cleaner
glue, paint, patch materials
sealing compound, cleaning compounds
electronic components.

Risks and hazards may include:

non-compliance with building codes and regulations
exposed electrical wiring
manual handling
chemical hazards (battery corrosion)
exposure to:
asbestos
dust
noise
live power
vermin
water
glass fibre
building debris
natural and other gas build-up.

OHS policies and procedures may relate to:

hazardous and risk assessment mechanisms
implementation of safety regulations
safety training
safety systems incorporating:
work clearance procedures
isolation procedures
gas and vapour
monitoring/testing procedures
use of protective equipment and clothing

use of codes of practice.

Organisational requirements may relate to:

legal and organisational operational policies and procedures
operations manuals, induction and training materials
insurance policy agreements
client and organisational confidentiality requirements

organisational goals, objectives, plans, systems and processes
employer and employee rights and responsibilities
own role, responsibility and delegation
quality and continuous improvement processes and standards
client service standards
defined resource parameters
OHS policies, procedures and programs
emergency and evacuation procedures
duty of care, code of conduct, code of ethics
access and equity policy, principles and practice
records and information systems and processes
communication channels and reporting procedures.

Personal protective clothing and equipment may include:

masks, safety glasses, head protection, ear muffs
safety boots, knee pads
gloves
high vis hats, flashing lights
warning signs and tapes
fire extinguisher
first aid kit.

Safe operating practices may include:

working safely around electrical wiring, cables and overhead power lines
working safely around tools and equipment
hazard recognition
emergency procedures
awareness of electrical hazards
following confined spaces procedures
administering first aid .

Applicable legislation, codes and national standards may relate to:

compliance with Australian building codes and regulations
compliance with Australian Communications Authority (ACA) cabling standards
relevant Commonwealth/State/Territory legislation which affect organisational operation:
Occupational Health and Safety and safe work practices
environmental issues
equal employment opportunity
industrial relations
anti-discrimination and diversity

licensing arrangements

Australian Standards, quality assurance and certification requirements
relevant industry Codes of Practice
trade practices, award and enterprise agreements
privacy requirements, freedom of information.

Access may involve:

use of access code
disablement of system
removal of housing
access token, keys

phone line access, modem.

Disruptions may affect:

security

time

access

noise

use of communications equipment

business operations.

Appropriate person(s) may include:

clients

site managers

project managers

engineers and technicians

technical experts

line managers/supervisors

colleagues

regulatory personnel

security consultants.

Documentation may relate to:

work log

service/maintenance records

equipment/system problems/faults

costings, receipts, invoice.

Unit Sector(s)

Not applicable.

PRSTS317A Provide estimate and quote

Modification History

Not applicable.

Unit Descriptor

This competency standard covers the process of providing an estimate and quote on security systems to clients. It requires the ability to identify the needs of clients and prepare an accurate quote which provides full details of security equipment and system provisions. Competency also requires a knowledge of interpreting plans, designs and specifications and calculating labour and material costs. These work functions would be carried out under routine supervision within organisational guidelines.

Functional Area: Elective, Technical Security

This competency standard covers the process of providing an estimate and quote on security systems to clients. It requires the ability to identify the needs of clients and prepare an accurate quote which provides full details of security equipment and system provisions. Competency also requires a knowledge of interpreting plans, designs and specifications and calculating labour and material costs. Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

Elements and Performance Criteria

Element	Performance Criteria
1 Identify customer needs	<p>1.1 Security assessment is undertaken in accordance with organisational requirements to determine client requirements</p> <p>1.2 Specialised system requirements of clients are identified and installation requirements are considered in accordance with legislative and organisational requirements</p> <p>1.3 Occupational Health and Safety standards, statutory requirements, Australian Standards, manufacturers specifications and organisational requirements are interpreted</p> <p>1.4 Appropriate plans, drawings and texts are interpreted in order to identify correct size, type and quantity of material and equipment for estimation</p> <p>1.5 Ability to provide client security system is assessed in accordance with client security requirements and organisational and legal requirements</p>
2 Estimate costs	<p>2.1 Organisation's rate schedules and / or industry based labour rates and conditions are identified and applied to establish costings according to organisational policy and procedures</p> <p>2.2 Where equipment or materials are to be obtained from a supplier, quotations are obtained to ensure fair comparisons between suppliers</p> <p>2.3 Equipment, materials and other relevant items availability and delivery dates are confirmed with supplier, where required</p> <p>2.4 Site inspection is carried out to identify installation method and possible problems are considered and allowances for contingencies are made based on findings</p> <p>2.5 Costs estimated plan to return a profit on provision of security systems to client requirements where</p>

appropriate

- 3 Document and confirm quotation with client
 - 3.1 Quotation is prepared providing clear and concise information including all details of security system to be provided in accordance with organisational requirements
 - 3.2 Quotation is presented promptly to client which reflects client security requirements according to organisational requirements and accepted timeframes
 - 3.3 Client is consulted and any changes or variations are negotiated to meet client and organisational requirements
 - 3.4 Client file is created and required documentation is accurately updated to include all relevant details in accordance with organisational policy and procedures

Required Skills and Knowledge

Not applicable.

Evidence Guide

The Evidence Guide identifies the requirements to be demonstrated to confirm competence for this unit. Assessment must confirm sufficient ability to use appropriate skills and knowledge to provide an estimate and quote on security systems. Assessment of performance should be over a period of time covering all categories within the Range of Variables statements that are applicable in the learning environment.

What critical aspects are required for evidence of competency?

Determine security equipment requirements for provision of security system.

Determine prices and estimates for labour, equipment, materials and other relevant items.

Determine availability of equipment/materials.

Calculate estimations to return a profit where appropriate.

Ensure estimates allow for provision of security system which meets client requirements.

Prepare accurate quotes for clients which provide full details of security equipment/system provision.

What specific knowledge is needed to achieve the performance criteria?

Knowledge and understanding are essential to apply this standard in the workplace, to transfer the skills to other contexts and to deal with unplanned events. The knowledge requirements for this competency standard are listed below:

legislation and regulations applicable to quoting and providing security equipment/system services

organisational policies and procedures (personal presentation, documentation procedures, records and information systems)

types and functions of security equipment and systems

requirements of company pricing including schedules, policy and procedures

computer applications in relation to costing

contractual requirements for estimating and quoting for service provision

principles of duty of care, code of conduct and code of ethics

organisational policies and procedures related to the analysis of client requirements and selection of services

rights and responsibilities of customers.

What specific skills are needed to achieve the performance criteria?

To achieve the performance criteria, some specific skills are required. These include the ability to:

accurately record and report information

present a professional image to members of the public and colleagues

apply active listening and questioning techniques

handle customer complaints courteously

communicate effectively with and relate to people from different social, cultural and ethnic backgrounds and of varying physical and mental abilities

calculate time, measurements and quantities

operate a computer

read and interpret plans, designs and specifications

organise work utilising time management skills

comply with relevant legislative and regulatory requirements.

What resources may be required for assessment?

Access to a suitable venue and access to designs and specifications, unit prices of equipment, materials and labour to make an estimate.

Case studies.

Occupational Health and Safety guidelines.

Assessment instruments, including personal planner and assessment record book.

Access to a registered provider of assessment services.

What is required to achieve consistency of performance?

For valid and reliable assessment of this unit, the competency should be demonstrated over a period of time and observed by the assessor. The competency is to be demonstrated in a range of situations, which may include involvement in related activities normally experienced in the workplace.

Evidence of underpinning knowledge understanding of processes and principles can be gained through thorough questioning and by observation of previous work.

Assessment against this unit may involve the following:

Continuous assessment in a setting that simulates the conditions of performance described in the elements, performance criteria and range of variables statement that make up the unit.

Continuous assessment in the workplace, taking into account the range of variables affecting performance.

Self-assessment on the same terms as those described above.

Simulated assessment or critical incident assessment, provided that the critical incident involves assessment against performance criteria and an evaluation of underpinning knowledge and skill required to achieve the required performance outcomes.

Key competency levels

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the key competencies, although others may be added.

Information below highlights how these processes are applied in this competency standard.

1 - perform the process

2 - perform and administer the process

3 - perform, administer and design the process

How can **communication of ideas and information** be applied? (2)

Information and ideas with regard to developing an understanding of client expectations and requirements may be shared and discussed with colleagues, supervisor and/or clients.

How can **information be collected, analysed and organised?** (2)

Occupational Health and Safety standards, quality assurance requirements, manufacturers specifications and organisational policy and procedures may be accessed to ensure compliance.

How are **activities planned and organised?** (2)

Work tasks may be prioritised and coordinated or sequenced as required to ensure availability of materials and meet agreed completion dates.

How can **team work** be applied? (2)

Assistance may be provided among team members to carry out and fulfil quotation requirements.

How can the use of **mathematical ideas and techniques** be applied? (2)

Mathematics may be applied as an aid to measure and calculate materials and labour.

How can **problem solving skills** be applied? (2)

In the application of skills and knowledge to identify and resolve client complaints or to recognise service delivery complications.

How can the **use of technology** be applied? (1)

To access company pricing schedules and company pro-formas for the preparation of estimates and quotes.

The Evidence Guide identifies the requirements to be demonstrated to confirm competence for this unit. Assessment must confirm sufficient ability to use appropriate skills and knowledge to provide an estimate and quote on security systems. Assessment of performance should be over a period of time covering all categories within the Range of Variables statements that are applicable in the learning environment.

What critical aspects are required for evidence of competency?

Determine security equipment requirements for provision of security system.

Determine prices and estimates for labour, equipment, materials and other relevant items.

Determine availability of equipment/materials.

Calculate estimations to return a profit where appropriate.

Ensure estimates allow for provision of security system which meets client requirements.

Prepare accurate quotes for clients which provide full details of security equipment/system provision.

What specific knowledge is needed to achieve the performance criteria?

Knowledge and understanding are essential to apply this standard in the workplace, to transfer the skills to other contexts and to deal with unplanned events. The knowledge requirements for this competency standard are listed below:

legislation and regulations applicable to quoting and providing security equipment/system services

organisational policies and procedures (personal presentation, documentation procedures, records and information systems)

types and functions of security equipment and systems

requirements of company pricing including schedules, policy and procedures

computer applications in relation to costing

contractual requirements for estimating and quoting for service provision

principles of duty of care, code of conduct and code of ethics

organisational policies and procedures related to the analysis of client requirements and selection of services

rights and responsibilities of customers.

