UEE Electrotechnology Training Package

Release: 6.0

CONTENTS

UEE Electrotechnology Training Package.....	41
UEE10120 Certificate I in ElectroComms Skills.....	42
UEE20120 Certificate II in Split Air Conditioning and Heat Pump Systems	45
UEE20520 Certificate II in Computer Assembly and Repair.....	48
UEE20720 Certificate II in Data and Voice Communications.....	51
UEE20920 Certificate II in Electronic Assembly	54
UEE21020 Certificate II in Fire Alarms Servicing.....	57
UEE21220 Certificate II in Antennae Equipment.....	60
UEE21420 Certificate II in Remote Area Power Supply Maintenance.....	63
UEE21620 Certificate II in Security Assembly and Set-up.....	66
UEE21720 Certificate II in Technical Support	69
UEE21920 Certificate II in Electronics	72
UEE22020 Certificate II in Electrotechnology (Career Start).....	76
UEE22120 Certificate II in Sustainable Energy (Career Start).....	79
UEE30120 Certificate III in Business Equipment.....	82
UEE30220 Certificate III in Computer Systems Equipment.....	86
UEE30320 Certificate III in Custom Electronics Installations.....	91
UEE30420 Certificate III in Data and Voice Communications	96
UEE30620 Certificate III in Electrical Machine Repair.....	100
UEE30720 Certificate III in Switchgear and Controlgear.....	104
UEE30820 Certificate III in Electrotechnology Electrician.....	108
UEE30920 Certificate III in Electronics and Communications.....	116
UEE31020 Certificate III in Fire Protection Control.....	123
UEE31220 Certificate III in Instrumentation and Control	127
UEE31420 Certificate III in Security Equipment	132
UEE32120 Certificate III in Appliance Service.....	136
UEE32220 Certificate III in Air Conditioning and Refrigeration.....	141
UEE33020 Certificate III in Electrical Fitting	147
UEE40120 Certificate IV in Computer Systems.....	155
UEE40220 Certificate IV in Electrical - Data and Voice Communications	161
UEE40320 Certificate IV in Installation Inspection and Audits	165
UEE40420 Certificate IV in Electrical - Instrumentation	169
UEE40520 Certificate IV in Electrical - Air Conditioning Split Systems	174
UEE40620 Certificate IV in Electrotechnology - Systems Electrician	178
UEE40720 Certificate IV in Electronics and Communications	187
UEE40820 Certificate IV in Electrical - Fire Protection Control Systems.....	195
UEE40920 Certificate IV in Industrial Electronics and Control.....	200
UEE41020 Certificate IV in Energy Management and Control	205
UEE41120 Certificate IV in Electrical - Lift Systems.....	210
UEE41223 Certificate IV in Rail Signalling.....	214
UEE41520 Certificate IV in Video and Audio Systems	219
UEE41720 Certificate IV in Rail - Communications and Network Systems	226
UEE42120 Certificate IV in Electrotechnology - Electrical Contracting.....	230
UEE42220 Certificate IV in Instrumentation and Control	234
UEE42622 Certificate IV in Hazardous areas - Electrical.....	240
UEE42720 Certificate IV in Air Conditioning and Refrigeration Servicing.....	244
UEE42820 Certificate IV in Air-conditioning Systems Energy Management and Control.....	250
UEE42920 Certificate IV in Refrigeration and Air Conditioning Systems	255
UEE43020 Certificate IV in Electrical Equipment and Systems	261

UEE43220 Certificate IV in Industrial Automation and Control.....	270
UEE43322 Certificate IV in Electrical - Renewable Energy.....	276
UEE50122 Diploma of Computer Systems Engineering.....	282
UEE50220 Diploma of Electrical and Instrumentation.....	290
UEE50320 Diploma of Electrical and Refrigeration and Air Conditioning.....	295
UEE50420 Diploma of Electrical Engineering	301
UEE50520 Diploma of Electronics and Communications Engineering	311
UEE50722 Diploma of Renewable Energy Engineering.....	322
UEE50920 Diploma of Industrial Electronics and Control Engineering.....	327
UEE51020 Diploma of Instrumentation and Control Engineering.....	333
UEE51120 Diploma of Engineering Technology - Refrigeration and Air Conditioning ..	340
UEE51220 Diploma of Air Conditioning and Refrigeration Engineering.....	345
UEE53020 Diploma of Electrical Systems Engineering.....	352
UEE60220 Advanced Diploma of Electronics and Communications Engineering.....	362
UEE60620 Advanced Diploma of Industrial Electronics and Control Engineering.....	373
UEE60922 Advanced Diploma of Renewable Energy Engineering	380
UEE61222 Advanced Diploma of Engineering - Explosion protection.....	386
UEE61521 Advanced Diploma of Instrumentation and Control Engineering	392
UEE61720 Advanced Diploma of Engineering Technology - Electronics.....	400
UEE62022 Advanced Diploma of Engineering Technology - Renewable Energy.....	410
UEE62122 Advanced Diploma of Engineering Technology - Electrical	416
UEE62220 Advanced Diploma of Electrical - Engineering.....	426
UEE62320 Advanced Diploma of Electrical Engineering - Coal Mining.....	436
UEE62420 Advanced Diploma of Engineering Technology - Air Conditioning and Refrigeration	443
UEE62520 Advanced Diploma of Air Conditioning and Refrigeration Engineering.....	449
UEE63020 Advanced Diploma of Electrical Systems Engineering	457
UEESS00187 Electrical - Install and commission whole current electricity meters Skill Set	467
UEESS00188 RAC - Inspect, Test and Repair Fire and Smoke Control Features of Mechanical Services Systems	469
UEESS00189 Rail Signalling Constructor Skill Set.....	471
UEESS00190 Electrical - Rail Signalling Principles Skill Set.....	473
UEESS00191 Grid-connected Battery Storage Systems Designer-Installer Skill Set.....	475
UEESS00192 Grid-connected Battery Storage Systems Installer Skill Set.....	477
UEESS00193 Grid-connected Photovoltaic and Battery Storage Systems Designer Skill Set	479
UEESS00194 Grid-connected Photovoltaic Systems Designer-Installer Skill Set.....	481
UEESS00195 Grid-connected Photovoltaic Systems Installer Skill Set.....	483
UEESS00196 Grid-connected Renewable Energy System Site Surveyor Skill Set.....	485
UEESS00197 Grid-connected Renewable Energy Systems Inspector Skill Set.....	487
UEESS00198 Hybrid Photovoltaic, Wind and Battery Storage Systems Installer Skill Set	489
UEESS00199 Micro-hydro Systems Designer Installer Skill Set	491
UEESS00200 Micro-hydro Systems Designer Skill Set	493
UEESS00201 Micro-hydro Systems Installer Skill Set.....	495
UEESS00202 Micro-grid Renewable Energy Systems Inspector Skill Set.....	497
UEESS00203 Micro-grid Systems Design Coordinator Skill Set.....	499
UEESS00204 Micro-grid Systems Installation and Maintenance Coordinator Skill Set	501
UEESS00205 Off-grid Photovoltaic/Generating Set Systems Designer-Installer Skill Set	503
UEESS00206 Off-grid Photovoltaic/Generating Set Systems Installer Skill Set.....	505
UEESS00207 Off-grid Photovoltaic Generating Set Systems Designer Skill Set.....	507
UEESS00208 Off-grid Renewable Energy System Site Surveyor Skill Set.....	509
UEESS00209 Off-grid Renewable Energy Systems Inspector Skill Set.....	511
UEESS00210 Sustainable - Electrical Installations Sustainability Strategies Skill Set	513
UEESS00211 Sustainable - Energy Assessment of Commercial Facilities Skill Set.....	515

UEESS00212 Sustainable - Energy Assessment of Industrial Properties and Enterprises Skill Set.....	517
UEESS00213 Sustainable - Energy Assessment of Residential, Office and Retail Premises Skill Set.....	519
UEESS00214 Sustainable - Energy Efficiency Systems Designer Skill Set	521
UEESS00215 Sustainable - Energy Efficiency Systems Developer Skill Set.....	523
UEESS00216 Sustainable - Identify Energy Efficiency Strategies Skill Set.....	525
UEESS00217 Wind Energy Systems Designer-Installer Skill Set.....	527
UEESS00218 Wind Energy Systems Designer Skill Set	529
UEESS00219 Wind Energy Systems Installer Skill Set.....	531
UEEAS0001 Assemble electronic components	533
Assessment Requirements for UEEAS0001 Assemble electronic components.....	536
UEEAS0002 Conduct quality and functional tests on assembled electronic apparatus ...	538
Assessment Requirements for UEEAS0002 Conduct quality and functional tests on assembled electronic apparatus.....	541
UEEAS0003 Modify electronic sub-assemblies	543
Assessment Requirements for UEEAS0003 Modify electronic sub-assemblies.....	546
UEEAS0004 Select electronic components for assembly	548
Assessment Requirements for UEEAS0004 Select electronic components for assembly..	551
UEEAS0005 Set up and check electronic component assembly machines	553
Assessment Requirements for UEEAS0005 Set up and check electronic component assembly machines.....	556
UEEAS0006 Use lead-free soldering techniques	558
Assessment Requirements for UEEAS0006 Use lead-free soldering techniques.....	561
UEEAS0007 Assemble, mount and connect control gear and switchgear.....	563
Assessment Requirements for UEEAS0007 Assemble, mount and connect control gear and switchgear.....	567
UEEAS0008 Fabricate and assemble bus bars.....	570
Assessment Requirements for UEEAS0008 Fabricate and assemble bus bars	573
UEEAS0009 Mount and wire control panel equipment	577
Assessment Requirements for UEEAS0009 Mount and wire control panel equipment ...	581
UEECD0001 Analyse materials for suitability in electrical equipment	584
Assessment Requirements for UEECD0001 Analyse materials for suitability in electrical equipment.....	587
UEECD0002 Analyse static and dynamic parameters of electrical equipment.....	589
Assessment Requirements for UEECD0002 Analyse static and dynamic parameters of electrical equipment.....	592
UEECD0003 Apply industry and community standards to engineering activities.....	594
Assessment Requirements for UEECD0003 Apply industry and community standards to engineering activities.....	596
UEECD0004 Apply material science to solving electrotechnology engineering problems	598
Assessment Requirements for UEECD0004 Apply material science to solving electrotechnology engineering problems	601
UEECD0005 Apply physics to solving electrotechnology engineering problems	603
Assessment Requirements for UEECD0005 Apply physics to solving electrotechnology engineering problems.....	606
UEECD0006 Apply technologies and concepts to energy sector work activities.....	608
Assessment Requirements for UEECD0006 Apply technologies and concepts to energy sector work activities	611
UEECD0007 Apply work health and safety regulations, codes and practices in the workplace	613
Assessment Requirements for UEECD0007 Apply work health and safety regulations, codes and practices in the workplace	616

UEECD0008 Carry out preparatory energy sector work activities	620
Assessment Requirements for UEECD0008 Carry out preparatory energy sector work activities.....	623
UEECD0009 Carry out routine work activities in an energy sector environment	625
Assessment Requirements for UEECD0009 Carry out routine work activities in an energy sector environment	628
UEECD0010 Compile and produce an energy sector detailed report.....	631
Assessment Requirements for UEECD0010 Compile and produce an energy sector detailed report	634
UEECD0011 Comply with scheduled and preventative maintenance program processes	637
Assessment Requirements for UEECD0011 Comply with scheduled and preventative maintenance program processes	641
UEECD0012 Contribute to risk management in electrotechnology systems.....	644
Assessment Requirements for UEECD0012 Contribute to risk management in electrotechnology systems	647
UEECD0013 Develop and implement energy sector maintenance programs	649
Assessment Requirements for UEECD0013 Develop and implement energy sector maintenance programs	652
UEECD0014 Develop design briefs for electrotechnology projects	654
Assessment Requirements for UEECD0014 Develop design briefs for electrotechnology projects.....	657
UEECD0015 Develop engineering solutions to photonic system problems	659
Assessment Requirements for UEECD0015 Develop engineering solutions to photonic system problems	663
UEECD0016 Document and apply measures to control WHS risks associated with electrotechnology work	665
Assessment Requirements for UEECD0016 Document and apply measures to control WHS risks associated with electrotechnology work	668
UEECD0017 Establish and follow a competency development plan in an electrotechnology engineering discipline	672
Assessment Requirements for UEECD0017 Establish and follow a competency development plan in an electrotechnology engineering discipline.....	675
UEECD0018 Establish, maintain and evaluate energy sector WHS/OHS systems	677
Assessment Requirements for UEECD0018 Establish, maintain and evaluate energy sector WHS/OHS systems	681
UEECD0019 Fabricate, assemble and dismantle utilities industry components	683
Assessment Requirements for UEECD0019 Fabricate, assemble and dismantle utilities industry components.....	687
UEECD0020 Fix and secure electrotechnology equipment	691
Assessment Requirements for UEECD0020 Fix and secure electrotechnology equipment	694
UEECD0021 Identify and select components, accessories and materials for energy sector work activities.....	697
Assessment Requirements for UEECD0021 Identify and select components, accessories and materials for energy sector work activities.....	700
UEECD0022 Identify building techniques, methods and materials used in energy sector work activities.....	702
Assessment Requirements for UEECD0022 Identify building techniques, methods and materials used in energy sector work activities	705
UEECD0023 Identify effects of energy on machinery and materials in an energy sector environment.....	708
Assessment Requirements for UEECD0023 Identify effects of energy on machinery and materials in an energy sector environment.....	711
UEECD0024 Implement and monitor energy sector WHS policies and procedures.....	715

Assessment Requirements for UEECD0024 Implement and monitor energy sector WHS policies and procedures.....719

UEECD0025 Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits721

Assessment Requirements for UEECD0025 Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits.....725

UEECD0026 Manage risk in electrotechnology activities728

Assessment Requirements for UEECD0026 Manage risk in electrotechnology activities 731

UEECD0027 Participate in development and follow a personal competency development plan.....733

Assessment Requirements for UEECD0027 Participate in development and follow a personal competency development plan.....736

UEECD0028 Plan an integrated cabling installation system.....740

Assessment Requirements for UEECD0028 Plan an integrated cabling installation system744

UEECD0029 Plan electrotechnology projects747

Assessment Requirements for UEECD0029 Plan electrotechnology projects.....750

UEECD0030 Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software752

Assessment Requirements for UEECD0030 Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software756

UEECD0031 Prepare engineering drawings using manual drafting and CAD for electrotechnology applications762

Assessment Requirements for UEECD0031 Prepare engineering drawings using manual drafting and CAD for electrotechnology applications766

UEECD0032 Produce detailed electrotechnology/utilities drawings using CAD equipment and software776

Assessment Requirements for UEECD0032 Produce detailed electrotechnology/utilities drawings using CAD equipment and software781

UEECD0033 Produce products for carrying out energy sector work activities.....787

Assessment Requirements for UEECD0033 Produce products for carrying out energy sector work activities790

UEECD0034 Produce routine tools/devices for carrying out energy sector work activities793

Assessment Requirements for UEECD0034 Produce routine tools/devices for carrying out energy sector work activities.....796

UEECD0035 Provide basic instruction in the use of electrotechnology apparatus798

Assessment Requirements for UEECD0035 Provide basic instruction in the use of electrotechnology apparatus801

UEECD0036 Provide engineering solutions for problems in complex multiple path circuits803

Assessment Requirements for UEECD0036 Provide engineering solutions for problems in complex multiple path circuits806

UEECD0037 Provide engineering solutions for uses of materials and the thermodynamic effects.....809

Assessment Requirements for UEECD0037 Provide engineering solutions for uses of materials and thermodynamic effects812

UEECD0038 Provide solutions and report on routine electrotechnology problems814

Assessment Requirements for UEECD0038 Provide solutions and report on routine electrotechnology problems.....817

UEECD0039 Provide solutions to basic engineering computational problems819

Assessment Requirements for UEECD0039 Provide solutions to basic engineering computational problems822

UEECD0040 Solve basic problems electronic and digital equipment and circuits.....824

Assessment Requirements for UEECD0040 Solve basic problems electronic and digital equipment and circuits.....827

UEECD0041 Solve electrotechnical engineering problems.....830
Assessment Requirements for UEECD0041 Solve electrotechnical engineering problems 833
UEECD0042 Solve problems in ELV single path circuits835
Assessment Requirements for UEECD0042 Solve problems in ELV single path circuits 838
UEECD0043 Solve problems in direct current circuits842
Assessment Requirements for UEECD0043 Solve problems in direct current circuits...845
UEECD0044 Solve problems in multiple path circuits851
Assessment Requirements for UEECD0044 Solve problems in multiple path circuits ...854
UEECD0045 Solve problems in multiple path extra-low voltage (ELV) a.c. circuits.....859
Assessment Requirements for UEECD0045 Solve problems in multiple path extra-low
voltage (ELV) a.c. circuits.....863
UEECD0046 Solve problems in single path circuits865
Assessment Requirements for UEECD0046 Solve problems in single path circuits.....868
UEECD0047 Supervise and coordinate energy sector work activities.....872
Assessment Requirements for UEECD0047 Supervise and coordinate energy sector work
activities.....875
UEECD0048 Undertake computations in an energy sector environment877
Assessment Requirements for UEECD0048 Undertake computations in an energy sector
environment.....880
UEECD0049 Use advanced computational processes to provide solutions to energy sector
engineering problems.....884
Assessment Requirements for UEECD0049 Use advanced computational processes to
provide solutions to energy sector engineering problems887
UEECD0050 Use and maintain the integrity of a portable gas detection device889
Assessment Requirements for UEECD0050 Use and maintain the integrity of a portable
gas detection device.....893
UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications...897
Assessment Requirements for UEECD0051 Use drawings, diagrams, schedules, standards,
codes and specifications900
UEECD0052 Use routine equipment/plant/technologies in an energy sector environment 904
Assessment Requirements for UEECD0052 Use routine equipment/plant/technologies in
an energy sector environment907
UEECD0053 Write specifications for computer systems engineering projects909
Assessment Requirements for UEECD0053 Write specifications for computer systems
engineering projects.....912
UEECD0054 Write specifications for electronics and communications engineering projects 914
Assessment Requirements for UEECD0054 Write specifications for electronics and
communications engineering projects917
UEECD0055 Write specifications for industrial electronics and control projects920
Assessment Requirements for UEECD0055 Write specifications for industrial electronics
and control projects923
UEECD0056 Apply methods to maintain currency of industry developments925
Assessment Requirements for UEECD0056 Apply methods to maintain currency of
industry developments927
UEECD0057 Manage electrotechnology projects.....929
Assessment Requirements for UEECD0057 Manage electrotechnology projects932
UEECD0059 Write specifications for electrical engineering projects.....936
Assessment Requirements for UEECD0059 Write specifications for electrical engineering
projects939
UEECD0060 Write specifications for electrotechnology engineering projects942
Assessment Requirements for UEECD0060 Write specifications for electrotechnology
engineering projects.....945

UEECD0061 Write specifications for refrigeration and air conditioning engineering projects.....	948
Assessment Requirements for UEECD0061 Write specifications for refrigeration and air conditioning engineering projects	951
UEECD0062 Write specifications for renewable energy engineering projects	954
Assessment Requirements for UEECD0062 Write specifications for renewable energy engineering projects.....	957
UEECD0063 Write work activity reports	960
Assessment Requirements for UEECD0063 Write work activity reports	963
UEECD0064 Interpret, produce and modify electrotechnology drawings.....	965
Assessment Requirements for UEECD0064 Interpret, produce and modify electrotechnology drawings.....	968
UEECO0001 Estimate electrotechnology projects	971
Assessment Requirements for UEECO0001 Estimate electrotechnology projects	974
UEECO0002 Maintain documentation	976
Assessment Requirements for UEECO0002 Maintain documentation.....	979
UEECO0003 Manage contract variations	981
Assessment Requirements for UEECO0003 Manage contract variations.....	984
UEECO0004 Participate in appliance servicing work and competency development activities.....	986
Assessment Requirements for UEECO0004 Participate in appliance servicing work and competency development activities	989
UEECO0005 Participate in business equipment work and competency development activities.....	991
Assessment Requirements for UEECO0005 Participate in business equipment work and competency development activities	994
UEECO0006 Participate in computer equipment work and competency development activities.....	996
Assessment Requirements for UEECO0006 Participate in computer equipment work and competency development activities	999
UEECO0007 Participate in electronics and communications work and competency development activities.....	1004
Assessment Requirements for UEECO0007 Participate in electronics and communications work and competency development activities.....	1007
UEECO0008 Participate in fire protection control work and competency development activities.....	1009
Assessment Requirements for UEECO0008 Participate in fire protection control work and competency development activities	1012
UEECO0009 Participate in instrumentation and control work and competency development activities.....	1017
Assessment Requirements for UEECO0009 Participate in instrumentation and control work and competency development activities.....	1020
UEECO0010 Participate in refrigeration and air conditioning work and competency development activities.....	1025
Assessment Requirements for UEECO0010 Participate in refrigeration and air conditioning work and competency development activities	1028
UEECO0011 Participate in security equipment work and competency development activities.....	1030
Assessment Requirements for UEECO0011 Participate in security equipment work and competency development activities	1033
UEECO0012 Participate in voice and data communications work and competency development activities.....	1038

Assessment Requirements for UEECO0012 Participate in voice and data communications work and competency development activities.....	1041
UEECO0013 Prepare specifications for the supply of materials and equipment for electrotechnology projects.....	1046
Assessment Requirements for UEECO0013 Prepare specifications for the supply of materials and equipment for electrotechnology projects.....	1049
UEECO0014 Prepare tender submissions for electrotechnology projects	1051
Assessment Requirements for UEECO0014 Prepare tender submissions for electrotechnology projects.....	1054
UEECO0015 Provide quotations for installation or service jobs.....	1056
Assessment Requirements for UEECO0015 Provide quotations for installation or service jobs.....	1059
UEECO0016 Receive and store materials and equipment for electrotechnology work .	1062
Assessment Requirements for UEECO0016 Receive and store materials and equipment for electrotechnology work	1065
UEECO0017 Source and purchase material/parts for installation or service jobs	1067
Assessment Requirements for UEECO0017 Source and purchase material/parts for installation or service jobs.....	1070
UEECO0018 Contribute to the commercialisation of products/applications/services ...	1072
Assessment Requirements for UEECO0018 Contribute to the commercialisation of products/applications/services.....	1075
UEECO0019 Contribute to the conduct of a research project	1080
Assessment Requirements for UEECO0019 Contribute to the conduct of a research project	1083
UEECO0020 Contribute to the development of a product/application/service.....	1090
Assessment Requirements for UEECO0020 Contribute to the development of a product/application/service.....	1093
UEECO0021 Contribute to the planning of a research project.....	1101
Assessment Requirements for UEECO0021 Contribute to the planning of a research project	1104
UEECO0022 Participate in electrical machine repair work and competency development activities.....	1112
Assessment Requirements for UEECO0022 Participate in electrical machine repair work and competency development activities.....	1115
UEECO0023 Participate in electrical work and competency development activities.....	1120
Assessment Requirements for UEECO0023 Participate in electrical work and competency development activities.....	1123
UEECO0024 Participate in switchgear and control gear work and competency development activities.....	1126
Assessment Requirements for UEECO0024 Participate in switchgear and control gear work and competency development activities.....	1129
UEECO0025 Provide quotations for inspection and compliance audit services	1134
Assessment Requirements for UEECO0025 Provide quotations for inspection and compliance audit services.....	1137
UEECS0001 Administer computer networks.....	1139
Assessment Requirements for UEECS0001 Administer computer networks	1142
UEECS0002 Analyse and implement biometric measuring techniques and applications	1145
Assessment Requirements for UEECS0002 Analyse and implement biometric measuring techniques and applications	1149
UEECS0003 Assemble, set up and test computing devices.....	1151
Assessment Requirements for UEECS0003 Assemble, set up and test computing devices	1155
UEECS0004 Commission industrial computer systems	1157
Assessment Requirements for UEECS0004 Commission industrial computer systems .	1161

UEECS0005 Design and implement advanced routing for internetworking systems.....1163
Assessment Requirements for UEECS0005 Design and implement advanced routing for internetworking systems1167
UEECS0006 Design and implement multi-layer switching for internetworking systems 1170
Assessment Requirements for UEECS0006 Design and implement multi-layer switching for internetworking systems.....1174
UEECS0007 Design and implement network systems for internetworking.....1177
Assessment Requirements for UEECS0007 Design and implement network systems for internetworking1180
UEECS0008 Design and implement remote access for internetworking systems1183
Assessment Requirements for UEECS0008 Design and implement remote access for internetworking systems1186
UEECS0009 Design and implement security for internetworking systems.....1188
Assessment Requirements for UEECS0009 Design and implement security for internetworking systems1192
UEECS0010 Design and implement wireless LANs/WANs for internetworking systems 1194
Assessment Requirements for UEECS0010 Design and implement wireless LANs/WANs for internetworking systems.....1197
UEECS0011 Design and manage enterprise computer networks1200
Assessment Requirements for UEECS0011 Design and manage enterprise computer networks1204
UEECS0012 Design embedded controller control systems.....1207
Assessment Requirements for UEECS0012 Design embedded controller control systems 1210
UEECS0013 Develop and validate biometric equipment/systems installation1212
Assessment Requirements for UEECS0013 Develop and validate biometric equipment/systems installation1216
UEECS0014 Develop computer network services1219
Assessment Requirements for UEECS0014 Develop computer network services1222
UEECS0015 Develop energy sector computer network applications infrastructure.....1224
Assessment Requirements for UEECS0015 Develop energy sector computer network applications infrastructure.....1227
UEECS0016 Develop energy sector directory services.....1229
Assessment Requirements for UEECS0016 Develop energy sector directory services...1232
UEECS0017 Develop industrial control programs for microcomputer equipped devices 1234
Assessment Requirements for UEECS0017 Develop industrial control programs for microcomputer equipped devices.....1237
UEECS0018 Develop web pages for engineering applications.....1239
Assessment Requirements for UEECS0018 Develop web pages for engineering applications.....1242
UEECS0019 Develop, implement and test object-oriented code.....1245
Assessment Requirements for UEECS0019 Develop, implement and test object-oriented code1248
UEECS0020 Evaluate and modify object-oriented code programs1250
Assessment Requirements for UEECS0020 Evaluate and modify object-oriented code programs1253
UEECS0021 Install and administer UNIX/LINUX-based networked computers1255
Assessment Requirements for UEECS0021 Install and administer UNIX/LINUX-based networked computers1258
UEECS0022 Install and configure a client computer operating system and software ...1260
Assessment Requirements for UEECS0022 Install and configure a client computer operating system and software1263
UEECS0023 Install and configure network systems for internetworking1265

Assessment Requirements for UEECS0023 Install and configure network systems for internetworking1268

UEECS0024 Integrate multiple computer operating systems on a client server local area network.....1271

Assessment Requirements for UEECS0024 Integrate multiple computer operating systems on a client server local area network.....1275

UEECS0025 Modify/re design industrial computer systems1277

Assessment Requirements for UEECS0025 Modify/re design industrial computer systems 1281

UEECS0026 Plan industrial computer systems projects1284

Assessment Requirements for UEECS0026 Plan industrial computer systems projects 1287

UEECS0027 Provide programming solution for computer systems engineering problems 1289

Assessment Requirements for UEECS0027 Provide programming solution for computer systems engineering problems.....1292

UEECS0028 Select, install, configure and test multimedia components1294

Assessment Requirements for UEECS0028 Select, install, configure and test multimedia components1297

UEECS0029 Set up and configure basic local area network (LAN)1299

Assessment Requirements for UEECS0029 Set up and configure basic local area network (LAN)1302

UEECS0030 Set up, configure and test biometric devices.....1305

Assessment Requirements for UEECS0030 Set up, configure and test biometric devices 1308

UEECS0031 Set up, create and implement content for a web server1310

Assessment Requirements for UEECS0031 Set up, create and implement content for a web server.....1314

UEECS0032 Support computer hardware and software for engineering applications ..1316

Assessment Requirements for UEECS0032 Support computer hardware and software for engineering applications1320

UEECS0033 Use engineering applications software on personal computers1323

Assessment Requirements for UEECS0033 Use engineering applications software on personal computers.....1326

UEEDV0001 Assemble and connect telecommunication frames and cabinets.....1328

Assessment Requirements for UEEDV0001 Assemble and connect telecommunication frames and cabinets1331

UEEDV0002 Install aerial telecommunication cables1334

Assessment Requirements for UEEDV0002 Install aerial telecommunication cables....1338

UEEDV0003 Install and connect cabling for direct access to telecommunications service 1341

Assessment Requirements for UEEDV0003 Install and connect cabling for direct access to telecommunications service.....1346

UEEDV0004 Install and connect data and voice communication equipment1350

Assessment Requirements for UEEDV0004 Install and connect data and voice communication equipment.....1354

UEEDV0005 Install and maintain cabling for multiple access to telecommunication services1356

Assessment Requirements for UEEDV0005 Install and maintain cabling for multiple access to telecommunication services1362

UEEDV0006 Install and modify optical fibre performance data communication cabling 1367

Assessment Requirements for UEEDV0006 Install and modify optical fibre performance data communication cabling1371

UEEDV0007 Install underground communication cables1373

Assessment Requirements for UEEDV0007 Install underground communication cables 1377

UEEDV0008 Install, modify and verify coaxial and structured communication copper cabling1380

Assessment Requirements for UEEDV0008 Install, modify and verify coaxial and structured communication copper cabling.....1384

UEEDV0009 Select and arrange data and voice equipment for local area networks.....1387

Assessment Requirements for UEEDV0009 Select and arrange data and voice equipment for local area networks1390

UEEDV0010 Select and arrange equipment for wireless communication networks.....1392

Assessment Requirements for UEEDV0010 Select and arrange equipment for wireless communication networks1395

UEEDV0011 Set up and configure basic data communication systems1397

Assessment Requirements for UEEDV0011 Set up and configure basic data communication systems1400

UEEDV0012 Set up and configure the wireless capabilities of communications and data storage devices1402

Assessment Requirements for UEEDV0012 Set up and configure the wireless capabilities of communications and data storage devices.....1405

UEEDV0013 Solve problems in voice and data communications circuits.....1407

Assessment Requirements for UEEDV0013 Solve problems in voice and data communications circuits1410

UEEDV0014 Test, report and rectify faults in data and voice installations.....1412

Assessment Requirements for UEEDV0014 Test, report and rectify faults in data and voice installations1416

UEEEC0001 Analyse the performance of wireless-based electronic communication systems.....1418

Assessment Requirements for UEEEC0001 Analyse the performance of wireless-based electronic communication systems1421

UEEEC0002 Assemble and install reception antennae and signal distribution equipment1424

Assessment Requirements for UEEEC0002 Assemble and install reception antennae and signal distribution equipment1427

UEEEC0003 Assemble and set up basic security systems1429

Assessment Requirements for UEEEC0003 Assemble and set up basic security systems1433

UEEEC0004 Assemble and set up fixed video/audio components and systems in buildings and premises.....1437

Assessment Requirements for UEEEC0004 Assemble and set up fixed video/audio components and systems in buildings and premises1440

UEEEC0005 Assess electronic apparatus compliance1442

Assessment Requirements for UEEEC0005 Assess electronic apparatus compliance ...1446

UEEEC0006 Carry out repairs of predictable faults in video and audio replay/recording apparatus1449

Assessment Requirements for UEEEC0006 Carry out repairs of predictable faults in video and audio replay/recording apparatus1453

UEEEC0007 Commission electronics and communications systems1455

Assessment Requirements for UEEEC0007 Commission electronics and communications systems.....1459

UEEEC0008 Commission large fire protection systems1461

Assessment Requirements for UEEEC0008 Commission large fire protection systems.1465

UEEEC0009 Commission satellite and microwave communication systems1467

Assessment Requirements for UEEEC0009 Commission satellite and microwave communication systems1471

UEEEC0010 Design and develop advanced digital systems1474

Assessment Requirements for UEEEC0010 Design and develop advanced digital systems1477

UEEEC0011 Design and develop electronics/computer systems projects1479

Assessment Requirements for UEEEC0011 Design and develop electronics/computer systems projects1482

UEEEEC0012 Design custom electronic equipment installations1484
Assessment Requirements for UEEEC0012 Design custom electronic equipment installations.....1487
UEEEEC0013 Design electronic printed circuit boards1490
Assessment Requirements for UEEEC0013 Design electronic printed circuit boards ...1493
UEEEEC0014 Design signal-conditioning sub-systems1495
Assessment Requirements for UEEEC0014 Design signal-conditioning sub-systems....1498
UEEEEC0015 Develop basic plans for integrating security systems.....1500
Assessment Requirements for UEEEC0015 Develop basic plans for integrating security systems.....1503
UEEEEC0016 Develop engineering solutions to RF amplifier problems1505
Assessment Requirements for UEEEC0016 Develop engineering solutions to RF amplifier problems.....1509
UEEEEC0017 Develop engineering solutions to analogue electronic problems1512
Assessment Requirements for UEEEC0017 Develop engineering solutions to analogue electronic problems.....1515
UEEEEC0018 Develop engineering solutions to audio electronic problems1517
Assessment Requirements for UEEEC0018 Develop engineering solutions to audio electronic problems.....1521
UEEEEC0019 Develop software solutions for microcontroller-based systems1524
Assessment Requirements for UEEEC0019 Develop software solutions for microcontroller-based systems.....1527
UEEEEC0020 Develop solutions for air surveillance apparatus and systems.....1529
Assessment Requirements for UEEEC0020 Develop solutions for air surveillance apparatus and systems1533
UEEEEC0021 Diagnose and rectify faults in air navigation circuits and systems1537
Assessment Requirements for UEEEC0021 Diagnose and rectify faults in air navigation circuits and systems1542
UEEEEC0022 Diagnose and rectify faults in camera circuits and equipment.....1548
Assessment Requirements for UEEEC0022 Diagnose and rectify faults in camera circuits and equipment.....1552
UEEEEC0023 Diagnose and rectify faults in digital transmission circuits and systems...1555
Assessment Requirements for UEEEC0023 Diagnose and rectify faults in digital transmission circuits and systems1559
UEEEEC0024 Diagnose and rectify faults in electronic display circuits.....1563
Assessment Requirements for UEEEC0024 Diagnose and rectify faults in electronic display circuits.....1567
UEEEEC0025 Diagnose and rectify faults in recording and replay equipment.....1570
Assessment Requirements for UEEEC0025 Diagnose and rectify faults in recording and replay equipment.....1574
UEEEEC0026 Enter and verify programs for fire protection systems1577
Assessment Requirements for UEEEC0026 Enter and verify programs for fire protection systems.....1581
UEEEEC0027 Enter instructions and test wired and wireless security systems1583
Assessment Requirements for UEEEC0027 Enter instructions and test wired and wireless security systems1587
UEEEEC0028 Fault find and repair complex power supplies1589
Assessment Requirements for UEEEC0028 Fault find and repair complex power supplies1593
UEEEEC0029 Fault find and repair electronic apparatus1596
Assessment Requirements for UEEEC0029 Fault find and repair electronic apparatus 1599
UEEEEC0030 Fault find and repair electronic medical equipment1601
Assessment Requirements for UEEEC0030 Fault find and repair electronic medical equipment.....1605

UEEEEC0031 Fault find and repair global positioning systems.....1608
Assessment Requirements for UEEEC0031 Fault find and repair global positioning systems.....1612
UEEEEC0032 Fault find and repair high-volume office equipment.....1614
Assessment Requirements for UEEEC0032 Fault find and repair high-volume office equipment.....1618
UEEEEC0033 Fault find and repair navigation systems1620
Assessment Requirements for UEEEC0033 Fault find and repair navigation systems..1624
UEEEEC0034 Fault find and repair radar apparatus and systems1626
Assessment Requirements for UEEEC0034 Fault find and repair radar apparatus and systems.....1630
UEEEEC0035 Fault find and repair satellite-based surveillance and observation systems1634
Assessment Requirements for UEEEC0035 Fault find and repair satellite-based surveillance and observation systems1638
UEEEEC0036 Fault find and repair sonar apparatus and systems1640
Assessment Requirements for UEEEC0036 Fault find and repair sonar apparatus and systems.....1644
UEEEEC0037 Fault find and repair telecommunication apparatus and systems1648
Assessment Requirements for UEEEC0037 Fault find and repair telecommunication apparatus and systems1652
UEEEEC0038 Find and repair microwave amplifier section faults in electronic apparatus1656
Assessment Requirements for UEEEC0038 Find and repair microwave amplifier section faults in electronic apparatus1660
UEEEEC0039 Install and test microwave antennae and waveguides1662
Assessment Requirements for UEEEC0039 Install and test microwave antennae and waveguides.....1665
UEEEEC0040 Install commercial video/audio system components1667
Assessment Requirements for UEEEC0040 Install commercial video/audio system components.....1670
UEEEEC0041 Install fire detection and warning system apparatus1672
Assessment Requirements for UEEEC0041 Install fire detection and warning system apparatus.....1676
UEEEEC0042 Install large security systems1679
Assessment Requirements for UEEEC0042 Install large security systems1683
UEEEEC0043 Manage computer systems/electronics projects.....1685
Assessment Requirements for UEEEC0043 Manage computer systems/electronics projects1689
UEEEEC0044 Modify - re design electronics and communications systems.....1692
Assessment Requirements for UEEEC0044 Modify - re design electronics and communications systems1696
UEEEEC0045 Modify digital signal processing (DSP) based sub-systems.....1698
Assessment Requirements for UEEEC0045 Modify digital signal processing (DSP) based sub-systems1701
UEEEEC0046 Operate and maintain amateur radio communication stations1704
Assessment Requirements for UEEEC0046 Operate and maintain amateur radio communication stations1708
UEEEEC0047 Plan large electronic projects.....1711
Assessment Requirements for UEEEC0047 Plan large electronic projects1714
UEEEEC0048 Program and commission commercial access control security systems1717
Assessment Requirements for UEEEC0048 Program and commission commercial access control security systems1721
UEEEEC0049 Program and commission commercial security closed-circuit television systems.....1723

Assessment Requirements for UEEEC0049 Program and commission commercial security closed-circuit television systems1727

UEEEEC0050 Program and commission commercial security systems.....1729

Assessment Requirements for UEEEC0050 Program and commission commercial security systems.....1733

UEEEEC0051 Program and commission commercial video/audio systems1735

Assessment Requirements for UEEEC0051 Program and commission commercial video/audio systems.....1739

UEEEEC0052 Program and test large security systems1741

Assessment Requirements for UEEEC0052 Program and test large security systems...1745

UEEEEC0053 Provide engineering solutions to air traffic control system problems.....1747

Assessment Requirements for UEEEC0053 Provide engineering solutions to air traffic control system problems1751

UEEEEC0054 Provide gate array solutions for complex electronics systems1756

Assessment Requirements for UEEEC0054 Provide gate array solutions for complex electronics systems1759

UEEEEC0055 Repair basic computer equipment faults by replacement of modules/sub-assemblies1761

Assessment Requirements for UEEEC0055 Repair basic computer equipment faults by replacement of modules/sub-assemblies1765

UEEEEC0056 Repair predictable faults in audio components1768

Assessment Requirements for UEEEC0056 Repair predictable faults in audio components 1772

UEEEEC0057 Repair predictable faults in general electronic apparatus1774

Assessment Requirements for UEEEC0057 Repair predictable faults in general electronic apparatus.....1778

UEEEEC0058 Repair predictable faults in television receivers1780

Assessment Requirements for UEEEC0058 Repair predictable faults in television receivers.....1784

UEEEEC0059 Repair routine business equipment faults1786

Assessment Requirements for UEEEC0059 Repair routine business equipment faults.1790

UEEEEC0060 Repairs basic electronic apparatus faults by replacement of components 1792

Assessment Requirements for UEEEC0060 Repairs basic electronic apparatus faults by replacement of components.....1796

UEEEEC0061 Set up and adjust commercial radio frequency (RF) transmission and reception systems1799

Assessment Requirements for UEEEC0061 Set up and adjust commercial radio frequency (RF) transmission and reception systems1803

UEEEEC0062 Set up and test residential video/audio equipment1806

Assessment Requirements for UEEEC0062 Set up and test residential video/audio equipment.....1809

UEEEEC0063 Solve fundamental electronic communications system problems1811

Assessment Requirements for UEEEC0063 Solve fundamental electronic communications system problems1814

UEEEEC0064 Solve oscillator problems1816

Assessment Requirements for UEEEC0064 Solve oscillator problems.....1819

UEEEEC0065 Solve problems in basic electronic circuits1821

Assessment Requirements for UEEEC0065 Solve problems in basic electronic circuits 1824

UEEEEC0066 Troubleshoot amplifiers in an electronic apparatus1827

Assessment Requirements for UEEEC0066 Troubleshoot amplifiers in an electronic apparatus.....1830

UEEEEC0067 Troubleshoot basic amplifier circuits.....1832

Assessment Requirements for UEEEC0067 Troubleshoot basic amplifier circuits1835

UEEEEC0068 Troubleshoot communication systems1837

Assessment Requirements for UEEEC0068 Troubleshoot communication systems1841
UEEEEC0069 Troubleshoot digital sub-systems1844
Assessment Requirements for UEEEC0069 Troubleshoot digital sub-systems.....1847
UEEEEC0070 Troubleshoot faults in television receivers1850
Assessment Requirements for UEEEC0070 Troubleshoot faults in television receivers 1854
UEEEEC0071 Troubleshoot fire protection systems1856
Assessment Requirements for UEEEC0071 Troubleshoot fire protection systems.....1860
UEEEEC0072 Troubleshoot microcontroller-based hardware systems.....1863
Assessment Requirements for UEEEC0072 Troubleshoot microcontroller-based hardware systems.....1866
UEEEEC0073 Troubleshoot professional audio reproduction components.....1869
Assessment Requirements for UEEEC0073 Troubleshoot professional audio reproduction components1873
UEEEEC0074 Troubleshoot resonance circuits in an electronic apparatus.....1875
Assessment Requirements for UEEEC0074 Troubleshoot resonance circuits in an electronic apparatus.....1878
UEEEEC0075 Troubleshoot single phase input d.c power supplies.....1881
Assessment Requirements for UEEEC0075 Troubleshoot single phase input d.c power supplies1884
UEEEEC0076 Verify compliance and functionality of fire protection system installations 1887
Assessment Requirements for UEEEC0076 Verify compliance and functionality of fire protection system installations1892
UEEEEC0077 Verify functionality and compliance of custom electronic installations1894
Assessment Requirements for UEEEC0077 Verify functionality and compliance of custom electronic installations1899
UEEEL0001 Apply compliance requirements to all aspects of electrical work1901
Assessment Requirements for UEEEL0001 Apply compliance requirements to all aspects of electrical work1904
UEEEL0002 Apply currency of safe working practices and compliance verification of electrical installations1906
Assessment Requirements for UEEEL0002 Apply currency of safe working practices and compliance verification of electrical installations1910
UEEEL0003 Arrange circuits, control and protection for electrical installations1913
Assessment Requirements for UEEEL0003 Arrange circuits, control and protection for electrical installations1917
UEEEL0004 Carry out basic repairs to electrical components and equipment.....1922
Assessment Requirements for UEEEL0004 Carry out basic repairs to electrical components and equipment1926
UEEEL0005 Develop and connect electrical control circuits1929
Assessment Requirements for UEEEL0005 Develop and connect electrical control circuits 1934
UEEEL0006 Develop detailed and complex drawings for electrical systems using CAD systems.....1938
Assessment Requirements for UEEEL0006 Develop detailed and complex drawings for electrical systems using CAD systems1942
UEEEL0007 Develop detailed electrical drawings1944
Assessment Requirements for UEEEL0007 Develop detailed electrical drawings1947
UEEEL0008 Evaluate and modify low voltage heating equipment and controls1951
Assessment Requirements for UEEEL0008 Evaluate and modify low voltage heating equipment and controls.....1955
UEEEL0009 Evaluate and modify low voltage lighting circuits, equipment and controls 1958
Assessment Requirements for UEEEL0009 Evaluate and modify low voltage lighting circuits, equipment and controls1962
UEEEL0010 Evaluate and modify low voltage socket outlets circuits1966

Assessment Requirements for UEEEL0010 Evaluate and modify low voltage socket outlets circuits	1970
UEEEL0011 Evaluate performance of low voltage electrical apparatus	1973
Assessment Requirements for UEEEL0011 Evaluate performance of low voltage electrical apparatus	1977
UEEEL0012 Install low voltage wiring, appliances, switchgear and associated accessories	1979
Assessment Requirements for UEEEL0012 Install low voltage wiring, appliances, switchgear and associated accessories	1985
UEEEL0014 Isolate, test and troubleshoot low voltage electrical circuits	1990
Assessment Requirements for UEEEL0014 Isolate, test and troubleshoot low voltage electrical circuits	1996
UEEEL0015 Manage large electrical projects	2002
Assessment Requirements for UEEEL0015 Manage large electrical projects	2005
UEEEL0016 Provide advice on effective and energy efficient lighting products	2008
Assessment Requirements for UEEEL0016 Provide advice on effective and energy efficient lighting products	2011
UEEEL0017 Repair and maintain mechanical components of electrical machines	2015
Assessment Requirements for UEEEL0017 Repair and maintain mechanical components of electrical machines	2019
UEEEL0018 Select wiring systems and select cables for low voltage electrical installations	2022
Assessment Requirements for UEEEL0018 Select wiring systems and select cables for low voltage electrical installations	2026
UEEEL0019 Solve problems in direct current (d.c.) machines	2031
Assessment Requirements for UEEEL0019 Solve problems in direct current (d.c.) machines	2035
UEEEL0020 Solve problems in low voltage a.c. circuits	2038
Assessment Requirements for UEEEL0020 Solve problems in low voltage a.c. circuits	2042
UEEEL0021 Solve problems in magnetic and electromagnetic devices	2048
Assessment Requirements for UEEEL0021 Solve problems in magnetic and electromagnetic devices	2052
UEEEL0022 Supply effective and efficient lighting products for domestic and small commercial applications	2055
Assessment Requirements for UEEEL0022 Supply effective and efficient lighting products for domestic and small commercial applications	2058
UEEEL0023 Terminate cables, cords and accessories for low voltage circuits	2061
Assessment Requirements for UEEEL0023 Terminate cables, cords and accessories for low voltage circuits	2065
UEEEL0024 Test and connect alternating current (a.c.) rotating machines	2069
Assessment Requirements for UEEEL0024 Test and connect alternating current (a.c.) rotating machines	2073
UEEEL0025 Test and connect transformers	2078
Assessment Requirements for UEEEL0025 Test and connect transformers	2082
UEEEL0026 Align and install traction lift equipment	2085
Assessment Requirements for UEEEL0026 Align and install traction lift equipment ...	2089
UEEEL0027 Carry out low voltage electrical field testing and report findings	2092
Assessment Requirements for UEEEL0027 Carry out low voltage electrical field testing and report findings	2096
UEEEL0028 Conduct compliance and functional verification of electrical apparatus and existing circuits	2100
Assessment Requirements for UEEEL0028 Conduct compliance and functional verification of electrical apparatus and existing circuits	2105
UEEEL0029 Conduct compliance inspection of LV electrical installations with demand exceeding 100 A per phase	2112

Assessment Requirements for UEEEL0029 Conduct compliance inspection of LV electrical installations with demand exceeding 100 A per phase.....2117

UEEEL0030 Conduct compliance inspection of single phase LV electrical installations 2119

Assessment Requirements for UEEEL0030 Conduct compliance inspection of single phase LV electrical installations2123

UEEEL0031 Conduct compliance inspection of special LV electrical installations2126

Assessment Requirements for UEEEL0031 Conduct compliance inspection of special LV electrical installations2131

UEEEL0032 Conduct electrical tests on HV electrical machines2134

Assessment Requirements for UEEEL0032 Conduct electrical tests on HV electrical machines.....2138

UEEEL0033 Conduct electrical tests on LV electrical machines.....2140

Assessment Requirements for UEEEL0033 Conduct electrical tests on LV electrical machines.....2144

UEEEL0034 Conduct mechanical tests on electrical machines and components.....2147

Assessment Requirements for UEEEL0034 Conduct mechanical tests on electrical machines and components2151

UEEEL0035 Design effective and efficient lighting for public, open and sports areas...2153

Assessment Requirements for UEEEL0035 Design effective and efficient lighting for public, open and sports areas2156

UEEEL0036 Design effective and efficient lighting for residential and commercial buildings2159

Assessment Requirements for UEEEL0036 Design effective and efficient lighting for residential and commercial buildings.....2162

UEEEL0037 Design electrical installations with a low voltage demand greater than 400 A per phase2165

Assessment Requirements for UEEEL0037 Design electrical installations with a low voltage demand greater than 400 A per phase2169

UEEEL0038 Design switchboards rated for high fault levels (greater than 400 A).....2171

Assessment Requirements for UEEEL0038 Design switchboards rated for high fault levels (greater than 400 A).....2175

UEEEL0039 Design, install and verify compliance and functionality of general electrical installations.....2178

Assessment Requirements for UEEEL0039 Design, install and verify compliance and functionality of general electrical installations2185

UEEEL0040 Develop compliance policies and plans to conduct an electrical contracting business.....2195

Assessment Requirements for UEEEL0040 Develop compliance policies and plans to conduct an electrical contracting business2198

UEEEL0041 Develop engineering solution for synchronous machine and control problems 2200

Assessment Requirements for UEEEL0041 Develop engineering solution for synchronous machine and control problems2204

UEEEL0042 Develop engineering solutions for d.c. machine and control problems2208

Assessment Requirements for UEEEL0042 Develop engineering solutions for d.c. machine and control problems2212

UEEEL0043 Develop engineering solutions for induction machine and control problems 2217

Assessment Requirements for UEEEL0043 Develop engineering solutions for induction machine and control problems2221

UEEEL0044 Diagnose and rectify faults in complex lift systems.....2225

Assessment Requirements for UEEEL0044 Diagnose and rectify faults in complex lift systems.....2229

UEEEL0045 Diagnose and rectify faults in traction lift systems2233

Assessment Requirements for UEEEL0045 Diagnose and rectify faults in traction lift systems.....	2238
UEEEL0046 Find and repair faults in LV d.c. electrical apparatus and circuits	2245
Assessment Requirements for UEEEL0046 Find and repair faults in LV d.c. electrical apparatus and circuits	2249
UEEEL0047 Identify, shut down and restart systems with alternate supplies.....	2252
Assessment Requirements for UEEEL0047 Identify, shut down and restart systems with alternate supplies	2256
UEEEL0049 Install and maintain emergency safety systems	2260
Assessment Requirements for UEEEL0049 Install and maintain emergency safety systems	2265
UEEEL0050 Install and replace low voltage current transformer metering	2268
Assessment Requirements for UEEEL0050 Install and replace low voltage current transformer metering.....	2273
UEEEL0051 Investigate and report on electrical incidents and causes	2276
Assessment Requirements for UEEEL0051 Investigate and report on electrical incidents and causes.....	2281
UEEEL0052 Maintain and service traction lift systems and equipment.....	2284
Assessment Requirements for UEEEL0052 Maintain and service traction lift systems and equipment.....	2288
UEEEL0053 Maintain operation of electrical marine equipment and systems.....	2291
Assessment Requirements for UEEEL0053 Maintain operation of electrical marine equipment and systems	2295
UEEEL0054 Maintain operation of electrical mining equipment and systems	2298
Assessment Requirements for UEEEL0054 Maintain operation of electrical mining equipment and systems	2302
UEEEL0055 Overhaul and repair major switchgear and control gear	2305
Assessment Requirements for UEEEL0055 Overhaul and repair major switchgear and control gear.....	2309
UEEEL0056 Place and connect electrical coils.....	2312
Assessment Requirements for UEEEL0056 Place and connect electrical coils	2315
UEEEL0057 Plan electrical installations with a low voltage demand up to 400 A per phase	2318
Assessment Requirements for UEEEL0057 Plan electrical installations with a low voltage demand up to 400 A per phase	2322
UEEEL0058 Plan large electrical projects	2324
Assessment Requirements for UEEEL0058 Plan large electrical projects.....	2327
UEEEL0059 Plan low voltage switchboard and control panel layouts	2331
Assessment Requirements for UEEEL0059 Plan low voltage switchboard and control panel layouts	2335
UEEEL0060 Prepare quotations for the supply of effective and efficient lighting products for lighting projects	2337
Assessment Requirements for UEEEL0060 Prepare quotations for the supply of effective and efficient lighting products for lighting projects	2340
UEEEL0061 Provide advice on the application of energy efficient lighting for ambient and aesthetic effect.....	2342
Assessment Requirements for UEEEL0061 Provide advice on the application of energy efficient lighting for ambient and aesthetic effect.....	2345
UEEEL0062 Provide engineering solutions to problems in complex polyphase power circuits	2347
Assessment Requirements for UEEEL0062 Provide engineering solutions to problems in complex polyphase power circuits.....	2350
UEEEL0063 Provide photometric data for illumination system design	2354
Assessment Requirements for UEEEL0063 Provide photometric data for illumination system design.....	2357

UEEEL0064 Rewind HV three phase induction machines rated for voltages above 3.3 kV 2360
Assessment Requirements for UEEEL0064 Rewind HV three phase induction machines
rated for voltages above 3.3 kV.....2364

UEEEL0065 Rewind HV three phase induction machines rated for voltages to 3.3 kV 2368
Assessment Requirements for UEEEL0065 Rewind HV three phase induction machines
rated for voltages to 3.3 kV.....2372

UEEEL0066 Rewind LV direct current machines2376
Assessment Requirements for UEEEL0066 Rewind LV direct current machines2380

UEEEL0067 Rewind single phase machines2384
Assessment Requirements for UEEEL0067 Rewind single phase machines.....2388

UEEEL0068 Rewind three phase low voltage induction machines.....2390
Assessment Requirements for UEEEL0068 Rewind three phase low voltage induction
machines.....2394

UEEEL0069 Select and arrange equipment for special LV electrical installations.....2397
Assessment Requirements for UEEEL0069 Select and arrange equipment for special LV
electrical installations2401

UEEEL0070 Select effective and efficient light sources and luminaries for given locations
and designs2403
Assessment Requirements for UEEEL0070 Select effective and efficient light sources and
luminaries for given locations and designs2406

UEEEL0071 Select low voltage power factor correction equipment2409
Assessment Requirements for UEEEL0071 Select low voltage power factor correction
equipment.....2413

UEEEL0072 Set up and place LV electrical apparatus and associated circuits into service2416
Assessment Requirements for UEEEL0072 Set up and place LV electrical apparatus and
associated circuits into service2420

UEEEL0073 Verify compliance and functionality of special LV electrical installations 2422
Assessment Requirements for UEEEL0073 Verify compliance and functionality of special
LV electrical installations2427

UEEEL0074 Wind electrical coils.....2430
Assessment Requirements for UEEEL0074 Wind electrical coils.....2433

UEEEL0075 Inspect, test and maintain emergency alarm systems and equipment.....2436
Assessment Requirements for UEEEL0075 Inspect, test and maintain emergency alarm
systems and equipment.....2440

UEEEL0076 Inspect, test and maintain emergency lighting systems2442
Assessment Requirements for UEEEL0076 Inspect, test and maintain emergency lighting
systems.....2446

UEEEL0077 Evaluate and report on the performance of LV machines2448
Assessment Requirements for UEEEL0077 Evaluate and report on the performance of LV
machines.....2451

UEEEL0078 Install and commission whole current electricity meters2457
Assessment Requirements for UEEEL0078 Install and commission whole current
electricity meters.....2463

UEEEL0079 Plan and analyse LV electrical apparatus2468
Assessment Requirements for UEEEL0079 Plan and analyse LV electrical apparatus .2471

UEEEL0080 Plan and analyse wiring systems, circuits, control and protection for
electrical installations2474
Assessment Requirements for UEEEL0080 Plan and analyse wiring systems, circuits,
control and protection for electrical installations2478

UEEHA0004 Enter a classified hazardous area to undertake work related to electrical
equipment.....2483
Assessment Requirements for UEEHA0004 Enter a classified hazardous area to undertake
work related to electrical equipment.....2486

UEEHA0008 Design gas detection systems2489
 Assessment Requirements for UEEHA0008 Design gas detection systems2492
 UEEHA0016 Assess the fitness-for-purpose of explosion-protected equipment2496
 Assessment Requirements for UEEHA0016 Assess the fitness-for-purpose of
 explosion-protected equipment.....2500
 UEEHA0017 Classify areas where a combustible dust hazard may arise.....2503
 Assessment Requirements for UEEHA0017 Classify areas where a combustible dust
 hazard may arise.....2507
 UEEHA0018 Classify areas where flammable gas or vapour hazards may arise2510
 Assessment Requirements for UEEHA0018 Classify areas where flammable gas or vapour
 hazards may arise2514
 UEEHA0019 Conduct a conformity assessment review of explosion-protected equipment2518
 Assessment Requirements for UEEHA0019 Conduct a conformity assessment review of
 explosion-protected equipment.....2522
 UEEHA0020 Conduct detailed inspection of electrical installations for hazardous areas2525
 Assessment Requirements for UEEHA0020 Conduct detailed inspection of electrical
 installations for hazardous areas.....2529
 UEEHA0021 Design explosion-protected electrical systems and installations2533
 Assessment Requirements for UEEHA0021 Design explosion-protected electrical systems
 and installations2537
 UEEHA0022 Determine the explosion-protection requirements to meet a specified
 classified hazardous area2540
 Assessment Requirements for UEEHA0022 Determine the explosion-protection
 requirements to meet a specified classified hazardous area.....2543
 UEEHA0023 Develop and manage periodic electrical inspection and maintenance
 programs for hazardous areas2550
 Assessment Requirements for UEEHA0023 Develop and manage periodic electrical
 inspection and maintenance programs for hazardous areas.....2554
 UEEHA0024 Inspect, maintain and fit plugs/couplers for reeling, trailing and flexible
 cables - coal mining.....2557
 Assessment Requirements for UEEHA0024 Inspect, maintain and fit plugs/couplers for
 reeling, trailing and flexible cables - coal mining2561
 UEEHA0025 Install explosion-protected equipment and associated apparatus and wiring
 systems.....2567
 Assessment Requirements for UEEHA0025 Install explosion-protected equipment and
 associated apparatus and wiring systems.....2571
 UEEHA0026 Maintain equipment associated with hazardous areas2575
 Assessment Requirements for UEEHA0026 Maintain equipment associated with
 hazardous areas2579
 UEEHA0027 Manage continuous supervision inspection of electrical installations for
 hazardous areas2582
 Assessment Requirements for UEEHA0027 Manage continuous supervision inspection of
 electrical installations for hazardous areas2586
 UEEHA0028 Perform compliance audits of hazardous areas and related electrical
 installation.....2590
 Assessment Requirements for UEEHA0028 Perform compliance audits of hazardous areas
 and related electrical installation.....2594
 UEEHA0029 Plan electrical installations for hazardous areas2597
 Assessment Requirements for UEEHA0029 Plan electrical installations for hazardous
 areas2601
 UEEHA0030 Repair reeling, trailing and flexible cables used in coal mining2604
 Assessment Requirements for UEEHA0030 Repair reeling, trailing and flexible cables
 used in coal mining2608

UEEHA0031 Supervise repair and overhaul of explosion-protected equipment type flameproof (Ex d).....2611
Assessment Requirements for UEEHA0031 Supervise repair and overhaul of explosion-protected equipment type flameproof (Ex d).....2615
UEEHA0032 Supervise repair and overhaul of explosion-protected equipment type increased safety (Ex e)2619
Assessment Requirements for UEEHA0032 Supervise repair and overhaul of explosion-protected equipment type increased safety (Ex e).....2623
UEEHA0033 Supervise repair and overhaul of explosion-protected equipment type intrinsically safe (Ex i)2627
Assessment Requirements for UEEHA0033 Supervise repair and overhaul of explosion-protected equipment type intrinsically safe (Ex i)2631
UEEHA0034 Supervise repair and overhaul of explosion-protected equipment type pressurised (Ex p)2635
Assessment Requirements for UEEHA0034 Supervise repair and overhaul of explosion-protected equipment type pressurised (Ex p)2639
UEEHA0035 Supervise repair and overhaul of explosion-protected rotating machines2643
Assessment Requirements for UEEHA0035 Supervise repair and overhaul of explosion-protected rotating machines.....2647
UEEHA0036 Test reeling, trailing and flexible cables and their attachments used in coal mining.....2650
Assessment Requirements for UEEHA0036 Test reeling, trailing and flexible cables and their attachments used in coal mining.....2654
UEEHA0037 Verify compliance of repaired reeling, trailing and flexible cables and attachments - coal mining2657
Assessment Requirements for UEEHA0037 Verify compliance of repaired reeling, trailing and flexible cables and attachments - coal mining.....2661
UEEHA0038 Conduct visual and close inspection of electrical installations for hazardous areas2663
Assessment Requirements for UEEHA0038 Conduct visual and close inspection of electrical installations for hazardous areas2666
UEEHA0039 Supervise repair and overhaul of explosion-protected equipment type Group III ('t').....2669
Assessment Requirements for UEEHA0039 Supervise repair and overhaul of explosion-protected equipment type Group III ('t')2673
UEEIC0001 Analyse complex electronic circuits controlling fluids.....2677
Assessment Requirements for UEEIC0001 Analyse complex electronic circuits controlling fluids2680
UEEIC0002 Assemble, enter and verify operating instructions in microprocessor equipped devices2682
Assessment Requirements for UEEIC0002 Assemble, enter and verify operating instructions in microprocessor equipped devices2685
UEEIC0003 Assist in commissioning process and instrumentation control systems.....2688
Assessment Requirements for UEEIC0003 Assist in commissioning process and instrumentation control systems2692
UEEIC0004 Calibrate, adjust and test measuring instruments.....2695
Assessment Requirements for UEEIC0004 Calibrate, adjust and test measuring instruments.....2698
UEEIC0005 Configure and maintain industrial control system networks.....2700
Assessment Requirements for UEEIC0005 Configure and maintain industrial control system networks.....2703
UEEIC0006 Design and configure Human-Machine Interface (HMI) networks.....2705

Assessment Requirements for UEEIC0006 Design and configure Human-Machine Interface (HMI) networks.....2709

UEEIC0007 Design and use advanced programming tools, PC networks and HMI Interfacing2712

Assessment Requirements for UEEIC0007 Design and use advanced programming tools, PC networks and HMI Interfacing2715

UEEIC0008 Design electronic control systems.....2717

Assessment Requirements for UEEIC0008 Design electronic control systems2721

UEEIC0009 Develop an electrical integrated system interface for access through a touch screen.....2723

Assessment Requirements for UEEIC0009 Develop an electrical integrated system interface for access through a touchscreen.....2727

UEEIC0010 Develop and test code for microcontroller devices2730

Assessment Requirements for UEEIC0010 Develop and test code for microcontroller devices2733

UEEIC0011 Develop electrical integrated systems.....2735

Assessment Requirements for UEEIC0011 Develop electrical integrated systems2739

UEEIC0012 Develop structured programs to control external devices2742

Assessment Requirements for UEEIC0012 Develop structured programs to control external devices.....2745

UEEIC0013 Develop, enter and verify discrete control programs for programmable controllers.....2748

Assessment Requirements for UEEIC0013 Develop, enter and verify discrete control programs for programmable controllers.....2752

UEEIC0014 Develop, enter and verify programs in supervisory control and data acquisition systems.....2756

Assessment Requirements for UEEIC0014 Develop, enter and verify programs in supervisory control and data acquisition systems2760

UEEIC0015 Develop, enter and verify word and analogue control programs for programmable logic controllers2763

Assessment Requirements for UEEIC0015 Develop, enter and verify word and analogue control programs for programmable logic controllers2766

UEEIC0016 Diagnose and rectify faults in a.c. motor drive systems2770

Assessment Requirements for UEEIC0016 Diagnose and rectify faults in a.c. motor drive systems.....2774

UEEIC0017 Diagnose and rectify faults in d.c. motor drive systems.....2776

Assessment Requirements for UEEIC0017 Diagnose and rectify faults in d.c. motor drive systems.....2780

UEEIC0018 Diagnose and rectify faults in digital controls systems2782

Assessment Requirements for UEEIC0018 Diagnose and rectify faults in digital controls systems.....2787

UEEIC0019 Diagnose and rectify faults in servo drive systems2792

Assessment Requirements for UEEIC0019 Diagnose and rectify faults in servo drive systems.....2796

UEEIC0020 Fault find and repair analogue circuits and components in electronic control systems.....2798

Assessment Requirements for UEEIC0020 Fault find and repair analogue circuits and components in electronic control systems.....2803

UEEIC0021 Find and rectify faults in process final control elements2807

Assessment Requirements for UEEIC0021 Find and rectify faults in process final control elements2811

UEEIC0022 Install instrumentation and control apparatus and associated equipment 2813

Assessment Requirements for UEEIC0022 Install instrumentation and control apparatus and associated equipment2817

UEEIC0023 Install instrumentation and control cabling and tubing2819

Assessment Requirements for UEEIC0023 Install instrumentation and control cabling and tubing2823

UEEIC0024 Plan the electrical installation of integrated systems2825

Assessment Requirements for UEEIC0024 Plan the electrical installation of integrated systems.....2829

UEEIC0025 Provide solutions to extra-low voltage (ELV) electro-pneumatic control systems and drives2832

Assessment Requirements for UEEIC0025 Provide solutions to extra-low voltage (ELV) electro-pneumatic control systems and drives.....2836

UEEIC0026 Provide solutions to fluid circuit operations.....2839

Assessment Requirements for UEEIC0026 Provide solutions to fluid circuit operations2842

UEEIC0027 Provide solutions to pneumatic-hydraulic system operations.....2845

Assessment Requirements for UEEIC0027 Provide solutions to pneumatic-hydraulic system operations.....2849

UEEIC0028 Provide solutions to problems in industrial control systems.....2851

Assessment Requirements for UEEIC0028 Provide solutions to problems in industrial control systems2855

UEEIC0029 Set up and adjust PID control loops.....2858

Assessment Requirements for UEEIC0029 Set up and adjust PID control loops2861

UEEIC0030 Set up and adjust advanced PID process control loops2864

Assessment Requirements for UEEIC0030 Set up and adjust advanced PID process control loops2868

UEEIC0031 Set up and configure human-machine interface (HMI) and industrial networks2870

Assessment Requirements for UEEIC0031 Set up and configure human-machine interface (HMI) and industrial networks.....2873

UEEIC0032 Set up electronically controlled robotically operated complex systems2875

Assessment Requirements for UEEIC0032 Set up electronically controlled robotically operated complex systems.....2880

UEEIC0033 Set up gas analysis measuring and control instruments2882

Assessment Requirements for UEEIC0033 Set up gas analysis measuring and control instruments.....2886

UEEIC0034 Set up industrial field control devices2888

Assessment Requirements for UEEIC0034 Set up industrial field control devices.....2892

UEEIC0035 Set up scientific analysis measuring and control instruments2895

Assessment Requirements for UEEIC0035 Set up scientific analysis measuring and control instruments.....2899

UEEIC0036 Set up water analysis measuring and control instruments2901

Assessment Requirements for UEEIC0036 Set up water analysis measuring and control instruments.....2905

UEEIC0037 Set up weighting measuring and control instruments2907

Assessment Requirements for UEEIC0037 Set up weighting measuring and control instruments.....2911

UEEIC0038 Solve problems in density/level measurement components and systems....2913

Assessment Requirements for UEEIC0038 Solve problems in density/level measurement components and systems2916

UEEIC0039 Solve problems in flow measurement components and systems2919

Assessment Requirements for UEEIC0039 Solve problems in flow measurement components and systems2922

UEEIC0040 Solve problems in polyphase electronic power control circuits2926

Assessment Requirements for UEEIC0040 Solve problems in polyphase electronic power control circuits2930

UEEIC0041 Solve problems in pressure measurement components and systems2935

Assessment Requirements for UEEIC0041 Solve problems in pressure measurement components and systems2938

UEEIC0042 Solve problems in single phase electronic power control circuits2941

Assessment Requirements for UEEIC0042 Solve problems in single phase electronic power control circuits2946

UEEIC0043 Solve problems in temperature measurement components and systems....2951

Assessment Requirements for UEEIC0043 Solve problems in temperature measurement components and systems2954

UEEIC0044 Troubleshoot measuring and analysis systems2957

Assessment Requirements for UEEIC0044 Troubleshoot measuring and analysis systems 2961

UEEIC0045 Troubleshoot medical equipment control systems2963

Assessment Requirements for UEEIC0045 Troubleshoot medical equipment control systems2967

UEEIC0046 Troubleshoot process control systems2969

Assessment Requirements for UEEIC0046 Troubleshoot process control systems2973

UEEIC0047 Use instrumentation drawings, specifications, standards and equipment manuals2975

Assessment Requirements for UEEIC0047 Use instrumentation drawings, specifications, standards and equipment manuals2978

UEEIC0048 Verify compliance and functionality of instrumentation and control installations2982

Assessment Requirements for UEEIC0048 Verify compliance and functionality of instrumentation and control installations2987

UEEIC0049 Manage instrumentation and control projects2989

Assessment Requirements for UEEIC0049 Manage instrumentation and control projects 2992

UEEIC0050 Plan instrumentation and control projects2994

Assessment Requirements for UEEIC0050 Plan instrumentation and control projects 2997

UEEIC0051 Evaluate motor drive systems and diagnose faults2999

Assessment Requirements for UEEIC0051 Evaluate motor drive systems and diagnose faults3002

UEERA0001 Analyse the operation of HVAC air and hydronic systems3004

Assessment Requirements for UEERA0001 Analyse the operation of HVAC air and hydronic systems3008

UEERA0002 Analyse the psychrometric performance of HVAC/R systems3012

Assessment Requirements for UEERA0002 Analyse the psychrometric performance of HVAC/R systems3016

UEERA0003 Analyse the thermodynamic performance of HVAC/R systems3019

Assessment Requirements for UEERA0003 Analyse the thermodynamic performance of HVAC/R systems3022

UEERA0004 Analyse vibration and noise in refrigeration and air conditioning systems 3027

Assessment Requirements for UEERA0004 Analyse vibration and noise in refrigeration and air conditioning systems3031

UEERA0005 Apply safety awareness and legal requirements for ammonia refrigerant 3035

Assessment Requirements for UEERA0005 Apply safety awareness and legal requirements for ammonia refrigerant3038

UEERA0006 Apply safety awareness and legal requirements for carbon dioxide refrigerant3040

Assessment Requirements for UEERA0006 Apply safety awareness and legal requirements for carbon dioxide refrigerant3043

UEERA0007 Apply safety awareness and legal requirements for flammable refrigerants 3045

Assessment Requirements for UEERA0007 Apply safety awareness and legal requirements for flammable refrigerants3048

UEERA0008 Audit HVAC/R control systems for compliance with regulations and standards3050

Assessment Requirements for UEERA0008 Audit HVAC/R control systems for compliance with regulations and standards3054

UEERA0009 Audit energy use for commercial HVAC/R systems.....3056

Assessment Requirements for UEERA0009 Audit energy use for commercial HVAC/R systems.....3060

UEERA0010 Commission complex heating, ventilation and air conditioning (HVAC) systems.....3063

Assessment Requirements for UEERA0010 Commission complex heating, ventilation and air conditioning (HVAC) systems.....3067

UEERA0011 Commission complex refrigeration systems and equipment3070

Assessment Requirements for UEERA0011 Commission complex refrigeration systems and equipment3075

UEERA0012 Commission complex refrigeration/air conditioning control systems3078

Assessment Requirements for UEERA0012 Commission complex refrigeration/air conditioning control systems3082

UEERA0013 Commission refrigeration/air conditioning hydronic systems3085

Assessment Requirements for UEERA0013 Commission refrigeration/air conditioning hydronic systems.....3090

UEERA0014 Design ammonia refrigerated systems3093

Assessment Requirements for UEERA0014 Design ammonia refrigerated systems3097

UEERA0015 Design carbon dioxide refrigerated systems.....3102

Assessment Requirements for UEERA0015 Design carbon dioxide refrigerated systems3106

UEERA0016 Design commercial refrigeration systems and select components3109

Assessment Requirements for UEERA0016 Design commercial refrigeration systems and select components3113

UEERA0017 Design complex air conditioning systems and select equipment.....3118

Assessment Requirements for UEERA0017 Design complex air conditioning systems and select equipment3122

UEERA0018 Design complex commercial refrigeration systems and select equipment.3127

Assessment Requirements for UEERA0018 Design complex commercial refrigeration systems and select equipment.....3131

UEERA0019 Design complex control systems for refrigeration or heating, ventilation, air conditioning systems3134

Assessment Requirements for UEERA0019 Design complex control systems for refrigeration or heating, ventilation, air conditioning systems3138

UEERA0020 Design complex industrial refrigeration systems and select equipment....3142

Assessment Requirements for UEERA0020 Design complex industrial refrigeration systems and select equipment.....3146

UEERA0021 Design control systems for refrigeration or heating, ventilation and air conditioning systems3150

Assessment Requirements for UEERA0021 Design control systems for refrigeration or heating, ventilation and air conditioning systems.....3154

UEERA0022 Design heating, ventilation and air conditioning (HVAC) systems and select components.....3158

Assessment Requirements for UEERA0022 Design heating, ventilation and air conditioning (HVAC) systems and select components3162

UEERA0023 Design hydrocarbon refrigerated systems.....3167

Assessment Requirements for UEERA0023 Design hydrocarbon refrigerated systems 3171

UEERA0024 Design hydronic systems and select equipment.....3174

Assessment Requirements for UEERA0024 Design hydronic systems and select equipment 3178

UEERA0025 Design industrial refrigeration systems and select components3183

Assessment Requirements for UEERA0025 Design industrial refrigeration systems and select components3187

UEERA0026 Design mechanical ventilation/exhaust systems and select equipment3190

Assessment Requirements for UEERA0026 Design mechanical ventilation/exhaust systems and select equipment.....3194

UEERA0027 Design secondary refrigerant systems.....3197

Assessment Requirements for UEERA0027 Design secondary refrigerant systems3201

UEERA0028 Determine noise and vibration encountered in HVAC/R applications3205

Assessment Requirements for UEERA0028 Determine noise and vibration encountered in HVAC/R applications3209

UEERA0029 Develop heat exchanger design specifications3212

Assessment Requirements for UEERA0029 Develop heat exchanger design specifications 3216

UEERA0030 Develop specifications and prepare drawings for HVAC/R projects.....3219

Assessment Requirements for UEERA0030 Develop specifications and prepare drawings for HVAC/R projects.....3223

UEERA0031 Diagnose and rectify faults in air conditioning and refrigeration control systems.....3226

Assessment Requirements for UEERA0031 Diagnose and rectify faults in air conditioning and refrigeration control systems.....3230

UEERA0032 Diagnose and rectify faults in complex air conditioning/refrigeration systems 3232

Assessment Requirements for UEERA0032 Diagnose and rectify faults in complex air conditioning/refrigeration systems3237

UEERA0033 Diagnose faults in complex HVAC/refrigeration control systems3241

Assessment Requirements for UEERA0033 Diagnose faults in complex HVAC/refrigeration control systems.....3246

UEERA0034 Establish heat loads for commercial refrigeration and/or air conditioning applications.....3250

Assessment Requirements for UEERA0034 Establish heat loads for commercial refrigeration and/or air conditioning applications3254

UEERA0035 Establish the basic operating conditions of air conditioning systems3259

Assessment Requirements for UEERA0035 Establish the basic operating conditions of air conditioning systems3262

UEERA0036 Establish the basic operating conditions of vapour compression systems 3264

Assessment Requirements for UEERA0036 Establish the basic operating conditions of vapour compression systems3268

UEERA0037 Establish the basic operating conditions of vapour compression systems - appliances3271

Assessment Requirements for UEERA0037 Establish the basic operating conditions of vapour compression systems - appliances3275

UEERA0038 Establish the thermodynamic parameters of refrigeration and air conditioning systems3278

Assessment Requirements for UEERA0038 Establish the thermodynamic parameters of refrigeration and air conditioning systems.....3282

UEERA0039 Evaluate and report on building services energy management systems ...3287

Assessment Requirements for UEERA0039 Evaluate and report on building services energy management systems3291

UEERA0040 Evaluate and report on the indoor air quality of buildings3296

Assessment Requirements for UEERA0040 Evaluate and report on the indoor air quality of buildings3300

UEERA0041 Evaluate new and alternative technologies applicable to electrotechnology applications.....3303

Assessment Requirements for UEERA0041 Evaluate new and alternative technologies applicable to electrotechnology applications3306

UEERA0042 Evaluate thermodynamic and fluid parameters of refrigeration systems.3309

Assessment Requirements for UEERA0042 Evaluate the rmodynamic and fluid parameters of refrigeration systems.....3313

UEERA0043 Find and rectify faults in appliance control systems and devices3319

Assessment Requirements for UEERA0043 Find and rectify faults in appliance control systems and devices.....3323

UEERA0044 Find and rectify faults in single phase motors and associated controls3325

Assessment Requirements for UEERA0044 Find and rectify faults in single phase motors and associated controls3329

UEERA0045 Find and rectify faults in three phase motors and associated controls3331

Assessment Requirements for UEERA0045 Find and rectify faults in three phase motors and associated controls3335

UEERA0046 Install and commission ammonia refrigeration systems, components and associated equipment.....3337

Assessment Requirements for UEERA0046 Install and commission ammonia refrigeration systems, components and associated equipment.....3341

UEERA0047 Install and commission carbon dioxide refrigeration systems, components and associated equipment3344

Assessment Requirements for UEERA0047 Install and commission carbon dioxide refrigeration systems, components and associated equipment.....3349

UEERA0048 Install and commission flammable refrigerant air conditioning and refrigeration systems.....3352

Assessment Requirements for UEERA0048 Install and commission flammable refrigerant air conditioning and refrigeration systems.....3357

UEERA0049 Install and start up single head split air conditioning and water heating heat pump systems.....3359

Assessment Requirements for UEERA0049 Install and start up single head split air conditioning and water heating heat pump systems3364

UEERA0050 Install refrigerant pipe work, flow controls and accessories3367

Assessment Requirements for UEERA0050 Install refrigerant pipe work, flow controls and accessories.....3371

UEERA0051 Install, commission, service and maintain air conditioning systems3374

Assessment Requirements for UEERA0051 Install, commission, service and maintain air conditioning systems3381

UEERA0052 Install, commission, service and maintain low temperature systems3385

Assessment Requirements for UEERA0052 Install, commission, service and maintain low temperature systems3390

UEERA0053 Install, commission, service and maintain medium temperature systems.3393

Assessment Requirements for UEERA0053 Install, commission, service and maintain medium temperature systems3398

UEERA0054 Maintain microbial control of refrigeration and air conditioning systems3401

Assessment Requirements for UEERA0054 Maintain microbial control of refrigeration and air conditioning systems3405

UEERA0055 Manage refrigeration and air conditioning projects3407

Assessment Requirements for UEERA0055 Manage refrigeration and air conditioning projects.....3410

UEERA0056 Monitor and adjust refrigeration energy management systems3413

Assessment Requirements for UEERA0056 Monitor and adjust refrigeration energy management systems.....3417

UEERA0057 Operate ammonia refrigeration plant.....3420

Assessment Requirements for UEERA0057 Operate ammonia refrigeration plant3424

UEERA0058 Plan refrigeration and air conditioning projects.....3427
Assessment Requirements for UEERA0058 Plan refrigeration and air conditioning projects.....3430
UEERA0059 Prepare and connect refrigerant tubing and fittings3432
Assessment Requirements for UEERA0059 Prepare and connect refrigerant tubing and fittings.....3435
UEERA0060 Produce HVAC/R control system diagrams.....3438
Assessment Requirements for UEERA0060 Produce HVAC/R control system diagrams 3442
UEERA0061 Produce HVAC/R system design drawings3445
Assessment Requirements for UEERA0061 Produce HVAC/R system design drawings 3449
UEERA0062 Recover and charge refrigerants3451
Assessment Requirements for UEERA0062 Recover and charge refrigerants3455
UEERA0063 Recover, pressure test, evacuate, charge and leak test refrigerants - appliances3457
Assessment Requirements for UEERA0063 Recover, pressure test, evacuate, charge and leak test refrigerants - appliances3461
UEERA0064 Recover, pressure test, evacuate, charge and leak test refrigerants - split systems.....3464
Assessment Requirements for UEERA0064 Recover, pressure test, evacuate, charge and leak test refrigerants - split systems3468
UEERA0065 Repair and service ammonia refrigeration systems3471
Assessment Requirements for UEERA0065 Repair and service ammonia refrigeration systems.....3475
UEERA0066 Repair and service carbon dioxide refrigeration systems.....3478
Assessment Requirements for UEERA0066 Repair and service carbon dioxide refrigeration systems.....3482
UEERA0067 Repair and service secondary refrigeration systems3485
Assessment Requirements for UEERA0067 Repair and service secondary refrigeration systems.....3490
UEERA0068 Repair and service self-contained carbon dioxide refrigeration and heat pump systems.....3493
Assessment Requirements for UEERA0068 Repair and service self-contained carbon dioxide refrigeration and heat pump systems.....3498
UEERA0069 Resolve problems in beverage dispensers3501
Assessment Requirements for UEERA0069 Resolve problems in beverage dispensers .3505
UEERA0070 Resolve problems in central plant air conditioning systems3508
Assessment Requirements for UEERA0070 Resolve problems in central plant air conditioning systems3512
UEERA0071 Resolve problems in dairy refrigeration systems3515
Assessment Requirements for UEERA0071 Resolve problems in dairy refrigeration systems.....3519
UEERA0072 Resolve problems in hydronic systems.....3522
Assessment Requirements for UEERA0072 Resolve problems in hydronic systems3526
UEERA0073 Resolve problems in ice making systems.....3529
Assessment Requirements for UEERA0073 Resolve problems in ice making systems ..3533
UEERA0074 Resolve problems in industrial refrigeration systems3536
Assessment Requirements for UEERA0074 Resolve problems in industrial refrigeration systems.....3539
UEERA0075 Resolve problems in post-mix refrigeration systems3542
Assessment Requirements for UEERA0075 Resolve problems in post-mix refrigeration systems.....3546
UEERA0076 Resolve problems in refrigerated beverage vending cabinets.....3549

Assessment Requirements for UEERA0076 Resolve problems in refrigerated beverage vending cabinets3553

UEERA0077 Resolve problems in transport refrigeration systems3556

Assessment Requirements for UEERA0077 Resolve problems in transport refrigeration systems.....3560

UEERA0078 Resolve problems in ultra-low temperature refrigeration systems.....3563

Assessment Requirements for UEERA0078 Resolve problems in ultra-low temperature refrigeration systems.....3567

UEERA0079 Safely handle refrigerants and lubricants3570

Assessment Requirements for UEERA0079 Safely handle refrigerants and lubricants.3573

UEERA0080 Select basic commercial refrigeration system equipment, components and accessories.....3575

Assessment Requirements for UEERA0080 Select basic commercial refrigeration system equipment, components and accessories3579

UEERA0081 Select refrigerant piping, accessories and associated controls3583

Assessment Requirements for UEERA0081 Select refrigerant piping, accessories and associated controls3586

UEERA0082 Select residential air conditioning system equipment, components and accessories.....3589

Assessment Requirements for UEERA0082 Select residential air conditioning system equipment, components and accessories3593

UEERA0083 Service and repair microwave ovens.....3596

Assessment Requirements for UEERA0083 Service and repair microwave ovens3600

UEERA0084 Service and repair self-contained flammable refrigerants air conditioning and refrigeration systems.....3602

Assessment Requirements for UEERA0084 Service and repair self-contained flammable refrigerants air conditioning and refrigeration systems3607

UEERA0085 Service clothes washing machines and dryers.....3609

Assessment Requirements for UEERA0085 Service clothes washing machines and dryers3613

UEERA0086 Service dishwasher machines.....3615

Assessment Requirements for UEERA0086 Service dishwasher machines3619

UEERA0087 Service electrical heating appliances.....3621

Assessment Requirements for UEERA0087 Service electrical heating appliances3625

UEERA0088 Service gas heating appliances.....3627

Assessment Requirements for UEERA0088 Service gas heating appliances.....3631

UEERA0089 Service refrigeration appliances3633

Assessment Requirements for UEERA0089 Service refrigeration appliances.....3637

UEERA0090 Service room air conditioners3639

Assessment Requirements for UEERA0090 Service room air conditioners.....3643

UEERA0091 Service small electrical appliances and power tools3645

Assessment Requirements for UEERA0091 Service small electrical appliances and power tools3649

UEERA0092 Solve problems in low voltage refrigeration and air conditioning circuits3651

Assessment Requirements for UEERA0092 Solve problems in low voltage refrigeration and air conditioning circuits3654

UEERA0093 Verify functionality and compliance of appliances.....3656

Assessment Requirements for UEERA0093 Verify functionality and compliance of appliances3661

UEERA0094 Verify functionality and compliance of refrigeration and air conditioning installations.....3663

Assessment Requirements for UEERA0094 Verify functionality and compliance of refrigeration and air conditioning installations3669

UEERA0095 Recover refrigerant from stationary self-contained end of life decommissioned equipment	3672
Assessment Requirements for UEERA0095 Recover refrigerant from stationary self-contained end of life decommissioned equipment	3677
UEERA0097 Install, commission, service and maintain variable refrigerant flow air conditioning systems	3680
Assessment Requirements for UEERA0097 Install, commission, service and maintain variable refrigerant flow air conditioning systems	3684
UEERA0098 Inspect, test and repair fire and smoke control features of mechanical services systems	3687
Assessment Requirements for UEERA0098 Inspect, test and repair fire and smoke control features of mechanical services systems	3692
UEERE0001 Apply environmentally and sustainable procedures in the energy sector	3694
Assessment Requirements for UEERE0001 Apply environmentally and sustainable procedures in the energy sector.....	3697
UEERE0006 Conduct periodic maintenance of remote area power supply battery banks.....	3699
Assessment Requirements for UEERE0006 Conduct periodic maintenance of remote area power supply battery banks	3703
UEERE0007 Conduct periodic maintenance of remote area power supply generator sets.....	3705
Assessment Requirements for UEERE0007 Conduct periodic maintenance of remote area power supply generator sets.....	3709
UEERE0008 Conduct periodic maintenance of remote area power supply photovoltaic arrays	3712
Assessment Requirements for UEERE0008 Conduct periodic maintenance of remote area power supply photovoltaic arrays	3716
UEERE0009 Conduct periodic maintenance of remote area power supply wind generators.....	3718
Assessment Requirements for UEERE0009 Conduct periodic maintenance of remote area power supply wind generators	3722
UEERE0013 Develop strategies to address environmental and sustainability issues in the energy sector.....	3724
Assessment Requirements for UEERE0013 Develop strategies to address environmental and sustainability issues in the energy sector	3727
UEERE0014 Develop strategies to address sustainability issues for electrical installations.....	3729
Assessment Requirements for UEERE0014 Develop strategies to address sustainability issues for electrical installations	3732
UEERE0015 Implement and monitor energy sector environmental and sustainable policies and procedures	3735
Assessment Requirements for UEERE0015 Implement and monitor energy sector environmental and sustainable policies and procedures.....	3738
UEERE0018 Maintain and repair remote area power generation facilities	3741
Assessment Requirements for UEERE0018 Maintain and repair remote area power generation facilities	3745
UEERE0019 Maintain safety and tidiness of remote area power supply systems.....	3748
Assessment Requirements for UEERE0019 Maintain safety and tidiness of remote area power supply systems.....	3751
UEERE0020 Promote sustainable energy practices in the community.....	3753
Assessment Requirements for UEERE0020 Promote sustainable energy practices in the community.....	3756
UEERE0021 Provide basic sustainable energy solutions for energy reduction in residential premises.....	3759
Assessment Requirements for UEERE0021 Provide basic sustainable energy solutions for energy reduction in residential premises.....	3762
UEERE0023 Work safely with remote area power supply systems	3765

Assessment Requirements for UEERE0023 Work safely with remote area power supply systems.....3768

UEERE0049 Apply safe work practices in the rooftop solar industry.....3771

Assessment Requirements for UEERE0049 Apply safe work practices in the rooftop solar industry3774

UEERE0050 Identify and isolate multiple supply systems3777

Assessment Requirements for UEERE0050 Identify and isolate multiple supply systems 3780

UEERE0051 Apply electrical principles to renewable energy design.....3783

Assessment Requirements for UEERE0051 Apply electrical principles to renewable energy design.....3786

UEERE0052 Assess energy loads and uses for energy efficiency in commercial facilities3792

Assessment Requirements for UEERE0052 Assess energy loads and uses for energy efficiency in commercial facilities.....3796

UEERE0053 Assess energy loads and uses for energy efficiency in industrial properties and enterprises3799

Assessment Requirements for UEERE0053 Assess energy loads and uses for energy efficiency in industrial properties and enterprises3803

UEERE0054 Conduct site survey for grid-connected photovoltaic and battery storage systems.....3806

Assessment Requirements for UEERE0054 Conduct site survey for grid-connected photovoltaic and battery storage systems3809

UEERE0055 Conduct site survey for off-grid photovoltaic/generating set systems3812

Assessment Requirements for UEERE0055 Conduct site survey for off-grid photovoltaic/generating set systems3815

UEERE0056 Coordinate maintenance of renewable energy (RE) apparatus and systems3819

Assessment Requirements for UEERE0056 Coordinate maintenance of renewable energy (RE) apparatus and systems3822

UEERE0057 Coordinate the design of micro-grid renewable energy systems.....3825

Assessment Requirements for UEERE0057 Coordinate the design of micro-grid renewable energy systems3829

UEERE0058 Coordinate the installation, fault finding and repair of micro grid systems3832

Assessment Requirements for UEERE0058 Coordinate the installation, fault finding and repair of micro grid systems3836

UEERE0059 Design energy management controls for electrical installations in buildings3839

Assessment Requirements for UEERE0059 Design energy management controls for electrical installations in buildings3842

UEERE0060 Design grid-connected battery storage systems3845

Assessment Requirements for UEERE0060 Design grid-connected battery storage systems3848

UEERE0061 Design grid-connected photovoltaic power supply systems3852

Assessment Requirements for UEERE0061 Design grid-connected photovoltaic power supply systems3855

UEERE0062 Design micro-hydro systems3858

Assessment Requirements for UEERE0062 Design micro-hydro systems.....3861

UEERE0063 Design off-grid photovoltaic/generating set systems.....3864

Assessment Requirements for UEERE0063 Design off-grid photovoltaic/generating set systems.....3867

UEERE0064 Design renewable energy heating systems3871

Assessment Requirements for UEERE0064 Design renewable energy heating systems.3874

UEERE0065 Design wind energy systems.....3878

Assessment Requirements for UEERE0065 Design wind energy systems3881

UEERE0066 Develop effective engineering strategies for energy reduction in buildings3884

Assessment Requirements for UEERE0066 Develop effective engineering strategies for energy reduction in buildings.....3887

UEERE0067 Develop engineering solutions to renewable energy (RE) problems3889
Assessment Requirements for UEERE0067 Develop engineering solutions to renewable energy (RE) problems3893
UEERE0068 Develop strategies to address sustainability issues for electrical installations 3896
Assessment Requirements for UEERE0068 Develop strategies to address sustainability issues for electrical installations3899
UEERE0069 Diagnose and rectify faults in renewable energy (RE) control systems.....3902
Assessment Requirements for UEERE0069 Diagnose and rectify faults in renewable energy (RE) control systems.....3905
UEERE0070 Fault find and repair grid-connected photovoltaic power supply systems 3909
Assessment Requirements for UEERE0070 Fault find and repair grid-connected photovoltaic power supply systems3912
UEERE0071 Fault find and repair off-grid photovoltaic/generating set systems to an electrical installation.....3914
Assessment Requirements for UEERE0071 Fault find and repair off-grid photovoltaic/generating set systems to an electrical installation3917
UEERE0072 Inspect grid connected renewable energy systems.....3920
Assessment Requirements for UEERE0072 Inspect grid connected renewable energy systems.....3923
UEERE0073 Inspect micro grid renewable energy systems3925
Assessment Requirements for UEERE0073 Inspect micro grid renewable energy systems 3928
UEERE0074 Inspect off-grid renewable energy systems.....3930
Assessment Requirements for UEERE0074 Inspect off-grid renewable energy systems 3933
UEERE0075 Install and maintain micro hydro energy systems to power conversion equipment.....3935
Assessment Requirements for UEERE0075 Install and maintain micro hydro energy systems to power conversion equipment3940
UEERE0076 Install and maintain wind energy systems to power conversion equipment 3943
Assessment Requirements for UEERE0076 Install and maintain wind energy systems to power conversion equipment3948
UEERE0077 Install battery storage equipment power conversion equipment to grid...3951
Assessment Requirements for UEERE0077 Install battery storage equipment power conversion equipment to grid.....3955
UEERE0078 Install battery storage to power conversion equipment.....3959
Assessment Requirements for UEERE0078 Install battery storage to power conversion equipment.....3963
UEERE0079 Install off-grid power conversion equipment to electrical installation.....3967
Assessment Requirements for UEERE0079 Install off-grid power conversion equipment to electrical installation.....3970
UEERE0080 Install photovoltaic power conversion equipment to grid.....3973
Assessment Requirements for UEERE0080 Install photovoltaic power conversion equipment to grid3976
UEERE0081 Install photovoltaic systems to power conversion equipment.....3978
Assessment Requirements for UEERE0081 Install photovoltaic systems to power conversion equipment3982
UEERE0082 Maintain renewable energy (RE) apparatus3985
Assessment Requirements for UEERE0082 Maintain renewable energy (RE) apparatus 3989
UEERE0083 Maintain safety and tidiness of remote area power supply systems.....3992
Assessment Requirements for UEERE0083 Maintain safety and tidiness of remote area power supply systems.....3995
UEERE0084 Manage renewable energy (RE) projects3997
Assessment Requirements for UEERE0084 Manage renewable energy (RE) projects ..4000
UEERE0085 Plan renewable energy (RE) projects.....4003

Assessment Requirements for UEERE0085 Plan renewable energy (RE) projects	4006
UEERE0086 Promote sustainable energy practices	4009
Assessment Requirements for UEERE0086 Promote sustainable energy practices	4012
UEERE0087 Provide basic sustainable energy solutions for energy management in residential premises	4015
Assessment Requirements for UEERE0087 Provide basic sustainable energy solutions for energy management in residential premises	4018
UEERE0088 Work safely with remote area power supply systems	4021
Assessment Requirements for UEERE0088 Work safely with remote area power supply systems	4024
UEERL0001 Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply	4027
Assessment Requirements for UEERL0001 Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply	4031
UEERL0002 Attach cords, cables and plugs to electrical equipment for connection to 1000 V a.c. or 1500 V d.c.	4035
Assessment Requirements for UEERL0002 Attach cords, cables and plugs to electrical equipment for connection to 1000 V a.c. or 1500 V d.c.	4039
UEERL0003 Conduct in-service safety testing of electrical cord connected equipment and cord assemblies	4042
Assessment Requirements for UEERL0003 Conduct in-service safety testing of electrical cord connected equipment and cord assemblies	4046
UEERL0004 Disconnect - reconnect electrical equipment connected to low voltage (LV) installation wiring	4049
Assessment Requirements for UEERL0004 Disconnect - reconnect electrical equipment connected to low voltage (LV) installation wiring	4054
UEERL0005 Locate and rectify faults in low voltage (LV) electrical equipment using set procedures	4060
Assessment Requirements for UEERL0005 Locate and rectify faults in low voltage (LV) electrical equipment using set procedures	4064
UEERL0006 Attach HV flexible cables and plugs	4067
Assessment Requirements for UEERL0006 Attach HV flexible cables and plugs	4070
UEERL0007 Disconnect-reconnect 3.3 kV electric propulsion components of self-propelled earth moving vehicles	4073
Assessment Requirements for UEERL0007 Disconnect-reconnect 3.3 kV electric propulsion components of self-propelled earth moving vehicles	4077
UEERL0008 Disconnect-reconnect explosion-protected appliances and control devices connected to LV installation	4084
Assessment Requirements for UEERL0008 Disconnect-reconnect explosion-protected appliances and control devices connected to LV installation	4090
UEERS0020 Apply rail signalling principles	4095
Assessment Requirements for UEERS0020 Apply rail signalling principles	4098
UEERS0021 Assemble and wire electrical rail signalling equipment	4101
Assessment Requirements for UEERS0021 Assemble and wire electrical rail signalling equipment	4105
UEERS0022 Find and repair rail signalling system faults	4108
Assessment Requirements for UEERS0022 Find and repair rail signalling system faults	4112
UEERS0023 Inspect, test and certify rail power signal equipment	4115
Assessment Requirements for UEERS0023 Inspect, test and certify rail power signal equipment	4120
UEERS0024 Install and maintain rail track circuit leads and bonds	4123
Assessment Requirements for UEERS0024 Install and maintain rail track circuit leads and bonds	4128