What specific skills are needed to achieve the performance criteria?

To achieve the performance criteria, some specific skills are required. These include the ability to:

accurately record and report information

present a professional image to members of the public and colleagues

apply active listening and questioning techniques

handle customer complaints courteously

communicate effectively with and relate to people from different social, cultural and ethnic backgrounds and of varying physical and mental abilities

calculate time, measurements and quantities

operate a computer

read and interpret plans, designs and specifications

organise work utilising time management skills

comply with relevant legislative and regulatory requirements.

What resources may be required for assessment?

Access to a suitable venue and access to designs and specifications, unit prices of equipment, materials and labour to make an estimate.

Case studies.

Occupational Health and Safety guidelines.

Assessment instruments, including personal planner and assessment record book.

Access to a registered provider of assessment services.

What is required to achieve consistency of performance?

For valid and reliable assessment of this unit, the competency should be demonstrated over a period of time and observed by the assessor. The competency is to be demonstrated in a range of situations, which may include involvement in related activities normally experienced in the workplace.

Evidence of underpinning knowledge understanding of processes and principles can be gained through thorough questioning and by observation of previous work.

Assessment against this unit may involve the following:

Continuous assessment in a setting that simulates the conditions of performance described in the elements, performance criteria and range of variables statement that make up the unit.

Continuous assessment in the workplace, taking into account the range of variables affecting performance.

Self-assessment on the same terms as those described above.

Simulated assessment or critical incident assessment, provided that the critical incident involves assessment against performance criteria and an evaluation of underpinning knowledge and skill required to achieve the required performance outcomes.

Key competency levels

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the key competencies, although others may be added.

Information below highlights how these processes are applied in this competency standard.

1 - perform the process

2 - perform and administer the process

3 - perform, administer and design the process

How can **communication of ideas and information** be applied? (2)

Information and ideas with regard to developing an understanding of client expectations and requirements may be shared and discussed with colleagues, supervisor and/or clients.

How can **information be collected, analysed and organised**? (2)

Occupational Health and Safety standards, quality assurance requirements, manufacturers specifications and organisational policy and procedures may be accessed to ensure compliance.

How are **activities planned and organised**? (2)

Work tasks may be prioritised and coordinated or sequenced as required to ensure availability of materials and meet agreed completion dates.

How can **team work** be applied? (2)

Assistance may be provided among team members to carry out and fulfil quotation requirements.

How can the use of **mathematical ideas and techniques** be applied? (2)

Mathematics may be applied as an aid to measure and calculate materials and labour.

How can **problem solving skills** be applied? (2)

In the application of skills and knowledge to identify and resolve client complaints or to recognise service delivery complications.

How can the **use of technology** be applied? (1)

To access company pricing schedules and company pro-formas for the preparation of estimates and quotes.

Range Statement

The Range of Variables provides information about the context in which the unit of competency is carried out. It allows for different work practices and work and knowledge requirements as well as for differences between organisations and workplaces. The following variables may be present for this particular unit:

Assessment may involve

discussions with client
visual inspections
review of client floor plans and supporting documentation
questioning police, insurance companies and other bodies.

Clients may include:

property agent
tenant
building supervisor
project manager
corporations
general public
government agencies.

Specialist system requirements may be:

use of special tools
system manuals and documentation
product training
software/hardware development.

Installation requirements may be:

use of special tools or equipment (e.g. drill, ladder, scaffolding, cherry picker
sub-contract labour.

Applicable legislation, codes and national standards may relate to:

relevant Commonwealth/State/Territory legislation which affect organisational operation:
Occupational Health and Safety
environmental issues
equal employment opportunity
industrial relations
anti-discrimination and diversity

licensing arrangements

Australian Standards, quality assurance and certification requirements

relevant industry Codes of Practice

award and enterprise agreements

trade practices

privacy requirements.

Organisational requirements may relate to:

legal and organisational policy and procedures including personnel practices and guidelines
organisational goals, objectives, plans, systems and processes
legislation relevant to the operation, incident and/or response
employer and employee rights and responsibilities
business and performance plans
policies and procedures relating to own role, responsibility and delegation

quality and continuous improvement processes and standards
client service standards
defined resource parameters
Occupational Health and Safety policies, procedures and programs
emergency and evacuation procedures
duty of care, code of conduct, code of ethics
access and equity policy, principles and practice
records and information systems and processes
communication channels and reporting procedures.

Manufacturers specifications may be found in:

printed instruction leaflets
operators manuals
equipment specifications
attachments to equipment
plans and diagrams
warranty documents.

Security systems may be:

electronic
mechanical
computerised
procedural.

Rate schedules may include:

labour rates
standard unit costs
standard equipment costs
standard materials costs
standard installation costs
standard service costs
standard monitoring costs.

Possible problems may include:

insurance
time penalties
disputes
availability
delivery
competencies
restricted site access
building progress
weather and environmental conditions
cash flow.

Quotations are written and may include:

company identification information
results of security assessment
client brief
recommended security system and agreed security system
system capabilities
system specifications and configuration
equipment and/or system type

equipment locations and positions
service and maintenance
limits of system
costs, timelines, warranty/guarantee/liability terms and conditions if applicable
suitable sign-off arrangements by company and client
terms of trade.

Changes or variations may include:

changes and variations in cost, equipment, services
changes and variations in installation, monitoring
changes and variations in starting and/or completion dates
variations of warranty/guarantee/liability terms and conditions
variations in exclusions and terms of trade.

The Range of Variables provides information about the context in which the unit of competency is carried out. It allows for different work practices and work and knowledge requirements as well as for differences between organisations and workplaces. The following variables may be present for this particular unit:

Assessment may involve

discussions with client
visual inspections
review of client floor plans and supporting documentation
questioning police, insurance companies and other bodies.

Clients may include:

property agent
tenant
building supervisor
project manager
corporations
general public
government agencies.

Specialist system requirements may be:

use of special tools
system manuals and documentation
product training
software/hardware development.

Installation requirements may be:

use of special tools or equipment (e.g. drill, ladder, scaffolding, cherry picker
sub-contract labour.

Applicable legislation, codes and national standards may relate to:

relevant Commonwealth/State/Territory legislation which affect organisational operation:
Occupational Health and Safety
environmental issues
equal employment opportunity
industrial relations
anti-discrimination and diversity

licensing arrangements

Australian Standards, quality assurance and certification requirements
relevant industry Codes of Practice

award and enterprise agreements
trade practices
privacy requirements.

Organisational requirements may relate to:

legal and organisational policy and procedures including personnel practices and guidelines
organisational goals, objectives, plans, systems and processes
legislation relevant to the operation, incident and/or response
employer and employee rights and responsibilities
business and performance plans
policies and procedures relating to own role, responsibility and delegation
quality and continuous improvement processes and standards
client service standards
defined resource parameters
Occupational Health and Safety policies, procedures and programs
emergency and evacuation procedures
duty of care, code of conduct, code of ethics
access and equity policy, principles and practice
records and information systems and processes
communication channels and reporting procedures.

Manufacturers specifications may be found in:

printed instruction leaflets
operators manuals
equipment specifications
attachments to equipment
plans and diagrams
warranty documents.

Security systems may be:

electronic
mechanical
computerised
procedural.

Rate schedules may include:

labour rates
standard unit costs
standard equipment costs
standard materials costs
standard installation costs
standard service costs
standard monitoring costs.

Possible problems may include:

insurance
time penalties
disputes
availability
delivery
competencies
restricted site access
building progress

weather and environmental conditions
cash flow.

Quotations are written and may include:

company identification information
results of security assessment
client brief
recommended security system and agreed security system
system capabilities
system specifications and configuration
equipment and/or system type
equipment locations and positions
service and maintenance
limits of system
costs, timelines, warranty/guarantee/liability terms and conditions if applicable
suitable sign-off arrangements by company and client
terms of trade.

Changes or variations may include:

changes and variations in cost, equipment, services
changes and variations in installation, monitoring
changes and variations in starting and/or completion dates
variations of warranty/guarantee/liability terms and conditions
variations in exclusions and terms of trade.

Unit Sector(s)

Not applicable.

PRSTS319A Modify and repair security equipment/system

Modification History

Not applicable.

Unit Descriptor

This competency standard covers the skills and knowledge required to conduct minor modifications and repairs on a range of security equipment and systems. It requires the ability to diagnose and rectify common basic faults and refer more complex faults for specialist attention. This work applies to extra-low voltage environments and would be carried out under limited supervision within organisational guidelines.

Functional Area: Elective, Technical Security

This competency standard covers the skills and knowledge required to conduct minor modifications and repairs on a range of security equipment and systems. It requires the ability to diagnose and rectify common basic faults and refer more complex faults for specialist attention. This work applies to extra-low voltage environments and would be carried out under limited supervision within organisational guidelines.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

Elements and Performance Criteria

Element	Performance Criteria
1 Prepare for maintenance	<ul style="list-style-type: none">1.1 Maintenance requirements of security equipment and systems are checked and confirmed against work order1.2 Tools, equipment and materials are selected appropriate to job requirements and checked to ensure safe and efficient operation1.3 Potential and existing risks and hazards in the workplace are risk assessed and controlled in accordance with legislative and OHS requirements1.4 Suitable personal protective equipment is selected, used and maintained according to OHS and organisational requirements
2 Carry out maintenance	<ul style="list-style-type: none">2.1 Security equipment / system to be modified or repaired is accessed in accordance with manufacturer's specifications and organisational requirements with minimal disruption to client or property2.2 Common faults in security equipment / system are diagnosed and appropriate repairs or modifications are carried out in accordance with manufacturer's specifications2.3 Complex faults and repair requirements are identified and reported for specialist attention in accordance with organisational requirements2.4 All work is conducted using safe operating practices in accordance with OHS, legislative and organisational requirements2.5 Maintenance work is completed in accordance with designated timeframes and work order instructions
3 Complete and document maintenance activities	<ul style="list-style-type: none">3.1 Equipment / system components are reassembled and tested for correct operation according to manufacturer's specifications and accepted practice3.2 Work area, tools and equipment are cleaned, maintained and stored in accordance with

organisational requirements

- 3.3 Malfunctions, faults, wear or damage to tools and equipment are reported to facilitate repair or replacement in accordance with organisational policy and procedures
- 3.4 Waste from service and repair activities is collected, treated and disposed or recycled in accordance with organisational and environmental requirements
- 3.5 Relevant information is accurately documented, processed and maintained in accordance with industry, legislative and organisational requirements

Required Skills and Knowledge

Not applicable.

Evidence Guide

The Evidence Guide identifies the requirements to be demonstrated to confirm competence for this unit. Assessment must confirm sufficient ability to use appropriate skills and knowledge to modify and repair security equipment/systems. Assessment of performance should be over a period of time covering all categories within the Range of Variables statements that are applicable in the learning environment.

What critical aspects are required for evidence of competency?

Effectively prepare for maintenance to security equipment/system including selecting tools and equipment appropriate to job requirements and identifying possible risks and hazards in the work area.

Access security equipment/system with minimal disruption to client, conduct tests and confirm status and repair requirements.

Accurately repair or modify security equipment/system using safe operating practices and complete within designated timeframes.

Clean work area, store tools and equipment and complete all relevant documentation.

What specific knowledge is needed to achieve the performance criteria?

Knowledge and understanding are essential to apply this standard in the workplace, to transfer the skills to other contexts and to deal with unplanned events. The knowledge requirements for this competency standard are listed below:

types, functions and specifications of security equipment/systems and principles of operation
security equipment/system repair techniques

fault finding techniques

welding, grinding and oxy-acetylene cutting principles and procedures

types, characteristics and functions of tools and equipment

electrical concepts (voltages, current, resistance, impedance)

cable identification and handling requirements

security equipment/system configurations and methods of programming

requirements for installation and modification of security equipment/systems

requirements for commissioning of security equipment/systems

relevant licensing, legislative and OHS requirements

safe work practices and their importance.

What specific skills are needed to achieve the performance criteria?

To achieve the performance criteria, some specific skills are required. These include the ability to:

provide efficient and effective customer service (liaise, consult, provide and gain feedback)

read and interpret specifications, charts and diagrams

read and interpret a multimeter

prioritise and methodically organise work

trouble shoot, solve routine problems

identify and diagnose faults and malfunctions

identify and refer complex faults

use appropriate testing equipment

repair and/or modify security equipment/systems

program and configure security equipment/systems

commission security equipment/systems

safely handle cable voltage, current, resistance and impedance

apply basic carpentry and fitting, soldering, welding, and drilling

apply safe and efficient work practices
obtain appropriate licensing.

What resources may be required for assessment?

Access to a suitable venue and equipment.
Access to plain English version of relevant statutes and procedures.
Assignment instructions, work plans and schedules, policy documents and duty statements.
Assessment instruments, including personal planner and assessment record book.
Access to a registered provider of assessment services.

What is required to achieve consistency of performance?

For valid and reliable assessment of this unit, the competency should be demonstrated over a period of time and observed by the assessor. The competency is to be demonstrated in a range of situations, which may include involvement in related activities normally experienced in the workplace.

Evidence of underpinning knowledge understanding of processes and principles can be gained through thorough questioning and by observation of previous work.

Assessment against this unit may involve the following:

Continuous assessment in a setting that simulates the conditions of performance described in the elements, performance criteria and range of variables statement that make up the unit.
Continuous assessment in the workplace, taking into account the range of variables affecting performance.

Self-assessment on the same terms as those described above.

Simulated assessment or critical incident assessment, provided that the critical incident involves assessment against performance criteria and an evaluation of underpinning knowledge and skill required to achieve the required performance outcomes.

Key competency levels

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the key competencies, although others may be added. Information below highlights how these processes are applied in this competency standard.

1 - perform the process

2 - perform and administer the process

3 - perform, administer and design the process

How can **communication of ideas and information** be applied? **(1)**

Work order instructions and methods to repair or modify security equipment/systems may be verified with the supervisor or work team.

How can **information be collected, analysed and organised?** **(1)**

Test results, diagnosis, repair recommendations, and repairs or modifications undertaken may be documented for reference and organised by records and reports.

How are **activities planned and organised?** **(1)**

Tests and maintenance activities may be planned and co-ordinated around client and work schedules or sequenced as required.

How can **team work** be applied? **(1)**

Additional information and advice may be sought from colleagues/supervisor to assist the accurate diagnosis of common faults and appropriate repair procedures to be undertaken.

How can the use of **mathematical ideas and techniques** be applied? **(1)**

Mathematical techniques may be used to plan and schedule work tasks and estimate resource requirements.

How can **problem solving skills** be applied? **(1)**

Complex faults may be accurately identified and promptly referred for specialist advice.

How can the **use of technology** be applied? (1)

Technology may be used to communicate, organise schedules, maintain records, and troubleshoot performance problems.

The Evidence Guide identifies the requirements to be demonstrated to confirm competence for this unit. Assessment must confirm sufficient ability to use appropriate skills and knowledge to modify and repair security equipment/systems. Assessment of performance should be over a period of time covering all categories within the Range of Variables statements that are applicable in the learning environment.

What critical aspects are required for evidence of competency?

Effectively prepare for maintenance to security equipment/system including selecting tools and equipment appropriate to job requirements and identifying possible risks and hazards in the work area.

Range Statement

The Range of Variables provides information about the context in which the unit of competency is carried out. It allows for different work practices and work and knowledge requirements as well as for differences between organisations and workplaces. The following variables may be present for this particular unit:

Maintenance may include:

minor modifications
repairs
servicing.

Security equipment may include:

detection devices
audible and visual warning devices
cameras, monitors and control equipment
control panels, intercoms
wireless equipment, car alarms
electronic readers, electronic recognition controls
locks and locking systems
grills, lighting, boom gates, turnstiles
bank pop-up screens
biometrics
electric and mechanical fire safety and fire locking systems
power supplies, batteries
security doors and door controls.

Security systems may be:

electronic
mechanical
computerised.

Work order instructions may relate to:

work schedules
completion dates
job requirements and tasks
specific client requirements
access to site and specific site requirements
resource requirements
OHS requirements, compliance with relevant legislation
organisational policies and procedures
budget allocations.

Tools and equipment may include:

computer, software
test equipment (multimeter)
hand and power tools, fixing tools
wire strippers
file, drill, lockpick, pick gun
glass break tester
soldering iron, welder, crimp tools, IDC tools
ladder, hoist
batteries

personal protective equipment
communications equipment.

Materials may include:

parts and components
security equipment/systems
wire and cable
fixings, solder, insulation tape
springs, pins, graphite powder
oil, silicon, grease, glass cleaner/lens cleaner
glue, paint, patch materials
electronic components, sealing compounds
cleaning compounds.

Workplace risks and hazards may include:

non-compliance with maintenance and repair codes and regulations
exposed electrical wiring
live power
other identified OHS risks (asbestos, dust, noise) .

Applicable legislation, codes and national standards may relate to:

relevant Commonwealth/State/Territory legislation which affect organisational operation:
Occupational Health and Safety
environmental issues
equal employment opportunity
industrial relations
anti-discrimination and diversity

licensing requirements
Australian Standards, quality assurance and certification requirements
relevant industry Codes of Practice
award and enterprise agreements
trade practices
privacy requirements
freedom of information.

Personal protective equipment and clothing may include:

masks
safety boots
head protection
safety glasses
knee pads
gloves
high vis hats, flashing lights, warning signs and tapes
fire extinguisher, first aid kit.

Organisational requirements may relate to:

legal and organisational policy and procedures including personnel practices and guidelines
organisational goals, objectives, plans, systems and processes
legislation relevant to the operation, incident and/or response
employer and employee rights and responsibilities
business and performance plans
policies and procedures relating to own role, responsibility and delegation

quality and continuous improvement processes and standards
client service standards
defined resource parameters
Occupational Health and Safety policies, procedures and programs
emergency and evacuation procedures
duty of care, code of conduct, code of ethics
access and equity policy, principles and practice
records and information systems and processes
communication channels and reporting procedures.

Modifications may include:

change in system capabilities and functions
locations and positions
monitoring.

Repairs may be made:

remotely
on site.

Access to security equipment/systems may involve:

use of access code
disablement of system
removal of housing
access token
keys
phone line access
modem.

Manufacturers specifications may be found in:

printed instruction leaflets
operators manuals
equipment specifications
attached to the equipment
plans and diagrams
warranty documents.

Clients may include:

owner
property agent
tenant
building supervisor
manager
project manager
agent
government and legal instruments/agencies.

Faults may be:

electronic
software
mechanical
procedural
result of operational misuse
environmental
result of previous mis-installation.

Safe operating practices may include:

working safely around electrical wiring, cables and overhead power lines
working safely around tools and equipment
hazard recognition
emergency procedures
awareness of electrical hazards
follow confined spaces procedures
first aid.

Relevant information may relate to:

completion of work log
equipment/system fault diagnosis
repairs and modifications undertaken
recommended repairs
warranty conditions and allowances
testing and commissioning results
materials used, parts and components replaced
recommendations for future operation and maintenance
costings
indemnity.

The Range of Variables provides information about the context in which the unit of competency is carried out. It allows for different work practices and work and knowledge requirements as well as for differences between organisations and workplaces. The following variables may be present for this particular unit:

Maintenance may include:

minor modifications
repairs
servicing.

Security equipment may include:

detection devices
audible and visual warning devices
cameras, monitors and control equipment
control panels, intercoms
wireless equipment, car alarms
electronic readers, electronic recognition controls
locks and locking systems
grills, lighting, boom gates, turnstiles
bank pop-up screens
biometrics
electric and mechanical fire safety and fire locking systems
power supplies, batteries
security doors and door controls.

Security systems may be:

electronic
mechanical
computerised.

Work order instructions may relate to:

work schedules
completion dates

job requirements and tasks
specific client requirements
access to site and specific site requirements
resource requirements
OHS requirements, compliance with relevant legislation
organisational policies and procedures
budget allocations.

Tools and equipment may include:

computer, software
test equipment (multimeter)
hand and power tools, fixing tools
wire strippers
file, drill, lockpick, pick gun
glass break tester
soldering iron, welder, crimp tools, IDC tools
ladder, hoist
batteries
personal protective equipment
communications equipment.