UEERS0025 Maintain active level crossing equipment.....4131
Assessment Requirements for UEERS0025 Maintain active level crossing equipment..4135
UEERS0026 Maintain communications based signalling equipment4138
Assessment Requirements for UEERS0026 Maintain communications based signalling equipment.....4142
UEERS0027 Maintain computer-based interlocking rail systems4144
Assessment Requirements for UEERS0027 Maintain computer-based interlocking rail systems.....4149
UEERS0028 Maintain mechanical rail signalling equipment and infrastructure4152
Assessment Requirements for UEERS0028 Maintain mechanical rail signalling equipment and infrastructure.....4156
UEERS0029 Maintain non-vital telemetry systems.....4159
Assessment Requirements for UEERS0029 Maintain non-vital telemetry systems4163
UEERS0030 Maintain power-operated point actuating devices.....4167
Assessment Requirements for UEERS0030 Maintain power-operated point actuating devices4171
UEERS0031 Maintain rail signalling power supplies.....4175
Assessment Requirements for UEERS0031 Maintain rail signalling power supplies4179
UEERS0032 Maintain trackside signal and train protection equipment.....4183
Assessment Requirements for UEERS0032 Maintain trackside signal and train protection equipment.....4188
UEERS0033 Maintain train detection equipment.....4192
Assessment Requirements for UEERS0033 Maintain train detection equipment.....4196
UEERS0034 Maintain vital relay interlocking systems.....4199
Assessment Requirements for UEERS0034 Maintain vital relay interlocking systems..4203
UEERS0035 Maintain wayside asset protection equipment.....4206
Assessment Requirements for UEERS0035 Maintain wayside asset protection equipment4210
UEERS0036 Repair rail signalling power and control cables.....4212
Assessment Requirements for UEERS0036 Repair rail signalling power and control cables4216
UEERS0037 Test copper rail signalling cables.....4219
Assessment Requirements for UEERS0037 Test copper rail signalling cables4223
BSBHRM413 Support the learning and development of teams and individuals.....4226
Assessment Requirements for BSBHRM413 Support the learning and development of teams and individuals4229
BSBINS402 Coordinate workplace information systems4231
Assessment Requirements for BSBINS402 Coordinate workplace information systems4234
BSBINS501 Implement information and knowledge management systems.....4236
Assessment Requirements for BSBINS501 Implement information and knowledge management systems.....4239
BSBLDR413 Lead effective workplace relationships4241
Assessment Requirements for BSBLDR413 Lead effective workplace relationships.....4244
BSBLDR414 Lead team effectiveness4246
Assessment Requirements for BSBLDR414 Lead team effectiveness.....4249
BSBLDR522 Manage people performance4251
Assessment Requirements for BSBLDR522 Manage people performance4254
BSBOPS203 Deliver a service to customers4256
Assessment Requirements for BSBOPS203 Deliver a service to customers4259
BSBOPS402 Coordinate business operational plans4261
Assessment Requirements for BSBOPS402 Coordinate business operational plans.....4264
BSBOPS404 Implement customer service strategies.....4266
Assessment Requirements for BSBOPS404 Implement customer service strategies.....4269
BSBPEF402 Develop personal work priorities.....4271
Assessment Requirements for BSBPEF402 Develop personal work priorities4274

BSBSTR401 Promote innovation in team environments.....4276
Assessment Requirements for BSBSTR401 Promote innovation in team environments4279
BSBSTR402 Implement continuous improvement.....4281
Assessment Requirements for BSBSTR402 Implement continuous improvement4284
BSBSTR501 Establish innovative work environments.....4286
Assessment Requirements for BSBSTR501 Establish innovative work environments ..4289
BSBSTR502 Facilitate continuous improvement4291
Assessment Requirements for BSBSTR502 Facilitate continuous improvement.....4294
BSB TWK502 Manage team effectiveness4296
Assessment Requirements for BSB TWK502 Manage team effectiveness.....4299
CPCCWHS1001 Prepare to work safely in the construction industry4301
Assessment Requirements for CPCCWHS1001 Prepare to work safely in the construction industry4305
CPCWHS1001 Prepare to work safely in the construction industry.....4309
Assessment Requirements for CPCWHS1001 Prepare to work safely in the construction industry4313
CPPBDN6106 Produce building information modelling for building design projects ...4317
Assessment Requirements for CPPBDN6106 Produce building information modelling for building design projects4320
CPPFES2043 Apply regulations to prevent ozone depleting substance and synthetic greenhouse gas emissions4322
Assessment Requirements for CPPFES2043 Apply regulations to prevent ozone depleting substance and synthetic greenhouse gas emissions4325
CPPFES2043A Prevent ozone depleting substance and synthetic greenhouse gas emissions4327
CPPHES4005 Assess household energy use and efficiency improvements4337
Assessment Requirements for CPPHES4005 Assess household energy use and efficiency improvements4341
HLTAID009 Provide cardiopulmonary resuscitation.....4343
Assessment Requirements for HLTAID009 Provide cardiopulmonary resuscitation....4345
HLTAID011 Provide First Aid.....4348
Assessment Requirements for HLTAID011 Provide First Aid.....4350
ICTICT203 Operate application software packages.....4354
Assessment Requirements for ICTICT203 Operate application software packages.....4358
ICTICT214 Operate application software packages.....4360
Assessment Requirements for ICTICT214 Operate application software packages.....4363
ICTICT518 Research and review hardware technology options for organisations4365
Assessment Requirements for ICTICT518 Research and review hardware technology options for organisations.....4368
ICTNWK307 Provide network systems administration.....4370
Assessment Requirements for ICTNWK307 Provide network systems administration.4373
ICTNWK309 Configure and administer network operating systems.....4375
Assessment Requirements for ICTNWK309 Configure and administer network operating systems.....4378
ICTNWK424 Install and operate small enterprise branch networks4380
Assessment Requirements for ICTNWK424 Install and operate small enterprise branch networks4383
ICTNWK426 Install and configure client-server applications and services4385
Assessment Requirements for ICTNWK426 Install and configure client-server applications and services.....4388
ICTNWK561 Design enterprise wireless local area networks4390
Assessment Requirements for ICTNWK561 Design enterprise wireless local area networks4394
ICTNWK624 Configure advanced internetwork routing solutions.....4396

Assessment Requirements for ICTNWK624 Configure advanced internetwork routing solutions.....	4399
ICTNWK625 Plan and configure advanced internetwork switching solutions.....	4402
Assessment Requirements for ICTNWK625 Plan and configure advanced internetwork switching solutions.....	4405
ICTPRG302 Apply introductory programming techniques.....	4408
Assessment Requirements for ICTPRG302 Apply introductory programming techniques.....	4411
ICTPRG430 Apply introductory object-oriented language skills.....	4413
Assessment Requirements for ICTPRG430 Apply introductory object-oriented language skills.....	4416
ICTPRG440 Apply introductory programming skills in different languages.....	4418
Assessment Requirements for ICTPRG440 Apply introductory programming skills in different languages.....	4421
ICTPRG443 Apply intermediate programming skills in different languages.....	4423
Assessment Requirements for ICTPRG443 Apply intermediate programming skills in different languages.....	4426
ICTPRG444 Analyse software requirements.....	4428
Assessment Requirements for ICTPRG444 Analyse software requirements.....	4431
ICTPRG534 Deploy applications to production environments.....	4433
Assessment Requirements for ICTPRG534 Deploy applications to production environments.....	4436
ICTPRG549 Apply intermediate object-oriented language skills.....	4438
Assessment Requirements for ICTPRG549 Apply intermediate object-oriented language skills.....	4441
ICTTEN203 Install and configure a home or small office network.....	4443
Assessment Requirements for ICTTEN203 Install and configure a home or small office network.....	4446
ICTTEN204 Install and configure a small to medium business network.....	4448
Assessment Requirements for ICTTEN204 Install and configure a small to medium business network.....	4451
ICTTEN205 Build and maintain a secure network.....	4453
Assessment Requirements for ICTTEN205 Build and maintain a secure network.....	4456
ICTTEN312 Install telecommunications network equipment.....	4458
Assessment Requirements for ICTTEN312 Install telecommunications network equipment.....	4462
ICTTEN409 Commission an electronic system.....	4464
Assessment Requirements for ICTTEN409 Commission an electronic system.....	4468
ICTTEN419 Implement and troubleshoot enterprise routers and switches.....	4470
Assessment Requirements for ICTTEN419 Implement and troubleshoot enterprise routers and switches.....	4474
ICTTEN420 Design, install and configure an internetwork.....	4476
Assessment Requirements for ICTTEN420 Design, install and configure an internetwork.....	4480
ICTTEN421 Apply advanced routing protocols to network design.....	4482
Assessment Requirements for ICTTEN421 Apply advanced routing protocols to network design.....	4486
ICTTEN422 Configure and troubleshoot advanced network switching.....	4488
Assessment Requirements for ICTTEN422 Configure and troubleshoot advanced network switching.....	4492
ICTTEN423 Install and maintain a wide area network.....	4494
Assessment Requirements for ICTTEN423 Install and maintain a wide area network.....	4498
ICTWEB447 Build basic website using development software and ICT tools.....	4500
Assessment Requirements for ICTWEB447 Build basic website using development software and ICT tools.....	4503
MEM16006 Organise and communicate information.....	4505

Assessment Requirements for MEM16006 Organise and communicate information....	4509
MEM16008 Interact with computing technology	4511
Assessment Requirements for MEM16008 Interact with computing technology.....	4515
MEM234010A Design microcontroller applications	4517
MEM234014A Design a robotic system	4524
MEM30027A Prepare basic programs for programmable logic controllers.....	4531
MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements	4536
MEM30032A Produce basic engineering drawings.....	4543
MEM30033A Use computer-aided design (CAD) to create and display 3-D models.....	4549
MSS402003 Apply competitive systems and practices.....	4554
Assessment Requirements for MSS402003 Apply competitive systems and practices ...	4557
MSS402022 Apply quick changeover procedures	4559
Assessment Requirements for MSS402022 Apply quick changeover procedures	4562
MSS402023 Apply Just in Time procedures	4564
Assessment Requirements for MSS402023 Apply Just in Time procedures	4566
MSS402042 Apply 5S procedures	4568
Assessment Requirements for MSS402042 Apply 5S procedures.....	4571
MSS402084 Undertake root cause analysis.....	4573
Assessment Requirements for MSS402084 Undertake root cause analysis.....	4576
MSS402085 Contribute to the application of a proactive maintenance strategy.....	4578
Assessment Requirements for MSS402085 Contribute to the application of a proactive maintenance strategy.....	4581
PMASUP410 Develop plant documentation.....	4583
Assessment Requirements for PMASUP410 Develop plant documentation	4587
RIIRAI609D Establish and maintain electrical installations, reticulation and protection system.....	4590
Assessment Requirements for RIIRAI609D Establish and maintain electrical installations, reticulation and protection system.....	4594
RIIRIS601D Establish and maintain the risk management system.....	4598
Assessment Requirements for RIIRIS601D Establish and maintain the risk management system.....	4600
RIIWH5202E Enter and work in confined spaces	4603
Assessment Requirements for RIIWH5202E Enter and work in confined spaces	4606
RIIWH5204E Work safely at heights	4610
Assessment Requirements for RIIWH5204E Work safely at heights.....	4613
RIIWH5205E Control traffic with stop-slow bat.....	4617
Assessment Requirements for RIIWH5205E Control traffic with stop-slow bat.....	4620
TLIF0008 Apply safety critical communications in the rail environment	4624
Assessment Requirements for TLIF0008 Apply safety critical communications in the rail environment.....	4627
TLIF0020 Safely access the rail corridor	4630
Assessment Requirements for TLIF0020 Safely access the rail corridor	4633
TLIF2010 Apply fatigue management strategies	4635
Assessment Requirements for TLIF2010 Apply fatigue management strategies	4638
TLILIC0003 Licence to operate a forklift truck	4640
Assessment Requirements for TLILIC0003 Licence to operate a forklift truck.....	4645
UEPOPS202 Apply quality systems to work.....	4651
Assessment Requirements for UEPOPS202 Apply quality systems to work.....	4654
UEPOPS337 Maintain quality systems within the team.....	4656
Assessment Requirements for UEPOPS337 Maintain quality systems within the team	4659
UEPOPS416 Monitor implementation of quality control for production and maintenance	4661

Assessment Requirements for UEPOPS416 Monitor implementation of quality control for production and maintenance.....4664

UETDRIS017 Perform high voltage field switching operation to a given schedule4666

Assessment Requirements for UETDRIS017 Perform high voltage field switching operation to a given schedule4670

UETDRIS018 Perform low voltage field switching operation to a given schedule4674

Assessment Requirements for UETDRIS018 Perform low voltage field switching operation to a given schedule4678

UETDRIS025 Diagnose and resolve faults in distribution systems.....4681

Assessment Requirements for UETDRIS025 Diagnose and resolve faults in distribution systems.....4685

UETDRIS026 Diagnose and resolve faults in electrical apparatus4688

Assessment Requirements for UETDRIS026 Diagnose and resolve faults in electrical apparatus4692

UETDRIS027 Diagnose and resolve faults in transmission systems4695

Assessment Requirements for UETDRIS027 Diagnose and resolve faults in transmission systems.....4699

UETDRIS031 Maintain insulating oil.....4703

Assessment Requirements for UETDRIS031 Maintain insulating oil.....4707

UETDRIS032 Solve problems in network equipment4709

Assessment Requirements for UETDRIS032 Solve problems in network equipment....4712

UETDRIS033 Solve problems in network protection.....4715

Assessment Requirements for UETDRIS033 Solve problems in network protection4719

UETDRMP007 Perform rescue from a live low voltage panel4722

Assessment Requirements for UETDRMP007 Perform rescue from a live low voltage panel.....4725

UETDRRF004 Perform rescue from a live LV panel.....4727

Assessment Requirements for UETDRRF004 Perform rescue from a live LV panel4730

UETDRSB001 Perform substation switching operations to a given schedule4732

Assessment Requirements for UETDRSB001 Perform substation switching operations to a given schedule4736

UETDRSB007 Install and maintain substation direct current systems4739

Assessment Requirements for UETDRSB007 Install and maintain substation direct current systems4743

UETDRSB010 Maintain capacitor bank equipment4746

Assessment Requirements for UETDRSB010 Maintain capacitor bank equipment.....4750

UEE Electrotechnology Training Package.....4753

UEESS00131 Data Communications - ACMA 'Open' Cabling Provider Skill Set.....4754

UEESS00132 Data Communications - ACMA 'Restricted' Telecommunications Cabling Registration Skill Set4756

UEESS00133 Restricted - Disconnection/Reconnection of Fixed Wired Low Voltage Electrical Equipment4758

UEESS00134 Data Communications - Install Aerial Communication Cables Skill Set.4760

UEESS00135 Instrumentation - Programmable Control Systems Skill Set.....4762

UEESS00137 Data Communications - Install Below Ground Communication Cables Skill Set.....4764

UEESS00138 Data Communications - Test, Report and Rectify Faults in Data and Voice Installations Skill Set4766

UEESS00139 Data Communications - Restricted Telecommunications Cable Registration - ACMA Skill Set.....4768

UEESS00140 Data Communications - Premises Cabling for NBN Rollout Skill Set4770

UEESS00141 Electrical - Providing Advice on Lighting Products Skill Set4772

UEESS00142 Data Communications - Plan an Integrated Cabling Installation System Skill Set.....4774

UEESS00143 Instrumentation - Develop an Integrated System Interface for Access Through a Touch Screen Skill Set.....4776

UEESS00144 Instrumentation - Develop Integrated Systems Skill Set4778

UEESS00145 Instrumentation - Plan the Installation of Integrated Systems Skill Set ..4780

UEESS00146 RAC - Design Ammonia Refrigeration Systems Skill Set.....4782

UEESS00147 RAC - Design Complex Carbon Dioxide Refrigeration Systems Skill Set.4784

UEESS00148 RAC - Design Hydrocarbon Refrigeration Systems Skill Set4786

UEESS00149 RAC - Design Secondary Refrigeration Systems Skill Set.....4788

UEESS00150 RAC - Install and Commission Ammonia Refrigeration Systems Skill Set4790

UEESS00151 RAC - Install and Commission Carbon Dioxide Refrigeration Systems Skill Set.....4792

UEESS00152 RAC - Install and Commission Flammable Refrigerant Air Cond. and Refrigeration Systems Skill Set.....4794

UEESS00153 RAC - Operate Ammonia Refrigeration Plant Skill Set.....4796

UEESS00154 RAC - Service and Repair Ammonia Refrigeration Systems Skill Set....4798

UEESS00155 RAC - Service and Repair Carbon Dioxide Refrigeration and Heat Pump Systems Skill Set.....4800

UEESS00156 RAC - Service and Repair Carbon Dioxide Refrigeration Systems Skill Set4802

UEE10120 Certificate I in ElectroComms Skills

Modification History

Release 2. Updated superseded imported elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to perform work activities, including identifying and using a range of components, accessories, materials, tools, equipment, technologies, and customs for carrying out work in the electrotechnology – communications industry. Sectors in the industry are electronics; electrical; communications, including telecommunications voice, data, video and information technology; computer systems; instrumentation; lifts; refrigeration and air conditioning; and renewable/sustainable energy.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **180 weighting points** comprising:

120 core weighting points listed below; plus

60 general elective weighting points from the general elective units listed below.

Choose a total of **60 weighting points** elective units from the list below, of which between **0 and 30 weighting points** can be taken from Group A; and between **30 and 60 weighting points** must be taken from Group B.

Up to **30 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference

Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
ICTICT203	Operate application software packages	20
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0009	Carry out routine work activities in an energy sector environment*	40
UEECD0021	Identify and select components, accessories and materials for energy sector work activities*	20
UEERE0001	Apply environmentally and sustainable procedures in the energy sector	20
Group A: Imported and common elective units		Weighting Points
BSBOPS203	Deliver a service to customers	20
UEECO0002	Maintain documentation	20
UEECO0016	Receive and store materials and equipment for electrotechnology work	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20
Group B: Qualification elective units		Weighting Points
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0020	Fix and secure electrotechnology equipment*	20
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECD0042	Solve problems in ELV single path circuits*	40
UEEEEC0046	Operate and maintain amateur radio communication	40

stations*

Qualification Mapping Information

This qualification replaces and is equivalent to UEE10111 Certificate I in ElectroComms Skills

UEE20120 Certificate II in Split Air Conditioning and Heat Pump Systems

Modification History

Release 3. Updated superseded imported elective units.

Release 2. Updated superseded HLT and BSB imported elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to install, commission and decommission single head, split air conditioning and heat pumps systems to a prescribed routine where the maximum plant capacity for each system does not exceed 18 kilowatt (kW) refrigeration.

This includes wall hung, floor and ceiling suspended, cassette and ducted fan coil split systems and water heating heat pump systems. This qualification excludes competencies required for service, repair, maintenance, diagnostic/fault finding and electrical work or the safe and proper installation of commercial refrigeration, air conditioning and heat pump plant and equipment.

Relevant employment may be required to enable the application of the required knowledge and skills to on the job work activities and environments.

Refrigerant Handling Licence:

The qualification meets only the training components for a national restricted heat pump, split system, installation and decommissioning Refrigerant Handling Licence, which is required to work on equipment that carries the risk of a fluorocarbon refrigerant being emitted while decanting the refrigerant, installing, commissioning or decommissioning refrigeration and air conditioning equipment.

Refrigeration and Air Conditioning Occupational Licence:

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to refrigeration/air conditioning work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **370 weighting points** comprising:

350 core weighting points listed below; plus

20 general elective weighting points from the general elective units listed below.

Up to **20 weighting points** of the general elective units, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed, weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0020	Fix and secure electrotechnology equipment*	20
UEECD0027	Participate in development and follow a personal competency development plan	20
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications*	40
UEERA0049	Install and start up single head split air conditioning and water heating heat pump systems*	70
UEERA0059	Prepare and connect refrigerant tubing and fittings*	40
UEERA0064	Recover, pressure test, evacuate, charge and leak test refrigerants - split systems*	60
UEERE0001	Apply environmentally and sustainable procedures in the energy sector	20
Imported and common elective units		Weighting Points
BSBOPS203	Deliver a service to customers	20

CPCWHS1001	Prepare to work safely in the construction industry	10
HLTAID009	Provide cardiopulmonary resuscitation	10
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20
UEECO0016	Receive and store materials and equipment for electrotechnology work	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20
UEERA0035	Establish the basic operating conditions of air conditioning systems*	20
UEERL0001	Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply*	20
UEERL0003	Conduct in-service safety testing of electrical cord connected equipment and cord assemblies*	20

Qualification Mapping Information

This qualification replaces and is equivalent to UEE20111 Certificate II in Split Air-conditioning and Heat Pump Systems

UEE20520 Certificate II in Computer Assembly and Repair

Modification History

Release 2. Updated superseded imported elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to select components and assemble computer to customer specifications and carry out routine hardware repairs (generally by replacement) of known faulty components following prescribed routines.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **360 weighting points** comprising:

200 core weighting points listed below; plus

160 general elective weighting points from the general elective units listed below.

Choose a total of **160 weighting points** elective units from the list below, of which between **0 and 60 weighting points** can be taken from Group A; and between **100 and 160 weighting points** must be taken from Group B.

Up to **60 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified

are complied with.

Core units		Weighting Points
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0027	Participate in development and follow a personal competency development plan	20
UEECS0003	Assemble, set up and test computing devices*	80
UEERE0001	Apply environmentally and sustainable procedures in the energy sector	20

Group A: Imported and common elective units		Weighting Points
BSBOPS203	Deliver a service to customers	20
ICTTEN203	Install and configure a home or small office network	20
ICTTEN204	Install and configure a small to medium business network	20
ICTTEN205	Build and maintain a secure network	20
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20
UEECO0016	Receive and store materials and equipment for electrotechnology work	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20

Group B: Qualification elective units		Weighting Points
ICTICT214	Operate application software packages	20
UEECD0020	Fix and secure electrotechnology equipment*	20
UEECD0021	Identify and select components, accessories and	20

	materials for energy sector work activities*	
UEECD0025	Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits*	40
UEECD0043	Solve problems in direct current circuits*	80
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications*	40
UEECS0022	Install and configure a client computer operating system and software	40
UEECS0029	Set up and configure basic local area network (LAN)*	80
UEEEEC0055	Repair basic computer equipment faults by replacement of modules/sub-assemblies*	40
UEEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20

Qualification Mapping Information

UEE20720 Certificate II in Data and Voice Communications

Modification History

Release 3. Updated superseded imported elective units.

Release 2: This minor update is the second release of this qualification in the UEE Electrotechnology Training Package.

An incorrect reference to the total general elective weighting point requirements from each group was fixed.

Imported elective units updated.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to select, assemble, set up and maintain simple equipment and systems to a prescribed routine Certification of telecommunication cabling in buildings and premises. It includes Australian Communications and media Authority (ACMA) requirements for Open Cabler registration.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **420 weighting points** comprising:

340 core weighting points listed below; plus

80 general elective weighting points from the general elective units listed below.

Choose a total of **80 weighting points** elective units from the list below, of which between **0 and 40 weighting points** can be taken from Group A; and between **40 and 80 weighting points** must be taken from Group B; or all **80 weighting points** must be taken from Group B.

Up to **40 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting

points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

UEE20920 Certificate II in Electronic Assembly

Modification History

Release 3. Updated superseded imported elective units.

Release 2. Updated superseded HLT, BSB and ICT elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to select components, set up and operate component placement machines and carry out rework to a prescribed routine. It includes selecting components, assembling electronic sub-systems and carrying out reworks to a prescribed routine.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **360 weighting points** comprising:

220 core weighting points listed below; plus

140 general elective weighting points from the general elective units listed below.

Choose a total of **140 weighting points** elective units from the list below, of which between **0 and 60 weighting points** can be taken from Group A; and between **80 and 140 weighting points** must be taken from Group B; or all **140 weighting points** can be taken from Group B.

Up to **60 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEEAS0001	Assemble electronic components*	40
UEEAS0004	Select electronic components for assembly*	20

UEE21220 Certificate II in Antennae Equipment

Modification History

Release 3. Updated superseded imported elective units.

Release 2. Updated superseded elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to select, assemble, connect and set up TV and radio reception antennae and multiple antenna outlets in buildings and premises.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification

Packaging Rules

A total of **360 weighting points** comprising:

240 core weighting points listed below; plus

120 general elective weighting points from the general elective units listed below.

Choose a total of **120 weighting points** elective units from the list below, of which between **0 and 60 weighting points** can be taken from Group A; and between **60 and 120 weighting points** must be taken from Group B; or all **120 weighting points** can be taken from Group B.

Up to **60 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. Where imported units are selected, care must be taken to ensure all pre-requisite units specified

are complied with.

Core units		Weighting Points
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0020	Fix and secure electrotechnology equipment*	20
UEECD0027	Participate in development and follow a personal competency development plan	20
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications*	40
UEEEEC0002	Assemble and install reception antennae and signal distribution equipment*	60
UEERE0001	Apply environmentally and sustainable procedures in the energy sector	20
Group A: Imported and common elective units		Weighting Points
BSBOPS203	Deliver a service to customers	20
CPCWHS1001	Prepare to work safely in the construction industry	10
HLTAID009	Provide cardiopulmonary resuscitation	10
RIIWHS202E	Enter and work in confined space	30
RIIWHS204E	Work safely at heights	20
RIIWHS205E	Control traffic with stop-slow bat	10
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20

UEECO0016	Receive and store materials and equipment for electrotechnology work	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20
Group B: Qualification elective units		Weighting Points
ICTICT214	Operate application software packages	20
UEECD0021	Identify and select components, accessories and materials for energy sector work activities*	20
UEECD0025	Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits*	40
UEECD0040	Solve basic problems electronic and digital equipment and circuits*	80
UEECD0043	Solve problems in direct current circuits*	80
UEECS0003	Assemble, set up and test computing devices*	80
UEECS0029	Set up and configure basic local area network (LAN)*	80
UEEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEEC0062	Set up and test residential video/audio equipment*	40

Qualification Mapping Information

This qualification replaces and is equivalent to UEE21211 Certificate II in Antennae Equipment

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

UEE21420 Certificate II in Remote Area Power Supply Maintenance

Modification History

Release 3. Updated superseded elective units. Deleted elective units removed.

Release 2. Updated superseded HLT and BSB elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers the skills and knowledge required for routine maintenance of remote area power supplies (RAPS) consisting of battery banks, generator sets, photovoltaic (PV) arrays and wind generators.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **360 weighting points** comprising:

200 core weighting points listed below; plus

160 general elective weighting points from the general elective units listed below.

Choose a total of **160 weighting points** elective units from the list below, of which between **0 and 60 weighting points** can be taken from Group A; and between **100 and 160 weighting points** must be taken from Group B; or all elective units of **160 weighting points** can be taken from Group B.

Up to **60 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided that selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points unless, directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly

to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0027	Participate in development and follow a personal competency development plan	20
UEECD0042	Solve problems in ELV single path circuits*	40
UEERE0001	Apply environmentally and sustainable procedures in the energy sector	20
UEERE0019	Maintain safety and tidiness of remote area power supply systems*	20
UEERE0023	Work safely with remote area power supply systems*	20
Group A: Imported and common elective units		Weighting Points
BSBOPS203	Deliver a service to customers	20
CPCWHS1001	Prepare to work safely in the construction industry	10
HLTAID009	Provide cardiopulmonary resuscitation	10
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20

UEECO0016	Receive and store materials and equipment for electrotechnology work	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20
Group B: Qualification elective units		Weighting Points
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications*	40
UEERE0006	Conduct periodic maintenance of remote area power supply battery banks*	40
UEERE0007	Conduct periodic maintenance of remote area power supply generator sets*	40
UEERE0008	Conduct periodic maintenance of remote area power supply photovoltaic arrays*	40
UEERE0009	Conduct periodic maintenance of remote area power supply wind generators*	40
UEERE0018	Maintain and repair remote area power generation facilities*	120
UEERE0086	Promote sustainable energy practices	40
UEERE0087	Provide basic sustainable energy solutions for energy management in residential premises	40

Qualification Mapping Information

This qualification replaces and is equivalent to UEE21411 Certificate II in Remote Area Power Supply Maintenance

UEE21620 Certificate II in Security Assembly and Set-up

Modification History

Release 2. Updated superseded imported elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to select, assemble and set up wired and wireless base level security systems following prescribed routines.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **360 weighting points** comprising:

240 core weighting points listed below; plus

120 general elective weighting points from the general elective units listed below.

Choose a total of **120 weighting points** elective units from the list below, of which between **0 and 60 weighting points** can be taken from Group A; and between **60 and 120 weighting points** must be taken from Group B; or all **120 weighting points** can be taken from Group B.

Up to **60 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units.		Weighting Points
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0027	Participate in development and follow a personal competency development plan	20

UEE21720 Certificate II in Technical Support

Modification History

Release 3. Updated superseded elective unit.

Release 2 Updated superseded HLT and BSB elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification provides competencies to collect/receive and store stock at worksites; set up and store equipment and tools; assist in installation, fault finding, and maintenance and repair activities.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **360 weighting points** comprising:

200 core weighting points listed below; plus

160 general elective weighting points from the general elective units listed below.

Choose a total of **160 weighting points** elective units from the list below, of which between **0 and 60 weighting points** can be taken from Group A; and between **100 and 160 weighting points** can be taken from Group B; or all **160 elective weighting points** can be taken from Group B.

Up to **60 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. UEE22020 Certificate II in Electrotechnology (Career Start)

Modification History

Release 2. Updated superseded HLT, BSB and ICT elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies for work entry program providing grounding in safety and basic skills and knowledge for work in any electrotechnology discipline.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **410 weighting points** comprising:

270 core weighting points listed below; **plus**

140 general elective weighting points from the general elective units listed below.

Choose a total of **140 weighting points** elective units from the list below, of which between 0 and 60 **weighting points** can be taken from Group A; and between 80 and 140 **weighting points** must be taken from Group B; or all 140 **weighting points** can be taken from Group B.

Up to 60 weighting points of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
CPCCWHS1001	Prepare to work safely in the construction industry	10
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0009	Carry out routine work activities in an energy sector environment*	40
UEECD0021	Identify and select components, accessories and materials for energy sector work activities*	20
UEECD0038	Provide solutions and report on routine electrotechnology problems	60
UEECD0046	Solve problems in single path circuits*	40
UEECD0052	Use routine equipment/plant/technologies in an energy sector environment*	40
UEERE0021	Provide basic sustainable energy solutions for energy reduction in residential premises	40
Group A: Imported and common elective units		Weighting Points
BSBOPS203	Deliver a service to customers	20
HLTAID009	Provide cardiopulmonary resuscitation	10
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20
Group B: General elective units		Weighting Points
ICTICT214	Operate application software packages	20
UEEAS0001	Assemble electronic components*	40
UEEAS0004	Select electronic components for assembly*	20
UEECD0008	Carry out preparatory energy sector work activities*	60

UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0020	Fix and secure electrotechnology equipment*	20
UEECD0033	Produce products for carrying out energy sector work activities*	40
UEECD0034	Produce routine tools/devices for carrying out energy sector work activities*	40
UEEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEERA0036	Establish the basic operating conditions of vapour compression systems*	60
UEERE0001	Apply environmentally and sustainable procedures in the energy sector	20
UEERL0001	Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply*	20

Qualification Mapping Information

This qualification replaces and is not equivalent to UEE22011 Certificate II in Electrotechnology (Career Start).

UEE30120 Certificate III in Business Equipment

Modification History

Release 2. Updated superseded HLT, BSB and ICT elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to install, set up, test, fault find, repair and maintain photocopiers and fax machines.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **1060 weighting points** comprising:

700 core weighting points listed below; **plus**

360 general elective weighting points from the general elective units listed below.

Choose a total of **360 weighting points** elective units from the list below, of which between 0 and 160 **weighting points** can be taken from Group A; and between 200 and 360 **weighting points** must be taken from Group B; or all 360 **weighting points** can be taken from Group B.

Up to 160 weighting points of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0020	Fix and secure electrotechnology equipment*	20
UEECD0043	Solve problems in direct current circuits*	80
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications*	40
UEECO0005	Participate in business equipment work and competency development activities	60
UEEEEC0032	Fault find and repair high-volume office equipment*	120
UEEEEC0059	Repair routine business equipment faults*	120
UEEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEEC0074	Troubleshoot resonance circuits in an electronic apparatus*	80
UEEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEERE0001	Apply environmentally and sustainable procedures in the energy sector	20
Group A: Imported and common elective units.		Weighting Points
BSBOPS203	Deliver a service to customers	20
HLTAID009	Provide cardiopulmonary resuscitation	10
HLTAID011	Provide First Aid	10

ICTICT214	Operate application software packages	20
UEECD0011	Comply with scheduled and preventative maintenance program processes	20
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20
UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20

Group B: Qualification elective units.**Weighting Points**

UEEAS0001	Assemble electronic components*	40
UEEAS0002	Conduct quality and functional tests on assembled electronic apparatus*	20
UEEAS0003	Modify electronic sub-assemblies*	40
UEEAS0004	Select electronic components for assembly*	20
UEEAS0005	Set up and check electronic component assembly machines*	40
UEECD0008	Carry out preparatory energy sector work activities*	60
UEECD0025	Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits*	40
UEECS0003	Assemble, set up and test computing devices*	80
UEECS0022	Install and configure a client computer operating system and software	40
UEECS0029	Set up and configure basic local area network (LAN)*	80
UEECS0033	Use engineering applications software on personal computers	40

UEEEEC0028	Fault find and repair complex power supplies*	40
UEEEEC0057	Repair predictable faults in general electronic apparatus*	40
UEEEEC0066	Troubleshoot amplifiers in an electronic apparatus*	80
UEEEEC0067	Troubleshoot basic amplifier circuits*	40
UEEEEC0069	Troubleshoot digital sub-systems*	80
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20

Qualification Mapping Information

This qualification replaces and is equivalent to UEE30111 Certificate III in Business Equipment

UEE30220 Certificate III in Computer Systems Equipment

Modification History

Release 2. Updated superseded HLT, BSB and ICT elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to select, install, set up, test, fault find, repair and maintain computer equipment for data storage, personal computer and networks, measurement/analysis and control.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **1060 weighting points** comprising:

560 core weighting points listed below; **plus**

500 general elective weighting points from the general elective units listed below.

Choose a total of **500 weighting points** elective units from the list below, of which between 0 and **150 weighting points** can be taken from Group A; and between **350 and 500 weighting points** must be taken from Group B; or all **500 weighting points** can be taken from Group B.

Up to 150 weighting points of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified

are complied with.

Core units		Weighting Points
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0042	Solve problems in ELV single path circuits*	40
UEECO0006	Participate in computer equipment work and competency development activities	60
UEECS0003	Assemble, set up and test computing devices*	80
UEECS0033	Use engineering applications software on personal computers	40
UEECS0032	Support computer hardware and software for engineering applications	120
UEECS0022	Install and configure a client computer operating system and software	40
UEECS0029	Set up and configure basic local area network (LAN)*	80
UEERE0001	Apply environmentally and sustainable procedures in the energy sector	20
Group A: Imported and common elective units.		Weighting Points
BSBOPS203	Deliver a service to customers	20

UEE30320 Certificate III in Custom Electronics Installations

Modification History

Release 3. Updated superseded imported elective units.

Release 2. Updated superseded imported elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to select, install, set up and test surround sound, home theatre and integration aspects for 'intelligent houses'. It covers the scope of Custom Electronic Design and Installation Association (CEDIA) Certification level 2.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **1060 weighting points** comprising:

600 core weighting points listed below; plus

460 general elective weighting points from the general elective units listed below.

Choose a total of **500 weighting points** elective units from the list below, of which between **0 and 150 weighting points** can be taken from Group A; and between **310 and 460 weighting points** must be taken from Group B; or all **500 weighting points** can be taken from Group B.

Up to **150 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40

UEE30420 Certificate III in Data and Voice Communications

Modification History

Release 3. Updated superseded imported elective units.

Release 2. Updated superseded HLT, BSB and ICT elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to select, install, set up, test, fault find, repair and maintain telecommunications and high-performance data services in buildings and premises. It includes Australian Communications and Media Authority (ACMA) requirements for Open Cabler Registration.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **1060 weighting points** comprising:

700 core weighting points listed below; plus

360 general elective weighting points from the general elective units listed below.

Choose a total of **360 weighting points** elective units from the list below, of which between **0 and 100 weighting points** can be taken from Group A; and between **260 and 360 weighting points** must be taken from Group B; or all **360 weighting points** can be taken from Group B.

Up to **100 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with.

A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

UEE30620 Certificate III in Electrical Machine Repair

Modification History

Release 3. Updated superseded imported elective units.

Release 2. Updated superseded HLT, BSB and ICT elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification provides competencies to overhaul and repair motor, transformer and control gear including rewinding.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **1060 weighting points** comprising:

880 core weighting points listed below; plus

180 general elective weighting points from the general elective units listed below.

Choose a total of **180 weighting points** elective units from the list below, of which between **0 and 60 weighting points** can be taken from Group A; and between **120 and 180 weighting points** can be taken from Group B (or all **180 elective weighting points** can be taken from Group B).

Up to **60 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0020	Fix and secure electrotechnology equipment*	20
UEECD0043	Solve problems in direct current circuits*	80
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications*	40
UEECO0022	Participate in electrical machine repair work and competency development activities	60
UEEEL0004	Carry out basic repairs to electrical components and equipment*	40
UEEEL0017	Repair and maintain mechanical components of electrical machines*	40
UEEEL0019	Solve problems in direct current (d.c.) machines*	30
UEEEL0020	Solve problems in low voltage a.c. circuits*	80
UEEEL0021	Solve problems in magnetic and electromagnetic devices*	30
UEEEL0023	Terminate cables, cords and accessories for low voltage circuits*	40
UEEEL0024	Test and connect alternating current (a.c.) rotating machines*	50
UEEEL0025	Test and connect transformers*	30
UEEEL0033	Conduct electrical tests on LV electrical	40

	machines*	
UEEEL0056	Place and connect electrical coils*	40
UEEEL0068	Rewind three phase low voltage induction machines*	60
UEEEL0074	Wind electrical coils*	40
UEERE0001	Apply environmentally and sustainable procedures in the energy sector	20
UEERL0004	Disconnect - reconnect electrical equipment connected to low voltage (LV) installation wiring*	60
Group A: Imported and common elective units		Weighting Points
BSBOPS203	Deliver a service to customers	20
CPCWHS1001	Prepare to work safely in the construction industry	10
HLTAID009	Provide cardiopulmonary resuscitation	10
HLTAID011	Provide First Aid	10
ICTICT214	Operate application software packages	20
UEECD0011	Comply with scheduled and preventative maintenance program processes	20
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20
UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20
Group B: General elective units		Weighting Points
UEECS0033	Use engineering applications software on personal computers	40

UEEEL0034	Conduct mechanical tests on electrical machines and components*	40
UEEEL0055	Overhaul and repair major switchgear and control gear*	60
UEEEL0066	Rewind LV direct current machines*	60
UEEEL0067	Rewind single phase machines*	40
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEERA0091	Service small electrical appliances and power tools*	60
UEERL0001	Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply*	20
UEERL0002	Attach cords, cables and plugs to electrical equipment for connection to 1000 V a.c. or 1500 V d.c.*	20
UEERL0005	Locate and rectify faults in low voltage (LV) electrical equipment using set procedures*	20

UEE30720 Certificate III in Switchgear and Controlgear

Modification History

Release 3. Updated superseded imported elective units.

Release 2. Updated superseded HLT, BSB and ICT elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification provides competencies for the construction, assembly and wiring of switchboards and control panels.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **1060 weighting points** comprising:

900 core weighting points listed below; plus

160 general elective weighting points from the general elective units listed below.

Choose a total of **160 weighting points** elective units from the list below, of which between **0 and 60 weighting points** can be taken from Group A; and between **100 and 160 weighting points** can be taken from Group B (or all **160 elective weighting points** can be taken from Group B).

Up to **60 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEEAS0007	Assemble, mount and connect control gear and switchgear*	40
UEEAS0008	Fabricate and assemble bus bars*	40
UEEAS0009	Mount and wire control panel equipment*	40
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0020	Fix and secure electrotechnology equipment*	20
UEECO0024	Participate in switchgear and control gear work and competency development activities	60
UEECD0043	Solve problems in direct current circuits*	80
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications*	40
UEEEL0003	Arrange circuits, control and protection for electrical installations*	40
UEEEL0004	Carry out basic repairs to electrical components and equipment*	40
UEEEL0005	Develop and connect electrical control circuits*	80
UEEEL0019	Solve problems in direct current (d.c.) machines*	30
UEEEL0020	Solve problems in low voltage a.c. circuits*	80
UEEEL0021	Solve problems in magnetic and electromagnetic devices*	30
UEEEL0023	Terminate cables, cords and accessories for low voltage circuits*	40
UEEEL0024	Test and connect alternating current (a.c.) rotating machines*	50

UEEEL0025	Test and connect transformers*	30
UEERE0001	Apply environmentally and sustainable procedures in the energy sector	20
UEERL0004	Disconnect - reconnect electrical equipment connected to low voltage (LV) installation wiring*	60

Group A: Imported and common elective units**Weighting Points**

BSBOPS203	Deliver a service to customers	20
CPCWHS1001	Prepare to work safely in the construction industry	10
HLTAID009	Provide cardiopulmonary resuscitation	10
HLTAID011	Provide First Aid	10
ICTICT214	Operate application software packages	20
UEECD0011	Comply with scheduled and preventative maintenance program processes	20
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20
UEECO0015	Provide quotations for installation or service jobs	20

Group B: General elective units**Weighting Points**

UEECS0033	Use engineering applications software on personal computers	40
UEEDV0001	Assemble and connect telecommunication frames and cabinets*	60
UEEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEEEL0017	Repair and maintain mechanical components of electrical machines*	40

UEEEL0055	Overhaul and repair major switchgear and control gear*	60
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEERL0005	Locate and rectify faults in low voltage (LV) electrical equipment using set procedures*	20

Qualification Mapping Information

This qualification replaces and is equivalent to UEE30711 Certificate III in Switchgear and Controlgear

UEE30820 Certificate III in Electrotechnology Electrician

Modification History

Release 6. Updated superseded UEERS units.

Release 5. Updated superseded elective units.

Release 4. Updated superseded units.

Release 3. Updated superseded imported units.

Release 2. Three units added to General Electives.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification provides individuals with the skills and knowledge to select, install, set up, test, fault find, repair and maintain electrical systems and equipment in buildings and premises. It includes Electrical Regulatory Authority Council (ERAC), or their successor's, Essential Performance Capabilities for an 'Unrestricted Electrician's license'.

The skills and knowledge described in this qualification require a licence or permit to practice in the workplace where work is carried out on electrical installations which are designed to operate at voltages greater than 50 volt (V) alternating current (a.c.) or 120 V direct current (d.c.).

Competency development activities in this qualification are subject to regulations directly related to licensing. Where a licence or permit to practice is not held, a relevant contract of training through an Australian Apprenticeship, may be required. To obtain an Unrestricted Electrician's Licence in most jurisdictions the qualification must be completed as an apprenticeship or Trades Recognition Australia (TRA) pathway. Where required for Licencing, the certification documentation issued must indicate if the qualification was completed as an apprenticeship or Trades Recognition Australia (TRA) pathway.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **1,110 weighting points** comprising:

990 core weighting points listed below; plus

120 general elective weighting points.

General elective weighting points are to be selected from the Group A general elective units listed below, or up to **40 general elective weighting points**, may be selected, with appropriate

contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided that selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed, weighting points will be 10 points.

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
HLTAID009	Provide cardiopulmonary resuscitation	10
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0020	Fix and secure electrotechnology equipment*	20
UEECD0044	Solve problems in multiple path circuits*	40
UEECD0046	Solve problems in single path circuits*	40
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications*	40
UEECO0023	Participate in electrical work and competency development activities	60
UEEEL0003	Arrange circuits, control and protection for electrical installations*	40
UEEEL0005	Develop and connect electrical control circuits*	80
UEEEL0008	Evaluate and modify low voltage heating equipment and controls*	20
UEEEL0009	Evaluate and modify low voltage lighting circuits, equipment and controls*	20

UEEEL0010	Evaluate and modify low voltage socket outlets circuits*	20
UEEEL0012	Install low voltage wiring, appliances, switchgear and associated accessories*	40
UEEEL0014	Isolate, test and troubleshoot low voltage electrical circuits*	60
UEEEL0018	Select wiring systems and select cables for low voltage electrical installations*	60
UEEEL0019	Solve problems in direct current (d.c.) machines*	30
UEEEL0020	Solve problems in low voltage a.c. circuits*	80
UEEEL0021	Solve problems in magnetic and electromagnetic devices*	30
UEEEL0023	Terminate cables, cords and accessories for low voltage circuits*	40
UEEEL0024	Test and connect alternating current (a.c.) rotating machines*	50
UEEEL0025	Test and connect transformers*	30
UEEEL0039	Design, install and verify compliance and functionality of general electrical installations*	40
UEEEL0047	Identify, shut down and restart systems with alternate supplies*	20
UEERE0001	Apply environmentally and sustainable procedures in the energy sector	20
UETDRRF004	Perform rescue from a live LV panel*	20
Group A General elective units		Weighting Points
UEEAS0007	Assemble, mount and connect control gear and switchgear*	40
UEEAS0008	Fabricate and assemble bus bars*	40
UEEAS0009	Mount and wire control panel equipment*	40
UEECD0028	Plan an integrated cabling installation system*	40

UEECD0050	Use and maintain the integrity of a portable gas detection device*	20
UEECS0033	Use engineering applications software on personal computers	40
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services*	80
UEEDV0008	Install, modify and verify coaxial and structured communication copper cabling*	40
UEEEC0003	Assemble and set up basic security systems*	80
UEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEEEL0004	Carry out basic repairs to electrical components and equipment*	40
UEEEL0016	Provide advice on effective and energy efficient lighting products	20
UEEEL0017	Repair and maintain mechanical components of electrical machines*	40
UEEEL0022	Supply effective and efficient lighting products for domestic and small commercial applications*	40
UEEEL0026	Align and install traction lift equipment*	20
UEEEL0033	Conduct electrical tests on LV electrical machines*	40
UEEEL0034	Conduct mechanical tests on electrical machines and components*	40
UEEEL0045	Diagnose and rectify faults in traction lift systems*	80
UEEEL0046	Find and repair faults in LV d.c. electrical apparatus and circuits*	60
UEEEL0049	Install and maintain emergency safety systems*	60

UEEEL0052	Maintain and service traction lift systems and equipment*	40
UEEEL0053	Maintain operation of electrical marine equipment and systems*	60
UEEEL0054	Maintain operation of electrical mining equipment and systems*	60
UEEEL0055	Overhaul and repair major switchgear and control gear*	60
UEEEL0056	Place and connect electrical coils*	40
UEEEL0061	Provide advice on the application of energy efficient lighting for ambient and aesthetic effect*	20
UEEEL0066	Rewind LV direct current machines*	60
UEEEL0067	Rewind single phase machines*	40
UEEEL0068	Rewind three phase low voltage induction machines*	60
UEEEL0069	Select and arrange equipment for special LV electrical installations*	60
UEEEL0074	Wind electrical coils*	40
UEEEL0075	Inspect, test and maintain emergency alarm systems and equipment*	20
UEEEL0076	Inspect, test and maintain emergency lighting systems*	20
UEEEL0078	Install and commission whole current electricity meters*	20
UEEHA0004	Enter a classified hazardous area to undertake work related to electrical equipment	40
UEEHA0020	Conduct detailed inspection of electrical installations for hazardous areas*	40
UEEHA0022	Determine the explosion-protection requirements to meet a specified classified hazardous area*	40
UEEHA0025	Install explosion-protected equipment and	60

	associated apparatus and wiring systems*	
UEEHA0026	Maintain equipment associated with hazardous areas *	60
UEEHA0038	Conduct visual and close inspection of electrical installations for hazardous areas*	40
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20
UEEIC0011	Develop electrical integrated systems*	20
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEEIC0015	Develop, enter and verify word and analogue control programs for programmable logic controllers*	60
UEEIC0024	Plan the electrical installation of integrated systems*	20
UEEIC0038	Solve problems in density/level measurement components and systems*	40
UEEIC0039	Solve problems in flow measurement components and systems*	40
UEEIC0041	Solve problems in pressure measurement components and systems*	40
UEEIC0043	Solve problems in temperature measurement components and systems*	40
UEEIC0047	Use instrumentation drawings, specifications, standards and equipment manuals*	40
UEERA0035	Establish the basic operating conditions of air conditioning systems*	20
UEERA0036	Establish the basic operating conditions of vapour compression systems*	60
UEERA0049	Install and start up single head split air conditioning and water heating heat pump systems*	70
UEERA0059	Prepare and connect refrigerant tubing and	40

	fittings*	
UEERA0064	Recover, pressure test, evacuate, charge and leak test refrigerants - split systems*	60
UEERE0049	Apply safe work practices in the rooftop solar industry	20
UEERE0054	Conduct site survey for grid-connected photovoltaic and battery storage systems	30
UEERE0077	Install battery storage equipment power conversion equipment to grid *	30
UEERE0078	Install battery storage to power conversion equipment*	30
UEERE0080	Install photovoltaic power conversion equipment to grid *	30
UEERE0081	Install photovoltaic systems to power conversion equipment *	30
UEERS0021	Assemble and wire rail signalling equipment*	30
UEERS0024	Install and maintain rail track circuit leads and bonds*	30
UEERS0036	Repair rail signalling power and control cables*	40
UEERS0037	Test copper rail signalling cables*	20
UETDRIS017	Perform high voltage field switching operation to a given schedule*	40
UETDRIS018	Perform low voltage field switching operation to a given schedule*	50
UETDRIS031	Maintain insulating oil*	40
UETDRIS032	Solve problems in network equipment*	80
UETDRIS033	Solve problems in network protection*	40
UETDRSB001	Perform substation switching operations to a given schedule	50
UETDRSB007	Install and maintain substation direct current systems*	30

UETDRSB010 Maintain capacitor bank equipment* 40

Qualification Mapping Information

This qualification replaces and is not equivalent to UEE30811 Certificate III in Electrotechnology Electrician.

UEE30920 Certificate III in Electronics and Communications

Modification History

Release 3. Updated superseded MSS elective units.

Release 2. Updated superseded HLT, BSB and ICT elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to select, install, set up, test, fault find, repair and maintain electronic equipment and devices at component/sub-assembly level with options in communications, audio, video and TV, personal computer and networks, security and custom installations.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **1060 weighting points** comprising:

680 core weighting points listed below; plus

380 elective weighting points from the elective units listed below.

Up to **180 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0043	Solve problems in direct current circuits*	80
UEECO0007	Participate in electronics and communications work and competency development activities	60
UEEEEC0028	Fault find and repair complex power supplies*	40
UEEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEEC0063	Solve fundamental electronic communications system problems*	40
UEEEEC0066	Troubleshoot amplifiers in an electronic apparatus*	80
UEEEEC0067	Troubleshoot basic amplifier circuits*	40
UEEEEC0069	Troubleshoot digital sub-systems*	80
UEEEEC0074	Troubleshoot resonance circuits in an electronic apparatus*	80
UEEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEERE0001	Apply environmentally and sustainable procedures in the energy sector	20
Group A: Imported and common elective units.		Weighting Points
BSBOPS203	Deliver a service to customers	20
HLTAID011	Provide First Aid	10
ICTICT214	Operate application software packages	20
ICTTEN312	Install telecommunications network equipment	40
MSS402003	Apply competitive systems and practices	20

MSS402022	Apply quick changeover procedures	20
MSS402023	Apply Just in Time procedures	20
MSS402042	Apply 5S procedures	20
MSS402084	Undertake root cause analysis	20
MSS402085	Contribute to the application of a proactive maintenance strategy	20
UEEAS0001	Assemble electronic components*	40
UEEAS0002	Conduct quality and functional tests on assembled electronic apparatus*	20
UEEAS0003	Modify electronic sub-assemblies*	40
UEEAS0004	Select electronic components for assembly*	20
UEEAS0005	Set up and check electronic component assembly machines*	40
UEEAS0006	Use lead-free soldering techniques*	40
UEECD0008	Carry out preparatory energy sector work activities*	60
UEECD0011	Comply with scheduled and preventative maintenance program processes	20
UEECD0020	Fix and secure electrotechnology equipment*	20
UEECD0021	Identify and select components, accessories and materials for energy sector work activities*	20
UEECD0025	Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits*	40
UEECD0028	Plan an integrated cabling installation system*	40
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECD0040	Solve basic problems electronic and digital equipment and circuits*	80
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications*	40
UEECO0002	Maintain documentation	20

UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20
UEEEEC0046	Operate and maintain amateur radio communication stations*	40
UEECS0003	Assemble, set up and test computing devices*	80
UEECS0018	Develop web pages for engineering applications	40
UEECS0020	Evaluate and modify object-oriented code programs	40
UEECS0022	Install and configure a client computer operating system and software	40
UEECS0028	Select, install, configure and test multimedia components	40
UEECS0029	Set up and configure basic local area network (LAN)*	80
UEECS0030	Set up, configure and test biometric devices	40
UEECS0032	Support computer hardware and software for engineering applications	120
UEECS0033	Use engineering applications software on personal computers	40
UEEDV0004	Install and connect data and voice communication equipment*	40
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services*	80
UEEDV0006	Install and modify optical fibre performance data communication cabling*	40
UEEDV0008	Install, modify and verify coaxial and structured communication copper cabling*	40
UEEDV0009	Select and arrange data and voice equipment for local area networks*	40
UEEDV0010	Select and arrange equipment for wireless communication networks*	40
UEEDV0011	Set up and configure basic data communication systems*	40
UEEDV0012	Set up and configure the wireless capabilities of	40

	communications and data storage devices	
UEEDV0013	Solve problems in voice and data communications circuits*	40
UEEDV0014	Test, report and rectify faults in data and voice installations*	40
UEEEEC0002	Assemble and install reception antennae and signal distribution equipment*	60
UEEEEC0003	Assemble and set up basic security systems*	80
UEEEEC0004	Assemble and set up fixed video/audio components and systems in buildings and premises*	120
UEEEEC0006	Carry out repairs of predictable faults in video and audio replay/recording apparatus*	120
UEEEEC0008	Commission large fire protection systems*	40
UEEEEC0019	Develop software solutions for microcontroller-based systems*	60
UEEEEC0026	Enter and verify programs for fire protection systems*	40
UEEEEC0027	Enter instructions and test wired and wireless security systems*	40
UEEEEC0029	Fault find and repair electronic apparatus*	40
UEEEEC0032	Fault find and repair high-volume office equipment*	120
UEEEEC0038	Find and repair microwave amplifier section faults in electronic apparatus*	40
UEEEEC0039	Install and test microwave antennae and waveguides*	60
UEEEEC0040	Install commercial video/audio system components*	120
UEEEEC0041	Install fire detection and warning system apparatus*	40
UEEEEC0042	Install large security systems*	100
UEEEEC0048	Program and commission commercial access control security systems*	60
UEEEEC0049	Program and commission commercial security closed-circuit television systems*	60

UEEEEC0050	Program and commission commercial security systems*	60
UEEEEC0055	Repair basic computer equipment faults by replacement of modules/sub-assemblies*	40
UEEEEC0056	Repair predictable faults in audio components*	40
UEEEEC0057	Repair predictable faults in general electronic apparatus*	40
UEEEEC0058	Repair predictable faults in television receivers*	120
UEEEEC0059	Repair routine business equipment faults*	120
UEEEEC0061	Set up and adjust commercial radio frequency (RF) transmission and reception systems*	60
UEEEEC0062	Set up and test residential video/audio equipment*	40
UEEEEC0064	Solve oscillator problems*	40
UEEEEC0065	Solve problems in basic electronic circuits*	100
UEEEEC0068	Troubleshoot communication systems*	80
UEEEEC0070	Troubleshoot faults in television receivers*	120
UEEEEC0071	Troubleshoot fire protection systems*	40
UEEEEC0072	Troubleshoot microcontroller-based hardware systems	40
UEEEEC0073	Troubleshoot professional audio reproduction components*	120
UEEEEC0076	Verify compliance and functionality of fire protection system installations*	60
UEEEEC0077	Verify functionality and compliance of custom electronic installations*	40
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20
UEEIC0004	Calibrate, adjust and test measuring instruments*	40
UEEIC0012	Develop structured programs to control external devices*	40
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEEIC0047	Use instrumentation drawings, specifications, standards	40

and equipment manuals*

UEERL0001	Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply*	20
UEERL0002	Attach cords, cables and plugs to electrical equipment for connection to 1000 V a.c. or 1500 V d.c.*	20
UEERL0004	Disconnect - reconnect electrical equipment connected to low voltage (LV) installation wiring*	60
UEERL0005	Locate and rectify faults in low voltage (LV) electrical equipment using set procedures*	20

UEE31020 Certificate III in Fire Protection Control

Modification History

Release 3. Updated superseded elective units.

Release 2. Updated superseded HLT, BSB and ICT elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers the skills and knowledge required to select, install, set up, test, fault find, repair and maintain fire protection systems in multiple, commercial and industrial premises.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **1060 weighting points** comprising:

650 core weighting points listed below; **plus**

410 general elective weighting points from the general elective units listed below.

Choose a total of **410 weighting points** elective units from the list below, of which between 0 and 170 **weighting points** can be taken from Group A; and between 260 and 410 **weighting points** must be taken from Group B; or all minimum 410 **weighting points** can be taken from Group B.

Up to 170 weighting points of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20

UEE31220 Certificate III in Instrumentation and Control

Modification History

Release 3. Updated superseded elective units.

Release 2. Updated superseded HLT, BSB and ICT elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package.

Qualification Description

This qualification covers competencies to select, install, set up, test, fault find, repair and maintain systems and devices for measurement and recording of physical/chemical phenomenon and related process control.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of 1060 weighting points comprising:

920 core weighting points listed below; **plus**

140 general elective weighting points from the general elective units listed below.

Choose a total of 140 **weighting points** elective units from the list below, of which between 0 and 60 **weighting points** can be taken from Group A; and between 80 and 140 **weighting points** must be taken from Group B; or all minimum 140 **weighting points** can be taken from Group B

Up to 60 weighting points of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0020	Fix and secure electrotechnology equipment*	20
UEECD0043	Solve problems in direct current circuits*	80
UEECD0045	Solve problems in multiple path extra-low voltage (ELV) a.c. circuits*	40
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications*	40
UEECO0009	Participate in instrumentation and control work and competency development activities	60
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEEIC0021	Find and rectify faults in process final control elements*	40
UEEIC0022	Install instrumentation and control apparatus and associated equipment*	20
UEEIC0023	Install instrumentation and control cabling and tubing*	20
UEEIC0029	Set up and adjust PID control loops*	40
UEEIC0030	Set up and adjust advanced PID process control loops*	40
UEEIC0031	Set up and configure human-machine interface (HMI) and industrial networks*	60

UEEIC0038	Solve problems in density/level measurement components and systems*	40
UEEIC0039	Solve problems in flow measurement components and systems*	40
UEEIC0041	Solve problems in pressure measurement components and systems*	40
UEEIC0043	Solve problems in temperature measurement components and systems*	40
UEEIC0047	Use instrumentation drawings, specifications, standards and equipment manuals*	40
UEEIC0048	Verify compliance and functionality of instrumentation and control installations*	40
UEERE0001	Apply environmentally and sustainable procedures in the energy sector	20
UEERL0004	Disconnect - reconnect electrical equipment connected to low voltage (LV) installation wiring*	60

UEE31420 Certificate III in Security Equipment

Modification History

Release 3. Updated superseded imported elective units.

Release 2. Updated superseded HLT, BSB and ICT elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies in installation and pre-commissioning set-up of wired and wireless security systems in multiple, commercial industrial premises.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **1060 weighting points** comprising:

640 core weighting points listed below; plus

420 general elective weighting points from the general elective units listed below.

Choose a total of **420 weighting points** elective units from the list below, of which between **0 and 170 weighting points** can be taken from Group A; and between **250 and 420 weighting points** must be taken from Group B; or all **420 weighting points** can be taken from Group B.

Up to **170 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified

are complied with.

UEE32120 Certificate III in Appliance Service

Modification History

Release 3. Updated superseded imported elective units.

Release 2: This minor update is the second release of this qualification in the UEE Electrotechnology Training Package.

An incorrect reference to the Group A general elective weighting point requirements was fixed. Imported units updated.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to set up, service and repair electrical and refrigerated appliances with electives in gas appliances.

Competency development activities in this qualification are subject to regulations directly related to licencing. A relevant contract of training through an apprenticeship or relevant employment may be required to enable the application of the required knowledge and skills to on the job work activities and environments.

Refrigerant Handling Licence:

The achievement of the qualification meets the training components for the national restricted domestic refrigeration and air conditioning appliance Refrigerant Handling Licence, which is required to work on refrigeration and air conditioning equipment that carries the risk of a fluorocarbon refrigerant being emitted while decanting the refrigerant or manufacturing, installing, commissioning, servicing, maintaining or decommissioning refrigeration and air conditioning equipment.

Refrigeration and Air Conditioning Occupational Licence:

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to domestic refrigerating and air conditioning appliance work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Electrical Occupation Licence:

The achievement of this qualification with the core restricted electrical units meet the electrical regulatory requirements for related restricted electrical work in most state/territories. This is required to work on electrical installations which are designed to operate at voltages greater than 50 volt (V) alternating current (a.c.) or 120 V direct current (d.c).

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **1080 weighting points** comprising:

870 core weighting points listed below; plus

210 general elective weighting points from the general elective units listed below.

Choose a total of **210 weighting points** elective units from the list below, of which between **0 and 100 weighting points** can be taken from Group A; and between **110 and 210 weighting points** must be taken from Group B; or all **210 elective unit weighting points** can be taken from Group B.

Up to **100 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

UEE32220 Certificate III in Air Conditioning and Refrigeration

Modification History

Release 5. Updated superseded elective unit.

Release 4. Updated elective units.

Release 3. Updated imported elective units.

Release 2. Two units added to general electives. Imported elective units updated.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to select components, install, set up, test, fault find, repair and maintain refrigeration systems and equipment that apply to food storage and preservation, and air conditioning and air distribution equipment in buildings and premises. It includes regulatory requirements for purchasing and handling refrigerants.

Competency development activities in this qualification are subject to regulations directly related to licencing. A relevant contract of training through an apprenticeship or relevant employment may be required to enable the application of the required knowledge and skills to on the job work activities and environments.

Refrigerant Handling Licence:

The achievement of the qualification meets the training components for the full national Refrigerant Handling Licence which is required to work on refrigeration and air conditioning equipment that carries the risk of a fluorocarbon refrigerant being emitted while decanting the refrigerant or manufacturing, installing, commissioning, servicing, maintaining or decommissioning refrigeration and air conditioning equipment.

Refrigeration and Air Conditioning Occupational Licence:

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to refrigeration/air conditioning work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Electrical Occupation Licence:

The achievement of this qualification with the core restricted electrical units meet the electrical regulatory requirements for related restricted electrical work in most state/territories. This is required to work on electrical installations which are designed to operate at voltages greater than 50 volt (V) alternating current (a.c.) or 120 V direct current (d.c.).

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **1210 weighting points** comprising:

1070 core weighting points listed below; plus

140 general elective weighting points from the general elective units listed below.

Choose a total of **140 weighting points** elective units from the list below, of which between **0 and 60 weighting points** can be taken from Group A; and between **80 and 140 weighting points** must be taken from Group B; or all electives units of **140 weighting points** can be taken from Group B.

Up to **30 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisites Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

UEE33020 Certificate III in Electrical Fitting

Modification History

Release 5. Updated superseded elective units.

Release 4. Updated superseded elective units.

Release 3. Updated superseded imported units.

Release 2: This minor update is the second release of this qualification in the UEE Electrotechnology Training Package.

Two units added to general electives.

One elective unit that was in core removed from electives - was duplicate error.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification provides competencies to manufacture, fit, assemble, erect, operate, test, fault find, alter and repair electrical equipment and includes electrical wiring work only if that work is associated with assembling, maintaining, terminating or altering the wiring between electrical components within a plant or machinery. An electrical fitter is not authorised to install any electrical wiring systems within an electrical installation as prescribed by definitions contained in AS/NZS 3000 Electrical installations (known as the Australian/New Zealand Wiring Rules)..

Electrical equipment means any appliance, article, accessory, wire, fitting, cable, conduit or apparatus that generates, uses, conveys or controls (or that is intended to generate, use, convey or control) electricity above extra-low voltage (ELV).

The skills and knowledge described in this qualification may require a licence or permit to practice in the workplace where work is carried out on electrical installations which are designed to operate at voltages greater than 50 volt (V) alternating current (a.c.) or 120 V direct current (d.c.).

Competency development activities in this qualification may be subject to regulations directly related to licensing. Where a licence or permit to practice is not held, a relevant contract of training through an Australian Apprenticeship, may be required.

Licensing, legislative and regulatory requirements that apply to this qualification can vary between states and territories. Some jurisdictions require that the qualification is completed as an apprenticeship to obtain an Electrical Occupational License. Relevant information must be sourced prior to commencing the qualification. Where required for Licencing, the certification documentation issued must indicate if the qualification was completed as an apprenticeship or Trades Recognition Australia (TRA) pathway.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **1060 weighting points** comprising:

810 core weighting points listed below; plus

250 general elective weighting points.

General elective weighting points are to be selected from the Group A general elective units listed below, or up to **60 weighting points** of the general elective units may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
HLTAID009	Provide cardiopulmonary resuscitation	10
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0020	Fix and secure electrotechnology equipment*	20
UEECD0044	Solve problems in multiple path circuits*	40
UEECD0046	Solve problems in single path circuits*	40
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications*	40

UEECO0023	Participate in electrical work and competency development activities	60
UEEEL0003	Arrange circuits, control and protection for electrical installations*	40
UEEEL0005	Develop and connect electrical control circuits*	80
UEEEL0014	Isolate, test and troubleshoot low voltage electrical circuits*	60
UEEEL0019	Solve problems in direct current (d.c.) machines*	30
UEEEL0020	Solve problems in low voltage a.c. circuits*	80
UEEEL0021	Solve problems in magnetic and electromagnetic devices*	30
UEEEL0023	Terminate cables, cords and accessories for low voltage circuits*	40
UEEEL0024	Test and connect alternating current (a.c.) rotating machines*	50
UEEEL0025	Test and connect transformers*	30
UEEEL0028	Conduct compliance and functional verification of electrical apparatus and existing circuits*	40
UEEEL0047	Identify, shut down and restart systems with alternate supplies*	20
UEERE0001	Apply environmentally and sustainable procedures in the energy sector	20
Group A: General elective units		Weighting Points
UEEAS0007	Assemble, mount and connect control gear and switchgear*	40
UEEAS0008	Fabricate and assemble bus bars*	40
UEEAS0009	Mount and wire control panel equipment*	40
UEECD0050	Use and maintain the integrity of a portable gas detection device*	20

UEECS0033	Use engineering applications software on personal computers	40
UEEDV0001	Assemble and connect telecommunication frames and cabinets*	60
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services*	80
UEEDV0008	Install, modify and verify coaxial and structured communication copper cabling*	40
UEEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEEEL0004	Carry out basic repairs to electrical components and equipment*	40
UEEEL0008	Evaluate and modify low voltage heating equipment and controls*	20
UEEEL0009	Evaluate and modify low voltage lighting circuits, equipment and controls*	20
UEEEL0010	Evaluate and modify low voltage socket outlets circuits*	20
UEEEL0016	Provide advice on effective and energy efficient lighting products	20
UEEEL0017	Repair and maintain mechanical components of electrical machines*	40
UEEEL0022	Supply effective and efficient lighting products for domestic and small commercial applications*	40
UEEEL0026	Align and install traction lift equipment*	20
UEEEL0033	Conduct electrical tests on LV electrical machines*	40
UEEEL0034	Conduct mechanical tests on electrical machines and components*	40
UEEEL0045	Diagnose and rectify faults in traction lift	80

	systems*	
UEEEL0046	Find and repair faults in LV d.c. electrical apparatus and circuits*	60
UEEEL0052	Maintain and service traction lift systems and equipment*	40
UEEEL0053	Maintain operation of electrical marine equipment and systems*	60
UEEEL0054	Maintain operation of electrical mining equipment and systems*	60
UEEEL0055	Overhaul and repair major switchgear and control gear*	60
UEEEL0056	Place and connect electrical coils*	40
UEEEL0061	Provide advice on the application of energy efficient lighting for ambient and aesthetic effect*	20
UEEEL0066	Rewind LV direct current machines*	60
UEEEL0067	Rewind single phase machines*	40
UEEEL0068	Rewind three phase low voltage induction machines*	60
UEEEL0074	Wind electrical coils*	40
UEEHA0004	Enter a classified hazardous area to undertake work related to electrical equipment	40
UEEHA0022	Determine the explosion-protection requirements to meet a specified classified hazardous area*	40
UEEHA0025	Install explosion-protected equipment and associated apparatus and wiring systems*	60
UEEHA0026	Maintain equipment associated with hazardous areas*	60
UEEHA0031	Supervise repair and overhaul of explosion-protected equipment type flameproof (Ex d)*	60
UEEHA0032	Supervise repair and overhaul of	60

	explosion-protected equipment type increased safety (Ex e)*	
UEEHA0033	Supervise repair and overhaul of explosion-protected equipment type intrinsically safe (Ex i)*	60
UEEHA0034	Supervise repair and overhaul of explosion-protected equipment type pressurised (Ex p)*	60
UEEHA0035	Supervise repair and overhaul of explosion-protected rotating machines*	60
UEEHA0039	Supervise repair and overhaul of explosion-protected equipment type Group III ('t')*	60
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEEIC0015	Develop, enter and verify word and analogue control programs for programmable logic controllers*	60
UEEIC0022	Install instrumentation and control apparatus and associated equipment*	20
UEEIC0023	Install instrumentation and control cabling and tubing*	20
UEEIC0038	Solve problems in density/level measurement components and systems*	40
UEEIC0039	Solve problems in flow measurement components and systems*	40
UEEIC0041	Solve problems in pressure measurement components and systems*	40
UEEIC0043	Solve problems in temperature measurement components and systems*	40
UEEIC0047	Use instrumentation drawings, specifications, standards and equipment manuals*	40

UEERA0035	Establish the basic operating conditions of air conditioning systems*	20
UEERA0036	Establish the basic operating conditions of vapour compression systems*	60
UEERA0043	Find and rectify faults in appliance control systems and devices*	60
UEERA0044	Find and rectify faults in single phase motors and associated controls*	40
UEERA0045	Find and rectify faults in three phase motors and associated controls*	30
UEERA0049	Install and start up single head split air conditioning and water heating heat pump systems*	70
UEERA0050	Install refrigerant pipe work, flow controls and accessories*	60
UEERA0059	Prepare and connect refrigerant tubing and fittings*	40
UEERA0062	Recover and charge refrigerants*	40
UEERA0079	Safely handle refrigerants and lubricants*	40
UEERA0085	Service clothes washing machines and dryers*	40
UEERA0087	Service electrical heating appliances*	60
UEERA0089	Service refrigeration appliances*	60
UEERA0091	Service small electrical appliances and power tools*	60
UEERL0004	Disconnect - reconnect electrical equipment connected to low voltage (LV) installation wiring*	60
UEERL0005	Locate and rectify faults in low voltage (LV) electrical equipment using set procedures*	20
UEERL0006	Attach HV flexible cables and plugs*	40
UEERL0007	Disconnect-reconnect 3.3 kV electric propulsion components of self-propelled earth moving vehicles*	60

UEERL0008	Disconnect-reconnect explosion-protected appliances and control devices connected to LV installation*	60
UEERS0021	Assemble and wire rail signalling equipment*	30
UEERS0036	Repair rail signalling power and control cables*	40
UEERS0037	Test copper rail signalling cables*	20
UETDRIS017	Perform high voltage field switching operation to a given schedule*	40
UETDRIS018	Perform low voltage field switching operation to a given schedule*	50
UETDRIS031	Maintain insulating oil*	40
UETDRIS032	Solve problems in network equipment*	80
UETDRIS033	Solve problems in network protection*	40
UETDRMP007	Perform rescue from a live low voltage panel*	20
UETDRSB001	Perform substation switching operations to a given schedule	50
UETDRSB010	Maintain capacitor bank equipment*	40

Qualification Mapping Information

This qualification replaces and is not equivalent to UEE33011 Certificate III in Electrical Fitting

UEE40120 Certificate IV in Computer Systems

Modification History

Release 2. This is the second release of this qualification in the UEE Electrotechnology Training Package. Modifications include:

- Updated superseded imported elective units
- The following imported units added to electives (see UEE Release 5.0 Companion Volume Implementation Guide for mapping of deleted UEE units to imported ICT units):
 - ICTNWK309
 - ICTNWK426
 - ICTPRG444
 - ICTTEN420

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to select, install, commission, fault find and maintain data processing, communications and control aspects of systems used for monitoring and control of systems for access, surveillance, safety and effective operation of manufacturing, buildings, structures, premises and precincts.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification

Packaging Rules

A total of **1280 weighting points** comprising:

600 core weighting points listed below; plus

680 general elective weighting points from the general elective units listed below.

Choose a total of **680 weighting points** elective units from the list below, of which between **0 and 220 weighting points** can be taken from Group A; and between **0 and 500 weighting points** must be taken from Group B; and between **180 and 680 weighting points** must be taken from Group C; or all **680 weighting points** can be taken from Group C.

Up to **220 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or

accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0027	Participate in development and follow a personal competency development plan	20
UEECD0042	Solve problems in ELV single path circuits*	40
UEECS0003	Assemble, set up and test computing devices*	80
UEECS0022	Install and configure a client computer operating system and software	40
UEECS0029	Set up and configure basic local area network (LAN)*	80
UEECS0032	Support computer hardware and software for engineering applications	120
UEECS0033	Use engineering applications software on personal computers	40
UEERE0015	Implement and monitor energy sector environmental and sustainable policies and procedures	20

Group A: Imported and common elective units		Weighting Points
BSBOPS203	Deliver a service to customers	20
ICTICT214	Operate application software packages	20
ICTTEN419	Implement and troubleshoot enterprise routers and switches	100
ICTTEN420	Design, install and configure an internetwork	100
ICTTEN421	Apply advanced routing protocols to network design	80
ICTTEN422	Configure and troubleshoot advanced network switching	80
ICTTEN423	Install and maintain a wide area network	80
UEECD0011	Comply with scheduled and preventative maintenance program processes	20
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20
UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20
Group B: Qualification elective units.		Weighting Points
UEEAS0001	Assemble electronic components*	40
UEEAS0003	Modify electronic sub-assemblies*	40
UEEAS0004	Select electronic components for assembly*	20
UEEAS0006	Use lead-free soldering techniques*	40
UEECD0020	Fix and secure electrotechnology equipment*	20
UEECD0021	Identify and select components, accessories and materials for energy sector work activities*	20
UEECD0025	Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits*	40
UEECD0040	Solve basic problems electronic and digital equipment and circuits*	80

UEECD0043	Solve problems in direct current circuits*	80
UEECD0045	Solve problems in multiple path extra-low voltage (ELV) a.c. circuits*	40
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications*	40
UEECS0018	Develop web pages for engineering applications	40
UEECS0028	Select, install, configure and test multimedia components	40
UEECS0030	Set up, configure and test biometric devices	40
UEEDV0004	Install and connect data and voice communication equipment*	40
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services*	80
UEEDV0006	Install and modify optical fibre performance data communication cabling*	40
UEEDV0008	Install, modify and verify coaxial and structured communication copper cabling*	40
UEEDV0009	Select and arrange data and voice equipment for local area networks*	40
UEEDV0010	Select and arrange equipment for wireless communication networks*	40
UEEDV0012	Set up and configure the wireless capabilities of communications and data storage devices	40
UEEEC0003	Assemble and set up basic security systems*	80
UEEEC0019	Develop software solutions for microcontroller-based systems*	60
UEEEC0027	Enter instructions and test wired and wireless security systems*	40
UEEEC0042	Install large security systems*	100
UEEEC0055	Repair basic computer equipment faults by replacement of modules/sub-assemblies*	40
UEEEC0059	Repair routine business equipment faults*	120

UEEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEEC0065	Solve problems in basic electronic circuits*	100
UEEEEC0066	Troubleshoot amplifiers in an electronic apparatus*	80
UEEEEC0067	Troubleshoot basic amplifier circuits*	40
UEEEEC0069	Troubleshoot digital sub-systems*	80
UEEEEC0072	Troubleshoot microcontroller-based hardware systems	40
UEEEEC0074	Troubleshoot resonance circuits in an electronic apparatus*	80
UEEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20
UEEIC0047	Use instrumentation drawings, specifications, standards and equipment manuals*	40

Group C: Qualification elective units**Weighting Points**

ICTPRG444	Analyse software requirements	60
ICTNWK309	Configure and administer network operating systems	70
ICTNWK426	Install and configure client-server applications and services	60
ICTTEN420	Design, install and configure an internet network	100
UEECO0001	Estimate electrotechnology projects	40
UEECO0013	Prepare specifications for the supply of materials and equipment for electrotechnology projects	40
UEECD0013	Develop and implement energy sector maintenance programs	60
UEECD0047	Supervise and coordinate energy sector work activities	40
UEECS0002	Analyse and implement biometric measuring techniques and applications	120
UEECS0014	Develop computer network services*	120

UEECS0020	Evaluate and modify object-oriented code programs	40
UEECS0021	Install and administer UNIX/LINUX-based networked computers	80
UEECS0023	Install and configure network systems for internetworking*	120
UEECS0024	Integrate multiple computer operating systems on a client server local area network	80
UEEIC0012	Develop structured programs to control external devices*	40

Qualification Mapping Information

This qualification replaces and is equivalent to UEE40111 Certificate IV in Computer Systems

UEE40220 Certificate IV in Electrical - Data and Voice Communications

Modification History

Release 3. Updated superseded imported elective units.

Release 2. Updated superseded HLT, BSB and ICT elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to select, install, commission, fault find and maintain electrical and communications systems and equipment in building and premises. It includes Australian Communications Media Authority (ACMA) requirements for Open Cabler registration.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

The entry requirement for this qualification is:

- UEE30820 Certificate III in Electrotechnology Electrician.

or

- A current 'Unrestricted Electricians Licence' or its equivalent issued in an Australian state or territory.

Packaging Rules

A total of **420 weighting points** comprising:

260 core weighting points listed below; plus

160 general elective weighting points from the general elective units listed below.

Choose a total of **160 weighting points** elective units from the list below, of which between **0 and 80 weighting points** can be taken from Group A; between **0 and 80 weighting points** can be taken from Group B; and between **80 and 160 weighting points** can be taken from Group C; or all minimum **160 weighting points** can be taken from Group C.

Up to **80 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology

Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units			Weighting Points
UEECD0010	Compile and produce an energy sector detailed report		60
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*		20
UEECD0024	Implement and monitor energy sector WHS policies and procedures		20
UEECD0027	Participate in development and follow a personal competency development plan		20
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services*		80
UEEDV0008	Install, modify and verify coaxial and structured communication copper cabling*		40
UEERE0015	Implement and monitor energy sector environmental and sustainable policies and procedures		20
Group A: Imported and common elective units			Weighting Points
BSBOPS203	Deliver a service to customers		20
CPCWHS1001	Prepare to work safely in the construction industry		10
HLTAID009	Provide cardiopulmonary resuscitation		10
ICTICT214	Operate application software packages		20
UEECD0011	Comply with scheduled and preventative		20

	maintenance program processes	
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20
UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20
Group B: Qualification elective units		Weighting Points
UEECD0028	Plan an integrated cabling installation system*	40
UEECS0003	Assemble, set up and test computing devices*	80
UEECS0029	Set up and configure basic local area network (LAN)*	80
UEECS0033	Use engineering applications software on personal computers	40
UEEDV0001	Assemble and connect telecommunication frames and cabinets*	60
UEEDV0002	Install aerial telecommunication cables*	40
UEEDV0004	Install and connect data and voice communication equipment*	40
UEEDV0006	Install and modify optical fibre performance data communication cabling*	40
UEEDV0007	Install underground communication cables*	40
UEEDV0009	Select and arrange data and voice equipment for local area networks*	40
UEEDV0010	Select and arrange equipment for wireless communication networks*	40
UEEDV0011	Set up and configure basic data communication systems*	40

UEEDV0012	Set up and configure the wireless capabilities of communications and data storage devices	40
UEEDV0013	Solve problems in voice and data communications circuits*	40
UEEDV0014	Test, report and rectify faults in data and voice installations*	40
UEEIC0011	Develop electrical integrated systems*	20
UEEIC0024	Plan the electrical installation of integrated systems*	20

Group C: Qualification elective units

Weighting Points

UEECD0032	Produce detailed electrotechnology/utilities drawings using CAD equipment and software*	60
UEECD0047	Supervise and coordinate energy sector work activities	40
UEECO0001	Estimate electrotechnology projects	40
UEECO0013	Prepare specifications for the supply of materials and equipment for electrotechnology projects	40
UEECO0025	Provide quotations for inspection and compliance audit services	20
UEEIC0009	Develop an electrical integrated system interface for access through a touch screen*	20

Qualification Mapping Information

This qualification replaces and is equivalent to UEE40211 Certificate IV in Electrical - Data and Voice Communications

UEE40320 Certificate IV in Installation Inspection and Audits

Modification History

Release 4. Updated superseded elective units.

Release 3. Updated superseded elective units.

Release 2. Updated superseded HLT, BSB and ICT elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies in mandatory and contractual inspections of electrical systems and auditing of entities for compliance with electrical safety requirements.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

The entry requirement for this qualification is:

- UEE30820 Certificate III in Electrotechnology Electrician

or

- a current 'Unrestricted Electricians Licence' or its equivalent issued in an Australian state or territory.

Packaging Rules

A total of **440 weighting points** comprising:

220 core weighting points listed below; plus

220 general elective weighting points from the general elective units listed below.

Choose a total of **220 weighting points** elective units from the list below, of which between **0 and 80 weighting points** can be taken from Group A; between **0 and 110 weighting points** can be taken from Group B; and between **110 and 220 weighting points** must be taken from Group C (or all elective **weighting points** can be taken from Group C).

Up to **80 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting

points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0027	Participate in development and follow a personal competency development plan	20
UEEEL0029	Conduct compliance inspection of LV electrical installations with demand exceeding 100 A per phase*	40
UEEEL0030	Conduct compliance inspection of single phase LV electrical installations*	60
UEERE0015	Implement and monitor energy sector environmental and sustainable policies and procedures	20
Group A: Imported and common elective units		Weighting Points
BSBOPS203	Deliver a service to customers	20
CPCWHS1001	Prepare to work safely in the construction industry	10
HLTAID009	Provide cardiopulmonary resuscitation	10
ICTICT214	Operate application software packages	20
UEECO0002	Maintain documentation	20
Group B: General elective units		Weighting Points

UEECS0033	Use engineering applications software on personal computers	40
UEEEL0045	Diagnose and rectify faults in traction lift systems*	80
UEEEL0049	Install and maintain emergency safety systems*	60
UEEEL0053	Maintain operation of electrical marine equipment and systems*	60
UEEEL0054	Maintain operation of electrical mining equipment and systems*	60
UEEEL0069	Select and arrange equipment for special LV electrical installations*	60
UEEEL0078	Install and commission whole current electricity meters*	20
UEEHA0004	Enter a classified hazardous area to undertake work related to electrical equipment	40
UEEHA0020	Conduct detailed inspection of electrical installations for hazardous areas*	40
UEEHA0022	Determine the explosion-protection requirements to meet a specified classified hazardous area*	40
UEEHA0026	Maintain equipment associated with hazardous areas*	60
UEEHA0038	Conduct visual and close inspection of electrical installations for hazardous areas*	40
UEEIC0011	Develop electrical integrated systems*	20
UEEIC0024	Plan the electrical installation of integrated systems*	20
UEEIC0047	Use instrumentation drawings, specifications, standards and equipment manuals*	40
UEERE0054	Conduct site survey for grid-connected photovoltaic and battery storage systems	30

UEERE0080	Install photovoltaic power conversion equipment to grid *	30
UEERE0081	Install photovoltaic power conversion equipment to grid *	30
Group C: General elective units		Weighting Points
UEEEL0027	Carry out low voltage electrical field testing and report findings*	60
UEEEL0031	Conduct compliance inspection of special LV electrical installations*	60
UEEEL0040	Develop compliance policies and plans to conduct an electrical contracting business*	80
UEEEL0044	Diagnose and rectify faults in complex lift systems*	40
UEEEL0051	Investigate and report on electrical incidents and causes*	60
UEEEL0057	Plan electrical installations with a low voltage demand up to 400 A per phase*	40
UEEEL0059	Plan low voltage switchboard and control panel layouts*	40
UEEEL0072	Set up and place LV electrical apparatus and associated circuits into service*	40
UEEEL0073	Verify compliance and functionality of special LV electrical installations*	40

Qualification Mapping Information

This qualification replaces and is not equivalent to UEE40311 Certificate IV in Installation Inspection and Audits

UEE40420 Certificate IV in Electrical - Instrumentation

Modification History

Release 3. Updated superseded elective units.

Release 2. Incorrect reference to the Group C general elective requirements fixed. Imported unit codes updated.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to select, install, commission, fault find and maintain equipment and systems for the control of plant, machines and processes.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

The entry requirement for this qualification is:

- UEE30820 Certificate III in Electrotechnology Electrician

or

- a current 'Unrestricted Electricians Licence' or its equivalent issued in an Australian state or territory.

Packaging Rules

A total of **440 weighting points** comprising:

320 core weighting points listed below; **plus**

120 general elective weighting points from the general elective units listed below.

Choose a total of **120 weighting points** elective units from the list below, of which between 0 and **60 weighting points** can be taken from Group A; and between 0 and **60 weighting points** can be taken from Group B; and between 60 and **120 weighting points** must be taken from Group C (or all 120 elective **weighting points** can be taken from Group C).

Up to 60 weighting points of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting

points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0027	Participate in development and follow a personal competency development plan	20
UEEIC0038	Solve problems in density/level measurement components and systems*	40
UEEIC0039	Solve problems in flow measurement components and systems*	40
UEEIC0041	Solve problems in pressure measurement components and systems*	40
UEEIC0043	Solve problems in temperature measurement components and systems*	40
UEEIC0047	Use instrumentation drawings, specifications, standards and equipment manuals*	40
UEERE0015	Implement and monitor energy sector environmental and sustainable policies and procedures	20
Group A: Imported and common elective units		Weighting Points
BSBOPS203	Deliver a service to customers	20
CPCWHS1001	Prepare to work safely in the construction industry	10
HLTAID009	Provide cardiopulmonary resuscitation	10
ICTICT214	Operate application software packages	20
UEECD0011	Comply with scheduled and preventative maintenance program processes	20

UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20
UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20

Group B: General elective units**Weighting Points**

UEECS0033	Use engineering applications software on personal computers	40
UEEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEEEL0053	Maintain operation of electrical marine equipment and systems*	60
UEEEL0054	Maintain operation of electrical mining equipment and systems*	60
UEEHA0004	Enter a classified hazardous area to undertake work related to electrical equipment	40
UEEHA0020	Conduct detailed inspection of electrical installations for hazardous areas*	40
UEEHA0022	Determine the explosion-protection requirements to meet a specified classified hazardous area*	40
UEEHA0025	Install explosion-protected equipment and associated apparatus and wiring systems*	60
UEEHA0026	Maintain equipment associated with hazardous areas*	60
UEEHA0038	Conduct visual and close inspection of electrical installations for hazardous areas*	40
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20
UEEIC0011	Develop electrical integrated systems*	20
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60

UEEIC0021	Find and rectify faults in process final control elements*	40
UEEIC0022	Install instrumentation and control apparatus and associated equipment*	20
UEEIC0023	Install instrumentation and control cabling and tubing*	20
UEEIC0024	Plan the electrical installation of integrated systems*	20
UEEIC0029	Set up and adjust PID control loops*	40
UEEIC0030	Set up and adjust advanced PID process control loops*	40
UEEIC0031	Set up and configure human-machine interface (HMI) and industrial networks*	60
Group C: General elective units		Weighting Points
UEEIC0014	Develop, enter and verify programs in supervisory control and data acquisition systems*	60
UEEIC0015	Develop, enter and verify word and analogue control programs for programmable logic controllers*	60
UEEIC0018	Diagnose and rectify faults in digital controls systems*	60
UEEIC0020	Fault find and repair analogue circuits and components in electronic control systems*	60
UEEIC0026	Provide solutions to fluid circuit operations*	60
UEEIC0027	Provide solutions to pneumatic-hydraulic system operations*	80
UEEIC0028	Provide solutions to problems in industrial control systems*	60
UEEIC0034	Set up industrial field control devices*	60
UEEIC0040	Solve problems in polyphase electronic power control circuits*	60
UEEIC0042	Solve problems in single phase electronic power control circuits*	60

Qualification Mapping Information

This qualification replaces and is not equivalent to UEE40411 Certificate IV in Electrical - Instrumentation

UEE40520 Certificate IV in Electrical - Air Conditioning Split Systems

Modification History

Release 3. Updated superseded imported elective units.

Release 2: This minor update is the second release of this qualification in the UEE Electrotechnology Training Package.

An incorrect reference to the Refrigeration handling licence entry requirement was fixed.

Imported elective units updated.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to select, install, commission, fault find and maintain electrical systems and equipment in buildings and premises and split air conditioning systems to a prescribed routine where the maximum plant capacity for each system does not exceed 18 kilowatt (kW). It includes regulatory requirements for purchasing and handling refrigerants for split systems.

Split systems include wall hung, floor and ceiling suspended, cassette and ducted fan coil split systems. This qualification excludes competencies required for service, repair, maintenance or the safe and proper installation of commercial refrigeration and air conditioning plant and equipment

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

The entry requirement for this qualification is:

- UEE30820 Certificate III in Electrotechnology Electrician

or

- a current 'Unrestricted Electricians Licence' or its equivalent issued in an Australian state or territory

and

- a Trainee Refrigerant Handling Licence.

Packaging Rules

A total of **450 weighting points** comprising:

290 core weighting points listed below; plus

160 general elective weighting points from the general elective units listed below.

Choose a total of **160 weighting points** elective units from the list below, of which between **0 and 80 weighting points** can be taken from Group A; and between **0 and 80 weighting points** can be taken from Group B; and between **80 and 160 weighting points** can be taken from Group C (or all electives units of **160 weighting points** can be taken from Group C).

Up to **80 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0027	Participate in development and follow a personal competency development plan	20
UEERA0049	Install and start up single head split air conditioning and water heating heat pump systems*	70
UEERA0059	Prepare and connect refrigerant tubing and fittings*	40
UEERA0064	Recover, pressure test, evacuate, charge and leak test refrigerants - split systems*	60
UEERE0015	Implement and monitor energy sector environmental and sustainable policies and procedures	20
Group A: Imported and common elective units		Weighting Points

BSBOPS203	Deliver a service to customers	20
CPCWHS1001	Prepare to work safely in the construction industry	10
HLTAID009	Provide cardiopulmonary resuscitation	10
ICTICT214	Operate application software packages	20
UEECD0011	Comply with scheduled and preventative maintenance program processes	20
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20
UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20

Group B: Qualification elective units

Weighting Points

UEECS0033	Use engineering applications software on personal computers	40
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEERA0036	Establish the basic operating conditions of vapour compression systems*	60
UEERA0035	Establish the basic operating conditions of air conditioning systems*	20
UEERA0007	Apply safety awareness and legal requirements for flammable refrigerants	10

Group C: Qualification elective units

Weighting Points

UEECD0047	Supervise and coordinate energy sector work activities	40
UEEEL0029	Conduct compliance inspection of LV electrical installations with demand exceeding 100 A per phase*	40
UEEEL0030	Conduct compliance inspection of single phase LV electrical installations*	60

UEERA0002	Analyse the psychrometric performance of HVAC/R systems*	50
UEERA0003	Analyse the thermodynamic performance of HVAC/R systems	50

Qualification Mapping Information

This qualification replaces and is not equivalent to UEE40511 Certificate IV in Electrical - Air-conditioning Split Systems

UEE40620 Certificate IV in Electrotechnology - Systems Electrician

Modification History

Release 6. Updated superseded UEERS units.

Release 5. Updated superseded elective units.

Release 4. Updated superseded elective units.

Release 3. Updated superseded imported units.

Release 2: Three units added to Group B General Electives. Imported elective units updated.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to select, install, commission, fault find and maintain electrical systems and equipment with options, typically in explosion protection; electrical machines; electrical inspection; safety auditing; contracting; lifts and energy supply/distribution.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

The entry requirement for this qualification is:

- UEE30820 Certificate III in Electrotechnology Electrician

or

- a current 'Unrestricted Electricians Licence' or its equivalent issued in an Australian state or territory.

Packaging Rules

A total of **440 weighting points** comprising:

120 core weighting points listed below; plus

320 general elective weighting points from the general elective units listed below.

Choose a total of **320 weighting points** elective units from the list below, of which between **0 and 100 weighting points** can be taken from Group A; between **0 and 100 weighting points** can be taken from Group B; and between **220 and 320 weighting points** can be taken from Group C (or all **320 elective weighting points** can be taken from Group C).

Up to **100 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0027	Participate in development and follow a personal competency development plan	20
UEERE0015	Implement and monitor energy sector environmental and sustainable policies and procedures	20
Group A: Imported and common elective units		Weighting Points
BSBOPS203	Deliver a service to customers	20
CPCWHS1001	Prepare to work safely in the construction industry	10
HLTAID009	Provide cardiopulmonary resuscitation	10
ICTICT214	Operate application software packages	20
UEECD0011	Comply with scheduled and preventative maintenance program processes	20
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20
UEECO0015	Provide quotations for installation or service jobs	20

Group B: General elective units		Weighting Points
UEEAS0007	Assemble, mount and connect control gear and switchgear*	40
UEEAS0008	Fabricate and assemble bus bars*	40
UEEAS0009	Mount and wire control panel equipment*	40
UEECD0028	Plan an integrated cabling installation system*	40
UEECD0050	Use and maintain the integrity of a portable gas detection device*	20
UEECS0033	Use engineering applications software on personal computers	40
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services*	80
UEEDV0008	Install, modify and verify coaxial and structured communication copper cabling*	40
UEEEC0003	Assemble and set up basic security systems*	80
UEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEEEL0004	Carry out basic repairs to electrical components and equipment*	40
UEEEL0016	Provide advice on effective and energy efficient lighting products	20
UEEEL0017	Repair and maintain mechanical components of electrical machines*	40
UEEEL0022	Supply effective and efficient lighting products for domestic and small commercial applications*	40
UEEEL0026	Align and install traction lift equipment*	20
UEEEL0033	Conduct electrical tests on LV electrical machines*	40

UEEEL0034	Conduct mechanical tests on electrical machines and components*	40
UEEEL0045	Diagnose and rectify faults in traction lift systems*	80
UEEEL0046	Find and repair faults in LV d.c. electrical apparatus and circuits*	60
UEEEL0049	Install and maintain emergency safety systems*	60
UEEEL0052	Maintain and service traction lift systems and equipment*	40
UEEEL0053	Maintain operation of electrical marine equipment and systems*	60
UEEEL0054	Maintain operation of electrical mining equipment and systems*	60
UEEEL0055	Overhaul and repair major switchgear and control gear*	60
UEEEL0056	Place and connect electrical coils*	40
UEEEL0061	Provide advice on the application of energy efficient lighting for ambient and aesthetic effect*	20
UEEEL0066	Rewind LV direct current machines*	60
UEEEL0067	Rewind single phase machines*	40
UEEEL0068	Rewind three phase low voltage induction machines*	60
UEEEL0069	Select and arrange equipment for special LV electrical installations*	60
UEEEL0074	Wind electrical coils*	40
UEEEL0075	Inspect, test and maintain emergency alarm systems and equipment*	20
UEEEL0076	Inspect, test and maintain emergency lighting systems*	20
UEEEL0078	Install and commission whole current electricity meters*	20
UEEHA0004	Enter a classified hazardous area to undertake	40

	work related to electrical equipment	
UEEHA0020	Conduct detailed inspection of electrical installations for hazardous areas*	40
UEEHA0022	Determine the explosion-protection requirements to meet a specified classified hazardous area*	40
UEEHA0025	Install explosion-protected equipment and associated apparatus and wiring systems*	60
UEEHA0026	Maintain equipment associated with hazardous areas*	60
UEEHA0038	Conduct visual and close inspection of electrical installations for hazardous areas*	40
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20
UEEIC0011	Develop electrical integrated systems*	20
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEEIC0024	Plan the electrical installation of integrated systems*	20
UEEIC0038	Solve problems in density/level measurement components and systems*	40
UEEIC0039	Solve problems in flow measurement components and systems*	40
UEEIC0041	Solve problems in pressure measurement components and systems*	40
UEEIC0043	Solve problems in temperature measurement components and systems*	40
UEEIC0047	Use instrumentation drawings, specifications, standards and equipment manuals*	40
UEERA0035	Establish the basic operating conditions of air conditioning systems*	20
UEERA0036	Establish the basic operating conditions of vapour compression systems*	60
UEERA0059	Prepare and connect refrigerant tubing and	40

	fittings*	
UEERE0050	Identify and isolate multiple supply systems*	20
UEERE0054	Conduct site survey for grid-connected photovoltaic and battery storage systems	30
UEERE0080	Install photovoltaic power conversion equipment to grid *	30
UEERE0081	Install photovoltaic systems to power conversion equipment *	30
UEERS0021	Assemble and wire electrical rail signalling equipment*	30
UEERS0024	Install and maintain rail track circuit leads and bonds*	30
UEERS0036	Repair rail signalling power and control cables*	40
UEERS0037	Test copper rail signalling cables*	20
UETDRIS017	Perform high voltage field switching operation to a given schedule*	40
UETDRIS018	Perform low voltage field switching operation to a given schedule*	50
UETDRIS031	Maintain insulating oil*	40
UETDRIS032	Solve problems in network equipment*	80
UETDRIS033	Solve problems in network protection*	40
UETDRSB001	Perform substation switching operations to a given schedule	50
UETDRSB007	Install and maintain substation direct current systems*	30
UETDRSB010	Maintain capacitor bank equipment*	40
Group C: General elective units		Weighting Points
CPPHES4005	Assess household energy use and efficiency improvements	40
UEECD0063	Write work activity reports	20

UEECO0001	Estimate electrotechnology projects	40
UEEEL0007	Develop detailed electrical drawings*	60
UEEEL0027	Carry out low voltage electrical field testing and report findings*	60
UEEEL0029	Conduct compliance inspection of LV electrical installations with demand exceeding 100 A per phase*	40
UEEEL0030	Conduct compliance inspection of single phase LV electrical installations*	60
UEEEL0031	Conduct compliance inspection of special LV electrical installations*	60
UEEEL0032	Conduct electrical tests on HV electrical machines*	60
UEEEL0036	Design effective and efficient lighting for residential and commercial buildings*	20
UEEEL0040	Develop compliance policies and plans to conduct an electrical contracting business*	80
UEEEL0044	Diagnose and rectify faults in complex lift systems*	40
UEEEL0050	Install and replace low voltage current transformer metering*	20
UEEEL0051	Investigate and report on electrical incidents and causes*	60
UEEEL0057	Plan electrical installations with a low voltage demand up to 400 A per phase*	40
UEEEL0059	Plan low voltage switchboard and control panel layouts*	40
UEEEL0060	Prepare quotations for the supply of effective and efficient lighting products for lighting projects*	20
UEEEL0063	Provide photometric data for illumination system design	60
UEEEL0064	Rewind HV three phase induction machines rated for voltages above 3.3 kV*	60

UEEEL0065	Rewind HV three phase induction machines rated for voltages to 3.3 kV*	60
UEEEL0070	Select effective and efficient light sources and luminaries for given locations and designs*	60
UEEEL0071	Select low voltage power factor correction equipment*	40
UEEEL0072	Set up and place LV electrical apparatus and associated circuits into service*	40
UEEEL0073	Verify compliance and functionality of special LV electrical installations*	40
UEEIC0009	Develop an electrical integrated system interface for access through a touch screen*	20
UEEIC0012	Develop structured programs to control external devices*	40
UEEIC0014	Develop, enter and verify programs in supervisory control and data acquisition systems*	60
UEEIC0015	Develop, enter and verify word and analogue control programs for programmable logic controllers*	60
UEEIC0018	Diagnose and rectify faults in digital controls systems*	60
UEEIC0020	Fault find and repair analogue circuits and components in electronic control systems*	60
UEEIC0026	Provide solutions to fluid circuit operations*	60
UEEIC0027	Provide solutions to pneumatic-hydraulic system operations*	80
UEEIC0028	Provide solutions to problems in industrial control systems*	60
UEEIC0034	Set up industrial field control devices*	60
UEEIC0040	Solve problems in polyphase electronic power control circuits*	60
UEEIC0042	Solve problems in single phase electronic power control circuits*	60

UEERE0052	Assess energy loads and uses for energy efficiency in commercial facilities*	40
UEERE0053	Assess energy loads and uses for energy efficiency in industrial properties and enterprises*	40
UEERE0061	Design grid-connected photovoltaic power supply systems*	60
UEERE0068	Develop strategies to address sustainability issues for electrical installations*	20

Qualification Mapping Information

This qualification replaces and is not equivalent to UEE40611 Certificate IV in Electrotechnology - Systems Electrician

Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

UEE40720 Certificate IV in Electronics and Communications

Modification History

Release 2. This is the second release of this qualification in the UEE Electrotechnology Training Package. Modifications include:

- Updated superseded imported elective units
- ICTPRG444 added to electives (see UEE Release 5.0 Companion Volume Implementation Guide for mapping of deleted UEE units to imported ICT units)

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package.