Materials may include:

parts and components
security equipment/systems
wire and cable
fixings, solder, insulation tape
springs, pins, graphite powder
oil, silicon, grease, glass cleaner/lens cleaner
glue, paint, patch materials
electronic components, sealing compounds
cleaning compounds.

Workplace risks and hazards may include:

non-compliance with maintenance and repair codes and regulations
exposed electrical wiring
live power
other identified OHS risks (asbestos, dust, noise) .

Applicable legislation, codes and national standards may relate to:

relevant Commonwealth/State/Territory legislation which affect organisational operation:
Occupational Health and Safety
environmental issues
equal employment opportunity
industrial relations
anti-discrimination and diversity

licensing requirements
Australian Standards, quality assurance and certification requirements
relevant industry Codes of Practice
award and enterprise agreements
trade practices
privacy requirements

freedom of information.

Personal protective equipment and clothing may include:

masks
safety boots
head protection
safety glasses
knee pads
gloves
warning hats, flashing lights, warning signs and tapes
fire extinguisher, first aid kit.

Organisational requirements may relate to:

legal and organisational policy and procedures including personnel practices and guidelines
organisational goals, objectives, plans, systems and processes
legislation relevant to the operation, incident and/or response
employer and employee rights and responsibilities
business and performance plans
policies and procedures relating to own role, responsibility and delegation
quality and continuous improvement processes and standards
client service standards
defined resource parameters
Occupational Health and Safety policies, procedures and programs
emergency and evacuation procedures
duty of care, code of conduct, code of ethics
access and equity policy, principles and practice
records and information systems and processes
communication channels and reporting procedures.

Modifications may include:

change in system capabilities and functions
locations and positions
monitoring.

Repairs may be made:

remotely
on site.

Access to security equipment/systems may involve:

use of access code
disablement of system
removal of housing
access token
keys
phone line access
modem.

Manufacturers specifications may be found in:

printed instruction leaflets
operators manuals
equipment specifications
attached to the equipment
plans and diagrams
warranty documents.

Clients may include:

owner
property agent
tenant
building supervisor
manager
project manager
agent
government and legal instruments/agencies.

Faults may be:

electronic
software
mechanical
procedural
result of operational misuse
environmental
result of previous mis-installation.

Safe operating practices may include:

working safely around electrical wiring, cables and overhead power lines
working safely around tools and equipment
hazard recognition
emergency procedures
awareness of electrical hazards
follow confined spaces procedures
first aid.

Relevant information may relate to:

completion of work log
equipment/system fault diagnosis
repairs and modifications undertaken
recommended repairs
warranty conditions and allowances
testing and commissioning results
materials used, parts and components replaced
recommendations for future operation and maintenance
costings
indemnity.

Unit Sector(s)

Not applicable.

SIRXSL201 Sell products and services

Modification History

The version details of this endorsed unit are in the table below. The latest information is at the top.

Release	Comments
First Release	This is a revised unit, based on and equivalent to SIRXSL001A Sell products and services.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to sell products and services in a retail environment.

It involves the use of sales techniques and encompasses key selling skills, from approaching the customer to closing the sale.

It requires a basic level of product knowledge and the recognition and demonstration of verbal and non-verbal communication skills to determine customer requirements, sell the benefits of products and services, overcome objections and close sales.

Personal evaluation is used to maximise sales, according to industry codes of practice, relevant legislation and store policy.

Application of the Unit

This unit applies to frontline sales personnel.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Develop and apply product knowledge.	<p>1.1. Develop <i>product knowledge</i> by accessing <i>relevant sources of information</i> and confirm with relevant staff.</p> <p>1.2. Apply knowledge of the use and application of relevant products and services in interactions with customers according to store policy and <i>legislative requirements</i>.</p> <p>1.3. Identify gaps in product knowledge and resolve by accessing relevant sources of information.</p>
2. Approach customer.	<p>2.1. Identify <i>customers</i> by name where possible.</p> <p>2.2. Develop knowledge of customer buying behaviour by accessing relevant sources of information.</p> <p>2.3. Determine and apply appropriate timing of customer approach according to store policy and customer behaviour.</p> <p>2.4. Initiate customer contact according to store policy.</p> <p>2.5. Convey a positive impression to encourage customer interest according to store policy.</p>
3. Gather and respond to information.	<p>3.1. Apply questioning techniques and listening skills to determine customer buying motives and requirements.</p> <p>3.2. Interpret and clarify non verbal communication cues.</p> <p>3.3. Direct customer to specific merchandise according to customer requirements and store policy.</p>
4. Sell benefits.	<p>4.1. Match customer needs to appropriate products and services.</p> <p>4.2. Communicate knowledge of product features and benefits clearly to customers.</p> <p>4.3. Describe product use and safety requirements to customers.</p> <p>4.4. Refer customers to appropriate product specialist as required.</p> <p>4.5. Answer <i>routine customer questions</i> about merchandise accurately and honestly or refer to senior sales staff.</p>
5. Overcome objections.	<p>5.1. Identify and acknowledge customer objections according to store policy.</p> <p>5.2. Categorise objections into price, time and merchandise characteristics and consider solutions.</p>

- 5.3. Offer solutions to customer objections according to store policy.
- 5.4. Apply *problem solving* within personal scope of responsibilities to overcome customer objections or refer to senior staff.
- 6. Close sale.
 - 6.1. Monitor, identify and respond appropriately to customer buying signals.
 - 6.2. Encourage customer to make purchase decisions.
 - 6.3. Select and apply appropriate method of closing sale.
- 7. Maximise sales opportunities.
 - 7.1. Recognise and apply opportunities for making additional *sales* according to store policy.
 - 7.2. Advise customer of complementary products or services according to customer's identified need.
 - 7.3. Review personal sales outcomes and consider strategies to maximise future sales in consultation with relevant staff.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication and interpersonal skills to:
 - handle difficult customers
 - verbal and non-verbal communication skills to:
 - question, listen and observe
 - overcome objections and close sale
- literacy and numeracy skills to:
 - handle payments for goods
 - read product information
 - read store policies and procedures
 - record information
 - weigh and measure goods
- selling skills to use a range of selling techniques

Required knowledge

- customer types and needs, including:
 - customer behaviour and cues
 - customer buying motives
 - demographics, lifestyle and income
 - individual and cultural differences
 - types of customer needs, such as:
 - functional
 - psychological
- relevant industry codes of practice, legislation and statutory requirements relating to the sale of products and services
- selling techniques, including:
 - add-ons and complementary sales
 - closing techniques
 - opening techniques
 - overcoming customer objections
 - recognising buying signals
 - using strategies to focus customer on specific merchandise
- specific product knowledge for area or section
- store merchandise and service range
- store policies and procedures in regard to:
 - allocated duties and responsibilities
 - selling products and services and sales performance

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- applies product knowledge and uses appropriate sales approach to sell the benefits of products and services, overcome objections and close sales
- uses questioning, listening and observation skills to determine customer requirements
- applies store policies and procedures in regard to selling products and services
- maximises sales opportunities according to store policies and procedures
- applies industry codes of practice, relevant legislation and statutory requirements in regard to selling products and services
- evaluates personal sales performance to maximise future sales.

Context of and specific resources for assessment

Assessment must ensure access to:

- a real or simulated retail work environment
- relevant documentation, such as policy and procedures manuals
- a range of customers with different requirements
- a range of merchandise and products appropriate to the retail workplace
- product labels and sources of product information.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- observation of the candidate in the workplace
- customer feedback
- answers to questions about specific skills and knowledge
- review of portfolios of evidence and third-party workplace reports of on-the-job performance.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the individual, accessibility of the item, and local industry and regional contexts) may also be included.

- Product knowledge*** may include:
- features and benefits
 - handling and storage requirements
 - price
 - safety features
 - stock availability
 - use-by dates
 - warranties.
- Relevant sources of information*** may include:
- demonstrations
 - internet
 - labels
 - product profiles
 - staff members
 - store or supplier product manuals
 - store tours
 - videos.
- Legislative requirements*** may include:
- industry codes of practice
 - liquor laws
 - lottery legislation
 - work health and safety (WHS)
 - sale of second-hand goods
 - sale of X and R-rated products
 - tobacco laws
 - Australian consumer law and fair trading Acts
 - trading hours
 - transport, storage and handling of goods.
- Customers*** may include:
- customers with routine or special requests
 - internal and external contacts
 - new or repeat contacts
 - people from a range of social, cultural and ethnic backgrounds
 - people with varying physical and mental abilities.
- Routine customer questions*** may relate to:
- availability
 - features and benefits
 - price and price reductions

Problem solving may be affected by:

- quality.
- resource implications
- store policies and procedures.

Sales transactions may be completed:

- face-to-face
- online
- over the telephone.

TLILIC0012A Licence to operate a vehicle loading crane (capacity 10 metre tonnes and above)

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor	This unit specifies the outcomes required to operate a vehicle loading crane with a capacity of 10 metre tonnes or more, mounted on a vehicle for the principle purpose of loading and unloading such a vehicle, including the application of load estimation and slinging techniques to move a load, for licensing purposes.
------------------------	---

Application of the Unit

Application of the Unit	<p>This unit requires the operator to plan the work, conduct routine checks, set up crane, transfer loads and shut down and secure crane.</p> <p>This unit is based on the requirements of the National Standard for Licensing Persons Performing High Risk Work.</p> <p>This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.</p>

Elements and Performance Criteria Pre-Content

<i>Elements describe the essential outcomes of a unit of competency</i>	<i>Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.</i>
---	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan work	1.1 Potential workplace <i>hazards</i> are identified 1.2 <i>Hazard control measures</i> are identified consistent with <i>appropriate standards</i> to ensure the safety of personnel and equipment 1.3 The weight of the load is identified and estimated in consultation with <i>associated personnel</i> (where applicable) 1.4 Suitable lifting points on the load are identified in consultation with <i>associated personnel</i> 1.5 Appropriate <i>lifting equipment</i> is obtained following consultation with <i>associated personnel</i> 1.6 <i>Crane</i> is <i>appropriate</i> to the load/s and workplace conditions 1.7 Appropriate paths for the movement of loads in the work area are inspected and determined 1.8 Appropriate <i>communication methods</i> are identified with <i>associated personnel</i>
2. Conduct routine checks	2.1 <i>Crane</i> is visually checked for any damage or defects 2.2 All <i>signage and labels</i> are visible and legible according to the <i>appropriate standard</i> . 2.3 Routine pre-operational crane checks are carried out according to <i>procedures</i> 2.4 All <i>controls</i> are located and identified 2.5 Crane <i>service logbook</i> is checked for compliance 2.6 <i>Crane</i> is started according to <i>procedures</i> and checked for any abnormal noises 2.7 All crane <i>safety devices</i> are tested according to <i>procedures</i> 2.8 Post-start operational checks are carried out according to <i>procedures</i> 2.9 All <i>communication equipment</i> is checked for serviceability 2.10 All damage and defects are reported and recorded according to <i>procedures</i> , and appropriate action is taken
3. Set up crane	3.1 <i>Ground suitability</i> is checked 3.2 <i>Crane</i> is driven to the work area according to <i>procedures</i> 3.3 <i>Crane</i> is positioned for work application and <i>stability</i> according to <i>procedures</i>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.4 Boom/jib and configuration data is input into the crane computer (as required)</p> <p>3.5 Appropriate <i>hazard prevention/control measures</i> are applied to the work area according to <i>procedures</i></p> <p>3.6 All <i>communications equipment</i> is tested for functionality</p> <p>3.7 <i>Lifting equipment</i> is prepared for load according to <i>procedures</i></p> <p>3.8 <i>Load destination</i> is prepared</p>
4. Transfer loads	<p>4.1 Loads are determined within the capacity of the crane</p> <p>4.2 Boom/jib and hoist block is positioned over load following directions from <i>associated personnel</i></p> <p>4.3 <i>Lifting equipment</i> is attached and secured using <i>defined techniques</i> according to <i>procedures</i></p> <p>4.4 <i>Test lift</i> is carried out according to <i>procedures</i></p> <p>4.5 Loads are transferred using all <i>relevant crane movements</i> according to <i>procedures</i> and the <i>appropriate standard</i></p> <p>4.6 All required <i>communication signals</i> are correctly interpreted according to <i>procedures</i> and the <i>appropriate standard</i></p> <p>4.7 The load is landed ensuring stability and security from movement</p> <p>4.8 <i>Lifting equipment</i> is removed or disconnected from load and/or lifting hook according to <i>procedures</i> (where applicable)</p> <p>4.9 <i>Crane</i> is operated according to <i>procedures</i></p> <p>4.10 Load movement is monitored constantly ensuring safety to personnel and load, and crane stability</p> <p>4.11 <i>Unplanned and/or unsafe</i> situations are responded to in line with <i>procedures</i></p>
5. Shut down and secure crane	<p>5.1 <i>Crane</i> boom/jib and equipment are stowed and secured according to <i>procedures</i> and the <i>appropriate standard</i></p> <p>5.2 Relevant motion locks and brakes are applied (where applicable)</p> <p>5.3 Outriggers/stabilisers are stowed and secured according to <i>procedures</i></p> <p>5.4 Plates or packing are stowed and secured.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>5.5 Crane is <i>shut down</i> according to <i>procedures</i></p> <p>5.6 Routine post-operational crane checks are carried out according to <i>procedures</i></p> <p>5.7 <i>Lifting equipment</i> is stored according to <i>procedures</i> and the <i>appropriate standards</i></p> <p>5.8 All damage and defects are reported and recorded according to <i>procedures</i>, and appropriate action is taken</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
<i>This describes the essential skills and knowledge and their level required for this unit.</i>
Required skills:
<ul style="list-style-type: none"> • Accurately record and maintain information relating to crane operations • Use communication techniques in the workplace including hand signals, whistles and two-way radios • Use interpersonal communication skills at a level sufficient to communicate with other site personnel • Operate crane including all functions to their maximum extension in the loading and unloading of loads to the safe working rated capacity of the crane, in conjunction with other associated personnel • Use of lifting equipment and basic slinging techniques suitable for the loads to be loaded/unloaded as defined by workplace procedures • Apply risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the vehicle loading crane (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions and vehicle tipping) • Use and interpret crane manufacturer's specifications and data, including load charts to enable the vehicle loading crane to be configured for the load • Verify problems and equipment faults and demonstrate appropriate response procedures
Required knowledge:
<ul style="list-style-type: none"> • Appropriate mathematical procedures for estimation of loads • Assessment of ground conditions to confirm that the site is suitable (e.g. firm, level and safe) to operate the crane • Awareness of the boom/jib movements and particularly the safe positioning of the operator for any lift

REQUIRED SKILLS AND KNOWLEDGE

- Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for the crane class
- Use of lifting equipment and basic slinging techniques suitable for the loads to be loaded/unloaded as defined by workplace procedures
- Understanding of the hierarchy of hazard identification and control
- Level of literacy to be able to read and comprehend manufacturer's instructions, procedures and safety signs
- Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- Procedures for the recording, reporting and maintenance of workplace records and information
- Typical routine problems encountered in the process and with equipment and adjustments required for correction
- Crane characteristics and capabilities to allow the configuration of the crane to suit the range of loads

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.

Overview of assessment

- Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work.
- State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Compliance with OH&S licensing legislation.
- Communicate and work safely with others in the work area.
- Assessment of ground conditions to confirm that the site is suitable (e.g. firm, level and safe) to operate the vehicle loading crane.
- Risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the vehicle loading crane (particular awareness of the risks associated with overhead powerlines/electrical cables, ground

EVIDENCE GUIDE	
	<p>conditions, wind, pedestrians and tipping).</p> <ul style="list-style-type: none"> • Set up, position stabilise and operate a vehicle loading crane including all functions to their maximum extension in the loading and unloading of loads to the safe working rated capacity. • Move loads from the vehicle to the ground and/or ground to the vehicle as described in the endorsed assessment tool. • Appropriate mathematical procedures for estimation of loads. • Use of lifting equipment and basic slinging techniques suitable for the loads to be loaded/unloaded as defined in the workplace procedures. • Awareness of the boom/jib movements and particularly the safe positioning of the operator for any lift.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument. • Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting. • Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace. • Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints. • Assessment is to comply with appropriate standard requirements. • Applicants must have access to: <ul style="list-style-type: none"> • Personal Protective Equipment (PPE) for the purpose of the Performance Assessment • appropriate vehicle loading crane (10 metre tonne or more) and associated equipment in safe condition • appropriate lifting gear in safe condition • Suitable loads as specified by the endorsed Assessment Instrument

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • communication equipment (e.g. two-way radios, whistles, etc.) • other associated personnel to sling and direct the loads.
Method of assessment	<ul style="list-style-type: none"> • Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application. • The use of 'simulators' in the assessment of this unit of competency is not acceptable. • Assessment may be in conjunction with the assessment of other units of competency. • Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
Guidance information for assessment	<ul style="list-style-type: none"> • Further information about endorsed Assessment Instruments may be obtained from state/territory OH&S regulators.

Range Statement

RANGE STATEMENT	
<p><i>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below.</i></p>	
Hazards	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • ground stability (e.g. ground condition, recently filled trenches, slopes) • overhead hazards (e.g. powerlines, service pipes) • traffic (e.g. pedestrians, vehicles, other plant) • Insufficient lighting • environmental conditions (e.g. wind, lightning, storms, etc.) • positioning of crane operator • other specific hazards (e.g. dangerous materials)

RANGE STATEMENT	
Hazard control measures	<p>Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls</p> <p>It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:</p> <ol style="list-style-type: none"> 1 elimination 2 substitution 3 isolation 4 engineering control measures 5 using safe work practices 6 personal protective equipment
Appropriate standards	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • codes of practice • legislation • Australian standards especially AS2550.1 - 2002 (6.5) • manufacturer's specifications • industry standards
Associated personnel	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • doggers • riggers
Lifting equipment	<p>May include but not be limited to:</p> <ul style="list-style-type: none"> • chain slings • wire and synthetic slings • shackles • eyebolts
Crane	<p>A crane with a capacity of 10 metre tonnes and above mounted on a vehicle for the principle purpose of loading and unloading such a vehicle</p>
Appropriate	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • crane capabilities • environmental conditions (e.g. wind, lightning, storms, etc.)
Communication method	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • verbal and non-verbal language • written instructions

RANGE STATEMENT	
	<ul style="list-style-type: none"> • signage • hand signals • listening • questioning to confirm understanding • appropriate worksite protocol
Signage and labels	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • crane data plates/labels • load charts • crane decals • control labels
Procedures	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • manufacturer's guidelines (instructions, specifications or checklists) • industry operating procedures • workplace procedures (work instructions, operating procedures, checklists)
Controls	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • luffing levers • knuckling levers • hoisting and lowering levers • slewing levers including brake • boom extension levers (where fitted)
Service logbook	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • any logbook • service book • history record system where the service and maintenance history is kept
Crane safety devices	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • horns/sirens • audible and visual warning devices • lights
Communication equipment	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • fixed frequency two-way radios • whistles
Ground suitability	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • rough uneven ground

RANGE STATEMENT	
	<ul style="list-style-type: none"> • backfilled ground • soft soils • hard compacted soil • rock • bitumen • concrete
Stability	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • deploying outriggers • establishing correct size plates or packing • correctly positioning plates or packing
Hazard prevention/control measures	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • safety tags on electrical switches/isolators • insulated powerlines • safety observer used inside exclusion zone • disconnected power • traffic barricades and controls • pedestrian controls • trench covers • movement of obstructions • personal protective equipment • adequate illumination
Load destination	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • ground • vehicles
Defined techniques	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • fixed lifting points • basic reeved slings
Test lift	<p>The load is lifted just clear of the lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure that:</p> <ul style="list-style-type: none"> • near capacity loads do not overload the crane • loads of unusual shape or weight distribution are correctly slung • load measuring equipment can be used to verify the calculated weight of the load • all equipment is functioning properly • adjustments to the slinging can be made in a safe

RANGE STATEMENT	
	manner
Relevant crane movements	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • luffing • slewing • knuckling • telescoping • raise and lower hoist
Communication signals	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • stop - hand • stop - whistle • hoist up - hand • hoist up - whistle • hoist down - hand • hoist down - whistle • luff boom down - hand • luff boom down - whistle • luff boom up - hand • luff boom up - whistle • telescope out - hand • telescope out - whistle • telescope in - hand • telescope in - whistle
Unplanned and/or unsafe situations	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • failure/loss of control (e.g. brakes and steering) • failure of equipment (e.g. hydraulic system) • environmental conditions (e.g. wind, lightning, storms, etc.)
Shut down	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • retracting boom/jib (where applicable) • retracting hoist rope and hook block • folding boom/jib into the transport position • retracting outriggers/stabilisers • idling engine to stabilise temperature • turning off engine (where applicable) • removing key from ignition (where applicable) • locking and securing cabin (where applicable) • securing crane for travel