Qualification Description

This qualification covers competencies in audio/video, data systems and computer/network hardware, medical applications and communication aspects of electronic i.e. transmitters, communications medium/channel, receivers, attenuation and noise reduction. It includes detection/surveillance.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification

Packaging Rules

A total of **1280 weighting points** comprising:

720 core weighting points listed below; plus

560 general elective weighting points from the general elective units listed below.

Choose a total of **560 weighting points** elective units from the list below, of which between **0 and 220 weighting points** can be taken from Group A; and between **0 and 360 weighting points** must be taken from Group B; and between **200 and 560 weighting points** must be taken from Group C; or all **560 weighting points** can be taken from Group C.

Up to **220 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference

Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0027	Participate in development and follow a personal competency development plan	20
UEECD0043	Solve problems in direct current circuits*	80
UEEEEC0028	Fault find and repair complex power supplies*	40
UEEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEEC0063	Solve fundamental electronic communications system problems*	40
UEEEEC0066	Troubleshoot amplifiers in an electronic apparatus*	80
UEEEEC0067	Troubleshoot basic amplifier circuits*	40
UEEEEC0069	Troubleshoot digital sub-systems*	80
UEEEEC0074	Troubleshoot resonance circuits in an electronic apparatus*	80
UEEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEERE0015	Implement and monitor energy sector environmental and	20

sustainable policies and procedures

Group A: Imported and common elective units		Weighting Points
BSBOPS203	Deliver a service to customers	20
ICTICT214	Operate application software packages	20
ICTTEN312	Install telecommunications network equipment	40
MSS402003	Apply competitive systems and practices	20
MSS402022	Apply quick changeover procedures	20
MSS402023	Apply Just in Time procedures	20
MSS402042	Apply 5S procedures	20
MSS402084	Undertake root cause analysis	20
MSS402085	Contribute to the application of a proactive maintenance strategy	20
UEECD0011	Comply with scheduled and preventative maintenance program processes	20
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20
UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20
Group B: Qualification elective units		Weighting Points
UEEAS0001	Assemble electronic components*	40
UEEAS0002	Conduct quality and functional tests on assembled electronic apparatus*	20
UEEAS0003	Modify electronic sub-assemblies*	40
UEEAS0004	Select electronic components for assembly*	20
UEEAS0005	Set up and check electronic component assembly machines*	40
UEEAS0006	Use lead-free soldering techniques*	40

UEECD0008	Carry out preparatory energy sector work activities*	60
UEECD0020	Fix and secure electrotechnology equipment*	20
UEECD0021	Identify and select components, accessories and materials for energy sector work activities*	20
UEECD0025	Lay wiring/cabbling and terminate accessories for extra-low voltage (ELV) circuits*	40
UEECD0028	Plan an integrated cabling installation system*	40
UEECD0040	Solve basic problems electronic and digital equipment and circuits*	80
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications*	40
UEECS0003	Assemble, set up and test computing devices*	80
UEECS0018	Develop web pages for engineering applications	40
UEECS0022	Install and configure a client computer operating system and software	40
UEECS0028	Select, install, configure and test multimedia components	40
UEECS0029	Set up and configure basic local area network (LAN)*	80
UEECS0030	Set up, configure and test biometric devices	40
UEECS0032	Support computer hardware and software for engineering applications	120
UEECS0033	Use engineering applications software on personal computers	40
UEEDV0004	Install and connect data and voice communication equipment*	40
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services*	80
UEEDV0006	Install and modify optical fibre performance data communication cabling*	40
UEEDV0008	Install, modify and verify coaxial and structured communication copper cabling*	40
UEEDV0009	Select and arrange data and voice equipment for local	40

	area networks*	
UEEDV0010	Select and arrange equipment for wireless communication networks*	40
UEEDV0011	Set up and configure basic data communication systems*	40
UEEDV0012	Set up and configure the wireless capabilities of communications and data storage devices	40
UEEDV0013	Solve problems in voice and data communications circuits*	40
UEEDV0014	Test, report and rectify faults in data and voice installations*	40
UEEEC0002	Assemble and install reception antennae and signal distribution equipment*	60
UEEEC0003	Assemble and set up basic security systems*	80
UEEEC0004	Assemble and set up fixed video/audio components and systems in buildings and premises*	120
UEEEC0006	Carry out repairs of predictable faults in video and audio replay/recording apparatus*	120
UEEEC0008	Commission large fire protection systems*	40
UEEEC0019	Develop software solutions for microcontroller-based systems*	60
UEEEC0026	Enter and verify programs for fire protection systems*	40
UEEEC0027	Enter instructions and test wired and wireless security systems*	40
UEEEC0029	Fault find and repair electronic apparatus*	40
UEEEC0032	Fault find and repair high-volume office equipment*	120
UEEEC0038	Find and repair microwave amplifier section faults in electronic apparatus*	40
UEEEC0039	Install and test microwave antennae and waveguides*	60
UEEEC0040	Install commercial video/audio system components*	120
UEEEC0041	Install fire detection and warning system apparatus*	40

UEEEEC0042	Install large security systems*	100
UEEEEC0046	Operate and maintain amateur radio communication stations*	40
UEEEEC0048	Program and commission commercial access control security systems*	60
UEEEEC0049	Program and commission commercial security closed-circuit television systems*	60
UEEEEC0050	Program and commission commercial security systems*	60
UEEEEC0055	Repair basic computer equipment faults by replacement of modules/sub-assemblies*	40
UEEEEC0056	Repair predictable faults in audio components*	40
UEEEEC0057	Repair predictable faults in general electronic apparatus*	40
UEEEEC0058	Repair predictable faults in television receivers*	120
UEEEEC0059	Repair routine business equipment faults*	120
UEEEEC0061	Set up and adjust commercial radio frequency (RF) transmission and reception systems*	60
UEEEEC0062	Set up and test residential video/audio equipment*	40
UEEEEC0064	Solve oscillator problems*	40
UEEEEC0065	Solve problems in basic electronic circuits*	100
UEEEEC0068	Troubleshoot communication systems*	80
UEEEEC0070	Troubleshoot faults in television receivers*	120
UEEEEC0071	Troubleshoot fire protection systems*	40
UEEEEC0072	Troubleshoot microcontroller-based hardware systems	40
UEEEEC0073	Troubleshoot professional audio reproduction components*	120
UEEEEC0076	Verify compliance and functionality of fire protection system installations*	60
UEEEEC0077	Verify functionality and compliance of custom electronic installations*	40

UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEERL0001	Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply*	20
UEERL0002	Attach cords, cables and plugs to electrical equipment for connection to 1000 V a.c. or 1500 V d.c.*	20

Group C: Qualification elective units **Weighting Points**

ICTPRG444	Analyse software requirements	60
UEECD0013	Develop and implement energy sector maintenance programs	60
UEECD0047	Supervise and coordinate energy sector work activities	40
UEECO0001	Estimate electrotechnology projects	40
UEECO0013	Prepare specifications for the supply of materials and equipment for electrotechnology projects	40
UEECS0002	Analyse and implement biometric measuring techniques and applications	120
UEECS0020	Evaluate and modify object-oriented code programs	40
UEEEEC0009	Commission satellite and microwave communication systems*	40
UEEEEC0012	Design custom electronic equipment installations*	120
UEEEEC0015	Develop basic plans for integrating security systems*	40
UEEEEC0022	Diagnose and rectify faults in camera circuits and equipment*	60
UEEEEC0023	Diagnose and rectify faults in digital transmission circuits and systems*	80
UEEEEC0024	Diagnose and rectify faults in electronic display circuits*	60
UEEEEC0025	Diagnose and rectify faults in recording and replay equipment	60
UEEEEC0030	Fault find and repair electronic medical equipment*	120

UEEEEC0031	Fault find and repair global positioning systems*	60
UEEEEC0033	Fault find and repair navigation systems*	60
UEEEEC0034	Fault find and repair radar apparatus and systems*	120
UEEEEC0035	Fault find and repair satellite-based surveillance and observation systems*	60
UEEEEC0036	Fault find and repair sonar apparatus and systems*	120
UEEEEC0037	Fault find and repair telecommunication apparatus and systems*	60
UEEEEC0051	Program and commission commercial video/audio systems*	40
UEEEEC0052	Program and test large security systems*	120
UEEIC0012	Develop structured programs to control external devices*	40
UEEIC0018	Diagnose and rectify faults in digital controls systems*	60
UEEIC0020	Fault find and repair analogue circuits and components in electronic control systems*	60
UEEIC0028	Provide solutions to problems in industrial control systems*	60

Qualification Mapping Information

This qualification replaces and is equivalent to UEE40711 Certificate IV in Electronics and Communications

UEE40820 Certificate IV in Electrical - Fire Protection Control Systems

Modification History

Release 3. Updated superseded elective units.

Release 2. Updated superseded imported elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to select, install, commission, fault find and maintain fire protection control systems in buildings.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

The entry requirement for this qualification is:

- UEE30820 Certificate III in Electrotechnology Electrician.

or

- a current 'Unrestricted Electricians Licence' or its equivalent issued in an Australian state or territory.

Packaging Rules

A total of **440 weighting points** comprising:

340 core weighting points listed below; **plus**

100 general elective weighting points from the general elective units listed below.

Choose a total of **100 weighting points** elective units from the list below, of which between 0 and 60 **weighting points** can be taken from Group A; between 0 and 60 **weighting points** can be taken from Group B; and between 40 and 100 **weighting points** can be taken from Group C; or all minimum **100 weighting points** can be taken from Group C.

Up to 60 weighting points of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference

Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0027	Participate in development and follow a personal competency development plan	20
UEEEEC0008	Commission large fire protection systems*	40
UEEEEC0026	Enter and verify programs for fire protection systems*	40
UEEEEC0041	Install fire detection and warning system apparatus*	40
UEEEEC0071	Troubleshoot fire protection systems*	40
UEEEEC0076	Verify compliance and functionality of fire protection system installations*	60
UEERE0015	Implement and monitor energy sector environmental and sustainable policies and procedures	20
Group A: Imported and common elective units		Weighting Points
BSBOPS203	Deliver a service to customers	20
CPCWHS1001	Prepare to work safely in the construction industry	10
CPPFES2043	Apply regulations to prevent ozone depleting substance and synthetic greenhouse gas emissions	10

HLTAID009	Provide cardiopulmonary resuscitation	10
ICTICT214	Operate application software packages	20
UEECD0011	Comply with scheduled and preventative maintenance program processes	20
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20
UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20

Group B: Qualification elective units

Weighting Points

UEECS0033	Use engineering applications software on personal computers	40
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services*	80
UEEDV0006	Install and modify optical fibre performance data communication cabling*	40
UEEDV0008	Install, modify and verify coaxial and structured communication copper cabling*	40
UEEEEC0028	Fault find and repair complex power supplies*	40
UEEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEEEL0049	Install and maintain emergency safety systems*	60
UEEHA0004	Enter a classified hazardous area to undertake work related to electrical equipment	40
UEEHA0022	Determine the explosion-protection	40

	requirements to meet a specified classified hazardous area*	
UEEHA0025	Install explosion-protected equipment and associated apparatus and wiring systems*	60
UEEHA0026	Maintain equipment associated with hazardous areas*	60
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
Group C: Qualification elective units		Weighting Points
UEEEL0007	Develop detailed electrical drawings*	60
UEEEL0029	Conduct compliance inspection of LV electrical installations with demand exceeding 100 A per phase*	40
UEEEL0030	Conduct compliance inspection of single phase LV electrical installations*	60
UEEEL0031	Conduct compliance inspection of special LV electrical installations*	60
UEEEL0040	Develop compliance policies and plans to conduct an electrical contracting business*	80
UEEEL0051	Investigate and report on electrical incidents and causes*	60
UEEEL0073	Verify compliance and functionality of special LV electrical installations*	40
UEEHA0038	Conduct visual and close inspection of electrical installations for hazardous areas*	40
UEEIC0014	Develop, enter and verify programs in supervisory control and data acquisition systems*	60
UEEIC0015	Develop, enter and verify word and analogue control programs for programmable logic controllers*	60

UEE40920 Certificate IV in Industrial Electronics and Control

Modification History

Release 4. Updated superseded units.

Release 3. Updated superseded HLT, BSB and ICT elective units.

Release 2. One unit added to general electives. Imported elective units updated.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to select, install, commission, fault find and maintain equipment and systems for the control of plant, machines and processes.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

The entry requirement for this qualification is:

- UEE30820 Certificate III in Electrotechnology Electrician

or

- a current 'Unrestricted Electricians Licence' or its equivalent issued in an Australian state or territory.

Packaging Rules

A total of **440 weighting points** comprising:

240 core weighting points listed below; **plus**

200 general elective weighting points from the general elective units listed below.

Choose a total of **200 weighting points** elective units from the list below, of which between 0 and 100 **weighting points** can be taken from Group A; and between 0 and 100 **weighting points** can be taken from Group B; and between 100 and 200 **weighting points** can be taken from Group C (or all minimum **200 weighting points** can be taken from Group C).

Up to 100 weighting points of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting

points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0027	Participate in development and follow a personal competency development plan	20
UEEIC0018	Diagnose and rectify faults in digital controls systems*	60

UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20

Group B: General elective units

Weighting Points

UEECD0030	Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software*	60
UEECD0031	Prepare engineering drawings using manual drafting and CAD for electrotechnology applications*	60
UEECD0032	Produce detailed electrotechnology/utilities drawings using CAD equipment and software*	60
UEECD0050	Use and maintain the integrity of a portable gas detection device*	20
UEECS0033	Use engineering applications software on personal computers	40
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services*	80
UEEDV0008	Install, modify and verify coaxial and structured communication copper cabling*	40
UEEEEC0003	Assemble and set up basic security systems*	80
UEEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEEEL0046	Find and repair faults in LV d.c. electrical apparatus and circuits*	60
UEEEL0053	Maintain operation of electrical marine equipment and systems*	60

UEEEL0054	Maintain operation of electrical mining equipment and systems*	60
UEEHA0004	Enter a classified hazardous area to undertake work related to electrical equipment	40
UEEHA0022	Determine the explosion-protection requirements to meet a specified classified hazardous area*	40
UEEHA0025	Install explosion-protected equipment and associated apparatus and wiring systems*	60
UEEHA0026	Maintain equipment associated with hazardous areas*	60
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEEIC0038	Solve problems in density/level measurement components and systems*	40
UEEIC0039	Solve problems in flow measurement components and systems*	40
UEEIC0041	Solve problems in pressure measurement components and systems*	40
UEEIC0043	Solve problems in temperature measurement components and systems*	40
UEEIC0047	Use instrumentation drawings, specifications, standards and equipment manuals*	40
UEERE0050	Identify and isolate multiple supply systems*	20
Group C: General elective units		Weighting Points
UEECO0001	Estimate electrotechnology projects	40
UEEEL0007	Develop detailed electrical drawings*	60
UEEEL0027	Carry out low voltage electrical field testing and report findings*	60

UEEIC0012	Develop structured programs to control external devices*	40
UEEIC0014	Develop, enter and verify programs in supervisory control and data acquisition systems*	60
UEEIC0015	Develop, enter and verify word and analogue control programs for programmable logic controllers*	60
UEEIC0026	Provide solutions to fluid circuit operations*	60
UEEIC0027	Provide solutions to pneumatic-hydraulic system operations*	80
UEEIC0028	Provide solutions to problems in industrial control systems*	60
UEEIC0034	Set up industrial field control devices*	60
UEEIC0040	Solve problems in polyphase electronic power control circuits*	60
UEEIC0042	Solve problems in single phase electronic power control circuits*	60

Qualification Mapping Information

This qualification replaces and is equivalent to UEE40911 Certificate IV in Industrial Electronics and Control

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

UEE41020 Certificate IV in Energy Management and Control

Modification History

Release 4. Updated superseded elective units.

Release 3. Updated superseded elective units.

Release 2: Two units added to Group B General Electives. Imported elective units updated.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to develop strategies for the reduction of energy in buildings and to recommend changes in the way in which energy is controlled in the building, either by the installation of new control equipment or by the modification or re-programming of existing control equipment.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

The entry requirement for this qualification is:

- UEE30820 Certificate III in Electrotechnology Electrician
- or
- a current 'Unrestricted Electricians Licence' or its equivalent issued in an Australian state or territory.

Packaging Rules

A total of **440 weighting points** comprising:

140 core weighting points listed below; plus

300 general elective weighting points from the general elective units listed below.

Choose a total of **300 weighting points** elective units from the list below, of which between **0 and 100 weighting points** can be taken from Group A; between **0 and 100 weighting points** can be taken from Group B; and between **200 and 300 weighting points** can be taken from Group C (or all electives units of **300 weighting points** can be taken from Group C).

Up to **100 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or

accredited course, provided that selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0027	Participate in development and follow a personal competency development plan	20
UEERE0014	Develop strategies to address sustainability issues for electrical installations*	20
UEERE0015	Implement and monitor energy sector environmental and sustainable policies and procedures	20
Group A: Imported and common elective units		Weighting Points
BSBOPS203	Deliver a service to customers	20
CPCWHS1001	Prepare to work safely in the construction industry	10
HLTAID009	Provide cardiopulmonary resuscitation	10
ICTICT214	Operate application software packages	20
UEECD0011	Comply with scheduled and preventative maintenance program processes	20
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20
UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or	20

service jobs

Group B: Qualification elective units		Weighting Points
UEECD0028	Plan an integrated cabling installation system*	40
UEECS0033	Use engineering applications software on personal computers	40
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services*	80
UEEDV0008	Install, modify and verify coaxial and structured communication copper cabling*	40
UEEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEEEL0016	Provide advice on effective and energy efficient lighting products	20
UEEEL0022	Supply effective and efficient lighting products for domestic and small commercial applications*	40
UEEEL0049	Install and maintain emergency safety systems*	60
UEEEL0061	Provide advice on the application of energy efficient lighting for ambient and aesthetic effect*	20
UEEEL0078	Install and commission whole current electricity meters*	20
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20
UEEIC0011	Develop electrical integrated systems*	20
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEEIC0038	Solve problems in density/level measurement components and systems*	40
UEEIC0039	Solve problems in flow measurement components and systems*	40
UEEIC0041	Solve problems in pressure measurement components and systems*	40

UEEIC0043	Solve problems in temperature measurement components and systems*	40
UEEEL0076	Inspect, test and maintain emergency lighting systems*	20
UEEEL0075	Inspect, test and maintain emergency alarm systems and equipment*	20

Group C: Qualification elective units

Weighting Points

CPPHES4005	Assess household energy use and efficiency improvements	40
UEECD0061	Write specifications for refrigeration and air conditioning engineering projects	40
UEEEL0007	Develop detailed electrical drawings*	60
UEEEL0029	Conduct compliance inspection of LV electrical installations with demand exceeding 100 A per phase*	40
UEEEL0030	Conduct compliance inspection of single phase LV electrical installations*	60
UEEEL0031	Conduct compliance inspection of special LV electrical installations*	60
UEEEL0036	Design effective and efficient lighting for residential and commercial buildings*	20
UEEEL0040	Develop compliance policies and plans to conduct an electrical contracting business*	80
UEEEL0044	Diagnose and rectify faults in complex lift systems*	40
UEEEL0050	Install and replace low voltage current transformer metering*	20
UEEEL0051	Investigate and report on electrical incidents and causes*	60
UEEEL0057	Plan electrical installations with a low voltage demand up to 400 A per phase*	40
UEEEL0059	Plan low voltage switchboard and control panel layouts*	40
UEEEL0060	Prepare quotations for the supply of effective and efficient lighting products for lighting projects*	20
UEEEL0063	Provide photometric data for illumination system design	60

UEEEL0070	Select effective and efficient light sources and luminaries for given locations and designs*	60
UEEEL0071	Select low voltage power factor correction equipment*	40
UEEEL0072	Set up and place LV electrical apparatus and associated circuits into service*	40
UEEEL0073	Verify compliance and functionality of special LV electrical installations*	40
UEERE0052	Assess energy loads and uses for energy efficiency in commercial facilities*	40
UEERE0053	Assess energy loads and uses for energy efficiency in industrial properties and enterprises*	40

Qualification Mapping Information

This qualification replaces and is not equivalent to UEE41011 Certificate IV in Energy Management and Control

UEE41120 Certificate IV in Electrical - Lift Systems

Modification History

Release 3. Updated superseded imported elective units.

Release 2. Updated superseded HLT, BSB and ICT elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to select, install, commission, fault find and maintain lifts, escalators and associated equipment.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

The entry requirement for this qualification is:

- UEE30820 Certificate III in Electrotechnology Electrician

or

- a current 'Unrestricted Electricians Licence' or its equivalent issued in an Australian state or territory.

Packaging Rules

A total of **440 weighting points** comprising:

360 core weighting points listed below; plus

80 general elective weighting points from the general elective units listed below.

Choose a total of **80 weighting points** elective units from the list below, between **0 and 20 weighting points** can be taken from Group A; between **0 and 20 weighting points** can be taken from Group B; and between **40 and 80 weighting points** can be taken from Group C (or all elective **80 weighting points** can be taken from Group C).

Up to **20 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting

points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0027	Participate in development and follow a personal competency development plan	20
UEEEL0044	Diagnose and rectify faults in complex lift systems*	40
UEEEL0045	Diagnose and rectify faults in traction lift systems*	80
UEEIC0018	Diagnose and rectify faults in digital controls systems*	60
UEEIC0020	Fault find and repair analogue circuits and components in electronic control systems*	60
UEERE0015	Implement and monitor energy sector environmental and sustainable policies and procedures	20

UEE41223 Certificate IV in Rail Signalling

Modification History

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package.

This qualification replaces and is not equivalent to UEE41220 Certificate IV in Electrical – Rail Signalling.

Modifications in this release include:

- Title changed
- Certificate III in Electrical Fitting added to Entry Requirements and other conditions included.
- Entry Requirements amended to allow the qualification to be undertaken in conjunction with entry requirement qualifications.
- Weighting points allocations for Core and Elective Groups adjusted.
- UEERS0034 and UEERS0036 moved from core to elective groups.
- Weighting points for UEERS0021 changed from 30 to 40.
- UEERS0020 added to core.
- Group B units changed.
- Weighting points for UEERS0027 changed from 30 to 40
- RIIWHS204E, TLIF0008, TILF0020, TLIF2010, UEECS0003, UEERS0026 and UEERS0035 added to electives
- UEECS0029 moved to Group C.
- UEERS0027 and UEERS0034 included in both Groups B and C to allow flexibility in selection of them.
- UEECD0010, UEECD0058, UEECS0033, UEERS0002, UEERS0003, UEERS0007 and UEERS0015 removed from qualification.

Qualification Description

This qualification provides competencies to install, certify, fault find and maintain rail signalling equipment and systems.

This includes requirements for performing like-for-like replacement, performing authorised installations and alterations, and applying emergency operational restriction. It excludes changing circuit principles, changing the design function and commissioning.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are two entry requirement pathways for this qualification. All relevant jurisdictional

licencing requirements must be complied with in the first instance. These requirements will determine the pathway that is applicable and must be selected, and how qualification certification documentation is completed. See notes below.

Entry requirement pathways for this qualification are as follows:

- Certificate III in Electrotechnology Electrician; or, a current 'Unrestricted Electricians Licence' or its equivalent issued in an Australian state or territory

or

- Certificate III in Electrical Fitting

Note: The Certificate III in Electrical Fitting qualification must not be used as the entry requirement in jurisdictions where industry and/or regulatory arrangements require a current 'Unrestricted Electricians Licence' or its equivalent issued in an Australian state or territory to undertake rail signalling installation and/or maintenance.

Note: Qualification certification documentation (testamur) must indicate which pathway was used as follows:

- If Certificate III in Electrotechnology Electrician or, a current 'Unrestricted Electricians Licence' is used the qualification title should appear on certification documentation as: UEE41223 Certificate IV in Rail Signalling (Electrotechnology Electrician)
- If Certificate III in Electrical Fitting is used the qualification title should appear on certification documentation as: UEE41223 Certificate IV in Rail Signalling (Electrical Fitting)

Note: UEE41223 Certificate IV in Electrical – Rail Signalling can be undertaken in conjunction with either of the entry requirement qualifications listed above as long as the following conditions are met:

- must be permitted within jurisdictional training and regulatory requirements;
- at least one third of the total weighting points required for completion of the entry requirement qualification must be met prior to commencing the Certificate IV in Electrical – Rail Signalling; and,
- the relevant Certificate III entry requirement qualification must be successfully completed prior to issuing the Certificate IV in Electrical – Rail Signalling.

Packaging Rules

A minimum of **510 weighting points** comprising:

390 core weighting points listed below; plus

Minimum of **120 general elective weighting points** from the general elective units listed below.

Choose a minimum of **120 weighting points** elective units from the list below, of which:

- between **0 and 40 weighting points** can be taken from Group A;
- a minimum of **40 weighting points** must be taken from Group B; and,
- a minimum of **40 weighting points** must be taken from Group C

Up to **30 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or

accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Prerequisite units not packaged in this qualification will be met by entry requirements.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0027	Participate in development and follow a personal competency development plan	20
UEERE0015	Implement and monitor energy sector environmental and sustainable policies and procedures	20
UEERS0020	Apply rail signalling principles	20
UEERS0021	Assemble and wire electrical rail signalling equipment*	40
UEERS0022	Find and repair rail signalling system faults*	20
UEERS0024	Install and maintain rail track circuit leads and bonds*	30
UEERS0025	Maintain active level crossing equipment*	40
UEERS0030	Maintain power-operated point actuating devices*	40
UEERS0031	Maintain rail signalling power supplies*	40
UEERS0032	Maintain trackside signal and train protection equipment*	40
UEERS0033	Maintain train detection equipment*	40

UEERS0037	Test copper rail signalling cables*	20
Group A Elective units		Weighting Points
BSBOPS203	Deliver a service to customers	20
CPCCWHS1001	Prepare to work safely in the construction industry	10
HLTAID009	Provide cardiopulmonary resuscitation	10
ICTICT214	Operate application software packages	20
RIIWHS204E	Work safely at heights	20
TLIF0008	Apply safety critical communication in the environment	10
TLIF0020	Safely access the rail corridor	10
TLIF2010	Apply fatigue management strategies	10
UEECD0011	Comply with scheduled and preventative maintenance program processes	20
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20
UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20
Group B Elective units		Weighting Points
UEERS0027	Maintain computer-based interlocking rail systems*	40
UEERS0034	Maintain vital relay interlocking systems*	40
Group C Elective units		Weighting Points
UEECS0003	Assemble, set up and test computing devices *	80

UEECS0029	Set up and configure basic local area network (LAN)*	80
UEERS0023	Inspect, test and certify rail power signal equipment*	20
UEERS0026	Maintain communications based signalling equipment*	20
UEERS0027	Maintain computer-based interlocking rail systems*	40
UEERS0028	Maintain mechanical rail signalling equipment and infrastructure*	20
UEERS0029	Maintain non-vital telemetry systems*	40
UEERS0034	Maintain vital relay interlocking systems*	40
UEERS0035	Maintain wayside asset protection equipment*	20
UEERS0036	Repair rail signalling power and control cables*	40

Qualification Mapping Information

This qualification replaces and is not equivalent to UEE41220 Certificate IV in Electrical – Rail Signalling

UEE41520 Certificate IV in Video and Audio Systems

Modification History

Release 2. This is the second release of this qualification in the UEE Electrotechnology Training Package. Modifications include:

- Updated superseded imported elective units
- ICTPRG444 added to electives (see UEE Release 5.0 Companion Volume Implementation Guide for mapping of deleted UEE units to imported ICT units)

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to service high-end audio, video, display systems and high-definition television (HDTV).

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification

Packaging Rules

A total of **1280 weighting points** comprising:

840 core weighting points listed below; plus

440 general elective weighting points from the general elective units listed below.

Choose a total of **440 weighting points** elective units from the list below, of which between **0 and 140 weighting points** can be taken from Group A; and between **0 and 220 weighting points** must be taken from Group B; and between **220 and 440 weighting points** must be taken from Group C; or all **440 weighting points** can be taken from Group C.

Up to **220 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of

competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0027	Participate in development and follow a personal competency development plan	20
UEECD0043	Solve problems in direct current circuits*	80
UEEEEC0028	Fault find and repair complex power supplies*	40
UEEEEC0058	Repair predictable faults in television receivers*	120
UEEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEEC0063	Solve fundamental electronic communications system problems*	40
UEEEEC0066	Troubleshoot amplifiers in an electronic apparatus*	80
UEEEEC0067	Troubleshoot basic amplifier circuits*	40
UEEEEC0069	Troubleshoot digital sub-systems*	80
UEEEEC0074	Troubleshoot resonance circuits in an electronic apparatus*	80
UEEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEERE0015	Implement and monitor energy sector environmental and sustainable policies and procedures	20

Group A: Imported and common elective units		Weighting Points
BSBOPS203	Deliver a service to customers	20
ICTICT214	Operate application software packages	20
UEECD0011	Comply with scheduled and preventative maintenance program processes	20
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20
UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20
Group B: Qualification elective units		Weighting Points
UEEAS0001	Assemble electronic components*	40
UEEAS0006	Use lead-free soldering techniques*	40
UEECD0020	Fix and secure electrotechnology equipment*	20
UEECD0021	Identify and select components, accessories and materials for energy sector work activities*	20
UEECD0025	Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits*	40
UEECD0028	Plan an integrated cabling installation system*	40
UEECD0040	Solve basic problems electronic and digital equipment and circuits*	80
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications*	40
UEECS0003	Assemble, set up and test computing devices*	80
UEECS0018	Develop web pages for engineering applications	40
UEECS0022	Install and configure a client computer operating system and software	40
UEECS0028	Select, install, configure and test multimedia components	40

UEECS0029	Set up and configure basic local area network (LAN)*	80
UEECS0030	Set up, configure and test biometric devices	40
UEECS0032	Support computer hardware and software for engineering applications	120
UEECS0033	Use engineering applications software on personal computers	40
UEEDV0004	Install and connect data and voice communication equipment*	40
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services*	80
UEEDV0006	Install and modify optical fibre performance data communication cabling*	40
UEEDV0008	Install, modify and verify coaxial and structured communication copper cabling*	40
UEEDV0009	Select and arrange data and voice equipment for local area networks*	40
UEEDV0010	Select and arrange equipment for wireless communication networks*	40
UEEDV0011	Set up and configure basic data communication systems*	40
UEEDV0012	Set up and configure the wireless capabilities of communications and data storage devices	40
UEEDV0013	Solve problems in voice and data communications circuits*	40
UEEDV0014	Test, report and rectify faults in data and voice installations*	40
UEEEC0002	Assemble and install reception antennae and signal distribution equipment*	60
UEEEC0003	Assemble and set up basic security systems*	80
UEEEC0004	Assemble and set up fixed video/audio components and systems in buildings and premises*	120
UEEEC0006	Carry out repairs of predictable faults in video and audio replay/recording apparatus*	120

UEEEEC0019	Develop software solutions for microcontroller-based systems*	60
UEEEEC0027	Enter instructions and test wired and wireless security systems*	40
UEEEEC0029	Fault find and repair electronic apparatus*	40
UEEEEC0032	Fault find and repair high-volume office equipment*	120
UEEEEC0038	Find and repair microwave amplifier section faults in electronic apparatus*	40
UEEEEC0039	Install and test microwave antennae and waveguides*	60
UEEEEC0040	Install commercial video/audio system components*	120
UEEEEC0042	Install large security systems*	100
UEEEEC0048	Program and commission commercial access control security systems*	60
UEEEEC0049	Program and commission commercial security closed-circuit television systems*	60
UEEEEC0050	Program and commission commercial security systems*	60
UEEEEC0055	Repair basic computer equipment faults by replacement of modules/sub-assemblies*	40
UEEEEC0056	Repair predictable faults in audio components*	40
UEEEEC0057	Repair predictable faults in general electronic apparatus*	40
UEEEEC0059	Repair routine business equipment faults*	120
UEEEEC0061	Set up and adjust commercial radio frequency (RF) transmission and reception systems*	60
UEEEEC0062	Set up and test residential video/audio equipment*	40
UEEEEC0064	Solve oscillator problems*	40
UEEEEC0065	Solve problems in basic electronic circuits*	100
UEEEEC0068	Troubleshoot communication systems*	80
UEEEEC0070	Troubleshoot faults in television receivers*	120
UEEEEC0072	Troubleshoot microcontroller-based hardware systems	40

UEEEEC0073	Troubleshoot professional audio reproduction components*	120
UEEEEC0077	Verify functionality and compliance of custom electronic installations*	40
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20

Group C: Qualification elective units

Weighting Points

ICTPRG444	Analyse software requirements	60
UEECD0047	Supervise and coordinate energy sector work activities	40
UEECO0001	Estimate electrotechnology projects	40
UEECO0013	Prepare specifications for the supply of materials and equipment for electrotechnology projects	40
UEECS0002	Analyse and implement biometric measuring techniques and applications	120
UEECS0020	Evaluate and modify object-oriented code programs	40
UEEEEC0012	Design custom electronic equipment installations*	120
UEEEEC0015	Develop basic plans for integrating security systems*	40
UEEEEC0022	Diagnose and rectify faults in camera circuits and equipment*	60
UEEEEC0023	Diagnose and rectify faults in digital transmission circuits and systems*	80
UEEEEC0024	Diagnose and rectify faults in electronic display circuits*	60
UEEEEC0025	Diagnose and rectify faults in recording and replay equipment	60
UEEEEC0030	Fault find and repair electronic medical equipment*	120
UEEEEC0037	Fault find and repair telecommunication apparatus and systems*	60
UEEEEC0051	Program and commission commercial video/audio systems*	40
UEEEEC0052	Program and test large security systems*	120

UEEIC0012 Develop structured programs to control external devices* 40

Qualification Mapping Information

UEE41720 Certificate IV in Rail - Communications and Network Systems

Modification History

Release 3. Updated superseded imported elective units.

Release 2. Updated superseded HLT, BSB and ICT elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to select, install, commission, fault find and maintain radio and dedicated telecommunications networks in rail systems.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification

Packaging Rules

A total of **1280 weighting points** comprising:

720 core weighting points listed below; plus

560 general elective weighting points from the general elective units listed below.

Choose a total of **560 weighting points** elective units from the list below, of which between **0 and 160 weighting points** can be taken from Group A; and between **0 and 340 weighting points** must be taken from Group B; and between **220 and 560 weighting points** must be taken from Group C; or all **560 weighting points** can be taken from Group C.

Up to **220 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with.

A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

UEE42120 Certificate IV in Electrotechnology - Electrical Contracting

Modification History

Release 3. Updated superseded elective units.

Release 2: Two units added to Group B General Electives. Imported elective units updated.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification provides competencies to set up and manage an electrical contracting business.

It includes competencies required by regulations for an electrical contracting licence; and requirements and competencies to select, install, set up, test, fault find, repair and maintain photovoltaic systems and associated equipment.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

The entry requirement for this qualification is:

- UEE30820 Certificate III in Electrotechnology Electrician
- or
- a current 'Unrestricted Electricians Licence' or its equivalent issued in an Australian state or territory.

Packaging Rules

A total of **360 weighting points** comprising:

120 core weighting points listed below; **plus**

240 general elective weighting points from the general elective units listed below.

Choose a total of **240 weighting points** elective units from the list below, of which between 0 and **120 weighting points** can be taken from Group A; between 0 and **120 weighting points** can be taken from Group B; and between 120 and 240 can be taken from Group C (or all 240 elective **weighting points** can be taken from Group C).

Up to 120 weighting points of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or

accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units **Weighting Points**

UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0027	Participate in development and follow a personal competency development plan	20
UEERE0015	Implement and monitor energy sector environmental and sustainable policies and procedures	20

Group A: Imported and common elective units **Weighting Points**

BSBOPS203	Deliver a service to customers	20
CPCWHS1001	Prepare to work safely in the construction industry	10
HLTAID009	Provide cardiopulmonary resuscitation	10
ICTICT214	Operate application software packages	20
UEECD0011	Comply with scheduled and preventative maintenance program processes	20
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20
UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20

Group B: General elective units **Weighting Points**

UEECD0030	Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software*	60
UEECD0031	Prepare engineering drawings using manual drafting and CAD for electrotechnology applications*	60
UEECS0033	Use engineering applications software on personal computers	40
UEEEL0078	Install and commission whole current electricity meters*	20
UEEEL0016	Provide advice on effective and energy efficient lighting products	20
UEEEL0022	Supply effective and efficient lighting products for domestic and small commercial applications*	40
UEEEL0049	Install and maintain emergency safety systems*	60
UEEEL0061	Provide advice on the application of energy efficient lighting for ambient and aesthetic effect*	20
UEEEL0069	Select and arrange equipment for special LV electrical installations*	60
UEEEL0076	Inspect, test and maintain emergency lighting systems*	20
UEEEL0075	Inspect, test and maintain emergency alarm systems and equipment*	20

Group C: General elective units

Weighting Points

UEECD0032	Produce detailed electrotechnology/utilities drawings using CAD equipment and software*	60
UEECO0001	Estimate electrotechnology projects	40
UEECO0013	Prepare specifications for the supply of materials and equipment for electrotechnology projects	40
UEECO0025	Provide quotations for inspection and compliance audit services	20
UEEEL0007	Develop detailed electrical drawings*	60
UEEEL0027	Carry out low voltage electrical field testing and report findings*	60
UEEEL0029	Conduct compliance inspection of LV electrical installations with demand exceeding 100 A per phase*	40

UEEEL0030	Conduct compliance inspection of single phase LV electrical installations*	60
UEEEL0031	Conduct compliance inspection of special LV electrical installations*	60
UEEEL0036	Design effective and efficient lighting for residential and commercial buildings*	20
UEEEL0040	Develop compliance policies and plans to conduct an electrical contracting business*	80
UEEEL0050	Install and replace low voltage current transformer metering*	20
UEEEL0051	Investigate and report on electrical incidents and causes*	60
UEEEL0057	Plan electrical installations with a low voltage demand up to 400 A per phase*	40
UEEEL0059	Plan low voltage switchboard and control panel layouts*	40
UEEEL0060	Prepare quotations for the supply of effective and efficient lighting products for lighting projects*	20
UEEEL0063	Provide photometric data for illumination system design	60
UEEEL0070	Select effective and efficient light sources and luminaries for given locations and designs*	60
UEEEL0071	Select low voltage power factor correction equipment*	40
UEEEL0072	Set up and place LV electrical apparatus and associated circuits into service*	40
UEEEL0073	Verify compliance and functionality of special LV electrical installations*	40

Qualification Mapping Information

This qualification replaces and is not equivalent to UEE42111 Certificate IV in Electrotechnology – Electrical Contracting

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

UEE42220 Certificate IV in Instrumentation and Control

Modification History

Release 3. Updated superseded elective units.

Release 2. Updated superseded HLT, BSB and ICT elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to select, install, set up, test, fault find, repair, maintain and commission systems and devices for measurement and recording of physical/chemical phenomenon and related process control systems.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification

Packaging Rules

A total of **1280 weighting points** comprising:

1080 core weighting points listed below; **plus**

200 general elective weighting points from the general elective units listed below.

Choose a total of **200 weighting points** elective units from the list below, of which between 0 and **60 weighting points** can be taken from Group A; and between 0 and **100 weighting points** must be taken from Group B; and between **100 and 200 weighting points** must be taken from Group C or all minimum **200 weighting points** can be taken from Group C.

Up to 60 weighting points of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with.

A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0020	Fix and secure electrotechnology equipment*	20
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0027	Participate in development and follow a personal competency development plan	20
UEECD0043	Solve problems in direct current circuits*	80
UEECD0045	Solve problems in multiple path extra-low voltage (ELV) a.c. circuits*	40
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications*	40
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEEIC0018	Diagnose and rectify faults in digital controls systems*	60
UEEIC0020	Fault find and repair analogue circuits and components in electronic control systems*	60
UEEIC0021	Find and rectify faults in process final control elements*	40
UEEIC0022	Install instrumentation and control apparatus and associated equipment*	20

UEEIC0023	Install instrumentation and control cabling and tubing*	20
UEEIC0029	Set up and adjust PID control loops*	40
UEEIC0030	Set up and adjust advanced PID process control loops*	40
UEEIC0031	Set up and configure human-machine interface (HMI) and industrial networks*	60
UEEIC0038	Solve problems in density/level measurement components and systems*	40
UEEIC0039	Solve problems in flow measurement components and systems*	40
UEEIC0041	Solve problems in pressure measurement components and systems*	40
UEEIC0043	Solve problems in temperature measurement components and systems*	40
UEEIC0047	Use instrumentation drawings, specifications, standards and equipment manuals*	40
UEEIC0048	Verify compliance and functionality of instrumentation and control installations*	40
UEERE0015	Implement and monitor energy sector environmental and sustainable policies and procedures	20
UEERL0004	Disconnect - reconnect electrical equipment connected to low voltage (LV) installation wiring*	60

Group A: Imported and common elective units

Weighting Points

BSBOPS203	Deliver a service to customers	20
CPCWHS1001	Prepare to work safely in the construction industry	10
HLTAID009	Provide cardiopulmonary resuscitation	10
ICTICT214	Operate application software packages	20
UEECD0011	Comply with scheduled and preventative	20

	maintenance program processes	
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20
UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20
Group B: General elective units		Weighting Points
UEECD0050	Use and maintain the integrity of a portable gas detection device*	20
UEECS0033	Use engineering applications software on personal computers	40
UEEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEEC0069	Troubleshoot digital sub-systems*	80
UEEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEEIC0004	Calibrate, adjust and test measuring instruments*	40
UEEIC0037	Set up weighting measuring and control instruments*	20
UEEIC0046	Troubleshoot process control systems*	60
UEEHA0004	Enter a classified hazardous area to undertake work related to electrical equipment	40
UEEHA0022	Determine the explosion-protection requirements to meet a specified classified hazardous area*	40
UEEHA0025	Install explosion-protected equipment and associated apparatus and wiring systems*	60
UEEHA0026	Maintain equipment associated with hazardous areas*	60

Group C: General elective units		Weighting Points
UEECO0001	Estimate electrotechnology projects	40
UEEHA0004	Enter a classified hazardous area to undertake work related to electrical equipment	40
UEEHA0020	Conduct detailed inspection of electrical installations for hazardous areas*	40
UEEHA0022	Determine the explosion-protection requirements to meet a specified classified hazardous area*	40
UEEHA0026	Maintain equipment associated with hazardous areas*	60
UEEHA0038	Conduct visual and close inspection of electrical installations for hazardous areas*	40
UEEIC0003	Assist in commissioning process and instrumentation control systems*	40
UEEIC0012	Develop structured programs to control external devices*	40
UEEIC0014	Develop, enter and verify programs in supervisory control and data acquisition systems*	60
UEEIC0015	Develop, enter and verify word and analogue control programs for programmable logic controllers*	60
UEEIC0026	Provide solutions to fluid circuit operations*	60
UEEIC0027	Provide solutions to pneumatic-hydraulic system operations*	80
UEEIC0042	Solve problems in single phase electronic power control circuits*	60
UEEIC0044	Troubleshoot measuring and analysis systems*	40

Qualification Mapping Information

This qualification replaces and is equivalent to UEE42211 Certificate IV in Instrumentation and

Control

UEE42622 Certificate IV in Hazardous areas - Electrical

Modification History

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package.

This qualification replaces and is not equivalent to UEE42620 Certificate IV in Hazardous areas - Electrical.

Modifications in this release include:

- UEEHA0025 and UEEHA0026 removed from group B (they are in Group C).
- UEEHA0037, UEEHA0024, UEEHA0036 and UEEHA0030 added to group B.
- UEEHA0027 added to Group C.
- Codes of superseded units updated.

Qualification Description

This qualification provides competencies to supervise selection, installation, commissioning maintenance and testing of explosion-protected equipment and systems for control and monitoring of plant and processes.

The qualification provides competencies in working with explosion-protection techniques.

It includes requirements and competencies to select, install, set up, test, fault find, repair and maintain stand-alone renewable energy equipment and systems.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

The entry requirement for this qualification is:

- Certificate III in Electrotechnology Electrician

or

- a current 'Unrestricted Electricians Licence' or its equivalent issued in an Australian state or territory.

Packaging Rules

A total of **440 weighting points** comprising:

200 core weighting points listed below; **plus**

240 general elective weighting points from the general elective units listed below.

Choose a total of **240 weighting points** elective units from the list below, of which between 0

and 60 **weighting points** can be taken from Group A; between 0 and 80 **weighting points** can be taken from Group B; and between 140 and 240 can be taken from Group C (or all 240 elective **weighting points** can be taken from Group C).

Up to 60 weighting points of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0027	Participate in development and follow a personal competency development plan	20
UEEHA0004	Enter a classified hazardous area to undertake work related to electrical equipment	40
UEEHA0022	Determine the explosion-protection requirements to meet a specified classified hazardous area*	40

UEE42720 Certificate IV in Air Conditioning and Refrigeration Servicing

Modification History

Release 3. Updated superseded elective units.

Release 2. Two units added to general electives. Imported elective units updated.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies in high-level fault diagnosis and rectification, commissioning and maintenance of refrigeration systems and equipment that apply to commercial food storage and preservation, air conditioning, air distribution equipment and/or special applications. It includes regulatory requirements for purchasing and handling refrigerants.

Competency development activities in this qualification are subject to regulations directly related to licencing. A relevant contract of training through an apprenticeship or relevant employment may be required to enable the application of the required knowledge and skills to on the job work activities and environments.

Refrigerant Handling Licence:

The achievement of the qualification meets the training components for the full national Refrigerant Handling Licence which is required to work on refrigeration and air conditioning equipment that carries the risk of a fluorocarbon refrigerant being emitted while decanting the refrigerant or manufacturing, installing, commissioning, servicing, maintaining or decommissioning refrigeration and air conditioning equipment.

Refrigeration and Air Conditioning Occupational Licence:

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to refrigeration/air conditioning work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Electrical Occupation Licence:

The achievement of this qualification with the core restricted electrical units meet the electrical regulatory requirements for related restricted electrical work in most state/territories. This is required to work on electrical installations which are designed to operate at voltages greater than 50 volt (V) alternating current (a.c.) or 120 V direct current (d.c.).

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **1350 weighting points** comprising:

1170 core weighting points listed below; **plus**

180 general elective weighting points from the general elective units listed below.

Choose a total of **180 weighting points** elective units from the list below, of which between 0 and 90 **weighting points** can be taken from Group A; and between 0 and 90 **weighting points** must be taken from Group B; and between 90 and 180 **weighting points** must be taken from Group C; or all electives units of **180 weighting points** can be taken from Group C.

Up to 90 weighting points of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20

UEE42820 Certificate IV in Air-conditioning Systems Energy Management and Control

Modification History

Release 3. Updated superseded elective unit.

Release 2: Two units added to general electives. Imported elective units updated.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to develop strategies for the reduction of energy in buildings and to recommend changes in the way in which energy is controlled in the building, either by the installation of new control equipment or by the modification or re-programming of existing equipment. It includes regulatory requirements for purchasing and handling refrigerants.

Competency development activities in this qualification are subject to regulations directly related to licencing. A relevant contract of training through an apprenticeship or relevant employment may be required to enable the application of the required knowledge and skills to on the job work activities and environments.

Refrigerant Handling Licence:

The achievement of the qualification meets the training components for the full national Refrigerant Handling Licence which is required to work on refrigeration and air conditioning equipment that carries the risk of a fluorocarbon refrigerant being emitted while decanting the refrigerant or manufacturing, installing, commissioning, servicing, maintaining or decommissioning refrigeration and air conditioning equipment.

Refrigeration and Air Conditioning Occupational Licence:

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to refrigeration/air conditioning work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Electrical Occupation Licence:

The achievement of this qualification with the core restricted electrical units meet the electrical regulatory requirements for related restricted electrical work in most state/territories. This is required to work on electrical installations which are designed to operate at voltages greater than 50 volt (V) alternating current (a.c.) or 120 V direct current (d.c.).

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **1350 weighting points** comprising:

1190 core weighting points listed below; **plus**

160 general elective weighting points from the general elective units listed below.

Choose a total of **160 weighting points** elective units from the list below, of which between 0 and 80 **weighting points** can be taken from Group A; and between 0 and 80 **weighting points** must be taken from Group B; and between 80 and 160 **weighting points** must be taken from Group C; or all electives units of 160 **weighting points** can be taken from Group C.

Up to 80 weighting points of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

UEE42920 Certificate IV in Refrigeration and Air Conditioning Systems

Modification History

Release 3. Updated superseded elective unit.

Release 2. Two units added to general electives. Imported elective units updated.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to determine heat loads and select equipment for basic commercial refrigeration or residential air conditioning applications. It includes regulatory requirements for purchasing and handling refrigerants.

Basic commercial refrigeration includes commercial cold rooms, freezer rooms and cabinets with a single compressor or condensing unit. This does not include large, complex commercial applications or industrial applications.

Competency development activities in this qualification are subject to regulations directly related to licencing. A relevant contract of training through an apprenticeship or relevant employment may be required to enable the application of the required knowledge and skills to on the job work activities and environments.

Refrigerant Handling Licence:

The achievement of the qualification meets the training components for the full national Refrigerant Handling Licence which is required to work on refrigeration and air conditioning equipment that carries the risk of a fluorocarbon refrigerant being emitted while decanting the refrigerant or manufacturing, installing, commissioning, servicing, maintaining or decommissioning refrigeration and air conditioning equipment.

Refrigeration and Air Conditioning Occupational Licence:

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to refrigeration/air conditioning work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Electrical Occupation Licence:

The achievement of this qualification with the core restricted electrical units meet the electrical regulatory requirements for related restricted electrical work in most state/territories. This is required to work on electrical installations which are designed to operate at voltages greater than 50 volt (V) alternating current (a.c.) or 120 V direct current (d.c.).

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **1360 weighting points** comprising:

1300 core weighting points listed below; **plus**

60 general elective weighting points from the general elective units listed below.

Choose a total of **60 weighting points** elective units from the list below, of which between 0 and 20 **weighting points** can be taken from Group A; and between 0 and 20 **weighting points** can be taken from Group B; and 40 **weighting points** must be taken from Group C.

Up to 20 weighting points of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0020	Fix and secure electrotechnology equipment*	20
UEECD0027	Participate in development and follow a personal competency development plan	20
UEECD0042	Solve problems in ELV single path circuits*	40

UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications*	40
UEERA0002	Analyse the psychrometric performance of HVAC/R systems*	50
UEERA0031	Diagnose and rectify faults in air conditioning and refrigeration control systems*	60
UEERA0034	Establish heat loads for commercial refrigeration and/or air conditioning applications*	80
UEERA0035	Establish the basic operating conditions of air conditioning systems*	20
UEERA0036	Establish the basic operating conditions of vapour compression systems*	60
UEERA0038	Establish the thermodynamic parameters of refrigeration and air conditioning systems*	80
UEERA0044	Find and rectify faults in single phase motors and associated controls*	40
UEERA0045	Find and rectify faults in three phase motors and associated controls*	30
UEERA0050	Install refrigerant pipe work, flow controls and accessories*	60
UEERA0051	Install, commission, service and maintain air conditioning systems*	80
UEERA0052	Install, commission, service and maintain low temperature systems*	40
UEERA0053	Install, commission, service and maintain medium temperature systems*	60
UEERA0059	Prepare and connect refrigerant tubing and fittings*	40
UEERA0062	Recover and charge refrigerants*	40
UEERA0079	Safely handle refrigerants and lubricants*	40
UEERA0081	Select refrigerant piping, accessories and associated controls*	40
UEERA0094	Verify functionality and compliance of refrigeration and air conditioning installations*	40

UEERA0092	Solve problems in low voltage refrigeration and air conditioning circuits*	40
UEERE0015	Implement and monitor energy sector environmental and sustainable policies and procedures	20
UEERL0001	Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply*	20
UEERL0002	Attach cords, cables and plugs to electrical equipment for connection to 1000 V a.c. or 1500 V d.c.*	20
UEERL0004	Disconnect - reconnect electrical equipment connected to low voltage (LV) installation wiring*	60
UEERL0005	Locate and rectify faults in low voltage (LV) electrical equipment using set procedures*	20

Group A: Imported and common elective units.**Weighting Points**

BSBOPS203	Deliver a service to customers	20
CPCWHS1001	Prepare to work safely in the construction industry	10

UEE43020 Certificate IV in Electrical Equipment and Systems

Modification History

Release 4. Updated superseded elective unit.

Release 3. Updated superseded elective units.

Release 2. Updated superseded imported elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification provides competencies to manufacture, fit, assemble, erect, operate, test, fault find, alter, repair electrical equipment and includes electrical wiring work only if that work is associated with assembling, maintaining, terminating or altering the wiring between electrical components within a plant or machinery.

An electrical fitter is not authorised to install any electrical wiring systems within an electrical installation as prescribed by definitions contained in AS/NZS 3000 Electrical installations (known as the Australian/New Zealand Wiring Rules).

Electrical equipment means any appliance, article, accessory, wire, fitting, cable, conduit or apparatus that generates, uses, conveys or controls (or that is intended to generate, use, convey or control) electricity above extra-low voltage (ELV).

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

The entry requirement for this qualification is:

- UEE33020 Certificate III in Electrical Fitting

or

- a current Electrical Fitter Occupational License or its equivalent issued in an applicable Australian state or territory.

Packaging Rules

A total of **540 weighting points** comprising:

120 core weighting points listed below; plus

420 general elective weighting points from the general elective units listed below.

Choose a total of **420 weighting points** elective units from the list below, of which between **0**

and 60 weighting points can be taken from Group A; between **0 and 200 weighting points** can be taken from Group B; and between **220 and 420 weighting points** can be taken from Group C (or all **420 elective weighting points** can be taken from Group C).

Up to **60 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisites Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0027	Participate in development and follow a personal competency development plan	20
UEERE0015	Implement and monitor energy sector environmental and sustainable policies and procedures	20
Group A: Imported and common elective units		Weighting Points
BSBOPS203	Deliver a service to customers	20
CPCWHS1001	Prepare to work safely in the construction industry	10

UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20
UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20

Group B: General elective units

Weighting Points

UEEAS0007	Assemble, mount and connect control gear and switchgear*	40
UEEAS0008	Fabricate and assemble bus bars*	40
UEEAS0009	Mount and wire control panel equipment*	40
UEECD0050	Use and maintain the integrity of a portable gas detection device*	20
UEECS0033	Use engineering applications software on personal computers	40
UEEDV0001	Assemble and connect telecommunication frames and cabinets*	60
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services*	80
UEEDV0008	Install, modify and verify coaxial and structured communication copper cabling*	40
UEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEEEL0004	Carry out basic repairs to electrical components and equipment*	40
UEEEL0016	Provide advice on effective and energy efficient lighting products	20
UEEEL0017	Repair and maintain mechanical components of electrical machines*	40

UEEEL0022	Supply effective and efficient lighting products for domestic and small commercial applications*	40
UEEEL0026	Align and install traction lift equipment*	20
UEEEL0033	Conduct electrical tests on LV electrical machines*	40
UEEEL0034	Conduct mechanical tests on electrical machines and components*	40
UEEEL0045	Diagnose and rectify faults in traction lift systems*	80
UEEEL0046	Find and repair faults in LV d.c. electrical apparatus and circuits*	60
UEEEL0052	Maintain and service traction lift systems and equipment*	40
UEEEL0053	Maintain operation of electrical marine equipment and systems*	60
UEEEL0054	Maintain operation of electrical mining equipment and systems*	60
UEEEL0055	Overhaul and repair major switchgear and control gear*	60
UEEEL0056	Place and connect electrical coils*	40
UEEEL0061	Provide advice on the application of energy efficient lighting for ambient and aesthetic effect*	20
UEEEL0066	Rewind LV direct current machines*	60
UEEEL0067	Rewind single phase machines*	40
UEEEL0068	Rewind three phase low voltage induction machines*	60
UEEEL0074	Wind electrical coils*	40
UEEHA0004	Enter a classified hazardous area to undertake work related to electrical equipment	40
UEEHA0022	Determine the explosion-protection	40

	requirements to meet a specified classified hazardous area*	
UEEHA0026	Maintain equipment associated with hazardous areas*	60
UEEHA0031	Supervise repair and overhaul of explosion-protected equipment type flameproof (Ex d)*	60
UEEHA0032	Supervise repair and overhaul of explosion-protected equipment type increased safety (Ex e)*	60
UEEHA0033	Supervise repair and overhaul of explosion-protected equipment type intrinsically safe (Ex i)*	60
UEEHA0034	Supervise repair and overhaul of explosion-protected equipment type pressurised (Ex p)*	60
UEEHA0035	Supervise repair and overhaul of explosion-protected rotating machines*	60
UEEHA0039	Supervise repair and overhaul of explosion-protected equipment type Group III ('t')*	60
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEEIC0022	Install instrumentation and control apparatus and associated equipment*	20
UEEIC0023	Install instrumentation and control cabling and tubing*	20
UEEIC0038	Solve problems in density/level measurement components and systems*	40
UEEIC0039	Solve problems in flow measurement components and systems*	40
UEEIC0041	Solve problems in pressure measurement components and systems*	40

UEEIC0043	Solve problems in temperature measurement components and systems*	40
UEEIC0047	Use instrumentation drawings, specifications, standards and equipment manuals*	40
UEERA0031	Diagnose and rectify faults in air conditioning and refrigeration control systems*	60
UEERA0035	Establish the basic operating conditions of air conditioning systems*	20
UEERA0036	Establish the basic operating conditions of vapour compression systems*	60
UEERA0037	Establish the basic operating conditions of vapour compression systems - appliances*	50
UEERA0043	Find and rectify faults in appliance control systems and devices*	60
UEERA0044	Find and rectify faults in single phase motors and associated controls*	40
UEERA0045	Find and rectify faults in three phase motors and associated controls*	30
UEERA0049	Install and start up single head split air conditioning and water heating heat pump systems*	70
UEERA0050	Install refrigerant pipe work, flow controls and accessories*	60
UEERA0059	Prepare and connect refrigerant tubing and fittings*	40
UEERA0062	Recover and charge refrigerants*	40
UEERA0063	Recover, pressure test, evacuate, charge and leak test refrigerants - appliances*	50
UEERA0079	Safely handle refrigerants and lubricants*	40
UEERA0083	Service and repair microwave ovens*	40
UEERA0085	Service clothes washing machines and dryers*	40

UEERA0086	Service dishwasher machines*	40
UEERA0087	Service electrical heating appliances*	60
UEERA0088	Service gas heating appliances*	40
UEERA0089	Service refrigeration appliances*	60
UEERA0091	Service small electrical appliances and power tools*	60
UEERA0092	Solve problems in low voltage refrigeration and air conditioning circuits*	40
UEERS0021	Assemble and wire electrical rail signalling equipment*	30
UETDRIS017	Perform high voltage field switching operation to a given schedule*	40
UETDRIS018	Perform low voltage field switching operation to a given schedule*	50
UETDRIS031	Maintain insulating oil*	40
UETDRIS032	Solve problems in network equipment*	80
UETDRIS033	Solve problems in network protection*	40
UETDRSB001	Perform substation switching operations to a given schedule	50
UETDRSB010	Maintain capacitor bank equipment*	40
Group C: General elective units		Weighting Points
UEEEL0007	Develop detailed electrical drawings*	60
UEEEL0032	Conduct electrical tests on HV electrical machines*	60
UEEEL0044	Diagnose and rectify faults in complex lift systems*	40
UEEEL0059	Plan low voltage switchboard and control panel layouts*	40
UEEEL0064	Rewind HV three phase induction machines rated for voltages above 3.3 kV*	60

UEEEL0065	Rewind HV three phase induction machines rated for voltages to 3.3 kV*	60
UEEHA0004	Enter a classified hazardous area to undertake work related to electrical equipment	40
UEEHA0020	Conduct detailed inspection of electrical installations for hazardous areas*	40
UEEHA0022	Determine the explosion-protection requirements to meet a specified classified hazardous area*	40
UEEHA0023	Develop and manage periodic electrical inspection and maintenance programs for hazardous areas*	20
UEEHA0025	Install explosion-protected equipment and associated apparatus and wiring systems*	60
UEEHA0026	Maintain equipment associated with hazardous areas*	60
UEEHA0029	Plan electrical installations for hazardous areas*	20
UEEHA0038	Conduct visual and close inspection of electrical installations for hazardous areas*	40
UEEIC0012	Develop structured programs to control external devices*	40
UEEIC0014	Develop, enter and verify programs in supervisory control and data acquisition systems*	60
UEEIC0015	Develop, enter and verify word and analogue control programs for programmable logic controllers*	60
UEEIC0018	Diagnose and rectify faults in digital controls systems*	60
UEEIC0020	Fault find and repair analogue circuits and components in electronic control systems*	60
UEEIC0026	Provide solutions to fluid circuit operations*	60

UEEIC0027	Provide solutions to pneumatic-hydraulic system operations*	80
UEEIC0028	Provide solutions to problems in industrial control systems*	60
UEEIC0034	Set up industrial field control devices*	60
UEEIC0040	Solve problems in polyphase electronic power control circuits*	60
UEEIC0042	Solve problems in single phase electronic power control circuits*	60

UEE43220 Certificate IV in Industrial Automation and Control

Modification History

Release 3. This is the third release of this qualification in the UEE Electrotechnology Training Package. Modifications include:

- Updated superseded imported elective units
- ICTTEN420 added to electives (see UEE Release 5.0 Companion Volume Implementation Guide for mapping of deleted UEE units to imported ICT units)

Release 2. Updated superseded imported elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to select, install, set up, test, fault find, repair, maintain and commission systems and devices for measurement and recording of physical/chemical phenomenon and related process control systems.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification

Packaging Rules

A total of **1280 weighting points** comprising:

520 core weighting points listed below; plus

760 general elective weighting points from the general elective units listed below.

Choose a total of **760 weighting points** elective units from the list below, of which between **0 and 220 weighting points** can be taken from Group A; and between **0 and 540 weighting points** must be taken from Group B; and between **220 and 760 weighting points** must be taken from Group C, or all **760 weighting points** can be taken from Group C.

Up to **220 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference

Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20

UEEIC0030	Set up and adjust advanced PID process control loops*	40

UEEIC0031	Set up and configure human-machine interface (HMI) and industrial networks*	60
UEEIC0038	Solve problems in density/level measurement components and systems*	40
UEEIC0039	Solve problems in flow measurement components and systems*	40
UEEIC0041	Solve problems in pressure measurement components and systems*	40
UEEIC0043	Solve problems in temperature measurement components and systems*	40
UEEIC0047	Use instrumentation drawings, specifications, standards and equipment manuals*	40
UEEIC0048	Verify compliance and functionality of instrumentation and control installations*	40
UEERL0001	Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply*	20
UEERL0002	Attach cords, cables and plugs to electrical equipment for connection to 1000 V a.c. or 1500 V d.c.*	20
UEERL0003	Conduct in-service safety testing of electrical cord connected equipment and cord assemblies*	20
Group C: General elective units		Weighting Points
ICTTEN420	Design, install and configure an internetwork	100
UEECS0023	Install and configure network systems for internetworking*	120
UEEIC0003	Assist in commissioning process and instrumentation control systems*	40
UEEIC0012	Develop structured programs to control external devices*	40
UEEIC0014	Develop, enter and verify programs in supervisory control and data acquisition systems*	60
UEEIC0015	Develop, enter and verify word and analogue control programs for programmable logic	60

	controllers*	
UEEIC0018	Diagnose and rectify faults in digital controls systems*	60
UEEIC0026	Provide solutions to fluid circuit operations*	60
UEEIC0027	Provide solutions to pneumatic-hydraulic system operations*	80
UEEIC0028	Provide solutions to problems in industrial control systems*	60
UEEIC0034	Set up industrial field control devices*	60
UEEIC0040	Solve problems in polyphase electronic power control circuits*	60
UEEIC0042	Solve problems in single phase electronic power control circuits*	60
UEEIC0044	Troubleshoot measuring and analysis systems*	40

Qualification Mapping Information

This qualification replaces and is equivalent to UEE43211 Certificate IV in Industrial Automation and Control

Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

UEE43322 Certificate IV in Electrical - Renewable Energy

Modification History

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package.

This qualification replaces and is not equivalent to:

- UEE41920 Certificate IV in Electrical - Renewable Energy
- UEE42020 Certificate IV in Electrical - Photovoltaic systems; and
- UEE43120 Certificate IV in Energy Efficiency and Assessment

Modifications include:

- Consolidation of three qualifications into this one
- Changes to core and elective units to reflect consolidation
- Changes to elective group structure and packaging rules

Qualification Description

This qualification provides competencies to select, install, set up, test, fault find, repair and maintain renewable energy (RE) electrical systems and equipment in buildings and premises.

It includes requirements and competencies to select, install, set up, test, fault find, repair and maintain stand-alone RE equipment and systems.

There are skills and knowledge covered in this qualification that require a licence or permit to practice.

Entry Requirements

The entry requirement for this qualification is:

- UEE30820 Certificate III in Electrotechnology Electrician

or

- a current 'Unrestricted Electricians Licence' or its equivalent issued in an Australian state or territory.

Packaging Rules

A total of **440 weighting points** comprising:

210 core weighting points; plus

230 elective weighting points

Choose a minimum of **230 elective weighting points** units from the list below, of which:

- **20 weighting points** must be taken from Group A
- a minimum of **60 weighting points** must be taken from Group B
- a minimum of **30 weighting points** must be taken from Group C
- between **0 and 80 weighting points** can be taken from Group D
- between **0 and 120 weighting points** can be taken from Group E
- between **0 and 60 weighting points** can be taken from Group F

Up to **60 weighting points** of the elective units Group E, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided that selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10.

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEERE0049	Apply safe work practices in the rooftop solar industry	20
UEERE0054	Conduct site survey for grid-connected photovoltaic and battery storage systems	30
UEERE0078	Install battery storage to power conversion equipment*	30
UEERE0081	Install photovoltaic systems to power conversion equipment *	30
UEERE0082	Maintain renewable energy (RE) apparatus *	20
Group A Elective units		Weighting Points
UEEEL0047	Identify, shut down and restart systems with alternate supplies*	20
UEERE0050	Identify and isolate multiple supply systems *	20
Group B Elective units		Weighting Points
UEERE0055	Conduct site survey for off-grid photovoltaic/generating	40

	set systems	
UEERE0075	Install and maintain micro hydro energy systems to power conversion equipment *	30
UEERE0076	Install and maintain wind energy systems to power conversion equipment*	30
UEERE0077	Install battery storage equipment power conversion equipment to grid *	30
UEERE0079	Install off-grid power conversion equipment to electrical installation *	30
UEERE0080	Install photovoltaic power conversion equipment to grid *	30
Group C Elective units		Weighting Points
UEERE0070	Fault find and repair grid-connected photovoltaic power supply systems *	30
UEERE0071	Fault find and repair off-grid photovoltaic/generating set systems to an electrical installation *	30
Group D Elective units		Weighting Points
UEERE0060	Design grid-connected battery storage systems *	40
UEERE0061	Design grid-connected photovoltaic power supply systems *	40
UEERE0062	Design micro-hydro systems *	40
UEERE0063	Design off-grid photovoltaic/generating set systems *	40
UEERE0064	Design renewable energy heating systems *	40
UEERE0065	Design wind energy systems *	40
Group E Elective units		Weighting Points
CPPHES4005	Assess household energy use and efficiency improvements	40
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services*	80
UEEEL0050	Install and replace low voltage current transformer metering*	20

UEEEL0078	Install and commission whole current electricity meters	20
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20
UEEIC0009	Develop an electrical integrated system interface for access through a touch screen*	20
UEEIC0011	Develop electrical integrated systems*	20
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEEIC0014	Develop, enter and verify programs in supervisory control and data acquisition systems*	60
UEEIC0015	Develop, enter and verify word and analogue control programs for programmable logic controllers*	60
UEEIC0024	Plan the electrical installation of integrated systems*	20
UEEEL0029	Conduct compliance inspection of LV electrical installations with demand exceeding 100 A per phase*	40
UEEEL0030	Conduct compliance inspection of single phase LV electrical installations*	60
UEEEL0031	Conduct compliance inspection of special LV electrical installations*	60
UEEEL0040	Develop compliance policies and plans to conduct an electrical contracting business*	80
UEEEL0050	Install and replace low voltage current transformer metering*	20
UEEEL0051	Investigate and report on electrical incidents and causes*	60
UEEEL0057	Plan electrical installations with a low voltage demand up to 400 A per phase*	40
UEEEL0063	Provide photometric data for illumination system design	60
UEEEL0069	Select and arrange equipment for special LV electrical installations*	60
UEEEL0073	Verify compliance and functionality of special LV electrical installations*	40
UEERE0052	Assess energy loads and uses for energy efficiency in	40

	commercial facilities*	
UEERE0053	Assess energy loads and uses for energy efficiency in industrial properties and enterprises*	40
UEERE0056	Coordinate maintenance of renewable energy (RE) apparatus and systems*	20
UEERE0061	Design grid-connected photovoltaic power supply systems*	60
UEERE0068	Develop strategies to address sustainability issues for electrical installations	20
UEERE0069	Diagnose and rectify faults in renewable energy (RE) control systems*	60
UEERE0083	Maintain safety and tidiness of remote area power supply systems*	20
UEERE0088	Work safely with remote area power supply systems*	20
Group F Elective units		Weighting Points
ICTICT214	Operate application software packages	20
UEECD0031	Prepare engineering drawings using manual drafting and CAD for electrotechnology applications*	60
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECD0056	Apply methods to maintain currency of industry developments	20
UEECO0001	Estimate electrotechnology projects	40
UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20
UEECS0033	Use engineering applications software on personal computers	40
UEERE0086	Promote sustainable energy practices	40

Qualification Mapping Information

This qualification replaces and is not equivalent to:

- UEE41920 Certificate IV in Electrical - Renewable Energy
- UEE42020 Certificate IV in Electrical - Photovoltaic systems; and
- UEE43120 Certificate IV in Energy Efficiency and Assessment

UEE50122 Diploma of Computer Systems Engineering

Modification History

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package.

This qualification replaces and is not equivalent to UEE50120 Diploma of Computer Systems Engineering. Modifications include:

- Replaced UECS0004 with ICTTEN409 in core
- Replaced UECS0025 with ICTPRG534 in core
- Replaced BSBCUS201 with BSBOPS203 in Group A
- Replaced BSBINM501 with BSBINS501 in Group A
- Replaced BSBINN502 with BSBSTR501 in Group A
- Replaced BSBMGT502 with BSBLDR522 in Group A
- Replaced BSBMGT516 with BSBSTR502 in Group A
- Replaced BSBWOR502 with BSBTWK502 in Group A
- Replaced ICTICT203 with ICTICT214 in Group A
- Moved ICTTEN420 from in Group A to group C
- Replaced UECS0002 with ICTPRG444 in Group C
- UECS0014 removed from Group C (covered in ICTNWK426 in Group D)
- Replaced UECS0021 with ICTNWK309 in Group C
- Replaced UECS0023 with ICTTEN420 in Group C
- Replaced UECS0031 with ICTWEB447 in Group C
- Deleted UECS0024 from Group C (covered in ICTNWK309)
- Replaced UECS0001 with ICTNWK307 in Group D
- Replaced UECS0007 with ICTNWK625 in Group D
- UECS0017 removed from Group D
- Replaced UECS0019 with ICTPRG549 in Group D
- Replaced UECS0027 with ICTPRG440 in Group D
- Replaced UECS0016 with ICTNWK426 in Group D

Qualification Description

This qualification covers competencies to develop, select, install, commission and maintain computer equipment and systems.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification

Packaging Rules

A total of **1600 weighting points** comprising:

190 core weighting points listed below; plus

1410 general elective weighting points from the general elective units listed below.

Choose a total of **1410 weighting points** elective units from the list below, of which between **0 and 270 weighting points** can be taken from Group A; and between **0 and 880 weighting points** can be taken from Group B; and between **0 and 580 weighting points** can be taken from Group C; and between **580 and 1040 weighting points** must be taken from Group D.

Up to **270 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
ICTPRG534	Deploy applications to production environments	40
ICTTEN409	Commission an electronic system	50
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0027	Participate in development and follow a personal competency development plan	20

UEERE0015	Implement and monitor energy sector environmental and sustainable policies and procedures	20
Group A: Imported and common elective units		Weighting Points
BSBINS501	Implement information and knowledge management systems	50
BSBLDR522	Manage people performance	70
BSBOPS203	Deliver a service to customers	20
BSBSTR501	Establish innovative work environments	50
BSBSTR502	Facilitate continuous improvement	60
BSBTWK502	Manage team effectiveness	60
ICTICT214	Operate application software packages	20
ICTTEN419	Implement and troubleshoot enterprise routers and switches	100
ICTTEN421	Apply advanced routing protocols to network design	80
ICTTEN422	Configure and troubleshoot advanced network switching	80
ICTTEN423	Install and maintain a wide area network	80
UEECD0011	Comply with scheduled and preventative maintenance program processes	20
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20
UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20
Group B: Qualification elective units		Weighting Points
UEEAS0001	Assemble electronic components*	40

UEEAS0003	Modify electronic sub-assemblies*	40
UEEAS0004	Select electronic components for assembly*	20
UEEAS0006	Use lead-free soldering techniques*	40
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0020	Fix and secure electrotechnology equipment*	20
UEECD0021	Identify and select components, accessories and materials for energy sector work activities*	20
UEECD0025	Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits*	40
UEECD0040	Solve basic problems electronic and digital equipment and circuits*	80
UEECD0043	Solve problems in direct current circuits*	80
UEECD0045	Solve problems in multiple path extra-low voltage (ELV) a.c. circuits*	40
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications*	40
UEECS0003	Assemble, set up and test computing devices*	80
UEECS0018	Develop web pages for engineering applications	40
UEECS0022	Install and configure a client computer operating system and software	40
UEECS0028	Select, install, configure and test multimedia components	40
UEECS0029	Set up and configure basic local area network (LAN)*	80
UEECS0030	Set up, configure and test biometric devices	40
UEECS0032	Support computer hardware and software for engineering applications	120
UEECS0033	Use engineering applications software on personal computers	40
UEEDV0004	Install and connect data and voice communication	40

	equipment*	
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services*	80
UEEDV0006	Install and modify optical fibre performance data communication cabling*	40
UEEDV0008	Install, modify and verify coaxial and structured communication copper cabling*	40
UEEDV0009	Select and arrange data and voice equipment for local area networks*	40
UEEDV0010	Select and arrange equipment for wireless communication networks*	40
UEEDV0012	Set up and configure the wireless capabilities of communications and data storage devices	40
UEEEEC0003	Assemble and set up basic security systems*	80
UEEEEC0019	Develop software solutions for microcontroller-based systems*	60
UEEEEC0027	Enter instructions and test wired and wireless security systems*	40
UEEEEC0042	Install large security systems*	100
UEEEEC0055	Repair basic computer equipment faults by replacement of modules/sub-assemblies*	40
UEEEEC0059	Repair routine business equipment faults*	120
UEEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEEC0065	Solve problems in basic electronic circuits*	100
UEEEEC0066	Troubleshoot amplifiers in an electronic apparatus*	80
UEEEEC0067	Troubleshoot basic amplifier circuits*	40
UEEEEC0069	Troubleshoot digital sub-systems*	80
UEEEEC0072	Troubleshoot microcontroller-based hardware systems	40

UEEEEC0074	Troubleshoot resonance circuits in an electronic apparatus*	80
UEEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20
UEEIC0047	Use instrumentation drawings, specifications, standards and equipment manuals*	40

Group C: Qualification elective units**Weighting
Points**

ICTNWK309	Configure and administer network operating systems	70
ICTPRG444	Analyse software requirements	60
ICTTEN420	Design, install and configure an internetwork	100
ICTWEB447	Build basic website using development software and ICT tools	20
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0013	Develop and implement energy sector maintenance programs	60
UEECD0047	Supervise and coordinate energy sector work activities	40
UEECO0001	Estimate electrotechnology projects	40
UEECO0013	Prepare specifications for the supply of materials and equipment for electrotechnology projects	40
UEECS0020	Evaluate and modify object-oriented code programs	40
UEEIC0005	Configure and maintain industrial control system networks*	60
UEEIC0012	Develop structured programs to control external devices*	40
UEEIC0020	Fault find and repair analogue circuits and components in electronic control systems*	60

Group D: Qualification elective units		Weighting Points
ICTNWK307	Provide network systems administration	60
ICTNWK426	Install and configure client-server applications and services	60
ICTNWK625	Plan and configure advanced internetwork switching solutions	120
ICTPRG440	Apply introductory programming skills in different languages	60
ICTPRG549	Apply intermediate object-oriented language skills	60
UEECD0014	Develop design briefs for electrotechnology projects	40
UEECD0036	Provide engineering solutions for problems in complex multiple path circuits	60
UEECD0039	Provide solutions to basic engineering computational problems*	60
UEECD0053	Write specifications for computer systems engineering projects	40
UEECO0014	Prepare tender submissions for electrotechnology projects*	60
UEEEEC0001	Analyse the performance of wireless-based electronic communication systems*	40
UEEEEC0010	Design and develop advanced digital systems	40
UEEEEC0013	Design electronic printed circuit boards*	40
UEEEEC0015	Develop basic plans for integrating security systems*	40
UEEEEC0017	Develop engineering solutions to analogue electronic problems*	80
UEEIC0006	Design and configure human-machine interface (HMI) networks	60
UEEIC0010	Develop and test code for microcontroller devices	60

UEE50220 Diploma of Electrical and Instrumentation

Modification History

Release 2. Updated superseded elective unit.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to develop, select, install, commission, maintain and diagnose faults/malfunctions on electrical, instrumentation and control equipment and systems. No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

The entry requirement for this qualification is:

- UEE30820 Certificate III in Electrotechnology Electrician

or

- a current 'Unrestricted Electricians Licence' or its equivalent issued in an Australian state or territory.

Packaging Rules

A total of **760 weighting points** comprising:

680 core weighting points listed below; **plus**

80 general elective weighting points from the general elective units listed below.

Choose a total of **80 weighting points** elective units from the list below, of which between 0 and 20 **weighting points** can be taken from Group A; between 0 and 20 **weighting points** can be taken from Group B; between 0 and 20 **weighting points** can be taken from Group C; and between 60 and 80 **weighting points** can be taken from Group D (or all elective **80 weighting points** can be taken from Group D).

Up to 20 weighting points of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0027	Participate in development and follow a personal competency development plan	20
UEECD0060	Write specifications for electrotechnology engineering projects	40
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEEIC0021	Find and rectify faults in process final control elements*	40
UEEIC0022	Install instrumentation and control apparatus and associated equipment*	20
UEEIC0023	Install instrumentation and control cabling and tubing*	20
UEEIC0029	Set up and adjust PID control loops*	40
UEEIC0030	Set up and adjust advanced PID process control loops*	40
UEEIC0031	Set up and configure human-machine interface (HMI) and industrial networks*	60
UEEIC0038	Solve problems in density/level measurement components and systems*	40
UEEIC0039	Solve problems in flow measurement components and systems*	40
UEEIC0041	Solve problems in pressure measurement components and systems*	40
UEEIC0043	Solve problems in temperature measurement components and systems*	40
UEEIC0047	Use instrumentation drawings, specifications, standards	40

	and equipment manuals*	
UEEIC0048	Verify compliance and functionality of instrumentation and control installations*	40

UEE50320 Diploma of Electrical and Refrigeration and Air Conditioning

Modification History

Release 4. Updated superseded elective units.

Release 3. Updated superseded imported unit.

Release 2. Two units added to general electives. Imported elective units updated.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to select, install, set up, test, commission, fault find, repair and maintain refrigeration, air conditioning and electrical systems and equipment in buildings and premises. This qualification contributes to the Refrigeration and Air Conditioning (RAC) Refrigerant Handling Licence.

Refrigerant Handling Licence:

The achievement of the qualification meets the training components for the full national Refrigerant Handling Licence which is required to work on refrigeration and air conditioning equipment that carries the risk of a fluorocarbon refrigerant being emitted while decanting the refrigerant or manufacturing, installing, commissioning, servicing, maintaining or decommissioning RAC equipment.

RAC Occupational Licence:

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to refrigeration/air conditioning work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Electrical Licence:

The achievement of this qualification meets Electrical Regulatory Authority Council (ERAC), or their successor's, Essential Performance Capabilities for an 'Unrestricted Electrician's license'.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **1830 weighting points** comprising:

1750 core weighting points listed below; **plus**

80 general elective weighting points from the general elective units listed below.

Choose a total of **80 weighting points** elective units from the list below, of which between 0 and 20 **weighting points** can be taken from Group A; between 0 and 20 **weighting points** can be taken from Group B; between 0 and 20 **weighting points** can be taken from Group C; and between 40 and 80 **weighting points** must be taken from Group D (or all electives units of 80 **weighting points** can be taken from Group D).

Up to 20 weighting points of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisites Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units	Weighting Points
UEECD0007 Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0010 Compile and produce an energy sector detailed report	60
UEECD0016 Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0019 Fabricate, assemble and dismantle utilities industry components*	40
UEECD0020 Fix and secure electrotechnology equipment*	20
UEECD0024 Implement and monitor energy sector WHS policies and procedures	20
UEECD0027 Participate in development and follow a personal competency development plan	20
UEECD0044 Solve problems in multiple path circuits*	40
UEECD0046 Solve problems in single path circuits*	40
UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications*	40

UEECD0060	Write specifications for electrotechnology engineering projects	40
UEEEL0003	Arrange circuits, control and protection for electrical installations*	40
UEEEL0005	Develop and connect electrical control circuits*	80
UEEEL0008	Evaluate and modify low voltage heating equipment and controls*	20
UEEEL0009	Evaluate and modify low voltage lighting circuits, equipment and controls*	20
UEEEL0010	Evaluate and modify low voltage socket outlets circuits*	20
UEEEL0012	Install low voltage wiring, appliances, switchgear and associated accessories*	40
UEEEL0014	Isolate, test and troubleshoot low voltage electrical circuits*	60
UEEEL0018	Select wiring systems and select cables for low voltage electrical installations*	60
UEEEL0019	Solve problems in direct current (d.c.) machines*	30
UEEEL0020	Solve problems in low voltage a.c. circuits*	80
UEEEL0021	Solve problems in magnetic and electromagnetic devices*	30
UEEEL0023	Terminate cables, cords and accessories for low voltage circuits*	40
UEEEL0024	Test and connect alternating current (a.c.) rotating machines*	50
UEEEL0025	Test and connect transformers*	30
UEEEL0039	Design, install and verify compliance and functionality of general electrical installations*	40
UEEEL0047	Identify, shut down and restart systems with alternate supplies*	20
UEERA0031	Diagnose and rectify faults in air conditioning and refrigeration control systems*	60
UEERA0035	Establish the basic operating conditions of air conditioning systems*	20

UEERA0036	Establish the basic operating conditions of vapour compression systems*	60
UEERA0044	Find and rectify faults in single phase motors and associated controls*	40
UEERA0045	Find and rectify faults in three phase motors and associated controls*	30
UEERA0050	Install refrigerant pipe work, flow controls and accessories*	60
UEERA0051	Install, commission, service and maintain air conditioning systems*	80
UEERA0052	Install, commission, service and maintain low temperature systems*	40
UEERA0053	Install, commission, service and maintain medium temperature systems*	60
UEERA0059	Prepare and connect refrigerant tubing and fittings*	40
UEERA0062	Recover and charge refrigerants*	40
UEERA0079	Safely handle refrigerants and lubricants*	40
UEERA0081	Select refrigerant piping, accessories and associated controls*	40
UEERA0092	Solve problems in low voltage refrigeration and air conditioning circuits*	40
UEERA0094	Verify functionality and compliance of refrigeration and air conditioning installations*	40
UEERE0013	Develop strategies to address environmental and sustainability issues in the energy sector	20
UETDRRF004	Perform rescue from a live LV panel*	20
Group A: Imported and common elective units		Weighting Points
BSBOPS203	Deliver a service to customers	20
ICTICT214	Operate application software packages	20
HLTAID009	Provide cardiopulmonary resuscitation	10
UEECD0011	Comply with scheduled and preventative maintenance	20

program processes

UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20
UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20

Group B: Qualification elective units

Weighting Points

UEEEL0078	Install and commission whole current electricity meters*	20
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20
UEEIC0011	Develop electrical integrated systems*	20
UEEIC0024	Plan the electrical installation of integrated systems*	20
UEERA0005	Apply safety awareness and legal requirements for ammonia refrigerant	10
UEERA0007	Apply safety awareness and legal requirements for flammable refrigerants	10
UEERA0054	Maintain microbial control of refrigeration and air conditioning systems	20
UEERA0073	Resolve problems in ice making systems*	20
UEERA0075	Resolve problems in post-mix refrigeration systems*	20
UEERA0097	Install, commission, service and maintain variable refrigerant flow air conditioning systems*	40
UEERA0098	Inspect, test and repair fire and smoke control features of mechanical services systems*	80

Group C: Qualification elective units

Weighting Points

UEEEL0050	Install and replace low voltage current transformer metering*	20
UEEIC0009	Develop an electrical integrated system interface for access through a touch screen*	20

Group D: Qualification elective units		Weighting Points
UEECD0013	Develop and implement energy sector maintenance programs	60
UEEEL0011	Evaluate performance of low voltage electrical apparatus*	40
UEERA0040	Evaluate and report on the indoor air quality of buildings*	40

Qualification Mapping Information

This qualification replaces and is not equivalent to UEE50311 Diploma of Electrical and Refrigeration and Air-conditioning

UEE50420 Diploma of Electrical Engineering

Modification History

Release 4. Updated superseded elective units.

Release 3. Updated superseded elective units.

Release 2. Two units added to general electives. Imported elective units updated.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification cover competencies to develop, select, commission, maintain and diagnose faults/malfunctions on advanced electrical equipment and systems.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

The entry requirement for this qualification is:

- UEE30820 Certificate III in Electrotechnology Electrician

or

- a current 'Unrestricted Electricians Licence' or its equivalent issued in an Australian state or territory.

Packaging Rules

A total of **760 weighting points** comprising:

160 core weighting points listed below; plus

600 general elective weighting points from the general elective units listed below.

Choose a total of **600 weighting points** elective units from the list below, of which between **0 and 270 weighting points** can be taken from Group A; between **0 and 100 weighting points** can be taken from Group B; between **0 and 240 weighting points** can be taken from Group C; and between **260 and 600 weighting points** must be taken from Group D (or all elective units between **0 and 600 weighting points** must can be taken from Group D).

Up to **270 weighting** points of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the

qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0027	Participate in development and follow a personal competency development plan	20
UEECD0060	Write specifications for electrotechnology engineering projects	40
UEERE0013	Develop strategies to address environmental and sustainability issues in the energy sector	20
Group A: Imported and common elective units		Weighting Points
BSBOPS203	Deliver a service to customers	20
BSBINS501	Implement information and knowledge management systems	50
BSBSTR501	Establish innovative work environments	50
BSBLDR522	Manage people performance	70
BSBSTR502	Facilitate continuous improvement	60
BSBTWK502	Manage team effectiveness	60
ICTICT214	Operate application software packages	20
UEECD0011	Comply with scheduled and preventative maintenance program processes	20
UEECD0035	Provide basic instruction in the use of	20

	electrotechnology apparatus	
UEECO0002	Maintain documentation	20
UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20
Group B: General elective units		Weighting Points
UEEAS0007	Assemble, mount and connect control gear and switchgear*	40
UEEAS0008	Fabricate and assemble bus bars*	40
UEEAS0009	Mount and wire control panel equipment*	40
UEECD0028	Plan an integrated cabling installation system*	40
UEECS0033	Use engineering applications software on personal computers	40
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services*	80
UEEDV0008	Install, modify and verify coaxial and structured communication copper cabling*	40
UEEEC0003	Assemble and set up basic security systems*	80
UEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEEEL0004	Carry out basic repairs to electrical components and equipment*	40
UEEEL0016	Provide advice on effective and energy efficient lighting products	20
UEEEL0017	Repair and maintain mechanical components of electrical machines*	40
UEEEL0022	Supply effective and efficient lighting products for domestic and small commercial applications*	40
UEEEL0026	Align and install traction lift equipment*	20

UEEEL0033	Conduct electrical tests on LV electrical machines*	40
UEEEL0034	Conduct mechanical tests on electrical machines and components*	40
UEEEL0045	Diagnose and rectify faults in traction lift systems*	80
UEEEL0046	Find and repair faults in LV d.c. electrical apparatus and circuits*	60
UEEEL0049	Install and maintain emergency safety systems*	60
UEEEL0052	Maintain and service traction lift systems and equipment*	40
UEEEL0053	Maintain operation of electrical marine equipment and systems*	60
UEEEL0054	Maintain operation of electrical mining equipment and systems*	60
UEEEL0055	Overhaul and repair major switchgear and control gear*	60
UEEEL0056	Place and connect electrical coils*	40
UEEEL0061	Provide advice on the application of energy efficient lighting for ambient and aesthetic effect*	20
UEEEL0066	Rewind LV direct current machines*	60
UEEEL0067	Rewind single phase machines*	40
UEEEL0068	Rewind three phase low voltage induction machines*	60
UEEEL0069	Select and arrange equipment for special LV electrical installations*	60
UEEEL0074	Wind electrical coils*	40
UEEEL0075	Inspect, test and maintain emergency alarm systems and equipment*	20
UEEEL0076	Inspect, test and maintain emergency lighting systems*	20
UEEEL0078	Install and commission whole current electricity	20

	meters*	
UEEHA0004	Enter a classified hazardous area to undertake work related to electrical equipment	40
UEEHA0020	Conduct detailed inspection of electrical installations for hazardous areas*	40
UEEHA0022	Determine the explosion-protection requirements to meet a specified classified hazardous area*	40
UEEHA0025	Install explosion-protected equipment and associated apparatus and wiring systems*	60
UEEHA0026	Maintain equipment associated with hazardous areas*	60
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20
UEEIC0011	Develop electrical integrated systems*	20
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEEIC0024	Plan the electrical installation of integrated systems*	20
UEEIC0038	Solve problems in density/level measurement components and systems*	40
UEEIC0039	Solve problems in flow measurement components and systems*	40
UEEIC0041	Solve problems in pressure measurement components and systems*	40
UEEIC0043	Solve problems in temperature measurement components and systems*	40
UEEIC0047	Use instrumentation drawings, specifications, standards and equipment manuals*	40
UEERA0035	Establish the basic operating conditions of air conditioning systems*	20
UEERA0036	Establish the basic operating conditions of vapour compression systems*	60
UEERA0059	Prepare and connect refrigerant tubing and	40

	fittings*	
UEERE0054	Conduct site survey for grid-connected photovoltaic and battery storage systems	30
UEERE0080	Install photovoltaic power conversion equipment to grid *	30
UEERE0081	Install photovoltaic systems to power conversion equipment *	30
UETDRIS017	Perform high voltage field switching operation to a given schedule *	40
UETDRIS032	Solve problems in network equipment*	80
UETDRIS033	Solve problems in network protection*	40
Group C: General elective units		Weighting Points
CPPHES4005	Assess household energy use and efficiency improvements	40
UEECO0001	Estimate electrotechnology projects	40
UEEEL0007	Develop detailed electrical drawings*	60
UEEEL0027	Carry out low voltage electrical field testing and report findings*	60
UEEEL0029	Conduct compliance inspection of LV electrical installations with demand exceeding 100 A per phase*	40
UEEEL0030	Conduct compliance inspection of single phase LV electrical installations*	60
UEEEL0031	Conduct compliance inspection of special LV electrical installations*	60
UEEEL0032	Conduct electrical tests on HV electrical machines*	60
UEEEL0036	Design effective and efficient lighting for residential and commercial buildings*	20
UEEEL0040	Develop compliance policies and plans to conduct an electrical contracting business*	80
UEEEL0044	Diagnose and rectify faults in complex lift	40

	systems*	
UEEEL0050	Install and replace low voltage current transformer metering*	20
UEEEL0051	Investigate and report on electrical incidents and causes*	60
UEEEL0057	Plan electrical installations with a low voltage demand up to 400 A per phase*	40
UEEEL0059	Plan low voltage switchboard and control panel layouts*	40
UEEEL0060	Prepare quotations for the supply of effective and efficient lighting products for lighting projects*	20
UEEEL0063	Provide photometric data for illumination system design	60
UEEEL0064	Rewind HV three phase induction machines rated for voltages above 3.3 kV*	60
UEEEL0065	Rewind HV three phase induction machines rated for voltages to 3.3 kV*	60
UEEEL0070	Select effective and efficient light sources and luminaries for given locations and designs*	60
UEEEL0071	Select low voltage power factor correction equipment*	40
UEEEL0072	Set up and place LV electrical apparatus and associated circuits into service*	40
UEEEL0073	Verify compliance and functionality of special LV electrical installations*	40
UEEIC0009	Develop an electrical integrated system interface for access through a touch screen*	20
UEEIC0012	Develop structured programs to control external devices*	40
UEEIC0014	Develop, enter and verify programs in supervisory control and data acquisition systems*	60
UEEIC0015	Develop, enter and verify word and analogue control programs for programmable logic controllers*	60

UEEIC0018	Diagnose and rectify faults in digital controls systems*	60
UEEIC0020	Fault find and repair analogue circuits and components in electronic control systems*	60
UEEIC0026	Provide solutions to fluid circuit operations*	60
UEEIC0027	Provide solutions to pneumatic-hydraulic system operations*	80
UEEIC0028	Provide solutions to problems in industrial control systems*	60
UEEIC0034	Set up industrial field control devices*	60
UEEIC0040	Solve problems in polyphase electronic power control circuits*	60
UEEIC0042	Solve problems in single phase electronic power control circuits*	60
UEERE0052	Assess energy loads and uses for energy efficiency in commercial facilities*	40
UEERE0053	Assess energy loads and uses for energy efficiency in industrial properties and enterprises*	40
UEERE0061	Design grid-connected photovoltaic power supply systems*	60
UEERE0068	Develop strategies to address sustainability issues for electrical installations*	20
Group D: General elective units		Weighting Points
UEECD0013	Develop and implement energy sector maintenance programs	60
UEECD0036	Provide engineering solutions for problems in complex multiple path circuits	60
UEECD0039	Provide solutions to basic engineering computational problems*	60
UEECO0014	Prepare tender submissions for electrotechnology projects*	60
UEEEL0006	Develop detailed and complex drawings for electrical systems using CAD systems*	60

UEEEL0011	Evaluate performance of low voltage electrical apparatus*	40
UEEEL0035	Design effective and efficient lighting for public, open and sports areas*	20
UEEEL0037	Design electrical installations with a low voltage demand greater than 400 A per phase*	40
UEEEL0062	Provide engineering solutions to problems in complex polyphase power circuits*	60
UEEIC0001	Analyse complex electronic circuits controlling fluids	80
UEEIC0005	Configure and maintain industrial control system networks*	60
UEEIC0010	Develop and test code for microcontroller devices	60
UEEIC0016	Diagnose and rectify faults in a.c. motor drive systems*	60
UEEIC0017	Diagnose and rectify faults in d.c. motor drive systems*	60
UEEIC0019	Diagnose and rectify faults in servo drive systems*	60
UEERE0062	Design micro-hydro systems*	60
UEERE0064	Design renewable energy heating systems*	120
UEERE0065	Design wind energy systems	60
UETDRIS025	Diagnose and resolve faults in distribution systems*	60
UETDRIS026	Diagnose and resolve faults in electrical apparatus*	60
UETDRIS027	Diagnose and resolve faults in transmission systems*	60

UEE50520 Diploma of Electronics and Communications Engineering

Modification History

Release 2. This is the second release of this qualification in the UEE Electrotechnology Training Package. Modifications include:

- Updated superseded imported elective units
- The following units added to electives (see UEE Release 5.0 Companion Volume Implementation Guide for mapping of deleted UEE units to imported ICT units):
 - ICTPRG440
 - ICTPRG444
 - ICTPRG534
 - ICTPRG549
 - ICTWEB447
 - ICTICT518
 - ICTNWK426

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to develop, select, commission, maintain and diagnose faults/malfunctions of electronic components/sub-assemblies, apparatus and systems.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification

Packaging Rules

A total of **1600 weighting points** comprising:

140 core weighting points listed below; plus

1460 general elective weighting points from the general elective units listed below.