Elements and Performance Criteria

ELEMENT <i>Elements describe the essential outcomes of a unit of competency.</i>	PERFORMANCE CRITERIA <i>Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.</i>
1. Plan work	1.1 Potential workplace hazards are identified 1.2 Hazard control measures are identified consistent with appropriate standards to ensure the safety of personnel and equipment 1.3 Appropriate forklift truck is selected according to the load and workplace conditions 1.4 Working area is inspected to determine appropriate path of movement for loads and forklift truck 1.5 Communication methods are identified according to procedures
2. Conduct routine checks	2.1 Forklift is visually checked for any damage or defects 2.2 All signage and labels are visible and legible according to the appropriate standard 2.3 All controls are located and identified 2.4 Pre-start operational checks are carried out according to procedures 2.5 Forklift is started according to procedures and checked for any abnormal noise 2.6 Post-start operational checks are carried out according to procedures 2.7 All forklift functions and safety devices are tested to their maximum according to procedures 2.8 Defects and damage are reported and recorded according to procedures , and appropriate action is taken
3. Shift load	3.1 The weight of load is assessed to ensure compliance with forklift truck data plate specifications 3.2 Appropriate hazard prevention/control measures are implemented and communicated with personnel in the work area 3.3 Forklift is operated at a safe speed and according to procedures 3.4 Loads are moved and placed to ensure stability of material and avoidance of hazards

	<p>3.5 Load movement is monitored constantly ensuring safety to personnel and load, and structural stability</p> <p>3.6 <i>Unplanned and/or unsafe situations</i> are responded to in line with <i>procedures</i></p>
4. Shut down and secure forklift truck	<p>4.1 <i>Forklift</i> truck is parked to avoid hazards</p> <p>4.2 Forklift is <i>shut down</i> according to <i>procedures</i></p> <p>4.3 Routine post-operational forklift checks are carried out according to <i>procedures</i></p> <p>4.4 Forklift is secured to prevent unauthorised access/use</p> <p>4.5 All defects and damage are reported and recorded according to <i>procedures</i>, and appropriate action is taken</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills:

- Accurately interpret information relating to conducting forklift truck operations (e.g. procedures)
- Safely conduct forklift truck operations including all functions to the maximum height and load capacity
- Identify hazards associated with the operation of the forklift truck, assess risks and put into place effective hazard prevention/control measures for those hazards identified
- Use communication skills at a level sufficient to communicate with other site personnel (e.g. receive and interpret work instructions, safety information, emergency procedures)
- Drive forklift with load in forward and reverse, maintaining visibility
- Verify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge:

- Methodology of determining the weight of a load
- Commonwealth, state or territory OH&S legislation, standards relevant to the safe operation for the forklift trucks
- Understanding of forklift characteristics and capabilities (including use of load data plates)
- Understanding of the hierarchy of hazard identification and control
- Organisational and workplace standards, requirements, policies and procedures for

REQUIRED SKILLS AND KNOWLEDGE

- conducting operations for the crane class
- Procedures for the recording, reporting and maintenance of workplace records and information
- Forklift truck operations and safe operating techniques
- Typical routine problems encountered in the operation of the crane and equipment and adjustments required for correction

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.

Overview of assessment

- Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work.
- State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Compliance with OH&S licensing legislation.
- Communicate and work safely with others in the work area.
- Identify hazards associated with the operation of the forklift truck and put in place effective hazard controls for those hazards identified.
- Conduct pre-start-up, operational, moving loads and shut down and secure checks of the forklift truck according to procedures.
- Operate the forklift truck and move loads safely, including driving and manoeuvring, picking up and placing of loads at various stack heights.
- Drive forklift truck with load in forward and reverse, maintaining visibility.

Context of and specific resources for assessment

- Assessment of the safe application of knowledge and skills to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting. • Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints. • Applicants must have access to: <ul style="list-style-type: none"> • Personal Protective Equipment (PPE) for the purpose of the Performance Assessment • associated equipment appropriate to forklift truck operations • suitable loads as described by the endorsed Assessment Instrument • manufacturers specifications • appropriate forklift truck in a safe condition.
Method of assessment	<ul style="list-style-type: none"> • Assessment must be conducted using the endorsed Assessment Instrument. These Instruments provide instruction on their application. • The use of 'simulators' in the assessment of this unit of competency is not acceptable. • Assessment may be in conjunction with the assessment of other units of competency. • Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
Guidance information for assessment	<ul style="list-style-type: none"> • Further information about endorsed Assessment Instruments may be obtained from state/territory OH&S regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below.

RANGE STATEMENT	
Hazards	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • ground conditions (e.g. condition of pavement, slopes) • overhead hazards (e.g. powerlines, service pipes) • insufficient lighting • traffic (e.g. pedestrians, vehicles, other plant) • weather (e.g. wind, lightning, rain) • forklift instability (e.g. overloading, poor load placement, irregular loads) • other hazards (e.g. dangerous materials)
Hazard control measures	<p>Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls</p> <p>It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:</p> <ol style="list-style-type: none"> 1 elimination 2 substitution 3 isolation 4 engineering control measures 5 using safe work practices 6 personal protective equipment
Appropriate standards	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • legislation • Australian standards • manufacturer's specifications • industry standards (where applicable)
Forklift truck	<p>May include but not be limited to:</p> <ul style="list-style-type: none"> • counterbalanced • reach trucks • rough terrain • internal combustion petrol, diesel, gas • electric
Communications methods	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • verbal and non-verbal language • written instructions • signage

RANGE STATEMENT	
	<ul style="list-style-type: none"> • hand signals • listening • questioning to confirm understanding • appropriate worksite protocol
Procedures	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • manufacturer's guidelines (instructions, specifications or checklists) • industry operating procedures • workplace procedures (work instructions, operating procedures, checklists)
Pre-start operational checks	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • safety devices fitted where appropriate • forklift data plate fitted and interpreted • logbook, handbook or operating manuals available • external visual check including, evidence of damage, leaks, visual evidence of structural weaknesses (including paint separation or stressed welds) is carried out • forklift attachment is checked for security • approved modifications and/or attachments fitted to manufacturer's specifications (e.g. as per forklift or attachment data plate) are identified • checks for adaptations or modifications outside manufacturer's specifications (e.g. not listed on the forklift or attachment data plate) are carried out • maintenance logbook/records checked
Post-start operational checks	<p>May include checks of the forklift truck and equipment after start-up to ensure:</p> <ul style="list-style-type: none"> • hazard warning systems (for example lights and horns), are functional • attachment movements and control functions are smooth and comply with operating requirements • steering, transmission and brake functions comply with operating requirements
Hazard prevention/control measures	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • barricades and traffic control • safety tags on electrical switches/isolators

RANGE STATEMENT	
	<ul style="list-style-type: none"> • insulated powerlines • safety observer used inside exclusion zone • disconnected power • pedestrian control (barricades, signs, etc.) • excavation safeguards • movement of obstructions • personal protective equipment • adequate illumination
Unplanned and/or unsafe situations	<p>May include but not limited:</p> <ul style="list-style-type: none"> • failure/loss of control (e.g. brakes and steering) • failure of equipment (e.g. hydraulic system) • environmental condition
Shut down	<p>May include, but is not limited to:</p> <ul style="list-style-type: none"> • parking in a suitable location away from dangerous areas • fork arms are correctly positioned (tips down, tilted forward, lowered to ground) • appropriate transmission/gear is selected for parking (relevant to transmission type) • hand/parking brake is applied • engine power is turned off • ignition key is removed (if applicable) • LPG gas cylinder valve is shut off (where fitted) • securing equipment against unauthorised operation • securing the site • ensuring access ways are clear • identifying and segregating defective equipment and reporting to authorised personnel • batteries are connected to the charger (if applicable)

Elements and Performance Criteria Pre-Content

<i>Elements describe the essential outcomes of a unit of competency</i>	<i>Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.</i>
---	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan work	1.1 Potential workplace <i>hazards</i> are identified 1.2 <i>Hazard control measures</i> are identified consistent with <i>appropriate standards</i> to ensure the safety of personnel and equipment 1.3 <i>Safety equipment</i> is identified for workplace conditions 1.4 <i>Forklift</i> is appropriate to the load and workplace conditions 1.5 Appropriate paths for movement of loads are determined for the workplace conditions 1.6 Appropriate <i>communication methods</i> are identified according to <i>procedures</i>
2. Conduct routine checks	2.1 <i>Forklift</i> is visually checked for any damage or defects 2.2 All <i>signage and labels</i> are visible and legible according to the <i>appropriate standard</i> 2.3 All controls are located and identified 2.4 <i>Pre-start operational checks</i> are carried out according to <i>procedures</i> 2.5 <i>Forklift</i> is started according to <i>procedures</i> and checked for any abnormal noises 2.6 <i>Post-start operational checks</i> are carried out according to <i>procedures</i> 2.7 All <i>forklift safety devices</i> are tested according to <i>procedures</i> 2.8 All defects and damage are reported and recorded according to <i>procedures</i> , and appropriate action is taken
3. Shift load	3.1 Appropriate <i>hazard prevention/control measures</i> are implemented and communicated with personnel in the work area 3.2 The weight of load is assessed to ensure compliance with <i>forklift</i> data plate 3.3 <i>Forklift</i> is operated at a safe speed and according to <i>procedures</i> 3.4 Work is conducted safely at heights including safe and efficient use of <i>safety equipment</i> . (where applicable) 3.5 Materials are placed on the pallet to ensure safety

ELEMENT	PERFORMANCE CRITERIA
	<p>and stability and avoidance of hazards</p> <p>3.6 Load movement is monitored constantly ensuring safety to personnel and load, and <i>forklift</i> stability</p> <p>3.7 <i>Unplanned and/or unsafe situations</i> are responded to in line with <i>procedures</i></p>
4. Shut down and secure forklift	<p>4.1 <i>Forklift</i> is parked to avoid hazards</p> <p>4.2 <i>Forklift</i> is <i>shut down</i> according to <i>procedures</i></p> <p>4.3 Routine post-operational <i>forklift</i> checks are carried out according to <i>procedures</i></p> <p>4.4 <i>Forklift</i> is secured to prevent unauthorised access/use</p> <p>4.5 All defects and damage are reported and recorded according to <i>procedures</i>, and appropriate action is taken</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills:

- Effectively operate an order picking forklift truck including all functions to the maximum height and load capacity
- Use hazard identification skills, including identifying those associated with the operation of the order picking forklift truck risk assessment and putting into place effective hazard prevention/control measures for those hazards
- Use interpersonal communication skills at a level sufficient to communicate with other site personnel (e.g. receive and interpret work instructions, safety information, emergency procedures)
- Interpret and accurately record information relating to conducting order picking forklift truck operations (e.g. operating instructions, procedures and service logbook)
- Use problem solving skills to verify problems and equipment faults and demonstrate appropriate response procedures
- Use interpersonal communication skills at a level sufficient to communicate with other site personnel (e.g. receive and interpret work instructions, safety information, emergency procedures)

Required knowledge:

REQUIRED SKILLS AND KNOWLEDGE

- Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for the order picking forklift truck
- Rated capacity and working load limits identification
- Estimation or determination of load weight from labels, markings or load paperwork
- Order picking forklift truck capabilities, limitations and gear
- Order picking forklift truck operations and operating techniques
- Organisational and workplace standards, requirements, policies and procedures for conducting operations for the order picking forklift truck
- Procedures for the recording, reporting and maintenance of workplace records and information
- Typical routine problems encountered in the process and with equipment and adjustments required for correction

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.

Overview of assessment

- Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work.
- State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Compliance with OH&S licensing legislation.
- Effectively communicate and work safely with others in the work area.
- Identify hazards associated with the operation of the order picking forklift truck and put in place effective hazard prevention/controls for those hazards.
- Effectively conduct pre-start, post-start operational checks and shut down checks of the order picking forklift truck.
- Effectively operate the forklift, pick and place

EVIDENCE GUIDE	
	loads safely at various heights, including driving and manoeuvring and placing loads in a safe manner.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument. • Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace. • Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace. • Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints. • Assessment is to comply with relevant appropriate standard requirements. • Applicants must have access to: <ul style="list-style-type: none"> • Personal Protective Equipment (PPE) for the purpose of the Performance Assessment. • safety equipment in safe condition as appropriate • associated equipment appropriate to order picking forklift truck operations • suitable loads as described by the endorsed Assessment Instrument • appropriate forklift in a safe condition.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills:

- Accurately record and maintain information relating to bridge and gantry crane operations
- Use communication techniques in the workplace including hand signals, whistles and use of two-way radios
- Use interpersonal communication skills at a level sufficient to communicate with other site personnel
- Operate a bridge and gantry crane including all functions to their maximum for the lifting and moving of loads to the maximum rated capacity in conjunction with other associated personnel
- Apply risk assessment and hazard control strategies, including hierarchy of control as applied to the safe operation of the crane (particular awareness of the risks associated with overhead powerlines/electrical cables, access to cabin, vehicles and

REQUIRED SKILLS AND KNOWLEDGE

clear access whilst travelling)

- Use and interpret crane manufacturer's specifications and data, including maximum load to ensure the crane is not overloaded
- Verify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge:

- Appropriate mathematical procedures for estimation of loads
- Bridge and gantry crane characteristics
- Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for the crane class
- Emergency procedures including escape routes
- Level of literacy to be able to read and comprehend manufacturer's instructions, procedures and safety signs
- Understanding of the hierarchy of hazard identification and control
- Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- Procedures for the recording, reporting and maintenance of workplace records and information
- Typical routine problems encountered in the operation of the crane and equipment and adjustments required for correction

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.

Overview of assessment

- Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work.

Elements and Performance Criteria

<p>ELEMENT</p> <p><i>Elements describe the essential outcomes of a unit of competency.</i></p>	<p>PERFORMANCE CRITERIA</p> <p><i>Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.</i></p>
<p>1. Plan work</p>	<p>1.1 1.1 Potential workplace <i>hazards</i> are identified</p> <p>1.2 <i>Hazard control measures</i> are identified consistent with <i>appropriate standards</i> to ensure the safety of personnel and equipment</p> <p>1.3 The weight of the load is identified and estimated in consultation with <i>associated personnel</i></p> <p>1.4 <i>Crane</i> is <i>appropriate</i> to the load/s and workplace conditions</p> <p>1.5 The appropriate path for the movement of loads in the work area is inspected and determined</p> <p>1.6 Appropriate <i>communication methods</i> are identified with <i>associated personnel</i></p>
<p>2. Conduct routine checks</p>	<p>2.1 Crane is visually checked for any damage or defects</p> <p>2.2 <i>Crane</i> is accessed in a safe manner</p> <p>2.3 All <i>signage and labels</i> are visible and legible according to the <i>appropriate standard</i></p> <p>2.4 Routine pre-operational crane checks are carried out according to <i>procedures</i></p> <p>2.5 All controls are located and identified</p> <p>2.6 Crane <i>service logbook</i> is checked for compliance</p> <p>2.7 Crane is started according to <i>procedures</i> and checked for any abnormal noises</p> <p>2.8 All <i>crane safety devices</i> are tested according to <i>procedures</i></p> <p>2.9 Pos-start operational checks are carried out according to <i>procedures</i></p> <p>2.10 All <i>communication equipment</i> is checked for serviceability</p> <p>2.11 All damage and defects are reported and recorded according to <i>procedures</i>, and appropriate action is taken</p>
<p>3. Set up crane</p>	<p>3.1 <i>Ground suitability</i> is checked</p> <p>3.2 <i>Crane</i> is driven to the work area according to <i>procedures</i></p>

	<p>3.3 <i>Crane</i> is positioned for work application and <i>stability</i> according to <i>procedures</i></p> <p>3.4 Appropriate <i>crane configuration</i> for work task is determined according to <i>procedures</i> (where applicable)</p> <p>3.5 Boom/jib and counterweight configuration data is input into the crane computer (where applicable)</p> <p>3.6 Appropriate <i>hazard prevention/control measures</i> are applied to the work area according to <i>procedures</i></p> <p>3.7 All <i>communications equipment</i> is tested for functionality</p>
<p>4. Transfer load</p>	<p>4.1 Lifts are determined within the capacity of the crane</p> <p>4.2 Boom/jib and hoist block is positioned over load following directions from <i>associated personnel</i></p> <p>4.3 <i>Test lift</i> is carried out according to <i>procedures</i></p> <p>4.4 Loads are transferred using all <i>relevant crane movements</i> according to <i>procedures</i> and the <i>appropriate standard</i></p> <p>4.5 All required <i>communication signals</i> are correctly interpreted according to <i>procedures</i> and the <i>appropriate standard</i></p> <p>4.6 <i>Crane</i> is operated according to <i>procedures</i></p> <p>4.7 Load movement is monitored constantly ensuring safety to personnel and load, and crane stability</p> <p>4.8 <i>Unplanned and/or unsafe</i> situations are responded to in line with <i>procedures</i></p>
<p>5. Mobile load</p>	<p>5.1 Suitability of <i>planned route</i> is checked for the crane according to <i>procedures</i></p> <p>5.2 <i>Crane</i> is configured to mobile load according to procedures</p> <p>5.3 Load is moved using <i>best mobile practice</i> according to the appropriate standard</p>
<p>6 Shut down and secure crane</p>	<p>6.1 <i>Crane</i> boom/jib and equipment is stowed and secured, where appropriate, according to <i>procedures</i> and the <i>appropriate standard</i></p> <p>6.2 Relevant motion locks and brakes are applied (where applicable)</p> <p>6.3 Outriggers/stabilisers are stowed and secured according to <i>procedures</i> (where applicable)</p> <p>6.4 Crane is <i>shut down</i> according to procedures</p> <p>6.5 Routine post-operational crane checks are carried</p>

	<p>out according to <i>procedures</i></p> <p>6.6 Plates or packing are stowed and secured (where applicable)</p> <p>6.7 All damage and defects are recorded and reported according to <i>procedures</i>, and appropriate action is taken</p>
--	--

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills:

- Accurately record and maintain information relating to crane operations
- Use communication techniques in the workplace including whistles, hand signals and use of two-way radios
- Use communication skills at a level sufficient to communicate with other site personnel
- Assessment of ground conditions to confirm that the site is suitable (e.g. firm, level and safe) to operate crane
- Operate crane including all functions to their maximum extension in the lifting and moving of loads to the safe working rated capacity in conjunction with other associated personnel
- Mobile loads using best mobile practice
- Apply risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the crane (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, crane tipping and demolition sites)
- Use and interpret crane manufacturer's specifications and data, including load charts to enable the crane to be configured for the load
- Verify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge:

- Appropriate mathematical procedures for estimation and measurement of loads
- Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for the crane class
- Ability to read and comprehend manufacturer's instructions, procedures and safety signs
- Understanding of crane characteristics and capabilities (including use of load charts) to allow the configuration of the crane to suit the range of loads

REQUIRED SKILLS AND KNOWLEDGE

- Understanding of the hierarchy of hazard identification and control
- Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- Procedures for the recording, reporting and maintenance of workplace records and information
- Typical routine problems encountered in the operation of the crane and equipment and adjustments required for correction

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work.

State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Compliance with OH&S licensing legislation.
- Communicate and work safely with others in the work area.
- Risk assessment and management procedures (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, crane tipping, other vehicles and personnel).
- Operation of a non-slewing mobile crane including all functions to their maximum extension in the lifting and moving of loads to the safe working rated capacity of non-slewing mobile cranes (over 3t capacity) in conjunction with other associated personnel.
- Appropriate mathematical procedures for estimation of loads.