Choose a total of **1460 weighting points** elective units from the list below, of which between **0 and 270 weighting points** can be taken from Group A; and between **0 and 920 weighting points** must be taken from Group B; and between **260 and 580 weighting points** must be taken

from Group C; and between **280 and 1200 weighting points** must be taken from Group D;

Up to **270 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0027	Participate in development and follow a personal competency development plan	20
UEEEEC0007	Commission electronics and communications systems	20
UEEEEC0044	Modify - redesign electronics and communications systems*	20
UEERE0015	Implement and monitor energy sector environmental and sustainable policies and procedures	20
Group A: Imported and common elective units		Weighting Points
BSBINS501	Implement information and knowledge management systems	50
BSBLDR522	Manage people performance	70
BSBOPS203	Deliver a service to customers	20
BSBSTR501	Establish innovative work environments	50

BSBSTR502	Facilitate continuous improvement	60
BSBTWK502	Manage team effectiveness	60
ICTICT214	Operate application software packages	20
ICTTEN312	Install telecommunications network equipment	40
MSS402003	Apply competitive systems and practices	20
MSS402022	Apply quick changeover procedures	20
MSS402023	Apply Just in Time procedures	20
MSS402042	Apply 5S procedures	20
MSS402084	Undertake root cause analysis	20
MSS402085	Contribute to the application of a proactive maintenance strategy	20
UEECD0011	Comply with scheduled and preventative maintenance program processes	20
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20
UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20

Group B: Qualification elective units**Weighting Points**

UEEAS0001	Assemble electronic components*	40
UEEAS0002	Conduct quality and functional tests on assembled electronic apparatus*	20
UEEAS0003	Modify electronic sub-assemblies*	40
UEEAS0004	Select electronic components for assembly*	20
UEEAS0005	Set up and check electronic component assembly machines*	40
UEEAS0006	Use lead-free soldering techniques*	40

UEECD0008	Carry out preparatory energy sector work activities*	60
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0020	Fix and secure electrotechnology equipment*	20
UEECD0021	Identify and select components, accessories and materials for energy sector work activities*	20
UEECD0025	Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits*	40
UEECD0028	Plan an integrated cabling installation system*	40
UEECD0040	Solve basic problems electronic and digital equipment and circuits*	80
UEECD0043	Solve problems in direct current circuits*	80
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications*	40
UEECS0003	Assemble, set up and test computing devices*	80
UEECS0018	Develop web pages for engineering applications	40
UEECS0022	Install and configure a client computer operating system and software	40
UEECS0028	Select, install, configure and test multimedia components	40
UEECS0029	Set up and configure basic local area network (LAN)*	80
UEECS0030	Set up, configure and test biometric devices	40
UEECS0033	Use engineering applications software on personal computers	40
UEECS0032	Support computer hardware and software for engineering applications	120
UEEDV0004	Install and connect data and voice communication equipment*	40
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services*	80
UEEDV0006	Install and modify optical fibre performance data communication cabling*	40

UEEDV0008	Install, modify and verify coaxial and structured communication copper cabling*	40
UEEDV0009	Select and arrange data and voice equipment for local area networks*	40
UEEDV0010	Select and arrange equipment for wireless communication networks*	40
UEEDV0011	Set up and configure basic data communication systems*	40
UEEDV0012	Set up and configure the wireless capabilities of communications and data storage devices	40
UEEDV0013	Solve problems in voice and data communications circuits*	40
UEEDV0014	Test, report and rectify faults in data and voice installations*	40
UEEEEC0002	Assemble and install reception antennae and signal distribution equipment*	60
UEEEEC0003	Assemble and set up basic security systems*	80
UEEEEC0004	Assemble and set up fixed video/audio components and systems in buildings and premises*	120
UEEEEC0006	Carry out repairs of predictable faults in video and audio replay/recording apparatus*	120
UEEEEC0008	Commission large fire protection systems*	40
UEEEEC0019	Develop software solutions for microcontroller-based systems*	60
UEEEEC0026	Enter and verify programs for fire protection systems*	40
UEEEEC0027	Enter instructions and test wired and wireless security systems*	40
UEEEEC0028	Fault find and repair complex power supplies*	40
UEEEEC0029	Fault find and repair electronic apparatus*	40
UEEEEC0032	Fault find and repair high-volume office equipment*	120
UEEEEC0038	Find and repair microwave amplifier section faults in electronic apparatus*	40

UEEEEC0039	Install and test microwave antennae and waveguides*	60
UEEEEC0040	Install commercial video/audio system components*	120
UEEEEC0041	Install fire detection and warning system apparatus*	40
UEEEEC0042	Install large security systems*	100
UEEEEC0046	Operate and maintain amateur radio communication stations*	40
UEEEEC0048	Program and commission commercial access control security systems*	60
UEEEEC0049	Program and commission commercial security closed-circuit television systems*	60
UEEEEC0050	Program and commission commercial security systems*	60
UEEEEC0055	Repair basic computer equipment faults by replacement of modules/sub-assemblies*	40
UEEEEC0056	Repair predictable faults in audio components*	40
UEEEEC0057	Repair predictable faults in general electronic apparatus*	40
UEEEEC0058	Repair predictable faults in television receivers*	120
UEEEEC0059	Repair routine business equipment faults*	120
UEEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEEC0061	Set up and adjust commercial radio frequency (RF) transmission and reception systems*	60
UEEEEC0062	Set up and test residential video/audio equipment*	40
UEEEEC0063	Solve fundamental electronic communications system problems*	40
UEEEEC0064	Solve oscillator problems*	40
UEEEEC0065	Solve problems in basic electronic circuits*	100
UEEEEC0066	Troubleshoot amplifiers in an electronic apparatus*	80
UEEEEC0067	Troubleshoot basic amplifier circuits*	40
UEEEEC0068	Troubleshoot communication systems*	80

UEEEEC0069	Troubleshoot digital sub-systems*	80
UEEEEC0070	Troubleshoot faults in television receivers*	120
UEEEEC0071	Troubleshoot fire protection systems*	40
UEEEEC0072	Troubleshoot microcontroller-based hardware systems	40
UEEEEC0073	Troubleshoot professional audio reproduction components*	120
UEEEEC0074	Troubleshoot resonance circuits in an electronic apparatus*	80
UEEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEEEEC0076	Verify compliance and functionality of fire protection system installations*	60
UEEEEC0077	Verify functionality and compliance of custom electronic installations*	40
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20
UEEIC0004	Calibrate, adjust and test measuring instruments*	40
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60

UEE50722 Diploma of Renewable Energy Engineering

Modification History

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

This qualification replaces and is not equivalent to UEE50720 Diploma of Renewable Energy Engineering. Modifications include:

- Qualification description updated
- Significant changes to core and elective unit structure and packaging rules

Qualification Description

This qualification provides competencies to design renewable energy systems; supervise installation and maintenance; and develop, select, commission, maintain and diagnose faults/malfunctions on large-scale renewable energy (RE) equipment and systems.

There are skills and knowledge covered in this qualification that require a licence or permit to practice.

Entry Requirements

The entry requirement for this qualification is:

- UEE30820 Certificate III in Electrotechnology Electrician
- or
- a current 'Unrestricted Electricians Licence' or its equivalent issued in an Australian state or territory.

Packaging Rules

A total of **760 weighting points** comprising:

310 core weighting points; plus

450 elective weighting points

Choose a minimum of **430 elective weighting points** units from the list below, of which:

- **20 weighting points** must be taken from Group A
- a minimum of **80 weighting points** must be taken from Group B
- between **0 and 350 weighting points** can be taken from Group C
- between **0 and 200 weighting points** can be taken from Group D

Up to **200 weighting points** of the elective units Group D, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course,

provided that selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0062	Write specifications for renewable energy engineering projects	40
UEERE0049	Apply safe work practices in the rooftop solar industry	20
UEERE0054	Conduct site survey for grid-connected photovoltaic and battery storage systems	30
UEERE0055	Conduct site survey for off-grid photovoltaic/generating systems	40
UEERE0056	Coordinate maintenance of renewable energy (RE) apparatus and systems*	20
UEERE0078	Install battery storage to power conversion equipment *	30
UEERE0081	Install photovoltaic systems to power conversion equipment *	30
UEERE0082	Maintain renewable energy (RE) apparatus *	20
Group A Elective units		Weighting Points
UEEEL0047	Identify, shut down and restart systems with alternate supplies*	20
UEERE0050	Identify and isolate multiple supply systems *	20
Group B Elective units		Weighting Points
UEERE0057	Coordinate the design of micro-grid renewable energy	50

	systems	
UEERE0058	Coordinate the installation, fault finding and repair of micro grid systems	40
UEERE0060	Design grid-connected battery storage systems *	40
UEERE0061	Design grid-connected photovoltaic power supply systems *	40
UEERE0062	Design micro-hydro systems *	40
UEERE0063	Design off-grid photovoltaic/generating set systems *	40
UEERE0064	Design renewable energy heating systems *	40
UEERE0065	Design wind energy systems *	40
Group C Elective units		Weighting Points
CPPHES4005	Assess household energy use and efficiency improvements	40
UEECO0013	Prepare specifications for the supply of materials and equipment for electrotechnology projects	40
UEECO0014	Prepare tender submissions for electrotechnology projects*	60
UEEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEEEL0011	Evaluate performance of low voltage electrical apparatus*	40
UEEEL0040	Develop compliance policies and plans to conduct an electrical contracting business*	80
UEEEL0078	Install and commission whole current electricity meters	20
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEERE0052	Assess energy loads and uses for energy efficiency in commercial facilities*	40

UEERE0053	Assess energy loads and uses for energy efficiency in industrial properties and enterprises*	40
UEERE0068	Develop strategies to address sustainability issues for electrical installations	20
UEERE0069	Diagnose and rectify faults in renewable energy (RE) control systems*	60
UEERE0070	Fault find and repair grid-connected photovoltaic power supply systems *	30
UEERE0071	Fault find and repair off-grid photovoltaic/generating set systems to an electrical installation *	30
UEERE0075	Install and maintain micro hydro energy systems to power conversion equipment *	30
UEERE0076	Install and maintain wind energy systems to power conversion equipment *	30
UEERE0077	Install battery storage equipment power conversion equipment to grid *	30
UEERE0079	Install off-grid power conversion equipment to electrical installation *	30
UEERE0080	Install photovoltaic power conversion equipment to grid *	30

Group D Elective units**Weighting Points**

BSBINS501	Implement information and knowledge management systems	50
BSBLDR522	Manage people performance	70
BSBSTR501	Establish innovative work environments	50
BSBSTR502	Facilitate continuous improvement	60
BSBTWK502	Manage team effectiveness	60
ICTICT214	Operate application software packages	20
UEECD0030	Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software*	60
UEECD0031	Prepare engineering drawings using manual drafting and CAD for electrotechnology applications*	60

UEECD0032	Produce detailed electrotechnology/utilities drawings using CAD equipment and software*	60
UEECO0001	Estimate electrotechnology projects	40
UEECO0013	Prepare specifications for the supply of materials and equipment for electrotechnology projects	40
UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20
UEECS0033	Use engineering applications software on personal computers	40
UEERE0084	Manage renewable energy (RE) projects	40
UEERE0085	Plan renewable energy (RE) projects	60

UEE50920 Diploma of Industrial Electronics and Control Engineering

Modification History

Release 2. This is the second release of this qualification in the UEE Electrotechnology Training Package. Modifications include:

- Updated superseded imported elective units
- The following units added to electives (see UEE Release 5.0 Companion Volume Implementation Guide for mapping of deleted UEE units to imported ICT units):
 - ICTNWK426
 - ICTTEN409
 - ICTPRG549
 - CTPRG534
 - ICTWEB447.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package.

Qualification Description

This qualification covers competencies to develop, select, commission, maintain and diagnose faults/malfunctions of equipment and systems for the monitoring and control of plant, machines and processes.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

The entry requirement for this qualification is:

- UEE30820 Certificate III in Electrotechnology Electrician
- OR
- a current 'Unrestricted Electricians Licence' or its equivalent issued in an Australian state or territory.

Packaging Rules

A total of **760 weighting points** comprising:

280 core weighting points listed below; plus

480 general elective weighting points from the general elective units listed below.

Choose a total of **480 weighting points** elective units from the list below, of which between **0 and 220 weighting points** can be taken from Group A; between **0 and 100 weighting points** can be taken from Group B; between **0 and 120 weighting points** can be taken from Group C; and between **260 and 480 weighting points** can be taken from Group D (or all minimum **480 weighting points** can be taken from Group D).

Up to **220 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0027	Participate in development and follow a personal competency development plan	20
UEECD0055	Write specifications for industrial electronics and control projects	40
UEEIC0018	Diagnose and rectify faults in digital controls systems*	60
UEEIC0020	Fault find and repair analogue circuits and components in electronic control systems*	60
UEERE0013	Develop strategies to address environmental and sustainability issues in the energy sector	20
Group A: Imported and common elective units		Weighting Points
BSBINS501	Implement information and knowledge management systems	50
BSBLDR522	Manage people performance	70
BSBOPS203	Deliver a service to customers	20

BSBSTR501	Establish innovative work environments	50
BSBSTR502	Facilitate continuous improvement	60
BSBTWK502	Manage team effectiveness	60
ICTICT214	Operate application software packages	20
UEECD0011	Comply with scheduled and preventative maintenance program processes	20
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20

Group B: General elective units**Weighting Points**

UEECS0033	Use engineering applications software on personal computers	40
UEEEEC0003	Assemble and set up basic security systems*	80
UEEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEEEL0004	Carry out basic repairs to electrical components and equipment*	40
UEEEL0045	Diagnose and rectify faults in traction lift systems*	80
UEEEL0046	Find and repair faults in LV d.c. electrical apparatus and circuits*	60
UEEEL0049	Install and maintain emergency safety systems*	60
UEEEL0053	Maintain operation of electrical marine equipment and systems*	60
UEEEL0054	Maintain operation of electrical mining equipment and systems*	60
UEEEL0055	Overhaul and repair major switchgear and control gear*	60
UEEIC0002	Assemble, enter and verify operating instructions in	20

	microprocessor equipped devices*	
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEEIC0038	Solve problems in density/level measurement components and systems*	40
UEEIC0039	Solve problems in flow measurement components and systems*	40
UEEIC0041	Solve problems in pressure measurement components and systems*	40
UEEIC0043	Solve problems in temperature measurement components and systems*	40
UEEIC0047	Use instrumentation drawings, specifications, standards and equipment manuals*	40
Group C: General elective units		Weighting Points
ICTNWK426	Install and configure client-server applications and services	60
UEECO0001	Estimate electrotechnology projects	40
UEECS0014	Develop computer network services*	120
UEEEL0007	Develop detailed electrical drawings*	60
UEEEL0027	Carry out low voltage electrical field testing and report findings*	60
UEEIC0012	Develop structured programs to control external devices*	40
UEEIC0014	Develop, enter and verify programs in supervisory control and data acquisition systems*	60
UEEIC0015	Develop, enter and verify word and analogue control programs for programmable logic controllers*	60
UEEIC0026	Provide solutions to fluid circuit operations*	60
UEEIC0027	Provide solutions to pneumatic-hydraulic system operations*	80
UEEIC0028	Provide solutions to problems in industrial control systems*	60

UEEIC0034	Set up industrial field control devices*	60
UEEIC0040	Solve problems in polyphase electronic power control circuits*	60
UEEIC0042	Solve problems in single phase electronic power control circuits*	60

Group D: General elective units**Weighting Points**

ICTTEN409	Commission an electronic system	50
ICTPRG549	Apply intermediate object-oriented language skills	60
ICTPRG534	Deploy applications to production environments	40
ICTWEB447	Build basic website using development software and ICT tools	20
UEECS0004	Commission industrial computer systems*	20
UEECS0019	Develop, implement and test object-oriented code*	140
UEECS0025	Modify/redesign industrial computer systems*	20
UEECS0031	Set up, create and implement content for a web server*	120
UEEEL0006	Develop detailed and complex drawings for electrical systems using CAD systems*	60
UEEEL0011	Evaluate performance of low voltage electrical apparatus*	40
UEEIC0005	Configure and maintain industrial control system networks*	60
UEEIC0010	Develop and test code for microcontroller devices	60
UEEIC0016	Diagnose and rectify faults in a.c. motor drive systems*	60
UEEIC0017	Diagnose and rectify faults in d.c. motor drive systems*	60
UEEIC0019	Diagnose and rectify faults in servo drive systems*	60

UEE51020 Diploma of Instrumentation and Control Engineering

Modification History

Release 3. This is the second release of this qualification in the UEE Electrotechnology Training Package. Modifications include:

- Updated superseded imported elective units
- The following units added to electives (see UEE Release 5.0 Companion Volume Implementation Guide for mapping of deleted UEE units to imported ICT and MEM units):
 - ICTNWK426
 - ICTTEN409
 - MEM234010A
 - ICTPRG549
 - ICTPRG534
 - ICTWEB447.

Release 2. Updated superseded elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package.

Qualification Description

This qualification covers competencies to install, set up, test, develop, select, commission, maintain and diagnose faults/malfunctions of equipment and systems for the measurement, recording, monitoring and control of physical/chemical phenomenon and related process control systems.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification

Packaging Rules

A total of **1600 weighting points** comprising:

1120 core weighting points listed below; plus

480 general elective weighting points from the general elective units listed below.

Choose a total of **480 weighting points** elective units from the list below, of which between **0 and 180 weighting points** can be taken from Group A; and between **0 and 100 weighting**

points must be taken from Group B; and between **0 and 120 weighting points** must be taken from Group C; and between **260 and 480 weighting points** must be taken from Group D or all minimum **480 weighting points** can be taken from Group D

Up to **180 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0020	Fix and secure electrotechnology equipment*	20
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0027	Participate in development and follow a personal competency development plan	20
UEECD0043	Solve problems in direct current circuits*	80
UEECD0045	Solve problems in multiple path extra-low voltage (ELV) a.c. circuits*	40
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications*	40
UEECD0055	Write specifications for industrial electronics and	40

	control projects	
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEEIC0018	Diagnose and rectify faults in digital controls systems*	60
UEEIC0020	Fault find and repair analogue circuits and components in electronic control systems*	60
UEEIC0021	Find and rectify faults in process final control elements*	40
UEEIC0022	Install instrumentation and control apparatus and associated equipment*	20
UEEIC0023	Install instrumentation and control cabling and tubing*	20
UEEIC0029	Set up and adjust PID control loops*	40
UEEIC0030	Set up and adjust advanced PID process control loops*	40
UEEIC0031	Set up and configure human-machine interface (HMI) and industrial networks*	60
UEEIC0038	Solve problems in density/level measurement components and systems*	40
UEEIC0039	Solve problems in flow measurement components and systems*	40
UEEIC0041	Solve problems in pressure measurement components and systems*	40
UEEIC0043	Solve problems in temperature measurement components and systems*	40
UEEIC0047	Use instrumentation drawings, specifications, standards and equipment manuals*	40
UEEIC0048	Verify compliance and functionality of instrumentation and control installations*	40
UEERE0013	Develop strategies to address environmental and sustainability issues in the energy sector	20
UEERL0004	Disconnect - reconnect electrical equipment connected to low voltage (LV) installation wiring*	60

Group A: Imported and common elective units**Weighting Points**

BSBINS501	Implement information and knowledge management systems	50
BSBLDR522	Manage people performance	70
BSBOPS203	Deliver a service to customers	20
BSBSTR501	Establish innovative work environments	50
BSBSTR502	Facilitate continuous improvement	60
BSBTWK502	Manage team effectiveness	60
ICTICT214	Operate application software packages	20
UEECD0011	Comply with scheduled and preventative maintenance program processes	20
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20
UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20

Group B: General elective units**Weighting Points**

UEECD0050	Use and maintain the integrity of a portable gas detection device*	20
UEECS0033	Use engineering applications software on personal computers	40
UEEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEEC0069	Troubleshoot digital sub-systems*	80
UEEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEEHA0025	Install explosion-protected equipment and associated apparatus and wiring systems*	60
UEEHA0026	Maintain equipment associated with hazardous areas*	60
UEEIC0004	Calibrate, adjust and test measuring instruments*	40

UEEIC0033	Set up gas analysis measuring and control instruments*	20
UEEIC0035	Set up scientific analysis measuring and control instruments*	20
UEEIC0036	Set up water analysis measuring and control instruments*	20
UEEIC0037	Set up weighting measuring and control instruments*	20
UEEIC0045	Troubleshoot medical equipment control systems*	120
UEEIC0046	Troubleshoot process control systems*	60

Group C: General elective units

Weighting Points

ICTNWK426	Install and configure client-server applications and services	60
UEECO0001	Estimate electrotechnology projects	40
UEECS0014	Develop computer network services*	120
UEEHA0004	Enter a classified hazardous area to undertake work related to electrical equipment	40
UEEHA0020	Conduct detailed inspection of electrical installations for hazardous areas*	40
UEEHA0022	Determine the explosion-protection requirements to meet a specified classified hazardous area*	40
UEEHA0025	Install explosion-protected equipment and associated apparatus and wiring systems*	60
UEEHA0026	Maintain equipment associated with hazardous areas*	60
UEEHA0038	Conduct visual and close inspection of electrical installations for hazardous areas*	40
UEEIC0003	Assist in commissioning process and instrumentation control systems*	40
UEEIC0012	Develop structured programs to control external devices*	40
UEEIC0014	Develop, enter and verify programs in supervisory control and data acquisition systems*	60

UEEIC0015	Develop, enter and verify word and analogue control programs for programmable logic controllers*	60
UEEIC0026	Provide solutions to fluid circuit operations*	60
UEEIC0027	Provide solutions to pneumatic-hydraulic system operations*	80
UEEIC0042	Solve problems in single phase electronic power control circuits*	60
UEEIC0044	Troubleshoot measuring and analysis systems*	40

Group D: General elective units**Weighting Points**

ICTPRG534	Deploy applications to production environments	40
ICTPRG549	Apply intermediate object-oriented language skills	60
ICTTEN409	Commission an electronic system	50
ICTWEB447	Build basic website using development software and ICT tools	20
MEM234010A	Design microcontroller applications	40
UEECO0014	Prepare tender submissions for electrotechnology projects*	60
UEECS0004	Commission industrial computer systems*	20
UEECS0012	Design embedded controller control systems	80
UEECS0019	Develop, implement and test object-oriented code*	140
UEECS0025	Modify/redesign industrial computer systems*	20
UEECS0031	Set up, create and implement content for a web server*	120
UEEEL0006	Develop detailed and complex drawings for electrical systems using CAD systems*	60
UEEEL0011	Evaluate performance of low voltage electrical apparatus*	40
UEEIC0001	Analyse complex electronic circuits controlling fluids	80
UEEIC0005	Configure and maintain industrial control system networks*	60

UEEIC0010	Develop and test code for microcontroller devices	60
UEEIC0016	Diagnose and rectify faults in a.c. motor drive systems*	60
UEEIC0017	Diagnose and rectify faults in d.c. motor drive systems*	60
UEEIC0019	Diagnose and rectify faults in servo drive systems*	60

UEE51120 Diploma of Engineering Technology - Refrigeration and Air Conditioning

Modification History

Release 3. Updated superseded imported elective units.

Release 2. Updated superseded imported elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to develop systems and select equipment for heating, ventilation, air conditioning and/or refrigeration systems.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification

Packaging Rules

A total of **1600 weighting points** comprising:

920 core weighting points listed below; plus

680 general elective weighting points from the general elective units listed below.

Choose a total of **680 weighting points** elective units from the list below, of which between **0 and 270 weighting points** can be taken from Group A; and between **0 and 100 weighting points** must be taken from Group B; and between **60 and 170 weighting points** must be taken from Group C; and between **270 and 620 weighting points** must be taken from Group D.

Up to **270 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0022	Identify building techniques, methods and materials used in energy sector work activities*	40
UEECD0027	Participate in development and follow a personal competency development plan	20
UEECD0039	Provide solutions to basic engineering computational problems*	60
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications*	40
UEERA0001	Analyse the operation of HVAC air and hydronic systems*	80
UEERA0002	Analyse the psychrometric performance of HVAC/R systems*	50
UEERA0003	Analyse the thermodynamic performance of HVAC/R systems	50
UEERA0028	Determine noise and vibration encountered in HVAC/R applications*	80
UEERA0034	Establish heat loads for commercial refrigeration and/or air conditioning applications*	80
UEERA0038	Establish the thermodynamic parameters of refrigeration and air conditioning systems*	80

UEERA0042	Evaluate thermodynamic and fluid parameters of refrigeration systems*	100
UEERA0061	Produce HVAC/R system design drawings*	80
UEERE0013	Develop strategies to address environmental and sustainability issues in the energy sector	20

Group A: Imported and common elective units **Weighting Points**

BSBOPS203	Deliver a service to customers	20
CPCWHS1001	Prepare to work safely in the construction industry	10
CPPBDN6106	Produce building information modelling for building design projects	100
HLTAID009	Provide cardiopulmonary resuscitation	10
ICTICT214	Operate application software packages	20
MEM16006	Organise and communicate information*	20
MEM16008	Interact with computing technology*	20
MEM30031A	Operate computer-aided design (CAD) system to produce basic drawing elements	40
MEM30032A	Produce basic engineering drawings	80
MEM30033A	Use computer-aided design (CAD) to create and display 3-D models*	40
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20
UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20

UEE51220 Diploma of Air Conditioning and Refrigeration Engineering

Modification History

Release 3. Updated superseded elective units.

Release 2. This minor update is the second release of this qualification in the UEE Electrotechnology Training Package.

Two units added to general electives.

Imported elective units updated.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to develop systems; select equipment; and commission, maintain and diagnose faults/malfunctions of refrigeration systems and equipment that apply to commercial food storage and preservation and air conditioning and air distribution equipment and special applications. It includes regulatory requirements for purchasing and handling refrigerants.

Competency development activities in this qualification are subject to regulations directly related to licencing. A relevant contract of training through an apprenticeship or relevant employment may be required to enable the application of the required knowledge and skills to on the job work activities and environments. Refrigerant Handling Licence:

The achievement of the qualification meets the training components for the full national Refrigerant Handling Licence which is required to work on refrigeration and air conditioning equipment that carries the risk of a fluorocarbon refrigerant being emitted while decanting the refrigerant or manufacturing, installing, commissioning, servicing, maintaining or decommissioning refrigeration and air conditioning equipment.

Refrigeration and Air Conditioning Occupational Licence:

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to refrigeration/air conditioning work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Electrical Occupation Licence:

The achievement of this qualification with the core restricted electrical units meet the electrical regulatory requirements for related restricted electrical work in most state/territories. This is required to work on electrical installations which are designed to operate at voltages greater than 50 volt (V) alternating current (a.c.) or 120 V direct current (d.c.).

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **1670 weighting points** comprising:

1540 core weighting points listed below; plus

130 general elective weighting points from the general elective units listed below.

Choose a total of **130 weighting points** elective units from the list below, of which between 0 and 60 **weighting points** can be taken from Group A; and between 0 and 30 **weighting points** can be taken from Group B; and between 0 and 50 **weighting points** can be taken from Group C; and between 50 and 130 **weighting points** must be taken from Group D; or all electives units of **130 weighting points** can be taken from Group D.

Up to 60 weighting points of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisites Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0020	Fix and secure electrotechnology equipment*	20
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20

UEECD0027	Participate in development and follow a personal competency development plan	20
UEECD0042	Solve problems in ELV single path circuits*	40
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications*	40
UEECS0033	Use engineering applications software on personal computers	40
UEERA0001	Analyse the operation of HVAC air and hydronic systems*	80
UEERA0002	Analyse the psychrometric performance of HVAC/R systems*	50
UEERA0031	Diagnose and rectify faults in air conditioning and refrigeration control systems*	60
UEERA0034	Establish heat loads for commercial refrigeration and/or air conditioning applications*	80
UEERA0035	Establish the basic operating conditions of air conditioning systems*	20
UEERA0036	Establish the basic operating conditions of vapour compression systems*	60
UEERA0038	Establish the thermodynamic parameters of refrigeration and air conditioning systems*	80
UEERA0042	Evaluate thermodynamic and fluid parameters of refrigeration systems*	100
UEERA0044	Find and rectify faults in single phase motors and associated controls*	40
UEERA0045	Find and rectify faults in three phase motors and associated controls*	30
UEERA0050	Install refrigerant pipe work, flow controls and accessories*	60
UEERA0051	Install, commission, service and maintain air conditioning systems*	80
UEERA0052	Install, commission, service and maintain low temperature systems*	40

UEERA0053	Install, commission, service and maintain medium temperature systems*	60
UEERA0059	Prepare and connect refrigerant tubing and fittings*	40
UEERA0062	Recover and charge refrigerants*	40
UEERA0079	Safely handle refrigerants and lubricants*	40
UEERA0081	Select refrigerant piping, accessories and associated controls*	40
UEERA0092	Solve problems in low voltage refrigeration and air conditioning circuits*	40
UEERA0094	Verify functionality and compliance of refrigeration and air conditioning installations*	40
UEERE0015	Implement and monitor energy sector environmental and sustainable policies and procedures	20
UEERL0001	Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply*	20
UEERL0002	Attach cords, cables and plugs to electrical equipment for connection to 1000 V a.c. or 1500 V d.c.*	20
UEERL0004	Disconnect - reconnect electrical equipment connected to low voltage (LV) installation wiring*	60
UEERL0005	Locate and rectify faults in low voltage (LV) electrical equipment using set procedures*	20
Group A: Imported and common elective units.		Weighting Points
BSBLDR522	Manage people performance	70
BSBINS501	Implement information and knowledge management systems	50
BSBSTR501	Establish innovative work environments	50
BSBSTR502	Facilitate continuous improvement	60
BSBTWK502	Manage team effectiveness	60
CPCWHS1001	Prepare to work safely in the construction industry	10
HLTAID009	Provide cardiopulmonary resuscitation	10

MEM16006	Organise and communicate information*	20

Group B: Qualification elective units.**Weighting Points**

UEERA0005	Apply safety awareness and legal requirements for ammonia refrigerant	10
UEERA0006	Apply safety awareness and legal requirements for carbon dioxide refrigerant	10
UEERA0007	Apply safety awareness and legal requirements for flammable refrigerants	10
UEERA0046	Install and commission ammonia refrigeration systems, components and associated equipment*	20
UEERA0047	Install and commission carbon dioxide refrigeration systems, components and associated equipment*	20
UEERA0048	Install and commission flammable refrigerant air conditioning and refrigeration systems*	20
UEERA0054	Maintain microbial control of refrigeration and air conditioning systems	20
UEERA0065	Repair and service ammonia refrigeration systems*	20
UEERA0066	Repair and service carbon dioxide refrigeration systems*	20
UEERA0067	Repair and service secondary refrigeration systems*	20
UEERA0068	Repair and service self-contained carbon dioxide refrigeration and heat pump systems*	20
UEERA0069	Resolve problems in beverage dispensers*	40
UEERA0070	Resolve problems in central plant air conditioning systems*	40
UEERA0071	Resolve problems in dairy refrigeration systems*	20

UEERA0072	Resolve problems in hydronic systems*	40
UEERA0073	Resolve problems in ice making systems*	20
UEERA0075	Resolve problems in post-mix refrigeration systems*	20
UEERA0076	Resolve problems in refrigerated beverage vending cabinets*	20
UEERA0077	Resolve problems in transport refrigeration systems*	20
UEERA0078	Resolve problems in ultra-low temperature refrigeration systems*	20
UEERA0084	Service and repair self-contained flammable refrigerants air conditioning and refrigeration systems*	20
UEERA0097	Install, commission, service and maintain variable refrigerant flow air conditioning systems*	40
UEERA0098	Inspect, test and repair fire and smoke control features of mechanical services systems*	80

Group C: Qualification elective units.**Weighting Points**

UEECD0013	Develop and implement energy sector maintenance programs	60
UEECO0001	Estimate electrotechnology projects	40
UEERA0060	Produce HVAC/R control system diagrams*	40
UEERA0061	Produce HVAC/R system design drawings*	80
UEERA0080	Select basic commercial refrigeration system equipment, components and accessories*	40
UEERA0082	Select residential air conditioning system equipment, components and accessories*	40

Group D: Qualification elective units.**Weighting Points**

UEECD0039	Provide solutions to basic engineering computational problems*	60
UEECO0014	Prepare tender submissions for electrotechnology projects*	60
UEERA0014	Design ammonia refrigerated systems*	40

UEERA0015	Design carbon dioxide refrigerated systems*	40
UEERA0016	Design commercial refrigeration systems and select components*	80
UEERA0021	Design control systems for refrigeration or heating, ventilation and air conditioning systems*	80
UEERA0022	Design heating, ventilation and air conditioning (HVAC) systems and select components*	60
UEERA0023	Design hydrocarbon refrigerated systems*	40
UEERA0025	Design industrial refrigeration systems and select components*	80
UEERA0027	Design secondary refrigerant systems*	40
UEERA0028	Determine noise and vibration encountered in HVAC/R applications*	80
UEERA0039	Evaluate and report on building services energy management systems*	80
UEERA0040	Evaluate and report on the indoor air quality of buildings*	40

Qualification Mapping Information

This qualification replaces and is equivalent to UEE51211 Diploma of Air-conditioning and Refrigeration Engineering

UEE53020 Diploma of Electrical Systems Engineering

Modification History

Release 3. Updated superseded elective units.

Release 2. Updated superseded elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to develop, select, commission, maintain and diagnose faults/malfunctions on advanced electrical equipment and systems.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

The entry requirement for this qualification is:

- UEE33020 Certificate III in Electrical Fitting

or

- a current Electrical Fitter Occupational License or its equivalent issued in an applicable Australian state or territory.

Packaging Rules

A total of **800 weighting points** comprising:

160 core weighting points listed below; plus

640 general elective weighting points from the general elective units listed below.

Choose a total of **600 weighting points** elective units from the list below, of which between **0 and 270 weighting points** can be taken from Group A; between **0 and 140 weighting points** can be taken from Group B; between **0 and 240 weighting points** can be taken from Group C; and between **260 and 640 weighting points** can be taken from Group D (or all elective units between **0 and 640 weighting points** can be taken from Group D).

Up to **270 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference

Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisites Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0027	Participate in development and follow a personal competency development plan	20
UEECD0059	Write specifications for electrical engineering projects	40
UEERE0013	Develop strategies to address environmental and sustainability issues in the energy sector	20

Group A: Imported and common elective units		Weighting Points
BSBINS501	Implement information and knowledge management systems	50
BSBLDR522	Manage people performance	70
BSBOPS203	Deliver a service to customers	20
BSBSTR501	Establish innovative work environments	50
BSBSTR502	Facilitate continuous improvement	60
BSBTWK502	Manage team effectiveness	60
ICTICT214	Operate application software packages	20
UEECD0011	Comply with scheduled and preventative maintenance program processes	20
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20

UEECO0002	Maintain documentation	20
UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20

Group B: General elective units**Weighting Points**

UEEAS0007	Assemble, mount and connect control gear and switchgear*	40
UEEAS0008	Fabricate and assemble bus bars*	40
UEEAS0009	Mount and wire control panel equipment*	40
UEECD0050	Use and maintain the integrity of a portable gas detection device*	20
UEECS0033	Use engineering applications software on personal computers	40
UEEDV0001	Assemble and connect telecommunication frames and cabinets*	60
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services*	80
UEEDV0008	Install, modify and verify coaxial and structured communication copper cabling*	40
UEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEEEL0004	Carry out basic repairs to electrical components and equipment*	40
UEEEL0016	Provide advice on effective and energy efficient lighting products	20
UEEEL0017	Repair and maintain mechanical components of electrical machines*	40
UEEEL0022	Supply effective and efficient lighting products for domestic and small commercial	40

	applications*	
UEEEL0026	Align and install traction lift equipment*	20
UEEEL0033	Conduct electrical tests on LV electrical machines*	40
UEEEL0034	Conduct mechanical tests on electrical machines and components*	40
UEEEL0045	Diagnose and rectify faults in traction lift systems*	80
UEEEL0046	Find and repair faults in LV d.c. electrical apparatus and circuits*	60
UEEEL0052	Maintain and service traction lift systems and equipment*	40
UEEEL0053	Maintain operation of electrical marine equipment and systems*	60
UEEEL0054	Maintain operation of electrical mining equipment and systems*	60
UEEEL0055	Overhaul and repair major switchgear and control gear*	60
UEEEL0056	Place and connect electrical coils*	40
UEEEL0061	Provide advice on the application of energy efficient lighting for ambient and aesthetic effect*	20
UEEEL0066	Rewind LV direct current machines*	60
UEEEL0067	Rewind single phase machines*	40
UEEEL0068	Rewind three phase low voltage induction machines*	60
UEEEL0074	Wind electrical coils*	40
UEEHA0004	Enter a classified hazardous area to undertake work related to electrical equipment	40
UEEHA0022	Determine the explosion-protection requirements to meet a specified classified hazardous area*	40

UEEHA0026	Maintain equipment associated with hazardous areas*	60
UEEHA0031	Supervise repair and overhaul of explosion-protected equipment type flameproof (Ex d)*	60
UEEHA0032	Supervise repair and overhaul of explosion-protected equipment type increased safety (Ex e)*	60
UEEHA0033	Supervise repair and overhaul of explosion-protected equipment type intrinsically safe (Ex i)*	60
UEEHA0034	Supervise repair and overhaul of explosion-protected equipment type pressurised (Ex p)*	60
UEEHA0035	Supervise repair and overhaul of explosion-protected rotating machines*	60
UEEHA0039	Supervise repair and overhaul of explosion-protected equipment type Group III ('t')*	60
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20

UEEIC0022	Install instrumentation and control apparatus and associated equipment*	20
UEEIC0023	Install instrumentation and control cabling and tubing*	20
UEEIC0038	Solve problems in density/level measurement components and systems*	40
UEEIC0039	Solve problems in flow measurement components and systems*	40
UEEIC0041	Solve problems in pressure measurement components and systems*	40
UEEIC0043	Solve problems in temperature measurement	40

	components and systems*	
UEEIC0047	Use instrumentation drawings, specifications, standards and equipment manuals*	40
UEERA0031	Diagnose and rectify faults in air conditioning and refrigeration control systems*	60
UEERA0035	Establish the basic operating conditions of air conditioning systems*	20
UEERA0036	Establish the basic operating conditions of vapour compression systems*	60
UEERA0037	Establish the basic operating conditions of vapour compression systems - appliances*	50
UEERA0043	Find and rectify faults in appliance control systems and devices*	60
UEERA0044	Find and rectify faults in single phase motors and associated controls*	40
UEERA0045	Find and rectify faults in three phase motors and associated controls*	30
UEERA0049	Install and start up single head split air conditioning and water heating heat pump systems*	70
UEERA0050	Install refrigerant pipe work, flow controls and accessories*	60
UEERA0059	Prepare and connect refrigerant tubing and fittings*	40
UEERA0062	Recover and charge refrigerants*	40
UEERA0063	Recover, pressure test, evacuate, charge and leak test refrigerants - appliances*	50
UEERA0079	Safely handle refrigerants and lubricants*	40
UEERA0083	Service and repair microwave ovens*	40
UEERA0085	Service clothes washing machines and dryers*	40
UEERA0086	Service dishwasher machines*	40
UEERA0087	Service electrical heating appliances*	60

UEERA0088	Service gas heating appliances*	40
UEERA0089	Service refrigeration appliances*	60
UEERA0091	Service small electrical appliances and power tools*	60
UEERA0092	Solve problems in low voltage refrigeration and air conditioning circuits*	40
UEERS0021	Assemble and wire electrical rail signalling equipment*	30
UETDRIS017	Perform high voltage field switching operation to a given schedule*	40
UETDRIS018	Perform low voltage field switching operation to a given schedule*	50
UETDRIS031	Maintain insulating oil*	40
UETDRIS032	Solve problems in network equipment*	80
UETDRIS033	Solve problems in network protection*	40
UETDRSB001	Perform substation switching operations to a given schedule*	50
UETDRSB010	Maintain capacitor bank equipment*	40
Group C: General elective units		Weighting Points
UEEEL0007	Develop detailed electrical drawings*	60
UEEEL0032	Conduct electrical tests on HV electrical machines*	60
UEEEL0044	Diagnose and rectify faults in complex lift systems*	40
UEEEL0059	Plan low voltage switchboard and control panel layouts*	40
UEEEL0064	Rewind HV three phase induction machines rated for voltages above 3.3 kV*	60
UEEEL0065	Rewind HV three phase induction machines rated for voltages to 3.3 kV*	60

UEEHA0004	Enter a classified hazardous area to undertake work related to electrical equipment	40
UEEHA0020	Conduct detailed inspection of electrical installations for hazardous areas*	40
UEEHA0022	Determine the explosion-protection requirements to meet a specified classified hazardous area*	40
UEEHA0023	Develop and manage periodic electrical inspection and maintenance programs for hazardous areas*	20
UEEHA0026	Maintain equipment associated with hazardous areas*	60
UEEHA0029	Plan electrical installations for hazardous areas*	20
UEEHA0038	Conduct visual and close inspection of electrical installations for hazardous areas*	40
UEEIC0012	Develop structured programs to control external devices*	40
UEEIC0014	Develop, enter and verify programs in supervisory control and data acquisition systems*	60
UEEIC0015	Develop, enter and verify word and analogue control programs for programmable logic controllers*	60
UEEIC0018	Diagnose and rectify faults in digital controls systems*	60
UEEIC0020	Fault find and repair analogue circuits and components in electronic control systems*	60
UEEIC0026	Provide solutions to fluid circuit operations*	60
UEEIC0027	Provide solutions to pneumatic-hydraulic system operations*	80
UEEIC0028	Provide solutions to problems in industrial control systems*	60
UEEIC0034	Set up industrial field control devices*	60

UEEIC0040	Solve problems in polyphase electronic power control circuits*	60
UEEIC0042	Solve problems in single phase electronic power control circuits*	60

Group D: General elective units**Weighting Points**

UEECD0013	Develop and implement energy sector maintenance programs	60
UEECO0014	Prepare tender submissions for electrotechnology projects*	60
UEEEL0006	Develop detailed and complex drawings for electrical systems using CAD systems*	60
UEEEL0011	Evaluate performance of low voltage electrical apparatus*	40
UEEEL0035	Design effective and efficient lighting for public, open and sports areas*	20
UEEEL0037	Design electrical installations with a low voltage demand greater than 400 A per phase*	40
UEEEL0062	Provide engineering solutions to problems in complex polyphase power circuits*	60
UEEIC0005	Configure and maintain industrial control system networks*	60
UEEIC0010	Develop and test code for microcontroller devices	60
UEEIC0016	Diagnose and rectify faults in a.c. motor drive systems*	60
UEEIC0017	Diagnose and rectify faults in d.c. motor drive systems*	60
UEEIC0019	Diagnose and rectify faults in servo drive systems*	60
UETDRIS025	Diagnose and resolve faults in distribution systems*	60
UETDRIS026	Diagnose and resolve faults in electrical	60

	apparatus*	
UETDRIS027	Diagnose and resolve faults in transmission systems*	60

Qualification Mapping Information

This qualification replaces and is not equivalent to UEE53011 Diploma of Electrical Systems Engineering

Links

Companion Volume Implementation Guides are found in VETNet -

UEE60220 Advanced Diploma of Electronics and Communications Engineering

Modification History

Release 2. This is the second release of this qualification in the UEE Electrotechnology Training Package. Modifications include:

- Updated superseded imported elective units
- The following units added to electives (see UEE Release 5.0 Companion Volume Implementation Guide for mapping of deleted UEE units to imported ICT and MEM units):
 - ICTICT518
 - ICTNWK426
 - ICTPRG440
 - ICTPRG444
 - ICTPRG534
 - ICTPRG549
 - ICTWEB447
 - MEM234010A.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to design and validate/evaluate electronics and communication equipment and systems, manage risk, estimate and manage projects and provide technical advice/sales.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **2160 weighting points** comprising:

280 core weighting points listed below; plus

1880 general elective weighting points from the general elective units listed below.

Choose a total of **1880 weighting points** elective units from the list below, of which between **0**

and 360 weighting points can be taken from Group A; and between **0 and 900 weighting points** must be taken from Group B; and between **0 and 280 weighting points** must be taken from Group C; and between **0 and 260 weighting points** must be taken from Group D; and between **520 and 1320 weighting points** must be taken from Group E.

Up to **360 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units	Weighting Points
UEECD0007 Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0012 Contribute to risk management in electrotechnology systems	20
UEECD0014 Develop design briefs for electrotechnology projects	40
UEECD0016 Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0024 Implement and monitor energy sector WHS policies and procedures	20
UEECD0027 Participate in development and follow a personal competency development plan	20
UEEEEC0007 Commission electronics and communications systems	20
UEEEEC0011 Design and develop electronics/computer systems projects	40
UEEEEC0043 Manage computer systems/electronics projects	40
UEEEEC0044 Modify - redesign electronics and communications systems*	20
UEERE0013 Develop strategies to address environmental and	20

sustainability issues in the energy sector

Group A: Imported and common elective units		Weighting Points
BSBINS501	Implement information and knowledge management systems	50
BSBSTR501	Establish innovative work environments	50
BSBLDR522	Manage people performance	70
BSBSTR502	Facilitate continuous improvement	60
BSBTWK502	Manage team effectiveness	60
ICTTEN312	Install telecommunications network equipment	40
MSS402003	Apply competitive systems and practices	20
MSS402022	Apply quick changeover procedures	20
MSS402023	Apply Just in Time procedures	20
MSS402042	Apply 5S procedures	20
MSS402084	Undertake root cause analysis	20
MSS402085	Contribute to the application of a proactive maintenance strategy	20
Group B: Qualification elective units		Weighting Points
UEEAS0001	Assemble electronic components*	40
UEEAS0002	Conduct quality and functional tests on assembled electronic apparatus*	20
UEEAS0003	Modify electronic sub-assemblies*	40
UEEAS0004	Select electronic components for assembly*	20
UEEAS0005	Set up and check electronic component assembly machines*	40
UEEAS0006	Use lead-free soldering techniques*	40
UEECD0008	Carry out preparatory energy sector work activities*	60
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40

UEECD0020	Fix and secure electrotechnology equipment*	20
UEECD0021	Identify and select components, accessories and materials for energy sector work activities*	20
UEECD0025	Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits*	40
UEECD0028	Plan an integrated cabling installation system*	40
UEECD0040	Solve basic problems electronic and digital equipment and circuits*	80
UEECD0043	Solve problems in direct current circuits*	80
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications*	40
UEECS0003	Assemble, set up and test computing devices*	80
UEECS0018	Develop web pages for engineering applications	40
UEECS0022	Install and configure a client computer operating system and software	40
UEECS0028	Select, install, configure and test multimedia components	40
UEECS0029	Set up and configure basic local area network (LAN)*	80
UEECS0030	Set up, configure and test biometric devices	40
UEECS0032	Support computer hardware and software for engineering applications	120
UEECS0033	Use engineering applications software on personal computers	40
UEEDV0004	Install and connect data and voice communication equipment*	40
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services*	80
UEEDV0006	Install and modify optical fibre performance data communication cabling*	40
UEEDV0008	Install, modify and verify coaxial and structured communication copper cabling*	40
UEEDV0009	Select and arrange data and voice equipment for local	40

	area networks*	
UEEDV0010	Select and arrange equipment for wireless communication networks*	40
UEEDV0011	Set up and configure basic data communication systems*	40
UEEDV0012	Set up and configure the wireless capabilities of communications and data storage devices	40
UEEDV0013	Solve problems in voice and data communications circuits*	40
UEEDV0014	Test, report and rectify faults in data and voice installations*	40
UEEEC0002	Assemble and install reception antennae and signal distribution equipment*	60
UEEEC0003	Assemble and set up basic security systems*	80
UEEEC0004	Assemble and set up fixed video/audio components and systems in buildings and premises*	120
UEEEC0006	Carry out repairs of predictable faults in video and audio replay/recording apparatus*	120
UEEEC0008	Commission large fire protection systems*	40
UEEEC0019	Develop software solutions for microcontroller-based systems*	60
UEEEC0026	Enter and verify programs for fire protection systems*	40
UEEEC0027	Enter instructions and test wired and wireless security systems*	40
UEEEC0028	Fault find and repair complex power supplies*	40
UEEEC0029	Fault find and repair electronic apparatus*	40
UEEEC0032	Fault find and repair high-volume office equipment*	120
UEEEC0038	Find and repair microwave amplifier section faults in electronic apparatus*	40
UEEEC0039	Install and test microwave antennae and waveguides*	60
UEEEC0040	Install commercial video/audio system components*	120

UEEEEC0041	Install fire detection and warning system apparatus*	40
UEEEEC0042	Install large security systems*	100
UEEEEC0046	Operate and maintain amateur radio communication stations*	40
UEEEEC0048	Program and commission commercial access control security systems*	60
UEEEEC0049	Program and commission commercial security closed-circuit television systems*	60
UEEEEC0050	Program and commission commercial security systems*	60
UEEEEC0055	Repair basic computer equipment faults by replacement of modules/sub-assemblies*	40
UEEEEC0056	Repair predictable faults in audio components*	40
UEEEEC0057	Repair predictable faults in general electronic apparatus*	40
UEEEEC0058	Repair predictable faults in television receivers*	120
UEEEEC0059	Repair routine business equipment faults*	120
UEEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEEC0061	Set up and adjust commercial radio frequency (RF) transmission and reception systems*	60
UEEEEC0062	Set up and test residential video/audio equipment*	40
UEEEEC0063	Solve fundamental electronic communications system problems*	40
UEEEEC0064	Solve oscillator problems*	40
UEEEEC0065	Solve problems in basic electronic circuits*	100
UEEEEC0066	Troubleshoot amplifiers in an electronic apparatus*	80
UEEEEC0067	Troubleshoot basic amplifier circuits*	40
UEEEEC0068	Troubleshoot communication systems*	80
UEEEEC0069	Troubleshoot digital sub-systems*	80
UEEEEC0070	Troubleshoot faults in television receivers*	120

UEEEEC0071	Troubleshoot fire protection systems*	40
UEEEEC0072	Troubleshoot microcontroller-based hardware systems	40
UEEEEC0073	Troubleshoot professional audio reproduction components*	120
UEEEEC0074	Troubleshoot resonance circuits in an electronic apparatus*	80
UEEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEEEEC0076	Verify compliance and functionality of fire protection system installations*	60
UEEEEC0077	Verify functionality and compliance of custom electronic installations*	40
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20
UEEIC0004	Calibrate, adjust and test measuring instruments*	40
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEEIC0047	Use instrumentation drawings, specifications, standards and equipment manuals*	40
UEERL0001	Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply*	20
UEERL0002	Attach cords, cables and plugs to electrical equipment for connection to 1000 V a.c. or 1500 V d.c.*	20

Group C: Qualification elective units**Weighting Points**

ICTPRG444	Analyse software requirements	60
ICTWEB447	Build basic website using development software and ICT tools	20
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0013	Develop and implement energy sector maintenance programs	60
UEECD0018	Establish, maintain and evaluate energy sector WHS/OHS systems	60

UEECD0047	Supervise and coordinate energy sector work activities	40
UEECO0001	Estimate electrotechnology projects	40
UEECO0013	Prepare specifications for the supply of materials and equipment for electrotechnology projects	40
UEECS0002	Analyse and implement biometric measuring techniques and applications	120
UEECS0020	Evaluate and modify object-oriented code programs	40
UEECS0031	Set up, create and implement content for a web server*	120
UEEEEC0009	Commission satellite and microwave communication systems*	40
UEEEEC0012	Design custom electronic equipment installations*	120
UEEEEC0022	Diagnose and rectify faults in camera circuits and equipment*	60
UEEEEC0023	Diagnose and rectify faults in digital transmission circuits and systems*	80
UEEEEC0024	Diagnose and rectify faults in electronic display circuits*	60
UEEEEC0025	Diagnose and rectify faults in recording and replay equipment	60
UEEEEC0030	Fault find and repair electronic medical equipment*	120
UEEEEC0031	Fault find and repair global positioning systems*	60
UEEEEC0033	Fault find and repair navigation systems*	60
UEEEEC0034	Fault find and repair radar apparatus and systems*	120
UEEEEC0035	Fault find and repair satellite-based surveillance and observation systems*	60
UEEEEC0036	Fault find and repair sonar apparatus and systems*	120
UEEEEC0037	Fault find and repair telecommunication apparatus and systems*	60
UEEEEC0051	Program and commission commercial video/audio systems*	40
UEEEEC0052	Program and test large security systems*	120

UEEIC0005	Configure and maintain industrial control system networks*	60
UEEIC0012	Develop structured programs to control external devices*	40
UEEIC0042	Solve problems in single phase electronic power control circuits*	60
UEERE0015	Implement and monitor energy sector environmental and sustainable policies and procedures	20

Group D: Qualification elective units

Weighting Points

ICTICT518	Research and review hardware technology options for organisations	20
ICTNWK426	Install and configure client-server applications and services	60
ICTPRG440	Apply introductory programming skills in different languages	60
ICTPRG534	Deploy applications to production environments	40
ICTPRG549	Apply intermediate object-oriented language skills	60
UEECD0036	Provide engineering solutions for problems in complex multiple path circuits	60
UEECD0037	Provide engineering solutions for uses of materials and thermodynamic effects	80
UEECD0039	Provide solutions to basic engineering computational problems*	60
UEECD0054	Write specifications for electronics and communications engineering projects	40
UEECO0014	Prepare tender submissions for electrotechnology projects*	60
UEECS0013	Develop and validate biometric equipment/systems installation	120
UEECS0016	Develop energy sector directory services*	80
UEECS0017	Develop industrial control programs for microcomputer equipped devices	60
UEECS0019	Develop, implement and test object-oriented code*	140

UEECS0027	Provide programming solution for computer systems engineering problems	60
UEEEEC0001	Analyse the performance of wireless-based electronic communication systems*	40
UEEEEC0010	Design and develop advanced digital systems	40
UEEEEC0013	Design electronic printed circuit boards*	40
UEEEEC0015	Develop basic plans for integrating security systems*	40
UEEEEC0016	Develop engineering solutions to RF amplifier problems*	40
UEEEEC0017	Develop engineering solutions to analogue electronic problems*	80
UEEEEC0018	Develop engineering solutions to audio electronic problems*	60
UEEEEC0020	Develop solutions for air surveillance apparatus and systems*	120
UEEEEC0021	Diagnose and rectify faults in air navigation circuits and systems*	120
UEEEEC0053	Provide engineering solutions to air traffic control system problems*	40
UEEIC0006	Design and configure human-machine interface (HMI) networks	60
UEEIC0010	Develop and test code for microcontroller devices	60

Group E: Qualification elective units

Weighting Points

MEM234010A	Design microcontroller applications	40
UEECD0001	Analyse materials for suitability in electrical equipment*	80
UEECD0002	Analyse static and dynamic parameters of electrical equipment	80
UEECD0004	Apply material science to solving electrotechnology engineering problems	60
UEECD0005	Apply physics to solving electrotechnology engineering problems	60

UEECD0015	Develop engineering solutions to photonic system problems*	80
UEECD0026	Manage risk in electrotechnology activities	60
UEECD0041	Solve electrotechnical engineering problems	60
UEECD0049	Use advanced computational processes to provide solutions to energy sector engineering problems*	80
UEECO0003	Manage contract variations	40
UEECS0012	Design embedded controller control systems	80
UEECS0015	Develop energy sector computer network applications infrastructure	80
UEEEEC0005	Assess electronic apparatus compliance	60
UEEEEC0014	Design signal-conditioning sub-systems	80
UEEEEC0045	Modify digital signal processing (DSP) based sub-systems	80
UEEEEC0047	Plan large electronic projects	60
UEEEEC0054	Provide gate array solutions for complex electronics systems*	60
UEEIC0007	Design and use advanced programming tools, PC networks and HMI Interfacing	120
UEEIC0008	Design electronic control systems*	60
UEEIC0032	Set up electronically controlled robotically operated complex systems*	80

Qualification Mapping Information

This qualification replaces and is equivalent to UEE60211 Advanced Diploma of Electronics and Communications Engineering

Links

Companion Volume Implementation Guides are found in VETNet -

UEE60620 Advanced Diploma of Industrial Electronics and Control Engineering

Modification History

Release 2. Updated superseded elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to design and validate/evaluate control equipment and systems, manage risk, estimate and manage projects and provide technical advice/sales.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

The entry requirement for this qualification is:

- UEE30820 Certificate III in Electrotechnology Electrician

OR

- a current 'Unrestricted Electricians Licence' or its equivalent issued in an Australian state or territory.

Packaging Rules

A total of **1320 weighting points** comprising:

960 core weighting points listed below; **plus**

360 general elective weighting points from the general elective units listed below.

Choose a total of **360 weighting points** elective units from the list below, of which between 0 and **180 weighting points** can be taken from Group A; between 0 and **60 weighting points** can be taken from Group B; between 0 and **100 weighting points** can be taken from Group C; between 0 and **60 weighting points** can be taken from Group D; and between **160 and 360 weighting points** can be taken from Group E (or all minimum **360 weighting points** can be taken from Group E).

Up to 180 weighting points of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting

points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0003	Apply industry and community standards to engineering activities	20
UEECD0004	Apply material science to solving electrotechnology engineering problems	60
UEECD0005	Apply physics to solving electrotechnology engineering problems	60
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0014	Develop design briefs for electrotechnology projects	40
UEECD0017	Establish and follow a competency development plan in an electrotechnology engineering discipline	120
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0026	Manage risk in electrotechnology activities	60
UEECD0036	Provide engineering solutions for problems in complex multiple path circuits	60
UEECD0039	Provide solutions to basic engineering computational problems*	60
UEECD0055	Write specifications for industrial electronics and control projects	40
UEECD0056	Apply methods to maintain currency of industry developments	20
UEECS0033	Use engineering applications software on personal computers	40
UEEEL0062	Provide engineering solutions to problems in complex polyphase power circuits*	60

UEEIC0018	Diagnose and rectify faults in digital controls systems*	60
UEEIC0020	Fault find and repair analogue circuits and components in electronic control systems*	60
UEEIC0049	Manage instrumentation and control projects*	40
UEEIC0050	Plan instrumentation and control projects*	60
UEERE0013	Develop strategies to address environmental and sustainability issues in the energy sector	20

Group A: Imported and common elective units **Weighting Points**

BSBINS501	Implement information and knowledge management systems	50
BSBLDR522	Manage people performance	70
BSBSTR501	Establish innovative work environments	50
BSBSTR502	Facilitate continuous improvement	60
BSBTWK502	Manage team effectiveness	60

Group B: General elective units **Weighting Points**

UEECD0030	Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software*	60
UEECD0031	Prepare engineering drawings using manual drafting and CAD for electrotechnology applications*	60
UEEEEC0003	Assemble and set up basic security systems*	80
UEEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEEEL0004	Carry out basic repairs to electrical components and equipment*	40
UEEEL0045	Diagnose and rectify faults in traction lift systems*	80
UEEEL0046	Find and repair faults in LV d.c. electrical apparatus and circuits*	60
UEEEL0053	Maintain operation of electrical marine equipment and systems*	60

UEEEL0054	Maintain operation of electrical mining equipment and systems*	60
UEEHA0004	Enter a classified hazardous area to undertake work related to electrical equipment	40
UEEHA0020	Conduct detailed inspection of electrical installations for hazardous areas*	40
UEEHA0022	Determine the explosion-protection requirements to meet a specified classified hazardous area*	40
UEEHA0026	Maintain equipment associated with hazardous areas*	60
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEEIC0025	Provide solutions to extra-low voltage (ELV) electro-pneumatic control systems and drives*	60
UEEIC0038	Solve problems in density/level measurement components and systems*	40
UEEIC0039	Solve problems in flow measurement components and systems*	40
UEEIC0041	Solve problems in pressure measurement components and systems*	40
UEEIC0043	Solve problems in temperature measurement components and systems*	40
UEEIC0047	Use instrumentation drawings, specifications, standards and equipment manuals*	40

Group C: General elective units

Weighting Points

UEECD0032	Produce detailed electrotechnology/utilities drawings using CAD equipment and software*	60
UEECO0001	Estimate electrotechnology projects	40
UEEEL0007	Develop detailed electrical drawings*	60
UEEEL0027	Carry out low voltage electrical field testing and report findings*	60

UEEEL0044	Diagnose and rectify faults in complex lift systems*	40
UEEEL0071	Select low voltage power factor correction equipment*	40
UEEEL0072	Set up and place LV electrical apparatus and associated circuits into service*	40
UEEHA0020	Conduct detailed inspection of electrical installations for hazardous areas*	40
UEEHA0022	Determine the explosion-protection requirements to meet a specified classified hazardous area*	40
UEEHA0023	Develop and manage periodic electrical inspection and maintenance programs for hazardous areas*	20
UEEHA0026	Maintain equipment associated with hazardous areas*	60
UEEHA0038	Conduct visual and close inspection of electrical installations for hazardous areas*	40
UEEIC0012	Develop structured programs to control external devices*	40
UEEIC0014	Develop, enter and verify programs in supervisory control and data acquisition systems*	60
UEEIC0015	Develop, enter and verify word and analogue control programs for programmable logic controllers*	60
UEEIC0026	Provide solutions to fluid circuit operations*	60
UEEIC0027	Provide solutions to pneumatic-hydraulic system operations*	80
UEEIC0028	Provide solutions to problems in industrial control systems*	60
UEEIC0034	Set up industrial field control devices*	60
UEEIC0040	Solve problems in polyphase electronic power control circuits*	60
UEEIC0042	Solve problems in single phase electronic power control circuits*	60
Group D: General elective units		Weighting Points
UEECD0013	Develop and implement energy sector maintenance programs	60

UEECO0014	Prepare tender submissions for electrotechnology projects*	60
UEEEL0006	Develop detailed and complex drawings for electrical systems using CAD systems*	60
UEEEL0011	Evaluate performance of low voltage electrical apparatus*	40
UEEHA0029	Plan electrical installations for hazardous areas*	20
UEEIC0001	Analyse complex electronic circuits controlling fluids	80
UEEIC0005	Configure and maintain industrial control system networks*	60
UEEIC0010	Develop and test code for microcontroller devices	60
UEEIC0016	Diagnose and rectify faults in a.c. motor drive systems*	60
UEEIC0017	Diagnose and rectify faults in d.c. motor drive systems*	60
UEEIC0019	Diagnose and rectify faults in servo drive systems*	60
Group E: General elective units		Weighting Points
UEECD0001	Analyse materials for suitability in electrical equipment*	80
UEECD0002	Analyse static and dynamic parameters of electrical equipment	80
UEECD0012	Contribute to risk management in electrotechnology systems	20
UEECD0015	Develop engineering solutions to photonic system problems*	80
UEECD0037	Provide engineering solutions for uses of materials and thermodynamic effects	80
UEECD0049	Use advanced computational processes to provide solutions to energy sector engineering problems*	80
UEECO0003	Manage contract variations	40
UEEEC0005	Assess electronic apparatus compliance	60
UEEEC0011	Design and develop electronics/computer systems projects	40

UEEEEC0014	Design signal-conditioning sub-systems	80
UEEEEC0045	Modify digital signal processing (DSP) based sub-systems	80
UEEEL0041	Develop engineering solution for synchronous machine and control problems*	60
UEEEL0042	Develop engineering solutions for d.c. machine and control problems*	60
UEEEL0043	Develop engineering solutions for induction machine and control problems*	60
UEEHA0008	Design gas detection systems	20
UEEIC0006	Design and configure human-machine interface (HMI) networks	60
UEEIC0007	Design and use advanced programming tools, PC networks and HMI Interfacing	120
UEEIC0008	Design electronic control systems*	60
UEEIC0032	Set up electronically controlled robotically operated complex systems*	80

Qualification Mapping Information

This qualification replaces and is not equivalent to UEE60611 Advanced Diploma of Industrial Electronics and Control Engineering

Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

UEE60922 Advanced Diploma of Renewable Energy Engineering

Modification History

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

This qualification replaces and is not equivalent to UEE60920 Advanced Diploma of Renewable Energy Engineering. Modifications include:

- Qualification description updated
- Significant changes to core and elective unit structure and packaging rules

Qualification Description

This qualification provides competencies to design and validate/evaluate renewable energy (RE) equipment and systems, manage risk, estimate and manage projects and provide technical advice.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

The entry requirement for this qualification is:

- UEE30820 Certificate III in Electrotechnology Electrician

or

- a current 'Unrestricted Electricians Licence' or its equivalent issued in an Australian state or territory.

Packaging Rules

A total of **1320 weighting points** comprising:

830 core weighting points; plus

490 elective weighting points

Choose a minimum of **470 elective weighting points units** from the list below, of which:

- **20 weighting points** must be taken from Group A
- a minimum of **120 weighting points** must be taken from Group B
- between **0 and 350 weighting points** can be taken from Group C
- between **0 and 250 weighting points** can be taken from Group D

Up to **150 weighting points** of the general elective units Group C, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided that selected units contribute to the vocational outcome of the

qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0003	Apply industry and community standards to engineering activities	20
UEECD0004	Apply material science to solving electrotechnology engineering problems	60
UEECD0005	Apply physics to solving electrotechnology engineering problems	60
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0014	Develop design briefs for electrotechnology projects	40
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0026	Manage risk in electrotechnology activities	60
UEECD0036	Provide engineering solutions for problems in complex multiple path circuits	60
UEECD0039	Provide solutions to basic engineering computational problems*	60
UEECD0062	Write specifications for renewable energy engineering projects	40
UEEEL0062	Provide engineering solutions to problems in complex polyphase power circuits*	60
UEERE0049	Apply safe work practices in the rooftop solar industry	20
UEERE0054	Conduct site survey grid-connected photovoltaic and battery storage systems	30
UEERE0055	Conduct site survey for off-grid photovoltaic/generating	40

	set systems	
UEERE0056	Coordinate maintenance of renewable energy (RE) apparatus and systems*	20
UEERE0078	Install battery storage to power conversion equipment *	30
UEERE0081	Install photovoltaic systems to power conversion equipment *	30
UEERE0082	Maintain renewable energy (RE) apparatus *	20
UEERE0084	Manage renewable energy (RE) projects	40
UEERE0085	Plan renewable energy (RE) projects	60
Group A Elective units		Weighting Points
UEEEL0047	Identify, shut down and restart systems with alternate supplies*	20
UEERE0050	Identify and isolate multiple supply systems *	20
Group B elective units		Weighting Points
CPPHES4005	Assess household energy use and efficiency improvements	40
UEERE0052	Assess energy loads and uses for energy efficiency in commercial facilities*	40
UEERE0053	Assess energy loads and uses for energy efficiency in industrial properties and enterprises*	40
UEERE0057	Coordinate the design of micro-grid renewable energy systems	50
UEERE0058	Coordinate the installation, fault finding and repair of micro grid systems	40
UEERE0059	Design energy management controls for electrical installations in buildings*	80
UEERE0061	Design grid-connected photovoltaic power supply systems *	40
UEERE0062	Design micro-hydro systems *	40
UEERE0063	Design off-grid photovoltaic/generating Systems *	40

UEERE0064	Design renewable energy heating systems *	40
UEERE0065	Design wind energy systems *	40
UEERE0066	Develop effective engineering strategies for energy reduction in buildings*	60
UEERE0067	Develop engineering solutions to renewable energy (RE) problems*	60
UEERE0068	Develop strategies to address sustainability issues for electrical installations	20
UEERE0069	Diagnose and rectify faults in renewable energy (RE) control systems*	60

Group C elective units**Weighting Points**

UEECD0001	Analyse materials for suitability in electrical equipment*	80
UEECD0002	Analyse static and dynamic parameters of electrical equipment	80
UEECD0037	Provide engineering solutions for uses of materials and thermodynamic effects	80
UEECD0049	Use advanced computational processes to provide solutions to energy sector engineering problems*	80
UEEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEEC0075	Troubleshoot single phase input d.c. power supplies*	40
UEEEL0027	Carry out low voltage electrical field testing and report findings*	60
UEEEL0035	Design effective and efficient lighting for public, open and sports areas*	20
UEEEL0037	Design electrical installations with a low voltage demand greater than 400 A per phase*	40
UEEEL0038	Design switchboards rated for high fault levels (greater than 400 A)*	60
UEEEL0040	Develop compliance policies and plans to conduct an electrical contracting business*	80
UEEEL0050	Install and replace low voltage current transformer	20

	metering*	
UEEEL0057	Plan electrical installations with a low voltage demand up to 400 A per phase*	40
UEEEL0059	Plan low voltage switchboard and control panel layouts*	40
UEEEL0071	Select low voltage power factor correction equipment*	40
UEEEL0072	Set up and place LV electrical apparatus and associated circuits into service*	40
UEEEL0078	Install and commission whole current electricity meters	20
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20
UEEIC0010	Develop and test code for microcontroller devices	60
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEEIC0014	Develop, enter and verify programs in supervisory control and data acquisition systems*	60
UEEIC0015	Develop, enter and verify word and analogue control programs for programmable logic controllers*	60
Group D Elective units		Weighting Points
BSBINS501	Implement information and knowledge management systems	50
BSBLDR522	Manage people performance	70
BSBSTR501	Establish innovative work environments	50
BSBSTR502	Facilitate continuous improvement	60
BSBTWK502	Manage team effectiveness	60
ICTICT214	Operate application software packages	20
UEECD0012	Contribute to risk management in electrotechnology systems	20
UEECD0029	Plan electrotechnology projects	60
UEECD0030	Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software*	60

UEECD0031	Prepare engineering drawings using manual drafting and CAD for electrotechnology applications*	60
UEECD0032	Produce detailed electrotechnology/utilities drawings using CAD equipment and software*	60
UEECD0056	Apply methods to maintain currency of industry developments	20
UEECO0001	Estimate electrotechnology projects	40
UEECO0003	Manage contract variations	40
UEECO0014	Prepare tender submissions for electrotechnology projects*	60
UEECS0033	Use engineering applications software on personal computers	40
UEEEL0006	Develop detailed and complex drawings for electrical systems using CAD systems*	60
UEEEL0007	Develop detailed electrical drawings*	60

Qualification Mapping Information

This qualification replaces and is not equivalent to UEE60920 Advanced Diploma of Renewable Energy Engineering

Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

UEE61222 Advanced Diploma of Engineering - Explosion protection

Modification History

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package.

This qualification replaces and is not equivalent to UEE61220 Advanced Diploma of Engineering - Explosion protection.

Modifications in this release include:

- Total weighting points increased from 1220 to 1320
- Core weighting points increased from 840 to 1080
- Elective weighting points reduced from 480 to 240
- UEEHA0022, UEEHA0004, UEEHA0017, UEEHA0018 and UEEHA0027 added to core.
- UEEHA0022 removed from Group B.
- UEEHA0020 removed from Group C.
- UEEHA0028, UEEHA0016 and UEEHA0019 added to Group D.
- UEEHA0021 added to Group E.
- Codes of superseded units updated.

Qualification Description

This qualification covers competencies to assess and manage risk associated with hazardous areas, design and validate/evaluate explosion-protection aspects of electrical and instrument systems, audit explosion-protected installations and provide explosion-protection technical advice/sales.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

The entry requirement for this qualification is:

- Certificate III in Electrotechnology Electrician

OR

- a current 'Unrestricted Electricians Licence' or its equivalent issued in an Australian state or territory.

Packaging Rules

A total of **1320 weighting points** comprising:

1080 core weighting points listed below; **plus**

240 general elective weighting points from the general elective units listed below.

Choose a total of 240 **weighting points** elective units from the list below, of which between 0 and 100 **weighting points** can be taken from Group A; between 0 and 60 **weighting points** can be taken from Group B; between 0 and 80 **weighting points** can be taken from Group C; between 0 and 60 **weighting points** can be taken from Group D; and between 140 and 240 **weighting points** can be taken from Group E (or all elective **weighting points** can be taken from Group E).

Up to 100 weighting points of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0003	Apply industry and community standards to engineering activities	20
UEECD0004	Apply material science to solving electrotechnology engineering problems	60
UEECD0005	Apply physics to solving electrotechnology engineering problems	60
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0014	Develop design briefs for electrotechnology projects	40
UEECD0017	Establish and follow a competency development plan in an electrotechnology engineering discipline	120
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20

UEECD0026	Manage risk in electrotechnology activities	60
UEECD0036	Provide engineering solutions for problems in complex multiple path circuits	60
UEECD0039	Provide solutions to basic engineering computational problems*	60
UEECD0056	Apply methods to maintain currency of industry developments	20
UEECD0059	Write specifications for electrical engineering projects	40
UEECS0033	Use engineering applications software on personal computers	40
UEEEL0015	Manage large electrical projects*	40
UEEEL0058	Plan large electrical projects*	60
UEEEL0062	Provide engineering solutions to problems in complex polyphase power circuits*	60
UEEHA0004	Enter a classified hazardous area to undertake work related to electrical equipment	40
UEEHA0017	Classify areas where a combustible dust hazard may arise	60
UEEHA0018	Classify areas where flammable gas or vapour hazards may arise	60
UEEHA0022	Determine the explosion-protection requirements to meet a specified classified hazardous area*	40
UEEHA0027	Manage continuous supervision inspection of electrical installations for hazardous areas*	40
UEERE0013	Develop strategies to address environmental and sustainability issues in the energy sector	20
Group A: Imported and common elective units		Weighting Points
BSBINS501	Implement information and knowledge management systems	50
BSBLDR522	Manage people performance	70

BSBSTR501	Establish innovative work environments	50
BSBSTR502	Facilitate continuous improvement	60
BSBTWK502	Manage team effectiveness	60
PMASUP410	Develop plant documentation	30
Group B: General elective units		Weighting Points
UEEHA0020	Conduct detailed inspection of electrical installations for hazardous areas*	40
UEEHA0025	Install explosion-protected equipment and associated apparatus and wiring systems*	60
UEEHA0026	Maintain equipment associated with hazardous areas*	60
Group C: General elective units		Weighting Points
UEECO0001	Estimate electrotechnology projects	40
UEEHA0023	Develop and manage periodic electrical inspection and maintenance programs for hazardous areas*	20
UEEHA0038	Conduct visual and close inspection of electrical installations for hazardous areas*	40
Group D: General elective units		Weighting Points
UEECD0013	Develop and implement energy sector maintenance programs	60
UEECO0014	Prepare tender submissions for electrotechnology projects*	60
UEEEL0006	Develop detailed and complex drawings for electrical systems using CAD systems*	60
UEEEL0011	Evaluate performance of low voltage electrical apparatus*	40
UEEHA0016	Assess the fitness-for-purpose of explosion-protected equipment *	60

UEEHA0019	Conduct a conformity assessment review of explosion-protected equipment *	40
UEEHA0028	Perform compliance audits of hazardous areas and related electrical installation *	60
UEEHA0029	Plan electrical installations for hazardous areas*	20

Group E: General elective units

Weighting Points

UEECD0001	Analyse materials for suitability in electrical equipment*	80
UEECD0002	Analyse static and dynamic parameters of electrical equipment	80
UEECD0012	Contribute to risk management in electrotechnology systems	20
UEECD0037	Provide engineering solutions for uses of materials and thermodynamic effects	80
UEECD0049	Use advanced computational processes to provide solutions to energy sector engineering problems*	80
UEECO0003	Manage contract variations	40
UEEEL0041	Develop engineering solution for synchronous machine and control problems*	60
UEEEL0042	Develop engineering solutions for d.c. machine and control problems*	60
UEEEL0043	Develop engineering solutions for induction machine and control problems*	60
UEEHA0008	Design gas detection systems	20
UEEHA0021	Design explosion-protected of electrical systems and installations	60
UEEHA0031	Supervise repair and overhaul of explosion-protected equipment type flameproof (Ex d)*	60
UEEHA0032	Supervise repair and overhaul of explosion-protected equipment type increased	60

	safety (Ex e)*	
UEEHA0033	Supervise repair and overhaul of explosion-protected equipment type intrinsically safe (Ex i)*	60
UEEHA0034	Supervise repair and overhaul of explosion-protected equipment type pressurised (Ex p)*	60
UEEHA0035	Supervise repair and overhaul of explosion-protected rotating machines*	60
UEEHA0039	Supervise repair and overhaul of explosion-protected equipment type Group III ('t')*	60

Qualification Mapping Information

This qualification replaces and is not equivalent to UEE61220 Advanced Diploma of Engineering - Explosion protection.

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

UEE61521 Advanced Diploma of Instrumentation and Control Engineering

Modification History

Release 3. This is the second release of this qualification in the UEE Electrotechnology Training Package. Modifications include:

- Superseded units updated
- The following units added to electives (see UEE Release 5.0 Companion Volume Implementation Guide for mapping of deleted UEE units to imported ICT units):
 - ICTTEN409
 - ICTNWK426
 - ICTPRG549
 - ICTPRG534
 - ICTWEB447.

Release 2. Updated superseded elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package.

Qualification Description

This qualification covers competencies to design and validate and/or evaluate process control equipment and systems, manage risk, estimate and manage projects and provide technical advice or sales. It also provides competencies to install, set up, test, develop, select, commission, maintain, and diagnose faults or malfunctions of equipment and systems.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification

Packaging Rules

A total of **2160 weighting points** comprising:

1740 core weighting points listed below; plus

420 general elective weighting points from the general elective units listed below.

Choose a total of **420 weighting points** elective units from the list below, of which between **0 and 170 weighting points** can be taken from Group A; and between **0 and 80 weighting points**

can be taken from Group B; and between **0 and 80 weighting points** can be taken from Group C; and between **0 and 80 weighting points** can be taken from Group D; and between **180 and 420 weighting points** must be taken from Group E; or all **420 weighting points** can be taken from Group E

Up to **170 weighting points** of the general elective units Group A, may be selected from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0003	Apply industry and community standards to engineering activities	20
UEECD0004	Apply material science to solving electrotechnology engineering problems	60
UEECD0005	Apply physics to solving electrotechnology engineering problems	60
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0014	Develop design briefs for electrotechnology projects	40
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0017	Establish and follow a competency development plan in an electrotechnology engineering discipline	120
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0020	Fix and secure electrotechnology equipment*	20
UEECD0024	Implement and monitor energy sector WHS policies and	20

	procedures	
UEECD0026	Manage risk in electrotechnology activities	60
UEECD0036	Provide engineering solutions for problems in complex multiple path circuits	60
UEECD0039	Provide solutions to basic engineering computational problems*	60
UEECD0043	Solve problems in direct current circuits*	80
UEECD0045	Solve problems in multiple path extra-low voltage (ELV) a.c. circuits*	40
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications*	40
UEECD0055	Write specifications for industrial electronics and control projects	40
UEECD0056	Apply methods to maintain currency of industry developments	20
UEECS0033	Use engineering applications software on personal computers	40
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEEIC0018	Diagnose and rectify faults in digital controls systems*	60
UEEIC0020	Fault find and repair analogue circuits and components in electronic control systems*	60
UEEIC0021	Find and rectify faults in process final control elements*	40
UEEIC0022	Install instrumentation and control apparatus and associated equipment*	20
UEEIC0023	Install instrumentation and control cabling and tubing*	20
UEEIC0029	Set up and adjust PID control loops*	40
UEEIC0030	Set up and adjust advanced PID process control loops*	40
UEEIC0031	Set up and configure human-machine interface (HMI) and industrial networks*	60
UEEIC0038	Solve problems in density/level measurement components and systems*	40

UEEIC0039	Solve problems in flow measurement components and systems*	40
UEEIC0041	Solve problems in pressure measurement components and systems*	40
UEEIC0043	Solve problems in temperature measurement components and systems*	40
UEEIC0047	Use instrumentation drawings, specifications, standards and equipment manuals*	40
UEEIC0048	Verify compliance and functionality of instrumentation and control installations*	40
UEEIC0049	Manage instrumentation and control projects*	40
UEEIC0050	Plan instrumentation and control projects*	60
UEERE0013	Develop strategies to address environmental and sustainability issues in the energy sector	20
UEERL0004	Disconnect - reconnect electrical equipment connected to low voltage (LV) installation wiring*	60

Group A: Imported and common elective units**Weighting Points**

BSBINS501	Implement information and knowledge management systems	50
BSBLDR522	Manage people performance	70
BSBSTR501	Establish innovative work environments	50
BSBSTR502	Facilitate continuous improvement	60
BSBTWK502	Manage team effectiveness	60

Group B: General elective units**Weighting Points**

ICTICT214	Operate application software packages	20
UEECD0030	Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software*	60
UEECD0031	Prepare engineering drawings using manual drafting and CAD for electrotechnology applications*	60
UEEEEC0060	Repairs basic electronic apparatus faults by replacement of	40

	components*	
UEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEEEL0007	Develop detailed electrical drawings*	60
UEEHA0004	Enter a classified hazardous area to undertake work related to electrical equipment	40
UEEHA0022	Determine the explosion-protection requirements to meet a specified classified hazardous area*	40
UEEHA0025	Install explosion-protected equipment and associated apparatus and wiring systems*	60
UEEHA0026	Maintain equipment associated with hazardous areas*	60
UEEIC0004	Calibrate, adjust and test measuring instruments*	40
UEEIC0033	Set up gas analysis measuring and control instruments*	20
UEEIC0035	Set up scientific analysis measuring and control instruments*	20
UEEIC0036	Set up water analysis measuring and control instruments*	20
UEEIC0037	Set up weighting measuring and control instruments*	20
UEEIC0045	Troubleshoot medical equipment control systems*	120
UEEIC0046	Troubleshoot process control systems*	60

Group C: General elective units

Weighting Points

UEECD0032	Produce detailed electrotechnology/utilities drawings using CAD equipment and software*	60
UEECO0001	Estimate electrotechnology projects	40
UEEHA0020	Conduct detailed inspection of electrical installations for hazardous areas*	40
UEEHA0038	Conduct visual and close inspection of electrical installations for hazardous areas*	40
UEEIC0003	Assist in commissioning process and instrumentation control systems*	40
UEEIC0012	Develop structured programs to control external devices*	40

UEEIC0014	Develop, enter and verify programs in supervisory control and data acquisition systems*	60
UEEIC0015	Develop, enter and verify word and analogue control programs for programmable logic controllers*	60
UEEIC0026	Provide solutions to fluid circuit operations*	60
UEEIC0027	Provide solutions to pneumatic-hydraulic system operations*	80
UEEIC0042	Solve problems in single phase electronic power control circuits*	60
UEEIC0044	Troubleshoot measuring and analysis systems*	40

Group D: General elective units

Weighting Points

ICTNWK426	Install and configure client-server applications and services	60
ICTPRG534	Deploy applications to production environments	40
ICTPRG549	Apply intermediate object-oriented language skills	60
ICTTEN409	Commission an electronic system	50
ICTWEB447	Build basic website using development software and ICT tools	20
UEECO0014	Prepare tender submissions for electrotechnology projects*	60
UEECS0004	Commission industrial computer systems*	20
UEECS0014	Develop computer network services*	120
UEECS0019	Develop, implement and test object-oriented code*	140
UEECS0025	Modify/redesign industrial computer systems*	20
UEECS0031	Set up, create and implement content for a web server*	120
UEEEL0006	Develop detailed and complex drawings for electrical systems using CAD systems*	60
UEEEL0011	Evaluate performance of low voltage electrical apparatus*	40
UEEHA0029	Plan electrical installations for hazardous areas*	20
UEEIC0001	Analyse complex electronic circuits controlling fluids	80

UEEIC0005	Configure and maintain industrial control system networks*	60
UEEIC0010	Develop and test code for microcontroller devices	60
Group E: General elective units		Weighting Points
UEECD0001	Analyse materials for suitability in electrical equipment*	80
UEECD0002	Analyse static and dynamic parameters of electrical equipment	80
UEECD0012	Contribute to risk management in electrotechnology systems	20
UEECD0015	Develop engineering solutions to photonic system problems*	80
UEECD0037	Provide engineering solutions for uses of materials and thermodynamic effects	80
UEECD0049	Use advanced computational processes to provide solutions to energy sector engineering problems*	80
UEECO0003	Manage contract variations	40
UEEEEC0005	Assess electronic apparatus compliance	60
UEEEEC0011	Design and develop electronics/computer systems projects	40
UEEEEC0014	Design signal-conditioning sub-systems	80
UEEEEC0045	Modify digital signal processing (DSP) based sub-systems	80
UEEHA0008	Design gas detection systems	20
UEEIC0006	Design and configure Human-Machine Interface (HMI) networks	60
UEEIC0007	Design and use advanced programming tools, PC networks and HMI Interfacing	120

Qualification Mapping Information

This qualification replaces and is equivalent to UEE61511 Advanced Diploma of Instrumentation and Control Engineering

UEE61720 Advanced Diploma of Engineering Technology - Electronics

Modification History

Release 2. This is the second release of this qualification in the UEE Electrotechnology Training Package. Modifications include:

- Updated superseded imported elective units
- The following units added to electives (see UEE Release 5.0 Companion Volume Implementation Guide for mapping of deleted UEE units to imported ICT and MEM units):
 - ICTICT518
 - ICTNWK307
 - ICTNWK309
 - ICTNWK424
 - ICTNWK426
 - ICTNWK561
 - ICTNWK624
 - ICTNWK625
 - ICTPRG440.
 - ICTPRG444
 - ICTPRG534
 - ICTPRG549
 - ICTTEN409
 - ICTTEN420
 - ICTWEB447
 - MEM234010A.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package.

Qualification Description

This qualification covers competencies to design and validate/evaluate electronics and/or communication equipment and systems and provide technical advice/sales.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **2160 weighting points** comprising:

1160 core weighting points listed below; plus

1000 general elective weighting points from the general elective units listed below.

Choose a total of **1000 weighting points** elective units from the list below, of which between **0 and 360 weighting points** can be taken from Group A; and between **0 and 200 weighting points** must be taken from Group B; and between **0 and 200 weighting points** must be taken from Group C; and between **0 and 300 weighting points** must be taken from Group D; and between **280 and 900 weighting points** must be taken from Group E.

Up to **360 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0004	Apply material science to solving electrotechnology engineering problems	60
UEECD0005	Apply physics to solving electrotechnology engineering problems	60
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0014	Develop design briefs for electrotechnology projects	40
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0024	Implement and monitor energy sector WHS policies and	20

	procedures	
UEECD0027	Participate in development and follow a personal competency development plan	20
UEECD0036	Provide engineering solutions for problems in complex multiple path circuits	60
UEECD0039	Provide solutions to basic engineering computational problems*	60
UEECD0043	Solve problems in direct current circuits*	80
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications*	40
UEECS0003	Assemble, set up and test computing devices*	80
UEECS0033	Use engineering applications software on personal computers	40
UEEEC0011	Design and develop electronics/computer systems projects	40
UEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEC0063	Solve fundamental electronic communications system problems*	40
UEEEC0066	Troubleshoot amplifiers in an electronic apparatus*	80
UEEEC0067	Troubleshoot basic amplifier circuits*	40
UEEEC0069	Troubleshoot digital sub-systems*	80
UEEEC0074	Troubleshoot resonance circuits in an electronic apparatus*	80
UEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEERE0013	Develop strategies to address environmental and sustainability issues in the energy sector	20

Group A: Imported and common elective units

Weighting Points

BSBINS501	Implement information and knowledge management systems	50
BSBLDR522	Manage people performance	70

BSBOPS203	Deliver a service to customers	20
BSBSTR501	Establish innovative work environments	50
BSBSTR502	Facilitate continuous improvement	60
BSBTWK502	Manage team effectiveness	60
ICTICT214	Operate application software packages	20
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20
UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20

Group B: Qualification elective units**Weighting Points**

UEEAS0001	Assemble electronic components*	40
UEEAS0002	Conduct quality and functional tests on assembled electronic apparatus*	20
UEEAS0003	Modify electronic sub-assemblies*	40
UEEAS0004	Select electronic components for assembly*	20
UEEAS0005	Set up and check electronic component assembly machines*	40
UEEAS0006	Use lead-free soldering techniques*	40
UEECD0008	Carry out preparatory energy sector work activities*	60
UEECD0020	Fix and secure electrotechnology equipment*	20
UEECD0021	Identify and select components, accessories and materials for energy sector work activities*	20
UEECD0025	Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits*	40
UEECD0028	Plan an integrated cabling installation system*	40
UEECD0040	Solve basic problems electronic and digital equipment and circuits*	80

UEECS0018	Develop web pages for engineering applications	40
UEECS0022	Install and configure a client computer operating system and software	40
UEECS0028	Select, install, configure and test multimedia components	40
UEECS0029	Set up and configure basic local area network (LAN)*	80
UEECS0032	Support computer hardware and software for engineering applications	120
UEEDV0004	Install and connect data and voice communication equipment*	40
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services*	80
UEEDV0006	Install and modify optical fibre performance data communication cabling*	40
UEEDV0008	Install, modify and verify coaxial and structured communication copper cabling*	40
UEEDV0009	Select and arrange data and voice equipment for local area networks*	40
UEEDV0010	Select and arrange equipment for wireless communication networks*	40
UEEDV0011	Set up and configure basic data communication systems*	40
UEEDV0012	Set up and configure the wireless capabilities of communications and data storage devices	40
UEEDV0014	Test, report and rectify faults in data and voice installations*	40
UEEEC0003	Assemble and set up basic security systems*	80
UEEEC0004	Assemble and set up fixed video/audio components and systems in buildings and premises*	120
UEEEC0006	Carry out repairs of predictable faults in video and audio replay/recording apparatus*	120
UEEEC0019	Develop software solutions for microcontroller-based systems*	60
UEEEC0027	Enter instructions and test wired and wireless security	40

	systems*	
UEEEEC0028	Fault find and repair complex power supplies*	40
UEEEEC0029	Fault find and repair electronic apparatus*	40
UEEEEC0038	Find and repair microwave amplifier section faults in electronic apparatus*	40
UEEEEC0046	Operate and maintain amateur radio communication stations*	40
UEEEEC0055	Repair basic computer equipment faults by replacement of modules/sub-assemblies*	40
UEEEEC0056	Repair predictable faults in audio components*	40
UEEEEC0057	Repair predictable faults in general electronic apparatus*	40
UEEEEC0058	Repair predictable faults in television receivers*	120
UEEEEC0059	Repair routine business equipment faults*	120
UEEEEC0062	Set up and test residential video/audio equipment*	40
UEEEEC0064	Solve oscillator problems*	40
UEEEEC0068	Troubleshoot communication systems*	80
UEEEEC0070	Troubleshoot faults in television receivers*	120
UEEEEC0072	Troubleshoot microcontroller-based hardware systems	40
UEEEEC0077	Verify functionality and compliance of custom electronic installations*	40
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEERE0015	Implement and monitor energy sector environmental and sustainable policies and procedures	20
Group C: Qualification elective units		Weighting Points
ICTNWK309	Configure and administer network operating systems	70
ICTNWK426	Install and configure client-server applications and	60

	services	
ICTTEN420	Design, install and configure an internetwork	100
UEECO0001	Estimate electrotechnology projects	40
UEECO0013	Prepare specifications for the supply of materials and equipment for electrotechnology projects	40
UEECS0014	Develop computer network services*	120
UEECS0021	Install and administer UNIX/LINUX-based networked computers	80
UEECS0023	Install and configure network systems for internetworking*	120
UEECS0024	Integrate multiple computer operating systems on a client server local area network	80
UEECS0030	Set up, configure and test biometric devices	40
UEEEEC0012	Design custom electronic equipment installations*	120
UEEEEC0015	Develop basic plans for integrating security systems*	40
UEEEEC0022	Diagnose and rectify faults in camera circuits and equipment*	60
UEEEEC0024	Diagnose and rectify faults in electronic display circuits*	60
UEEEEC0025	Diagnose and rectify faults in recording and replay equipment	60
UEEEEC0037	Fault find and repair telecommunication apparatus and systems*	60
UEEIC0012	Develop structured programs to control external devices*	40
UEEIC0014	Develop, enter and verify programs in supervisory control and data acquisition systems*	60
UEEIC0015	Develop, enter and verify word and analogue control programs for programmable logic controllers*	60
Group D: Qualification elective units		Weighting Points
ICTICT518	Research and review hardware technology options for organisations	20

ICTNWK307	Provide network systems administration	60
ICTPRG444	Analyse software requirements	60
ICTPRG534	Deploy applications to production environments	40
ICTPRG549	Apply intermediate object-oriented language skills	60
ICTTEN409	Commission an electronic system	50
ICTWEB447	Build basic website using development software and ICT tools	20
UEECD0001	Analyse materials for suitability in electrical equipment*	80
UEECD0002	Analyse static and dynamic parameters of electrical equipment	80
UEECD0037	Provide engineering solutions for uses of materials and thermodynamic effects	80
UEECD0053	Write specifications for computer systems engineering projects	40
UEECO0014	Prepare tender submissions for electrotechnology projects*	60
UEECS0001	Administer computer networks	80
UEECS0002	Analyse and implement biometric measuring techniques and applications	120
UEECS0004	Commission industrial computer systems*	20
UEECS0013	Develop and validate biometric equipment/systems installation	120
UEECS0019	Develop, implement and test object-oriented code*	140
UEECS0025	Modify/redesign industrial computer systems*	20
UEECS0031	Set up, create and implement content for a web server*	120
UEEEEC0001	Analyse the performance of wireless-based electronic communication systems*	40
UEEEEC0010	Design and develop advanced digital systems	40
UEEEEC0013	Design electronic printed circuit boards*	40

UEEEEC0016	Develop engineering solutions to RF amplifier problems*	40
UEEEEC0018	Develop engineering solutions to audio electronic problems*	60
UEEEEC0054	Provide gate array solutions for complex electronics systems*	60
UEEIC0005	Configure and maintain industrial control system networks*	60
UEEIC0010	Develop and test code for microcontroller devices	60

Group E: Qualification elective units**Weighting Points**

ICTNWK424	Install and operate small enterprise branch networks	60
ICTNWK561	Design enterprise wireless local area networks	30
ICTNWK624	Configure advanced internetwork routing solutions	120
ICTNWK625	Plan and configure advanced internetwork switching solutions	120
ICTPRG440	Apply introductory programming skills in different languages	60
ICTPRG534	Deploy applications to production environments	40
ICTTEN420	Design, install and configure an internetwork	100
MEM234010A	Design microcontroller applications	40
UEECD0015	Develop engineering solutions to photonic system problems*	80
UEECD0049	Use advanced computational processes to provide solutions to energy sector engineering problems*	80
UEECS0005	Design and implement advanced routing for internetworking systems	100
UEECS0006	Design and implement multi-layer switching for internetworking systems	100
UEECS0007	Design and implement network systems for internetworking	120
UEECS0008	Design and implement remote access for internetworking	100

	systems	
UEECS0009	Design and implement security for internetworking systems	100
UEECS0010	Design and implement wireless LANs/WANs for internetworking systems	100
UEECS0011	Design and manage enterprise computer networks	80
UEECS0012	Design embedded controller control systems	80
UEECS0017	Develop industrial control programs for microcomputer equipped devices	60
UEECS0027	Provide programming solution for computer systems engineering problems	60
UEEEEC0005	Assess electronic apparatus compliance	60
UEEEEC0014	Design signal-conditioning sub-systems	80
UEEEEC0045	Modify digital signal processing (DSP) based sub-systems	80
UEEEEC0047	Plan large electronic projects	60
UEEIC0007	Design and use advanced programming tools, PC networks and HMI Interfacing	120

Qualification Mapping Information

This qualification replaces and is equivalent to UEE61711 Advanced Diploma of Engineering Technology - Electronics

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

UEE62022 Advanced Diploma of Engineering Technology - Renewable Energy

Modification History

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

This qualification replaces and is not equivalent to UEE62020 Advanced Diploma of Engineering Technology - Renewable Energy. Modifications include:

- Significant changes to core and elective unit structure and packaging rules

Qualification Description

This qualification provides competencies in preparation to design and validate/evaluate renewable energy (RE) equipment and systems and provide technical advice/sales.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **2160 weighting points** comprising:

1170 core weighting points; plus

990 elective weighting points

Choose a minimum of **990 elective weighting points** units from the list below, of which:

- a minimum of **400 weighting points** must be taken from Group A
- between **0 and 450 weighting points** can be taken from Group B

Up to **300 weighting points** of the general elective units Group B, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided that selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with.

A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0003	Apply industry and community standards to engineering activities	20
UEECD0004	Apply material science to solving electrotechnology engineering problems	60
UEECD0005	Apply physics to solving electrotechnology engineering problems	60
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0014	Develop design briefs for electrotechnology projects	40
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0020	Fix and secure electrotechnology equipment*	20
UEECD0025	Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits*	40
UEECD0036	Provide engineering solutions for problems in complex multiple path circuits	60
UEECD0039	Provide solutions to basic engineering computational problems*	60
UEECD0044	Solve problems in multiple path circuits	40
UEECD0046	Solve problems in single path circuits	40
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications*	40
UEECD0062	Write specifications for renewable energy engineering projects	40
UEECS0033	Use engineering applications software on	40

	personal computers	
UEEEL0019	Solve problems in direct current (d.c.) machines*	30
UEEEL0020	Solve problems in low voltage a.c. circuits*	80
UEEEL0021	Solve problems in magnetic and electromagnetic devices*	30
UEEEL0062	Provide engineering solutions to problems in complex polyphase power circuits*	60
UEERE0051	Apply electrical principles to renewable energy design	40
UEERE0054	Conduct site survey for grid-connected photovoltaic and battery storage systems	30
UEERE0055	Conduct site survey for off-grid photovoltaic/generating set systems	40
UEERE0067	Develop engineering solutions to renewable energy (RE) problems	60
UEERE0082	Maintain renewable energy (RE) apparatus	20
UEERE0084	Manage renewable energy (RE) projects	40
UEERE0085	Plan renewable energy (RE) projects	60
Group A Elective units		Weighting Points
CPPHES4005	Assess household energy use and efficiency improvements	40
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEEIC0014	Develop, enter and verify programs in supervisory control and data acquisition systems*	60
UEEIC0015	Develop, enter and verify word and analogue control programs for programmable logic controllers*	60
UEERE0052	Assess energy loads and uses for energy efficiency in commercial facilities*	40

UEERE0053	Assess energy loads and uses for energy efficiency in industrial properties and enterprises*	40
UEERE0057	Coordinate the design of micro-grid renewable energy systems	50
UEERE0058	Coordinate the installation, fault finding and repair of micro grid systems	40
UEERE0059	Design energy management controls for electrical installations in buildings*	80
UEERE0061	Design grid-connected photovoltaic power supply systems *	40
UEERE0062	Design micro-hydro systems *	40
UEERE0063	Design off-grid photovoltaic/generating set systems*	40
UEERE0064	Design renewable energy heating systems *	40
UEERE0065	Design wind energy systems *	40
UEERE0066	Develop effective engineering strategies for energy reduction in buildings*	60
UEERE0068	Develop strategies to address sustainability issues for electrical installations	20
UEERE0069	Diagnose and rectify faults in renewable energy (RE) control systems*	60
UEERL0001	Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply*	20
UEERL0002	Attach cords, cables and plugs to electrical equipment for connection to 1000 V a.c. or 1500 V d.c.*	20
UEERL0003	Conduct in-service safety testing of electrical cord connected equipment and cord assemblies*	20
Group B Elective units		Weighting Points
BSBINS501	Implement information and knowledge	50

	management systems	
BSBLDR522	Manage people performance	70
BSBSTR501	Establish innovative work environments	50
BSBSTR502	Facilitate continuous improvement	60
BSBTWK502	Manage team effectiveness	60
ICTICT214	Operate application software packages	20
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0030	Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software*	60
UEECD0031	Prepare engineering drawings using manual drafting and CAD for electrotechnology applications*	60
UEECD0032	Produce detailed electrotechnology/utilities drawings using CAD equipment and software*	60
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECD0047	Supervise and coordinate energy sector work activities	40
UEECO0001	Estimate electrotechnology projects	40
UEECO0002	Maintain documentation	20
UEECO0013	Prepare specifications for the supply of materials and equipment for electrotechnology projects	40
UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20
UEEEL0006	Develop detailed and complex drawings for	60

electrical systems using CAD systems*

Qualification Mapping Information

UEE62122 Advanced Diploma of Engineering Technology - Electrical

Modification History

Release 2. This is the second release of this qualification in the UEE Electrotechnology Training Package. Modifications include:

- Superseded and deleted renewable energy (UEERE...) units updated and/or replaced
- ICTNWK426 added to group D electives

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package.

This qualification replaces and is not equivalent to UEE62120 Advanced Diploma of Engineering Technology - Electrical.

Modifications in this release include:

- Core and elective group weighting points allocations adjusted.
- UEECD0044, UEECD0046 UEECD0056, UEECD0064, UEEEL0077, UEEEL0079 and UEEEL0080, added to core.
- UEECD0043, UEEEL0003, UEEEL0008, UEEEL0009, UEEEL0010, UEEEL0018, UEEEL0023, UEEEL0024 and UEEEL0025 removed from core.
- UEECD0016, UEECD0017, UEECD0019, UEECD0020, UEECD0024 and UEECD0051 moved from core to electives.
- ICTPRG440, ICTPRG443, UEECD0019, UEECD0020, and UEECD0051 added to elective Group A.
- ICTPRG302, MEM30027A, UEECD0016, UEECD0017, UEECD0025, UEERE0025, UEERE0045, UEERE0046 and UEERE0047 added to elective Group B.
- UEEEL0069, UEERE5001, UETTDRIS67 and UETTDRIS68 removed from elective Group B.
- UEECD0024 added to elective Group C.
- UEEEL0057 and UEEEL0059 removed from elective Group C.
- UEECD0032, UEECS0025 and UEEIC0051 added to elective Group D.
- UEEEL0037, UEEIC0016, UEEIC0017, UEEIC0019, UETTDRIS70, UETTDRIS71 and UETTDRIS72 removed from elective Group D.
- ICTPRG430, ICTPRG549, MEM234014A, UEEHA0017 and UEEHA0018 added to Group E.
- UEEEL0038, UEEIC0008, UEEIC0032, UETTDRIS73 and UETTDRIS74 removed from elective Group E.

Qualification Description

This qualification covers competencies to design and validate/evaluate electrical equipment and systems and provide technical advice/sales.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **2160 weighting points** comprising:

1200 core weighting points listed below; plus

960 general elective weighting points from the general elective units listed below.

Choose a total of **960 weighting points** elective units from the list below, of which between **0 and 440 weighting points** can be taken from Group A; between **0 and 300 weighting points** can be taken from Group B; between **0 and 300 weighting points** can be taken from Group C; between **0 and 300 weighting points** can be taken from Group D; and between **200 and 960 weighting points** can be taken from Group E (or all **960 elective weighting points** can be taken from Group E).

Up to **360 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0003	Apply industry and community standards to engineering activities	20
UEECD0004	Apply material science to solving electrotechnology engineering problems	60
UEECD0005	Apply physics to solving electrotechnology engineering problems	60

UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0014	Develop design briefs for electrotechnology projects	40
UEECD0026	Manage risk in electrotechnology activities	60
UEECD0036	Provide engineering solutions for problems in complex multiple path circuits	60
UEECD0039	Provide solutions to basic engineering computational problems*	60
UEECD0044	Solve problems in multiple path circuits*	40
UEECD0046	Solve problems in single path circuits *	40
UEECD0056	Apply methods to maintain currency of industry developments	20
UEECD0059	Write specifications for electrical engineering projects	40
UEECD0064	Interpret, produce and modify electrotechnology drawings	40
UEEEL0015	Manage large electrical projects*	40
UEEEL0019	Solve problems in direct current (d.c.) machines*	30
UEEEL0020	Solve problems in low voltage a.c. circuits*	80
UEEEL0021	Solve problems in magnetic and electromagnetic devices*	30
UEEEL0058	Plan large electrical projects*	60
UEEEL0062	Provide engineering solutions to problems in complex polyphase power circuits*	60
UEEEL0077	Evaluate and report on the performance of LV machines *	100
UEEEL0079	Plan and analyse LV electrical apparatus	60
UEEEL0080	Plan and analyse wiring systems, circuits, control	100

and protection for electrical installations

UEERE0013 Develop strategies to address environmental and sustainability issues in the energy sector 20

Group A: Imported and common elective units

Weighting Points

BSBINS501 Implement information and knowledge management systems 50

BSBLDR522 Manage people performance 70

BSBOPS203 Deliver a service to customers 20

BSBSTR501 Establish innovative work environments 50

BSBSTR502 Facilitate continuous improvement 60

BSBTWK502 Manage team effectiveness 60

ICTICT214 Operate application software packages 20

ICTPRG440 Apply introductory programming skills in different languages 60

ICTPRG443 Apply intermediate programming skills in different languages 80

UEECD0019 Fabricate, assemble and dismantle utilities industry components* 40

UEECD0020 Fix and secure electrotechnology equipment* 20

UEECD0035 Provide basic instruction in the use of electrotechnology apparatus 20

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications* 40

UEECO0002 Maintain documentation 20

UEECO0015 Provide quotations for installation or service jobs 20

UEECO0017 Source and purchase material/parts for installation or service jobs 20

Group B: General elective units

Weighting Points

ICTPRG302	Apply introductory programming techniques	40
MEM30027A	Prepare basic programs for programmable logic controllers	40
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0017	Establish and follow a competency development plan in an electrotechnology engineering discipline	120
UEECD0025	Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits*	40
UEECD0028	Plan an integrated cabling installation system*	40
UEECD0030	Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software*	60
UEECD0031	Prepare engineering drawings using manual drafting and CAD for electrotechnology applications*	60
UEECS0033	Use engineering applications software on personal computers	40
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services*	80
UEEDV0008	Install, modify and verify coaxial and structured communication copper cabling*	40
UEEEC0003	Assemble and set up basic security systems*	80
UEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEEEL0004	Carry out basic repairs to electrical components and equipment*	40
UEEEL0016	Provide advice on effective and energy efficient lighting products	20
UEEEL0022	Supply effective and efficient lighting products	40

	for domestic and small commercial applications*	
UEEEL0061	Provide advice on the application of energy efficient lighting for ambient and aesthetic effect*	20
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20
UEEIC0011	Develop electrical integrated systems*	20
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEEIC0024	Plan the electrical installation of integrated systems*	20
UEEIC0025	Provide solutions to extra-low voltage (ELV) electro-pneumatic control systems and drives*	60
UEEIC0047	Use instrumentation drawings, specifications, standards and equipment manuals*	40
UEERE0054	Conduct site survey for grid-connected photovoltaic and battery storage systems	30
UEERE0055	Conduct site survey for off-grid photovoltaic/generating set systems	40
Group C: General elective units		Weighting Points
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECO0001	Estimate electrotechnology projects	40
UEEEL0007	Develop detailed electrical drawings*	60
UEEEL0036	Design effective and efficient lighting for residential and commercial buildings*	20
UEEEL0060	Prepare quotations for the supply of effective and efficient lighting products for lighting projects*	20
UEEEL0063	Provide photometric data for illumination system design	60
UEEEL0070	Select effective and efficient light sources and luminaries for given locations and designs*	60

UEEIC0009	Develop an electrical integrated system interface for access through a touch screen*	20
UEEIC0012	Develop structured programs to control external devices*	40
UEEIC0014	Develop, enter and verify programs in supervisory control and data acquisition systems*	60
UEEIC0015	Develop, enter and verify word and analogue control programs for programmable logic controllers*	60
UEERE0061	Design grid-connected photovoltaic power supply systems*	60
UEERE0060	Design grid-connected battery storage systems*	60
Group D: General elective units		Weighting Points
ICTNWK426	Install and configure client-server applications and services	60
UEECD0013	Develop and implement energy sector maintenance programs	60
UEECD0032	Produce detailed electrotechnology/utilities drawings using CAD equipment and software *	60
UEECO0014	Prepare tender submissions for electrotechnology projects*	60
UEECS0004	Commission industrial computer systems*	20
UEECS0016	Develop energy sector directory services*	80
UEECS0025	Modify/redesign industrial computer systems*	20
UEEEL0006	Develop detailed and complex drawings for electrical systems using CAD systems*	60
UEEEL0011	Evaluate performance of low voltage electrical apparatus*	40
UEEEL0035	Design effective and efficient lighting for public, open and sports areas*	20
UEEIC0005	Configure and maintain industrial control system networks*	60

UEEIC0010	Develop and test code for microcontroller devices	60
UEEIC0051	Evaluate motor drive systems and diagnose faults *	120
UEERE0062	Design micro-hydro systems*	60
UEERE0064	Design renewable energy heating systems*	120
UEERE0065	Design wind energy systems *	60

Group E: General elective units**Weighting
Points**

ICTPRG430	Apply introductory object-oriented language skills	60
ICTPRG549	Apply intermediate object-oriented language skills	60
MEM234014A	Design a robotic system	40
UEECD0001	Analyse materials for suitability in electrical equipment*	80
UEECD0002	Analyse static and dynamic parameters of electrical equipment	80
UEECD0012	Contribute to risk management in electrotechnology systems	20
UEECD0015	Develop engineering solutions to photonic system problems*	80
UEECD0037	Provide engineering solutions for uses of materials and thermodynamic effects	80
UEECD0049	Use advanced computational processes to provide solutions to energy sector engineering problems*	80
UEECO0003	Manage contract variations	40
UEECS0015	Develop energy sector computer network applications infrastructure	80
UEEEEC0005	Assess electronic apparatus compliance	60
UEEEEC0011	Design and develop electronics/computer systems projects	40

UEEEEC0014	Design signal-conditioning sub-systems	80
UEEEEC0045	Modify digital signal processing (DSP) based sub-systems	80
UEEEL0041	Develop engineering solution for synchronous machine and control problems*	60
UEEEL0042	Develop engineering solutions for d.c. machine and control problems*	60
UEEEL0043	Develop engineering solutions for induction machine and control problems*	60
UEEIC0006	Design and configure Human-Machine Interface (HMI) networks	60
UEEIC0007	Design and use advanced programming tools, PC networks and HMI Interfacing	120
UEEHA0017	Classify areas where a combustible dust hazard may arise	60
UEEHA0018	Classify areas where flammable gas or vapour hazards may arise	60
UEERE0059	Design energy management controls for electrical installations in buildings*	80
UEERE0066	Develop effective engineering strategies for energy reduction in buildings*	60
UEERE0063	Design off-grid photovoltaic/generating set systems *	40
UEERE0067	Develop engineering solutions to renewable energy (RE) problems*	60

Qualification Mapping Information

This qualification replaces and is not equivalent to UEE62120 Advanced Diploma of Engineering Technology - Electrical.

Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

UEE62220 Advanced Diploma of Electrical - Engineering

Modification History

Release 4. This is the second release of this qualification in the UEE Electrotechnology Training Package. Modifications include:

- Updated and/or replaced superseded and deleted elective units
- The following units added to electives (see UEE Release 5.0 Companion Volume Implementation Guide for mapping of deleted UEE units to imported ICT and MEM units):
 - ICTNWK426
 - ICTPRG440
 - ICTPRG534
 - MEM234010A

Release 3. Updated superseded elective units.

Release 2. Two units added to general electives. Imported elective units updated.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to design and validate/evaluate electrical equipment and systems, manage risk, estimate and manage projects and provide technical advice/sales.

It develops competencies in the ethical and responsible application of mathematics, science, engineering techniques, standards and codes of practice, engineering design practices, supervision and management of physical, human and financial resources in engineering.

The core competencies of this qualification meet the prescribed requirements for Engineering Associate membership of Engineers Australia.

Participants seeking Engineers Australia membership should ensure that their training provider is accredited by that body to provide Engineering Education Programs at the level of Engineering Associate.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

The entry requirement for this qualification is:

- UEE30820 Certificate III in Electrotechnology Electrician
- or

- a current 'Unrestricted Electricians Licence' or its equivalent issued in an Australian state or territory.

Packaging Rules

A total of **1320 weighting points** comprising:

840 core weighting points listed below; plus

480 general elective weighting points from the general elective units listed below.

Choose a total of **480 weighting points** elective units from the list below, of which between **0 and 220 weighting points** can be taken from Group A; between **0 and 60 weighting points** can be taken from Group B; between **0 and 100 weighting points** can be taken from Group C; between **0 and 60 weighting points** can be taken from Group D; and between **260 and 480 weighting points** can be taken from Group E (or all **480 elective weighting points** can be taken from Group E).

Up to **220 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0003	Apply industry and community standards to engineering activities	20
UEECD0004	Apply material science to solving electrotechnology engineering problems	60
UEECD0005	Apply physics to solving electrotechnology engineering problems	60
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0014	Develop design briefs for electrotechnology projects	40
UEECD0017	Establish and follow a competency development plan in an	120

	electrotechnology engineering discipline	
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0026	Manage risk in electrotechnology activities	60
UEECD0036	Provide engineering solutions for problems in complex multiple path circuits	60
UEECD0039	Provide solutions to basic engineering computational problems*	60
UEECD0056	Apply methods to maintain currency of industry developments	20
UEECD0059	Write specifications for electrical engineering projects	40
UEECS0033	Use engineering applications software on personal computers	40
UEEEL0015	Manage large electrical projects*	40
UEEEL0058	Plan large electrical projects*	60
UEEEL0062	Provide engineering solutions to problems in complex polyphase power circuits*	60
UEERE0013	Develop strategies to address environmental and sustainability issues in the energy sector	20
Group A: Imported and common elective units		Weighting Points
BSBINS501	Implement information and knowledge management systems	50
BSBLDR522	Manage people performance	70
BSBSTR501	Establish innovative work environments	50
BSBSTR502	Facilitate continuous improvement	60
BSBTWK502	Manage team effectiveness	60
Group B: General elective units		Weighting Points
UEEAS0007	Assemble, mount and connect control gear and switchgear*	40
UEEAS0008	Fabricate and assemble bus bars*	40

UEEAS0009	Mount and wire control panel equipment*	40
UEECD0028	Plan an integrated cabling installation system*	40
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services*	80
UEEDV0008	Install, modify and verify coaxial and structured communication copper cabling*	40
UEEEC0003	Assemble and set up basic security systems*	80
UEEEC0060	Repairs basic electronic apparatus faults by replacement of components*	40
UEEEC0075	Troubleshoot single phase input d.c power supplies*	40
UEEEL0004	Carry out basic repairs to electrical components and equipment*	40
UEEEL0016	Provide advice on effective and energy efficient lighting products	20
UEEEL0017	Repair and maintain mechanical components of electrical machines*	40
UEEEL0022	Supply effective and efficient lighting products for domestic and small commercial applications*	40
UEEEL0026	Align and install traction lift equipment*	20
UEEEL0033	Conduct electrical tests on LV electrical machines*	40
UEEEL0034	Conduct mechanical tests on electrical machines and components*	40
UEEEL0045	Diagnose and rectify faults in traction lift systems*	80
UEEEL0046	Find and repair faults in LV d.c. electrical apparatus and circuits*	60
UEEEL0049	Install and maintain emergency safety systems*	60
UEEEL0052	Maintain and service traction lift systems and equipment*	40
UEEEL0053	Maintain operation of electrical marine equipment and systems*	60
UEEEL0054	Maintain operation of electrical mining equipment and systems*	60

UEEEL0055	Overhaul and repair major switchgear and control gear*	60
UEEEL0056	Place and connect electrical coils*	40
UEEEL0061	Provide advice on the application of energy efficient lighting for ambient and aesthetic effect*	20
UEEEL0066	Rewind LV direct current machines*	60
UEEEL0067	Rewind single phase machines*	40
UEEEL0068	Rewind three phase low voltage induction machines*	60
UEEEL0069	Select and arrange equipment for special LV electrical installations*	60
UEEEL0074	Wind electrical coils*	40
UEEEL0075	Inspect, test and maintain emergency alarm systems and equipment*	20
UEEEL0076	Inspect, test and maintain emergency lighting systems*	20
UEEEL0078	Install and commission whole current electricity meters*	20
UEEHA0020	Conduct detailed inspection of electrical installations for hazardous areas*	40
UEEHA0022	Determine the explosion-protection requirements to meet a specified classified hazardous area*	40
UEEHA0025	Install explosion-protected equipment and associated apparatus and wiring systems*	60
UEEHA0026	Maintain equipment associated with hazardous areas*	60
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20
UEEIC0011	Develop electrical integrated systems*	20
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEEIC0024	Plan the electrical installation of integrated systems*	20
UEEIC0025	Provide solutions to extra-low voltage (ELV) electro-pneumatic control systems and drives*	60
UEEIC0038	Solve problems in density/level measurement components	40

	and systems*	
UEEIC0039	Solve problems in flow measurement components and systems*	40
UEEIC0041	Solve problems in pressure measurement components and systems*	40
UEEIC0043	Solve problems in temperature measurement components and systems*	40
UEEIC0047	Use instrumentation drawings, specifications, standards and equipment manuals*	40
UEERA0035	Establish the basic operating conditions of air conditioning systems*	20
UEERA0036	Establish the basic operating conditions of vapour compression systems*	60
UEERA0059	Prepare and connect refrigerant tubing and fittings*	40
UEERE0001	Apply environmentally and sustainable procedures in the energy sector	20
UEERE0054	Conduct site survey for grid-connected photovoltaic and battery storage systems	30
UEERE0080	Install photovoltaic power conversion equipment to grid *	30
UEERE0081	Install photovoltaic systems to power conversion equipment *	30
UETDRIS017	Perform high voltage field switching operation to a given schedule *	40
UETDRIS032	Solve problems in network equipment*	80
UETDRIS033	Solve problems in network protection*	40
Group C: General elective units		Weighting Points
CPPHES4005	Assess household energy use and efficiency improvements	40
UEECD0013	Develop and implement energy sector maintenance programs	60
UEECO0001	Estimate electrotechnology projects	40
UEEEL0007	Develop detailed electrical drawings*	60

UEEEL0027	Carry out low voltage electrical field testing and report findings*	60
UEEEL0029	Conduct compliance inspection of LV electrical installations with demand exceeding 100 A per phase*	40
UEEEL0030	Conduct compliance inspection of single phase LV electrical installations*	60
UEEEL0031	Conduct compliance inspection of special LV electrical installations*	60
UEEEL0032	Conduct electrical tests on HV electrical machines*	60
UEEEL0036	Design effective and efficient lighting for residential and commercial buildings*	20
UEEEL0040	Develop compliance policies and plans to conduct an electrical contracting business*	80
UEEEL0044	Diagnose and rectify faults in complex lift systems*	40
UEEEL0050	Install and replace low voltage current transformer metering*	20
UEEEL0051	Investigate and report on electrical incidents and causes*	60
UEEEL0057	Plan electrical installations with a low voltage demand up to 400 A per phase*	40
UEEEL0059	Plan low voltage switchboard and control panel layouts*	40
UEEEL0060	Prepare quotations for the supply of effective and efficient lighting products for lighting projects*	20
UEEEL0063	Provide photometric data for illumination system design	60
UEEEL0064	Rewind HV three phase induction machines rated for voltages above 3.3 kV*	60
UEEEL0065	Rewind HV three phase induction machines rated for voltages to 3.3 kV*	60
UEEEL0070	Select effective and efficient light sources and luminaries for given locations and designs*	60
UEEEL0071	Select low voltage power factor correction equipment*	40
UEEEL0072	Set up and place LV electrical apparatus and associated circuits into service*	40

UEEEL0073	Verify compliance and functionality of special LV electrical installations*	40
UEEHA0004	Enter a classified hazardous area to undertake work related to electrical equipment	40
UEEHA0020	Conduct detailed inspection of electrical installations for hazardous areas*	40
UEEHA0022	Determine the explosion-protection requirements to meet a specified classified hazardous area*	40
UEEHA0023	Develop and manage periodic electrical inspection and maintenance programs for hazardous areas*	20
UEEHA0026	Maintain equipment associated with hazardous areas*	60
UEEHA0038	Conduct visual and close inspection of electrical installations for hazardous areas*	40
UEEIC0009	Develop an electrical integrated system interface for access through a touch screen*	20
UEEIC0012	Develop structured programs to control external devices*	40
UEEIC0014	Develop, enter and verify programs in supervisory control and data acquisition systems*	60
UEEIC0015	Develop, enter and verify word and analogue control programs for programmable logic controllers*	60
UEEIC0018	Diagnose and rectify faults in digital controls systems*	60
UEEIC0020	Fault find and repair analogue circuits and components in electronic control systems*	60
UEEIC0026	Provide solutions to fluid circuit operations*	60
UEEIC0027	Provide solutions to pneumatic-hydraulic system operations*	80
UEEIC0028	Provide solutions to problems in industrial control systems*	60
UEEIC0034	Set up industrial field control devices*	60
UEEIC0040	Solve problems in polyphase electronic power control circuits*	60
UEEIC0042	Solve problems in single phase electronic power control circuits*	60

UEERE0052	Assess energy loads and uses for energy efficiency in commercial facilities*	40
UEERE0053	Assess energy loads and uses for energy efficiency in industrial properties and enterprises*	40
UEERE0061	Design grid-connected photovoltaic power supply systems*	60
UEERE0068	Develop strategies to address sustainability issues for electrical installations*	20
UEERE0015	Implement and monitor energy sector environmental and sustainable policies and procedures	20

Group D: General elective units**Weighting Points**

UEECO0014	Prepare tender submissions for electrotechnology projects*	60
UEECS0016	Develop energy sector directory services*	80
UEEEL0011	Evaluate performance of low voltage electrical apparatus*	40
UEEEL0037	Design electrical installations with a low voltage demand greater than 400 A per phase*	40
UEEHA0029	Plan electrical installations for hazardous areas*	20
UEEIC0001	Analyse complex electronic circuits controlling fluids	80
UEEIC0005	Configure and maintain industrial control system networks*	60
UEERE0066	Develop effective engineering strategies for energy reduction in buildings*	60
UETDRIS025	Diagnose and resolve faults in distribution systems*	60
UETDRIS026	Diagnose and resolve faults in electrical apparatus*	60
UETDRIS027	Diagnose and resolve faults in transmission systems*	60

Group E: General elective units**Weighting Points**

ICTNWK426	Install and configure client-server applications and services	60
ICTPRG440	Apply introductory programming skills in different languages	60
ICTPRG534	Deploy applications to production environments	40

MEM234010A	Design microcontroller applications	40
UEECD0049	Use advanced computational processes to provide solutions to energy sector engineering problems*	80
UEECO0003	Manage contract variations	40
UEECS0012	Design embedded controller control systems	80
UEECS0015	Develop energy sector computer network applications infrastructure	80
UEECS0017	Develop industrial control programs for microcomputer equipped devices	60
UEECS0027	Provide programming solution for computer systems engineering problems	60
UEEEL0038	Design switchboards rated for high fault levels (greater than 400 A)*	60
UEEEL0043	Develop engineering solutions for induction machine and control problems*	60
UEEIC0006	Design and configure Human-Machine Interface (HMI) networks	60
UEEIC0007	Design and use advanced programming tools, PC networks and HMI Interfacing	120
UEEIC0010	Develop and test code for microcontroller devices	60
UEEIC0016	Diagnose and rectify faults in a.c. motor drive systems*	60
UEEIC0017	Diagnose and rectify faults in d.c. motor drive systems*	60
UEEIC0019	Diagnose and rectify faults in servo drive systems*	60

Qualification Mapping Information

This qualification replaces and is not equivalent to UEE62211 Advanced Diploma of Electrical - Engineering

Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

UEE62320 Advanced Diploma of Electrical Engineering - Coal Mining

Modification History

Release 2. Updated superseded elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to design and validate/evaluate coal mining electrical equipment and systems, manage risk, estimate and manage projects and provide technical advice/sales.

It develops competencies in the ethical and responsible application of mathematics, science, engineering techniques, standards and codes of practice, engineering design practices, supervision and management of physical, human and financial resources in engineering.

The core competencies of this qualification meet the prescribed requirements for Engineering Associate membership of Engineers Australia.

Participants seeking Engineers Australia membership should ensure that their training provider is accredited by that body to provide Engineering Education Programs at the level of Engineering Associate.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

The entry requirement for this qualification is:

- UEE30820 Certificate III in Electrotechnology Electrician

or

- a current 'Unrestricted Electricians Licence' or its equivalent issued in an Australian state or territory.

Packaging Rules

A total of **1320 weighting points** comprising:

1000 core weighting points listed below; **plus**

320 general elective weighting points from the general elective units listed below.

Choose a total of **320 weighting points** elective units from the list below, of which between 0

and 160 **weighting points** can be taken from Group A; between 0 and 60 **weighting points** can be taken from Group B; between 0 and 100 **weighting points** can be taken from Group C; between 0 and 60 **weighting points** can be taken from Group D; and between 160 and 320 **weighting points** can be taken from Group E (or all 320 elective **weighting points** can be taken from Group E).

Up to 160 weighting points of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
RIIRAI609D	Establish and maintain electrical installations, reticulation and protection system	120
RIIRIS601D	Establish and maintain the risk management system	100
UEECD0003	Apply industry and community standards to engineering activities	20
UEECD0004	Apply material science to solving electrotechnology engineering problems	60
UEECD0005	Apply physics to solving electrotechnology engineering problems	60
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0014	Develop design briefs for electrotechnology projects	40
UEECD0017	Establish and follow a competency development plan in an electrotechnology engineering discipline	120

UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0036	Provide engineering solutions for problems in complex multiple path circuits	60
UEECD0039	Provide solutions to basic engineering computational problems*	60
UEECD0056	Apply methods to maintain currency of industry developments	20

UEE62420 Advanced Diploma of Engineering Technology - Air Conditioning and Refrigeration

Modification History

Release 2. Updated superseded elective units.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to design and validate/evaluate refrigeration and air conditioning equipment and systems and provide technical advice/sales.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification

Packaging Rules

A total of **2160 weighting points** comprising:

1360 core weighting points listed below; plus

800 general elective weighting points from the general elective units listed below.

Choose a total of **800 weighting points** elective units from the list below, of which between **0 and 350 weighting points** can be taken from Group A; and between **0 and 100 weighting points** must be taken from Group B; and between **120 and 320 weighting points** must be taken from Group C; and between **200 and 360 weighting points** must be taken from Group D; and between **360 and 480 weighting points** must be taken from Group E.

Up to **350 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with.

A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0003	Apply industry and community standards to engineering activities	20
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0017	Establish and follow a competency development plan in an electrotechnology engineering discipline	120
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0023	Identify effects of energy on machinery and materials in an energy sector environment	120
UEECD0039	Provide solutions to basic engineering computational problems*	60
UEECD0041	Solve electrotechnical engineering problems	60
UEECD0049	Use advanced computational processes to provide solutions to energy sector engineering problems*	80
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications*	40
UEECS0033	Use engineering applications software on personal computers	40
UEERA0001	Analyse the operation of HVAC air and hydronic systems*	80
UEERA0002	Analyse the psychrometric performance of HVAC/R systems*	50
UEERA0003	Analyse the thermodynamic performance of HVAC/R systems	50
UEERA0004	Analyse vibration and noise in refrigeration and air	80

	conditioning systems*	
UEERA0034	Establish heat loads for commercial refrigeration and/or air conditioning applications*	80
UEERA0038	Establish the thermodynamic parameters of refrigeration and air conditioning systems*	80
UEERA0042	Evaluate thermodynamic and fluid parameters of refrigeration systems*	100
UEERA0058	Plan refrigeration and air conditioning projects	60
UEERA0061	Produce HVAC/R system design drawings*	80
UEERE0013	Develop strategies to address environmental and sustainability issues in the energy sector	20
Group A: Imported and common elective units		Weighting Points
BSBOPS203	Deliver a service to customers	20
BSBINS501	Implement information and knowledge management systems	50
BSBSTR501	Establish innovative work environments	50
CPPBDN6106	Produce building information modelling for building design projects	100
ICTICT214	Operate application software packages	20
UEECD0035	Provide basic instruction in the use of electrotechnology apparatus	20
UEECO0002	Maintain documentation	20
UEECO0015	Provide quotations for installation or service jobs	20
UEECO0017	Source and purchase material/parts for installation or service jobs	20
Group B: Qualification elective units		Weighting Points
UEERA0005	Apply safety awareness and legal requirements for ammonia refrigerant	10
UEERA0006	Apply safety awareness and legal requirements for carbon dioxide refrigerant	10

UEERA0007	Apply safety awareness and legal requirements for flammable refrigerants	10
UEERA0036	Establish the basic operating conditions of vapour compression systems*	60
UEERA0081	Select refrigerant piping, accessories and associated controls*	40

Group C: Qualification elective units **Weighting Points**

UEECO0001	Estimate electrotechnology projects	40
UEERA0060	Produce HVAC/R control system diagrams*	40
UEERA0080	Select basic commercial refrigeration system equipment, components and accessories*	40
UEERA0082	Select residential air conditioning system equipment, components and accessories*	40
UEERE0015	Implement and monitor energy sector environmental and sustainable policies and procedures	20

Group D: Qualification elective units **Weighting Points**

UEECO0014	Prepare tender submissions for electrotechnology projects*	60
UEECD0048	Undertake computations in an energy sector environment	120
UEERA0014	Design ammonia refrigerated systems*	40
UEERA0015	Design carbon dioxide refrigerated systems*	40
UEERA0016	Design commercial refrigeration systems and select components*	80
UEERA0021	Design control systems for refrigeration or heating, ventilation and air conditioning systems*	80
UEERA0022	Design heating, ventilation and air conditioning (HVAC) systems and select components*	60
UEERA0023	Design hydrocarbon refrigerated systems*	40
UEERA0025	Design industrial refrigeration systems and select components*	80

UEERA0027	Design secondary refrigerant systems*	40
UEERA0039	Evaluate and report on building services energy management systems*	80
UEERA0040	Evaluate and report on the indoor air quality of buildings*	40
UEERE0066	Develop effective engineering strategies for energy reduction in buildings*	60
Group E: Qualification elective units		Weighting Points
UEECO0003	Manage contract variations	40
UEERA0017	Design complex air conditioning systems and select equipment*	120
UEERA0018	Design complex commercial refrigeration systems and select equipment*	40
UEERA0019	Design complex control systems for refrigeration or heating, ventilation, air conditioning systems*	80
UEERA0020	Design complex industrial refrigeration systems and select equipment*	40
UEERA0024	Design hydronic systems and select equipment*	80
UEERA0026	Design mechanical ventilation/exhaust systems and select equipment*	40
UEERA0029	Develop heat exchanger design specifications*	80
UEERA0030	Develop specifications and prepare drawings for HVAC/R projects*	60
UEERA0041	Evaluate new and alternative technologies applicable to electrotechnology applications	40

Qualification Mapping Information

This qualification replaces and is equivalent to UEE62411 Advanced Diploma of Engineering Technology - Air-conditioning and Refrigeration

UEE62520 Advanced Diploma of Air Conditioning and Refrigeration Engineering

Modification History

Release 4. Updated superseded elective unit.

Release 3. Updated superseded elective units.

Release 2. This minor update is the second release of this qualification in the UEE Electrotechnology Training Package.

Two units added to general electives.

Imported elective units updated.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification covers competencies to design and validate/evaluate refrigeration and air conditioning equipment and systems, manage risk, estimate and manage projects and provide technical advice/sales. It includes regulatory requirements for purchasing and handling refrigerants.

It develops competencies in the ethical and responsible application of mathematics, science, engineering techniques, standards and codes of practice, engineering design practices, supervision and management of physical, human and financial resources in refrigeration and air conditioning engineering.

Competency development activities in this qualification are subject to regulations directly related to licencing. A relevant contract of training through an apprenticeship or relevant employment may be required to enable the application of the required knowledge and skills to on the job work activities and environments.

Refrigerant Handling Licence:

The achievement of the qualification meets the training components for the full national Refrigerant Handling Licence which is required to work on refrigeration and air conditioning equipment that carries the risk of a fluorocarbon refrigerant being emitted while decanting the refrigerant or manufacturing, installing, commissioning, servicing, maintaining or decommissioning refrigeration and air conditioning equipment.

Refrigeration and Air Conditioning Occupational Licence:

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to refrigeration/air conditioning work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Electrical Occupation Licence:

The achievement of this qualification with the core restricted electrical units meet the electrical regulatory requirements for related restricted electrical work in most state/territories. This is required to work on electrical installations which are designed to operate at voltages greater than 50 volt (V) alternating current (a.c.) or 120 V direct current (d.c.).

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **2230 weighting points** comprising:

1980 core weighting points listed below; plus

250 general elective weighting points from the general elective units listed below.

Choose a total of **250 weighting points** elective units from the list below, of which between **0 and 120 weighting points** can be taken from Group A; and between **0 and 30 weighting points** can be taken from Group B; and between **0 and 60 weighting points** can be taken from Group C; and between **0 and 120 weighting points** can be taken from Group D; and between **120 and 250 weighting points** must be taken from Group E; or all electives units of **250 weighting points** can be taken from Group E.

Up to **120 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisites Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0003	Apply industry and community standards to engineering activities	20
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace	20

UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0016	Document and apply measures to control WHS risks associated with electrotechnology work*	20
UEECD0017	Establish and follow a competency development plan in an electrotechnology engineering discipline	120
UEECD0019	Fabricate, assemble and dismantle utilities industry components*	40
UEECD0020	Fix and secure electrotechnology equipment*	20
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0026	Manage risk in electrotechnology activities	60
UEECD0042	Solve problems in ELV single path circuits*	40
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications*	40
UEECS0033	Use engineering applications software on personal computers	40
UEERA0001	Analyse the operation of HVAC air and hydronic systems*	80
UEERA0002	Analyse the psychrometric performance of HVAC/R systems*	50
UEERA0004	Analyse vibration and noise in refrigeration and air conditioning systems*	80
UEERA0031	Diagnose and rectify faults in air conditioning and refrigeration control systems*	60
UEERA0034	Establish heat loads for commercial refrigeration and/or air conditioning applications*	80
UEERA0035	Establish the basic operating conditions of air conditioning systems*	20
UEERA0036	Establish the basic operating conditions of vapour compression systems*	60
UEERA0038	Establish the thermodynamic parameters of refrigeration and air conditioning systems*	80

UEERA0042	Evaluate thermodynamic and fluid parameters of refrigeration systems*	100
UEERA0044	Find and rectify faults in single phase motors and associated controls*	40
UEERA0045	Find and rectify faults in three phase motors and associated controls*	30
UEERA0050	Install refrigerant pipe work, flow controls and accessories*	60
UEERA0051	Install, commission, service and maintain air conditioning systems*	80
UEERA0052	Install, commission, service and maintain low temperature systems*	40
UEERA0053	Install, commission, service and maintain medium temperature systems*	60
UEERA0055	Manage refrigeration and air conditioning projects	40
UEERA0058	Plan refrigeration and air conditioning projects	60
UEERA0059	Prepare and connect refrigerant tubing and fittings*	40
UEERA0061	Produce HVAC/R system design drawings*	80
UEERA0062	Recover and charge refrigerants*	40
UEERA0079	Safely handle refrigerants and lubricants*	40
UEERA0081	Select refrigerant piping, accessories and associated controls*	40
UEERA0092	Solve problems in low voltage refrigeration and air conditioning circuits*	40
UEERA0094	Verify functionality and compliance of refrigeration and air conditioning installations*	40
UEERE0013	Develop strategies to address environmental and sustainability issues in the energy sector	20
UEERL0001	Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply*	20
UEERL0002	Attach cords, cables and plugs to electrical equipment for connection to 1000 V a.c. or 1500 V d.c.*	20

UEERL0004	Disconnect - reconnect electrical equipment connected to low voltage (LV) installation wiring*	60
UEERL0005	Locate and rectify faults in low voltage (LV) electrical equipment using set procedures*	20

Group A: Imported and common elective units **Weighting Points**

BSBLDR522	Manage people performance	70
BSBINS501	Implement information and knowledge management systems	50
BSBSTR501	Establish innovative work environments	50
BSBSTR502	Facilitate continuous improvement	60
BSBTWK502	Manage team effectiveness	60
CPCWHS1001	Prepare to work safely in the construction industry	10
HLTAID009	Provide cardiopulmonary resuscitation	10
MEM16006	Organise and communicate information*	20
MEM16008	Interact with computing technology*	20
MEM30031A	Operate computer-aided design (CAD) system to produce basic drawing elements	40
MEM30032A	Produce basic engineering drawings	80
MEM30033A	Use computer-aided design (CAD) to create and display 3-D models*	40

Group B: Qualification elective units **Weighting Points**

UEERA0005	Apply safety awareness and legal requirements for ammonia refrigerant	10
UEERA0006	Apply safety awareness and legal requirements for carbon dioxide refrigerant	10
UEERA0007	Apply safety awareness and legal requirements for flammable refrigerants	10
UEERA0046	Install and commission ammonia refrigeration systems, components and associated equipment*	20
UEERA0047	Install and commission carbon dioxide refrigeration	20

	systems, components and associated equipment*	
UEERA0048	Install and commission flammable refrigerant air conditioning and refrigeration systems*	20
UEERA0054	Maintain microbial control of refrigeration and air conditioning systems	20
UEERA0065	Repair and service ammonia refrigeration systems*	20
UEERA0066	Repair and service carbon dioxide refrigeration systems*	20
UEERA0067	Repair and service secondary refrigeration systems*	20
UEERA0068	Repair and service self-contained carbon dioxide refrigeration and heat pump systems*	20
UEERA0069	Resolve problems in beverage dispensers*	40
UEERA0070	Resolve problems in central plant air conditioning systems*	40
UEERA0071	Resolve problems in dairy refrigeration systems*	20
UEERA0072	Resolve problems in hydronic systems*	40
UEERA0073	Resolve problems in ice making systems*	20
UEERA0075	Resolve problems in post-mix refrigeration systems*	20
UEERA0076	Resolve problems in refrigerated beverage vending cabinets*	20
UEERA0077	Resolve problems in transport refrigeration systems*	20
UEERA0078	Resolve problems in ultra-low temperature refrigeration systems*	20
UEERA0084	Service and repair self-contained flammable refrigerants air conditioning and refrigeration systems*	20
UEERA0097	Install, commission, service and maintain variable refrigerant flow air conditioning systems*	40
UEERA0098	Inspect, test and repair fire and smoke control features of mechanical services systems*	80
Group C: Qualification elective units		Weighting Points
UEECO0001	Estimate electrotechnology projects	40

UEERA0060	Produce HVAC/R control system diagrams*	40
UEERA0080	Select basic commercial refrigeration system equipment, components and accessories*	40
UEERA0082	Select residential air conditioning system equipment, components and accessories*	40
UEERE0015	Implement and monitor energy sector environmental and sustainable policies and procedures	20

Group D: Qualification elective units

Weighting Points

UEECD0014	Develop design briefs for electrotechnology projects	40
UEECD0039	Provide solutions to basic engineering computational problems*	60
UEECO0014	Prepare tender submissions for electrotechnology projects*	60
UEERA0014	Design ammonia refrigerated systems*	40
UEERA0015	Design carbon dioxide refrigerated systems*	40
UEERA0016	Design commercial refrigeration systems and select components*	80
UEERA0021	Design control systems for refrigeration or heating, ventilation and air conditioning systems*	80
UEERA0022	Design heating, ventilation and air conditioning (HVAC) systems and select components*	60
UEERA0023	Design hydrocarbon refrigerated systems*	40
UEERA0025	Design industrial refrigeration systems and select components*	80
UEERA0027	Design secondary refrigerant systems*	40
UEERA0039	Evaluate and report on building services energy management systems*	80
UEERA0040	Evaluate and report on the indoor air quality of buildings*	40
UEERE0066	Develop effective engineering strategies for energy reduction in buildings*	60

Group E: Qualification elective units

Weighting Points

UEECO0003	Manage contract variations	40
UEERA0008	Audit HVAC/R control systems for compliance with regulations and standards*	60
UEERA0009	Audit energy use for commercial HVAC/R systems*	40
UEERA0017	Design complex air conditioning systems and select equipment*	120
UEERA0018	Design complex commercial refrigeration systems and select equipment*	40
UEERA0019	Design complex control systems for refrigeration or heating, ventilation, air conditioning systems*	80
UEERA0020	Design complex industrial refrigeration systems and select equipment*	40
UEERA0024	Design hydronic systems and select equipment*	80
UEERA0026	Design mechanical ventilation/exhaust systems and select equipment*	40
UEERA0029	Develop heat exchanger design specifications*	80
UEERA0030	Develop specifications and prepare drawings for HVAC/R projects*	60
UEERA0041	Evaluate new and alternative technologies applicable to electrotechnology applications	40

Qualification Mapping Information

UEE63020 Advanced Diploma of Electrical Systems Engineering

Modification History

Release 4. Updated superseded elective units.

Release 3. Updated superseded elective units.

Release 2. Two units added to general electives. Imported elective units updated.

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification cover competencies to develop, design and validate/evaluate, select, commission, maintain and diagnose faults/malfunctions on advanced electrical equipment and systems. It also provides skills to manage risk, estimate and manage projects and provide technical advice/sales.

It develops competencies in the ethical and responsible application of mathematics, science, engineering techniques, standards and codes of practice, engineering design practices, supervision and management of physical, human and financial resources in engineering.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

The entry requirement for this qualification is:

- UEE33020 Certificate III in Electrical Fitting
- or
- a current Electrical Fitter Occupational License or its equivalent issued in an applicable Australian state or territory.

Packaging Rules

A total of **1420 weighting points** comprising:

840 core weighting points listed below; plus

580 general elective weighting points from the general elective units listed below.

Choose a total of **580 weighting points** elective units from the list below, of which between **0 and 220 weighting points** can be taken from Group A; between **0 and 160 weighting points** can be taken from Group B; between **0 and 160 weighting points** can be taken from Group C;

between **0 and 160 weighting points** can be taken from Group D; and between **200 and 580 weighting points** can be taken from Group E (or all **580 elective weighting points** can be taken from Group E).

Up to **220 weighting points** of the general elective units Group A, may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UEE Electrotechnology Training Package Companion Volume Implementation Guide (CVIG), if not listed weighting points will be 10 points, unless directed from the Electrotechnology Industry Reference Committee (IRC).

There are units of competency within this qualification that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisites Companion Volume.

Where imported units are selected, care must be taken to ensure all pre-requisite units specified are complied with.

Core units		Weighting Points
UEECD0003	Apply industry and community standards to engineering activities	20
UEECD0004	Apply material science to solving electrotechnology engineering problems	60
UEECD0005	Apply physics to solving electrotechnology engineering problems	60
UEECD0010	Compile and produce an energy sector detailed report	60
UEECD0014	Develop design briefs for electrotechnology projects	40
UEECD0017	Establish and follow a competency development plan in an electrotechnology engineering discipline	120
UEECD0024	Implement and monitor energy sector WHS policies and procedures	20
UEECD0026	Manage risk in electrotechnology activities	60
UEECD0036	Provide engineering solutions for problems in complex multiple path circuits	60
UEECD0039	Provide solutions to basic engineering computational problems*	60
UEECD0056	Apply methods to maintain currency of industry developments	20

UEECD0059	Write specifications for electrical engineering projects	40
UEECS0033	Use engineering applications software on personal computers	40
UEEEL0015	Manage large electrical projects*	40
UEEEL0058	Plan large electrical projects*	60
UEEEL0062	Provide engineering solutions to problems in complex polyphase power circuits*	60
UEERE0013	Develop strategies to address environmental and sustainability issues in the energy sector	20

Group A: Imported and common elective units **Weighting Points**

BSBINS501	Implement information and knowledge management systems	50
BSBLDR522	Manage people performance	70

UEEEL0053	Maintain operation of electrical marine equipment and systems*	60
UEEEL0054	Maintain operation of electrical mining equipment and systems*	60
UEEEL0055	Overhaul and repair major switchgear and control gear*	60
UEEEL0056	Place and connect electrical coils*	40
UEEEL0061	Provide advice on the application of energy efficient lighting for ambient and aesthetic effect*	20
UEEEL0066	Rewind LV direct current machines*	60
UEEEL0067	Rewind single phase machines*	40
UEEEL0068	Rewind three phase low voltage induction machines*	60
UEEEL0069	Select and arrange equipment for special LV electrical installations*	60
UEEEL0074	Wind electrical coils*	40
UEEEL0076	Inspect, test and maintain emergency lighting systems*	20
UEEEL0075	Inspect, test and maintain emergency alarm systems and	20

	equipment*	
UEEEL0078	Install and commission whole current electricity meters*	20
UEEHA0004	Enter a classified hazardous area to undertake work related to electrical equipment	40
UEEHA0020	Conduct detailed inspection of electrical installations for hazardous areas*	40
UEEHA0022	Determine the explosion-protection requirements to meet a specified classified hazardous area*	40
UEEHA0026	Maintain equipment associated with hazardous areas*	60
UEEIC0002	Assemble, enter and verify operating instructions in microprocessor equipped devices*	20
UEEIC0011	Develop electrical integrated systems*	20
UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers*	60
UEEIC0024	Plan the electrical installation of integrated systems*	20
UEEIC0025	Provide solutions to extra-low voltage (ELV) electro-pneumatic control systems and drives*	60
UEEIC0038	Solve problems in density/level measurement components and systems*	40
UEEIC0039	Solve problems in flow measurement components and systems*	40
UEEIC0041	Solve problems in pressure measurement components and systems*	40
UEEIC0043	Solve problems in temperature measurement components and systems*	40
UEEIC0047	Use instrumentation drawings, specifications, standards and equipment manuals*	40
UEERA0035	Establish the basic operating conditions of air conditioning systems*	20
UEERA0036	Establish the basic operating conditions of vapour compression systems*	60
UEERA0059	Prepare and connect refrigerant tubing and fittings*	40

UETDRIS017	Perform high voltage field switching operation to a given schedule*	40
UETDRIS018	Perform low voltage field switching operation to a given schedule*	50
UETDRIS031	Maintain insulating oil*	40
UETDRIS032	Solve problems in network equipment*	80
UETDRIS033	Solve problems in network protection*	40
UETDRSB001	Perform substation switching operations to a given schedule*	50
UETDRSB010	Maintain capacitor bank equipment*	40

Group C: General elective units**Weighting Points**

UEECO0001	Estimate electrotechnology projects	40
UEEEL0007	Develop detailed electrical drawings*	60
UEEEL0032	Conduct electrical tests on HV electrical machines*	60
UEEEL0036	Design effective and efficient lighting for residential and commercial buildings*	20
UEEEL0040	Develop compliance policies and plans to conduct an electrical contracting business*	80
UEEEL0044	Diagnose and rectify faults in complex lift systems*	40
UEEEL0051	Investigate and report on electrical incidents and causes*	60
UEEEL0057	Plan electrical installations with a low voltage demand up to 400 A per phase*	40
UEEEL0059	Plan low voltage switchboard and control panel layouts*	40
UEEEL0060	Prepare quotations for the supply of effective and efficient lighting products for lighting projects*	20
UEEEL0063	Provide photometric data for illumination system design	60
UEEEL0064	Rewind HV three phase induction machines rated for voltages above 3.3 kV*	60
UEEEL0065	Rewind HV three phase induction machines rated for voltages to 3.3 kV*	60

UEEEL0070	Select effective and efficient light sources and luminaries for given locations and designs*	60
UEEEL0072	Set up and place LV electrical apparatus and associated circuits into service*	40
UEEHA0020	Conduct detailed inspection of electrical installations for hazardous areas*	40
UEEHA0023	Develop and manage periodic electrical inspection and maintenance programs for hazardous areas*	20
UEEHA0026	Maintain equipment associated with hazardous areas*	60
UEEHA0038	Conduct visual and close inspection of electrical installations for hazardous areas*	40
UEEIC0009	Develop an electrical integrated system interface for access through a touch screen*	20
UEEIC0012	Develop structured programs to control external devices*	40
UEEIC0014	Develop, enter and verify programs in supervisory control and data acquisition systems*	60
UEEIC0015	Develop, enter and verify word and analogue control programs for programmable logic controllers*	60
UEEIC0018	Diagnose and rectify faults in digital controls systems*	60
UEEIC0020	Fault find and repair analogue circuits and components in electronic control systems*	60
UEEIC0026	Provide solutions to fluid circuit operations*	60
UEEIC0027	Provide solutions to pneumatic-hydraulic system operations*	80
UEEIC0028	Provide solutions to problems in industrial control systems*	60
UEEIC0034	Set up industrial field control devices*	60
UEEIC0040	Solve problems in polyphase electronic power control circuits*	60
UEEIC0042	Solve problems in single phase electronic power control circuits*	60

Group D: General elective units

Weighting Points

UEECD0013	Develop and implement energy sector maintenance programs	60
UEECD0062	Write specifications for renewable energy engineering projects	40
UEECO0014	Prepare tender submissions for electrotechnology projects*	60
UEEEL0006	Develop detailed and complex drawings for electrical systems using CAD systems*	60
UEEEL0011	Evaluate performance of low voltage electrical apparatus*	40
UEEEL0035	Design effective and efficient lighting for public, open and sports areas*	20
UEEEL0037	Design electrical installations with a low voltage demand greater than 400 A per phase*	40
UEEHA0029	Plan electrical installations for hazardous areas*	20
UEEIC0001	Analyse complex electronic circuits controlling fluids	80
UEEIC0005	Configure and maintain industrial control system networks*	60
UEEIC0010	Develop and test code for microcontroller devices	60
UEEIC0016	Diagnose and rectify faults in a.c. motor drive systems*	60
UEEIC0017	Diagnose and rectify faults in d.c. motor drive systems*	60
UEEIC0019	Diagnose and rectify faults in servo drive systems*	60
UEERE0055	Conduct site survey for off-grid photovoltaic/generating set systems	40
UEERE0062	Design micro-hydro systems *	60
UEERE0064	Design renewable energy heating systems*	120
UEERE0065	Design wind energy systems*	60
UETDRIS026	Diagnose and resolve faults in electrical apparatus*	60
UETDRIS025	Diagnose and resolve faults in distribution systems*	60
UETDRIS027	Diagnose and resolve faults in transmission systems*	60

Group E: General elective units		Weighting Points
UEECD0001	Analyse materials for suitability in electrical equipment*	80
UEECD0002	Analyse static and dynamic parameters of electrical equipment	80
UEECD0012	Contribute to risk management in electrotechnology systems	20
UEECD0015	Develop engineering solutions to photonic system problems*	80
UEECD0037	Provide engineering solutions for uses of materials and thermodynamic effects	80
UEECD0049	Use advanced computational processes to provide solutions to energy sector engineering problems*	80
UEECO0003	Manage contract variations	40
UEEEEC0005	Assess electronic apparatus compliance	60
UEEEEC0011	Design and develop electronics/computer systems projects	40
UEEEEC0014	Design signal-conditioning sub-systems	80
UEEEEC0045	Modify digital signal processing (DSP) based sub-systems	80
UEEEL0038	Design switchboards rated for high fault levels (greater than 400 A)*	60
UEEEL0041	Develop engineering solution for synchronous machine and control problems*	60
UEEEL0042	Develop engineering solutions for d.c. machine and control problems*	60
UEEEL0043	Develop engineering solutions for induction machine and control problems*	60
UEEHA0008	Design gas detection systems	20
UEEHA0029	Plan electrical installations for hazardous areas*	20
UEEIC0006	Design and configure Human-Machine Interface (HMI) networks	60
UEEIC0007	Design and use advanced programming tools, PC networks and HMI Interfacing	120

UEEIC0008	Design electronic control systems*	60
UEEIC0032	Set up electronically controlled robotically operated complex systems*	80
UEERE0059	Design energy management controls for electrical installations in buildings*	80
UEERE0063	Design off-grid photovoltaic/generating set systems *	40
UEERE0066	Develop effective engineering strategies for energy reduction in buildings*	60
UEERE0067	Develop engineering solutions to renewable energy (RE) problems*	60

Qualification Mapping Information

This qualification replaces and is not equivalent to UEE63011 Advanced Diploma of Electrical Systems Engineering

Links

Companion Volume Implementation Guides are found in VETNet -

UEESS00187 Electrical - Install and commission whole current electricity meters Skill Set

Modification History

Release 2. Updated superseded imported unit.

Release 1. This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is not equivalent to UEESS00179 Electrical - Install and Set Up Interval Metering Skill Set.

The title has been changed.

The entry requirement has been amended.

UETDRRF004 Perform rescue from a live LV panel has been added.

This Skill Set replaces and is not equivalent to UEESS00179 Electrical - Install and Set Up Interval Metering Skill Set.

Description

This Skill Set covers the skills and knowledge required to install and set up electrical interval metering.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set already hold the following:

- a current 'Unrestricted Electrical Licence' issued in an Australian state or territory.

OR

- UEEEL0039 Design, install and verify compliance and functionality of general electrical installations

OR

- be completed concurrently with UEEEL0039 as part of an Electrical Trade course (final assessment of UEEEL0039 must be successfully completed before this skill set can be issued).

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units** of competency must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

UEEEL0078 Install and commission whole current electricity meters*

UETDRMP007 Perform rescue from a live low voltage panel*

Target Group

This Skill Set is intended for persons who are required to install and commission whole current electricity meters.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for installing and setting up interval metering.

Custom Content Section

Not applicable.

UEESS00188 RAC - Inspect, Test and Repair Fire and Smoke Control Features of Mechanical Services Systems

Modification History

Release 1. This is the first release of this Skill Set in the UEE Electrotechnology Training Package. This skill set replaces and is equivalent to UEESS00183 RAC - Inspect, Test and Repair Fire and Smoke Control Features of Mechanical Services Systems. UEERA0098 Inspect, test and repair fire and smoke control features of mechanical services systems replaces UEERA0096.

Description

This Skill Set is for persons who are required to inspect, test and repair all safety measures relating to fire and smoke control features of mechanical services systems.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant refrigeration and air conditioning Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set already hold the following qualification:

- Certificate III in Air Conditioning and Refrigeration.

Licensing/Regulatory Information

Competency development activities in this Skill Set are subject to regulations directly related to licensing.

Additional licences, permits and/or other conditions may apply in some jurisdictions subject to regulations related to fire and smoke control features of mechanical services systems work.

Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Permits may also be required for some work environments, such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

Skill Set Requirements

A total of 3 **units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of

competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

UEECD0007	Apply work health and safety regulations, codes and practices in the workplace
UEERA0051	Install, commission, service and maintain air conditioning systems*
UEERA0098	Inspect, test and repair fire and smoke control features of mechanical services systems*

Target Group

This Skill Set is intended for persons who are required to inspect, test and repair fire and smoke control features of mechanical services systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for inspecting, testing and repairing fire and smoke control features of mechanical services systems.

Custom Content Section

Not applicable.

UEESS00189 Rail Signalling Constructor Skill Set

Modification History

Release 1. This is the first release of this Skill Set in the Electrotechnology Training Package.

Description

This Skill Set covers the skills and knowledge required to install rail signalling equipment in the rail signalling sector.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Units in this Skill Set include prerequisite requirements that must be met.

Licensing/Regulatory Information

Persons achieving this Skill Set will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rules and/or guidelines.

Skill Set Requirements

A total of **4 units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

UEERS0021*	Assemble and wire electrical rail signalling equipment
UEERS0024*	Install and maintain rail track circuit leads and bonds
UEERS0036*	Repair rail signalling power and control cables
UEERS0037*	Test copper rail signalling cables

Target Group

This Skill Set is intended for persons who are required to install rail signalling equipment.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements to install rail signalling equipment.

Custom Content Section

Not applicable.

UEESS00190 Electrical - Rail Signalling Principles Skill Set

Modification History

Release 1. This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

Description

This Skill Set covers the skills and knowledge required to apply rail signalling principles in rail signalling sector.

Pathways Information

The unit of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable

Skill Set Requirements

A total of **1 unit of competency** must be attained.

UEERS0020 Apply rail signalling principles

Target Group

This Skill Set is intended for persons who are required to install and maintain rail signalling equipment.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements to apply rail signalling principles.

Custom Content Section

Not applicable.

UEESS00191 Grid-connected Battery Storage Systems Designer-Installer Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package

Description

This Skill Set is for persons who are required to design and install grid-connected battery storage systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

It is essential that persons undertaking this Skill Set already hold a current unrestricted electrical licence issued in an Australian state or territory.

Skill Set Requirements

A total of **4 units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

UEERE0054	Conduct site survey for grid-connected photovoltaic and battery storage systems
UEERE0060	Design grid-connected battery storage systems *
UEERE0077	Install battery storage equipment power conversion equipment to grid *
UEERE0078	Install battery storage to power conversion equipment *

Target Group

This Skill Set is intended for persons who are required to design and install grid-connected battery storage systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for a designer and installer of grid-connected battery storage systems.

Custom Content Section

Not applicable.

UEESS00192 Grid-connected Battery Storage Systems Installer Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

Description

This Skill Set is for persons who are required to install grid-connected battery storage systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

It is essential that persons undertaking this Skill Set already hold a current unrestricted electrical licence issued in an Australian state or territory.

Skill Set Requirements

A total of **4 units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

RIIWHS204E	Work safely at heights
UEERE0049	Apply safe work practices in the rooftop solar industry
UEERE0077	Install battery storage equipment power conversion equipment to grid *
UEERE0078	Install battery storage to power conversion equipment *

Target Group

This Skill Set is intended for persons who are required to install grid-connected battery storage

systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for an installer of grid-connected photovoltaic systems.

Custom Content Section

Not applicable.

UEESS00193 Grid-connected Photovoltaic and Battery Storage Systems Designer Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces but is not equivalent to UEESS00159 Sustainable - Designer of Grid Connected Photovoltaic Systems Skill Set.

Description

This Skill Set is for persons who are required to design grid-connected photovoltaic and battery storage systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

The following **4 units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

RIIWH5204E	Work safely at heights
UEERE0054	Conduct site survey for photovoltaic and battery storage systems
UEERE0060	Design grid-connected battery storage systems *
UEERE0061	Design grid-connected photovoltaic power supply systems *

Target Group

This Skill Set is intended for persons who are required to design grid-connected photovoltaic and battery storage systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for designers of grid-connected photovoltaic and battery storage systems.

Custom Content Section

Not applicable.

UEESS00194 Grid-connected Photovoltaic Systems Designer-Installer Skill Set

Modification History

Release 1: This Skill Set replaces but is not equivalent to UEESS00185 Sustainable - Designer-Installer of Grid Connected Photovoltaic Systems.

Two units added to Skill Set Requirements.

Description

This Skill Set is for persons who are required to design and install grid-connected photovoltaic systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

It is essential that persons undertaking this Skill Set already hold a current unrestricted electrical licence issued in an Australian state or territory.

Skill Set Requirements

A total of **6 units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

RIIWH5204E	Work safely at heights
UEERE0049	Apply safe work practices in the rooftop solar industry
UEERE0054	Conduct site survey for grid-connected photovoltaic and battery storage systems
UEERE0061	Design grid-connected photovoltaic power supply systems*

UEERE0080 Install photovoltaic power conversion equipment to grid*

UEERE0081 Install photovoltaic systems to power conversion equipment*

Target Group

This Skill Set is intended for persons who are required to design and install grid-connected photovoltaic system.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for a designer and installer of grid-connected photovoltaic systems.

Custom Content Section

Not applicable.

UEESS00195 Grid-connected Photovoltaic Systems Installer Skill Set

Modification History

Release 1: This Skill Set replaces but is not equivalent to UEESS00186 Sustainable - Installer of Grid Connected Photovoltaic Systems. Modifications include:

- Skill set requirement changed.

Description

This Skill Set is for persons who are required to install grid-connected photovoltaic systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

It is essential that persons undertaking this Skill Set already hold a current unrestricted electrical licence issued in an Australian state or territory.

Skill Set Requirements

A total of **4 units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

RIIWHS204E	Work safely at heights
UEERE0049	Apply safe work practices in the rooftop solar industry
UEERE0080	Install photovoltaic power conversion equipment to grid *
UEERE0081	Install photovoltaic systems to power conversion equipment *

Target Group

This Skill Set is intended for persons who are required to install grid-connected photovoltaic systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for an installer of grid-connected photovoltaic systems.

Custom Content Section

Not applicable.

UEESS00196 Grid-connected Renewable Energy System Site Surveyor Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

Description

This Skill Set is for persons who are required to conduct site survey for grid connected renewable energy systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units of competency** must be attained.

RIIWHS204E	Work safely at heights
UEERE0054	Conduct site survey for grid-connected photovoltaic and battery storage systems

Target Group

This Skill Set is intended for persons who are required to conduct site survey for grid connected renewable energy systems

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements to conduct site surveys for grid connected renewable energy systems.

Custom Content Section

Not applicable.

UEESS00197 Grid-connected Renewable Energy Systems Inspector Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

Description

This Skill Set is for persons who are required to undertake compliance inspections of grid connected renewable energy systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

It is essential that persons undertaking this Skill Set already hold a current unrestricted electrical licence issued in an Australian state or territory.

Skill Set Requirements

The following **2 units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

RIIWHS204E Work safely at heights

UEERE0072 Inspect grid connected renewable energy systems *

Target Group

This Skill Set is intended for persons who are required to undertake compliance inspections of grid connected renewable energy systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements to undertake compliance inspections of grid connected renewable energy systems.

Custom Content Section

Not applicable.

UEESS00198 Hybrid Photovoltaic, Wind and Battery Storage Systems Installer Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

Description

This Skill Set is for persons who are required to install hybrid photovoltaic, wind and battery storage systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

It is essential that persons undertaking this Skill Set already hold a current unrestricted electrical licence issued in an Australian state or territory.

Skill Set Requirements

A total of **6 units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

RIIWHS204E	Work safely at heights
UEERE0049	Apply safe work practices in the rooftop solar industry
UEERE0076	Install and maintain wind energy systems to power conversion equipment *
UEERE0078	Install battery storage to power conversion equipment *
UEERE0079	Install off-grid power conversion equipment to electrical installation *
UEERE0081	Install photovoltaic systems to power conversion equipment *

Target Group

This Skill Set is intended for persons who are required to install hybrid photovoltaic, wind and battery storage systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for installers of hybrid photovoltaic, wind and battery storage systems.

Custom Content Section

Not applicable.

UEESS00199 Micro-hydro Systems Designer Installer Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

Description

This Skill Set is for persons who are required to design and install micro-hydro energy systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

It is essential that persons undertaking this Skill Set already hold a current unrestricted electrical licence issued in an Australian state or territory.

Skill Set Requirements

A total of **4 units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

UEERE0055	Conduct site survey for off-grid photovoltaic/generating set systems
UEERE0062	Design micro-hydro systems *
UEERE0075	Install and maintain micro hydro energy systems to power conversion equipment *
UEERE0079	Install off-grid power conversion equipment to electrical installation *

Target Group

This Skill Set is intended for persons who are required to design and install micro-hydro energy

systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for a designer and installer of micro-hydro energy systems.

Custom Content Section

Not applicable.

UEESS00200 Micro-hydro Systems Designer Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

Description

This Skill Set is for persons who are required to design micro-hydro renewable energy systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

The following **2 units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

UEERE0055 Conduct site survey for off-grid photovoltaic/generating set systems

UEERE0062 Design micro-hydro systems *

Target Group

This Skill Set is intended for persons who are required to design micro-hydro renewable energy systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for designers of micro-hydro renewable energy systems.

Custom Content Section

Not applicable.

UEESS00201 Micro-hydro Systems Installer Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package

Description

This Skill Set is for persons who are required to install micro-hydro energy systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

It is essential that persons undertaking this Skill Set already hold a current unrestricted electrical licence issued in an Australian state or territory.

Skill Set Requirements

The following **2 units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

UEERE0075 Install and maintain micro hydro energy systems to power conversion equipment *

UEERE0079 Install off-grid power conversion equipment to electrical installation *

Target Group

This Skill Set is intended for persons who are required to install micro-hydro energy systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for installers of micro-hydro energy systems.

Custom Content Section

Not applicable.

UEESS00202 Micro-grid Renewable Energy Systems Inspector Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

Description

This Skill Set is for persons who are required to undertake compliance inspections of micro-grid renewable energy systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

It is essential that persons undertaking this Skill Set already hold a current unrestricted electrical licence issued in an Australian state or territory.

Skill Set Requirements

The following **2 units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

RIIWHS204E	Work safely at heights
UEERE0073	Inspect microgrid renewable energy systems *

Target Group

This Skill Set is intended for persons who are required to undertake compliance inspections of micro-grid renewable energy systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for micro-grid renewable energy systems compliance inspectors.

Custom Content Section

Not applicable.

UEESS00203 Micro-grid Systems Design Coordinator Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

Description

This Skill Set is for persons who are required to coordinate site survey for, and design of, micro-grid renewable energy systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

The following **2 units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

RIIWHS204E Work safely at heights

UEERE0057 Coordinate the design of micro-grid renewable energy systems *

Target Group

This Skill Set is intended for persons who are required to coordinate site survey for, and design of, micro-grid renewable energy systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry

requirements to coordinate site survey for, and design of, micro-grid renewable energy systems.

Custom Content Section

Not applicable.

UEESS00204 Micro-grid Systems Installation and Maintenance Coordinator Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

Description

This Skill Set is for persons who are required to coordinate the installation, fault finding, repair and maintenance of micro-grid systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

It is essential that persons undertaking this Skill Set already hold a current unrestricted electrical licence issued in an Australian state or territory.

Skill Set Requirements

A total of **2 units of competency** must be attained.

RIIWHS204E Work safely at heights

UEERE0058 Coordinate the installation, fault finding and repair of micro grid systems
*

Target Group

This Skill Set is intended for persons who are required to coordinate the installation, fault finding, repair and maintenance of micro-grid systems

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for coordinators of the installation, fault finding, repair and maintenance of

micro-grid systems.

Custom Content Section

Not applicable.

UEESS00205 Off-grid Photovoltaic/Generating Set Systems Designer-Installer Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

Description

This Skill Set is for persons who are required to design and install off-grid photovoltaic/generating set systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

It is essential that persons undertaking this Skill Set already hold a current unrestricted electrical licence issued in an Australian state or territory.

Skill Set Requirements

A total of **7 units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

RIIWHS204E	Work safely at heights
UEERE0049	Apply safe work practices in the rooftop solar industry
UEERE0055	Conduct site survey for off-grid photovoltaic/generating set systems
UEERE0063	Design off-grid photovoltaic/generating set systems *
UEERE0078	Install battery storage to power conversion equipment *
UEERE0079	Install off-grid power conversion equipment to electrical installation *

UEERE0081 Install photovoltaic systems to power conversion equipment *

Target Group

This Skill Set is intended for persons who are required to design and install off-grid photovoltaic/generating set systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for a designer and installer of off-grid photovoltaic/generating set systems.

Custom Content Section

Not applicable.

UEESS00206 Off-grid Photovoltaic/Generating Set Systems Installer Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

Description

This Skill Set is for persons who are required to install off-grid photovoltaic/generating set systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

It is essential that persons undertaking this Skill Set already hold a current unrestricted electrical licence issued in an Australian state or territory.

Skill Set Requirements

The following **5 units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

RIIWHS204E	Work safely at heights
UEERE0049	Apply safe work practices in the rooftop solar industry
UEERE0078	Install battery storage to power conversion equipment *
UEERE0079	Install off-grid power conversion equipment to electrical installation *
UEERE0081	Install photovoltaic systems to power conversion equipment *

Target Group

This Skill Set is intended for persons who are required to install off-grid photovoltaic/generating set systems

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for installers of off-grid photovoltaic/generating set systems.

Custom Content Section

Not applicable.

UEESS00207 Off-grid Photovoltaic Generating Set Systems Designer Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

Description

This Skill Set is for persons who are required to design off-grid photovoltaic/generating set systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable

Skill Set Requirements

The following **3 units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

RIIWH5204E	Work safely at heights
UEERE0055	Conduct site survey for off-grid photovoltaic/generating set systems
UEERE0063	Design off-grid photovoltaic/generating set systems *

Target Group

This Skill Set is intended for persons who are required to design off-grid photovoltaic/generating set systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements to design off-grid photovoltaic/generating set systems.

Custom Content Section

Not applicable.

UEESS00208 Off-grid Renewable Energy System Site Surveyor Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

Description

This Skill Set is for persons who are required to conduct site survey for off-grid renewable energy systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units of competency** must be attained.

RIIWH204E Work safely at heights

UEERE0055 Conduct site survey for off-grid photovoltaic/generating set systems

Target Group

This Skill Set is intended for persons who are required to conduct site survey for off-grid renewable energy systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements to conduct site survey for off-grid renewable energy systems.

Custom Content Section

Not applicable.

UEESS00209 Off-grid Renewable Energy Systems Inspector Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

Description

This Skill Set is for persons who are required to undertake compliance inspections of off-grid renewable energy systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

It is essential that persons undertaking this Skill Set already hold a current unrestricted electrical licence issued in an Australian state or territory.

Skill Set Requirements

The following **2 units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

RIIWHS204E	Work safely at heights
UEERE0074	Inspect off-grid renewable energy systems *

Target Group

This Skill Set is intended for persons who are required to undertake compliance inspections of off-grid renewable energy systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for compliance inspections of off-grid renewable energy systems.

Custom Content Section

Not applicable.

UEESS00210 Sustainable - Electrical Installations Sustainability Strategies Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00136 Sustainable - Electrical Installations Sustainability Strategies. Modifications include:

- Title updated
- Unit requirements amended.

Description

This Skill Set is for persons responsible for developing strategies to address greenhouse gases and sustainability issues for residential, commercial and industrial electrical installations.

Pathways Information

The unit of competency in this Skill Set can contribute to the completion of relevant Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

It is essential that persons undertaking this Skill Set must already hold a current unrestricted electrical licence issued in an Australian state or territory.

Skill Set Requirements

A total of **1 unit of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

UEERE0068 Develop strategies to address sustainability issues for electrical installations *

Target Group

This Skill Set is intended for persons who are required to develop electrical installation sustainability strategies.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for electrical installations sustainability strategies.

Custom Content Section

Not applicable.

UEESS00211 Sustainable - Energy Assessment of Commercial Facilities Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is not equivalent to UEESS00161 Sustainable - Energy assessment of commercial facilities. Modifications include:

- Title updated
- Unit requirements amended.

Description

This Skill Set is for persons who are required to undertake an energy assessment of commercial facilities.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

It is essential that persons undertaking this Skill Set already hold a current unrestricted electrical licence issued in an Australian state or territory.

Skill Set Requirements

A total of **3 units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

CPPHES4005	Assess household energy use and efficiency improvements
UEERE0052	Assess energy loads and uses for energy efficiency in commercial facilities *
UEERE0068	Develop strategies to address sustainability issues for electrical

installations *

Target Group

This Skill Set is intended for persons who are required to undertake an energy assessment of commercial facilities.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for energy assessment of commercial facilities.

Custom Content Section

Not applicable.

UEESS00212 Sustainable - Energy Assessment of Industrial Properties and Enterprises Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is not equivalent to UEESS00162 Sustainable - Energy Assessment of industrial properties and enterprises. Modifications include:

- Title updated
- Unit requirements amended.

Description

This Skill Set is for persons who are required to undertake energy assessments of industrial properties and enterprises.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

It is essential that persons undertaking this Skill Set already hold a current unrestricted electrical licence issued in an Australian state or territory.

Skill Set Requirements

A total of **3 units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

CPPHES4005	Assess household energy use and efficiency improvements
UEERE0053	Assess energy loads and uses for energy efficiency in industrial properties and enterprises *
UEERE0068	Develop strategies to address sustainability issues for electrical

installations *

Target Group

This Skill Set is intended for persons who are required to undertake energy assessments of industrial properties and enterprises.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for energy assessment of industrial properties and enterprises.

Custom Content Section

Not applicable.

UEESS00213 Sustainable - Energy Assessment of Residential, Office and Retail Premises Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is not equivalent to UEESS00163 Sustainable - Energy assessment of residential, office and retail premises. Modifications include:

- Title updated
- Unit requirements amended.

Description

This Skill Set is for persons who are required to undertake energy assessment of residential, office and retail premises.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

It is essential that persons undertaking this Skill Set already hold a current unrestricted electrical licence issued in an Australian state or territory.

Skill Set Requirements

A total of **2 units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

CPPHES4005 Assess household energy use and efficiency improvements

UEERE0068 Develop strategies to address sustainability issues for electrical installations *

Target Group

This Skill Set is intended for persons who are required to undertake energy assessment of residential, office and retail premises.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for energy assessment of residential, office and retail premises

Custom Content Section

Not applicable.

UEESS00214 Sustainable - Energy Efficiency Systems Designer Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00165 Sustainable - Energy Efficiency Systems Designer. Modifications include:

- Title updated
- Unit requirements updated.

Description

This Skill Set is for persons who are required to design energy efficiency systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

It is essential that persons undertaking this Skill Set already hold a Degree in Electrical Engineering, an Advanced Diploma or Diploma of Electrical Engineering or an electrical trade qualification from the UEE Electrotechnology Training Package or equivalent.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **4 units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

UEECD0012	Contribute to risk management in electrotechnology systems
UEECD0041	Solve electrotechnical engineering problems
UEEEL0011	Evaluate performance of low voltage electrical apparatus *

UEERE0059 Design energy management controls for electrical installations in buildings
*

Target Group

This Skill Set is intended for persons who are required to design energy efficiency systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for a designer of energy efficient systems.

Custom Content Section

Not applicable.

UEESS00215 Sustainable - Energy Efficiency Systems Developer Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00166 Sustainable - Energy Efficiency Systems Developer. Modifications include:

- Title updated
- Unit requirements amended.

Description

This Skill Set is for persons who are required to develop energy efficiency systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

It is essential that persons undertaking this Skill Set already hold a Degree in Electrical Engineering, an Advanced Diploma or Diploma of Electrical Engineering or an electrical trade qualification from the UEE Electrotechnology Training Package or equivalent.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **7 units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

UEECD0010	Compile and produce an energy sector detailed report
UEECD0012	Contribute to risk management in electrotechnology systems
UEECD0041	Solve electrotechnical engineering problems

UEEEL0011	Evaluate performance of low voltage electrical apparatus *
UEERE0013	Develop strategies to address environmental and sustainability issues in the energy sector
UEERE0059	Design energy management controls for electrical installations in buildings *
UEERE0066	Develop effective engineering strategies for energy reduction in buildings

Target Group

This Skill Set is intended for persons who are required to develop energy efficiency systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for an energy efficiency systems developer.

Custom Content Section

Not applicable.

UEESS00216 Sustainable - Identify Energy Efficiency Strategies Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00167 Sustainable - Identify Energy Efficiency Strategies. Modifications include:

- Title updated
- Unit requirements updated.

Description

This Skill Set is for persons who are required to identify energy efficiency strategies.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

It is essential that persons undertaking this Skill Set already hold a Degree in Electrical Engineering, an Advanced Diploma or Diploma of Electrical Engineering or an electrical trade qualification from the UEE Electrotechnology Training Package or equivalent.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **4 units of competency** must be attained.

UEECD0010	Compile and produce an energy sector detailed report
UEECD0012	Contribute to risk management in electrotechnology systems
UEERE0013	Develop strategies to address environmental and sustainability issues in the energy sector
UEERE0066	Develop effective engineering strategies for energy reduction in buildings

Target Group

This Skill Set is intended for persons who are required to identify energy efficiency strategies.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements to identify energy efficiency strategies.

Custom Content Section

Not applicable.

UEESS00217 Wind Energy Systems Designer-Installer Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

Description

This Skill Set is for persons who are required to design and install wind energy systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

It is essential that persons undertaking this Skill Set already hold a current unrestricted electrical licence issued in an Australian state or territory.

Skill Set Requirements

A total of **5 units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

RIIWHS204E	Work safely at heights
UEERE0055	Conduct site survey for off-grid photovoltaic/generating set systems
UEERE0065	Design wind energy systems *
UEERE0076	Install and maintain wind energy systems to power conversion equipment *
UEERE0079	Install off-grid power conversion equipment to electrical installation *

Target Group

This Skill Set is intended for persons who are required to design and install wind energy systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for a designer and installer of wind energy systems.

Custom Content Section

Not applicable.

UEESS00218 Wind Energy Systems Designer Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

Description

This Skill Set is for persons who are required to design wind energy renewable energy systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable

Skill Set Requirements

The following **2 units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

UEERE0055 Conduct site survey for off-grid photovoltaic/generating set systems

UEERE0065 Design wind energy systems *

Target Group

This Skill Set is intended for persons who are required to design wind energy renewable energy systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for designers of wind energy renewable energy systems.

Custom Content Section

Not applicable.

UEESS00219 Wind Energy Systems Installer Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

Description

This Skill Set is for persons who are required to install wind energy renewable energy systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

It is essential that persons undertaking this Skill Set already hold a current unrestricted electrical licence issued in an Australian state or territory.

Skill Set Requirements

The following **3 units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

RIIWHS204E	Work safely at heights
UEERE0076	Install and maintain wind energy systems to power conversion equipment *
UEERE0079	Install off-grid power conversion equipment to electrical installation *

Target Group

This Skill Set is intended for persons who are required to install wind energy renewable energy systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for installers of wind energy renewable energy systems.

UEEAS0001 Assemble electronic components

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to assemble electronic components.

It includes preparing and assembling electronic apparatus. It also includes qualify checking of assembled components.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Assembly

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to assemble electronic components

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied
- 1.2 WHS/OHS hazards are identified, risks are assessed and control measures are implemented for work preparation

- 1.3 Assembling of electronic components work instructions are obtained and applied
 - 1.4 Advice is sought from work supervisor to ensure work is coordinated effectively with others
 - 1.5 Materials required for work are obtained in accordance with workplace procedures
 - 1.6 Tools, equipment and testing devices needed to carry out work are obtained and checked for correct operation and safety
- 2 Assemble electronic components**
- 2.1 WHS/OHS risk control measures and workplace procedures are followed
 - 2.2 Circuits are checked and isolated in accordance with WHS/OHS requirements and workplace procedures
 - 2.3 Components are placed and interconnections made in accordance with drawings or diagrams, industry standards and workplace procedures
 - 2.4 Work is completed in accordance within timeframe, environment and work instructions
- 3 Check quality of assembled components**
- 3.1 WHS/OHS risk control measures and workplace procedures for work inspection and testing are followed
 - 3.2 Quality of assembled component is inspected and checked in accordance with work instruction and relevant industry standards
 - 3.3 Problem-solving techniques are used where faulty component/s are identified and corrective actions completed in accordance with workplace procedures
 - 3.4 Reporting is completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Assembling electronic components must include at least two different electronic apparatus consisting of the following:

- printed circuit board
- plated through hole component or sub-system
- surface-mount component or sub-system

Unit Mapping Information

This unit replaces and is equivalent to UEENEEA101A Assemble electronic components.

Links

Companion Volume implementation guides are found in VETNet - -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEEAS0001 Assemble electronic components

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/ occupational health and safety (OHS) requirements, including:
 - job safety assessments or risk mitigation processes
 - safe work method statements (SWMS)
- coordinating work with others
- checking and isolating circuits
- assembling electronic components/apparatus, including:
 - identifying and selecting tools, equipment and testing devices
 - identifying and applying work instructions, relevant workplace procedures, industry standards, codes of practice and regulations for electronic component assembly
 - selecting and placing components in accordance with drawings or diagrams
 - making connection without damaging components
 - adhering to quality workplace procedures and instructions
- verifying quality of assembled apparatus and connection of components
- applying problem solving techniques in accordance with workplace procedures
- completing required reporting.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- identification of surface mount components
- requirements of standard with respect to surface mount, including soldering
- post solder inspection
- ball grid arrays
- identification of surface mount components including ball grid arrays

- requirement of standards with respect to soldering
- post-solder inspection
- electronic components, apparatus and circuits
- interconnections requirements
- relevant industry standards
- reporting requirements
- relevant job safety assessments or risk mitigation processes
- relevant testing devices and inspection requirements
- relevant WHS/OHS legislated requirements
- requisition procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, relevant industry standards, codes of practice and operation manuals.

UEEAS0002 Conduct quality and functional tests on assembled electronic apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to conduct quality and functional tests on assembled electronic apparatus.

It includes working safely with electricity, testing device set-up, following inspection and testing procedures, interpreting and reporting testing and inspection results, and making recommendations for dealing with defects.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Assembly

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to conduct inspection and testing

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied

- 1.2 WHS/OHS risk control measures for work preparation are followed
 - 1.3 Scope of apparatus functions and quality requirements are identified, obtained and applied
 - 1.4 Testing processes and workplace procedures are reviewed and testing equipment checked for correct operation and safety
 - 1.5 Apparatus inspection and testing is coordinated with others involved in the work to ensure work schedules are met and safety measures are followed
- 2 Conduct apparatus testing**
- 2.1 WHS/OHS risk control work measures and procedures are followed
 - 2.2 Need to inspect, test or measure live work is determined in accordance with WHS/OHS and workplace procedures
 - 2.3 Apparatus is checked and isolated in accordance with WHS/OHS and workplace procedures
 - 2.4 Inspection and testing are conducted in accordance with relevant industry standards, principles and technology of electrical measurement
 - 2.5 Test results are interpreted within the scope of required functionality and quality
- 3 Conduct apparatus inspection**
- 3.1 WHS/OHS risk control work measures and procedures are followed
 - 3.2 Apparatus is checked and isolated in accordance with WHS/OHS and workplace procedures
 - 3.3 Apparatus is inspected for quality in accordance with workplace procedures and relevant industry standards
 - 3.4 Work is completed in acceptable timeframe, environment and workplace conditions
- 4 Report on apparatus inspection and testing**
- 4.1 Recommendations for repairs to defects are reported within the scope of workplace procedures
 - 4.2 Report forms/data sheets on inspection and testing are completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEA105A Conduct quality and functional tests on assembled electronic apparatus.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEEAS0002 Conduct quality and functional tests on assembled electronic apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements, including using risk control measures
- checking and isolating apparatus
- conducting apparatus inspection and testing
- following job specifications/scope
- identifying visual defects
- interpreting test results
- preparing to conduct inspection and testing
- recommending appropriate actions for dealing with defect apparatus
- reporting on apparatus inspection and testing
- reporting test results
- selecting and using testing and measuring devices correctly
- testing and measuring live work.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant industry standards
- relevant manufacturer specifications and operating instructions
- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace quality, policies and procedures
- relevant verification procedures
- test equipment
- testing, including:

- checklists
- interpreting test results within given parameters
- requirements
- routine testing procedures
- quality inspection, including:
 - checklists
 - interpreting test results within given parameters
 - requirements
 - routine testing procedures
- non-compliance reporting.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to conducting functional and quality tests on assembled electronic apparatus
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEEAS0003 Modify electronic sub-assemblies

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to modify electronic sub-assemblies.

It includes working safely, checking components against job specifications, testing and following quality procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEEAS0001 Assemble electronic components

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Assembly

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to modify electronic sub-assemblies

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied
- 1.2 WHS/OHS risk control measures for work preparation are followed

- 1.3 Scope of rework is determined from documentation or from work supervisor
 - 1.4 Re-work of sub-assemblies is coordinated with others involved in the work to ensure work schedules are met and safety measures are followed
 - 1.5 Sources of materials required for work are in accordance with workplace procedures
 - 1.6 Tools and equipment required for re-work are selected for their effectiveness and checked for correct operation and safety
- 2 Modify sub-assemblies**
- 2.1 WHS/OHS risk control work measures and procedures are followed
 - 2.2 Need to inspect, test and measure live work is determined in accordance with WHS/OHS requirements and workplace procedures
 - 2.3 Circuits are checked and isolated in accordance with WHS/OHS requirements and workplace procedures
 - 2.4 Components are disconnected and reconnected in accordance with relevant industry and technology of connection methods used
 - 2.5 Work is carried out in accordance with quality procedures and workplace/industry standards
 - 2.6 Re-work of sub-assemblies is completed in accordance with timeframes and environment and workplace conditions
- 3 Check quality of modified sub-assemblies**
- 3.1 WHS/OHS risk control measures for work completion are followed
 - 3.2 Quality of re-work is checked in accordance with workplace/industry standards
 - 3.3 Functional tests on re-worked sub-assemblies are carried out in accordance with workplace procedures
 - 3.4 Actions are taken to rectify defects within the scope of workplace procedures
 - 3.5 Report forms/data sheets on re-work of sub-assemblies are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEA104A Modify electronic sub assemblies.

Assessment Requirements for UEEAS0003 Modify electronic sub-assemblies

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- adhering to quality procedures
- applying relevant work health and safety/occupational health and safety (WHS/OHS) requirements, including using risk control measures
- carrying out functional tests
- checking and isolating circuits
- checking quality of modified sub-assemblies
- completing re-work in acceptable timeframe, environment and workplace conditions
- completing workplace reports/data sheets
- disconnecting and reconnecting components
- determining materials for work
- following job specifications
- inspecting, testing and measuring live work
- modifying sub-assemblies
- preparing to modify sub-assemblies
- rectifying defects
- selecting tools and equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- quality management system
- relevant manufacturer specifications and operating instructions
- relevant materials, tools and equipment
- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace quality, instructions, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to re-working electronic sub-assemblies
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEEAS0004 Select electronic components for assembly

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to select electronic components for assembly from job specifications.

It includes preparing, selecting electronic components for assembly, and completing workplace report.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Assembly

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare electronic components

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied
- 1.2 Work instructions are obtained and applied

- | | | |
|---------------------------------------|------------|---|
| | 1.3 | Advice is sought from supervisor to ensure work is coordinated effectively with others |
| | 1.4 | Materials required for work are obtained in accordance with workplace procedures |
| | 1.5 | Tools, equipment and testing devices needed to carry out work are obtained and checked for correct operation and safety |
| 2 Select electronic components | 2.1 | WHS/OHS risk control measures and workplace procedures are followed |
| | 2.2 | Electronic components are selected, sorted and placed in accordance with work instructions |
| | 2.3 | Problem-solving techniques are used to resolve issues with supply of component in accordance with workplace procedures |
| | 2.4 | Quality checks of components are in accordance with work instructions and relevant industry standards |
| | 2.5 | Work is completed in acceptable timeframe given environment and workplace conditions |
| 3 Complete work report | 3.1 | WHS/OHS risk control measures and workplace procedures for work completion are followed |
| | 3.2 | Workplace report/s on component/s are completed in accordance with work instructions and workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Selecting components for assembly must include at least two different electronic

- a chassis
- printed circuit board

apparatus. These apparatuses must consist of the following basic features:

- adjustment components and interconnections

Unit Mapping Information

This unit replaces and is equivalent to UEENEEA102A Select electronic components for assembly.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEEAS0004 Select electronic components for assembly

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety / occupational health and safety (WHS/OHS) requirements, including using risk control measures
- completing workplace report
- dealing with unplanned events in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
- preparing and selecting electronic components, including:
 - following job specifications
 - identifying and selecting components
 - handling components without damaging
 - adhering to relevant quality procedures
- using problem-solving techniques in accordance with workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- types of components, including resistors, inductors, capacitors, diodes, transistor, integrated circuits, printed circuit boards, sub-assemblies, and mounting/enclosing, connection and termination hardware
- the physical features and primary characteristic of components, including:
 - features, including shape, size and connections
 - characteristics, including parameter and power ratings and polarity
 - methods of identifying and marking of component ratings
 - identifying and handling static sensitive components
 - selection of components
- through-hole component

- surface-mount component
- component handling techniques
- problem-solving techniques
- relevant industry standards
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications, including relevant testing devices
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies, procedures and instructions, including quality inspection and checking workplace procedures
- types of electronic components, including resistors, inductors, capacitors, diodes, transistor, integrated circuits, printed circuit boards, sub-assemblies, and mounting/enclosing, connection and termination hardware.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, relevant industry standards, codes of practice and operation manuals.

UEEAS0005 Set up and check electronic component assembly machines

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to set up and check electronic component assembly machines.

It includes working safely, interpreting job specifications, identifying components by characteristics, following machine set-up work instructions and following quality procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEEAS0001 Assemble electronic components

UEEAS0004 Select electronic components for assembly

Competency Field

Assembly

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to set-up machine

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1

Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied

- 1.2 WHS/OHS risk control measures for work preparation are followed
 - 1.3 Work instructions are obtained and applied
 - 1.4 Advice is sought from the work supervisor to ensure that work is coordinated effectively with others
 - 1.5 Materials required for the work are obtained in accordance with workplace procedures
 - 1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
- 2 Set up machine**
- 2.1 WHS/OHS risk control work measures are followed
 - 2.2 Machines are checked and isolated in accordance with WHS/OHS and workplace procedures
 - 2.3 Electronic components are selected sorted and placed in accordance with work instructions and workplace procedures
 - 2.4 Machine is set up in accordance with work instructions ensuring specified components are loaded correctly
 - 2.5 Solutions are used to resolve issues with supply of component
 - 2.6 Quality and inspection checks are conducted to ensure components comply with workplace procedures/relevant industry standards
 - 2.7 Work is completed in acceptable timeframe given environment and workplace conditions
- 3 Complete work report**
- 3.1 WHS/OHS risk control measures for work completion are followed
 - 3.2 Operational checks of machine are carried out in accordance with workplace procedures to ensure quality outcome are met
 - 3.3 Work report forms/data sheets on components are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEA103A Set up and check electronic component assembly machines.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEEAS0005 Set up and check electronic component assembly machines

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- adhering to quality check procedures
- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements, including using risk control measures
- checking and isolating machines
- completing work reports
- conducting machine operation checks
- following assembly job specifications
- identifying components
- obtaining materials for work
- obtaining work instructions
- preparing to set up machine
- setting up machine.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant industry standards
- relevant inspection methods
- relevant manufacturer specifications and operating instructions
- relevant job safety assessments or risk mitigation processes
- relevant tools, equipment and testing devices
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace instruction, quality, policies and procedures
- object-oriented programming language elements, including:
 - classes

- objects
- instantiation
- fields
- methods
- constructors
- inheritance.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to setting up and checking electronic component placement machines
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEEAS0006 Use lead-free soldering techniques

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to use lead-free soldering techniques.

It includes working safely, performing high reliability soldering/de-soldering, checking components against job specifications, testing and following quality procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Assembly

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to carry out lead-free soldering

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and understood
- 1.2 WHS/OHS risk control measures for work preparation are followed

- 1.3 Scope of work is determined from documentation or from work supervisor
 - 1.4 Work is coordinated with others involved to ensure work schedules are met and safety measures are followed
 - 1.5 Materials required for work are sourced and checked for lead-free soldering requirements in accordance with workplace procedures and relevant industry standards
 - 1.6 Tools and equipment required for work are selected for their effectiveness and checked for correct operation and safety
- 2 Carry out lead-free soldering**
- 2.1 WHS/OHS risk control work measures and procedures are followed
 - 2.2 Lead-free soldering characteristic and requirements are applied to soldering/de-soldering operations
 - 2.3 Components are connected and disconnected in accordance with workplace procedures and relevant industry standards
 - 2.4 Work is carried out in accordance with quality workplace procedures and relevant industry standards
 - 2.5 Lead-free soldering is completed in acceptable timeframe, environment and workplace conditions
- 3 Check quality of lead-free soldering work**
- 3.1 WHS/OHS risk control measures for work completion are followed
 - 3.2 Quality of lead-free is checked in accordance with workplace procedures and industry standards
 - 3.3 Functional tests on lead-free soldered connections are carried out in accordance with workplace routines
 - 3.4 Actions are taken to rectify defects within the scope of work and in accordance with workplace procedures
 - 3.5 Report forms/data sheets on lead-free soldering work are completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEA106A Use lead-free soldering techniques.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEEAS0006 Use lead-free soldering techniques

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- adhering to quality procedures
- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements, including using risk control measures
- carrying out functional tests on lead-free soldered connections
- carrying out lead-free soldering
- checking quality of lead-free soldering work
- following manufacturer specifications and operating instructions
- preparing to carryout lead-free soldering
- rectifying defects
- soldering and de-soldering components
- sourcing and checking materials
- using high reliability lead-free soldering/de-soldering techniques.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- completed soldered connections compliance requirements
- component requirements for lead-free soldering
- equipment requirements
- lead-free solder issues
- lead-free soldering cleaning requirements
- lead-free soldering safety considerations
- quality management procedures for soldering and re-work
- relevant differences, advantages and disadvantages between lead and lead-free solder
- relevant industry standards
- relevant manufacturer specifications and operating instructions

- relevant soldering tools and equipment
- relevant types of fluxes and their activity level
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace quality, instructions, policies and procedures
- solder types and characteristics
- soldering techniques.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to applying lead-free soldering technology
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEEAS0007 Assemble, mount and connect control gear and switchgear

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to assemble, mount and connect control gear and switchgear, including the interconnections within a switchboard enclosure intended to operate at voltages up to 1,000 volts (V) alternating current (a.c.) or 1,500 V direct current (d.c.).