Context of and specific

- Assessment of the safe and effective application of knowledge and skill to workplace tasks

EVIDENCE GUIDE	
resources for assessment	<p>(performance) must be undertaken using the endorsed Assessment Instrument.</p> <ul style="list-style-type: none"> • Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting. • Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace. • Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints. • Assessment is to comply with relevant appropriate standard requirements. • Applicants must have access to: <ul style="list-style-type: none"> • Personal Protective Equipment (PPE) for the purpose of the Performance Assessment • appropriate non-slewing crane (greater than 3 tonnes) and associated equipment in safe condition • suitable loads as specified by endorsed assessment instrument • communication equipment (e.g. two-way radios, whistles, etc.) • other associated personnel to sling and direct the loads.
Method of assessment	<ul style="list-style-type: none"> • Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application. • The use of 'simulators' in the assessment of this unit of competency is not acceptable. • Assessment may be in conjunction with the assessment of other units of competency. • Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.
Guidance information for	<ul style="list-style-type: none"> • Further information about endorsed Assessment Instruments may be obtained from state/territory

EVIDENCE GUIDE	
assessment	OH&S regulators.

Range Statement

RANGE STATEMENT	
<i>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below.</i>	
Hazards	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • ground stability (e.g. ground condition, recently filled trenches, slopes) • overhead hazards (e.g. powerlines, service pipes) • insufficient lighting • traffic (e.g. pedestrians, vehicles, other plant) • environmental conditions (e.g. wind, lightning, storms, etc.) • other specific hazards (e.g. dangerous materials)
Hazard control measures	<p>Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls</p> <p>It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:</p> <ol style="list-style-type: none"> 1 elimination 2 substitution 3 isolation 4 engineering control measures 5 using safe work practices 6 personal protective equipment
Appropriate standards	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • codes of practice • legislation • Australian standards • manufacturer's specifications • industry standards (where applicable)

RANGE STATEMENT	
Associated personnel	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • doggers • riggers
Appropriate	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • crane capabilities • environmental conditions (e.g. wind, lightning, storms, etc.)
Crane	<p>May include:</p> <ul style="list-style-type: none"> • a crane (greater than 3 tonnes capacity) which meets the requirements of AS1418 • articulated type mobile cranes • locomotive cranes <p>Does not include vehicle tow truck operations</p>
Communication method	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • verbal and non-verbal language • written instructions • signage • hand signals • listening • questioning to confirm understanding • appropriate worksite protocol
Signage and labels	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • crane data plates/labels • load charts • crane decals • control labels
Procedures	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • manufacturer's guidelines (instructions, specifications, operators manual or checklists) • industry operating procedures • workplace procedures (work instructions, operating procedures, checklists)
Controls	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • luffing levers • hoisting and lowering levers • slewing levers including brake

RANGE STATEMENT	
	<ul style="list-style-type: none"> boom extension levers (where fitted)
Service logbook	<p>May include but not limited to:</p> <ul style="list-style-type: none"> any logbook service book history record system where the service and maintenance history is kept
Crane safety devices	<p>May include but not limited to:</p> <ul style="list-style-type: none"> horns/sirens audible and visual reversing devices operator restraint devices lights
Communication equipment	<p>May include but not limited to:</p> <ul style="list-style-type: none"> fixed channel two-way radios whistles bells buzzers <p>NB: where radio communication equipment is used the transmitting frequencies of the equipment must be selected to prevent interference to or from other radio equipment being used in the vicinity of the crane</p>
Ground suitability	<p>May include but not limited to:</p> <ul style="list-style-type: none"> rough uneven ground backfilled ground soft soils hard compacted soil rock bitumen concrete
Stability	<p>May include but not limited to:</p> <ul style="list-style-type: none"> deploying outriggers establishing correct size plates or packing correctly positioning plates or packing
Crane configuration	<p>May include but not be limited to:</p> <ul style="list-style-type: none"> boom/jib fly-jib counterweights

RANGE STATEMENT	
Hazard prevention/control measures	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • safety tags on electrical switches/isolators • insulated powerlines • safety observer used inside exclusion zone • disconnected power • traffic barricades and control/s • pedestrian controls • trench covers • movement of obstructions • personal protective equipment • adequate illumination
Test lift	<p>The load is lifted just clear of the lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure that:</p> <ul style="list-style-type: none"> • near capacity loads do not overload the crane • loads of unusual shape or weight distribution are correctly slung • load measuring equipment can be used to verify the calculated weight of the load • all crane equipment is functioning properly • adjustments to the slinging can be made in a safe manner
Relevant crane movements	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • telescope in and out • boom/jib up and down • articulating (as applicable) • raise and lower hoist (as applicable)
Communication signals	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • stop - hand • stop - whistle • hoist up - hand • hoist up - whistle • hoist down - hand • hoist down - whistle • luff boom down - hand • luff boom down - whistle • luff boom up - hand • luff boom up - whistle

RANGE STATEMENT	
	<ul style="list-style-type: none"> • telescope out - hand • telescope out - whistle • telescope in - hand • telescope in - whistle • slew/articulate right - hand • slew/articulate right - whistle • slew/articulate left - hand • slew/articulate left - whistle
Unplanned and/or unsafe situations	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • failure/loss of control (e.g. brakes and steering) • failure of equipment (e.g. hydraulic system) • environmental conditions (e.g. wind, lightning, storms, etc.)
Planned route	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • unusual or difficult terrains • obstacles or obstruction
Best mobile practice	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • minimum speed • gentle acceleration and braking (to minimise load swing) • minimum boom/jib length • carrying the load near to the ground surface • use of handheld taglines
Shut down	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • retracting boom/jib/fly (where applicable) • retracting hoist rope and hook block • idling engine to stabilise temperature • retracting outriggers/stabilisers (where applicable) • turning off engine

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit deals with the skills and knowledge required to perform the drafting and use of drawing equipment as applied to the production of sectional, arrangement, schematic and plan drawings.

Application of the Unit

Application of the Unit 2)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice

3)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships and the like.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Where pre-requisite pathways have been identified. All competencies in the Common Unit Group must have been completed.

Common Unit Group

Unit Code	Unit Title
UEENEEE107A	Use drawings, diagrams, schedules, standards, cords and specifications
UEENEEE101A	Apply Occupational Health Safety regulations, codes and practices in the workplace
	OR
MEM09002B	Interpret technical drawing

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following levels. A description of what each level entails is provided in Section 2.3.1 Language, Literacy and Numeracy.

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the

Employability Skills 5)

qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for drafting	1.1 Work requirements are identified from request/work orders or equivalent and clarified/confirmed with appropriate parties or by site inspection
	1.2 Occupational Health and Safety standards, statutory requirements, relevant Australian standards, codes of practice, manufacturers' specifications, environmental requirements and enterprise procedures are identified, applied and monitored throughout the work procedure
	1.3 Relevant plans, drawings and texts are selected and interpreted in accordance with the work plan
	1.4 Where appropriate, the teams and individuals roles and responsibilities within the team are identified and, where required, assist in the provision of the on-the-job training
2 Perform civil drafting	2.1 Civil structures and assemblies are drawn using sectional representation in accordance with specification requirements
	2.2 Structures drawn to highlight critical features in accordance with specification requirements

ELEMENT**PERFORMANCE CRITERIA**

- | | | |
|---|-------------------|---|
| | 2.3 | Civil assemblies drawn to highlight critical features in accordance with specification requirements |
| | 2.4 | Progressive tolerance calculations made to ensure functional operation of civil structures and assemblies |
| | 2.5 | Dimensions selected to ensure fit of civil components in accordance with specification requirements |
| | 2.6 | Civil components selected from manufacturer's catalogue to meet specified functions |
| | 2.7 | Pictorial drawings, such as isometric, produced as requested in accordance with relevant standards |
| 3 | Complete the work | |
| | 3.1 | Drawings checked to ensure that assembly is possible in accordance with specification requirements |
| | 3.2 | Drawings produced, registered and recorded in accordance with instructions/site documentation procedures |
| | 3.3 | Relevant personnel notified and existing drawings/specification sheets updated as required |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the Essential Skills and Knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired performing civil drafting.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

The extent of the Essential Knowledge and Associated Skills required follows:

KS01-PM419B Civil drafting

T1 Evidence shall show that knowledge has been acquired for safe working practices of:

- Relevant Environmental, Occupational Health and Safety legislation and regulations
- Relevant plant and equipment, its location and operation
- Technical drawings and manufacturers manuals
- Introduction to and typical arrangements of power production plant
- Relevant state and territory regulations
- Detailed drafting concepts
- Technical drawings and data
- Engineering practices (civil)
- Engineering drawing equipment
- Civil drawing symbols
- Computer Aided Drawing systems

T2 Specific skills needed to achieve the Performance Criteria:

- Apply Relevant Environmental, Occupational Health and Safety legislation and regulations
- Interpret Technical drawings and manufacturers manuals
- Apply relevant state and territory regulations
- Perform civil drafting
- Use drawing equipment
- Use Computer Aided Drawing systems
- Communicate effectively
- Apply data analysis techniques and tools.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the competency standard unit and must be read in conjunction with the Performance Criteria and the Range Statement of unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this competency standard unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitude competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all pre-requisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the “Assessment Guidelines – UEP12”. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
 - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in 6) of this unit
 - Demonstrate an appropriate level of employability skills
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
 - The knowledge and application of relevant sections of: Occupational Health and Safety legislation; Statutory legislation; Enterprise/site safety procedures; Enterprise/site emergency procedures
 - Detailed drafting concepts (Civil)
 - Engineering practices (Civil)
 - Use of engineering drawing equipment
 - Dealing with an unplanned event by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

Competency Standards should be assessed in the workplace or simulated workplace and under the normal range of workplace conditions.

Assessment of this unit will be supported with documentary evidence, by means of endorsement stating type and application of work.

In addition to the resources listed above in 'Context of assessment', evidence should show competency working, in limited spaces, with different types of plant and equipment as well as different structural/construction types and methods and in a variety of environments.

Method of assessment 9.4)

This unit shall be assessed by methods given in 1.3.00 Assessment Guidelines.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied competency standard units where listed.

Nil

Range Statement**RANGE STATEMENT**

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

Relevant legislation, standards or codes of practice may apply.

Dimensions may be notated in metric or imperial units.

Drawings may utilise perspective, explosive view or hidden view techniques.

Types of structures drafted may include foundations, plinths, dams, canals, spillways, flumes and roads.

Drawing equipment used may include Computer Aided Drafting (CAD) and conventional drawing tools.

Standard symbols are used.

Generic terms are used throughout this Training Package for vocational standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms are given in Section 2.1 Preliminary Information and Glossaries.