It includes working safely; following standards, specifications and component manufacturer requirements; matching equipment with that specified; terminating cables; connecting wiring and completing necessary documentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0020 Fix and secure electrotechnology equipment

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0003 Arrange circuits, control and protection for general electrical installations

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0023 Terminate cables, cords and accessories for low voltage circuits

UEEEL0005 Develop and connect electrical control circuits

UEEEL0019 Solve problems in direct current (d.c.) machines

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UEEEL0024 Solve problems in alternating current (a.c.) rotating machines

UEEEL0025 Test and connect transformers

and

UEECD0043 Solve problems in direct current circuits

or

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

Competency Field

Assembly

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Plan to assemble, mount and connect control gear and switchgear

2 Assemble, mount and connect control gear and switchgear

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Switchgear and control gear assembly installation is determined and planned in accordance with job specifications, wiring and schematic diagrams
- 1.2 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified and applied
- 1.3 Work instructions, including layout and wiring diagrams, are applied in accordance with workplace procedures
- 1.4 Advice is sought from supervisor to ensure work is coordinated effectively with relevant person/s
- 1.5 Materials required for the control gear and switchgear installation work are obtained in accordance with workplace procedures
- 1.6 Tools, equipment and measuring devices required to carry out work are obtained and checked for correct operation and safety
- 2.1 Switchgear and control gear assembly hazards are identified, risks assessed and control measures are implemented in accordance with workplace procedures
- 2.2 Circuits are checked and isolated in accordance with WHS/OHS workplace requirements and procedures

- 2.3 Component layout is in accordance with job specifications, wiring and schematic diagrams
 - 2.4 Switchgear/control gear is fitted in accordance with work instructions, industry standards, manufacturer specifications and workplace procedures
 - 2.5 Interconnections are made in accordance with work instructions, industry standards and workplace procedures
 - 2.6 Regular quality checks are carried out in accordance with workplace procedures
 - 2.7 Completed switchboard function is tested in accordance with workplace procedures, industry standards and manufacturer specifications
 - 2.8 Labelling and numbering cable are undertaken in accordance with industry standards, wiring and schematic diagrams
 - 2.9 Unplanned events are referred to supervisor for directions in accordance with workplace procedures
 - 2.10 Assembly work is carried out without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy practices
- 3 Finalise and inspect assembled control gear and switchgear installation**
- 3.1 Assembled switchboard panel is visually inspected and checked against work instructions, industry standards and manufacturer specifications in accordance with workplace procedures
 - 3.2 Problem-solving techniques are used where corrective actions to assembled components are required in accordance with regulatory requirements and industry standards
 - 3.3 Work completion is documented and relevant person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Assembling at least two different control panels must include:

- general supply main switches
- multiple supplies
- safety services

Unit Mapping Information

This unit replaces and is equivalent to UEENEEA110A Assemble, mount and connect control gear and switchgear.

Links

Assessment Requirements for UEEAS0007 Assemble, mount and connect control gear and switchgear

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying labelling and numbering to cables and using terminal numbering in accordance with relevant industry standards and workplace procedures
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures and practices, including:
 - hazards associated with switchgear and control gear assembly and installation
 - using risk control measures
- applying sustainable energy principles and practices
- assembling, mounting and connecting control gear and switchgear, including:
 - checking circuits are isolated
 - making connection without damaging switchgear/control
 - making interconnections
 - mounting and wiring switchgear and control gear
 - selecting and placing switchgear and control gear in accordance with industry standards, wiring and schematic diagrams
- checking tools, equipment and testing devices for correct operation and safety
- completing workplace documentation
- dealing with unplanned events in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
- inspecting and checking installation of assembled control gear and switchgear
- using problem-solving techniques when determining the nature of a fault in accordance with workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- assembly instructions, including industry standards, wiring and schematic diagrams

- cable labelling and numbering, including:
 - cable labelling/identification
 - component labelling/identification
 - use of terminal strips to assist fault finding
- choice of switchgear and control gear, including:
 - current ratings
 - overload and fuse settings
 - voltage ratings
- other considerations, including:
 - earthing
 - size of power and control circuit conductors
 - equipment layout methods and accessories
- component layout, including:
 - interconnecting plugs and sockets
 - placement/layout of control circuit devices and components
 - placement/layout of power circuit devices and components
 - segregation of cables at different voltages
 - wiring and schematic diagrams
- equipment layout, methods and accessories
- problem-solving techniques including quality checks
- relevant electrical and WHS/OHS regulations and legislation requirements
- relevant manufacturer specifications
- relevant workplace documentation
- relevant workplace policies and procedures
- risk mitigation processes include safety issues associated with switchgear and control gear assembly and installation
- sustainable energy principles and practices
- switchgear and control gear mounting and wiring techniques, including switchboard testing
- techniques to check if circuits are isolated
- tools, equipment and measuring devices
- types of switchgear and other equipment, including:
 - air-break
 - bus bars and cleats
 - bus ties
 - circuit breakers
 - contactors
 - fuses
 - interlock devices
 - load break switches
 - motor starters

- oil type
- relays
- switch fuses
- transformers
- variable speed drives (VSDs).

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment (including control panels) and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEEAS0008 Fabricate and assemble bus bars

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to fabricate and assemble copper (Cu) and aluminium (Al) electrical bus bars for interconnections in switchboards and specific plant, and that have high current demand.

It includes working safely to industry standards and specifications in making up and fixing electrical bus bars and completing necessary documentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0020 Fix and secure electrotechnology equipment

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

Competency Field

Assembly

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Plan to make up and assemble bus bars

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures

for a given work area are identified and applied

- 1.2 Hazards are identified, risks assessed and control measures implemented
 - 1.3 Work instructions, including layout and wiring diagrams, are obtained and applied
 - 1.4 Advice is sought from supervisor to ensure work is coordinated effectively with others
 - 1.5 Materials required for the work are obtained in accordance with workplace procedures
 - 1.6 Tools, equipment and testing devices required for the work are obtained and checked for correct operation and safety in accordance with workplace procedures
- 2 Make up and assemble bus bars**
- 2.1 WHS/OHS risk control work measures are followed
 - 2.2 Circuits are checked and isolated in accordance with WHS/OHS requirements and workplace procedures
 - 2.3 Bus bars are formed/made up in accordance with work instructions, industry standards, manufacturer specifications and workplace procedures
 - 2.4 Bus bars are connected in accordance with work instructions, industry standards, manufacturer specifications and workplace procedures
 - 2.5 Quality checks are carried out in accordance with workplace procedures
 - 2.6 Completed bus bar assembly is inspected and tested in accordance with workplace procedures, industry standards and manufacturer specifications
 - 2.7 Unplanned events are referred to supervisor for directions in accordance with workplace procedures
 - 2.8 Work is carried out without waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
- 3 Check quality of assembled bus bars**
- 3.1 WHS/OHS risk control measures for work completion are followed
 - 3.2 Assembled bus bars are checked against work

instructions, industry standards and manufacturer specifications in accordance workplace procedures

- 3.3** Problem-solving techniques are used where corrective actions to assembled components are required in accordance with regulatory requirements and industry standards
- 3.4** Work report forms are completed accurately and relevant person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Fabricating and assembling bus bars must include at least the following:

- two different bus bar assemblies, one of which must be custom made

Unit Mapping Information

This unit replaces and is equivalent to UEENEEA112A Fabricate and assemble bus bars.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEEAS0008 Fabricate and assemble bus bars

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying problem-solving techniques when determining the nature of a fault
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - using risk control measures
 - checking tools, equipment and testing devices for correct operation and safety
- applying sustainable energy principles and practices
- checking quality and installation of assembled bus bars
- communicating effectively with relevant stakeholders
- completing workplace documentation
- dealing with unplanned events in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
- following work instructions
- interpreting electrical layout and wiring diagrams
- inspecting and testing installed bus bars
- making up and assembling electrical bus bars, including:
 - following assembly instructions
 - forming and making up correctly
 - terminating bus bars correctly
 - adhering to quality procedures
 - checking circuits are isolated
 - making interconnections
 - considering designs
 - connecting bus bars correctly
- performing regular quality checks.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- chemical and metallurgical properties of bus bars, including:
 - copper (Cu)
 - aluminium (Al)
 - copper clad aluminium
 - hard drawn copper
 - annealing
 - types of high conductivity copper
- current-carrying capacity, including:
 - standard cross-sections of bar
 - current ratings
 - temperature rise
- design considerations, including:
 - electrical and thermal resistance
 - mechanical strength in tension, compression and shear
 - resistance to fatigue failure
 - electrical resistance of surface films
 - ease of fabrication
 - resistance to corrosion
 - first cost and high eventual recovery value
 - choice of bus bar materials
 - creep properties
 - fatigue properties
 - self-extinguishing arcs in Cu and Al
 - insulated bus bar
 - provision for bus bar expansion
- effects of short circuit, including:
 - temperature rise
 - electromagnetic stresses
 - cleats and structural supports
- electrical bus bar types, including:
 - main bus bars
 - intermediate bus bars
 - cell bus bars
 - droppers
 - flexible joints

- hanger bars
- short circuit frames
- jointing types and techniques, including:
 - clamped joints
 - bolted
 - riveted
 - welded
 - soldered or brazed
- relevant manufacturer specifications
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- shaping and bending equipment and techniques, including:
 - hand and power tools
 - hydraulic shears
 - hydraulic punches
 - hydraulic notcher
 - machines allowing multiple operations
- stand-off insulators, including:
 - form
 - function
 - physical and electrical properties/characteristics
 - selection.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications,

regulations, codes of practice and operation manuals.

UEEAS0009 Mount and wire control panel equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to mount and wire control panel equipment. It includes working safely, following layout and circuit diagrams, selecting and mounting equipment, installing and terminating wiring, functional testing and completing necessary documentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0020 Fix and secure electrotechnology equipment

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0003 Arrange circuits, control and protection for general electrical installations

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0023 Terminate cables, cords and accessories for low voltage circuits

UEEEL0005 Develop and connect electrical control circuits

UEEEL0019 Solve problems in direct current (d.c.) machines

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UEEEL0024 Solve problems in alternating current (a.c.) rotating machines

UEEEL0025 Test and connect transformers

and

UEECD0043 Solve problems in direct current circuits

or

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

Competency Field

Assembly

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Plan to mount and wire control panel equipment

2 Mount and wire control panel equipment

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Wire control panel equipment installation is determined and planned in accordance with job specifications, wiring and schematic diagrams
- 1.2 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified and applied
- 1.3 Work instructions, including layout and wiring diagrams, are applied in accordance with workplace procedures
- 1.4 Advice is sought from supervisor to ensure work is coordinated effectively with others
- 1.5 Materials required for the control panel work are obtained in accordance with workplace procedures
- 1.6 Tools, equipment and measuring devices required to carry out control panel work are obtained and checked for correct operation and safety in accordance with workplace procedures
- 2.1 Control panel equipment and electrical hazards are identified, risks assessed and control measures implemented
- 2.2 Circuits are checked and isolated in accordance with WHS/OHS workplace requirements and procedures
- 2.3 Components are laid out in accordance with job specifications, wiring and schematic diagrams

- 2.4 Control panel components including switch gear, interconnecting plugs and sockets and earthing are fitted in accordance with work instructions, industry standards, manufacturer specifications and workplace procedures
 - 2.5 Control panel wiring is installed in accordance with wiring and schematic diagrams, work instructions, industry standards, manufacturer specifications and workplace procedures
 - 2.6 Regular quality checks are carried out in accordance with workplace procedures
 - 2.7 Completed control panel is visually inspected and tested in accordance with workplace procedures, industry standards and manufacturer specifications
 - 2.8 Labelling and cable numbering are undertaken in accordance with industry standards, wiring and schematic diagrams
 - 2.9 Unplanned events are referred to supervisor for directions in accordance with workplace procedures
 - 2.10 Work is carried out without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy practices
- 3 Finalise and inspect control panel installation**
- 3.1 Assembled control panel is tested against work instructions, industry standards and manufacturer specifications in accordance with workplace procedures
 - 3.2 Problem-solving techniques are used, where corrective actions to assembled components are required, in accordance with regulatory requirements and industry standards
 - 3.3 Work completion is documented and relevant person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Assembling must include at least two different control panels including the following:

- controls for more than two electrical machines, electro-mechanical and/or electronic control and devices such as relays, timers, logic controllers, indicators and switches/push buttons

Unit Mapping Information

This unit replaces and is equivalent to UEENEEA113A Mount and wire control panel equipment.

Assessment Requirements for UEEAS0009 Mount and wire control panel equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying labelling and numbering to cables and using terminal numbering in accordance with relevant industry standards and workplace procedures
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures and practices, including using risk control measures
- applying sustainable energy principles and practices
- dealing with unplanned events in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
- following layout and wiring diagrams
- inspecting and checking installation of control panel equipment
- laying out components, including:
 - selecting and placing switchgear and control gear in accordance with industry standards, wiring and schematic diagrams, including low voltage (LV) and extra-low voltage (ELV) devices
 - segregating of cables at different voltages in accordance with relevant industry standards
 - interconnecting plugs and sockets
- mounting and wiring control panel equipment in accordance with relevant industry standards
- selecting switchgear and control gear to required specifications, including voltage ratings, current ratings and overload settings
- using problem-solving techniques when determining the nature of a fault.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- control panel types and mounting techniques, including:
 - clearances
 - DIN mounted switchgear

- direct mounting on insulated panels
- metallic and non-metallic (insulated)
- rear connections
- strapped harness wiring and use of duct to support and channel wiring
- cable labelling and numbering, including:
 - cable and component labelling/identification
 - use of terminal strips to assist fault finding
- component layout, including:
 - interconnecting plugs and sockets
 - placement/layout of power and control circuit devices and components
 - segregation of cables at different voltages
 - wiring and schematic diagrams
- choice of switchgear and control gear, including:
 - current ratings
 - number of operations
 - overload and fuse settings
 - voltage ratings
- other considerations, including:
 - earthing of panels
 - effect of high current devices on electromagnetic components or programmable logic controllers (PLC)
 - effects of electronic components on other devices
 - size of power and control circuit conductors
- relevant industry standards
- problem solving techniques including quality checks
- relevant manufacturer specifications
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- risk mitigation processes.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0001 Analyse materials for suitability in electrical equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to analyse materials for suitability in electrical equipment.

It includes preparing and analysing materials. It also includes documenting and reporting analysis.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0002 Analyse static and dynamic parameters of electrical equipment

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to analyse materials

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) processes and workplace procedures for a given work area are identified, obtained and applied
- 1.2 WHS/OHS risk control measures and workplace procedures in preparation for the work are followed

- 1.3 Machine analysis is determined from performance specifications and/or reports and in consultation with relevant person/s
 - 1.4 Activities are planned in accordance with workplace procedures for timelines in consultation with others involved
 - 1.5 Strategies are identified, developed and implemented
- 2 Apply and analyse materials**
 - 2.1 WHS/OHS risk control work measures and workplace procedures for carrying out the work are followed
 - 2.2 Materials are applied to developing machine parts
 - 2.3 Characteristics, specifications and performance requirements of the materials are obtained in accordance with workplace procedures
 - 2.4 Analysis of materials is carried out in accordance with workplace procedures
 - 2.5 Unplanned events are responded to in accordance with WHS/OHS requirements and workplace procedures
 - 2.6 Quality of work is monitored in accordance with workplace procedures and/or relevant industry standards
- 3 Document and report the results of analysis**
 - 3.1 Solutions to materials analysis are tested and modified as required
 - 3.2 Analysis is reported to appropriate person/s to establish action to be taken based on findings
 - 3.3 Justification and instruction for actions are documented in work records in accordance with relevant industry standards

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Analysis must include the following:

- at least two different types of materials

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE163A Analyse materials for suitability in electrical equipment.

Links

Assessment Requirements for UEECD0001 Analyse materials for suitability in electrical equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including
 - using risk control measures
- dealing with unplanned events in accordance with problem-solving techniques and workplace procedures
- determining material properties
- documenting and reporting results of the material analysis
- documenting instruction for implementing any actions resulting from the analysis
- documenting justification of actions to be implemented
- forming strategies for analysing machine performance
- obtaining machine characteristics, specifications and performance requirements appropriate to each situation
- preparing to analyse materials
- testing results of the analysis.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- problem-solving techniques
- relevant analysis methods
- relevant implementation strategies
- relevant industry standards
- relevant machine characteristics, specifications and performance requirements
- relevant manufacturer specifications and operating instructions
- relevant materials
- relevant job safety assessments or risk mitigation processes

- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace quality, instructions, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, facilities, tools and equipment currently used in industry
- resources that reflect current industry practices in relation to analysing materials for suitability in equipment
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

Assessment Requirements for UEECD0002 Analyse static and dynamic parameters of electrical equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- analysing machine parameters
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including
 - using risk control measures
- dealing with unplanned events in accordance with problem-solving techniques and workplace procedures
- documenting and reporting results of the analysis of static and dynamic parameters of machines
- documenting instructions for implementing any actions resulting from the analysis
- forming effective strategies for analysing machine performance
- obtaining machine parameters, specifications and performance requirements
- preparing to analyse static and dynamic parameters of machinery
- testing the results of the analysis.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- function of mechanical parts and components
- problem-solving techniques
- relevant analysis testing methods
- relevant development and implementation strategies
- relevant industry standards
- relevant machine parameters, specifications and performance requirements
- relevant manufacturer specifications and operating instructions
- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation

- relevant workplace quality, instructions, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, facilities, tools and equipment currently used in industry
- resources that reflect current industry practices in relation to analysing static and dynamic parameters of equipment
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0003 Apply industry and community standards to engineering activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to apply industry and community standards to engineering activities.

It includes applying knowledge and application of ethical and community standards, seeking advice and adopting appropriate technologies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Review ethical and community standards

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Ethical standards are reviewed and applied in accordance with relevant industry standards
- 1.2 Advice on the application processes for applying ethical community and relevant industry standards is obtained from relevant person/s

- 1.3** Contributions to periodic revision of relevant industry standards is conducted through formal discussions with relevant person/s and submissions documented for public review in accordance with relevant community standards
- 2 Apply ethical and community standards**
- 2.1** Ethical standards are applied to all formal interactions and activities
- 2.2** Work is planned and managed in accordance with relevant community and industry standards
- 2.3** Quality of work is monitored in accordance with relevant community and industry standards
- 2.4** Advice on engineering issues and adoption of technologies is sought from relevant person/s in accordance with relevant industry standards

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE080A Apply industry and community standards to engineering activities.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECD0003 Apply industry and community standards to engineering activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying ethical standards to all professional interactions and activities
- contributing to periodic review of relevant industry standards
- monitoring work outcomes and ensuring compliance with relevant standards, community and relevant industry standards
- obtaining advice on applying relevant industry standards
- planning and managing work
- reviewing and applying ethical standards
- seeking advice on engineering issues and adopting technologies from relevant person/s in accordance with relevant industry standards.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant ethical standards, including:
 - application of ethical standards
 - common tenets of ethical standards
 - ethical standards of professional bodies in the engineering industry
 - purpose of ethical standards
 - purpose of standards and how they are applied
 - standards development organisations and compliance systems
 - standards development process and community involvement
- relevant industry community standards
- relevant industry standards
- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation

- relevant workplace quality policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to industry and community standards expected of engineers
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0004 Apply material science to solving electrotechnology engineering problems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to apply material science to solving electrotechnology engineering problems.

It includes identifying and solving electrotechnology engineering problems using material science. It also includes applying knowledge of materials science and documenting justification for solutions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Identify electrotechnology problem/s

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) processes and workplace procedures for a given work area are identified, obtained and applied

1.2 WHS/OHS risk control work preparation measures and

- workplace procedures are followed
- 1.3 Scope of electrotechnology problem and material for the environment are obtained and applied from documentation and/or work supervisor
 - 1.4 Tools, equipment and testing devices required for work are obtained and checked for correct operation and safety
- 2 Apply material science to developing solutions**
- 2.1 WHS/OHS risk control work measures and workplace procedures are followed
 - 2.2 Tests and measurements are undertaken in accordance with WHS/OHS requirements and workplace procedures
 - 2.3 Tests, measurements and results are used to identify material science solutions to electrotechnology problems
 - 2.4 Effects on environments, materials and health risks are considered in resolving electrotechnology problems
 - 2.5 Unplanned situations are dealt with in accordance with WHS/OHS and approval of relevant person/s
- 3 Report solution/s**
- 3.1 Proposed solutions to electrotechnology problems are documented with justification for the solutions
 - 3.2 Identified health risks exposed by a material and/or application is documented in workplace report
 - 3.3 Proposed solution report is forwarded to relevant person/s in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Applying material science from the workplace • electrotechnology problems

must include:

Unit Mapping Information

Assessment Requirements for UEECD0004 Apply material science to solving electrotechnology engineering problems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying material science to developing solutions to electrotechnology problems
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including
 - using risk control measures
- considering environment and health risks in resolving electrotechnology problems
- dealing with unplanned situations in accordance with WHS/OHS and approval from relevant person/s
- documenting proposed solutions and justification
- obtaining the scope of electrotechnology problem and materials to be used
- obtaining tools, equipment and testing devices
- interpreting results to identify material science solutions to electrotechnology problems
- using testing devices
- using test and measurement results to identify material science solutions.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- problem-solving techniques
- relevant classification, nature and physical properties of materials used in electrotechnology
- relevant environment and health issues
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications and operating instructions
- relevant material processing and manufacturing
- relevant material science
- relevant tests and measurement
- relevant tools, equipment and testing devices
- relevant WHS/OHS legislated requirements

- relevant workplace documentation, including
 - solution report
- relevant workplace instruction, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

UEECD0005 Apply physics to solving electrotechnology engineering problems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to apply physics to solving electrotechnology engineering problems.

It includes identifying and solving physics-related problems and documenting justifications. It also includes applying knowledge of measurement techniques.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Identify electrotechnology-related problems

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) processes and workplace procedures for a given work area are identified, obtained and applied
- 1.2 WHS/OHS risk control work preparation measures and workplace procedures are followed

- 1.3 Scope of electrotechnology problem is identified from documentation and/or work supervisor
 - 1.4 Problems are stated in writing and/or diagrammatic form to ensure appropriate methods are used to resolve them
 - 1.5 Equipment and testing devices required for problem solving are obtained and checked for correct operation and safety
- 2 Apply physics to developing solutions**
 - 2.1 WHS/OHS risk control work measures and workplace procedures are followed
 - 2.2 Tests and measurements are undertaken in accordance with WHS/OHS requirements and workplace procedures
 - 2.3 Tests, measurements and results are used to develop resolutions in static and dynamic problems
 - 2.4 Theoretical and measured values are applied to develop solutions to static and dynamics problems
 - 2.5 Results are applied to develop solutions to problems
 - 2.6 Unplanned situations are dealt with in accordance with WHS/OHS requirements and approval of relevant person/s
- 3 Report solution**
 - 3.1 Proposed solutions to electrotechnology problems are documented with justification for the solutions
 - 3.2 Adverse effects and outcomes of developed solution are reported
 - 3.3 Solution report is forwarded to relevant person/s in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package

Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE082A Apply physics to solving electrotechnology engineering problems.

Assessment Requirements for UEECD0005 Apply physics to solving electrotechnology engineering problems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying measured values to developing solutions to static and dynamic problems
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including
 - using risk control measures
- applying the laws of physics to developing solutions to electrotechnology problems
- dealing with unplanned events in accordance with problem-solving techniques and workplace procedures
- developing resolutions in static and dynamics problems
- identifying the scope of electrotechnology problems
- obtaining and using equipment and testing devices for problem solving
- reporting adverse effects in the developed solutions
- reporting developed solutions and justification.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- problem-solving techniques
- relevant adverse effects and outcomes of solution
- relevant equipment and testing devices
- relevant industry standards
- relevant manufacturer specifications and operating instructions
- relevant measurement values
- relevant physics theorems
- relevant job safety assessments or risk mitigation processes
- relevant tests and measurements
- relevant WHS/OHS legislated requirements
- relevant workplace documentation, including:

- diagrammatic form
- solution report
- relevant workplace instructions, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

UEECD0006 Apply technologies and concepts to energy sector work activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to apply technologies and concepts to energy sector work activities.

It includes preparing and applying technologies and concepts to work activities. It also includes checking results using technologies and applications of concepts using a range of information technologies, and applying analytical concepts to achieve desired outcomes ensuring work is completed in an agreed time, to industry standard and with a minimum of waste.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to apply technologies and concepts

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Instructions to apply technologies and concepts are communicated and confirmed

3.5 Records are updated in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE144A Apply technologies and concepts to energy sector work activities.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECD0006 Apply technologies and concepts to energy sector work activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- understanding work instruction
- obtaining and checking tools and equipment
- following work schedules
- using technologies and applying concepts appropriately
- returning tools and surplus resources as required
- updating work records
- dealing with unplanned events
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- cleaning and making safe work area
- communicating and confirming technologies and concepts, including information technologies
- obtaining resources and materials, including performing ongoing checks
- working with relevant person/s.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- energy sector technologies and concepts, personal computers and computer hardware, including:
 - starting up
 - selecting application
 - entering information
 - saving
 - printing
 - structure and components and their function:

- motherboards, memory modules, video modules, connecting buses and storage devices
- assembling and dismantling techniques
- hardware faults and troubleshooting techniques (confined to sub-system level)
- basic network hardware and components
- connection of network media
- set-up of standard network configuration
- communication techniques
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications
- relevant tools, equipment and personal protective equipment (PPE)
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- sustainable energy principles and practices.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to apply work health and safety (WHS)/occupational health and safety (OHS) regulations and codes of practices in the electrotechnology workplace.

It includes applying safe working practices, following workplace procedures for hazard identification and risk control. It also includes electrotechnology worker responsibilities and application for health and safety, risk management and adherence to safety practices as part of electrotechnology work functions when preparing to enter a work area.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to enter an electrotechnology workplace

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work area access permits are obtained from appropriate person/s in accordance with workplace procedures

- 1.2 Relevant workplace WHS/OHS safety regulations and codes of practices are identified and followed when entering the electrotechnology work area
 - 1.3 Safe work methods for controlling risks are obtained, read and applied prior to undertaking work activity in accordance with WHS/OHS workplace procedures
 - 1.4 Preparation for electrical and non-electrical isolation is carried out to prevent creation of hazards from loss of machine/system/process control in accordance with WHS/OHS workplace procedures
 - 1.5 Tools, equipment and chemicals required for the electrotechnology work are checked for safety and correct functionality in accordance with workplace procedures and regulatory requirements
 - 1.6 Personal protective equipment (PPE) is worn appropriate to the electrotechnology work area and in accordance with workplace procedures
- 2 **Apply safe electrotechnology working practices**
 - 2.1 Risk control work measures are implemented in accordance with WHS/OHS workplace procedures
 - 2.2 Procedures for dealing with accidents, fires and emergencies are followed in accordance with workplace procedures, scope of responsibility and capabilities
 - 2.3 Safe work methods are applied when working at heights including safe and effective use of safety equipment
 - 2.4 Safe work methods are used when undertaking lifting, lowering, pushing, pulling, carrying or otherwise moving, holding or restraining workplace tasks in accordance with relevant code of practice
 - 2.5 Safe work methods for removing an electric shock victim from a live electrical situation are demonstrated in accordance with workplace emergency management procedures
 - 2.6 Working area is kept clean, neat and tidy in accordance with workplace housekeeping procedures
- 3 **Follow electrotechnology workplace procedures for hazard identification and**
 - 3.1 Hazards are identified, control measures implemented and reviewed through regular active participation in the consultation process with employer and other employees

risk control

- 3.2 Hazards in the work area are identified and reported to relevant person/s in accordance with workplace procedures
- 3.3 WHS/OHS documentation and incident records are completed in accordance with regulatory requirements and workplace procedures
- 3.4 Workplace instructions are followed in accordance with regulatory requirements and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace.

Links

Companion Volume implementation guides are found in VETNet - -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) regulations, legislation, codes of practices and procedures in the workplace, including:
 - identifying typical hazards associated with work environments and assessing risk/s in an electrotechnology workplace
 - applying and reviewing risk control measures to minimise, control or eliminate identified hazards
 - reporting hazards to relevant person/s
 - applying safe working practices/methods
 - contributing to WHS/OHS consultative processes
- following relevant workplace emergency management procedures and instructions relating to WHS/OHS and emergency incidents
- selecting and using appropriate personal protective equipment (PPE)
- applying correct manual handling techniques
- confirming (safe) isolation of an electrical supply and isolation of potential electrical and non-electrical hazards has been completed by an authorised person
- demonstrating safe methods of removing an electric shock victim from a live electrical situation
- selecting an appropriate ladder for a given situation and performing a safety check before use
- completing relevant WHS/OHS documentation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- effective verbal and written communication techniques
- electrotechnology work environment, including:
 - appropriate fire extinguisher for a given type of fire
 - commonly used workplace safety signs

- relevant industry standard for safe workplace procedures
- risk assessment documentation
- typical hazards associated with a range of work environments
- use of fire extinguishers
- housekeeping and potential hazards in relation to improper housekeeping
- workplace procedures used to control the risks associated with workplace hazards
- legal requirements relevant to WHS/OHS in the workplace, including:
 - appropriate personal protective equipment (PPE)
 - asbestos awareness and reporting hazardous gases, including supervisory requirements and duty of care
 - difference between hazards and risks
 - duty holder responsibilities, as specified in WHS/OHS Acts, regulations and codes of practice
 - employer and employee responsibilities, rights and obligations
 - general aims and objectives of the relevant state or territory legislation relating to WHS/OHS
 - hazards that may be present in the electrotechnology workplace, the harm they can cause and how this harm occurs
 - housekeeping and potential hazards in relation to improper housekeeping
 - major functions of safety committees and representatives
 - powers of health and safety inspectors
 - relevant WHS/OHS regulations, codes and practices
 - underlying principles of WHS
- life support - cardiopulmonary resuscitation (CPR) in the workplace, including:
 - first aid
 - responsibilities of the first aider
 - priorities of first aid management for any accident or injury
 - procedures required at an accident scene
 - legal and ethical issues, which may impact on the management of care
 - 'duty of care'
 - examination of a casualty for injuries
 - effect of cardiopulmonary arrest on the body
 - managing simulated conditions of airway obstruction, respiratory arrest and cardiopulmonary arrest
 - single and two-person CPR
 - signs and symptoms of an altered level of consciousness
 - management of simulation of a casualty with an altered level of consciousness
 - signs and symptoms of shock
 - management of simulation of a casualty in shock
- relevant safe work method statements (SWMS)/job safety analysis (JSA) or risk mitigation processes, including:

- emergency management plan
- hierarchy of WHS/OHS hazard risk control measures
- principles of risk assessment/management and required documentation
- typical hazards associated with electrotechnology work environments and their control, including:
 - asbestos, including:
 - common types of asbestos containing building materials
 - warning signs used to identify the presence of asbestos
 - effects of asbestos on the human body
 - requirements for reporting the presence of asbestos
 - silica, including:
 - types of materials that contain crystalline silica (silica dust)
 - methods of releasing silica dust
 - recommended levels of exposure to crystalline silica
 - effects of crystalline silica on the human body
 - hazardous gases
 - chemicals in the workplace, including:
 - hazardous substances and dangerous goods and their classifications
 - labelling and storage requirements for chemicals
 - purpose and interpretation of safety data sheets (SDS)/material safety data sheets (MSDS)
 - confined spaces, including:
 - control measures for working in a designated confined space
 - hazards associated with working in a confined space
 - workplace situations that could be classified as a confined space
 - physical and psychological hazards, including excessive noise, vibration, thermal stress, radiation, lasers, occupational overuse syndrome, stress, drugs and alcohol
 - safe manual handling principles, including:
 - procedures and methods for manual handling
 - situations that may cause manual handling injuries
 - types of manual handling injuries and their effect
 - working at heights, including:
 - hazards and precautions associated with working on ladders, elevated work platforms (EWP) and scaffolds
 - identification of work area as a height risk and use appropriate safety equipment to prevent a fall
 - working safely with electricity, including:
 - effects of electric shock on the human body
 - protection offered by a residual current device (RCD)
 - need for ensuring the (safe) isolation of an electrical supply

- appropriate method of removing an electric shock victim from a live electrical situation
- precautions that can minimise the chance of electric shock (earthing, extra-low voltage (ELV), fuses, circuit breakers and RCDs)
- common causes of electrical accidents.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, emergency management plan, equipment specifications, regulations, codes of practice and operation manuals
- relevant WHS/OHS legislation, regulations and codes of practice related to hazards management in the electrotechnology industry and workplace.

UEECD0008 Carry out preparatory energy sector work activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to carry out preparatory energy sector work activities.

It includes planning and carrying out energy sector work support activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Plan energy sector support activity

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are obtained and applied
- 1.2 WHS/OHS hazards are identified, risks assessed and control measures implemented for energy sector work preparation

- 1.3 WHS/OHS hazards not previously identified are noted on job safety assessments and advice is sought from work supervisor
 - 1.4 Work instructions are obtained and the nature, scope and location of work is determined from the supervisor or appropriate person/s
 - 1.5 Advice is sought from supervisor or appropriate person/s to ensure work is coordinated effectively with others
 - 1.6 Materials required for work are determined in accordance with workplace procedures
 - 1.7 Tools, equipment and testing devices needed to carry out work are obtained and checked for correct operation and safety
- 2 Undertake energy sector support activity**
- 2.1 WHS/OHS risk control measures and workplace procedures for carrying out work are followed
 - 2.2 Plant and equipment are checked in accordance with manufacturer guidelines/instructions, WHS/OHS requirements and workplace procedures
 - 2.3 Mechanical equipment is installed straight and square in the required locations and within acceptable tolerances in accordance with relevant industry standards
 - 2.4 Hand and power tools are used in accordance with safe working practices and WHS/OHS requirements and workplace procedures
 - 2.5 Work instructions are carried out under supervision
 - 2.6 Unplanned events are referred to relevant supervisor and directions are followed in accordance with workplace procedures
- 3 Complete energy sector work activity**
- 3.1 WHS/OHS work completion risk control measures and workplace procedures are followed
 - 3.2 Work site is cleaned and made safe in accordance with workplace procedures
 - 3.3 Supervisor is notified of work completion in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE122A Carry out preparatory energy sector work activities.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECD0008 Carry out preparatory energy sector work activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using of risk control measures
- carrying out preparatory energy sector work activities in accordance with requirements, including:
 - maintaining fire integrity
 - placing and securing accessories accurately
 - routing, placing and securing cables
 - using testing devices
 - using hand and power tools safely and in accordance with workplace safe work practices
- completing energy sector work and following instructions
- planning and undertaking energy sector support activities.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- problem-solving techniques for unplanned situations/events
- relevant hand, fixed and portable power tools, including:
 - associated hazards
 - care and maintenance
 - cutting, shaping, drilling, threading, tapping, and finishing metallic, non-metallic and structural components
 - different types of tools and their purpose
 - requirements for use on construction sites
 - techniques for the correct and safe use
 - tools for dismantling and assembling electrical and electronic components
 - tools for measuring and marking out

- relevant industry standards
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications
- relevant energy sector testing devices
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies, procedures and instructions.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective (PPE) equipment currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, relevant industry standards, codes of practice and operation manuals.

UEECD0009 Carry out routine work activities in an energy sector environment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to carry out work activities in an energy sector environment.

It includes preparing, carrying out work activities in the energy sector and checking the quality of the work completed.

Practice in the workplace and during training is also subject to regulations directly related to work health and safety (WHS)/occupational health and safety (OHS) and where applicable contracts of training, such as apprenticeships.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare work activity

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work instructions for preparing work activity are obtained and confirmed

- 1.2 WHS/OHS policies and workplace procedures are communicated, confirmed and applied
 - 1.3 Tools, equipment and personal protective equipment (PPE) necessary for work are identified, checked and are safe to use in accordance with workplace procedures
 - 1.4 Relevant person/s is consulted to ensure work is coordinated effectively with others
 - 1.5 Resources and materials required for work are confirmed, scheduled and obtained in accordance with workplace procedures
 - 1.6 Schedule of work and safe work practices are confirmed in accordance with work instructions and job requirements
- 2 Carry out work activity**
- 2.1 WHS/OHS policies and workplace procedures for safe work practices are followed to eliminate or minimise incidents
 - 2.2 Schedule of work is followed to ensure work is completed in agreed timelines, quality standard and with a minimum of waste
 - 2.3 Electrotechnology practices and electrical principles are applied to routine work activities
 - 2.4 Unplanned situations are responded to in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
 - 2.5 Quality checks of work are undertaken in accordance with work instructions and workplace procedures
- 3 Check completed work**
- 3.1 Checks are made to ensure work activity is in accordance with work instructions and job requirements
 - 3.2 Relevant person/s is notified of work activity completion
 - 3.3 Tools, equipment, surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures
 - 3.4 Work area is cleaned, made safe and sustainable energy practices are followed

- 3.5 Workplace records are updated in accordance with work instructions and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE148A Carry out routine work activities in an energy sector environment.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECD0009 Carry out routine work activities in an energy sector environment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- carrying out work activities in an energy sector, including:
 - applying industry standards
 - applying quality, workplace procedures and instructions
 - applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
 - applying sustainable energy practices
 - completing schedules of work
 - dealing with unplanned events/situations in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
 - following quality, workplace procedures and instructions
 - obtaining and checking tools and equipment
 - returning tools, equipment, personal protective equipment (PPE), surplus resources and materials
 - updating work records.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- energy sector vocations, including:
 - electrical
 - electronics and communications
 - computer systems
 - data communication
 - refrigeration and air conditioning
 - instrumentation and control
 - rail signalling

- lifts
- electricity supply – generation, transmission and distribution
- gas industry
- career paths in energy sector, including:
 - Australian policy framework for qualifications/classifications
 - scope of work for the installation, maintenance and servicing sector
- training in energy sector vocations, including:
 - traineeships and apprenticeships
 - minimum electrical licencing requirements
 - career pathways and awards
- industry stakeholders, including:
 - employer and employee organisations
 - government electrical regulatory authorities and skills standards networks
 - private and public Registered Training Organisations (RTOs)
- qualification requirements, including:
 - units of competency and qualification assessments
- employment preparation, including:
 - job application involving research, writing and methods to apply
 - job interview consisting of preparation and presentation
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications and operating instruction for tools, equipment and technologies
- relevant sustainable energy practices
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies, procedures and instructions.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, relevant industry standards, codes of practice and operation manuals.

UEECD0010 Compile and produce an energy sector detailed report

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to compile and produce an energy sector detailed report.

It includes planning; identifying information sources; collecting, analysing and formatting information applicable to the electrotechnology industry in developing and obtaining approval for energy sector report.

This unit is typically for technicians working as part of a product/application/service research and/or design, development and implementation team. This generally involves working closely with a range of management and production/operations personnel and requires balancing the business and technical sides of the research process.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Identify energy sector report requirement**
 - 1.1 Work health and safety (WHS)/occupational health safety (OHS) requirements and workplace procedures are identified and applied
 - 1.2 Report writing techniques are reviewed and adopted in accordance with workplace procedures
 - 1.3 Scope and parameters of energy sector report are evaluated and identified in accordance with workplace procedures
 - 1.4 Criteria from other related works impacting on the report development are determined from relevant sources
 - 1.5 Report information and sources are identified, and availability and reliability of information is assessed for relevance
- 2 Develop energy sector report**
 - 2.1 Scenarios/requirements identified in consultation with relevant person/s and industry regulatory and job requirements are included in report
 - 2.2 Report is developed in collaboration with relevant person/s
 - 2.3 Relevant person/s is identified to assist in the compilation of the report
 - 2.4 Report is reviewed and adjusted to rectify anomalies
 - 2.5 Report is compiled in accordance with workplace policies and procedures
 - 2.6 Research information is analysed and compiled for the final report
- 3 Obtain approval for final energy sector report**
 - 3.1 Report is presented, discussed and authorised by relevant person/s
 - 3.2 Modifications to report resulting from presentation/discussion with authorised person/s are negotiated
 - 3.3 Final report is presented and approval obtained from authorised person/s

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE124A Compile and produce an energy sector detailed report.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECD0010 Compile and produce an energy sector detailed report

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- analysing energy sector report information
- applying relevant work health and safety (WHS)/occupational health safety (OHS) requirements
- collaborating with relevant person/s in compiling report
- compiling and producing an energy sector report, including:
 - identifying workplace policies and procedures
 - developing report brief incorporating scenarios and requirements
 - communicating with relevant person/s to determine report requirements
 - identifying scope and parameters of report
 - determining impact of related works
 - developing design brief incorporating scenarios and all requirements
- identifying source, availability and reliability of information for report
- obtaining approval for final energy sector report
- presenting and discussing report with relevant person/s, including presenting final report and reviewing and adjusting report to rectify anomalies
- successfully negotiating alterations to proposed report.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communicating with personnel, including:
 - oral communications
 - written procedures and work instructions
- communicating with suppliers
- communicating with customers
- purpose and extent of maintaining work activities records in an enterprise, including:

- types of records for maintaining work activities in an enterprise
- methods for recording and maintaining work records
- work records required by regulation requirements
- using basic computer functions including:
 - starting up
 - selecting application
 - entering information
 - saving
 - printing
- techniques of analysis, including:
 - use of appropriate sampling techniques to collect data
 - types of data and classification
 - effective questionnaire design
 - data collection errors
 - frequency tables
 - statistical diagrams drawing and interpretation
 - the general shape of a frequency distribution
 - different types of diagrams
 - mean time between failures calculations
- summary of statistics, including:
 - measures of central tendency
 - measures of dispersion
 - a 5-point summary for a given data set, box and whisker plot distribution
 - data sets comparison using measures of centre and spread
 - the effect of outliers on measures of centre and spread
 - use computer programs or calculators to simplify calculations
- correlation and regression, including:
 - bivariate data and scatter diagrams
 - product-moment correlation coefficient calculation and interpretation
 - difference between causation and correlation
 - equations of regression lines from bivariate data with a calculator and line plotting on a scatter diagram
 - using the equation of regression to make predictions in practical situations
 - investigation of practical problems using correlation and regression
- investigation and reporting, including:
 - presentation of a well formatted report with a clearly stated aim
 - using the internet to obtain relevant data
 - description of the statistical method and design chosen to meet the aim of the investigation
 - statistical analysis and results reporting

- evaluation and interpretation of the results of the investigation
- discussion of the investigation with reference to real world applications
- chronology of the investigation
- analysis techniques
- collaboration and communication techniques
- presentation and negotiation skills
- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- report writing techniques.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0011 Comply with scheduled and preventative maintenance program processes

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to comply with the quality assurance and risk management processes for scheduled and preventative maintenance of the electrotechnology aspects of plant and equipment.

It includes working safely and to technical, quality and risk management standards, work specifications and maintenance schedules; sampling inspections; evaluating components and completing the necessary maintenance documentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to comply with scheduled maintenance program process

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied

- 1.2 Hazards are identified, risks assessed and control measures implemented
 - 1.3 Maintenance schedule and process compliance requirements are confirmed with relevant person/s and work appropriately sequenced in accordance with workplace procedures
 - 1.4 Relevant person/s is consulted to ensure the work is coordinated effectively with others involved on the work site
 - 1.5 Location of equipment to be maintained is determined from maintenance schedule and/or system specifications and diagrams
 - 1.6 Resources required to conduct the maintenance are obtained in accordance with workplace procedures and checked against job requirements
 - 1.7 Tools, equipment and testing devices required to conduct the maintenance are obtained and checked for correct operation and safety in accordance with workplace procedures
- 2 Comply with scheduled maintenance program process**
- 2.1 WHS/OHS risk control measures and workplace procedures for carrying out the work are followed
 - 2.2 Inspecting, testing or measuring on live and operating systems is conducted in accordance with WHS/OHS requirements and workplace procedures
 - 2.3 Circuits/machines/plant are checked and isolated as required in accordance with WHS/OHS requirements and workplace procedures
 - 2.4 Apparatus/components to be maintained are inspected and evaluated for compliance in accordance with maintenance schedule and operational and WHS/OHS requirements and workplace procedures
 - 2.5 Non-compliant apparatus/components are documented and arrangements made for rectification in accordance with workplace procedures
 - 2.6 Methods for dealing with unplanned situations are discussed with relevant person/s and documented in accordance with workplace procedures

- 2.7 Quality checks of the maintenance are undertaken in accordance with workplace procedures
- 2.8 Maintenance process compliance is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
- 3 Complete maintenance compliance process**
- 3.1 WHS/OHS risk control measures and workplace procedures for work completion are followed
- 3.2 Work site and equipment are cleaned and made safe in accordance with WHS/OHS requirements and workplace procedures
- 3.3 Final checks are made to verify that maintenance complies with WHS/OHS requirements, manufacturer specifications and workplace procedures
- 3.4 Maintenance completion is documented and relevant person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Complying with scheduled and preventative maintenance processes must include at least the following:

- three different items of installed equipment

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE009B Comply with scheduled and preventative maintenance program processes.

Links

Companion Volume implementation guides are found in VETNet - -

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEECD0011 Comply with scheduled and preventative maintenance program processes

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - using risk control measures
 - checking tools, equipment and testing devices for correct operation and safety
- applying sustainable energy principles and practices
- communicating effectively with relevant stakeholders
- complying with scheduled and preventative maintenance program processes, including:
 - interpreting maintenance schedule requirements correctly
 - following quality assurance and risk management compliance processes
 - following maintenance schedule
 - inspecting and evaluating apparatus for quality assurance and risk compliance
 - arranging for corrective action of non-compliant apparatus
 - documenting maintenance work
- consulting relevant person/s to coordinate maintenance
- dealing with unplanned events in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
- determining location of equipment maintenance
- ensuring circuits/machines/plant are isolated
- interpreting system specifications and diagrams
- maintaining a clean worksite and equipment
- obtaining relevant resources to conduct maintenance
- performing regular quality checks.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include

knowledge of:

- corrective action procedures for non-compliant apparatus
- data acquisition, including:
 - plant history cards/files
 - inspection techniques
 - predictive maintenance
 - remote visual inspection
 - non-destructive testing
 - thermography
 - vibration analysis
 - oil analysis
- maintenance plan, including:
 - characteristics of plant operation
 - assessment of failure characteristics
 - link failure characteristics to maintenance systems
 - identify production windows
 - resources
 - labour
 - materials
 - establish plan
 - implementation procedures
- maintenance principles, including:
 - maintenance function
 - role of maintenance department
- maintenance systems, including:
 - maintenance terminology
 - preventative maintenance
 - predictive maintenance
 - corrective maintenance
- quality assurance compliance processes
- relevant risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- review of maintenance plan, including:
 - analysis of records
 - manual and electronic recording methods
- scheduled and preventative maintenance process
- sustainable energy principles and practices
- techniques to inspect and evaluate apparatus for quality assurance and risk compliance.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0012 Contribute to risk management in electrotechnology systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to contribute to risk management in electrotechnology systems.

It includes contributing to the identification of electrotechnology systems risks and risk events, the likelihood and consequences of events, evaluating risk, risk management planning and mitigation of risk.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

- 1 Contribute to the identification of risks and development of management strategies**

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) processes and workplace procedures for a given work area are identified, obtained and applied

- 1.2 Scope of program or project is identified from design brief specification and/or relevant documentation and in consultation with relevant person/s
 - 1.3 Potential, perceived and actual risk events in electrotechnology systems risks are identified for contribution, documented and analysed in consultation with relevant person/s in accordance with workplace procedures
 - 1.4 Risk management methods, tools and techniques are used in the analysis and documentation of identified risk events
 - 1.5 Risk management techniques are used to analyse electrotechnology systems risks and risk events, options are assessed and risk approaches recommended to relevant person/s for approval
 - 1.6 Draft risk management processes and workplace procedures are developed and communicated with stakeholders for the management of risk factors
 - 1.7 Risk management processes and workplace procedures are submitted to relevant person/s for approval in accordance with workplace procedures
 - 1.8 WHS/OHS risk control measures are submitted for incorporation in risk management strategies in accordance with workplace procedures and relevant industry standards
- 2 Contribute to the implementation and monitoring of risk management strategies**
- 2.1 Risk management processes and workplace procedures are produced for incorporation into work and project plans to ensure outcomes are achieved
 - 2.2 Activities are monitored to identify variations and responses are submitted to relevant person/s for approval in accordance with risk management processes and workplace procedures
 - 2.3 Agreed risk responses are revised for implementation contribution and plans modified to reflect changing project objectives in accordance with risk management processes and workplace procedures
- 3 Contribute to the evaluation of risk**
- 3.1 Project outcomes are reviewed for contribution with relevant person/s to determine effectiveness of risk

management strategies

management processes in accordance with workplace procedures

- 3.2 Risk issues and recommended improvements are identified, documented and submitted to relevant person/s for approval to be incorporated into ongoing and/or future program, project or plans
- 3.3 Outcomes are documented in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE078B Contribute to risk management in electrotechnology systems.

Assessment Requirements for UEECD0012 Contribute to risk management in electrotechnology systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including
 - using risk control measures
- contributing to identifying potential, perceived and actual risk events
- contributing to incorporating risk management strategies and condition monitoring of plant and equipment with criteria for repair and/or replacement
- contributing to incorporating risk management processes and workplace procedures into program, project and/or plans
- developing risk management processes and workplace procedures for agreement by stakeholders
- identifying improvements and documenting recommendations
- identifying the scope of program or project
- monitoring to identify and responding to variations
- reviewing project outcomes
- using risk management methods, tools and techniques in analysis and reporting.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant plant and equipment
- relevant risk management, applications, practices and techniques, including:
 - principles of risk assessment - planning and prioritisation
 - principles of risk management procedures
 - principles of risk mitigation – handling and monitoring
 - relevant potential, perceived and actual risk events
 - relevant risk management methods, tools and techniques

- risk management principles
- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation, including
 - program, project and/or plans
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to contributing to risk management in electrotechnology systems
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0013 Develop and implement energy sector maintenance programs

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to develop and implement energy sector maintenance programs.

It includes preparing, developing and implementing maintenance programs. It also includes evaluating risks associated with equipment failure; developing maintenance frequency; adhering to repair/replacement policies; and developing, recording and reporting system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare maintenance requirements for energy sector

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) processes and workplace procedures for a given work area are identified, obtained and applied
- 1.2 WHS/OHS risk control measures and workplace

procedures in preparation for the work are followed

- 1.3 WHS/OHS and workplace procedures are developed for required practice skills, frequency and level of maintenance work
 - 1.4 Maintenance program is determined from plant performance specifications and in consultation with relevant person/s
 - 1.5 Relevant person/s is engaged to assess the risks with individual equipment failure
 - 1.6 Level and frequency of repair/replacement for maintenance work is identified following manufacturer instructions in accordance with WHS/OHS and relevant industry standards
 - 1.7 Systems to manage and record maintenance work are identified in accordance with workplace procedures and relevant industry standards
- 2 Develop and implement maintenance program**
- 2.1 Schedules detailing maintenance levels and frequency for equipment items are developed in accordance with risk assessment reports and manufacturer instructions
 - 2.2 Workplace procedures for the maintenance program are developed and implemented in accordance with workplace schedule and relevant industry standards
 - 2.3 Workplace procedures for records to be maintained are developed and implemented in accordance with workplace schedule and relevant industry standards
 - 2.4 Maintenance program is documented in accordance with relevant industry standards and workplace procedures
- 3 Evaluate maintenance program**
- 3.1 Periodic and sample inspection reports are used for maintenance quality and revision of maintenance schedule and frequency in accordance with workplace procedures
 - 3.2 Maintenance schedule is reviewed and revised to maintain equipment to acceptable level in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Developing and implementing energy sector maintenance programs must include producing one workplace maintenance program and include at least ten different types of items included in the schedule:

- elements or variables included in the schedule

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE110A Develop and implement energy sector maintenance programs.

Assessment Requirements for UEECD0013 Develop and implement energy sector maintenance programs

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - using risk control measures
- determining the maintenance program from specifications and relevant person/s
- developing a maintenance record system
- developing maintenance schedule implementation procedures
- developing maintenance program and evaluation procedures
- documenting the maintenance program
- identifying the level and frequency of repair/replacement maintenance
- preparing maintenance requirements.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- relevant equipment
- relevant industry standards
- relevant maintenance principles
- relevant maintenance systems maintenance plan
- relevant manufacturer specifications and operating instructions
- relevant plant performance specifications
- relevant review of maintenance plan
- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation, including:
 - periodic and sample inspection reports

- relevant workplace quality, instructions, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, facilities, tools and equipment currently used in industry
- resources that reflect current industry practices in relation to developing and implementing maintenance programs
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0014 Develop design briefs for electrotechnology projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to develop design briefs for electrotechnology projects.

It includes preparing and developing project design briefs. It also includes obtaining approval of designs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to develop project design briefs

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|-----|---|
| 1.1 | Work health and safety (WHS)/occupational health and safety (OHS) processes and workplace procedures for a given work area are identified, obtained and applied |
| 1.2 | Techniques for project planning are reviewed and applied in accordance with workplace procedures |

- 1.3 Project is evaluated and parameters determined using a formal evaluation/survey in accordance with workplace procedures
 - 1.4 Relevant person/s is consulted and/or site visits conducted to identify other works impacting on project
 - 1.5 Project budget is determined by deliverables and quality in accordance with workplace procedures and project parameters
- 2 Develop design proposal**
- 2.1 Project design brief is developed with scenarios/requirements in consultation with relevant person/s and in accordance with relevant industry standards
 - 2.2 Project design brief is developed in collaboration with relevant design professional/s and/or contractor/s involved in the project
 - 2.3 Relevant person/s required for the project is identified and their role/s specified in the project design brief
 - 2.4 Project design brief is reviewed against inputs and adjusted to rectify any anomalies
 - 2.5 Project design brief proposal is documented in accordance with workplace procedures
- 3 Obtain approval for project design briefs**
- 3.1 Project design brief is presented and discussed with relevant person/s
 - 3.2 Alterations to the project design brief resulting from the presentation/discussion are negotiated with relevant person/s in accordance with workplace procedures
 - 3.3 Final project design brief is documented and approval obtained from relevant person/s

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work

environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Developing requirements to be incorporated into the design of electrotechnology projects must include at least the following:

- safety requirements met
- client expectations established
- cost-effective solutions pursued and assured
- design requirements documented

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE015B Develop design briefs for electrotechnology projects.

Assessment Requirements for UEECD0014 Develop design briefs for electrotechnology projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including
 - using risk control measures
- dealing with unplanned events in accordance with problem-solving techniques and workplace procedures
- determining the impact of other related works
- developing project design brief incorporating scenarios and all requirements
- documenting project plan proposal
- establishing the scope and parameters of the project
- identifying competencies required for the project
- negotiating alterations to the proposed project design brief successfully
- obtaining approval of the final brief.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- problem-solving techniques
- purpose of critical path analysis
- purpose of customer relations
- relevant industry standards
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications
- relevant project parameters and budget requirements
- relevant scenarios/requirements
- relevant techniques for project planning
- relevant WHS/OHS legislated requirements

- relevant workplace documentation, including
 - project design brief proposal
- relevant workplace quality, instructions, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, facilities, tools, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to developing project design briefs for electrotechnology projects
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0015 Develop engineering solutions to photonic system problems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to develop engineering solutions to photonic system problems.

It includes preparing and developing engineering solutions for photonic systems problems, and applying problem-solving techniques. It also includes testing, documenting and implementing engineering solutions.

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations which are designed to operate at voltages greater than 50 volt (V) alternating current (a.c.) or 120 V direct current (d.c.).

Competency development activities in this unit are subject to regulations directly related to licensing. Where a licence or permit to practice is not held, skills and knowledge described in this unit require a relevant contract of training, such as an Australian Apprenticeship.

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEEEEC0065 Solve problems in basic electronic circuits

or

UEECD0043 Solve problems in direct current circuits

or

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to develop engineering solution for photonic systems problems

2 Develop engineering solutions

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 WHS/ OHS processes and workplace procedures for a given work area are identified, obtained and applied

1.2 WHS/OHS risk control measures and workplace procedures in preparation for the work are followed

1.3 Photonic system problems are determined from performance specifications and/or reports and in consultation with relevant person/s

1.4 Activities are planned in accordance with workplace procedures for timelines in consultation with others involved

1.5 Strategies are identified, developed and implemented

2.1 WHS/OHS risk control measures and workplace procedures for carrying out the work are followed

2.2 Photonic technology, operation, device characteristics and applications are applied to developing solutions to photonic system problems

2.3 Parameters, specifications and performance requirements of photonic system problems are obtained in accordance with workplace procedures

2.4 Resolving photonic system problems is analysed to provide solutions in accordance with workplace procedures

- 2.5** Unplanned events are responded to in accordance with WHS/OHS requirements and workplace procedures
- 2.6** Quality of work is monitored and responded to in accordance with workplace procedures and/or relevant industry standards
- 3 Test, document and implement engineering solutions for photonic problems**
- 3.1** Solutions to photonic problems are tested and modified as required in accordance with workplace procedures
- 3.2** Solutions and instructions for implementation are documented in accordance with WHS/OHS requirements and workplace procedures
- 3.3** Relevant person/s required to implement solutions to photonic system problems is coordinated in accordance with relevant industry standards and workplace procedures
- 3.4** Justification for solutions used to solve photonic system problems is documented in work records in accordance with relevant industry standards

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Developing engineering solutions must include the following:

- at least two solution applications

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE128A Develop engineering solutions to photonic system problems.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEED0015 Develop engineering solutions to photonic system problems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including
 - using risk control measures
- dealing with unplanned events in accordance with problem-solving techniques and workplace procedures
- determining photonic system problems
- developing engineering solutions for photonic system problems
- documenting instruction for implementation of solutions
- documenting justification of solutions implemented
- forming strategies for solution development and implementation
- implement engineering solutions for photonic system problems
- obtaining photonic system parameters, specifications and performance requirements
- preparing to develop engineering solution for photonic system problems
- testing and solving photonic system problems.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- problem-solving techniques
- relevant development and implementation strategies
- relevant industry standards
- relevant manufacturer specifications
- relevant photonic principles and applications, including:
 - components for wavelength-division multiplexing (WDM) systems
 - concepts of optical transmission

- environmental advantages and impacts of optical technology
- geometric optics
- introduction to photonic components
- operating principles of optical couplers and their characteristics
- operational principles of key photonic devices
- photonic components and component technologies
- photonic components and their roles in photonic devices
- relevant job safety assessments or risk mitigation processes
- relevant testing techniques
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace instruction, quality, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, facilities, tools and equipment currently used in industry
- resources that reflect current industry practices in relation to developing engineering solutions to photonic system problems
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0016 Document and apply measures to control WHS risks associated with electrotechnology work

Modification History

Release 2. This minor update is the second release of this unit of competency in the UEE Electrotechnology Training Package.

Duplicate content removed from Knowledge Evidence.

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to identify, document and apply work health and safety (WHS)/occupational health and safety (OHS) hazard and risk control measures associated with electrotechnology work.

It includes identifying workplace hazards, assigning levels of risk, developing control measures to eliminate and/or mitigate risks, reviewing risk control measures and maintaining documentation of hazards, risk control measures and their application in accordance with compliance procedures.

This unit addresses information, processes and techniques for the application of WHS/OHS, specific to working in the electrotechnology sector and is essential for workers without managerial or supervisory responsibilities.

Typically, this unit will relate to the type of job being undertaken, electrical conditions, energy levels, radiation levels, toxic substances, airborne particles, pressure discharge, explosive atmosphere, worksite location, general worksite conditions, specific work location, moving parts, tools and equipment, workers competence and/or capacity and/or personal effects.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Identify and document hazards and risks associated with electrotechnology work

2 Assign levels of risk and develop and document control measures

3 Monitor, review and document risk control measures

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Hazards are identified and documented by undertaking a job analysis and worksite inspection in consultation with relevant person/s and in accordance with workplace procedures

1.2 Risks associated with identified hazards are assessed in consultation with relevant person/s, taking into account existing control measures and documented in accordance with workplace procedures

2.1 Level of risk is assessed and prioritised for each identified hazard in consultation with relevant/s persons and in accordance with regulations and WHS/OHS workplace compliance procedures

2.2 Control measures for identified hazards are determined by applying the hierarchy of control and activities to eliminate and/or mitigate the risk

2.3 Level of risk is re-assessed to confirm the required control measures reduce the risk level to as low as reasonably practicable

2.4 Hazards risk level and control measures are agreed to in consultation with relevant stakeholders and documented in accordance with workplace procedures

3.1 Documented control measures are recorded in workplace risk register and made available for reference by relevant person/s

3.2 Control measures are reviewed and modified, as required, in consultation with relevant person/s in accordance with workplace procedures

3.3 Document and apply measures to control WHS/OHS risks associated with electrotechnology work

- 3.4 Changes and updates are made to relevant documentation, risk register as additional hazards are identified
- 3.5 Documentation of hazards, risks control measures and their application are filed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Documenting and applying WHS risks must be demonstrated in relation to electrotechnology installation, testing, inspection, fault finding, maintenance or development work functions and include the following:

- relevant WHS/OHS legislation, regulations and codes of practice related to devices and systems and hazards present in residential, commercial and industrial workplaces
- accepted industry work procedures and the specific safety procedures and work instructions for a particular workplace or organisation

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work.

Links

Companion Volume Implementation Guides are found in VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEECD0016 Document and apply measures to control WHS risks associated with electrotechnology work

Modification History

Release 2. This minor update is the second release of this unit of competency in the UEE Electrotechnology Training Package.

Duplicate content removed from Knowledge Evidence.

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying measures to control work health and safety (WHS)/occupational health and safety (OHS) risks, including:
 - identifying hazards by job analysis and/or work-site inspection
 - documenting hazards
 - determining risks associated with identified hazards
 - determining the degree of risk in consultation with relevant person/s and in accordance with workplace requirements and documenting the level of risk
 - working with a group to identify effective hazard control measures
 - working with a group to modify and/or develop safe work methods
 - utilising the hierarchy of control to develop reasonably practicable control measures to eliminate or control risk
 - reassessing the level of risk and documenting the reassessed level of risk
 - documenting control measures
 - updating worksite risk register
 - monitoring, reviewing relevant control measure documentation to ensure control measures remain valid
 - reviewing job-specific and/or worksite processes to ensure control measures remain valid
 - identifying job-specific and/or worksite changes and modifying hazard, risk and control measure documentation
 - following workplace requirements for filing control measure documentation
 - identifying practical control measures for dealing with the hazards on a construction worksite
 - identifying practical control measures for dealing with the hazards of low voltage (LV)

equipment

- identifying practical control measures for dealing with the hazards of high voltage (HV).

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- risk management and assessment of risks, including:
 - principle and purpose of risk management
 - processes for conducting a risk assessment
 - hazard identification by job analysis and work-site inspection
 - recording hazards and assessing risk
- recognising and assigning a level of risk, including:
 - high (potential to kill or permanent disability)
 - medium (potential to cause an injury or illness of a permanent nature)
 - low (potential to cause a minor injury requiring first aid but no permanent disability)
 - the likelihood of an incident happening
 - risk level matrix
- identifying control measures to eliminate or control risk, including:
 - hierarchy of control measures
 - what constitutes a reasonably practicable control measure
 - monitoring and reviewing processes to ensure control measures remain valid
- control measure documentation, including:
 - job safety analysis (JSAs)
 - safe work method statements (SWMS)
 - risk registers
 - relevant industry standards
- construction site hazards, risks and control measures, including:
 - manual and mechanical handling
 - noise, dusts, gases and chemicals
 - working at heights
 - working in confined spaces
 - harmful airborne contaminants: fibres of thermal insulation, fibrous cement materials, asbestos, silica and other fibres in insulation materials
 - harmful devices: laser equipped devices, gas torches and welding equipment
 - harmful materials: gases including refrigerants, industrial cleaning agents, fibres of optical cable, thermal insulation, glues and other setting agents
- hazards, risks and control measures associated with HV, including:
 - control measures used for dealing with the hazards of HV

- parts of an electrical system and equipment where HV is likely
- the terms ‘touch voltage’, ‘step voltage’, ‘induced voltage’, ‘stored energy’ and ‘creepage’ as they relate to the hazards of HV
- Australian and New Zealand Standards (AS/NZS) requirements for safety services and issues related to HV installations
- consultation and the requirement for the use of authorised personnel for undertaking isolations, maintenance and reporting of faults (including permit requirements)
- hazards, risks and control measures associated with LV equipment, including:
 - risks in modifying electrical installations, fault finding, maintenance and repair
 - control measures before, while and after working on electrical installations, circuits and equipment
 - isolation and tagging-off procedures
 - risks, restrictions and control measures for working live
 - alternate supplies
- hazards associated with extra-low voltage (ELV), LV and high currents, including:
 - arrangement of power distribution and circuits in electrical installations
 - parts of an electrical system and equipment that operate at LV and ELV, and, where high currents are likely
- hazards, risks and control measures associated with disconnecting and reconnecting electrical equipment, including:
 - isolation and tagging-off procedures
 - alternate supplies (back-up supply and changeover switches).

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0017 Establish and follow a competency development plan in an electrotechnology engineering discipline

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to determine and follow a competency development plan in an electrotechnology engineering discipline.

It includes identifying competency development plan, following activities for developing competency, pursuing opportunities to develop competencies, self-monitoring competency development and meeting obligations for periodic reporting of competency development activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Identify competency development plan

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Competency development plan requirements are identified in accordance with workplace procedures and in consultation with relevant person/s

- 1.2** Obligations and expectations of the competency development plan are obtained and applied
- 2 Prepare for competency development plan activities**
 - 2.1** Work activities are obtained and applied in accordance with workplace procedures and relevant industry standards
 - 2.2** Work instructions are followed and clarification is sought from relevant person/s
 - 2.3** Unplanned situations are dealt with safely and in accordance with relevant industry standards and workplace procedures and with the approval of relevant person/s
- 3 Monitor and report competency development plan**
 - 3.1** Competency development plan is confirmed in consultation with relevant person/s
 - 3.2** Components of competency development plan are followed in accordance with workplace procedures
 - 3.3** Opportunities to practise skills and apply knowledge to a competency activity are applied
 - 3.4** Assistance is sought from relevant person/s as required in developing skills and applying knowledge relevant to a competency activity
 - 3.5** Progress in activities is monitored against competency development plan in accordance with relevant industry standards and workplace procedures
 - 3.6** Modifications to competency development plan are made in consultation with relevant person/s
 - 3.7** Competency development activities are reported in accordance with relevant industry standards and workplace procedures
 - 3.8** Periodic competency development activities report is validated by relevant person/s in accordance with relevant industry standards and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE083A Establish and follow a competency development plan in an electrotechnology engineering discipline.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECD0017 Establish and follow a competency development plan in an electrotechnology engineering discipline

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying duties and responsibilities of competency development plan
- applying opportunities for gaining the range of workplace experience/s
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including
 - using risk control measures
- dealing with unplanned situations in accordance with relevant industry standards and workplace procedures
- dealing with unplanned situations with the approval of relevant person/s
- following relevant industry standards and workplace procedures
- following work instructions and seeking clarification
- identifying competency development plan requirements
- progressing with activities monitored against competency development plan
- reporting competency development activities in accordance with workplace procedures
- reviewing progress of the competency development activities in accordance with workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- monitoring and reporting requirements of competency development plan
- obligations and expectations of competency development plan
- problem-solving techniques
- relevant components of a competency development plan
- relevant industry standards and workplace procedures
- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements

- relevant workplace documentation, including:
 - competency development activities report
 - development plan
- relevant workplace instructions, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to participating in, developing and following a personal competency development plan
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0018 Establish, maintain and evaluate energy sector WHS/OHS systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to establish, maintain and evaluate energy sector work health and safety (WHS)/occupational health and safety (OHS) systems.

It includes understanding an organisation's WHS/OHS obligations; determining and maintaining participative arrangements, procedures for hazard identification, risk assessment and control measures; procedures for dealing with hazardous incidents, safety training and safety records; and evaluating the safety system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Determine and maintain framework for WHS/OHS system

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 WHS/OHS policies are developed and implemented within management systems in accordance with workplace procedures and relevant industry standards

- 1.2 WHS/OHS responsibilities and duties included in job descriptions and duty statements for implementation and integration of the WHS/OHS system are defined and allocated for relevant positions
 - 1.3 Relevant resources for operation of WHS/OHS system are identified, obtained and/or provided in accordance with workplace procedures
 - 1.4 Information on WHS/OHS system and workplace procedures of managerial responsibility is provided and explained in a form accessible to employees
 - 2 **Determine and maintain participative arrangements for management of WHS/OHS**
 - 2.1 Relevant consultative workplace processes are determined and maintained in consultation with employees and representatives in accordance with WHS/OHS and workplace procedures
 - 2.2 Issues raised through participation and consultation are addressed and resolved in accordance with workplace procedures and timeframes
 - 2.3 Outcomes of participation and consultation are provided to employees in accordance with workplace procedures
 - 3 **Determine and maintain procedures for identifying hazards assessing risk and controlling risk**
 - 3.1 Existing and potential hazards are identified and confirmed in area of managerial responsibility in accordance with WHS/OHS records system and workplace procedures
 - 3.2 Workplace procedures for ongoing identification of hazards are developed and integrated within management systems of work
 - 3.3 Activities are monitored to ensure workplace procedures are implemented in area of managerial responsibility
 - 3.4 Hazard identification is addressed at planning, design and evaluation stages of any change in the workplace to prevent new hazards
 - 3.5 Risks presented by identified hazards are assessed in accordance with WHS/OHS and relevant industry standards
 - 3.6 Workplace procedures for ongoing assessment of risk are developed and integrated within systems of work in

accordance with workplace procedures

- 3.7** Activities are monitored to ensure workplace procedures are implemented in area of managerial responsibility
 - 3.8** Risk assessment is addressed at planning, design and evaluation stages of any change in the area of managerial responsibility to ensure risk from hazards has not increased
 - 3.9** Control measures to assess risks are developed and implemented according to hierarchy of control in accordance with WHS/OHS records system
 - 3.10** Interim control measures are implemented for identified risk immediately until a practical control measure is developed
 - 3.11** Workplace procedures for ongoing risk control are developed and integrated in systems of work in accordance with hierarchy of control
 - 3.12** Activities are monitored to ensure the risk control workplace procedures are implemented in area of managerial responsibility
 - 3.13** Risk control is addressed at the planning, design and evaluation stages of any change within the area of managerial responsibility to ensure risk control measures are implemented
 - 3.14** Inadequacies in risk control measures are identified and resources enabling implementation of new measures are obtained and/or provided in accordance with hierarchy of control and workplace procedures
- 4 Determine and maintain procedures, training and systems for dealing with hazardous events**
- 4.1** Potential hazardous events are correctly identified in accordance with WHS/OHS and workplace procedures
 - 4.2** Workplace procedures to control the risks associated with hazardous events are developed in consultation with relevant emergency services and relevant industry standards
 - 4.3** Relevant information and training are provided to employees to enable implementation of the workplace procedures in all relevant circumstances

- 4.4** WHS/OHS training program is developed and implemented to identify and fulfil employees' training requirements in accordance with workplace procedures
- 4.5** WHS/OHS records system is determined and monitored for identification of patterns of injury and disease within the area of managerial responsibility
- 5 Evaluate the WHS/OHS system and relevant policies, workplace procedures and programs**
- 5.1** WHS/OHS system and relevant policies, workplace procedures and programs are assessed in accordance with
- 5.2** WHS/OHS system improvements are developed and implemented in accordance with workplace procedures
- 5.3** WHS/OHS and relevant industry standards is assessed to ensure compliance with WHS/OHS is maintained

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE118A Establish, maintain and evaluate energy sector OHS systems.

Links

Companion Volume implementation guides are found in VETNet - -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEECD0018 Establish, maintain and evaluate energy sector WHS/OHS systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- establishing and maintaining the framework for the work health and safety (WHS)/occupational health and safety (OHS) system
- establishing and maintaining participative arrangements for management of WHS/OHS
- establishing and maintaining procedures for identifying hazards, assessing risk and controlling risk
- establishing and maintaining procedures for dealing with hazardous events
- establishing and maintaining WHS/OHS training programs
- establish and maintaining a system for WHS/OHS records
- evaluating the WHS/OHS system and related policies, procedures and programs
- dealing with unplanned events
- addressing and resolving issues raised through participation and consultation
- addressing risk assessment and control at planning, design and evaluation stages of any change
- developing and implementing control measures to assess risks in hierarchy of control
- developing and integrating workplace procedures for ongoing assessment of risk
- identifying inadequacies in risk control measures
- implementing interim and ongoing control measures for identified risk immediately
- monitoring activities to ensure workplace procedure is implemented
- providing outcomes of participation and consultation to employees.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- energy sector WHS/OHS enterprise responsibilities, including:
 - provisions of relevant WHS/OHS legislation
 - principles and practice of effective WHS/OHS management
 - management arrangements relating to regulatory compliance

- enterprise hazards and risks, control measures and relevant expertise required
- characteristics and composition of workforce and their impact on WHS/OHS
- relevance of enterprise management systems to WHS/OHS
- analysis of working environment and design of appropriate WHS/OHS systems
- analysis of relevant data and evaluation of WHS/OHS system effectiveness
- assess resources to establish and maintain WHS/OHS management systems
- relevant manufacturer specifications and operating instructions
- relevant safe work method statements (SWMS)/job safety assessments or risk mitigation processes
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to establishing, maintaining and evaluating WHS/OHS systems
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0019 Fabricate, assemble and dismantle utilities industry components

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to fabricate, assemble and dismantle utilities industry components using fitting and metal fabrication techniques.

It includes the safe use of hand tools, fixed and portable power tools; cutting, shaping, joining and fixing; using metallic and non-metallic materials; dismantling and assembling equipment; mechanical measurement and marking out; and, reading drawings/diagrams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare for dismantling, assembling and fabrication work

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified and applied in accordance with workplace procedures

- 1.2 WHS/OHS risk control measures and workplace procedures are followed in preparation for the work
 - 1.3 Work instructions and relevant workplace procedures, industry standards, codes of practice and regulations for dismantling, assembling and fabrication are identified and applied
 - 1.4 Scope of work to be undertaken is obtained from relevant documentation and from work supervisor
 - 1.5 Advice is sought from work supervisor to ensure work is coordinated effectively with other persons
 - 1.6 Materials required for work are identified and obtained in accordance with workplace procedures
 - 1.7 Tools, equipment and measuring devices needed to carry out the work are obtained and checked for correct operation and safety
- 2 Dismantle and assemble utilities industry apparatus**
- 2.1 WHS/OHS risk control measures and workplace procedures for dismantling and assembling apparatus are followed
 - 2.2 Circuits/apparatus/plant are checked and isolation confirmed in accordance with WHS/OHS workplace requirements and procedures
 - 2.3 Relevant tools are selected and used correctly and safely in accordance with manufacturer instructions and workplace procedures
 - 2.4 Relevant manufacturer guides and instructions are followed when dismantling and assembling apparatus
 - 2.5 Apparatus components are marked or tagged correctly during dismantling to ensure correct and efficient reassembly in accordance with workplace procedures
 - 2.6 Dismantled components and parts are stored to protect them against loss or damage in accordance with manufacturer instructions and workplace procedures
 - 2.7 Apparatus is dismantled and assembled without waste of materials and energy, damage to apparatus, the surrounding environment or services
 - 2.8 Unplanned events are referred to supervisor for

directions in accordance with workplace procedures

2.9 Quality checks are carried out in accordance with workplace procedures

2.10 Worksite is tidied, tools and equipment cleaned and securely stored in accordance with workplace procedures

2.11 Work supervisor is notified of dismantling and assembling apparatus completion in accordance with workplace procedures

3 Fabricate utilities industry components

3.1 WHS/OHS risk control measures and workplace procedures for fabricating components are followed

3.2 Circuits/apparatus/plant are checked and isolated in accordance WHS/OHS workplace requirements and procedures

3.3 Relevant tools and equipment are selected, used correctly and safely in accordance with manufacturer instructions and workplace procedures

3.4 Drawings, diagrams and instructions for fabrication of mechanical components are followed in accordance with workplace procedures

3.5 Component dimensions are determined directly by measuring, or by calculation from information supplied in job drawings and instructions

3.6 Mechanical components are fabricated by measuring, marking out, cutting, joining and fixing accurately using relevant equipment and tools, minimising waste of materials and energy and/or damage to the surrounding environment or services

3.7 Unplanned events are referred to supervisor for directions in accordance with workplace procedures

3.8 Quality checks are carried out in accordance with workplace procedures

3.9 Worksite is tidied, tools and equipment cleaned and securely stored in accordance with workplace procedures

3.10 Work supervisor is notified of fabrication completion in

accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

- | | |
|--|---|
| Hand tools must include: | <ul style="list-style-type: none">• drills and drilling with different types of drills used in the electrotechnology industry• tools for holding, cutting, driving, shaping, breaking and bending materials• tools for cutting metallic and non-metallic material |

Assessment Requirements for UEECD0019 Fabricate, assemble and dismantle utilities industry components

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements
- applying sustainable energy work practices to reduce waste when marking out
- complying with relevant electrical regulations and legislations
- consulting with work supervisor
- correctly marking, tagging and storing components during dismantling
- dealing with unplanned events in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
- drawing freehand mechanical components showing all information needed for its manufacture/fabrication
- fabricating, dismantling, assembling utilities industry components, including:
 - applying safety procedures when using holding and cutting tools
 - cutting a thread on metallic components
 - demonstrating safe use of a bench drill
 - dismantling electrical, electronic, instrumentation or refrigeration/air conditioning piece of equipment using correct procedures
 - assembling electrical, electronic, instrumentation or refrigeration/air conditioning piece of equipment using correct procedures
 - drilling metallic and non-metallic components
 - fabricating components using sheet metal and fabrication tools
- following manufacturer guides and instructions
- following work instructions
- holding and cutting materials accurately
- interpreting and completing workplace documentation
- interpreting mechanical drawings/diagrams and instructions used in the electrotechnology industry
- joining components using correct method and equipment
- laying out a drawing of mechanical components using engineering drawing convention

- marking out, cut, bend, drill and join sheet metal
- measuring, calculating and marking out a project accurately in accordance with workplace procedures
- selecting and using portable power tools correctly and safely
- selecting and using relevant hand tools correctly and safely
- tapping and threading metallic and/or non-metallic components
- using vernier calipers and micrometers to measure components
- maintaining a clean worksite and equipment
- modifying metal enclosures
- demonstrating safe drilling practices
- modifying plastic enclosures
- performing quality checks
- planning for dismantling, assembling and fabrication work.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- mechanical drawing interpretation and sketching, including:
 - industry drawing standards of mechanical components
 - abbreviations and symbols used in drawing of mechanical components
 - interpretation of mechanical drawings commonly used in the electrotechnology industry (orthogonal projection, third angle - detail and assembly drawings, and pictorial views)
 - laying out a drawing of mechanical components using engineering drawing convention
 - freehand drawings of mechanical components showing all information needed for its manufacture/fabrication
- workshop planning and materials, including:
 - methods used to work safely in an industrial work environment
 - typical non-electrical hazards in the workplace
 - control measures for dealing with hazards identified
 - type of metallic and non-metallic materials used in the electrotechnology industry and application of the common materials
 - planning process
- measuring and marking out, including:
 - reasons for measuring and marking out
 - sustainable energy work practices related to reducing waste when marking out
- holding and cutting materials, including:
 - procedures for using a range of tools for cutting, shaping, and finishing metallic and non-metallic materials
 - safety procedures when using holding and cutting tools

- drills and drilling, including:
 - types of drills used in the electrotechnology industry
 - drilling metallic and non-metallic components
 - safe use of a bench drill
- tapping and threading including type and size of commonly used threads used in electrotechnology work
- general hand tools used in electrotechnology work
- joining techniques, including:
 - machine screws
 - welding, brazing or soldering techniques
- portable power tools in electrotechnology work, including:
 - applications of portable power tools
 - using portable power tools
 - fabricating components using power tools
 - requirements for testing and tagging cord connected electrical equipment
- compressed gas operated tools in electrotechnology work
- sheet metal work, including:
 - types of sheet metal materials used in the electrotechnology work
 - names and applications of the types of fabrication materials
 - techniques used in fabricating sheet metal, including cutting, bending, drilling/punching, joining and cutting mitres
 - marking out, cutting, bending, drilling and/or cutting and/or punching holes, joining and cutting mitred joints using sheet metal
 - sustainable energy work practices to reducing waste when fabricating using sheet metal
- low tolerance measurement, including:
 - tolerance
 - techniques in using vernier callipers and micrometers
- dismantling and assembly techniques, including procedures for ensuring the safe treatment of dismantled components
- relevant tools for specific tasks, including:
 - tapping and threading
 - general hand tools used in electrotechnology work
 - joining
 - portable electric power tools
 - dismantling and assembly techniques
 - measuring and marking out
 - holding and cutting metallic and non-metallic materials
 - sheet metal work

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0020 Fix and secure electrotechnology equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to fix, secure and mount electrotechnology equipment to hollow walls, solid walls and metal fixings.

It includes the safe use of hand and portable tools/ power tools and the selection and safe application of fixing devices and supporting accessories/equipment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to fix and secure electrotechnology equipment

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified and applied
- 1.2 Hazards are identified, risks are assessed and control measures are implemented

- 1.3 Scope of work to be undertaken is obtained from relevant documentation and/or from work supervisor
 - 1.4 Advice is sought from work supervisor to ensure work is coordinated effectively with others
 - 1.5 Materials required for the work are identified and obtained in accordance with workplace procedures
 - 1.6 Fixing devices are selected for their suitability for the environment, weight of the load they are supporting and sub-stratums into which they are being installed in accordance with manufacturer specifications and safe load limits
 - 1.7 Supporting accessories/equipment are selected for their suitability for the environment and ability to support and protect from damage in accordance with workplace procedures
 - 1.8 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety in accordance with workplace procedures
- 2 Install fixing and support devices**
- 2.1 Exposed and/or conductive parts, plant or machinery are confirmed as isolated in consultation with authorised person
 - 2.2 WHS/OHS risk control measures relevant to work site are followed
 - 2.3 Fixing devices are installed in accordance with manufacturer instructions, regulatory requirements and workplace procedures
 - 2.4 Support accessories/equipment are installed accurately in accordance with industry technical standards, regulatory requirements and job specifications
 - 2.5 Work is carried out without waste of materials or damage to apparatus or circuits, the surrounding environment or services and using sustainable energy practices
- 3 Complete fixing and support work**
- 3.1 WHS/OHS risk control measures for work completion are followed
 - 3.2 Worksite is tidied and tools and equipment cleaned and

securely stored in accordance with workplace procedures

- 3.3** Relevant personnel are notified of work completion in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Fixing and securing electrotechnology equipment must include:

- installation
- maintenance or development work functions

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE105A Fix and secure electrotechnology equipment.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECD0020 Fix and secure electrotechnology equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant workplace health and safety (WHS)/occupational health and safety (OHS) requirements
- applying sustainable energy principles and practices
- communicating effectively with relevant stakeholders
- completing fixing and support work to electrotechnology equipment
- completing workplace documentation
- ensuring exposed and/or conductive parts, plant or machinery are isolated by an authorised person
- installing a fixing device and accessory capable of supporting up to 20 kilograms (kg) on the metal plate
- using appropriate fixing methods, tools and devices to install fixings to hollow walls, solid walls, brick, concrete and steel
- installing, aligning and adjusting fixing devices in accordance with manufacturer instructions and load limits, including installing relevant fixing support accessories/equipment
- maintaining a clean worksite and equipment
- selecting relevant fixing devices suitable for the environment they are being installed for loads, including:
 - less-than 5 kg
 - 5-20 kg
 - 20-50 kg
- selecting the correct device for supporting, fixing and protecting wiring/cabling/piping and functional accessories
- using fixing adhesives and tapes safely in accordance with manufacturer instructions and load limits
- using power drills, including selecting and changing drill bits and drill speeds.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- devices, tools, equipment and methods for supporting, fixing and protecting electrotechnology equipment wiring/cabling/piping and functional accessories, including:
 - hollow walls, wood, masonry blocks, plasterboard and panelling
 - fixing to metal
 - solid walls, including masonry and concrete structures
 - vertical and horizontal surfaces
 - fixing adhesives and tapes
 - securing and mounting types, load limits and safe installation
 - support accessories/equipment
- relevant electrical regulations and legislations
- relevant job safety assessments or risk mitigation processes
- relevant electrotechnology equipment manufacturer specifications
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- sustainable energy principles and practices.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0021 Identify and select components, accessories and materials for energy sector work activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to identify and select components, accessories and materials for energy sector work activities.

It includes identifying, selecting and confirming components, accessories and materials for energy sector work activity selection.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0009 Carry out routine work activities in an energy sector environment

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Identify components, accessories and materials

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work instructions for selecting components, accessories and materials are obtained and confirmed

1.2 Work health and safety (WHS)/occupational health and safety (OHS) policies and workplace procedures are

- communicated, confirmed and applied
- 1.3 Tools, equipment and personal protective equipment (PPE) are identified, checked and are safe to use in accordance with workplace procedures
 - 1.4 Relevant person/s is consulted to ensure the work is coordinated effectively with others
 - 1.5 Resources and materials required for work activity are confirmed, scheduled and obtained in accordance with workplace procedures
- 2 Select components, accessories and materials**
- 2.1 WHS/OHS policies and workplace procedures and safe work practices are followed
 - 2.2 Schedule of work for selecting components, accessories and materials are followed to ensure work is completed in accordance with agreed timelines, quality standard and with a minimum of waste using appropriate technology
 - 2.3 Unplanned situations are responded to in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
 - 2.4 Quality checks of work are undertaken in accordance with work instructions and job requirements
- 3 Confirm components and materials selection**
- 3.1 Checks are made to ensure selection of components, accessories and materials are in accordance with work instructions
 - 3.2 Relevant person/s is notified of completion of the selection process
 - 3.3 Tools, equipment, surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures
 - 3.4 Work area is cleaned, made safe and sustainable energy practices are followed
 - 3.5 Workplace record/s are updated in accordance with work instructions and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Identifying and selecting components/accessories/materials for energy sector work activities must relate to at least one of the following disciplines:

- appliances
- business equipment
- computers
- data communications
- electrical
- electrical machines
- electronics
- fire protection
- instrumentation
- refrigeration and air conditioning
- renewable/sustainable energy
- security technology

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE179A Identify and select components, accessories and materials for energy sector work activities.

Links

Companion Volume implementation guides are found in VETNet - -

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEECD0021 Identify and select components, accessories and materials for energy sector work activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
- following schedule of work
- locating, scheduling and obtaining resources and materials required for work
- dealing with unplanned events/situations in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
- identifying and checking required tools, equipment and personal protective equipment (PPE)
- identifying and selecting components, accessories and materials, including:
 - confirming selection of components, accessories and materials
 - obtaining, checking and returning tools, equipment, surplus resources and materials
 - type, number and ratings of components used in the electrotechnology and engineering industries
- updating work records
- using manufacturer specifications, including:
 - selecting relevant electrotechnology parts and components
 - using relevant part and component identification and information.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- information about parts and components, including:
 - alternative parts
 - catalogues
 - computer access

- telephone inquiry
- ordering procedures, including customer approval, supplier requirements and job requirements
- part identification and access, including:
 - availability and delivery times
 - manufacturers and manufacturer's supply outlets
 - part codes
 - price, including discounts, goods and services tax (GST)/tax and delivery costs
 - type, number and ratings of typical components used in the electrotechnology and engineering industries
- receiving/dispatching procedures, including supplier requirements, handling and storage and job requirements
- relevant workplace documentation
- relevant workplace policies, procedures and instructions.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, relevant industry standards, codes of practice and operation manuals.

UEECD0022 Identify building techniques, methods and materials used in energy sector work activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to identify building techniques, methods and materials used in energy sector work activities.

It includes preparing, identifying and confirming building techniques, methods and materials used. It also includes types of fixing devices, segregation requirements, fixing structures, walls and floor structures, lifting techniques and other related building materials.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to identify building techniques, methods and materials

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Instructions for identifying building techniques, methods and materials used in electrotechnology work are obtained and clarified

1.2 Work health and safety (WHS)/occupational health and

- safety (OHS) requirements and workplace procedures are identified and applied
- 1.3 Tools, equipment and personal protective equipment (PPE) required for work are obtained in accordance with workplace procedures and checked for correct operation and safety
 - 1.4 Identification of building techniques, methods and materials is coordinated with relevant person/s
 - 1.5 Resources and materials needed for work are confirmed, scheduled and obtained in accordance with workplace procedures
 - 1.6 Schedule for identifying building techniques methods and materials used, including practices for working safely, is confirmed in accordance with instructions and requirements
- 2 Identify building techniques, methods and materials**
- 2.1 Hazards are identified, risks assessed and control measures implemented
 - 2.2 Schedule to identify building techniques, methods and materials used is followed to ensure work is completed in an agreed time to a quality standard and with a minimum of waste
 - 2.3 Unplanned events are responded to in accordance with workplace procedures and approval of relevant person/s
 - 2.4 Ongoing checks of work quality are undertaken in accordance with instructions and requirements
- 3 Confirm building techniques, methods and materials used**
- 3.1 Final checks are made to confirm building techniques, methods and materials used conform with work instructions and job requirements
 - 3.2 Work completion is documented and relevant person/s notified in accordance with workplace procedures
 - 3.3 Tools, equipment, surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures
 - 3.4 Sustainable energy practices are followed and work area is cleaned and made safe

3.5 Relevant documents and records are updated in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE147A Identify building techniques, methods and materials used in energy sector work activities.

Links

Companion Volume implementation guides are found in VETNet - -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEECD0022 Identify building techniques, methods and materials used in energy sector work activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- understanding work instructions
- obtaining and checking tools and equipment
- following work schedules
- returning tools and surplus resources as required
- updating work records
- dealing with unplanned events
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- confirming building techniques, methods and materials used
- identifying building techniques, methods and materials.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- energy sector science and materials, including:
 - trade calculations encompassing:
 - mathematical techniques
 - relevant calculations
 - linear measurement, areas, volumes and ratios
 - engineering mechanics encompassing:
 - base physical International System of Units (SI), their applications in engineering calculations in relation to physical quantities and associated formulae
 - mass, velocity, acceleration, force, weight, density and angles
 - energy/work/power
 - moments/torque

- centre of gravity
- mechanical advantage
- levers
- pulley blocks
- efficiency
- friction
- vectors
- resolution of forces
- forces in strung conductors
- forces on poles and towers
- determination of sag
- pressure/stress
- elementary fluid mechanics
- engineering materials encompassing:
 - classification
 - ferrous and non-ferrous metals
 - steels and alloys
 - properties
 - tensile strength
 - temperature and expansion in metals
 - stress and strain
 - ductility
 - applications
 - corrosion
 - galvanic corrosion
 - hardwoods and soft woods
- relevant manufacturer specifications
- relevant safe work method statements (SWMS)/job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- sustainable energy principles and practices.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of

assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0023 Identify effects of energy on machinery and materials in an energy sector environment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to identify effects of energy on machinery and materials in an energy sector environment.

It includes working safely and applying knowledge of the effects of energy on machinery and/or materials in an electrotechnology environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to identify effects of energy on machinery and/or materials

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work instructions for identifying effects of energy on machinery or materials are communicated and applied to ensure clear understanding

1.2 Work health and safety (WHS)/occupational health and

safety (OHS) requirements and workplace procedures are communicated, confirmed and applied

- 1.3 Tools, equipment and personal protective equipment (PPE) required for work are identified, scheduled and checked to ensure they work correctly and are safe to use in accordance with workplace procedures
- 1.4 Relevant person/s is consulted to ensure effects of energy on machinery and/or materials are identified and coordinated effectively with others involved
- 1.5 Resources and materials required for work are confirmed, scheduled and obtained in accordance with workplace procedures
- 1.6 Schedule for identifying effects of energy on machinery and/or materials and practices for working safely are confirmed in accordance with work instructions and manufacturer specifications

2 Identify effects of energy on machinery and/or materials

- 2.1 WHS/OHS requirements and workplace procedures are followed to eliminate or minimise incidents
- 2.2 Schedule for identifying effects of energy on machinery and/or materials work is followed to ensure work is completed in accordance with timeframes, quality standards and minimum of waste
- 2.3 Further instructions are sought from relevant person/s in the event of unplanned events and/or conditions
- 2.4 Ongoing checks of work quality are undertaken in accordance with work instructions and manufacturer specifications

3 Check results of the effects of energy on machinery and/or materials

- 3.1 Final checks are made to ensure the effects of energy on machinery and/or materials, as identified, conforms with work instructions and manufacturer specifications
- 3.2 Relevant person/s is notified of completion of the calculations
- 3.3 Tools, equipment, surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures

- 3.4 Work area is cleaned up, made safe and sustainable energy practices are followed
- 3.5 Relevant records are updated in accordance with work instructions and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE146A Identify effects of energy on machinery and materials in an energy sector environment.

Links

Companion Volume implementation guides are found in VETNet - -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEECD0023 Identify effects of energy on machinery and materials in an energy sector environment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- understanding work instruction
- obtaining and checking tools and equipment
- following work schedules
- identifying the effects of energy appropriately
- returning tools and surplus resources as required
- updating work records
- dealing with unplanned events
- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements, including using risk control measures
- cleaning work area, making safe and following sustainable energy practices.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applied physics concepts, including:
 - motion in two dimensions encompassing:
 - vertical and horizontal components of velocity
 - determination of the vertical component of velocity
 - resolution of velocity into components
 - time of flight, range, effect of air resistance
 - centripetal acceleration, force causing the centripetal acceleration
 - Newton's law of universal gravitation
 - satellites in circular orbits
 - momentum in two dimensions:
 - vector form of Newton's second law of motion, Newton's second law of motion in terms of momentum, law of conservation of momentum

- electricity and magnetism encompassing:
 - electric fields:
 - Coulomb's law, principle of superposition, electric field, pictorial representation of electric fields, superposition of electric fields, electric field due to one or two charged plates, electric fields and conductors, electric field inside a hollow conductor and electric fields near sharp points
 - the motion of charges particles in electric fields:
 - electric, potential difference, acceleration in a constant electric field, and motion of a charged particle in a constant electric field
 - magnetic fields:
 - magnetic fields and their pictorial representation, and magnetic force on a current-carrying conductor
 - the motion of charges particles in magnetic fields:
 - force on a charged particle in a magnetic field, and motion of a charged particle at right angles to a magnetic field
- light and matter:
 - electromagnetic waves:
 - characteristics of electromagnetic waves, speed, frequency and wavelength
 - the interference of light:
 - coherent wave sources, interference, two-source interference, diffraction, two-slit interference, transmission diffraction gratings and speckle
 - photons:
 - photons, the photoelectric effect and x-rays
 - wave behaviour of particles:
 - wave behaviour of particles, and experimental evidence for wave behaviour of particles
- atoms and nuclei:
 - the structure of the atom:
 - line emission spectrum, energy levels in atoms, spectrum of atomic hydrogen, ionization energy, continuous spectrum, line absorption spectrum, fluorescence and stimulated emission
 - the structure of the nucleus:
 - composition of nuclei, the nucleon force, isotopes, mass defect and binding energy, and conservation laws in nuclear reactions
 - radioactivity:
 - stable and unstable nuclei, types of decay of unstable nuclei, alpha decay, beta minus decay, beta plus decay, half-life and activity
 - nuclear fission and fusion:
 - spontaneous and induced nuclear fission, and chain reaction
- skills:
 - experimental skills:
 - purpose and variables, procedure, observation, presentation and interpretation

- investigation design skills:
 - designing and investigation, evaluating and investigation
- information skills:
 - planning an information search, searching for information and evaluating information
- communication skills:
 - oral communication, written communication, and evaluation of oral and written communications
- problem-solving techniques
- relevant calculations
- relevant manufacturer specifications and operating instructions
- relevant job safety assessments or risk mitigation processes
- relevant tools, equipment and personal protective equipment (PPE)
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace quality, policies and procedures
- sustainable energy principles.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- resources that reflect current industry practices in relation to identifying effects of energy on machinery and materials in an energy sector environment
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0024 Implement and monitor energy sector WHS policies and procedures

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to implement and monitor energy sector work health and safety (WHS)/occupational health and safety (OHS) policies and procedures.

It includes providing WHS/OHS information to the work group; implementing and monitoring participative arrangements for the management of WHS/OHS; and implementing and monitoring the workplace procedures for identifying hazards, assessing and controlling risks. It also includes implementing and monitoring procedures for dealing with hazardous events, WHS/OHS training, and maintaining WHS/OHS records.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Provide WHS/OHS information to the work group

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Relevant WHS/OHS legislation and codes of practice are explained to work group

- | | | |
|---|------------|---|
| | 1.2 | Relevant WHS/OHS workplace policies, procedures and programs are available in a readily accessible manner and explained to work group |
| | 1.3 | Identified hazards, risk assessments and risk control measures are identified, supplied and explained to the work group |
| 2 Implement and monitor participative arrangements for management of WHS/OHS | 2.1 | Workplace procedures for consultation of WHS/OHS issues are implemented, monitored and communicated to work group |
| | 2.2 | Issues raised through consultation are dealt with and resolved promptly or referred to relevant person/s for resolution in accordance with workplace procedures |
| | 2.3 | Outcomes of WHS/OHS consultation issues are communicated to the work group |
| 3 Implement and monitor procedures for identifying hazards, assessing risk and controlling risks | 3.1 | Hazards are identified, risks are assessed and control measures are implemented |
| | 3.2 | Risks control measures are implemented and adherence by work group is monitored in accordance with workplace procedures |
| | 3.3 | Inadequacies in existing risk control measures are identified in accordance with hierarchy of risk control and reported to relevant person/s |
| | 3.4 | Inadequacies in resource allocation for implementation of risk control measures are identified and reported to relevant person/s |
| 4 Implement procedures for dealing with hazardous events | 4.1 | Workplace procedures for responding to hazardous events are implemented to ensure prompt control action is taken |
| | 4.2 | Hazardous events are investigated to identify their cause in accordance with workplace procedures |
| | 4.3 | Control measures to minimise risks of hazardous events based on the hierarchy of risk control are implemented or referred to relevant person/s |

- | | |
|---|---|
| 5 Implement and monitor procedures for WHS/OHS training | <p>5.1 WHS/OHS training needs analysis of work group is performed to identify competency gaps</p> <p>5.2 Identified WHS/OHS training gaps are fulfilled by training programs in consultation with relevant person/s</p> |
| 6 Implement and monitor procedures for maintaining WHS/OHS records | <p>6.1 WHS/OHS records for work area are completed in accordance with workplace procedures and relevant legislative requirements</p> <p>6.2 Aggregate information from work area WHS/OHS records are used to identify hazards and monitor risk control procedures in accordance with workplace procedures</p> |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Implementing and monitoring energy sector WHS/OHS policies and procedures must include the following attributes:

- organisation's WHS/OHS obligations
- participative arrangements
- implementation and monitoring safety information to staff
- safety procedures
- safety records maintenance
- training

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE117A Implement and monitor energy sector OHS policies and procedures.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECD0024 Implement and monitor energy sector WHS policies and procedures

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements in the energy sector, including:
 - communicating WHS/OHS issues with relevant person/s, and providing and explaining WHS/OHS information to a work group
 - implementing and monitoring participative arrangements for management of WHS/OHS
 - implementing and monitoring procedures for identifying hazards, and assessing and controlling risks
 - implementing and monitoring workplace procedures for WHS/OHS and maintaining records, including existing hazard register
 - implementing risk control measures using hierarchy of risk control
 - investigating hazardous events to identify causes
- dealing with unplanned events/situations in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
- implementing procedures for dealing with hazardous events
- performing training needs analysis and identifying training gaps
- resolving WHS/OHS issues raised.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- provisions of relevant WHS/OHS legislation
- principles and practice of effective WHS/OHS management
- workplace hazards, range and selection of control measures
- organisational WHS/OHS management systems and policies and procedures needed for legislative compliance
- impact of characteristics and composition of the workforce on WHS/OHS management

- relevance of WHS/OHS management to other organisational management policies, procedures and systems
- analysis of entire work environment and judge WHS/OHS interventions
- analysis of relevant workplace data
- ability to assess resources needed for risk control
- communication techniques
- relevant WHS/OHS legislation, including:
 - resources needed for risk control
 - hierarchy of risk control measures
 - relevant safe work method statements (SWMS)/job safety assessments or risk mitigation processes
 - workplace hazards, range and selection of risk control measures
- relevant workplace documentation
- relevant workplace policies and procedures
- training needs analysis.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in an energy sector workplace operational situation where it is appropriate to do so; where this is not appropriate, assessment must occur in a simulated energy sector workplace operational situation that replicates workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0025 Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits.

It includes preparing to lay, laying wiring/cabling and connecting accessories for ELV circuits. It also includes completing and reporting work activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0020 Fix and secure electrotechnology equipment

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to lay wiring/cabling and connect accessories for

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures are identified and applied

ELV circuits

- 1.2** Hazards are identified, risks are assessed and control measures are implemented
- 1.3** Safety hazards not previously identified are reported on job safety assessment and advice on risk control measures is sought from the work supervisor
- 1.4** Location of work is obtained from relevant person/s to determine scope of work
- 1.5** Advice is sought from relevant person/s to ensure work is coordinated with others
- 1.6** Sources of materials required for work are determined in accordance with workplace procedures
- 1.7** Tools, equipment and testing devices required for work are obtained in accordance with workplace procedures and checked for correct operation and safety
- 2 Lay wiring/cabling and connect accessories for ELV circuits**
 - 2.1** WHS/OHS workplace risk control measures for carrying out the work are followed
 - 2.2** Circuits/machines/plant are checked as isolated in accordance with workplace procedures
 - 2.3** Wiring and accessories are installed to comply with industry standards and job specifications with sufficient excess to affect terminations
 - 2.4** Accessories are installed straight and square in the required locations and within acceptable tolerances
 - 2.5** Cables and conductors are terminated at accessories in accordance with manufacturer specifications and relevant industry standards
 - 2.6** Cables installed for future service are marked and terminated in compliance with relevant industry standards and workplace procedures
 - 2.7** Unplanned events are responded to in accordance with workplace procedures and approval of immediate supervisor
 - 2.8** Cable installation and termination is carried out without wasting materials, damaging apparatus, circuits or the

surrounding environment using sustainable energy practices

- 3 Complete and report work activity**
- 3.1** WHS/OHS completion risk control measures and workplace procedures are followed
- 3.2** Worksite is cleaned and made safe in accordance with workplace procedures
- 3.3** Work completion is documented and relevant person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Laying wiring/cabling and connecting accessories for ELV power and control cabling systems circuits must include:

- at least one of the following wiring/cabling systems:
 - unenclosed thermoplastic sheathed (TPS) cable
 - enclosed thermoplastic insulated (TPI) or sheathed cables
- at least three of the following wiring/cabling systems:
 - single cable
 - flexible cable
 - flexible cord
 - shielded cable
 - ribbon cable
 - other similar and like cable

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE108A Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits.

Links

Companion Volume implementation guides are found in VETNet - -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEECD0025 Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including implementing risk control measures
- applying sustainable energy principles and practices
- cleaning worksite
- completing and reporting work activities
- dealing with unplanned events/situations in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
- determining nature of work activities
- installing cables and accessories to specifications
- laying wiring/cabling and connecting accessories for extra-low voltage (ELV) circuits
- marking cables for future service using workplace procedures
- notifying and documenting completion of work using workplace procedures
- obtaining location of work
- preparing to lay wiring/cabling and connecting accessories for ELV circuits
- reporting safety hazards not previously identified on job safety assessment
- seeking advice from relevant person/s
- selecting appropriate tools, equipment, testing devices, cables and accessories
- sourcing materials required for work activities
- terminating cables, conductors and accessories to manufacturer specifications and requirements.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- cable protection and support method and accessories, including:
 - requirements to protect and support cables adequately - protection against mechanical

- damage, protection from adverse temperatures and corrosion and protection from magnetic field that may affect the performance of the cable
- cable support and protection devices, accessories and typical applications - metallic and non-metallic conduits, duct and trunking, cable ladder and tray, cable clips and ties and related accessories
- installation techniques - cable installation equipment and cable drawing and hauling techniques
- basic cable and conductor terminations, including:
 - insulation removal and replacement
 - conductor handling and cable terminations including general aspects and soldering involving pins on electronic components and stranded conductors carrying current up to 25 amperes (A)
 - application of connecting devices for conductors and terminals
 - continuity through connections and insulation resistance testing
 - stress release on cables/conductors
- environmental and heritage regulation effecting electrotechnology work, including:
 - purpose of environmental and heritage regulation
 - typical issues affecting electrotechnology services and systems
 - meeting requirements
- environmental regulations effecting electrotechnology work
- ELV wiring
- techniques for installing cables in buildings, structures and premises, including:
 - building construction method and construction sequence
 - typical cable routes through buildings, structures and premises
 - building codes affecting the installation of cables in buildings, structures and premises - limitation on penetration structural elements and maintenance of fire protection interiority
 - cable segregation requirements
- technical industry standards, regulations and codes of practice related to ELV work, including:
 - limitation imposed by regulations
 - how to read and apply a standard
- aspects of technical standards that apply to extra-low voltage work types of cables used in the electrotechnology industry and their application, including:
 - structural components of cables and their purpose - conductors and conductor material, insulation, sheathings and servings
 - application of various cables types
 - cable variates - single cables, flexible cables, flexible cords, shielded cables, armoured cables, ribbon cables, other similar and like cables
 - typical characteristics and use of power circuit cables and control circuit cables
- relevant job safety assessments, including risk control measures
- relevant manufacturer specifications
- relevant tools, equipment and testing devices

- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- sustainable energy principles and practices.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0026 Manage risk in electrotechnology activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to manage risk in electrotechnology activities.

It includes managing risk, environment, resources and financial viability. It also includes identifying risk events, consequences of risk events, evaluating risk, risk management planning and mitigation of risk.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Identify risks and develop management strategies

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied
- 1.2** Scope of program or project is identified from design brief specifications and/or relevant documentation and

in consultation with relevant person/s

- 1.3** Potential, perceived and actual risk events are identified, documented and analysed in consultation with risk professionals and/or relevant person/s in accordance with workplace procedures
 - 1.4** Risk management methods, tools and techniques are used in the analysis, reporting and documenting of identified risk events
 - 1.5** Risk management techniques are used to analyse risk events, assess options and recommend risk approaches to relevant person/s for approval
 - 1.6** Risk management processes and workplace procedures are developed for agreement by stakeholders and communicated for ongoing management of risk factors
 - 1.7** WHS/OHS risk control measure are incorporated in risk management strategies in accordance with workplace procedures and relevant industry standards
 - 1.8** Condition monitoring of plant, equipment, criteria for repair and/or replacement are incorporated in risk management strategies
- 2 Implement and monitor risk management strategies**
- 2.1** Risk management processes and workplace procedures are incorporated into work and project plans to ensure outcomes are achieved
 - 2.2** Programs and project plan/s activities are monitored to identify and respond to variations in accordance with risk management processes and workplace procedures
 - 2.3** Agreed risk responses are implemented and plans modified to reflect changing project objectives in accordance with risk management processes and workplace procedures
- 3 Evaluate risk management strategies**
- 3.1** Project outcomes are reviewed with relevant person/s to determine effectiveness of risk management processes in accordance with workplace procedures
 - 3.2** Risk issues and recommended improvements are identified, documented and submitted to relevant person/s for approval to be incorporated into ongoing and/or future program or project plans

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE011C Manage risk in electrotechnology activities.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECD0026 Manage risk in electrotechnology activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including
 - using risk control measures
- developing risk management processes and workplace procedures for agreement by stakeholders
- identifying improvements and documenting recommendations
- identifying potential, perceived and actual risk events
- identifying program or project scope
- implementing risk management strategies
- incorporating risk management strategies and condition into monitoring of plant and equipment with criteria for repair and/or replacement
- monitoring to identify and responding to variations
- reviewing project outcomes
- using risk management methods, tools and techniques in analysis and reporting.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant risk management, application and techniques, including:
 - application of risk management tools and techniques
 - implementing risk management
 - need for risk management within the broad project management framework
 - risk management in the context of the project life cycle and other project management functions
 - risk management methodologies, their capabilities, limitations, applicability and outcomes
- uncertainty and the means of measurement

- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to managing risk in electrotechnology activities
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0027 Participate in development and follow a personal competency development plan

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to participate in development and follow a personal competency development plan.

It includes the application of skills and knowledge in taking responsibility for one's own competency development; participating in the development of a personal competency development plan, responsibilities and obligations; following activities for developing competency; self-monitoring competency development and meeting learner obligations for periodic reporting of competency development activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Participate in development of a personal competency development

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Nature of competency-based training is determined from consultation with relevant person/s

plan

- 1.2 Responsibilities/obligations of trainees/learners, employers, trainers and assessors are identified from discussions with relevant person/s
- 1.3 Competency development plans are confirmed in consultation with relevant person/s
- 2 **Follow a personal competency development plan**
 - 2.1 Competency development plan is followed
 - 2.2 Opportunities to practise skills and apply knowledge relevant to competencies are followed
 - 2.3 Assistance is sought from relevant person/s to overcome difficulties in developing skills and applying knowledge in relevant competencies
 - 2.4 Progress in competency development is self-monitored against the competency development plan and workplace procedures
 - 2.5 Modifications to the competency development plan are made in consultation with appropriate person/s
 - 2.6 Obligations are met for periodic and timely reporting of competency development activities

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Competency development plan must include the following:

- applying a competency plan for work activities
- competency development self-monitoring
- personal competency development plan
- periodic reporting of competency activities

- responsibilities and obligation under the competency development plan
- responsibility for one's own competency development in developing and applying skills and knowledge
- applying a training plan to work activities

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE038B Participate in development and follow a personal competency development plan.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECD0027 Participate in development and follow a personal competency development plan

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements
- identifying opportunities to develop competency
- following competency development plan including following aspects of the training plan
- participating in a personal competency plan for work activities
- periodic reporting of competency plan activities
- seeking assistance to overcome difficulties in developing competency as needed.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- competency development (training) plans, including:
 - state/territory requirements (Acts/regulations)
 - competency development (training) contracts
 - competency development (training) period
 - purpose of competency development (training) plans
 - process in developing competency development (training) plans
 - parties involved in the competency development (training) plan
- qualification structure, including:
 - scope of work
 - Training Packages - UEE Electrotechnology
 - units of competency
 - structure of qualification
 - off-the-job requirements
 - on-the-job requirements
- responsibilities of parties to the contract, including:

- employer responsibilities
- learner responsibilities
- RTO responsibilities
- State/Territory Training Authorities (STA)
- electrotechnology industry career opportunities, including:
 - industry areas
 - qualification levels
 - career paths
- industry customs and practices, including:
 - industry bodies, employer and employee representatives
 - regulatory bodies including licensing/registration, WHS/OHS, industrial relations (IR), training authorities, apprentice/trainee regulation
 - vocational education and training (VET) system, Australian Qualification Framework (AQF) and credentials
- monitoring of workplace evidence, including:
 - workplace exposure and practices and relationship with units of competency
 - methods of collecting workplace evidence
 - monitoring period cycle
 - requirements of workplace evidence
 - actions taken for unsatisfactory progression
 - role of STA
 - apprentice/learner responsibilities
 - employer responsibilities
- RTO policies, including:
 - apprentice/learner responsibilities
 - teacher/trainer responsibilities
 - absenteeism
 - off-the-job component assessment specifications
 - on-the-job component assessment specifications
 - qualification completion requirements and award
 - advanced standing and/or recognition of prior learning (RPL)
 - result review procedures
- apprentice/learner discipline policy, including:
 - apprentice/learner rights
 - apprentice/learner responsibilities
 - breaches of discipline
 - types of penalties - apprentice/learner responsibilities
- attendance at the Registered Training organisation (RTO), including:
 - importance of attendance
 - record management of attendance

- attendance cards
- advice to employer of absences
- fire and emergencies at the RTO, including:
 - designated fire and emergency exits
 - procedures in the event of a fire
 - evacuation procedures
 - assembly points
 - importance of attendance
- WHS/OHS at the RTO, including:
 - eye protection
 - foot protection
 - protective clothing
 - personal injuries
 - mobile phones and personal belongings
 - dress regulations
 - rotating machinery
 - designated fire and emergency exits
- entry requirements, including:
 - numeracy requirements
 - literacy requirements
 - RTO support mechanisms
- RTO tour, including:
 - RTO layout
 - building layout
 - tour of building and RTO
- RTO responsibility to receive and monitor workplace activities of the apprentice/learner
- industry requirements for monitoring workplace evidence
- acceptable methods for monitoring and reporting workplace activities
- apprentice/learner responsibility to participate in the reporting of workplace activities
- RTO requirements in periodically evaluating development of apprentices/learners from the workplace activities information gathered, and providing feedback and advice on areas requiring improvement
- employer responsibilities to participate in monitoring, reporting and confirming workplace activities, and assisting in overcoming areas requiring development by the apprentice/learner
- options for appeal or assistance from RTO or STA
- methods of monitoring and reporting competency development activities.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0028 Plan an integrated cabling installation system

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to plan an integrated cabling installation system, including cable routes for intelligent power and lighting, information and communications, entertainment systems, distributed video and audio, energy management and control, security and safety, digital home health and aged and assisted living.

It includes determining immediate and future cabling needs of an installation, including origin and termination points, planning cable routes, specifying cable types and sizes, fixing/support methods and cable identification systems. It also includes documenting cabling plans based on calculated and/or deemed-to-comply solutions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0020 Fix and secure electrotechnology equipment

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications
and

UEECD0025 Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits
or

UEEEL0023 Terminate cables, cords and accessories for low voltage circuits

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Determine immediate and future cabling needs

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) risk control measures and workplace procedures for carrying out work are followed
- 1.2 Supervisor and/or customers are consulted to determine immediate and future cabling services, systems, service items, devices and accessories required
- 1.3 Immediate and future location of systems, service items, devices and accessories are determined and written confirmation sought from appropriate person/s in accordance with workplace procedures
- 1.4 Safety and other regulatory requirements required for installation compliance are determined and followed in accordance with workplace procedures

2 Plan an integrated cabling system for immediate and future services

- 2.1 Types, sizes and capacity of cables required for the various services to be installed are selected to comply with relevant industry technical standards, codes of practice, regulations and workplace procedures
- 2.2 Cables are arranged into circuits to ensure safe and functional operation of the services for which they are intended, and comply with technical industry standards, codes of practice, regulations, workplace procedures and budgetary restraints
- 2.3 Cabling for protective and functional earthing is determined in accordance with technical industry standards, codes of practice, regulations and workplace procedures
- 2.4 Cabling routes are planned and cable support methods for protection against damage are identified to ensure compliance with technical industry standards, codes of practice, regulations and workplace procedures
- 2.5 Cable identification labelling scheme is developed to aid installation of services in accordance with workplace procedures

- 2.6** Methods for terminating cables intended for future services are specified in accordance with technical industry standards, codes of practice, regulations and workplace procedures
- 3 Document the integrated cabling plan**
- 3.1** Type, size and capacity of cables selected for the installation of services and supporting justification are documented in accordance with workplace procedures
- 3.2** Cable route and cable support methods for protection against damage are documented in accordance with technical industry standards and workplace procedures
- 3.3** Cable identification labelling scheme and methods of terminating cables intended for future services are documented in accordance with workplace procedures
- 3.4** Acceptance of the integrated cabling plan is sought from relevant person/s

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Planning two integrated cabling installations and must include at least four of the following services:

- intelligent electrical power and lighting
- fixed home entertainment systems
- integrated energy management system
- security and safety system
- climate control system
- renewable energy systems
- water management system
- information and communications
- digital home health
- age and assisted living

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE121A Plan an integrated cabling installation system.

Assessment Requirements for UEECD0028 Plan an integrated cabling installation system

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
- communicating effectively with relevant internal and external stakeholders
- completing workplace documentation
- complying with relevant industry technical standards, codes of practice and regulations
- planning integrated cabling installation, including:
 - arranging cables into circuits safely ensuring services function correctly
 - choosing appropriate type and size of cables for immediate and future services
 - dealing with unplanned events in accordance with workplace procedures
 - determining immediate and future cabling needs accurately
 - determining immediate and future location of systems/service items devices and accessories
 - determining immediate and future systems, service items, devices and accessories
 - developing an effective cable identification labelling scheme
 - documenting cabling plan including supporting justification
 - planning cable routes and specifying effective support and protection methods
 - selecting cabling for protective and functional earthing
 - specifying compliant termination methods for cables intended for future use.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- cable identification labelling scheme
- cable sizes, types and capacity
- electrical circuits

- installation compliance requirements
- methods for terminating cables
- protective and functional earthing techniques
- relevant cabling routes and support methods to protect against damage
- relevant electrical regulations and codes of practice
- relevant industry and technical standards
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications
- relevant systems, including:
 - age and assisted living
 - digital home health
 - energy management
 - entertainment
 - information and communications
 - intelligent lighting and power
 - security and safety
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0029 Plan electrotechnology projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to plan an electrotechnology project.

It includes determining, developing and obtaining approval for an electrotechnology project plan. It also includes establishing budgets, critical path analysis, developing workflow strategies and documenting the plan.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Determine an electrotechnology project

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) procedures for relevant work area are identified and applied
- 1.2 Techniques for project planning are reviewed and adopted in accordance with workplace policies and procedures

- | | | |
|---|------------|--|
| | 1.3 | Scope of the project is determined from design brief, specifications and/or other relevant documentation and discussions with appropriate person/s |
| 2 Develop project plan proposal | 2.1 | Plant, material, labour and other cost estimations are sought and obtained from appropriate person/s in accordance with workplace policies and procedures |
| | 2.2 | Project budget is determined from plant, material labour and other cost estimations in accordance with workplace policies and procedures |
| | 2.3 | Critical path analysis is applied to developing workflow strategies |
| | 2.4 | Sources and availability of materials and human resources required for the project are determined in accordance with workplace policies and procedures |
| | 2.5 | Risk management strategies are identified, assessed and applied in the project plan |
| | 2.6 | Project plan is reviewed against all inputs and adjusted to rectify any anomalies |
| | 2.7 | Project plan proposal is documented in accordance with workplace procedures |
| 3 Obtain approval for project plan | 3.1 | Project plan is presented and discussed with appropriate person/s |
| | 3.2 | Alterations to the project plan resulting from presentation/discussion are negotiated with appropriate person/s in accordance with workplace policies and procedures |
| | 3.3 | Final project plan is documented and approval obtained from appropriate person/s |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work

environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Planning an electrotechnology project must include at least one of the following disciplines:

- automation technologies
- computers
- data communications
- electrical
- electrical machines
- electronics
- fire protection
- instrumentation
- refrigeration and air conditioning
- renewable/sustainable energy
- security technology
- one hundred thousand Australian dollars (\$AUD100,000)

Electrotechnology project cost must exceed:

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE013B Plan electrotechnology projects.

Assessment Requirements for UEECD0029 Plan electrotechnology projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- determining the project requirements accurately
- establishing a project budget
- developing effective workflow strategies
- documenting project plan proposal
- negotiating alterations to the proposed project plan successfully
- obtaining approval of the final plan
- dealing with unplanned events
- accessing, interpreting and applying workplace policies and procedures
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures and practices, including the use of risk control measures
- identifying and applying project risk management strategies
- planning electrotechnology projects.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- electrotechnology project planning and critical path analysis, including:
 - purpose of project planning
 - documents needed to plan a project
 - factors influencing sequence and restraints of project activities
 - critical path analysis encompassing:
 - graphical representation methods
 - methods of representing time/rates
 - purpose of critical path analysis

- essential data
- relational sequence of work activities
- graphical representation methods
- methods of representing time/rates
- monitoring methods
- project risk management strategies
- relevant manufacturer specifications
- relevant WHS/OHS legislated requirements
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and facilities currently used in industry
- resources that reflect current industry practices in relation to planning electrotechnology projects
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0030 Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to prepare electrotechnology/utilities drawings using manual drafting and computer-aided design (CAD) equipment and software.

It includes preparing, planning and completing electrotechnology/utilities drawings using manual drafting and CAD equipment and software. It also includes preparation and modification of preliminary electrotechnology/utilities drawings and diagrams using manual drafting methods, techniques, procedures, devices and CAD equipment and software from specifications, layouts, sketches or verbal instructions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECS0033 Use engineering applications software on personal computers

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEECD0031 Prepare engineering drawings using manual drafting and CAD for electrotechnology applications

and

UEECD0043 Solve problems in direct current circuits

or

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

**1 Plan
electrotechnology/utilities
drawing using manual
drafting and CAD
equipment and software**

**2 Prepare
electrotechnology/utilities
drawing using manual
drafting and CAD
equipment and software**

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures are identified and applied
- 1.2** Hazards are identified, risks are assessed and control measures are implemented
- 1.3** Extent of work is determined from job specifications and discussions with relevant person/s
- 1.4** Relevant person/s is consulted to coordinate work
- 1.5** CAD software, tools and equipment required for work are obtained in accordance with workplace procedures
- 2.1** WHS/OHS risk control measures and procedures for carrying out work are followed
- 2.2** Design, detailed drawings and layouts required are determined from job specifications
- 2.3** Technical data of system components is interpreted to determine parameters included in detailed drawings
- 2.4** Relevant CAD software tools are used to produce detailed drawings based on industry standard protocols
- 2.5** Detailed drawings are checked for accuracy and compliance with job specifications
- 2.6** Unplanned situations are responded to in accordance with workplace procedures and approval with authorised

person/s

3 Complete electrotechnology/utilities drawing using manual drafting and CAD equipment and software

- 3.1** Completed drawings are submitted to relevant person/s and checked for accuracy and compliance with job specifications
- 3.2** Modifications are followed and drawings re-submitted for final approval
- 3.3** Completed drawings are filed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Preparation of electrotechnology/utilities drawings using manual drafting and CAD equipment and software must include:

- architectural and site plan drawings
- auxiliary views and revolutions
- civil/geographic information systems (GIS) drawing basics
- electrotechnology drafting specifications, layouts, sketches or verbal instructions in conformance with Australian Standards and enterprise standards
- electrotechnology drawings line work, symbols, lettering and techniques
- layouts, assembly and installation drawings, and modifications (version control), and conversion between drawing types
- manual drafting methods, techniques, procedures and devices
- map drafting
- organisational procedures for collaborating with the client, key stakeholders and other staff in the selection of the preferred option

- organisational procedures for preparation and production of drawings, drawing sets, specifications, drafting documentation and operating and maintenance instructions/manuals for products and systems
- organisational procedures for processing, filing and saving all graphics, specifications, instructions and related documentation in correct format and location in accordance with work site procedures
- pole and structure elevations
- safety precautions when working with CAD equipment
- sketching methods, techniques, procedures and devices encompassing freehand sketching
- sketching techniques
- specifications obtained from design information, customer requirements, sketches, preliminary layouts and/or field investigations
- survey base plan drawings
- technical drawing equipment, including CAD applications, peripherals and devices including CAD software for electrotechnology applications and related commands
- type, form and size of materials from information, abbreviations and symbols supplied on electrotechnology drawings, briefs and/or specifications

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE191A Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECD0030 Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying modifications to original drawings and resubmitting for approval
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including implementing risk control measures
- checking drawings for accuracy and compliance with job specifications
- completing electrotechnology/utilities drawings using manual drafting and computer-aided design (CAD) equipment and software
- determining job specifications from designs, drawings and layouts
- filing completed drawings
- obtaining specifications from design information, customer requirements, sketches, preliminary layouts and/or field investigations
- planning and preparing electrotechnology/utilities drawings using manual drafting and CAD equipment and software
- preparing and modifying preliminary electrotechnology/utilities drawings and diagrams using CAD equipment and software
- responding to unplanned situations
- submitting completed drawings
- using CAD equipment and related computer commands
- working with relevant person/s.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- architectural and site plan drawings for electrotechnology/utilities applications, including:
 - principles, purpose, terms and conventions usage in basic architectural drawings
 - typical scales

- base plan symbols and labels
- electrotechnology/utilities site plan symbols and labels
- signing and markings site plan symbols and labels
- architectural design and planning principles
- elevation drawings
- architectural symbols and abbreviations usage
- floor plans layout and production
- basic construction terminology and materials
- perspectives and pictorials
- typical wall and building sections with necessary details
- applicable building codes
- as-built floor plan measurement, sketching and drafting
- usage of schedules in freehand architectural style lettering
- styles of architecture
- fundamentals and design function in residential design
- site plans production
- foundation plan production
- AutoCAD basics for electrotechnology utilities applications, including:
 - operating system fundamentals encompassing principals, concepts and applications of CAD hardware; terms, conventions and codes related to CAD hardware; CAD hardware type and variation; system specifications interpretation and usage; input/output (I/O) devices identification; computer components installation and configuration arrangements and applications
 - CAD filing and naming conventions
 - opening program, closing and saving drawings
 - basic drafting commands encompassing line, circle, spline and rectangle
 - basic modification commands encompassing erasing, copy, mirror, block, trim and extend
 - layout and plotting
 - design centre encompassing electrical symbols and electronic symbols
 - AutoCAD and lists
 - components and symbols in CAD
 - mass storage and file compression
 - network operating systems, protocols, and cabling systems
 - researching hardware and software
 - installation and configuration of operating systems
 - plotting solutions
 - security issues
 - system maintenance
 - user interface
 - object creation and modification

- editing
- layers
- properties
- paper space and model space concepts
- dimensioning and dimensioning variables
- blocks
- attributes
- three-dimensional construction
- solid modelling and scripts
- library construction
- database manipulation
- data extraction
- circuit simulation
- wiring symbols - motor and generator; alternating current (a.c.) and direct current (d.c.) ; wiring junctions; grounds; distinguishing power and control conductors; normally open and normally closed contacts; series and shunt coils; circuit protection devices - overload relay w/thermal element; fuse and circuit breakers; push button - disconnect switches; momentary contact; maintained contact; meters; resistors; transformers - power, current, potential and auto-transformers
- auxiliary views and revolutions, including:
 - principles, concepts and purpose of auxiliary views and revolutions
 - terms, conventions and codes related to auxiliary views and revolutions
 - rules of revolutions
 - types and usage techniques of auxiliary views, auxiliary reference planes and revolutions
 - techniques and applications in finding the true size of an oblique surface
 - secondary auxiliary view drawing techniques and applications
 - applications of revolutions
 - usage of the axis of revolution to draw the true shape of an oblique view
- civil/geographic information systems (GIS) drawings fundamentals, including:
 - principles, terms and conventions usage in civil GIS drawings
 - land surveying techniques (e.g. property line, corners, symbols, coordinates, base line and typical sections)
 - GIS and global positioning systems (GPS) uses and applications
 - land survey plot production from a written description
 - manual and computer methods calculation of area
 - contour plans
 - profile drawings
- drawing, numbering, file names and digital file storage, including:
 - drawing series and version control
 - drawing sheet numbering
 - drawing file names

- drawing storage
- drawing file
- electrotechnology/utilities drafting fundamentals, including:
 - principles, concepts and purpose of electrotechnology/utilities drafting
 - terms, conventions and codes related to electrotechnology/utilities drafting
 - rules and symbols used in electrotechnology/utilities drafting
 - types and usage techniques of electrotechnology/utilities drawings
 - techniques and applications for creating graphic symbols charts
 - techniques and applications in composing block diagram drawings
- electrotechnology/utilities drawings and diagrams
- electrotechnology/utilities drawings line work, symbols, lettering and techniques production to Australian/New Zealand industry standards, including:
 - principles of correct drafting technique
 - principles, concepts and purpose of electrotechnology/utilities drawings
 - terms, symbols (including sectional symbols), conventions and codes related to electrotechnology/utilities drawings
 - rules for drafting electrotechnology/utilities drawings
 - types and usage techniques of electrotechnology/utilities drawings
 - relationship between components and symbols used in drafting applications
 - techniques and applications for production of electrotechnology/utilities drawings
- map drafting, including:
 - types and usage techniques of map drafting and illustrated maps
 - techniques and applications of plat surveys and set plans
 - techniques and applications of contour maps using profile coordinates
 - map reading techniques and applications
 - map drawing techniques and applications
- pole and structure elevations, including:
 - elevation sheet layout
 - elevation labelling
 - concrete bases
 - luminaire pole elevations
 - signal pole elevations
 - service pole elevations
 - sign pole elevations
 - sign bridge and cantilever elevations
 - breakaway sign structures
 - wood post/sign structures
- relevant manufacturer specifications
- relevant WHS/OHS legislated requirements
- relevant workplace documentation

- relevant workplace policies and procedures
- risk control measures
- sketching techniques for electrotechnology/utilities applications, including:
 - lines and letters
 - shapes
 - solids
 - axonometric views
 - building sketch
 - isometric views
 - object sketch
 - perspective: building interior perspective sketch
 - detail labelled sketch
- standard drawing sheets and drawing sheet layout, including:
 - standard drawing sheet borders
 - standard drawing sheet scale
 - standard drawing sheet editing - routine
 - standard drawing sheet editing - title block
 - standard drawing sheet editing - revision blocks
 - drawing sheet layout for small electrotechnology/utilities projects
 - drawing sheet layout for large electrotechnology/utilities projects
 - drawing sheet layout for signing and markings projects
 - key plan sheets
 - drawing layers
 - line types
- survey base plan drawings, including:
 - survey base plan scale
 - survey base plan
 - survey base plan contents
 - model space and paper space
 - external reference (xref) drawings
 - viewports.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so;

where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0031 Prepare engineering drawings using manual drafting and CAD for electrotechnology applications

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to prepare engineering drawings using manual drafting and computer-aided design (CAD) for electrotechnology/utilities applications.

It includes planning and producing electrotechnology/utilities engineering drawings. It also includes completing, reporting electrotechnology/utilities engineering drawings as well as using manual drafting methods, CAD equipment and software from specifications, layouts, sketches or verbal instructions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECS0033 Use engineering applications software on personal computers

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | |
|--|------------|---|
| 1 Plan
electrotechnology/utilities
engineering drawing | 1.1 | Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures are identified and applied |
| | 1.2 | Hazards are identified, risks are assessed and control measures are implemented |
| | 1.3 | Extent of work is determined from job specifications, discussions with relevant person/s, sketches, preliminary layouts and/or field investigations |
| | 1.4 | Relevant person/s is consulted to coordinate work |
| | 1.5 | CAD software, tools and equipment required for work are obtained in accordance with workplace procedures |
| 2 Produce
electrotechnology/utilities
engineering drawing | 2.1 | WHS/OHS risk control measures and procedures for carrying out the work are followed |
| | 2.2 | Design, drawings and layouts required are determined from job specifications |
| | 2.3 | Technical data of system components is interpreted to determine parameters included in drawings |
| | 2.4 | Relevant CAD software tools are used to produce drawings in accordance with workplace procedures |
| | 2.5 | Drawings are checked for accuracy and compliance with job specifications |
| | 2.6 | Unplanned situations are responded to in accordance with workplace procedures and approval with authorised person/s |
| 3 Complete and report
electrotechnology/utilities
engineering drawing | 3.1 | Completed drawings are submitted to relevant person/s and checked for accuracy and compliance with job specifications |
| | 3.2 | Modifications are followed and drawings re-submitted for final approval |
| | 3.3 | Completed drawings are filed in accordance with workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Preparation of electrotechnology/utilities engineering drawing using manual drafting and CAD applications must include:

- auxiliary views
- care and use of equipment
- descriptive geometry/revolutions
- development layouts
- dimensioning/size description and tolerancing
- drawings, including component drawings for fabrication, assembly and sub-assembly drawings, installation drawings, fault location aids such as flow diagrams and modifications (version control), and conversion between drawing types
- drawing reproductions
- engineering drafting specifications, layouts, sketches or verbal instructions in conformance with Australian Standards and enterprise standards for electrotechnology/utilities applications
- fabrication drawings
- geometric construction
- graphs and charts
- ink overlay drawings production
- layout drawings
- manual drafting methods, techniques, procedures and devices
- maps and profiles design
- mechanical, fabrication and fluid power
- multi-view orthographic projections
- organisational procedures for collaborating with the client, key stakeholders and other staff in the selection of the preferred option
- organisational procedures for preparation and production of drawings, drawing sets, specifications, drafting documentation and operating and maintenance instructions/manuals for products and

systems

- organisational procedures for processing, filing and saving all graphics, specifications, instructions and related documentation in correct format and location in accordance with worksite procedures
- pattern development
- pictorial drawings
- pipe/plumbing drawings
- safety precautions when working with CAD equipment
- sectional views/conventions
- sketching methods, techniques, procedures and devices including freehand sketching
- specifications obtained from design information, customer requirements, sketches, preliminary layouts and/or field investigations
- structural steel and sheet metal drawings
- technical drawing equipment, including CAD applications, peripherals and devices
- technical illustrations
- thread representations
- type, form and size of materials from information, abbreviations and symbols supplied on electrotechnology/utilities related engineering drawings, briefs and/or specifications
- working drawings

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE190A Prepare engineering drawings using manual drafting and CAD for electrotechnology/utilities applications.

Assessment Requirements for UEECD0031 Prepare engineering drawings using manual drafting and CAD for electrotechnology applications

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying modifications to original drawings and resubmitting for approval
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including implementing risk control measures
- checking drawings for accuracy and compliance with job specifications
- completing and reporting electrotechnology/utilities engineering drawings
- determining job specifications from designs, drawings and layouts
- filing completed drawings
- obtaining specifications from design information, customer requirements, sketches, preliminary layouts and/or field investigations
- planning and producing electrotechnology/utilities engineering drawings
- preparing and modifying preliminary electrotechnology/utilities drawings and diagrams using computer-aided design (CAD) equipment and software
- responding to unplanned situations
- submitting completed drawings
- using CAD equipment and related computer commands
- working with relevant person/s.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- drawing fundamentals, including:
 - principles, purpose and classification of drawings
 - basic drawing terms and conventions
 - symbols, codes and abbreviations used in drafting drawings
 - tools and equipment used in drafting drawings

- drawing forms; sheet size and format, metric, imperial and copy fold information
- drawing routines, signatures, approvals, dates, numbers and numbering systems, design considerations/specifications, materials or component specifications, lists, titles, proprietary information, fasteners, representations, notes, charts and graphs, modifications and revision conventions
- fundamentals of drafting documentation, including contents, version control, indexing and product identification (e.g. logo, trademark and software warning plates)
- delineation: line conventions and lettering, multi- and sectional view drawings, pictorial drawings, types and application of engineering drawings, conventional representations, microfilming, descriptive geometry and revolutions
- measurements: types, forms, units, symbols, reading and transfer
- sketching techniques (e.g. freehand lettering)
- basic drafting skills (e.g. drafting by hand, working with triangles, and working with a T square)
- basic drawing layout (e.g. borders and information blocks)
- line types and weights
- geometric construction principles
- use of drawing instruments and equipment to produce basic technical drawings
- drawings instruments and media usage
- usage of reproducible drawings with mechanical pencils
- lettering, including:
 - principles, concepts and applications of lettering
 - terms, conventions and codes related to lettering
 - construction of vertical or inclined, single-stroke gothic lettering, numerals and fractions, including proper spacing and guidelines
 - proper lettering instruments selection
 - usage of lettering techniques for notes and titles on drawings
 - text style, text composition, and text placement selection and application
- sketching, including:
 - principals, practices and rules for sketching in relation to proportion, placement of the views, and drawing medium
 - concepts and applications of sketching
 - terms, conventions and codes related to sketching
 - sketches used in industry
 - usage of sketching aids for creative communication
 - sketching types and their applications
 - line techniques in sketching simple objects
 - estimation and proportion techniques usage
 - views selection for requisite applications
 - blocking technique for size, shape and details
 - surface shading techniques

- geometric construction, including:
 - principles, concepts and applications of geometric construction
 - terms, conventions and shapes related to geometric construction
 - drawing techniques of lines, angles, circles, arcs, tangents and polygons
 - geometric construction to single-view and multi-view drawings
 - graphic geometric controls
 - intermediate CAD commands
 - plotting and printing equipment set-up and configuration
- multi-view orthographic projections and Australian/New Zealand and industry standards, including:
 - principals of multi-view orthographic projections
 - terms, conventions and codes related to multi-view drawings
 - applications and use of orthographic projections/drawings (e.g. 3rd angle)
 - types and usage techniques of orthographic projection
 - sketching techniques related to orthographic views
 - rules for orthographic projection
 - working drawing problems and specifications
 - views visualisation and selection
 - 1st and 3rd angle projection drawings
 - lines, lettering, and drawing medium types
 - fractional, decimal, and metric equations solutions
 - concepts of units of measurement usage related to multi-view orthographic projections
 - sectional and/or auxiliary views uses, identification and analysis
 - rules for sections and auxiliary views
 - geometric figures visualisation and drawing in two dimensions
 - geometric figures classification and comparison
 - circle properties and relationships, and circle problem solving
 - drawing from a view of a model (e.g. orthographic projection)
- auxiliary views, including:
 - principles, terms and conventions usage in auxiliary views
 - use and application of auxiliary views
 - primary auxiliary view construction
 - secondary auxiliary view construction
- descriptive geometry/revolutions, including:
 - principles, terms and conventions usage in descriptive geometry/revolutions
 - graphic solutions of points, lines and planes
 - graphic solutions of intersections (e.g. lines, planes and solids)
 - true length of lines, bearing and slope of lines
 - graphic solutions of solids
 - drawings construction using the revolution method

- sectional views/conventions, including:
 - principles, terms, symbols and conventions of sectional views
 - use and application of sectional views
 - drawing standard sectional views
 - use of conventional breaks
 - symbols used to represent different materials
 - use of cutting plans
- pictorial drawings introduction and production to Australian/New Zealand and industry standards, including:
 - principals, concepts and applications of pictorial drawings
 - terms, symbols, conventions and codes usage in pictorial drawings
 - types and usage techniques of pictorial drawings
 - line of sight application
 - isometric view usage
 - pictorial drawing types, usage and selection
 - pictorial drawings sketching
 - pictorial working drawing problems and specifications
 - axonometric, oblique and perspective drawings construction
 - calculations in projection plane angles
 - standards for drawing pictorial drawings
 - application of properties and relationships of triangles to solve geometric shapes
 - conversion of an angular dimension of an orthographic to a linear dimension in a pictorial drawing
 - drawing techniques of pictorial representations
- dimensioning/size description and tolerancing as applied to drafting, including:
 - principles, terms, symbols and conventions used in dimensioning and tolerancing
 - terms, conventions and codes related to dimensioning
 - dimensioning drawing construction using Australian/New Zealand Standards
 - types and usage techniques of dimensioning
 - application of dimensioning to object drawings
 - geometric dimensioning and tolerancing
 - lines used in dimension drawings construction
 - dimensioning practices applications
 - dual dimensioning
 - tolerancing applications
 - dimensioning verification requirements
 - formulas for positional tolerancing
 - form, orientation, profile and runout
- development layouts of various shaped objects to Australian/New Zealand and industry standards, including:

- principals and concepts of development layouts of various shaped objects
- terms, conventions and codes related to surface developments
- surface development uses in Australian/New Zealand and industry standards
- basic three-dimensional geometric shapes visualisation in a two-dimensional plane
- cut out and construct models for checking accuracy
- rules to surface developments to produce stretch-outs
- layout drawings production to Australian/New Zealand and industry standards, including:
 - principals, concepts and applications of layout drawings
 - terms, conventions and codes related to layout drawings
 - layout drawings types and differences
 - rules for layout drawings
 - concepts of units of measurement usage related to layout drawings
- technical illustrations drawing to Australian/New Zealand and industry standards, including:
 - principals, concepts and purpose of technical illustrations
 - terms, conventions, symbols and codes related to technical illustrations
 - types and usage techniques of illustrations
 - rules for technical illustration application
 - techniques and applications for creating illustrations
 - illustration types usage and selection
 - illustration working drawing problems and specifications
 - techniques and applications in the use of drawing instruments to prepare illustrations
 - surface shading purpose and types, selection and analysis
 - techniques and applications in airbrush renderings to detailed illustrations
 - techniques and applications of CAD practices to technical illustrations
 - techniques and applications of line-shaded illustrations
 - concepts of units of measurement usage related to illustrations
 - solutions for illustrations using fractional, metric and decimal equations
- graphs and charts production to Australian/New Zealand and industry standards, including:
 - principals, concepts and applications of basic graphs, charts and diagrams production
 - terms, conventions and codes related to basic graphs, charts and diagrams production
 - graphs, charts and diagrams production types, usage and variations
 - data configuration for graphic representation
 - graph type selection per specifications and data
 - basic graphic charts and diagrams interpretation
 - charts and diagrams construction
- thread representations, including:
 - principles, concepts and applications of threaded fasteners
 - terms, conventions and codes related to threaded fasteners
 - types and usage techniques of threaded fasteners

- drawing of threads using simplified and schematic types of thread representation
- working drawings, including:
 - principles, concepts and applications of working drawings
 - terms, conventions and codes related to working drawings
 - types and usage techniques of working drawings
 - title block, bill of materials and schedules used in working drawings
 - working drawing production requirements
- care and use of equipment, including:
 - principles, concepts and applications of various drafting instruments, equipment and materials
 - types and usage techniques of drafting instruments, equipment and materials
 - drawing materials selection for specific types of drafting projects
 - drawing instruments usage as a means of technical drawings preparation for accuracy and readability
 - CAD station components identification
 - CAD set-up requirements to complete a basic drafting problem
- CAD basics, including:
 - principles, terms, symbols and conventions usage in CAD
 - concepts and applications of CAD and related application commands
 - types of CAD hardware
 - CAD standards, including file presentation; layering standards; sorting graphic data, including data groups, principal data and supporting data; layering naming convention, colour assignment standard (layer colours and pen weights); provision for creation of new layers; blocks standards - real blocks object, common block objects, symbol objects, block library and block naming; text style standards - text styles naming, text height; dimension styles standards - dimension style naming; line-type (LT) standards; title blocks and graphic scales - title block set-up, information title blocks, drawing scales; systems of measurement and preferred scales - drawing scales
 - disk operating system (DOS) and windows application definitions
 - techniques and practices in the application of program assist and editing commands
 - view and display commands (e.g. zooming and panning)
 - query commands to extract drawing data
 - techniques and practices in the application of changes to text styles, text entering and editing
 - existing drawing modifications
 - working with multiple drawings using cut and paste, and so on
 - components and symbol libraries creation, editing and retrieval
 - plotting drawings to the proper scale
 - scaling techniques applications
 - layering techniques applications
 - LT scale usage

- drawing techniques application
- drawing setups to applicable standards (e.g. settings, layers, line types and widths)
- two-dimensional drawing creation
- cartesian, polar, absolute, and relative coordinates usage in drawing lines and shapes
- techniques and practices in the application of geometric construction
- techniques and practices in the application of text to a drawing
- techniques and practices in altering font options
- techniques and practices in the application of laying out, drawing and completing orthographic drawings
- techniques and practices in the application of drawing objects in isometric using isometric drawing commands
- techniques and practices in the application of completing primary auxiliary drawings on CAD equipment
- techniques and practices in the application of CAD to draw screw threads
- techniques and practices in the application of making, setting and using layers and blocks
- basic production fabrication drawings to Australian/New Zealand and industry standards, including:
 - principles, terms, symbols, codes and conventions usage in production of fabrication drawings
 - types and usage techniques of detailed and assembly drawings
 - detailing: including principals, concepts and applications of detailing; terms, conventions and codes related to detailing; detailing types, application and selection; different fabrication processes and identification of machine parts; rules for drawing machine part details; concepts of units of measurement usage related to detailing; application of properties and relationships of triangles and circles to solve geometric shapes related to detailing
 - assembly drawings: including principals, concepts and applications of assembly drawings; terms, conventions and codes related to assembly drawings; different assembly processes and identification of machine part assemblies; rules for drawing assembly drawings; concepts of units of measurement usage related to assembly drawings; application of properties and relationships of triangles and circles to solve geometric shapes related to assembly drawings
 - machine assembly drawing production
 - detail drawings standard machine fits applications
 - drawings for welded component parts
 - parts list (e.g. balloons) development
 - file and/or drawing for CAD/computer-aided manufacturing (CAM) applications
 - gears drawings
 - CAM drawings
 - threads and fasteners (e.g. bolts, pins and keys) use and applications
 - drawings for metal bending and fabricating
 - standard fits, finishes, and tolerances to a machine drawing application

- manufacturing processes (e.g. machine, metal forming and computer numerically controlled (CNC))
- pattern development, including:
 - principles, concepts and purpose of pattern development
 - terms, conventions and codes related to pattern development
 - types and usage techniques of pattern development and related drawings
 - application of pattern development and intersection techniques
 - intersections of geometric surfaces development techniques and applications
 - flat surfaces development techniques and applications
 - construct of objects from the intersection
- maps and profiles design and production to Australian/New Zealand and industry standards, including:
 - principals, concepts and applications of maps and profiles design and production
 - terms, conventions and codes related to maps and profiles design and production
 - maps and profiles design and production types and uses
 - rules for cartography
 - components selection and transit usage
 - symbols usage and applications for topography
 - application of properties and relationships of triangles to solve geometric problems, trigonometric relations to solve right triangles, law of sines and cosines to solve triangles
- pipe/plumbing drawing basics, including:
 - principles, purpose, terms and conventions usage in pipe/plumbing drawings
 - applicable codes, symbols and abbreviations
 - piping symbols, fittings, fixtures and valves
 - types of piping systems and usage techniques in pipe drawings
 - principles of pneumatics and hydraulics
 - pneumatics and hydraulic schematics production
 - plumbing schematics production
 - techniques and applications in creating drawings of piping symbols and systems
- structural steel, welding and sheet metal drawing basics, including:
 - principles, terms and conventions usage in structural steel, welding and sheet metal drawings
 - applicable codes (e.g. WHS/OHS, Standards Australia/New Zealand, building codes and regulations, related standards and codes)
 - classification of major structural and welding components
 - rules and symbols used in structural and welding drawings
 - structural steel shapes
 - steel-framing materials
 - detail and assembly drawings (including beam connections) with bill of materials
 - steel frame plan drawings production

- types and usage techniques of structural and welding drawings
- techniques and applications in creating structural drawings using measuring, labelling, and symbol procedures
- techniques and applications used in drafting the processes for joining metal and standard symbols for welding
- techniques and applications in creating welding drawings complete with weld symbols
- sheet metal layout methods and procedures
- representative sheet metal drawings
- sheet metal drawings for CAD/CAM applications
- ink overlay drawings produced to Australian/New Zealand and industry standards, including:
 - principals, concepts and applications of ink overlay drawings production
 - terms, conventions and codes related to ink production
 - drawing specifications identification and analysis
 - rapid graph equipment usage procedures
- drawings reproductions to Australian/New Zealand and industry standards, including:
 - principals, concepts and applications of drawing reproductions
 - terms, conventions and codes related to processes related to drawing reproductions
 - rules for reproducing drawings
 - various machines usage and selection in the reproduction process
- CAD software and functions
- drawing fundamentals
- electrotechnology/utilities engineering drawings and diagrams
- relevant risk mitigation processes including risk control measures
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- sketching techniques.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0032 Produce detailed electrotechnology/utilities drawings using CAD equipment and software

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to produce detailed electrotechnology/utilities drawings using computer-aided design (CAD) equipment and software.

It includes planning, producing and completing detailed electrotechnology/utilities drawings. It also includes modification and maintenance of detailed electrotechnology/utilities drawings and diagrams using CAD equipment and software from specifications, layouts, sketches or verbal instructions

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECS0033 Use engineering applications software on personal computers

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEECD0031 Prepare engineering drawings using manual drafting and CAD for electrotechnology applications

UEECD0030 Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software

and

UEECD0043 Solve problems in direct current circuits

or

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Plan detailed electrotechnology/utilities drawing

2 Produce detailed electrotechnology/utilities drawing

3 Complete detailed electrotechnology/utilities drawing

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures are identified and applied
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
- 1.3 Extent of work is determined from job specifications and discussions with relevant person/s
- 1.4 Relevant person/s is consulted to coordinate work
- 1.5 CAD software, tools and equipment for work are obtained in accordance with workplace procedures
- 2.1 WHS/OHS risk control measures and procedures for carrying out the work are followed
- 2.2 Design, detailed drawings and layouts required are determined from job specifications
- 2.3 Technical data of system components is interpreted to determine parameters included in detailed drawings
- 2.4 Relevant CAD software tools are used to produce detailed drawings based on standard protocols
- 2.5 Detailed drawings are checked for accuracy and compliance with job specifications
- 2.6 Unplanned situations are responded to in accordance with workplace procedures and approval with authorised person/s
- 3.1 Completed detailed drawings are submitted to relevant person/s and checked for accuracy and compliance with job specifications

- 3.2 Modifications are followed and detailed drawings re-submitted for final approval
- 3.3 Completed detailed drawings are filed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Producing detailed electrotechnology/utilities drawings using CAD equipment and software must include:

- detailed circuit and wiring diagrams/schedules, block diagrams, schematics, printed circuit board (PCB) layouts, assembly and installation drawings, modification drawings, and conversion between drawing types
- electrotechnology/utilities specifications, layouts, sketches or verbal instructions in conformance with Australian Standards, enterprise standards and/or design brief
- master sketches methods, techniques, procedures and devices including freehand sketching
- type, form and size of materials from information, abbreviations and symbols supplied on electrotechnology/ utilities engineering drawings, briefs and/or specifications
- specifications may be obtained from design information, customer requirements, sketches, preliminary layouts and/or field investigations
- materials and equipment used in electrotechnology/ utilities engineering applications by selecting the correct type, form and size of materials and equipment from information, abbreviations and

- symbols supplied on detailed electrotechnology/ utilities engineering drawings, briefs and/or specifications
- advanced CAD equipment commands and drawing techniques and processes
 - CAD application programs and advanced tools
 - utility programs disk and file management
 - filing systems management including entering/retrieving technical information from computer-related database programs for the production, modification and/or maintenance of detailed electrotechnology/ utilities drawings
 - safety precautions when working with CAD equipment
 - detailed working drawings
 - drafting/modelling electrotechnology/ utilities
 - detailed electrotechnology/utilities drawings including a representative array of relevant 2-D and 3-D CAD drawings
 - single and multi-part components and detailed electrotechnology utilities assemblies for fabrication, assembly, installation and/or modification of products including dimensions including dimensions; fabrication, assembly, installation and/or modification notes, circuit/wiring layouts/schedules and parts lists from specified dimensions, associated tolerances and design specifications.
 - architectural drawings for electrotechnology/utilities applications
 - organisational procedures for preparation and production of drawings, drawing sets, specifications, drafting documentation and operating and maintenance instructions/manuals for products and systems
 - organisational procedures for processing, filing and saving all graphics, specifications, instructions and related documentation in correct format and location in accordance with work site procedures
 - organisational procedures for collaborating

with the client, key stakeholders and other staff in the selection of the preferred option

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE192A Produce detailed electrotechnology/utilities drawings using computer aided design equipment and software

Links

Assessment Requirements for UEECD0032 Produce detailed electrotechnology/utilities drawings using CAD equipment and software

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying modifications to original drawings and re-submitting for approval
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements including implementing risk control measures
- checking drawings for accuracy and compliance with job specifications
- determining job specifications from designs, drawings and layouts
- filing completed drawings
- preparing, producing and completing detailed electrotechnology/utilities drawings
- producing detailed electrotechnology/utilities drawings using computer-aided design (CAD) equipment and software
- responding to unplanned situations
- submitting completed drawings
- working with relevant person/s.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- detailed working drawings, including:
 - definition of detailed working drawings
 - usage and types of detailed working drawings
 - composition and layout of detailed working drawings
 - preparation of detailed working drawings
- advanced (master) sketching techniques, including:
 - lines and letters
 - shapes

- solids
- axonometric views
- building sketch
- isometric views
- object sketch
- perspective: building interior perspective sketch
- detail labelled sketch
- complex surfaces with tangent and curvature continuities
- surfaces manipulation using editing tools
- surfaces analysis for quality and desired characteristics
- drafting/modelling electrotechnology/utilities, including:
 - standard documentation practices for block diagrams
 - wiring diagrams
 - circuit schematics
 - control circuits
 - creating one-line diagrams
 - standard printed circuit board (PCB) layouts
 - printing wiring assemblies
 - art masters
- electrotechnology/utilities related drawings, including:
 - charts and graphs, including alternating current (a.c.), frequency, electromagnetisms, signals and transmission
 - measuring devices and gauges
 - power sources, transformers, alternators, motors and related applications
 - earthing
 - conduits, boxes and fittings, harnesses, cable trays and ducts
 - conductor terminations, splices, installations and wiring schedules
 - busways
 - electric services installations
 - protection devices -over current and voltage, circuit breakers and fuses
 - switches, contactors and relays
 - control systems and devices
 - high voltage (HV) devices and apparatus
 - cabinet and panel layouts
 - plot and floor plans
 - electric lighting
 - analogue and digital systems, circuits, electronic components and devices - connections; resistors; capacitors; magnetic devices; piezoelectric devices; crystals and resonators; transducers, sensors and detectors; solid state components and semiconductors; display technologies filament; light-emitting diode (LED); liquid crystal display (LCD), discharge devices; thermionic valves; vacuum tubes; assemblies and modules;

- prototyping aids and mechanical accessories
- data networks, communication and telecommunications equipment and devices
- pneumatic and hydraulic circuits, including related piping ware and components
- AutoCAD functional for electrotechnology/utilities, including:
 - user coordinates systems
 - right-hand rule
 - 2-D geometry extrusion
 - 2-D views from 3-D models and visa-versa
 - user coordinate systems creation
 - 3-D wireframe geometry creation
 - 3-D faces on wireframe geometry placement
 - 3-D geometry viewing
 - surfaces construction
 - working drawings generation
 - drawing set up using model space and paper space, including printing and plotting
 - plotting
 - rendering
 - 3-D models construction
 - 3-D surface models construction
 - 3-D models display from different vantage points
 - orthographic drawings constructed from 3-D models
 - rendered images creation
 - solid modelling construction using Boolean operations
 - scripts writing and tool button macros application
 - organisation of writing scripts and tool button macros commands
 - advanced drawing, editing, and configuration procedures application
 - basic user-level system customisation
 - design environment
 - basic workflow
- AutoCAD project basics, including:
 - project manager
 - project drawing list
 - projects progression/stages
 - projects copy and activation
- AutoCAD schematic wiring, editing, components and reporting, including:
 - wiring and ladders
 - wire types and wire numbers
 - source and destination signal arrows
 - multiple phase and multi wire circuits

- circuits
- connectors and point-2-point wiring
- basic editing utilities
- miscellaneous tools
- data tools
- re-sequence and re-tag drawings
- using the auditing tools
- schematic symbol annotation
- inserting schematic symbols
- swapping and updating blocks
- inserting schematic components from lists
- generating schematic reports
- AutoCAD panel layouts, including:
 - creating panel layouts from schematic lists
 - din rail utility usage
 - panel footprints
 - terminal strip editor usage
 - panel layout annotation and reports
- AutoCAD programmable logic controller (PLC) modules, including:
 - PLC input/output (I/O) modules
 - PLC modules builder
 - PLC database file editor, including insert and edit in parametric PLC modules, non-parametric PLC modules and stand-alone PLC I/O points
 - PLC I/O address-based tagging
 - spreadsheet to PLC I/O utility
- AutoCAD detailed settings and configurations advanced commands, including:
 - drawing properties
 - project properties
 - creating wire types
 - reference files usage
 - creating drawing templates
 - installation and search paths
- AutoCAD detailed customised components and customised detailed data, including:
 - schematic symbols
 - icon menu system
 - panel footprints
 - part catalogue databases usage
 - pin list database editor
 - title block update and attributes
 - terminal properties editor

- reference files usage
- AutoCAD advanced auditing tools, automation tools and integration, including:
 - auditing tools
 - troubleshooting tools
 - updating schematics from spreadsheets
 - generating automatic reports
 - AutoCAD integration
 - din rail editor
 - footprint with wire annotation
 - conduit tools
 - cables management
- AutoCAD database management and productivity tools, including:
 - title block attributes automation tools update
 - schematics update spreadsheets
 - adding wire data to footprints
 - managing cables
 - using the circuit builder
 - working with peer-to-peer
- drawings production using CAD application programs, including:
 - principals, concepts and applications of drawings production using CAD application programs
 - terms, conventions and codes related to drawings production using CAD application programs
 - drawing production types using CAD application programs
 - CAD advanced commands identification and application for drawings
 - CAD advanced commands identification and application for editing drawings
 - CAD advanced commands identification and application for hardcopy drawings
 - techniques and applications in producing detailed architectural drawings of a floor plan, elevation, and exterior wall section for a residential structure related to electrotechnology/utilities applications
- T15 utility programs disk and file management, including:
 - principals, concepts and applications of disk and file management of utility programs
 - terms, conventions and codes related to disk and file management of utility programs
 - disk operating system commands identification and usage
 - utility commands identification and usage
 - commands for word processing identification and usage
- CAD information technology
- detailed electrotechnology/utilities drawings
- relevant manufacturer specifications
- relevant risk mitigation processes include risk control measures

- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0033 Produce products for carrying out energy sector work activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to produce products for carrying out energy sector work activities.

It includes preparing and producing products for carrying out energy sector work, and checking quality of the products produced.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to produce products

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work instructions for preparing work activities of the product are obtain and confirmed

1.2 Work health and safety (WHS)/occupational health and safety (OHS) policies and workplace procedures are

- communicated, confirmed and applied to the carrying out of the energy sector work activities
- 1.3 Tools, equipment and personal protective equipment (PPE) for work are identified, checked and are safe to use in accordance with workplace procedures
 - 1.4 Relevant person/s is consulted to ensure work is coordinated effectively with others
 - 1.5 Resources and materials required for work activities and energy sector produced products are confirmed, scheduled and obtained in accordance with workplace procedures
 - 1.6 Schedule of work and safe work practices are confirmed in accordance with work instructions and workplace procedures
- 2 Produce energy sector products**
- 2.1 WHS/OHS policies and workplace procedures for safe work practices are followed to eliminate or minimise incidents
 - 2.2 Schedule of work is followed to ensure products are completed in accordance with agreed timelines, required quality standard and with a minimum of waste
 - 2.3 Unplanned situations are responded to in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
 - 2.4 Quality checks of work activities are undertaken in accordance with work instructions and workplace procedures
- 3 Check results of products produced**
- 3.1 Checks are made to ensure the completed product is in accordance with work instructions
 - 3.2 Relevant person/s is notified of work activity completion
 - 3.3 Tools, equipment, surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures
 - 3.4 Work area is cleaned, made safe and sustainable energy practices are followed
 - 3.5 Records are updated in accordance with work

instructions and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE142A Produce products for carrying out energy sector work activities.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECD0033 Produce products for carrying out energy sector work activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying energy sector industry standards
- applying quality, workplace procedures and instructions
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements: including using risk control measures
- applying sustainable energy practices
- completing schedule of work
- dealing with unplanned events/situations in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
- preparing and producing energy sector products, including:
 - obtaining and checking tools and equipment
 - updating work records
 - using and returning tools, equipment, personal protective equipment (PPE), surplus resources and materials
 - using relevant hand, fixed and portable tools.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic technical drawing conventions and symbols
- freehand technical sketching techniques
- hand tools for cutting, shaping, drilling, threading, tapping, and finishing metallic and non-metallic components, including:
 - types of tools and their purpose
 - techniques for the correct and safe use of these tools
 - hazards associated with their use
 - care and maintenance of hand tools

- tools for measuring and marking out, including:
 - types of tools and their purpose
 - techniques for the correct and safe use of these tools
 - hazards associated with their use
 - care and maintenance of hand tools
- tools for dismantling and assembling electrical and electronic components, including:
 - types of tools and their purpose
 - techniques for the correct and safe use of these tools
 - hazards associated with their use
 - care and maintenance of hand tools
- fixed power tools for cutting, shaping, drilling, and finishing metallic and non-metallic components, including:
 - types of tools and their purpose
 - techniques for the correct and safe use of these tools
 - hazards associated with their use
 - care and maintenance of fixed power tools
- portable power tools for cutting, shaping, drilling, and structural components including:
 - types of tools and their purpose
 - techniques for the correct and safe use of these tools
 - hazards associated with their use
 - care and maintenance of fixed power tools
 - requirements for use on construction sites
- purpose of sequencing dismantling and assembling
- importance of marking/labelling and storing parts
- techniques for dismantling and assembling close fitting parts
- use of gasket and seals
- hazards associated with welding activities and equipment
- welding processes and industry applications
- thermal cutting techniques
- manual metal arc welding processes
- problem-solving techniques
- relevant energy sector industry standards
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications and operating instructions for tools and equipment
- relevant quality workplace procedures
- relevant sustainable energy practices
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies, procedures and instructions, including quality workplace procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, relevant industry standards, codes of practice and operation manuals.

UEECD0034 Produce routine tools/devices for carrying out energy sector work activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to produce tools and devices required to carry out energy sector work activities.

It includes identifying and carrying out work activities in the energy sector.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Identify energy sector work activity

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work instructions for preparing work activities are obtained and confirmed

1.2 Work health and safety (WHS)/occupational health and safety (OHS) policies and workplace procedures are communicated, confirmed and applied

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Producing routine tools/devices for carrying out energy sector work activities must be demonstrated in at least one of the following disciplines:

- appliances
- business equipment
- computers
- data communications
- electrical
- electrical machines
- electronics
- fire protection
- instrumentation
- refrigeration and air conditioning
- renewable/sustainable energy
- security technology

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE143A Produce routine tools/devices for carrying out energy sector work activities.

Assessment Requirements for UEECD0034 Produce routine tools/devices for carrying out energy sector work activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying industry standards
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
- applying sustainable energy practices
- dealing with unplanned events/situations in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
- dismantling and assembling electrical and electronic components
- following quality, workplace procedures and instructions
- following work schedule
- identifying and carrying out work activities
- obtaining and checking tools, equipment resources and materials
- producing products in accordance with work schedule
- updating work records
- using and returning tools, equipment, personal protective equipment (PPE), surplus resources and materials.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- problem-solving techniques
- scope of engineering practice work and responsibilities, including:
 - applying and working to ethical standards
 - maintaining currency in technical and regulatory developments
 - working with others in a project team
- relevant hand, fixed and portable tools, including:
 - associated hazards

- care and maintenance
- cutting, shaping, drilling, threading, tapping, and finishing metallic, non-metallic and structural components
- different types of tools and their purpose
- requirements for use in the workplace
- techniques for the correct and safe use
- tools for dismantling and assembling electrical and electronic components
- tools for measuring and marking out
- relevant industry standards
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications
- relevant quality workplace procedures
- relevant sustainable energy practices
- relevant tool, equipment, resources and materials
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies, procedures and instructions.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, relevant industry standards, codes of practice and operation manuals.

UEECD0035 Provide basic instruction in the use of electrotechnology apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to instruct customers/users in the use of electrotechnology apparatus.

It includes appropriate customer relations, using apparatus manufacturer instruction material, instructing methods and completing instruction documentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to instruct in the use of electrotechnology apparatus

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified and applied
- 1.2** Hazards are identified, risks are assessed and control measures are implemented

- 1.3 Electrotechnology apparatus on which user is to be instructed is confirmed with work supervisor and/or relevant person/s
 - 1.4 Safety features and safe use of the electrotechnology apparatus are reviewed in accordance with manufacturer instructions
 - 1.5 Familiarity with the electrotechnology apparatus is gained by reference to manufacturer user instructions and applying them during a preliminary practice run through
 - 1.6 Materials required to instruct users in the use of electrotechnology apparatus are obtained in accordance with workplace procedures
- 2 Instruct user in the use of electrotechnology apparatus**
- 2.1 Users are informed of safety features and safe use of electrotechnology apparatus in accordance with manufacturer instructions, regulatory requirements and safe work methods
 - 2.2 Users are instructed in the set up and use of the electrotechnology apparatus in accordance with manufacturer instructions
 - 2.3 Users are given the opportunity to ask questions and demonstrate they understand the safety aspects, set-up features and operation of the electrotechnology apparatus
 - 2.4 Manufacturer user instructions and other related electrotechnology apparatus documentation are given to the appropriate person/s
 - 2.5 Unplanned events are referred to supervisor for direction in accordance with workplace procedures
 - 2.6 Instructions are given efficiently, without damage to electrotechnology apparatus, the surrounding environment or services using sustainable energy practices

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Demonstration of unit must include:

- providing instruction relevant to electrotechnology apparatus and its control

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE020B Provide basic instruction in the use of electrotechnology apparatus.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECD0035 Provide basic instruction in the use of electrotechnology apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements
- applying sustainable energy principles and practices
- communicating effectively with relevant stakeholders
- dealing with unplanned events in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
- evaluating user needs
- following manufacturer user instructions
- giving clear instructions in the safe use and features of the electrotechnology apparatus
- giving users the opportunity to ask questions and demonstrate understanding of the features and safe use of the electrotechnology apparatus
- instructing users in the use of specific items of electrotechnology equipment and systems
- obtaining relevant materials to assist with instructing users
- performing preliminary run through with apparatus to confirm familiarity
- providing users with relevant documentation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- customer relations purpose, techniques and procedures
- effective communication, including:
 - communicating with customers and suppliers
 - oral communication
 - written procedures and work instructions
- effective instructional techniques
- methods for evaluating user ability in the use of electrotechnology apparatus

- methods for evaluating user instructional needs
- procedures for dealing with customers and customer issues
- relevant electrotechnology apparatus instruction, including how it is used efficiently and safely
- relevant manufacturer instructions and user material
- relevant WHS/OHS legislated and electrical regulations and legislations requirements
- relevant workplace documentation and work activities records, including:
 - methods for recording and maintaining work records
 - regulatory work record requirements
 - types of work activity maintenance records
- relevant workplace policies and procedures
- risk mitigation processes include safe work method statements
- safe and correct use of electrotechnology apparatus
- safety features of relevant electrotechnology apparatus.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0036 Provide engineering solutions for problems in complex multiple path circuits

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to provide engineering solutions for problems in complex multiple path circuits.

It includes preparing tools, equipment and materials; and providing solutions for complex multiple path circuits. It also includes completing work and documentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare tools, equipment and materials for problem solving

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) processes and workplace procedures for a given work area are identified, obtained and applied
- 1.2 WHS/OHS risk control work preparation measures and workplace procedures are followed

- 1.3 Scope of circuit/s problems are obtained from documentation and/or work instructions to determine the work
 - 1.4 Advice is sought from the work supervisor to ensure the work is coordinated with others
 - 1.5 Materials required for work are identified and accessed in accordance with workplace procedures
 - 1.6 Tools, equipment and testing devices required for work are obtained and checked for correct operation and safety
- 2 Provide solutions for complex multiple path circuits**
 - 2.1 WHS/OHS risk control work measures and workplace procedures are followed
 - 2.2 Inspect and test live work is conducted in accordance with WHS/OHS requirements and workplace procedures
 - 2.3 Circuits are checked and isolated as required in accordance with WHS/OHS requirements and workplace procedures
 - 2.4 Methods used to solve circuit problems are used from measured and calculated values as they apply to complex multiple path circuits
 - 2.5 Unplanned situations are dealt with in accordance with WHS/OHS and approval of a relevant person
 - 2.6 Problems are solved without damage to apparatus, circuits, the surrounding environment and/or services using sustainable energy practices
- 3 Complete work and documentation**
 - 3.1 WHS/OHS work completion risk control measures and workplace procedures are followed
 - 3.2 Worksite is cleaned and made safe in accordance with workplace procedures
 - 3.3 Justification for solutions used to solve circuit problems is documented
 - 3.4 Work completion is documented and relevant person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Solving circuit problems must include at least two of the following:

- determining the operating parameters of an existing circuit
- altering an existing circuit to comply with specified operating parameters
- developing circuits to comply with a specified function and operating parameters
- developing circuits to comply with specified functions using established methods

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECD0036 Provide engineering solutions for problems in complex multiple path circuits

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- analysing complex multiple path circuits
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including
 - using risk control measures
- completing work and documenting problem-solving activities
- completing written justification of solutions
- coordinating work with others
- dealing with unplanned events in accordance with problem-solving techniques and workplace procedures
- determining the operating parameters of existing circuits
- inspecting and testing active systems
- obtaining and following work instructions
- obtaining and using tools, equipment and products
- preparing to solve problems in complex multiple path circuits
- providing effective solutions to circuit problems from measurements and calculations
- providing solutions for problems in complex multiple path circuits
- using sustainable energy practices in accordance with workplace procedures
- using testing devices.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- complex alternating current (a.c.) power and maximum power transfer theorem
- complex impedance
- mesh and nodal analysis for a.c. linear circuits
- mesh and nodal analysis for direct current (d.c.) linear circuits

- Norton's principles for d.c. linear circuits
- phasors
- problem-solving techniques
- relevant complex multiple path circuits
- relevant industry standards
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications and operating instructions
- relevant materials, tools, equipment, product and testing devices
- relevant sustainable energy principles
- relevant tools, equipment and products
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace instructions, policies and procedures
- series and parallel a.c. linear circuits
- star-delta conversions
- superposition principles and Kirchhoff's law applied to a.c. linear circuits
- superposition principles for d.c. linear circuits
- Thévenin and Norton theorems applied to a.c. linear circuits
- Thévenin's principles for d.c. linear circuits
- transients
- voltage/current sources and Kirchhoff's law for d.c. linear circuits.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, facilities, tools, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to solving problems in complex multiple path circuits.
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0037 Provide engineering solutions for uses of materials and thermodynamic effects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to provide engineering solutions for uses of materials and thermodynamic effects.

It includes selecting and using appropriate materials and dealing with thermodynamic effects relative to an engineering problem. It also includes using measuring instruments, applying appropriate theorems, and providing solutions derived from measurements and calculations and justification for engineering solutions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Select materials, tools and equipment to deal with thermodynamic effects

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) processes and workplace procedures for a given work area are identified, obtained and applied

- 1.2 WHS/OHS risk control work preparation measures and workplace procedures are followed
 - 1.3 Scope of engineering problems are identified from workplace documentation and/or work supervisor
 - 1.4 Advice is sought from the work supervisor to ensure the engineering work is coordinated with others
 - 1.5 Equipment, material and products required for engineering work are obtained in accordance with workplace procedures
 - 1.6 Tools and testing devices required for work are obtained and checked for correct operation and safety
- 2 Provide engineering solutions to deal with thermodynamic effects**
- 2.1 WHS/OHS risk control work measures and workplace procedures are followed
 - 2.2 The need to inspect and test active systems is determined in accordance with WHS/OHS requirements and workplace procedures
 - 2.3 Systems are checked and isolated, as required, in accordance with WHS/OHS requirements and workplace procedures
 - 2.4 Methods used to solve system problems are used from measured and calculated values as they apply to materials and thermodynamics
 - 2.5 Unplanned situations are dealt with in accordance with WHS/OHS requirements and approval of relevant person/s
 - 2.6 Engineering problems are solved without damage to apparatus, circuits, the surrounding environment and/or services using sustainable energy practices with minimum of waste
- 3 Complete work and document engineering solution/s**
- 3.1 WHS/OHS work completion risk control measures and workplace procedures are followed
 - 3.2 Worksite is cleaned and made safe in accordance with workplace procedures
 - 3.3 Justification for solutions used to solve system problems

is documented

- 3.4** Work completion is documented and relevant person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE160A Provide engineering solutions for uses of materials and thermodynamic effects.

- providing solutions for the uses of materials and thermodynamics
- using sustainable energy practices in accordance with workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- problem-solving techniques
- relevant apparatus, circuits, environment and services
- relevant inspection and testing methods
- relevant manufacturer specifications and operating instructions
- relevant material science and thermodynamics
- relevant measured and calculated values
- relevant job safety assessments or risk mitigation processes
- relevant sustainable energy principles

- relevant tools, equipment, material, products and testing devices
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace instructions, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

UEECD0038 Provide solutions and report on routine electrotechnology problems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to provide solutions and report on electrotechnology problems.

It includes performing relevant numerical calculations to identify workplace electrotechnology problems, applying relevant problem-solving techniques, using a range of fundamental mathematical processes and techniques to resolve problems and documenting the solution/s.

Typical electrotechnology problems are those encountered in meeting routine performance requirements and compliance with industry standards, interpreting the operating parameters of equipment and dealing with equipment malfunctions. Typical reports are those based on routine structures and formats and require the application of routine communication fundamentals.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|---|
| 1 Perform fundamental numerical electrotechnology calculations | 1.1 Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified, obtained and applied |
| | 1.2 Nature of the problem is identified from documentation or work supervisor to determine scope of work to be undertaken |
| | 1.3 Problems are accurately documented in written and/or diagrammatic form to ensure issues are explicit and appropriate problem-solving methods used to resolve matter/s |
| | 1.4 Constants and variables related to electrotechnology problem are identified from measured values or relevant documentation |
| | 1.5 Methods for resolving electrotechnology problems are considered and discussed with appropriate person/s |
| | 1.6 Electrotechnology problems are resolved using relevant numerical calculations with result outcome in accordance with relevant industry standards |
| | 1.7 Solutions to electrotechnology problems are documented in accordance with workplace procedures |
| 2 Complete work calculations and report on solutions | 2.1 Solutions used to solve workplace electrotechnology problems are recorded for inclusion in work/project and/or records/technical reports in accordance with workplace procedures |
| | 2.2 Reporting requirements and structures are identified and used to prepare technical reports to communicate the calculated resolution to appropriate person/s |
| | 2.3 Reports are produced to communicate the calculated solutions in accordance with workplace procedures |
| | 2.4 Work completion is documented and appropriate person/s notified |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Solving routine electrotechnology problems must include:

- numerical calculations relevant to equipment processes in the deployment of work functions
- reporting their outcomes in accordance with industry requirements

Demonstration of solving routine electrotechnology problems must be conducted in relation to any of the following disciplines:

- computers
- data communications
- electrical
- electronics
- instrumentation
- refrigeration and air conditioning

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE130A Provide solutions and report on routine electrotechnology problems.

Assessment Requirements for UEECD0038 Provide solutions and report on routine electrotechnology problems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- completing work and reporting on calculated solutions, including:
 - using standard reporting structures and forms to prepare and produce documents/technical reports
 - interpreting and communicating solutions in documents/technical reports to appropriate person/s in accordance with workplace procedures
- performing calculations to solve electrotechnology problems, including:
 - identifying problems in written and diagrammatic form
 - obtaining known constants and variables from an appropriate source to solve problems
 - solving problems using appropriate fundamental calculations to achieve realistic and accurate outcomes.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- electrotechnology numeracy, including:
 - decimals
 - fractions and indices
 - percentages
 - graphs
 - multiples and sub-multiples
 - ratios and proportions
 - transposition
 - areas and volumes
 - trigonometry and Pythagoras' Theorem
 - construction of angles and triangles

- transposition of equations
- conversion of units of measurement
- electrotechnology literacy, including:
 - reading comprehension
 - spelling
 - sentence construction (syntax)
 - grammar.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0039 Provide solutions to basic engineering computational problems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to provide solutions to engineering computational problems.

It includes applying problem-solving techniques, using a range of mathematical processes and completing documentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Provide computational solutions to engineering problems

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) processes and workplace procedures for a given work area are identified, obtained and applied
- 1.2** Scope of problem/s is obtained from documentation and/or from work instructions to determine work

- 1.3 Problems are documented and/or diagrammatic form and appropriate methods identified to resolve them
 - 1.4 Constants and variables to the problem are obtained from measured values and/or problem documentation
 - 1.5 Alternative methods for resolving the problem are considered and, as required, discussed with relevant person/s
 - 1.6 Problems are resolved using mathematical processes in accordance with workplace procedures
- 2 Complete work and documentation**
- 2.1 Justification for solutions used to solve engineering problems is documented in work records in accordance with workplace procedures and relevant industry standards
 - 2.2 Work completion is documented and relevant person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

- Engineering diagnosis development and work functions must include at least the following:
- working safety
 - applying problem-solving techniques
 - using a range of mathematical processes
 - provision of electrical/electronic engineering problem solutions
 - solutions justification

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE126A Provide solutions to basic engineering computational problems.

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including
 - using risk control measures
- completing work and documenting problem-solving activities
- dealing with unplanned events in accordance with problem-solving techniques and workplace procedures
- documenting justification of solutions provided
- obtaining known constants and variables
- solving problems using appropriate mathematical processes
- stating problems in documented and diagrammatic form.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- algebraic manipulation
- complex numbers
- estimations, errors and approximations
- exponential and logarithmic functions
- graphs of linear functions
- graphs of trigonometric functions
- laws of indices
- matrices
- plane figures - quadrilaterals and circles
- plane figures – triangles and basic trigonometry
- problem-solving techniques
- quadratic functions

- rational, irrational numbers and algebra
- relevant manufacturer specifications
- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace instruction, policies and procedures
- simultaneous equations
- vectors and phasors.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment Requirements for UEECD0040 Solve basic problems electronic and digital equipment and circuits

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements, including using risk control measures
- checking and isolating circuits in accordance with WHS/OHS requirements and workplace procedures
- completing work and documenting problem-solving activities
- dealing with unplanned situations
- deducing equipment behaviour correctly and accurately
- identifying and accessing sources of materials required for work
- observing equipment behaviour and measured values
- obtaining and checking tools, equipment and testing devices
- obtaining problem scope
- preparing to work on electronic and digital equipment
- providing written justification for the solutions to problems
- solving electronic and digital equipment problems without damage using sustainable energy practices
- taking and recording measurements correctly and accurately using relevant measuring equipment
- testing and measuring live work in accordance with WHS/OHS requirements and workplace procedures
- using problem-solving methods.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- alternating currents (a.c.) and waveforms
- analogue to digital conversion
- analogue versus digital

- basic electronic components
- basic logic
- batteries
- capacitance and inductance
- codes
- data manipulation
- digital to analogue conversion
- electromagnetic interference
- electromagnetic waves and signals
- fundamental concepts
- isolation procedures
- number systems
- problem-solving techniques
- relevant industry standards
- relevant manufacturer specifications and operating procedures
- relevant job safety assessments or risk mitigation processes
- relevant tools, equipment and testing devices
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- relevant electronic and digital equipment problems
- sustainable energy principles
- techniques in the use of multimeters
- testing and measuring live work.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment Requirements for UEECD0041 Solve electrotechnical engineering problems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements, including using risk control measures
- completing work and documenting calculated solutions to electrotechnical activities
- documenting justification of solutions provided in accordance with relevant industry standards
- obtaining known constants and variables from relevant sources
- obtaining scope of problem from documentation and/or work supervisor
- providing calculated solutions to electrotechnical engineering problems
- solving problems using relevant calculations
- stating problems in written and/or diagrammatic form.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- capacitance in alternating current (a.c.) circuits
- capacitance/capacitors
- electromagnetic induction
- impedance in a.c. circuits
- inductance in a.c. circuits
- magnetism and electromagnetism
- measurement of electrical quantities
- parallel circuits
- phase relationships in a.c. circuits
- problem-solving techniques
- relevant industry standards
- relevant manufacturer specifications and operating instructions
- relevant job safety assessments or risk mitigation processes

- relevant WHS/OHS legislated requirements
- relevant workplace documentation, including:
 - diagrammatic form
 - work/project development records
- relevant workplace policies and procedures
- resistance
- series circuits
- series/parallel circuits
- single-source resistive a.c. circuits of various frequencies
- sinusoidal alternating voltage and current
- test equipment.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to applying calculations required to solve electrotechnical problems
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0042 Solve problems in ELV single path circuits

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to provide solutions to predictable problems in single path circuits operated at extra-low voltage (ELV) as they apply to energy sector work functions.

It includes working safely; using voltage, current and resistance measuring devices; and providing solutions to predictable circuit problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to work on ELV single path electrical circuits

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for the relevant work area are identified and applied
- 1.2 Hazards are identified, risks are assessed, and control measures and workplace procedures are implemented

- 1.3 Nature of the circuit/s problem is obtained from relevant documentation or work supervisor to determine the scope of work to be undertaken
 - 1.4 Advice is sought from work supervisor to ensure work is coordinated effectively with others
 - 1.5 Materials required for the work are identified and accessed in accordance with workplace procedures
 - 1.6 Tools, equipment and testing devices required for work are obtained and checked for correct operation and safety in accordance with workplace procedures
- 2 Solve ELV single path electrical circuits problem**
 - 2.1 WHS/OHS risk control work measures and procedures are followed
 - 2.2 Need to test or measure live electrical work is determined and conducted in accordance with WHS/OHS, workplace and regulatory requirements
 - 2.3 Circuits are confirmed as being isolated, as required, in accordance with WHS/OHS, workplace and regulatory requirements
 - 2.4 Methodological techniques are used to solve circuit problems using measured and calculated values as they apply to single path, single source circuits in accordance with workplace procedures
 - 2.5 Problems are solved without damage to apparatus, circuits, the surrounding environment or services using sustainable energy practices
- 3 Complete work and document problem-solving activity**
 - 3.1 WHS/OHS risk control measures for work completion are followed
 - 3.2 Worksite is cleaned and made safe in accordance with workplace procedures
 - 3.3 Justification for solutions used to solve circuit problems is documented in accordance with workplace procedures
 - 3.4 Work completion is documented and appropriate person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Solving problems in ELV single path circuits must include three of the following types of circuit problems:

- identifying and locating open circuits
- identifying and locating short circuits
- identifying loss of supply

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE103A Solve problems in ELV single path circuits.

Assessment Requirements for UEECD0042 Solve problems in ELV single path circuits

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - checking tools, materials, equipment and testing devices for correct operation and safety
 - ensuring circuits are isolated
 - testing or measuring on live circuits and operating systems safely
 - using risk control measures
- applying sustainable energy principles and practices
- completing workplace documentation, including documenting problem-solving activities
- identifying and accessing relevant materials
- maintaining a clean work site and equipment
- planning work on extra-low voltage (ELV) single path electrical circuits
- referring to relevant documentation to determine the circuit problem
- solving problems in ELV single path electrical circuits, including:
 - altering an existing circuit to comply with specified operating parameters
 - dealing with unplanned events
 - developing circuits to comply with a specified function and operating parameters
- determining the operating parameters of an existing circuit
- dealing with unplanned events.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- basic electrical concepts, including:
 - electrotechnology industry
 - static and current electricity

- production of electricity by renewable and non-renewable energy sources
- transportation of electricity from the source to the load via the transmission and distribution systems
- utilisation of electricity by the various loads
- basic calculations involving quantity of electricity, velocity and speed with relationship to the generation and transportation of electricity
- basic electrical circuit, including:
 - symbols used to represent an electrical energy source, a load, a switch and a circuit protection device in a circuit diagram
 - purpose of each component in the circuit
 - effects of an open circuit, a closed circuit and a short circuit
 - multiple and sub-multiple units
- effects of electrical current, including:
 - physiological effects of current and the fundamental principles listed in AS/NZS 3000 for protection against this effect
 - basic principles by which electric current can result in the production of heat, the production of magnetic fields, and a chemical reaction
 - typical uses of the effects of current
 - mechanisms by which metals corrode
 - fundamental principles listed in AS/NZS 3000 for protection against the damaging effects of current
- electromotive force (EMF) sources, energy sources and conversion electrical energy, including:
 - basic principles of producing an emf from the interaction of a moving conductor in a magnetic field
 - basic principles of producing an emf from the heating of one junction of a thermocouple
 - basic principles of producing an emf by the application of sun light falling on the surface of photovoltaic (PV) cells
 - basic principles of generating an emf when a mechanical force is applied to a crystal (piezo electric effect)
 - principles of producing an electrical current from primary, secondary and fuel cells
 - input, output, efficiency or losses of electrical systems and machines
 - effect of losses in electrical wiring and machines
 - principle of conservation of energy
- resistors, including:
 - features of fixed and variable resistor types and typical applications
 - identification of fixed and variable resistors
 - various types of fixed resistors used in the electrotechnology industry e.g. wire-wound, carbon film and tapped resistors
 - various types of variable resistors used in the electrotechnology industry e.g. adjustable resistors: potentiometer and rheostat, light dependent resistor (LDR), voltage dependent resistor (VDR), negative temperature dependent resistor (NTC) positive temperature

- dependent resistor (PTC)
- characteristics of temperature, voltage and light dependent resistors and typical applications of each
- power ratings of a resistor
- power loss (heat) occurring in a conductor
- resistance of a colour coded resistor from colour code tables and confirm the value by measurement
- measurement of resistance of a range of variable resistors under varying conditions of light, voltage and temperature conditions
- Ohm's law, including:
 - basic direct current (d.c.) single path circuit
 - voltage and current levels in a basic d.c. single path circuit
 - effects of an open circuit, a closed circuit and a short circuit on a basic d.c. single path relationship between voltage and current from measured values in a simple circuit
 - determining voltage, current and resistance in a circuit given any two of these quantities
 - graphical relationships of voltage, current and resistance
 - relationship between voltage, current and resistance
- electrical power, including:
 - relationship between force, power, work and energy
 - power dissipated in circuit from voltage, current and resistance values
 - power ratings of devices
 - measurement of electrical power in a d.c. circuit
 - effects of power rating of various resistors
- relevant electrical regulations and legislations
- relevant manufacturer specifications
- relevant safe work method statements (SWMS)/job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- series circuits, including:
 - circuit diagram of a single source d.c. series circuit
 - identification of the major components of a series circuit: power supply, loads, connecting leads and switch
 - applications where series circuits are used in the electrotechnology industry
 - characteristics of a series circuit - connection of loads, current path, voltage drops, power dissipation and effects of an open circuit in a series circuit
 - the voltage, current and resistances or power dissipated from measured or given values of any two of these quantities
 - relationship between voltage drops and resistance in a simple voltage divider network
 - setting up and connecting a single-source series d.c. circuit

- measurement of resistance, voltage and current values in a single source series circuit
- effect of an open circuit on a series connected circuit
- sustainable energy principles and practices
- techniques to confirm that a circuit is isolated
- techniques to check if tools, equipment and testing devices are operating correctly and safely.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0043 Solve problems in direct current circuits

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to determine correct operation of single source direct current (d.c.) series, parallel and series-parallel circuits and provide solutions to various electrotechnology work functions.

It includes working safely; using voltage, current and resistance measuring devices; and providing solutions to measurement and calculation problems derived from single and multiple path circuits.

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations which are designed to operate at voltages greater than 50 volt (V) alternating current (a.c.) or 120 V d.c.

Competency development activities in this unit are subject to regulations directly related to licensing. Where a licence or permit to practice is not held, a relevant contract of training, such as an apprenticeship, may be required.

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Identify d.c. electrical circuits

- 1.1** Nature of the circuit problem is obtained from relevant documentation, electrical drawings or personnel to determine the scope of work to be undertaken
- 1.2** Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified and applied
- 1.3** Tools, equipment and circuit measuring devices required for the electrical work are obtained and checked for correct operation and safety in accordance with workplace procedures
- 1.4** Electrical apparatus is visually inspected, and components and circuits are identified

2 Determine electrical d.c. circuit problem

- 2.1** Electrical hazards are identified, risks are assessed and control measures are implemented
- 2.2** Need to test or measure live electrical work is conducted in accordance with WHS/OHS workplace safety procedures and regulatory requirements
- 2.3** Circuits are checked and isolated in accordance with workplace procedures and regulatory requirements
- 2.4** Expected circuit parameters are calculated from relevant component ratings/specifications
- 2.5** Circuit parameters are measured in accordance with industry standards and checked against expected values
- 2.6** D.c. circuit problems are assessed from measured and calculated values using established methodologies as they apply to circuits
- 2.7** Circuit solutions are determined from measured and calculated values of resistance, voltage, current and power in series, parallel, and series-parallel circuits in accordance with industry standards
- 2.8** Solutions are tested in accordance with workplace procedures and industry standards
- 2.9** Problems are resolved without damage to apparatus, circuits, the surrounding environment or services using

- sustainable energy practices
- 2.10** Unplanned situations are responded to in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
- 3 Complete work and document problem-solving activities**
- 3.1** WHS/OHS work completion risk control measures and procedures are followed
- 3.2** Worksite is cleaned and made safe in accordance with workplace procedures
- 3.3** Justification for solutions used to resolve circuit problems is documented
- 3.4** Work completion is documented, electrical drawings are updated, and relevant person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE104A Solve problems in d.c. circuits.

Assessment Requirements for UEECD0043 Solve problems in direct current circuits

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- altering an existing circuit to comply with specified operating parameters
- applying Ohm's Law to solve problems in direct current (d.c.) single path circuits
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including identifying risks and applying risk control measures
- calculating resistance of a conductor from factors such as conductor length, cross-sectional area, resistivity and changes in temperature and material
- connecting analogue/digital ammeter into a circuit ensuring the polarities are correct to take current readings
- connecting a series d.c. circuit containing capacitor and resistor to determine the time constant of the circuit
- calculating quantities from given information to determine capacitance, energy and voltage
- calculating one time constant as well as the time taken to fully charge and discharge a given capacitor
- calculating equivalent capacitance of capacitors connected in series and parallel circuits
- dealing with unplanned events in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
- demonstrating graphical relationships of voltage, current and resistance
- calibrating and using measuring device in accordance with manufacturer specifications
- determining the operating parameters of an existing circuit
- developing circuits to comply with a specified function and operating parameters
- identifying and applying electrical industry standard symbols to represent electrical components in circuit diagram
- identifying fixed and variable resistors, including:
 - determining resistance of a colour coded resistor from colour code tables and confirming the value by measurement
 - measuring resistance of variable resistors under varying conditions of light, voltage and/or temperature
 - selecting a resistor for an application
- solving problems in series and series-parallel circuits, including:

- developing, setting up and connecting a single source d.c. series-parallel circuit
- measuring voltage and current
- calculating resistance, voltage, current and power from measured and/or given values of any two of these quantities in a single source series-parallel circuit
- using test equipment to confirm the effect of material length, cross-sectional area and temperature on the resistance of conductive materials
- selecting an appropriate meter in terms of units to be measured, range, loading effect and accuracy for a given application
- using measuring devices to Solve problems in direct current circuits
- using meters for problem solving, including measuring resistance using direct, volt-ammeter and/or bridge methods
- using methodical techniques to solve d.c. circuit problems from measured and calculated values.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- electrical concepts, including:
 - calculations involving quantity of electricity, velocity and speed
 - distribution of electricity from the source to the load via the transmission systems
 - principle of conservation of energy
 - production of electricity, including:
 - renewable and non-renewable energy sources
 - static and current electricity
 - utilisation of electricity by the various loads
- electrical circuit, including:
 - industry standard symbols used to represent components in an electrical circuit diagram
 - multiple and sub-multiple units
 - purpose of each component in the electrical circuit
- Ohm's Law, including:
 - d.c. single path circuit
 - determining voltage, current and resistance in a circuit
 - effects of an open circuit, a closed circuit and a short circuit on a d.c. single path
 - relationship between voltage and current from measured values in a circuit
 - graphical relationships of voltage, current and resistance
 - relationship between voltage, current and resistance
 - voltage and current levels in a d.c. single path circuit
- electrical power, including:
 - effects of power rating of various resistors
 - methods for measuring of electrical power in a d.c. circuit

- power dissipated in circuit from voltage, current and resistance values
- power ratings of electrical devices
- relationship between force, power, work and energy
- effects of electrical current, including:
 - relevant industry standards relating to fundamental principles for protection against the damaging effects of current
 - mechanisms by which metals corrode
 - principles by which electric current can result in the production of:
 - heat
 - magnetic fields
 - a chemical reaction
 - typical uses of electrical current
 - physiological effects of current
- electromotive force (EMF) sources and conversion of electrical energy, including:
 - input, output, efficiency and losses of electrical systems and machines
 - principles of generating an EMF, including:
 - when a mechanical force is applied to a crystal
 - when moving a conductor in a magnetic field
 - by the application of light falling on the surface of photovoltaic (PV) cells
 - from the heating of one junction of a thermocouple
 - principles of producing an electrical current from primary, secondary and fuel cells
- resistors, including:
 - types and applications of fixed and variable resistors used in the electrotechnology industry
 - characteristics of variable resistors used in the electrotechnology industry, including:
 - adjustable resistors: potentiometer and rheostat
 - light dependent resistor (LDR)
 - voltage dependent resistor (VDR)
 - temperature dependent resistor
 - power ratings of a resistor
 - power loss (heat) occurring in a conductor
 - resistor colour code tables
- series, parallel, and series-parallel circuits, including:
 - applications where these circuits are used in the electrotechnology industry
 - characteristics of series, parallel, and series-parallel circuits, including:
 - connection of loads
 - current path
 - voltage drops
 - power dissipation
 - effects of an open circuit

- diagrams of single source d.c. series, parallel, and series-parallel circuits
- identification of the components of series, parallel, and series-parallel circuits, including power supply, loads, connecting leads and switch
- relationship between voltage drops and resistance in a simple voltage divider network
- techniques for determining voltage, current, resistances or power dissipated from measured or given values (of any two of these quantities)
- relationship between branch currents and resistances in a two-branch parallel and series-parallel current divider network
- factors affecting the resistance of a conductor, including:
 - conductor length
 - cross-sectional area
 - resistivity
 - changes in temperature and material
 - effect the change in cross-sectional area, length and type of material has on the resistance of a conductor
 - effects of resistance on the current-carrying capacity and voltage drop in cables
 - effects of temperature change on the resistance of various conducting materials
- effects of measuring devices in a circuit, including:
 - advantages and disadvantages of each voltage indicator tester
 - calibration and use of the measuring device
 - methods for connecting an analogue/digital voltmeter into a circuit ensuring the polarities are correct and taking various voltage readings
 - correct techniques to read the scale of an analogue meters and how to reduce the ‘parallax’ error
 - hazards associated with the use of measuring devices, including polarity
 - hazards involved in using electrical instruments and the safety control measures that should be taken
 - instruments used in the field to measure voltage, current, resistance and insulation resistance and the typical circumstances in which they are used
 - methods for using insulation resistance measuring devices to relevant industry standards
 - loading effect of various voltmeters when measuring voltage across various loads
 - methods for measuring resistance using direct, volt-ammeter and bridge methods
 - non-contact voltage indicator types and use
 - operating characteristics of analogue and digital meters
 - connecting an analogue/digital voltmeter into a circuit ensuring the polarities are correct and taking various voltage readings
 - operation of various voltage indicator testers
 - purpose and characteristics of a voltmeter
 - purpose of an ammeter and the correct connection (series) of an ammeter into a circuit
 - reasons the internal resistance of an ammeter must be extremely low and the dangers and consequences of connecting an ammeter in parallel and/or wrong polarity

- methods for selecting an appropriate meter in terms of units to be measured, range, loading effect and accuracy for a given application
- types of voltage indicator testers, including light-emitting diode (LED), neon, solenoid, volt-stick and series tester and the purpose of each voltage indicator tester
- methods for using voltage indicator testers to detect the presence of various voltage levels
- capacitors and capacitance, including:
 - construction of a standard capacitor
 - different types of dielectric material and each dielectric's relative permittivity
 - types of capacitors commonly used in the electrotechnology industry
 - industry standard symbol of various types of capacitors, including standard, variable, trimmer and polarised
 - terms and units for capacitance, electric charge and energy
 - factors affecting capacitance
 - behaviour of a series d.c. circuit containing resistance and capacitance components. - charge and discharge curves
 - arrangement of a series d.c. circuit containing capacitance and resistor to determine the time constant of the circuit
- capacitors in series and parallel, including:
 - application of capacitors in the electrotechnology industry
 - common faults in capacitors
 - arrangement of capacitors in series and/or parallel configurations to achieve various capacitance values
 - equivalent capacitance of capacitors connected in series and parallel
 - effects of capacitors connected in parallel by calculating their equivalent capacitance
 - effects on the total capacitance of capacitors connected in series by calculating their equivalent capacitance
 - hazards involved in working with capacitance effects and the safety control measures that should be taken, including safe handling and the correct methods of discharging various size capacitors, dangers of a charged capacitor and the consequences of discharging a capacitor through a person
 - testing of capacitors to determine serviceability.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment (including single source series, parallel and series-parallel d.c. circuits) and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, manufacturer instructions, regulations, codes of practice and operation manuals.

UEECD0044 Solve problems in multiple path circuits

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to solve problems in multiple path circuits.

It includes working safely; applying problem-solving procedures, including the use of voltage, current and resistance measuring devices; and providing solutions derived from measurements and calculations to predictable problems in multiple path circuits.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0046 Solve problems in single path circuits

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to work on multiple path circuits

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Scope of work to be undertaken is determined from relevant documentation, electrical drawings or relevant person/s

1.2 Work health and safety (WHS)/occupational health and safety (OHS) workplace procedures for a given work

- area are identified and applied
- 1.3 Electrical hazards are identified, risks are assessed, and control measures are implemented
 - 1.4 Advice is sought from the relevant person/s to ensure the work is coordinated effectively with others
 - 1.5 Materials required for work are identified and accessed in accordance with workplace procedures
 - 1.6 Tools, equipment and testing devices needed to carry out work are obtained and checked for correct operation and safety
- 2 Solve multiple path circuit problems**
- 2.1 The need to test or measure live is determined in accordance with WHS/OHS requirements and when necessary conducted in accordance with workplace procedures
 - 2.2 Circuits are checked as isolated in accordance with workplace procedures and regulatory requirements
 - 2.3 Expected circuit parameters are calculated from relevant component ratings/specifications
 - 2.4 Circuit parameters are measured in accordance with industry standards and checked against expected values
 - 2.5 Circuit problems are assessed using measured and calculated values as they apply to multiple path circuits
 - 2.6 Circuit solutions are determined from measured and calculated values of resistance, voltage, current and power in extra-low voltage (ELV) multiple path circuits
 - 2.7 Solutions are tested in accordance with workplace procedures and industry standards
 - 2.8 Problems are resolved without damage to equipment, circuits, the surrounding environment or services using sustainable energy practices
 - 2.9 Unplanned situations are responded to in accordance with workplace procedures, in a manner that minimises risk to personnel and equipment
- 3 Complete work and document problem-solving activities**
- 3.1 WHS/OHS work completion risk control measures and procedures are followed

- 3.2 Worksite is cleaned and made safe in accordance with workplace procedures
- 3.3 Justification for solutions used to resolve circuit problems is documented
- 3.4 Work completion is documented, electrical drawings are updated, and relevant personnel are notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Installation, fault finding, maintenance or development work functions in multiple path circuits must be demonstrated in one of the following disciplines:

- computers
- data communications
- electrical
- electronics
- fire protection
- instrumentation
- refrigeration and air conditioning
- renewable and sustainable energy systems
- security technology

Unit Mapping Information

No equivalent unit

Assessment Requirements for UEECD0044 Solve problems in multiple path circuits

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures, including:
 - identifying and assessing hazards and risks
 - implementing control measures
 - safely measuring the parameters for the whole or any part of a d.c. circuit
- working safely with electric circuits in the electrotechnology sector, including:
 - checking circuits are isolated in accordance with workplace procedures and regulatory requirements
 - applying protections against the physiological effects of electrical currents
- calculating values of voltage, current and resistance in single source series/parallel circuits given any two of these quantities
- calculating power in single source series/parallel circuits from known values of voltage, current and/or resistance
- connecting a parallel circuit: power supply, protection device, switch and loads
- connecting a series/parallel circuit: power supply, protection device, switch and loads
- measuring values of voltage and current in single source ELV series/parallel circuits
- measuring values of resistance, including insulation resistance and continuity/no continuity
- measuring values of capacitance
- testing capacitors to determine serviceability
- altering an existing circuit to comply with specified operating parameters
- developing circuits to comply with a specified function and operating parameters
- using methodical techniques to solve circuit problems from measured and calculated values
- ensuring compliance with relevant Australian Standards and legislation
- completing work and documenting activities.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- factors affecting resistance, including:
 - four factors that affect the resistance of a conductor (type of material, length, cross-sectional area and temperature)
 - affect the change in the type of material (resistivity) has on the resistance of a conductor
 - affect the change in 'length' has on the resistance of a conductor
 - affect the change in 'cross-sectional area' has on the resistance of a conductor
 - effects of temperature change on the resistance of various conducting materials
 - effects of resistance on the current-carrying capacity and voltage drop in cables
 - techniques for calculation of the resistance of a conductor from factors such as conductor length, cross-sectional area, resistivity and changes in temperature
 - using digital and analogue ohmmeter to measure the change in resistance of different types of conductive materials (copper, aluminium, nichrome and tungsten) when those materials undergo a change in type of material length, cross-sectional area and temperature
- series/parallel circuits including:
 - schematic diagram of a single source d.c. series/parallel circuit
 - identification of the major components of a series/parallel circuit (power supply, protection device, switch and loads)
 - applications where series/parallel circuits are used in the electrotechnology industry
 - characteristics of a series/parallel circuit (load connection, current paths, voltage drops, power dissipation, and effects of an open circuit in a series/parallel circuit)
 - relationship between voltages, currents and resistances in a bridge network
 - calculation of the total:
 - resistance of a series/parallel circuit
 - current of a series/parallel circuit
 - voltage and the individual voltage drops of a series/parallel circuit
 - techniques for setting up and connecting a single source d.c. series/parallel circuit
 - resistance, voltage and current measurements in a single source d.c. series/parallel circuit
 - the voltage, current, resistances or power dissipated from measured values of any two of these quantities
- parallel circuits including:
 - schematic diagram of a single source d.c. parallel circuit
 - identification of the major components of a parallel circuit (power supply, protection device, switch and loads)
 - applications where parallel circuits are used in the electrotechnology industry
 - characteristics of a parallel circuit (load connection, current paths, voltage drops, power dissipation, and effects of an open circuit in a parallel circuit)
 - relationship between currents entering a junction and currents leaving a junction
 - relationship between branch currents and resistances in a two-branch current divider

network

- methods to calculate total:
 - resistance of a parallel circuit
 - current of a parallel circuit
 - voltage and the individual voltage drops of a parallel circuit
- techniques for setting up and connecting a single source d.c. parallel circuit
- resistance, voltage and current measurements in a single source parallel circuit
- voltage, current, resistance or power dissipated from measured values of any of these quantities
- output current and voltage levels of connecting cells in parallel
- meters in a circuit, including:
 - types, operating characteristics and purpose of instruments/meters used to measure voltage, current, resistance and insulation resistance
 - advantages and disadvantages of different instruments/meters commonly used in the field
 - hazards involved in using electrical instruments/meters and relevant safety control measures
 - techniques to correctly connect and accurately read instruments/meters used in the field and common errors that may occur when connecting and reading meters
 - consequences of incorrect connection of instruments/meters into a circuit
 - techniques for calculation of resistance values using voltmeter and ammeter reading
- resistance measurement, including:
 - types, operating characteristics, purpose and storage of instruments to measure resistance (including insulation resistance)
 - functions of various analogue and digital insulation resistance testers
 - reasons why the supply must be isolated prior to using the insulation resistance tester
 - where and why the continuity test and insulation resistance test would be used in an electrical installation
 - the voltage ranges of an insulation resistance tester and where each range may be used
 - AS/NZS 3000 requirements for resistance measurement/testing
 - purpose and method to carry out a calibration check on a resistance tester
 - techniques for measurement of:
 - low values of resistance using a resistance tester continuity functions
 - high values of resistance using a resistance tester insulation resistance function
 - resistance using volt-ammeter methods
- capacitors and capacitance including:
 - techniques for identification of various types of capacitors commonly used in the electrotechnology industry
 - circuit symbol of various types of capacitors: standard, variable, trimmer and polarised
 - terms and units for capacitance and electric charge
 - behaviour of a series d.c. circuit containing resistance and capacitance components. - charge and discharge curves

- techniques for calculation of quantities from given information: capacitance, charge and voltage
- techniques for calculation one time constant as well as the time taken to fully charge and discharge a given capacitor
- techniques for connection of a series d.c. circuit containing capacitance and resistor to determine the time constant of the circuit
- capacitors in series and parallel, including:
 - hazards involved in working with capacitance effects and the safety control measures that should be taken
 - safe handling and the correct methods of discharging various size capacitors
 - dangers of a charged capacitor and the consequences of discharging a capacitor through a person
 - effects of capacitors connected in parallel by calculating their equivalent capacitance
 - effects on the total capacitance of capacitors connected in series by calculating their equivalent capacitance
 - techniques for connecting capacitors in series and/or parallel configurations to achieve various capacitance values
 - common faults in capacitors
 - techniques for testing of capacitors to determine serviceability
 - application of capacitors in the electrotechnology industry.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, manufacturer instructions, regulations, codes of practice and operation manuals.

UEECD0045 Solve problems in multiple path extra-low voltage (ELV) a.c. circuits

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to solve problems in multiple path extra-low voltage (ELV) alternating current (a.c.) circuits.

It includes working safely, applying problem-solving procedures, measuring devices, and providing solutions from measurements and calculations to problems in multiple path circuits.

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations which are designed to operate at voltages greater than 50 volt (V) a.c. or 120 V direct current (d.c.).

Competency development activities in this unit are subject to regulations directly related to licensing. Where a licence or permit to practice is not held, skills and knowledge described in this unit require a relevant contract of training, such as an Australian Apprenticeship.

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Permits may also be required for some work environments, such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace and

UEECD0043 Solve problems in direct current circuits

or

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to work on multiple path ELV a.c. electrical circuits

2 Solve multiple path ELV a.c circuit problems

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) processes and workplace procedures for a given work area are identified, obtained and applied
- 1.2 WHS/OHS risk control measures and workplace procedures in preparation for the work are followed
- 1.3 Scope of circuit problem is obtained from documentation and/or work supervisor
- 1.4 Advice is sought from work supervisor to ensure work is coordinated effectively with others
- 1.5 Sources of materials required for work are identified and accessed in accordance with workplace procedures
- 1.6 Tools, equipment and testing devices required for work are obtained and checked for correct operation and safety
- 2.1 WHS/OHS risk control work measures and workplace procedures are followed
- 2.2 Need to test and measure live work is determined in accordance with WHS/OHS requirements and workplace procedures
- 2.3 Circuits are checked and isolated, as required, in accordance with WHS/OHS requirements and workplace procedures
- 2.4 Methods are used to solve a.c circuit problems from measured and calculated values as they apply to multiple

path electrical circuits

- 2.5** Unplanned situations are dealt with safely in accordance with workplace procedures and approval of relevant person/s
- 2.6** Problems are solved without damage to apparatus, circuits, the surrounding environment or services using sustainable energy practices
- 3 Complete work and document problem-solving activities**
- 3.1** WHS/OHS work completion risk control measures and workplace procedures are followed
- 3.2** Worksite is cleaned and made safe in accordance with workplace procedures
- 3.3** Justification for solutions used to solve circuit problems is documented
- 3.4** Work completion is documented and relevant person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Circuit problems must include at least two of the following:

- determining the operating parameters of an existing circuit
- altering an existing circuit to comply with specified operating parameters
- developing circuits to comply with a specified function and operating parameter

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE119A Solve problems in multiple path extra-low voltage (ELV) a.c. circuits.

Assessment Requirements for UEECD0045 Solve problems in multiple path extra-low voltage (ELV) a.c. circuits

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including
 - using risk control measures
- checking and isolating circuits
- identifying and assessing sources of materials required for work
- obtaining and checking tools, equipment and testing devices for correct operation and safety using sustainable energy practices
- obtaining scope of circuit/s from documentation and/or work supervisor
- preparing to work on multiple path extra-low voltage (ELV) alternating current (a.c.) electrical circuits
- seeking advice from the work supervisor
- solving a.c. circuits problems from measuring and calculating values
- testing and measuring live circuits
- dealing with unplanned situations safely and with the approval of relevant person/s
- workplace documenting, including:
 - justifications solution
 - work completion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- problem-solving techniques
- relevant capacitance in a.c. circuits
- relevant impedance
- relevant inductance in a.c. circuits
- relevant isolation of circuits

- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications and operating instructions
- relevant materials, tools, equipment and testing devices
- relevant methods to measure and calculate values
- relevant phasors
- relevant power and power factor
- relevant resistance in a.c. circuits
- relevant resonance
- relevant sinusoidal alternating voltage and current
- relevant test and measure live work procedures
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- sustainable energy principles.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment used in industry
- resources that reflect current industry practices in relation to solving problems in multiple path ELV a.c. circuits
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0046 Solve problems in single path circuits

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to solve problems in single path circuits.

It includes working safely; applying problem-solving procedures, including the use of basic voltage, current and resistance measuring devices; and providing known solutions to predictable circuit problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to work on single path electrical circuits

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Scope of work to be undertaken is determined from relevant documentation, electrical drawings or relevant person/s

1.2 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified and applied

- 1.3 Electrical hazards are identified, risks are assessed, and control measures are implemented
 - 1.4 Advice is sought from the relevant person/s to ensure the work is coordinated effectively with others
 - 1.5 Materials required for work are identified and accessed in accordance with workplace procedures
 - 1.6 Tools, equipment and testing devices needed to carry out work are obtained and checked for correct operation and safety
- 2 Solve problems in single path electrical circuits**
- 2.1 The need to test or measure live electrical work is determined in accordance with WHS/OHS requirements and, when necessary, conducted in accordance with workplace procedures
 - 2.2 Circuits are checked as isolated in accordance with workplace procedures and regulatory requirements
 - 2.3 Expected circuit parameters are calculated from relevant component ratings/specifications
 - 2.4 Circuit parameters are measured in accordance with industry standards and checked against expected values
 - 2.5 Circuit problems are assessed using measured and calculated values as they apply to single path, single source circuits
 - 2.6 Circuit solutions are determined from measured and calculated values of resistance, voltage, current, and power in single path circuits
 - 2.7 Solutions are tested in accordance with workplace procedures and industry standards
 - 2.8 Problems are resolved without damage to equipment, circuits, the surrounding environment or services using sustainable energy practices
 - 2.9 Unplanned situations are responded to in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
- 3 Complete work and document problem solving activities**
- 3.1 WHS/OHS work completion risk control measures and procedures are followed

- 3.2 Worksite is cleaned and made safe in accordance with workplace procedures
- 3.3 Justification for solutions used to solve circuit problems is documented
- 3.4 Work completion is documented, and relevant personnel are notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Installation, fault finding, maintenance or development work functions of single source series circuits containing more than one load must be demonstrated in one of the following disciplines:

- computers
- data communications
- electrical
- electronics
- fire protection
- instrumentation
- refrigeration and air conditioning
- renewable and sustainable energy systems
- security technology

Unit Mapping Information

No equivalent unit

Assessment Requirements for UEECD0046 Solve problems in single path circuits

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures, including:
 - identifying and assessing hazards and risks
 - implementing control measures
 - safely measuring the parameters for the whole or any part of a d.c. circuit
- working safely with electric circuits in the electrotechnology sector, including:
 - checking circuits are isolated in accordance with workplace procedures and regulatory requirements
 - applying protections against the physiological effects of electrical currents
- determining the operating parameters of an existing circuit
- calculating values of voltage, current and resistance in single source series circuits given any two of these quantities
- calculating power in single source series circuits from known values of voltage and current and/or resistance
- connecting a series circuit: power supply, protection device, switch and load
- measuring values of voltage and current in single source series circuits
- measuring values of resistance
- altering an existing circuit to comply with specified operating parameters
- developing circuits to comply with a specified function and operating parameters
- identifying loss of supply
- using methodical techniques to solve circuit problems from measure and calculated values
- ensuring compliance with relevant Australian Standards and legislation
- completing work and documenting activities.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include

knowledge of:

- electrical concepts, including:
 - static and current electricity
 - production of electricity by renewable and non-renewable energy sources
 - transportation of electricity from the source to the load via the transmission and distribution systems
 - utilisation of electricity by the various loads
 - basic calculations involving quantity of electricity
- electrical circuits, including:
 - symbols used to represent an electrical energy source, a load, a switch and a circuit protection device in a circuit diagram
 - purpose of each component in the circuit
 - effects of an open circuit, a closed circuit and a short circuit
 - multiple and sub-multiple units
- Ohm's Law including:
 - direct current (d.c.) single path circuit
 - voltage and currents levels in a basic d.c. single path circuit
 - effects of an:
 - open circuit
 - a closed circuit and a short circuit on a basic d.c. single path
 - relationship between voltage and current from measured values in a simple circuit
 - determining voltage, current and resistance in a circuit given any two of these quantities
 - graphical relationships of voltage, current and resistance
 - relationship between voltage, current and resistance
- electrical power, including:
 - relationship between force, power, work and energy
 - power dissipated in circuit from voltage, current and resistance values
 - power ratings of devices
 - methods for measuring electrical power in a d.c. circuit
 - effects of power rating of various resistors
- effects of electrical current, including:
 - physiological effects of current
 - principles by which an electric current can produce heat, light, motion and a chemical reaction
 - typical uses of the effects of current
 - mechanisms by which metals corrode
 - fundamental principles listed in AS/NZS 3000 for protection against the damaging effects of current
- electromotive force (EMF) sources and conversion of electrical energy, including:
 - input/output (I/O), efficiency and losses of electrical systems and machines

- principles of generating an EMF, including:
 - when a mechanical force is applied to a crystal
 - when moving a conductor in a magnetic field
 - by the application of light falling on the surface of photovoltaic (PV) cells
 - from the heating of one junction of a thermocouple
- principles of producing an electrical current from primary, secondary and fuel cells
- resistors, including:
 - types and applications of fixed and variable resistors used in the electrotechnology industry
 - identification of fixed and variable resistors
 - characteristics of temperature, voltage and light dependent resistors and typical applications of each
 - power ratings of a resistor
 - power loss (heat) occurring in a conductor
 - resistor colour code tables
 - specifying a resistor for a particular application
- series circuits, including:
 - circuit diagram of a single source single path circuit
 - identification of the major components of a series circuit: power supply, protection device, switch and loads
 - applications where series circuits are used in the electrotechnology industry
 - characteristics of a series circuit - connection of loads, current path, voltage drops, power dissipation and effects of an open circuit in a series circuit
 - the voltage, current, resistances or power dissipated from measured or given values of any two of these quantities
 - relationship between voltage drops and resistance in a simple voltage divider network
 - techniques for setting up and connecting a single source single path circuit
 - methods for measurement of resistance, voltage and current values in a single source single path circuit
 - effect of an open circuit on a series connected circuit.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, manufacturer instructions, regulations, codes of practice and operation manuals.

UEECD0047 Supervise and coordinate energy sector work activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to supervise and coordinate energy sector work activities.

It encompasses working safety, implementing safety procedures and processes, sequencing work activities, providing guidance and work instructions to others, ensuring job requirements are met and maintaining necessary work documentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to supervise and coordinate work activities

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied

- | | | |
|---|------------|--|
| | 1.2 | Job specification and requirements are obtained and applied |
| | 1.3 | Plant, materials and skills needed for work are determined from specifications and relevant documentation |
| | 1.4 | Plant, materials and person/s required for work are accessed in accordance with workplace procedures |
| 2 Supervise work activities and complete documentation | 2.1 | WHS/OHS and workplace procedures are implemented and monitored |
| | 2.2 | Guidance and work instructions are given to relevant person/s to ensure work is sequenced and completed in accordance with job specifications and requirements |
| | 2.3 | Cooperation is sought from others involved in the work to ensure aspects of work are coordinated effectively |
| | 2.4 | Work progress is monitored in accordance with schedules, job specifications and requirements |
| | 2.5 | Conflict issues at the worksite are dealt with in accordance with workplace procedures |
| | 2.6 | Requested variations to job specification are dealt with in accordance with workplace procedures |
| | 2.7 | Methods for dealing with unplanned situations are applied in accordance with WHS/OHS and workplace procedures |
| 3 Document supervision and coordination activities | 3.1 | Job records are maintained in accordance with workplace procedures |
| | 3.2 | Processes are followed to ensure activities are carried out in accordance with workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Assessment Requirements for UEECD0047 Supervise and coordinate energy sector work activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- accessing appropriate plant, materials and personnel
- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements, including using risk control measures
- dealing with conflicts in accordance with workplace procedures
- dealing with job variations in accordance with workplace procedures
- dealing with unplanned situations in accordance with established workplace procedures
- documenting supervision and coordination activities
- ensuring work completion documentation is accurate and forwarded to appropriate person/s
- obtaining and applying job specification and requirements
- obtaining the cooperation of others
- preparing to supervise and coordinate work activities
- providing guidance and instructions to relevant person/s
- supervising and coordinating work activities.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- analytical techniques in problem solving
- dispute resolution
- effective instruction methods
- methods for seeking the cooperation of others
- problem-solving techniques
- relevant job specifications and requirements
- relevant manufacturer specifications
- relevant plant, materials and skills
- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements

- relevant workplace documentation
- relevant workplace policies and procedures
- responsibilities of workplace supervisors.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to supervising and coordinating energy sector work activities
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0048 Undertake computations in an energy sector environment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to undertake computations in an energy sector environment.

It includes determining and applying computational mathematical methods to solve problems or to enhance given data in an energy sector environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Determine computation methods

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Computational activities are planned and prepared to ensure work health and safety (WHS)/occupational health and safety (OHS) workplace policies and procedures are followed with the work appropriately sequenced in accordance with job requirements

- 1.2 Data for computations is obtained and verified in accordance with workplace procedures to comply with job requirements
 - 1.3 Location in which activities are undertaken or data gathered is determined from job outcome requirements
 - 1.4 Applicable computation methods are determined and calculations applied relevant to data gathered and job outcome requirements
 - 1.5 Information technology needed to carry out the computations is obtained in accordance with workplace procedures
- 2 **Undertake computations**
 - 2.1 Computations are undertaken and appropriate calculations applied relevant to data gathered and in accordance with job outcome requirements
 - 2.2 Unplanned situations are responded to in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
 - 2.3 Ongoing checking and validating of the quality/accuracy of the calculation work results are undertaken in accordance with workplace procedures
- 3 **Complete computation activities**
 - 3.1 Computation results are verified and checked against estimates
 - 3.2 Documentation/reports/computations are completed to ensure all job requirements are met
 - 3.3 Work is completed and relevant person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package

Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE150A Undertake computations in an energy sector environment.

Assessment Requirements for UEECD0048 Undertake computations in an energy sector environment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying appropriate calculation methods relevant to data gathered and job outcome requirements
- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements
- dealing with unplanned events
- understanding transporting instructions
- checking transport details against job instruction
- obtaining relevant plant and equipment
- transporting plant and equipment in accordance with requirements
- notifying work completion
- undertaking computations in accordance with requirements.
-

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- energy sector applied mathematical concepts of engineering mathematics with calculus, including:
 - mathematical linear measurement in engineering situations encompassing:
 - precision and error in mathematical computations
 - displaying mathematical outcomes in the correct format using the appropriate significant figures and in scientific notation
 - perimeters of plane figures, polygons and the perimeter of shapes involving arcs
 - Pythagoras' theorem to engineering situations
 - mathematical spatial measurement in engineering situations encompassing:
 - areas of combined shapes
 - volume and surface areas of solids

- right triangle trigonometry in engineering problem solving encompassing:
 - problems using the six trigonometrical ratios
 - problems involving compass bearings and angles of elevation/depression
 - trigonometrical concepts in problems involving inclined planes, vectors and forces and electrical sinusoidal waveforms
- sine and cosine rules in practical applications encompassing:
 - sine rule to solve unknown dimensions/angles in triangles
 - cosine rule to solve unknown dimensions/angles in triangles
- mathematical concepts in basic surveying and computation of areas encompassing:
 - mathematical concepts for radial and triangulation surveys
 - Simpson's Rule in engineering applications
- basic algebra in engineering calculations encompassing:
 - basic operations involving substitutions, additions, removal of brackets, multiplication and divisions
 - solving linear equations
 - transportation in non-linear equations
- linear graphical techniques in engineering problem solving encompassing:
 - graphing linear functions
 - deriving equations from graphs and tables
 - solving simultaneous equations algebraically and graphically
 - the best line of fit graphically and determine equation
- mathematical computations involving polynomials encompassing:
 - adding, subtracting and multiplying polynomials
 - factorising trinomials
 - solving quadratic equation
- mathematical computations involving quadratic graphs encompassing:
 - graphs of quadratic functions
 - maxima and minima
 - graphical solutions of quadratic equations
 - properties of a parabola
 - applications of parabolas in engineering applications
- trigonometry and graphical techniques in engineering outcomes encompassing:
 - graphs of trigonometric functions e.g.: $V = V_m \sin \omega t$, $I = I_m \cos \omega t$
 - addition of equations such as: $v \sin A + u \sin B$ graphically
 - Simpson's Rule to determine the average and root mean square values of a sinusoidal waveform
- statistical data presentation encompassing:
 - appropriate presentation of frequency tables, histograms, polygons, stem and leaf plots
 - advantages of different visual presentations
- appropriate sampling techniques for gathering data encompassing:

- design of surveys and census
- sample data using correct technique
- use of the measures of central tendency encompassing:
 - estimation of percentiles and deciles from cumulative frequency polygons (ogives)
 - interpreting data from tables and graphs, including interpolation and extrapolation
 - analysing misleading graphs
- measures of dispersion in statistical presentations encompassing:
 - box-and-whisker graphs
 - measures of dispersion using variance and standard deviation
 - standardised scores, including Z-scores
- correlation and regression techniques encompassing:
 - interpreting scatter plots
 - correlation coefficients
 - calculate the regression equation and use for prediction purposes
- elementary probability theory encompassing:
 - probabilities in everyday situations
 - counting techniques: factorials; permutations and combinations
- Pascal's triangle and the normal curve encompassing:
 - Pascal's triangle
 - characteristics of the normal curve
 - standard deviation and applications to everyday occurrences
 - probabilities using the normal curve
- differential calculus encompassing:
 - basic concepts - definition of the derivative of a function as the slope of a tangent line (the gradient of a curve); limits; basic examples from 1st principles; notation and results of derivative of $k.f(ax + b)$ where $f(x)=x$ to the power of n , $\sin x$, $\cos x$, $\tan x$, e to the power of x , $\ln x$
 - rules - derivative of sum and difference; product rule; quotient rule; chain rule (function of a function), limited to two rules for any given function
 - the 2nd derivative
 - application - equations of tangents and normals; stationary points; turning points; and curve sketching; rates of change and rectilinear motion
 - verbally formulated problems involving related rates and maxima: minima
- integral calculus encompassing:
 - integration as the inverse operation to differentiation - results of the integral of $k.f(ax + b)$ where $f(x) = x$ to the power of n , $\sin x$, $\cos x$, $\sec^2 x$, e to the power of x
 - the method of substitution
 - the definite integral
 - applications - areas between curves; rectilinear motion, including displacement from acceleration and distance travelled; and voltage and current relationship in capacitors and inductors

- differential equations encompassing:
 - first order and separable linear equations
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices when undertaking computations in an energy sector environment
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0049 Use advanced computational processes to provide solutions to energy sector engineering problems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to use advanced computational processes to provide solutions to energy sector engineering problems.

It includes providing solutions to energy sector engineering problems, applying problem-solving techniques, using a range of advanced mathematical processes, providing solutions to problems and completing documentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0039 Provide solutions to basic engineering computational problems

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Provide solutions to engineering problems

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) processes and workplace procedures for a given work area are identified, obtained and applied

- 1.2 Scope of problems are obtained from documentation and/or work instruction to solve problems
 - 1.3 Problems are documented and/or provided in diagrammatic form and appropriate methods identified to resolve them
 - 1.4 Constants and variables to problems are obtained from measured values and/or problem documentation
 - 1.5 Alternative methods for resolving problems are reviewed and, as required, discussed with relevant person/s
 - 1.6 Problems are resolved using mathematical processes in accordance with workplace procedures
- 2 Complete work and documentation**
- 2.1 Justification for solutions used to solve engineering problems is documented in work records in accordance with workplace procedures and relevant industry standards
 - 2.2 Work completion is documented and relevant person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

- Engineering diagnosis development and work functions must include at least the following:
- working safety
 - applying problem-solving techniques
 - using a range of advanced mathematical processes
 - provision of electrical/electronic engineering problems solutions
 - solutions justification

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE127A Use advanced computational processes to provide solutions to energy sector engineering problems.

Assessment Requirements for UEECD0049 Use advanced computational processes to provide solutions to energy sector engineering problems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including
 - using risk control measures
- completing work and documenting problem-solving activities
- dealing with unplanned events in accordance with problem-solving techniques and workplace procedures
- documenting justification of solutions provided
- obtaining known constants and variables
- providing computational solutions to energy sector engineering problems
- solving problems using appropriate mathematical processes
- stating problems in written and diagrammatic form.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- problem-solving techniques
- relevant advanced engineering mathematics, including:
 - differential calculus
 - differential equations
 - integral calculus
 - linear algebra
 - number
 - sequences and series
 - statistics

- variables
- vectors
- relevant constants and variables
- relevant diagrammatic form
- relevant industry standards
- relevant manufacturer specifications
- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace instruction, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, facilities, tools, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to using advanced computational processes for energy sector engineering problems
- applicable documentation, including workplace procedures, equipment specifications, regulations, relevant industry standards, codes of practice and operation manuals.

UEECD0050 Use and maintain the integrity of a portable gas detection device

Modification History

Release 2. This minor update is the second release of this unit of competency in the UEE Electrotechnology Training Package.

Duplicate content in Knowledge Evidence removed and typographic errors fixed.

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to ensure a workplace, including hazardous areas, is safe from dangerous gases and/or vapours by using and maintaining a portable gas detection device.

Portable gas detection devices are used to detect combustible, flammable and toxic gases and/or vapours in a work area. Portable gas detectors transmit warnings via audible and visible signals, such as alarms and flashing lights, when dangerous levels of gas and/or vapours are detected.

Hazardous areas are defined as areas where fire or explosion may occur due to flammable gases, vapours, combustible dusts and/or ignitable fibres are present in the air, in quantities sufficient to produce explosive or ignitable mixtures.

Competency in this unit requires the ability to use measuring instruments such as portable gas detection devices, establish the safety of an area, monitor dangerous gases and/or vapours, follow workplace procedures in maintaining gas detection devices and completing all required documentation. Individuals will typically work, under supervision, as part of a hazardous area maintenance and repair team.

Site-specific work permits may be required to work in the hazardous environment. In addition, other permits may be required, such as confined space and to operate specific pieces of equipment such as elevated work platforms (EWPs) in various jurisdictions.

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to use portable gas detection device

2 Establish safety of area

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 WHS/OHS policies and procedures for work in hazardous areas are identified and applied
- 1.2 Safety processes, relevant permits and material safety data sheet (MSDS)/safety data sheet (SDS) and safe work method statements (SWMS) related to entering a hazardous area are obtained in accordance with workplace procedures and clearance to undertake work is obtained from supervisor
- 1.3 Emergency and evacuation plans are reviewed prior to entering hazardous area
- 1.4 Gas and/or vapour is identified in accordance with workplace procedures from plant and/or site records and in consultation with relevant person/s
- 1.5 Portable gas detection device is checked for calibration and response in accordance with manufacturer instructions and workplace procedures
- 1.6 Portable gas detection device is checked for damaged casing from use of incorrect batteries and/or chargers and use of incorrect spare parts and accessories which would nullify its Ex rating
- 2.1 WHS/OHS policies and procedures relating to gas/vapour detection are followed
- 2.2 Hazards are monitored and risk controls are implemented in accordance with workplace procedures

- 2.3 Personal protective equipment (PPE) is worn for work in potentially dangerous atmospheres and/or hazardous areas
 - 2.4 Portable gas detection device is used in accordance with manufacturer instructions and workplace procedures
 - 2.5 Environmental impacts of gas and/or vapour readings in hazardous areas are taken into consideration when using a portable gas detection device
 - 2.6 Gas detection readings are recorded in accordance with workplace procedures
 - 2.7 Safe to work is determined from gas detection reading and then clearance to start or resume work is issued in accordance with workplace procedures
- 3 Provide training in using portable gas detection devices**
- 3.1 Monitoring schedule for detecting dangerous gas and/or vapours in hazardous areas is implemented in accordance with workplace procedures
 - 3.2 Training is provided to relevant person/s in the use of portable gas detection devices, as required
 - 3.3 Documentation on training provided is maintained in accordance with workplace procedures
- 4 Maintain portable gas detection devices**
- 4.1 Portable gas detection devices are stored and maintained in accordance with workplace procedures and manufacturer recommendations
 - 4.2 Gas detection devices are checked and calibrated regularly in accordance with workplace procedures, hazardous area requirements and manufacturer instructions
 - 4.3 Calibration records of portable gas detection device are maintained in accordance with the workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Using and maintaining portable gas detecting devices must include:

- at least two of the following classified hazardous areas:
 - confined spaces
 - drains
 - pits
 - excavations

Unit Mapping Information

This unit replaces and is equivalent to UEENEEM076A Use and maintain the integrity of a portable gas detection device.

Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEECD0050 Use and maintain the integrity of a portable gas detection device

Modification History

Release 2. This minor update is the second release of this unit of competency in the UEE Electrotechnology Training Package.

Duplicate content in Knowledge Evidence removed and typographic errors fixed.

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying legislation, industry standards, codes of practice and regulations
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures and practices, including:
 - applying safe work practices
 - determining safety of area
 - identifying and monitoring hazards
 - implementing risk control measures
 - using material data safety sheets (MSDS)/safety data sheets (SDS) and safe work method statements (SWMS)
 - wearing personal protective equipment (PPE)
- following workplace procedures to maintain gas detection devices
- interpreting manufacturer specifications
- meeting workplace compliance requirements
- preparing to use portable gas detection devices
- using and maintaining the integrity of portable gas detection devices, including:
 - determining whether gas/vapour level in a work area is safe from explosive, toxic and oxygen deficiency
 - following work permits and clearance procedures
 - following workplace procedures to maintain integrity of gas detection devices
 - instructing others in use of a portable gas detection devices
 - monitoring hazards and following evacuation procedures
- using portable gas detection devices to monitor gases and/or vapours
- using site-specific documentation, including plans, records and schedules
- utilising relevant equipment and tools.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- actions or conditions that would void hazardous area/equipment protections
- characteristics and liabilities of equipment and tools
- principles of gas detection and the use and care of portable gas detection devices, including:
 - fundamental principles in the use of gas and vapour instruments
 - use of manufacturer instruction manuals (operating instructions, adjustment procedures, operational limitations and storage)
 - calibration and response checking
- detecting gases and vapours, including:
 - apparatus capability and users' knowledge of gases and vapours
 - common properties of gases and vapours, including density of gases, complication of evaporation, condensation and temperature effects of vapours and their mixtures; effect of temperature on density; lower explosive limit (LEL) and upper explosive limit (UEL) of combustibles and toxicity
 - detection and non-detection of gases
 - environmental effects and intended application
 - propagation of gases, including the release of gas and vapours, ventilation, density, temperature and location
 - safety when monitoring for flammable gases where personnel could be present
 - the differences between detecting gases and vapours, including added complication of evaporation, condensation and temperature effects of vapours and their effect on propagation, calibration and detection, including sampling
- oxygen deficiency and effects on safety, including:
 - chemical reaction of oxygen with solid and gaseous products
 - dilution of the air by displacement by some other gas or vapour
- measuring principles of catalytic sensors, electrochemical sensors, infrared sensors and semi-conductor sensors, including:
 - common applications, limitations and safety
 - interferences of other gases with the measurement
 - poisoning of the sensor
 - note: detailed information on gas detection is given in AS/NZS 60079.29.2 Explosive atmospheres Gas detectors - Performance requirements of detectors for flammable gases
- limits of gas detection of flammable (combustible) gas equipment, including:
 - limit to which flammable gas detection equipment will only detect gases and vapours that are present in the vicinity of the detector or in the line of sight of open path apparatus
 - limit to which flammable gas equipment will not detect combustible liquids and not detect

- combustible liquids as such, or combustible mists, dusts or fibres
- limits of vapour detection of flammable (combustible) gas equipment (flammable gas detection equipment will only detect those vapours that do not condense at the temperature of the detector or its sampling equipment)
- interpretation of gas detection instrument readings (behaviour), including:
 - upscale reading in the presence of a gas for which an instrument is not calibrated
 - causes of erratic indications
 - reading of low concentrations of gas of interest
 - off-scale readings
- toxicity level of flammable gases and vapours and their potential for occurring in a given situation
- issues with gas and vapour detection in hazardous areas which may include confined spaces
- manufacturer instruction manuals (operating instructions, adjustment procedures, operational limitations and storage)
- relevant hazardous area classification principles and techniques, including calibration and response checking
- relevant legislation, industry standards, codes of practice and regulations
- relevant manufacturer specifications
- relevant risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures for testing and inspection of electrical equipment in hazardous atmospheres
- environmental conditions that may impact explosion-protection techniques
- flammable material properties and ignition characteristics.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, industry standards, equipment

specifications, regulations, codes of practice and operation manuals.

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to use drawings, diagrams, cable schedules, industry standards, codes of practice and specifications as they apply to various electrotechnology work functions.

It includes interpreting schematic, wiring and mechanical diagrams, equipment and cable/connection schedules and manuals; and the use and format of compliance standards, codes and job specifications used in the electrotechnology industry. It also includes the use of site and architectural drawings/plans to show the location of services, apparatus, plant and machinery.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to use drawings, diagrams, schedules and manuals

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Hazards are identified, risks are assessed and control measures are implemented

- 1.2 Need for drawings, diagrams, schedules or manuals is determined from the nature of work to be undertaken
 - 1.3 Relevant drawings, diagrams, site plans and cable/connection schedules or manuals required for the work to be undertaken are determined and obtained in accordance with workplace procedures
- 2 Use drawings, diagrams, schedules and manuals to obtain job information**
 - 2.1 Drawings, diagrams and cable/connection schedules are interpreted using drawing layouts, conventions and symbols
 - 2.2 Dimensions are extracted from drawings and diagrams in accordance with workplace procedures for application to the work to be undertaken
 - 2.3 Location of equipment is determined from equipment cable/connection schedules and location diagrams
 - 2.4 Information relating to work to be undertaken is located and interpreted from relevant cable/connection manuals in accordance with workplace procedures
- 3 Use drawings, diagrams, schedules and manuals to convey information and ideas**
 - 3.1 Drawing conventions are applied in neat and legible freehand drawings to convey information and ideas to person/s involved in the work to be undertaken
 - 3.2 Drawing conventions are used to neatly correct freehand original job drawing to show final 'as-installed' arrangement in accordance with workplace procedures
 - 3.3 Corrected drawings are forwarded to appropriate person/s in accordance with workplace procedures
- 4 Comply with industry standards, codes of practice and specifications**
 - 4.1 Industry standards and codes of practice that specifically apply to relevant disciplines are obtained in accordance with workplace procedures
 - 4.2 Format of industry standards and codes of practice that apply to relevant disciplines are reviewed and applied in accordance with workplace procedures
 - 4.3 Purpose, format and content of job specifications are reviewed and applied

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Using drawings, diagrams, schedules, standards, codes and specifications must include:

- assembly, installation, fault finding, maintenance or development work functions in the electrotechnology industry

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - identifying hazards
 - implementing and monitoring control measures
- dealing with unplanned events in accordance with workplace procedures
- extracting dimensions from drawings and diagrams
- reading and interpreting drawings, diagrams and plans to determine the location of electrical/communication/audio accessories and appliances
- using drawings, diagrams, cable/connection schedules, industry standards, codes of practice and specifications used in electrotechnology work, including:
 - giving correct information in freehand drawings
 - identifying and selecting drawings, diagrams, site plans, cable/connection schedules and manuals relevant to the work to be undertaken
 - interpreting drawings, diagrams, cable/connection schedules and manuals correctly
 - obtaining compliance standards and codes applicable to particular disciplines
 - reviewing and understanding the format of compliance standards and codes that apply to particular disciplines
 - reviewing the format and content of typical job specifications
 - using correct conventions in freehand drawings
- sketching and marking up basic circuit diagrams
- developing switching charts to identify the terminals of various types of switches
- using drawings, diagrams, schedules and manuals to:
 - connect equipment
 - convey information and ideas
 - obtain job information.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- architectural drawings, including:
 - site plans, floor plans detailed drawings and standard drawings
 - architectural floor plans to determine the power and lighting or communications/audio/video layouts required in a domestic installation
 - site plans to locate the service point, consumer mains, communication services, main switchboard, distribution boards and/or builders supplies
 - standard drawing scales to determine the actual lengths represented by dimensions on an architectural drawing
 - Australian standard symbols used on floor plans to show the location of the accessories and appliances as detailed in an electrical schedule
- building construction drawings and diagrams, including:
 - building types: timber frame, brick veneer, double brick and metal frame
 - identification of different types of footings, floors, external walls, roofs and interior walls
 - typical cable routes through buildings, structures and premises
 - sequence of each constructional stage for brick, brick veneer and timber cottages
 - identification of the stages at which the electrical/communications - first and second fixing occurs in the constructional sequence
 - areas of cooperation between electrical/communications and other building trades
- circuit diagrams, including:
 - purpose of circuit diagrams in the electrotechnology industry
 - conventions used in and the features of circuit diagrams
 - common symbols used in circuit diagram
- electrical drawings, including:
 - types of electrical drawings: block, circuit, wiring and ladder diagrams
 - purpose and application of block, circuit, wiring diagrams and ladder diagrams
 - Australian standard symbols used to represent components on electrical diagrams
 - converting a circuit diagram to a wiring diagram
 - identification of cable type, origin and route from a cable schedule
 - developing a cable schedule for a given installation
- purpose, format and content of typical job specifications, including common templates on which job specifications are written
- regulations for undertaking electrical work, including legislative requirements for ensuring electrical or electronic equipment is safe i.e. compliance requirements of electrical installations
- scope of work covered by licensing in the electrotechnology industry (electrical licensing)
 - legislative requirements for ensuring electrical or electronic equipment is safe, including compliance requirements of electrical installations

- relevant WHS/OHS legislated requirements
- relevant workplace policies and procedures include risk mitigation process
- standards philosophy and format, including:
 - performance verses prescriptive requirements
 - purpose of technical standards and their development
 - role of Standards Australia/New Zealand, International Organisation for Standardisation (ISO) and the International Electrotechnical Commission (IEC)
 - how standards are used in compulsory and accreditation compliance schemes
 - arrangement and use of technical standards in relation to electrical and electronic work
 - how to read and apply a standard
 - standards and codes that apply to all types of electrical installations
 - standards mandated under regulation (e.g. Wiring Rules) or by an authority, deemed-to-comply standard and local service requirements (e.g. service rules)
 - codes applicable to electrical safe working practices and some aspects of the Building Code of Australia (BCA)
- wiring diagrams, including:
 - purpose of wiring diagrams in the electrotechnology industry
 - conventions used in and the features of wiring diagrams
 - common symbols used in wiring diagrams.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0052 Use routine equipment/plant/technologies in an energy sector environment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to use routine equipment, plant, technologies and personnel protective equipment (PPE) in an energy sector environment.

It includes preparing and using equipment, plant, technologies and PPE, and completing workplace requirements in an energy sector work environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to use equipment, plant and technologies

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work instructions in the use of equipment, plant or technologies are obtained, interpreted and followed

1.2 Work health and safety (WHS)/occupational health and safety (OHS) policies and workplace procedures are identified, communicated and confirmed to ensure they

are applied in the carrying out of work activities in an energy sector environment

- 1.3** Tools, equipment and PPE necessary for work are identified, scheduled and checked to ensure they work correctly and are safe to use in accordance with workplace procedures
 - 1.4** Relevant person/s is consulted to ensure the work is coordinated effectively with others
 - 1.5** Resources and materials needed for work are confirmed, scheduled and obtained in accordance with workplace procedures
 - 1.6** Schedule of work, including practices for working safely, are confirmed in accordance with workplace instructions and requirements
- 2 Use equipment, plant and technologies**
- 2.1** WHS/OHS policies and workplace procedures for safe work practices are followed to eliminate or minimise incidents
 - 2.2** Equipment, plant or technologies are used in accordance with schedule of work to ensure work is completed in agreed timelines, to required quality standard and with a minimum of waste
 - 2.3** Unplanned situations are responded to in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
 - 2.4** Regular checks of work quality are undertaken in accordance with work instructions and job requirements
- 3 Complete use of equipment, plant and technologies**
- 3.1** Regular checks are made to ensure the safe use of equipment, plant or technologies in accordance with job instructions and requirements
 - 3.2** Relevant person/s is notified of work completion using equipment, plant or technologies
 - 3.3** Tools, equipment and surplus resources and materials are appropriately cleaned, checked and returned to storage in accordance with workplace procedures
 - 3.4** Work area is cleaned, made safe and sustainable energy practices are followed

- 3.5 Workplace record/s are updated in accordance with work instructions and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE141A Use of routine equipment/plant/technologies in an energy sector environment.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECD0052 Use routine equipment/plant/technologies in an energy sector environment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - applying risk control measures
 - following workplace procedures and instruction
 - applying sustainable energy principles and practices
 - completing workplace documentation
 - dealing with unplanned events/situations in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
 - maintaining a clean worksite and equipment
- preparing and using equipment, plant and technologies, including:
 - completing schedule of work
 - using and returning tools, equipment, personnel protective equipment, surplus resources and materials
 - updating work records.
-

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- electrical concepts, including:
 - electrical supply and distribution within a building or premises
 - arrangement of circuits
 - protection for safety requirements and their practice
 - difference between alternating current (a.c.) and direct current (d.c.)
 - measurement and calculation of voltage, current, resistance and power in practical circuits
 - concepts and applications of magnetism and electromagnetic induction

- transformer operating principles and their application
- hazards associated with electrical systems and apparatus
- energy sector tools, equipment and technology
- relevant energy sector industry standards
- relevant manufacturer specifications
- operating instruction for tools, equipment and technologies
- relevant job safety assessments or risk mitigation processes
- relevant sustainable energy practices
- relevant WHS/ OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies, procedures and instructions.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, relevant industry standards, codes of practice and operation manuals.

UEECD0053 Write specifications for computer systems engineering projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to write specifications for computer systems engineering projects.

It includes preparing specifications to meet client expectations, consulting with relevant person/s and/or information sources, and documenting design with approval of relevant person/s.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

PERFORMANCE CRITERIA	
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare specification requirements	<p>1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied</p> <p>1.2 Techniques for specification writing are reviewed and</p>

environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Developing specifications for medium-sized computer systems engineering project must include all the following attributes:

- safety requirements met
- client expectations established
- cost-effective solutions pursued and assured
- design and technical requirements documented

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE070B Write specifications for computer systems engineering projects.

Assessment Requirements for UEECD0053 Write specifications for computer systems engineering projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
- determining scope and parameters of the specification
- determining the impact of related works
- developing specification in accordance with workplace procedures
- developing specification with scenarios and requirements
- identifying competencies required for the specification
- negotiating alterations to the proposed specification successfully
- obtaining approval of the final specification
- preparing specification requirements
- reviewing specifications in accordance with specification scope inputs and adjusted to rectify anomalies
- writing specifications.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- computer systems engineering specifications
- computers functions
- relevant industry documentation
- relevant manufacturer specifications
- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- specification writing techniques.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment and currently used in industry
- resources that reflect current industry practices in relation to writing specifications for computer systems engineering projects
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0054 Write specifications for electronics and communications engineering projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to write specifications for electronics and communications engineering projects.

It includes preparing specification to meet client expectations, consulting with relevant person/s and/or information sources and documenting design with approval of relevant person/s.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare specification requirements

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied

1.2 Techniques for specification writing are reviewed and

- applied in accordance with workplace procedures
- 1.3** Scope of the specification is determined using formal evaluation/survey processes
 - 1.4** Criteria from related works impacting specification are determined from relevant documentation, site visits and/or discussions with relevant person/s
- 2 Write specification**
- 2.1** Specification is developed with scenarios/requirements in consultation with relevant person/s in accordance with relevant industry standards
 - 2.2** Specification is developed in collaboration with relevant design professionals and contractors involved in the project
 - 2.3** Relevant person/s required for the project is identified and roles specified in accordance with specification scope
 - 2.4** Specification is reviewed in accordance with specification scope inputs and adjusted to rectify anomalies
 - 2.5** Specification is developed in accordance with workplace procedures
- 3 Obtain approval of specification**
- 3.1** Specification is presented and discussed with relevant person/s
 - 3.2** Alterations to the specification resulting from discussions are negotiated with relevant person/s in accordance with workplace procedures
 - 3.3** Specification is finalised and approval obtained from relevant person/s

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Developing a specification for medium-sized electronics and communications engineering project must include at least one of the following attributes:

- safety requirements met
- client expectations established
- cost-effective solutions pursued and assured
- design and technical requirements documented

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE072B Write specifications for electronics and communications engineering projects.

Assessment Requirements for UEECD0054 Write specifications for electronics and communications engineering projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- establishing the scope and parameters of the specification
- determining the impact of other related works
- developing the specification incorporating scenarios and all requirements
- identifying competencies required for the specification
- writing specifications
- negotiating alterations to the proposed specification successfully
- obtaining approval of the final specification
- dealing with unplanned events
- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements, including using risk control measures
- developing specification in accordance with workplace procedures
- preparing specification requirements
- reviewing specifications in accordance with specification scope inputs and adjusting to rectify anomalies.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- electronics and communications engineering specification development and writing, including:
 - electronics and communications engineering specifications encompassing:
 - purpose and nature of specification
 - performance-based specifications
 - prescriptive specifications
 - acceptable evidence of compliance
 - additional service required with the supply of equipment

- suppliers and manufacturers encompassing:
 - documenting specification
 - customer/client relations encompassing:
 - importance of customer/client relations
 - interpersonal skills that enhance customer/client relationships
 - dispute resolution
 - customer/client relations strategies
- basic computer functions encompassing:
 - starting up
 - selecting application
 - entering information
 - saving
 - printing
- research skills encompassing:
 - terminology - terminology used in a research workplace and terminology used in research-specific literature
 - theory – why conduct research - the history of research, past research successes, past research failures, research protocols and research practices
 - the research environment - standard research practices; industrial, legal, ethical, political and market environment considerations; legislation and regulation; and contractual obligations of all parties
 - planning to conduct research - concept development and/or research brief analysis; research objectives; research deliverables; research project plan; literature reviews; methodology development, including experimental design, technology selection and information management system selection
 - clients - identifying client viewpoints and stake in project; identifying client requirements and parameters; determining research budgets, timelines, milestones and quality attributes with clients
 - research, development and commercialisation - research and development goals versus commercialisation goals and realities, and research and development to inspire a commercialisation process
- relevant industry and workplace documentation
- relevant manufacturer specifications
- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory

requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to writing specifications for electronics and communications engineering projects
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0055 Write specifications for industrial electronics and control projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to write specifications for industrial electronics and control projects.

It includes determining client expectations, ensuring cost-effective solutions are pursued, and documenting design and technical requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare specification requirements

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) processes and workplace procedures for a given work area are identified, obtained and applied
- 1.2 Techniques for specification writing are reviewed and adopted in accordance with workplace procedures

- 1.3 Scope of industrial electronics and control projects specification is determined using formal evaluation/survey processes
 - 1.4 Criteria from related works impacting on specification are determined from relevant documentation, site visits and/or in consultation with relevant person/s
- 2 Write specification**
 - 2.1 Specification is developed to include scenarios and requirements in consultation with relevant person/s and relevant industry standards
 - 2.2 Specification is developed in collaboration with relevant design professionals and contractors involved in the project
 - 2.3 Relevant person/s required for project are identified and roles specified in the specification
 - 2.4 Specification is reviewed against inputs and adjusted to rectify any anomalies
 - 2.5 Specification is developed and documented in accordance with workplace procedures
- 3 Obtain approval of specification**
 - 3.1 Specification is presented and discussed with relevant person/s
 - 3.2 Alterations to specification resulting from discussions are negotiated with relevant person/s in accordance with workplace procedures
 - 3.3 Specification is finalised and approval obtained from relevant person/s

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Developing specification must include at least one medium-sized industrial electronics and control project and include at least the following:

- safety requirements met
- client expectations established
- cost-effective solutions pursued and assured
- design and technical requirements documented

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE075B Write specifications for industrial electronics and control projects.

UEECD0056 Apply methods to maintain currency of industry developments

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to apply methods to maintain currency of industry developments.

It includes identifying and maintaining currency of methods and practices of industry developments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Identify currency of industry developments

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work activities are identified and reviewed for currency of methods in accordance with relevant industry standards
- 1.2 Information and advice are sought for relevant legislated requirements on work outcomes

- 2 Maintain currency of methods and practices**
- 1.3** Technical information is reviewed in accordance with relevant industry standards
 - 2.1** Methods are maintained in accordance with work health and safety (WHS)/occupational health and safety (OHS) requirements
 - 2.2** Methods are maintained in accordance with relevant industry standards
 - 2.3** Methods are maintained in accordance with relevant legislation and workplace procedures
 - 2.4** Methods for maintaining currency of relevant industry developments are identified and applied in accordance with workplace procedures
 - 2.5** Maintenance of current methods and practices for work is documented in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE006B Apply methods to maintain currency of industry developments.

Assessment Requirements for UEECD0056 Apply methods to maintain currency of industry developments

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying methods to maintain currency in accordance with relevant industry standards
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including
 - using risk control measures
- dealing with unplanned events in accordance with problem-solving techniques and workplace procedures
- documenting maintenance of current knowledge and practices in accordance with relevant industry standards
- identifying and reviewing areas of work activities for currency
- preparing to apply methods to maintain currency of industry developments
- using methods to ensure managerial aspects of work in accordance with relevant industry standards
- using methods to ensure technical aspects of work are current in accordance with relevant industry standards.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- currency of technology, machinery, equipment and tools, applications and uses
- relevant codes of practice and industry standards
- relevant manufacturer specifications and instruction manuals
- relevant methods of formally maintaining currency
- relevant regulatory and industry standards
- relevant requirements to maintain currency in industry practices and products
- relevant job safety assessments or risk mitigation processes
- relevant sources of information in industry changes and new developments
- relevant technical information

- relevant WHS/OHS legislated requirements
- relevant workplace documentation, including:
 - industry journals
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, facilities, tools and equipment currently used in industry
- resources that reflect current industry practices in relation to applying methods to maintain currency of industry developments
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0057 Manage electrotechnology projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to manage an electrotechnology project.

It includes determining scope, managing an electrotechnology project and completing reporting/documentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Determine scope of the electrotechnology project

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) procedures for relevant work area are identified and applied
- 1.2 Project deliverables and budget are determined from relevant documentation and discussions with appropriate person/s

- 1.3 Measurable outcomes to evaluate the electrotechnology project are identified from relevant documentation
 - 1.4 Resources needed to meet project outcomes are identified from relevant documentation
 - 1.5 Processes and procedures are developed for managing contract variations from discussions with relevant person/s and in accordance with contract
 - 2 **Manage the implementation of an electrotechnology project**
 - 2.1 WHS/OHS policies and procedures are implemented and monitored
 - 2.2 Project tasks are delegated to competent project person/s
 - 2.3 Project risks are identified, assessed and strategies implemented to ensure outcomes are achieved to relevant industry standards specified in the contract and in accordance with workplace procedures
 - 2.4 Procurement is monitored to ensure on-time supply of plant and materials in accordance with project plan and workplace procedures
 - 2.5 Verification of project technical design, modification, installation and/or maintenance of system and equipment parameters is completed against specifications and workplace procedures
 - 2.6 Project progress is monitored against schedule, quality requirements and budget
 - 2.7 Project/worksite conflicts are identified and managed in accordance with workplace procedures
 - 2.8 Variations in project are managed in accordance with agreed processes and the contract
 - 2.9 Project records are maintained and progress reports completed and provided to appropriate person/s
 - 3 **Complete electrotechnology project**
 - 3.1 Project outcomes are reviewed against project plan, risk strategies, contract variations, safety performance and budget
 - 3.2 Acceptance of project completion is sought from appropriate person/s and handover conducted in accordance with workplace policies and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Managing electrotechnology projects must include the following:

- design
- modifications
- installation
- maintenance of systems and equipment
- management of:
 - WHS/OHS
 - budget
 - variations
 - personnel
 - resources and critical path timelines
 - progress monitoring
 - completion documentation

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE012B Manage electrotechnology projects.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECD0057 Manage electrotechnology projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- establishing the scope of the project accurately
- ascertaining the input of a project
- developing effective management processes
- managing resources and variations effectively
- resolving conflicts
- adopting risk management strategies
- maintaining records and submitting progress reports
- meeting project outcomes
- dealing with unplanned events
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures and practices
- completing and acquitting the project
- identifying electrotechnology project risks and implementing control measures
- implementing workplace policies and procedures, including:
 - project scope and quality
 - project budget/finances
 - equipment and resources
 - human resources
 - communication with personnel, contractors, stakeholders and clients.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- electrotechnology project management concepts and customer/client relations, including:
 - defining project parameters:

- project scope
- project stakeholders and clients
- project phases and the relationship between phases
- time requirements and limitations
- resource requirements and limitations
- quality requirements and limitations
- time management:
 - time management concepts
 - standard practices for ensuring a project runs to time
- financial management:
 - financial management concepts
 - standard practices for managing project finances
 - project budgets
 - costs, variations and estimations
 - invoicing against project phases/deliverables
 - acquittals
- quality management:
 - quality management concepts
 - standard practices for managing quality within a project
- human resource management:
 - human resource management concepts
 - standard practices for managing personnel within a project
- communication management:
 - communication management concepts
 - standard practices for managing communication within a project
- risk management and contingencies:
 - risk management concepts
 - standard practices for managing risk within a project
 - internal risks, external risks, risk minimisation, risk removal and contingencies
- procurement management:
 - procurement management concepts
 - standard practices for managing procurement
- physical resource management:
 - types of physical resources, including equipment, technology, information and facilities
 - physical resource management concepts
 - standard practices for managing physical resources
- contracts:
 - understanding project contracts
 - standard practices for working to contract specifications

- contract format
- contract content
- legal obligations of contract parties
- accompanying documentation, including contract schedules
- performance assessment and continuous improvement:
 - standard performance assessment practices
 - standard continuous improvement practices
- engineering ethics principles
- importance of customer/client relations encompassing:
 - interpersonal skills that enhance customer/client
 - dispute resolution
 - customer/client relations strategies
- project management principles
- relevant legislation/regulation, including relevant WHS/OHS legislated requirements
- relevant job safety assessments or risk mitigation processes
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to managing electrotechnology projects
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0059 Write specifications for electrical engineering projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to write specifications for electrical engineering projects.

It includes preparing, writing specifications and obtaining approval for electrical engineering projects.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare specification requirements

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) processes and workplace procedures for a given work area are identified, obtained and applied
- 1.2 Techniques for specification writing are reviewed and applied in accordance with workplace procedures

- 1.3** Relevant person/s is consulted and/or site visits conducted to identify other works impacting on specification
- 2 Write specification**
 - 2.1** Specification is developed to include scenarios/requirements in consultation with relevant person/s and in accordance with relevant industry standards
 - 2.2** Specification is developed in collaboration with relevant design professional/s and/or contractor/s involved in the project
 - 2.3** Relevant person/s required for the project is identified and their role/s specified in the specification
 - 2.4** Specification is reviewed against all inputs and adjusted to rectify any anomalies
 - 2.5** Specification is developed in accordance with workplace procedures
- 3 Obtain approval of specification**
 - 3.1** Specification is presented and discussed with relevant person/s
 - 3.2** Alterations to the specification resulting from the discussion are negotiated with relevant person/s in accordance with workplace procedures
 - 3.3** Specification is finalised and approval obtained from relevant person/s

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Developing specifications must include at least one medium-sized electrical engineering

- safety requirements met
- client expectations established
- cost-effective solutions pursued and assured

project with the following attributes:

- design and technical requirements documented

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE071B Write specifications for electrical engineering projects.

Assessment Requirements for UEECD0059 Write specifications for electrical engineering projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- establishing the scope and parameters of the specification
- determining the impact of other related works
- developing the specification incorporating scenarios and all requirements
- identifying competencies required for the specification
- writing specifications
- negotiating alterations to the proposed specification successfully
- obtaining approval of the final specification
- dealing with unplanned events
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
- establishing the specification using formal evaluations/surveys
- preparing specification requirements.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- electrical engineering specification development and writing, including:
 - electrical engineering specifications encompassing:
 - purpose and nature of specification
 - performance-based specifications
 - prescriptive specifications
 - acceptable evidence of compliance
 - additional service required with the supply of equipment
 - dealing with suppliers and manufacturers encompassing:
 - documenting specification

- customer/client relations encompassing:
 - importance of customer/client relations
 - interpersonal skills that enhance customer/client relationships
 - dispute resolution
 - customer/client relations strategies
- basic computer functions encompassing:
 - starting up
 - selecting application
 - entering information
 - saving
 - printing
- research skills encompassing:
 - terminology - terminology used in a research workplace and terminology used in research-specific literature
 - theory – why conduct research - the history of research, past research successes, past research failures, research protocols and research practices
 - the research environment - the research work environment; standard research practices; industrial, legal, ethical, political and market environment considerations; legislation and regulation; and contractual obligations of all parties
 - planning to conduct research - concept development and/or research brief analysis; research objectives; research deliverables; research project plan; literature reviews; methodology development, including experimental design, technology selection and information management system selection
 - clients - identifying client viewpoints and stake in project; identifying client requirements and parameters; determining research budgets, timelines, milestones and quality attributes with clients
 - research, development and commercialisation - research and development goals versus commercialisation goals and realities; research and development to inspire a commercialisation process
- relevant manufacturer specifications
- relevant safe work method statements (SWMS)/job safety assessments or risk mitigation processes
- relevant scenarios/requirements
- relevant techniques for specification writing
- relevant WHS/OHS legislated requirements
- relevant workplace instructions, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory

requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, facilities, tools and equipment currently used in industry
- resources that reflect current industry practices in relation to writing specifications for electrical engineering projects
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0060 Write specifications for electrotechnology engineering projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to write specifications for electrotechnology engineering projects.

It includes preparing and writing specifications for electrotechnology engineering projects. It also includes obtaining approval of final specification.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare engineering specification requirements

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) processes and workplace procedures for a given work area are identified, obtained and applied
- 1.2 Engineering techniques for specification writing are reviewed and implemented in accordance with

- workplace procedures
- 1.3** Scope of the engineering specification is identified using a formal evaluation/survey process
 - 1.4** Related works impacting on the specification are determined from relevant documentation, site visits and/or discussion with relevant person/s
- 2 Write engineering specification**
- 2.1** Engineering specification scenarios/requirements are developed in consultation with relevant person/s in accordance with relevant industry standards
 - 2.2** Engineering specification is developed in collaboration with relevant design professionals and contractors involved in the project
 - 2.3** Relevant person/s required for the project is identified and roles specified in the specification
 - 2.4** Engineering specification is reviewed with inputs and adjusted to rectify any anomalies
 - 2.5** Engineering specification is developed in accordance with workplace procedures
- 3 Obtain approval of specification**
- 3.1** Engineering specification is presented and discussed with relevant person/s
 - 3.2** Alterations to the engineering specification are negotiated with relevant person/s in accordance with workplace procedures
 - 3.3** Specification is finalised and approval obtained from relevant person/s

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Developing specifications must include at least one medium-sized electrotechnology engineering project with the following attributes:

- safety requirements met
- client expectations established
- cost-effective solutions pursued and assured
- design and technical requirements documentation

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE084A Write specifications for electrotechnology engineering projects.

Assessment Requirements for UEECD0060 Write specifications for electrotechnology engineering projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- establishing the scope and parameters of the specification
- determining the impact of other related works
- developing the specification incorporating scenarios and all requirements
- identifying competencies required for the specification
- writing specifications
- negotiating alterations to the proposed specification successfully
- obtaining approval of the final specification
- dealing with unplanned events
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
- identifying roles in specification
- preparing specification requirements
- using a formal evaluation/survey process.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- electrotechnology engineering specification development and writing, including:
 - engineering specifications encompassing:
 - purpose and nature of specification
 - performance-based specifications
 - prescriptive specifications
 - acceptable evidence of compliance
 - additional service required with the supply of equipment
 - dealing with suppliers and manufacturers encompassing:

- documenting specification
- customer/client relations encompassing:
 - importance of customer/client relations
 - interpersonal skills that enhance customer/client relationships
 - dispute resolution
 - customer/client relations strategies
- basic computer functions encompassing:
 - starting up
 - selecting application
 - entering information
 - saving
 - printing
- research skills encompassing:
 - terminology - terminology used in a research workplace and terminology used in research-specific literature
 - theory – why conduct research - the history of research, past research successes, past research failures, research protocols and research practices
 - the research environment - the research work environment; standard research practices; industrial, legal, ethical, political and market environment considerations; legislation and regulation; and contractual obligations of all parties
 - planning to conduct research - concept development and/or research brief analysis; research objectives; research deliverables; research project plan; literature reviews; methodology development, including experimental design, technology selection and information management system selection
 - clients - identifying client viewpoints and stake in project; identifying client requirements and parameters; determining research budgets, timelines, milestones and quality attributes with clients
 - research, development and commercialisation - research and development goals versus commercialisation goals and realities; research and development to inspire a commercialisation process
- relevant design professional/s and contractor/s
- relevant engineering techniques
- relevant evaluation/survey processes
- relevant industry standards
- relevant manufacturer specifications
- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to writing specifications for electrotechnology engineering projects
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0061 Write specifications for refrigeration and air conditioning engineering projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to write specifications for a refrigeration and air conditioning engineering project.

It includes determining refrigeration and air conditioning engineering project specifications, documenting design and technical requirements, and obtaining approval for the project specification.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

- 1 Prepare refrigeration and air conditioning engineering project specification requirements**

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) procedures for relevant work area are identified and applied

- 1.2 Techniques for specification writing are reviewed and adopted in accordance with workplace procedures
 - 1.3 Scope of the specification is determined using formal evaluation/survey processes
 - 1.4 Criteria from other related works impacting on the specification are determined from relevant documentation, site visits and/or discussions with relevant person/s
- 2 **Write refrigeration and air conditioning engineering project specification**
 - 2.1 Specification is developed to include scenarios/requirements determined in consultation with relevant person/s and regulatory requirements
 - 2.2 Specification is developed in collaboration with relevant design professionals and contractors involved in the project
 - 2.3 Competent person/s required for the project is identified and their roles specified in the specification
 - 2.4 Project specification is reviewed and adjusted to rectify any anomalies
 - 2.5 Project specification is developed in accordance with workplace procedures
- 3 **Obtain approval for refrigeration and air conditioning engineering project specification**
 - 3.1 Project specification is presented and discussed with relevant person/s
 - 3.2 Alteration/s to project specification resulting from discussions is negotiated with relevant person/s in accordance with workplace procedures
 - 3.3 Project specification is finalised and approval obtained from relevant person/s

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Writing specifications for refrigeration and air conditioning engineering project must include at least the following:

- one medium-sized refrigeration/air conditioning engineering project with the following attributes:
 - meeting safety requirements
 - determining client expectations
 - applying cost-effective solutions
 - designing and technical documentation requirements

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE073B Write specifications for refrigeration and air conditioning engineering projects.

Assessment Requirements for UEECD0061 Write specifications for refrigeration and air conditioning engineering projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- establishing the scope and parameters of the specification
- determining the impact of other related works
- developing the specification incorporating scenarios and all requirements
- identifying competencies required for the specification
- writing specifications
- negotiating alterations to the proposed specification successfully
- obtaining approval of the final specification
- dealing with unplanned events
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures and practices, including the use of risk control measures
- identifying and applying project risk management strategies.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- refrigeration and air conditioning engineering specification development, including:
 - refrigeration and air conditioning engineering specifications encompassing:
 - purpose and nature of specification
 - performance-based specifications
 - prescriptive specifications
 - acceptable evidence of compliance
 - additional service required with the supply of equipment
 - dealing with suppliers and manufacturers encompassing:
 - documenting specification

- customer/client relations:
 - importance of customer/client relations
 - interpersonal skills that enhance customer/client
 - dispute resolution
 - customer/client relations strategies
- using basic computers functions encompassing:
 - starting up
 - selecting application
 - entering information
 - saving
 - printing
- research skills encompassing:
 - terminology - terminology used in a research workplace and terminology used in research-specific literature
 - theory – reasons for conducting research, the history of research, past research successes, past research failures, research protocols and research practices
 - the research environment - the research work environment; standard research practices; industrial, legal, ethical, political and market environment considerations; legislation and regulation; and contractual obligations of all parties
 - planning to conduct research - concept development and/or research brief analysis; research objectives; research deliverables; research project plan; literature reviews; methodology development, including experimental design, technology selection and information management system selection
 - clients - identifying client viewpoints and stake in project; identifying client requirements and parameters; determining research budgets, timelines, milestones and quality attributes with clients
 - research, development and commercialisation - research and development goals versus commercialisation goals and realities, and research and development to inspire a commercialisation process
- project management principles, including:
 - process for amending specifications
 - relevant manufacturer specifications
 - relevant WHS/OHS legislated requirements
 - relevant workplace policies and procedures
 - research methodologies.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and facilities currently used in industry
- resources that reflect current industry practices in relation to writing specifications for refrigeration and air conditioning engineering projects
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0062 Write specifications for renewable energy engineering projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to write specifications for a renewable energy (RE) engineering project.

It includes determining RE engineering project specification requirements, documenting design and technical requirements, and obtaining approval for the project specification.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Determine RE engineering project specification requirements

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) procedures for relevant work area are identified and applied

1.2 Techniques for specification writing are reviewed and

- adopted in accordance with workplace procedures
- 1.3 Scope of the specification is determined using formal evaluation/survey processes
 - 1.4 Criteria from other related works impacting on the specification are determined from other relevant documentation, site visits and/or discussions with relevant person/s
- 2 Write RE engineering project specification**
- 2.1 Specification is developed to include scenarios/requirements determined in consultation with relevant person/s and regulatory requirements
 - 2.2 Specification is developed in collaboration with relevant design professionals and contractors involved in the project
 - 2.3 Competent person/s required for the project is identified and their role specified in the specification
 - 2.4 Project specification is reviewed and adjusted to rectify any anomalies
 - 2.5 Project specification is developed in accordance with workplace procedures
- 3 Obtain approval for RE engineering project specification**
- 3.1 Project specification is presented and discussed with relevant person/s
 - 3.2 Alterations to project specification resulting from discussions are negotiated with relevant person/s in accordance with workplace procedures
 - 3.3 Project specification is finalised and approval obtained from relevant person/s

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Writing specifications for RE engineering projects must include at least the following:

- one medium-sized RE engineering project with the following attributes:
 - meeting safety requirements
 - determining client expectations
 - applying cost-effective solutions
 - designing and technical documentation requirements

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE074B Write specifications for renewable energy engineering projects.

Assessment Requirements for UEECD0062 Write specifications for renewable energy engineering projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- establishing the scope and parameters of the specification
- determining the impact of other related works
- developing the specification incorporating scenarios and all requirements
- identifying competencies required for the specification
- writing specifications
- negotiating alterations to the proposed specification successfully
- obtaining approval of the final specification
- dealing with unplanned events
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures and practices, including the use of risk control measures
- identifying and applying project risk management strategies.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- renewable energy (RE) engineering specification development and writing, including:
 - RE engineering specifications encompassing:
 - purpose and nature of specification
 - performance-based specifications
 - prescriptive specifications
 - acceptable evidence of compliance
 - additional service required with the supply of equipment
 - dealing with suppliers and manufacturers encompassing:
 - documenting specification

- customer/client relations encompassing:
 - importance of customer/client relations
 - interpersonal skills that enhance customer/client
 - dispute resolution
 - customer/client relations strategies
- basic computer functions encompassing:
 - starting up
 - selecting application
 - entering information
 - saving
 - printing
- research skills encompassing:
 - terminology - terminology used in a research workplace and terminology used in research-specific literature
 - theory – reasons for research - the history of research, past research successes, past research failures, research protocols and research practices
 - the research environment - the research work environment; standard research practices; industrial, legal, ethical, political and market environment considerations; legislation and regulation; and contractual obligations of all parties
 - planning to conduct research - concept development and/or research brief analysis; research objectives; research deliverables; research project plan; literature reviews; methodology development, including experimental design, technology selection and information management system selection
 - clients - identifying client viewpoints and stake in project; identifying client requirements and parameters; determining research budgets, timelines, milestones and quality attributes with clients
 - research, development and commercialisation - research and development goals versus commercialisation goals and realities, and research and development to inspire a commercialisation process
- project management principles
- process for amending specifications
- relevant manufacturer specifications
- relevant WHS/OHS legislated requirements
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and facilities currently used in industry
- resources that reflect current industry practice in relation to writing specifications for RE engineering projects
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0063 Write work activity reports

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to write work activity reports.

It includes planning, writing and obtaining approval for the final activity report. It also includes an understanding of the energy sector, gathering relevant information from appropriate sources, making deductions from the information obtained, and arranging information in a clear and logical sequence.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Plan a report

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Report requests are determined in accordance with workplace procedures
- 1.2 Purpose and scope of report is determined in accordance with workplace procedures

- | | | |
|----------|---|--|
| | 1.3 | Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures are identified and applied |
| | 1.4 | Sources of information for report are identified and obtained in consultation with relevant person/s in accordance with workplace procedures |
| 2 | Write activity report | |
| | 2.1 | Report is developed in consultation with relevant person/s |
| | 2.2 | Report is written to include all relevant information obtained |
| | 2.3 | Report is arranged in accordance with workplace procedures, including relevant deductions and recommendations |
| | 2.4 | Report is written in accordance with workplace procedures |
| 3 | Obtain approval for final report | |
| | 3.1 | Report is presented, discussed and authorised by relevant person/s |
| | 3.2 | Modifications to report resulting from presentation/discussion with authorised person/s are incorporated in accordance with workplace procedures |
| | 3.3 | Final report is presented, and approval obtained from authorised person/s |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Writing a report must include at least three of the following:

- enquiry
- situation
- investigation

Each report must include at least one of the following different work activities:

- problem
- incident
- installation
- fault finding/repair
- servicing/maintenance
- safety

Unit Mapping Information

This unit replaces and is equivalent to UEENEEE185A Write work activity reports.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECD0063 Write work activity reports

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- determining the need for a report
- ascertaining the purpose and scope of a report
- sourcing and obtaining information relevant to a report
- arranging reports in a logical sequence
- writing reports in plain English
- obtaining approval for the report
- dealing with unplanned events
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements
- proofreading report prior to presenting report for approval.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- work activity reporting, including:
 - scope of work activity reports encompassing:
 - installation, fault finding/repair, servicing/maintenance and safety work activities
 - reports in response to an enquiry, situation, investigation, problem and incident
 - sources of information:
 - work colleagues, customer/client personnel, standards, specifications and direct experience of the enquiry, situation, investigation, problem or incident that is subject of the report
 - structure of reports encompassing:
 - the description and/or explanation of the subject matter in logical sequence of facts
 - arrangement of content

- clear English writing techniques
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools and equipment currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECD0064 Interpret, produce and modify electrotechnology drawings

Modification History

Release 1. This is the first release of this unit of competency in the Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to interpret, produce and modify electrotechnology drawings.

It includes interpreting circuit, wiring and mechanical diagrams, equipment and cable/connection schedules and manuals; producing and modifying a range of electrical drawings; and using computer drawing packages to produce and modify drawings.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Cross Discipline

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Interpret electrical drawings and diagrams

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Type of drawings and diagrams is determined from the nature of work to be undertaken
- 1.2 Relevant drawings, diagrams, site plans and cable/connection schedules or manuals required for the

work to be undertaken are determined and obtained

- 1.3** Drawings, diagrams and cable/connection schedules are interpreted using drawing layouts, conventions and symbols
 - 1.4** Information is extracted from drawings and diagrams for application to the work to be undertaken
 - 1.5** Technical data of system components is interpreted
- 2 Produce electrical drawings**
- 2.1** Drawing conventions are applied in neat and legible freehand drawings to convey information and ideas relevant to the work to be undertaken
 - 2.2** Correct drawing/diagram type is produced in accordance with job requirements
 - 2.3** Technical data of system components to determine parameters is included in drawings
 - 2.4** Drawings are checked for accuracy and compliance with requirements
 - 2.5** Completed drawings are submitted to relevant person for review
- 3 Modify electrical drawings**
- 3.1** Drawing conventions are used to modify drawings in accordance with requirements
 - 3.2** Technical data of system components is modified in drawings
 - 3.3** Modified drawings are checked for accuracy and compliance with requirements
 - 3.4** Modified drawings are submitted to relevant person for review
- 4 Use computer drawing packages**
- 4.1** Relevant computer drawing package software is used to produce drawings based on industry standard protocols
 - 4.2** Relevant computer drawing package software is used to modify drawings based on industry standard protocols
 - 4.3** Drawings are checked for accuracy and compliance with requirements
 - 4.4** Completed drawings are stored in accordance with requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This is a new unit.

Links

Companion Volume Implementation Guides are found in VETNet -

Assessment Requirements for UEECD0064 Interpret, produce and modify electrotechnology drawings

Modification History

Release 1. This is the first release of this unit of competency in the Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- extracting information from drawings and diagrams
- interpreting drawings, diagrams and plans to determine the location of electrical/communication/audio accessories, appliances and cable runs
- using drawings, diagrams, cable/connection schedules, industry standards and codes of practice used in electrotechnology work
- interpreting drawings, diagrams, cable/connection schedules and manuals correctly
- using correct conventions in freehand drawings
- sketching and marking up basic circuit diagrams
- using drawings, diagrams, schedules and manuals to convey information and ideas and obtain job information
- producing the following:
 - circuit diagram
 - single line diagram
 - termination drawing
 - loop drawing
 - wiring diagram
 - block diagram
- marking up an existing printed drawing
- using a computer drawing package to:
 - produce a drawing
 - modify a drawing
- checking drawings for accuracy and compliance with job specifications.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- architectural and building construction drawings and diagrams, including:
 - different types of drawings
 - relevant information included in drawings and diagrams
 - Australian standard symbols
 - building types and their construction
 - typical cable routes through buildings, structures, and premises
- circuit diagrams, including:
 - purpose of circuit diagrams in the electrotechnology industry
 - conventions used in and the features of circuit diagrams
 - common symbols used in circuit diagrams
- electrical drawings, including:
 - types of electrical drawings: block, circuit, wiring and ladder diagrams
 - purpose and application of block, circuit, wiring and ladder diagrams
 - Australian standard symbols used to represent components on electrical diagrams
 - identification of cable type, origin and route from a cable schedule
 - developing a cable schedule for a given installation
- wiring diagrams, including:
 - purpose of wiring diagrams in the electrotechnology industry
 - conventions used in and the features of wiring diagrams
 - common symbols used in wiring diagrams.
- computer drawing packages including:
 - features and capability
 - file management
 - symbols
 - drawing layout
 - commands
 - viewing and printing options.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, software and equipment used in industry
- applicable documentation, including drawings, diagrams, specifications, codes of practice and operation manuals.

UEECO0001 Estimate electrotechnology projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to estimate material and labour costs for competitive quotation/tenders for electrotechnology work exceeding \$AUD20,000.

It includes reading and understanding job specifications, adjusting for material take-offs, determining labour and site requirements, costing and documenting.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Commercial

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Determine project scope

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified and applied
- 1.2 Hazards are identified, risks are assessed and control measures are implemented

- 1.3 Extent of the project is determined from design brief specifications, other relevant documentation and discussions with appropriate person/s
 - 1.4 Estimated completion date is determined from design brief specifications, other relevant documentation and discussions with appropriate person/s
 - 1.5 Project activities are planned to meet scheduled timeframes in consultation with relevant person/s
- 2 **Estimate electrotechnology project**
 - 2.1 Material take-offs are determined accurately and checked against job specifications
 - 2.2 Materials, labour and other costs are determined from relevant workplace documentation
 - 2.3 Sources and availability of materials and human resources required for the electrotechnology project are determined in accordance with workplace procedures
 - 2.4 Estimates are checked and revised for accuracy in costing against job specifications in consultation with relevant person/s
 - 2.5 Unplanned events are responded to in accordance with workplace procedures
- 3 **Document and submit quotation**
 - 3.1 Project estimates are documented in accordance with workplace procedures
 - 3.2 Quotation is forwarded to relevant person/s within specified timeframe
 - 3.3 Quotation documentation is filed in accordance with workplace policies and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package

Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEC005B Estimate electrotechnology projects.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECO0001 Estimate electrotechnology projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- adjusting estimates
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements
- checking and documenting estimates
- creating, documenting, forwarding and filing quotations
- dealing with unplanned events/situations in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
- documenting and submitting quotations
- estimating completion dates
- estimating electrotechnology project material and labour costs
- estimating electrotechnology projects for a competitive quotation/tender for which the value must exceed \$AUD20,000
- identifying risk control measures
- planning extent of projects
- sourcing materials and human resources
- working within timeframes.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- contingency
- costing
- design brief and specifications
- documents used in estimating and costing margins
- material take-off methods, including a list of materials with quantities and types of material
- money labour rates method of costing
- life cycle costing analysis

- project estimates, including quotations and adjustments
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- resources to be quantified and costed
- resource (labour, plant, equipment and materials).

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECO0002 Maintain documentation

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to maintain and prepare documentation required to record work activities, purchases and expenses obligations.

It includes planning and maintaining documentation typically required in an electrotechnology workplace information system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Commercial

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to maintain documentation

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Documentation requirements and record management methods are identified, obtained and applied in accordance with workplace procedures
- 1.2 Advice is sought from supervisor, as required, to ensure work activity is correctly documented and coordinated with other person/s

- 1.3 Forms required to document work activity are obtained in accordance with workplace procedures
 - 1.4 Work health and safety (WHS)/occupational health and safety (OHS), risk assessment and control measures are documented in accordance with workplace procedures
- 2 Maintain documents**
- 2.1 Work activities are documented, at the appropriate time and in accordance with workplace procedures
 - 2.2 Documents are checked for accuracy, clarity and anomalies corrected
 - 2.3 Appropriate information technology is used to maintain workplace documentation
 - 2.4 Signatures are obtained by relevant person/s, as required
 - 2.5 Copies of required documents are forwarded to appropriate person/s in accordance with workplace procedures
 - 2.6 Unplanned events are referred to supervisor for direction in accordance with workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit must be demonstrated by:

- maintaining documentation in an electrotechnology organisation information system

Unit Mapping Information

This unit replaces and is equivalent to UEENECC001B Maintain documentation.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECO0002 Maintain documentation

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including implementing risk control measures
- dealing with unplanned events in accordance with workplace documentation
- recording and maintaining workplace records using appropriate technology in accordance with workplace information methods
- following workplace record management procedures
- maintaining documentation
- planning documentation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- computers and applications, including:
 - entering information
 - printing
 - saving
 - selecting application
 - starting up
- relevant risk mitigation processes, including risk control measures
- relevant WHS/OHS legislated work records requirements
- relevant workplace communication methods, including:
 - communicating with customers
 - communicating with personnel
 - communicating with suppliers
 - oral and written communication
- relevant workplace documentation and work activities records, including:

- methods for recording and maintaining work records
- purpose and extent of work activities records
- regulatory work record requirements
- types of records for maintaining work activities
- relevant workplace record management policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEECO0003 Manage contract variations

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to manage contract variations.

It includes understanding the specification on which the contracted price is based, identifying contract variations, and negotiating and submitting variations documentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Commercial

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Identify terms of variations

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified, obtained and applied
- 1.2 WHS/OHS risk control measures and workplace procedures are followed
- 1.3 Original scope of work and contract price is obtained from specifications, plans, diagrams and relevant tender

- submission/acceptance documents
- 2 Manage contract variations**
- 1.4** Costing and claiming variations are obtained from relevant tender submission/acceptance and contract documents
 - 2.1** Contract variations are determined and documentation issued by the customer representative or relevant person
 - 2.2** Variations are priced in accordance with workplace procedures
 - 2.3** Variation approvals are negotiated with relevant person/s and in accordance with workplace procedures
 - 2.4** Unplanned events are identified and resolution techniques are applied in accordance with workplace procedures
 - 2.5** Approved variations are submitted for payment in accordance with workplace procedures
 - 2.6** Variations documents are forwarded to relevant person/s in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Contracts must include at least the following:

- five variations for electrotechnology

Unit Mapping Information

This unit replaces and is equivalent to UEENEEC007B Manage contract variations.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECO0003 Manage contract variations

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - using risk control measures
- ascertaining the terms of the contract, including:
 - ascertaining arrangements for claiming variations
 - ascertaining work specifications, plans, diagrams and contract price
- dealing with unplanned events in accordance with resolution techniques and workplace procedures
- forwarding variation documentation appropriately
- managing contract variations, including:
 - negotiating contract variation approvals
 - pricing variations in accordance with the contract.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- problem-solving techniques
- relevant costing and evaluating estimations
- relevant manufacturer specifications
- relevant job safety assessments or risk mitigation processes
- relevant specifications, plans and diagrams
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace instructions, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to managing contract variations
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECO0004 Participate in appliance servicing work and competency development activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to participate in appliance servicing work and competency development activities.

It includes applying workplace policies and procedures in actively participating in appliance servicing work activities and competency development. It also includes observing how appliance servicing work is conducted, identifying responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting obligations for periodic reporting of competency development activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Commercial

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Comply with appliance servicing workplace

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Workplace policies and procedures for appliance servicing work activities are identified and applied

policies and procedures

- 1.2** Clarification on how particular appliance servicing work is to be carried out and the workplace procedures involved is sought from supervisor/appropriate person/s
- 1.3** Unplanned situations are dealt with safely in accordance with workplace policies and procedures and with the approval of authorised person/s in a manner that minimises risk to personnel and equipment
- 2 Monitor and respond to competency development plan**
 - 2.1** Aspects of the appliance servicing competency development plan are confirmed in consultation with appropriate person/s
 - 2.2** Components of the competency development plan are followed in accordance with workplace procedures
 - 2.3** Opportunities to practise skills and apply knowledge relative to a particular appliance servicing competency are pursued
 - 2.4** Assistance is sought from appropriate person/s to overcome difficulties in developing skills and applying knowledge relevant to appliance servicing competency
 - 2.5** Progress in competency development is self-monitored against the appliance servicing competency development plan and workplace policies and procedures
 - 2.6** Modifications to the competency development plan are made in consultation with appropriate person/s
 - 2.7** Obligations are met for periodic and timely reporting of competency development activities
 - 2.8** Periodic competency development activities report is validated by appropriate person/s in accordance with workplace policies and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENECC017B Participate in appliance servicing work and competency development activities.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECO0004 Participate in appliance servicing work and competency development activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures and practices, including applying risk control measures
- applying sustainable energy principles and practices
- dealing with unplanned events/situations in accordance with workplace procedures in a manner that minimises risk to personnel and appliance equipment
- identifying and confirming the context, requirements and responsibilities of the competency development or training plan to be met
- identifying and confirming the workplace and regulatory policies, procedures and context applicable to appliance servicing work activities
- periodically reviewing progress of the competency development activities in accordance with workplace requirements
- progressing against periodic or staged evaluative performance events in accordance with workplace requirements
- pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- reporting periodically the competency development activities in accordance with workplace requirements
- seeking assistance to overcome difficulties in developing competency
- seeking clarification of how particular appliance servicing work is to be carried out and the workplace procedures involved.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- competency development plan or training plan responsibilities
- methods of monitoring and reporting competency development activities
- relevant appliance manufacturer specifications

- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant work activities and workplace policies and procedures
- relevant workplace documentation.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- appliance resources that reflect current industry practices
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECO0005 Participate in business equipment work and competency development activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to participate in business equipment work and competency development activities.

It includes identifying responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting obligations for periodic reporting of competency development activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Commercial

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

- 1 Comply with relevant business equipment industry standards and workplace procedures**

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Relevant industry standards and workplace procedures for work activities are identified and obtained

- 1.2 Clarification on work to be carried out is sought from the supervisor/relevant person/s in accordance with workplace procedures
- 1.3 Unplanned situations are dealt with safely and in accordance with relevant industry standards and workplace procedures with approval of relevant person/s
- 2 **Monitor and respond to a personal competency development plan**
 - 2.1 Competency development plan is confirmed in consultation with relevant person/s
 - 2.2 Competency development plan components are followed
 - 2.3 Opportunities to apply skills and knowledge to a relevant competency are identified in accordance with competency development plan
 - 2.4 Assistance is sought from relevant person/s and/or organisation/s to assist in developing skills and applying knowledge to a relevant competency
 - 2.5 Progress in competency development is self-monitored in accordance with competency development plan, relevant industry standards and workplace procedures
 - 2.6 Modifications to competency development plan are made in consultation with relevant person/s
 - 2.7 Obligations for periodic and timely reporting of competency development activities are met
 - 2.8 Periodic competency development activities report is validated by relevant person/s in accordance with relevant industry standards and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for UEECO0005 Participate in business equipment work and competency development activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- complying with relevant business equipment industry standards and workplace procedures
- dealing with unplanned situations in accordance with relevant industry standards and workplace procedures and approval of relevant person/s
- identifying and confirming relevant industry standards and workplace procedures
- identifying and confirming the context, requirements and responsibilities of the competency development plan
- identifying and confirming the relevant training organisations
- monitoring and responding to a personal competency development plan
- periodically reviewing progress of the competency development activities
- periodically reporting competency development activities
- seeking assistance to assist in developing competency
- seeking clarification on how work is to be carried out in accordance with workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- enterprise work activities policies and procedures
- methods of monitoring and reporting competency development activities
- relevant manufacturer specifications
- relevant training organisations
- relevant work health and safety (WHS)/occupational health and safety (OHS) legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- responsibilities under a competency development plan.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to participating in development and following a personal competency development plan
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECO0006 Participate in computer equipment work and competency development activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to participate in computer equipment work and competency development activities.

It includes identifying responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting obligations for periodic reporting of competency development activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Commercial

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

- 1 Comply with relevant computer equipment industry standards and workplace procedures**

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Relevant industry standards and workplace procedures for work activities are identified and obtained

-
- 2 Monitor and respond to a personal competency development plan**
- 1.2** Clarification on work to be carried out is sought from the supervisor/relevant person/s in accordance with workplace procedures
 - 1.3** Unplanned situations are dealt with safely and in accordance with relevant industry and workplace procedures with the approval of relevant person/s
 - 2.1** Competency development plan is confirmed in consultation with relevant persons
 - 2.2** Competency development plan components are followed
 - 2.3** Opportunities to apply skills and knowledge to a relevant competency are identified in accordance with competency development plan
 - 2.4** Assistance is sought from relevant person/s and/or organisation/s to assist in developing skills and applying knowledge to a relevant competency
 - 2.5** Progress in competency development is self-monitored in accordance with competency development plan, relevant industry standards and workplace procedures
 - 2.6** Modifications to competency development plan are made in consultation with relevant person/s
 - 2.7** Obligations for periodic and timely reporting of competency development activities are met
 - 2.8** Periodic competency development activities report is validated by relevant person/s in accordance with relevant industry standards and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package

Companion Volume Implementation Guide.

Assessment Requirements for UEECO0006 Participate in computer equipment work and competency development activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and includes:

- identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
- identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
- identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the Registered Training Organisation (RTO) to all vocational education and training (VET) activities
- seeking clarification of how particular work is to be carried out and the procedures involved
- dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
- reporting periodically the competency development activities in accordance with requirements
- periodically reviewing progress of the competency development activities in accordance with requirements
- pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- progressing successfully against periodic or staged evaluative performance events according to requirements
- seeking assistance to overcome difficulties in developing competency
- dealing with unplanned events
- complying with relevant computer equipment industry standards and workplace procedures
- identifying and confirming relevant industry standards and workplace procedures
- monitoring and responding to a personal competency development plan.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- computer equipment work and competency development activities, including:

- responsibilities under a competency development plan:
 - competency development (training) plans encompassing:
 - state/territory requirements (Acts/regulations)
 - competency development (training) contracts
 - competency development (training) period
 - purpose of competency development (training) plans
 - process in developing competency development (training) plans
 - parties involved in the competency development (training) plan
 - qualification structure encompassing:
 - scope of work
 - Training Packages – UEE Electrotechnology
 - units of competency
 - structure of qualification
 - off-the-job requirements
 - on-the-job requirements
 - responsibilities of parties to the contract encompassing:
 - employer responsibilities
 - learner responsibilities
 - RTO responsibilities
 - State/Territory Training Authorities (STAs)
 - electrotechnology industry career opportunities encompassing:
 - industry areas
 - qualification levels
 - career paths
 - industry customs and practices encompassing:
 - industry bodies – employer and employee representatives
 - regulatory bodies – including licensing/registration, WHS/OHS, industrial relations (IR), training authorities – apprentice/trainee regulation
 - vocational education and training (VET) system – Australian Qualification Framework (AQF) and credentials
 - monitoring of workplace evidence encompassing:
 - workplace exposure and practices and relationship with units of competency
 - methods of collecting workplace evidence
 - monitoring period cycle
 - requirements of workplace evidence
 - actions taken for unsatisfactory progression
 - role of STA
 - apprentice/learner responsibilities
 - employer responsibilities
 - RTO policies encompassing:

- apprentice/learner responsibilities
- teacher/trainer responsibilities
- absenteeism
- off-the-job component assessment specifications
- on-the-job component assessment specifications
- qualification completion requirements and award
- advanced standing and/or recognition of prior learning (RPL)
- result review procedures
- apprentice/learner discipline policy encompassing:
 - apprentice/learner rights
 - apprentice/learner responsibilities
 - breaches of discipline
 - types of penalties apprentice/learner responsibilities
- attendance at the RTO encompassing:
 - importance of attendance
 - record management of attendance
 - attendance cards
 - advice to employer of absences
- fire and emergencies at the RTO encompassing:
 - designated fire and emergency exits
 - procedures in the event of a fire
 - evacuation procedures
 - assembly points importance of attendance
- WHS/OHS at the RTO encompassing:
 - eye protection
 - foot protection
 - protective clothing
 - personal injuries
 - mobile phones and personal belonging
 - dress regulations
 - rotating machinery
 - designated fire and emergency exists
- entry requirements encompassing:
 - numeracy requirements
 - literacy requirements
 - RTO support mechanisms
- RTO tour encompassing:
 - RTO layout
 - building layout

- tour of building and RTO
- methods of monitoring and reporting competency development activities encompassing:
 - RTOs responsibility to receive and monitor workplace activities of the apprentice/learner
 - industry requirements for monitoring workplace evidence
 - acceptable methods for monitoring and reporting workplace activities
 - apprentice's/learner's responsibility to participate in the reporting of workplace activities
 - RTOs requirements in periodically evaluating development of apprentices/learners from the workplace activities information gathered, and providing feedback and advice on areas requiring improvement
 - employer responsibilities to participate in monitoring, reporting and confirming workplace activities, and assisting in overcoming areas requiring development by the apprentice/learner
 - options for appeal or assistance from RTO or STA
- enterprise work activities policies and procedures encompassing:
 - need for policies and procedures
 - scope for an industry/enterprise to establish work activity policies and procedures - policies and procedure related to safety, effective work outcomes, customer relations, conflict resolution and competency development
 - following work activities procedures
- relevant training organisations
- relevant WHS/OHS legislated requirements
- relevant workplace documentation.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to participating in development and

following a personal competency development plan

- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECO0007 Participate in electronics and communications work and competency development activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to participate in electronics and communications work and competency development activities.

It includes identifying responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting obligations for periodic reporting of competency development activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Commercial

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Comply with relevant electronics and communications industry standards and workplace procedures

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Relevant industry standards and workplace procedures for work activities are identified and obtained

- 1.2 Clarification on work to be carried out is sought from the supervisor/relevant person/s in accordance with workplace procedures
- 1.3 Unplanned situations are dealt with safely and in accordance with relevant industry and workplace procedures and with the approval of relevant person/s
- 2 **Monitor and respond to a personal competency development plan**
 - 2.1 Competency development plan is confirmed in consultation with relevant person/s
 - 2.2 Competency development plan components are followed
 - 2.3 Opportunities to apply skills and knowledge relative to a particular competency are identified in accordance with competency development plan
 - 2.4 Assistance is sought from relevant person/s and/or organisation/s to assist in developing skills and applying knowledge to a relevant competency
 - 2.5 Progress in competency development is self-monitored in accordance with competency development plan, relevant industry standards and workplace procedures
 - 2.6 Modifications to competency development plan are made in consultation with relevant person/s
 - 2.7 Obligations for periodic and timely reporting of competency development activities are met
 - 2.8 Periodic competency development activities report is validated by relevant person/s in accordance with relevant industry standards and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package

Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEC021B Participate in electronics and communications work and competency development activities.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECO0007 Participate in electronics and communications work and competency development activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- complying with relevant electronics and communications industry standards and workplace procedures
- dealing with unplanned situations in accordance with relevant industry standards and workplace procedures and approval of relevant person/s
- identifying and confirming relevant industry standards and workplace procedures
- identifying and confirming the context, requirements and responsibilities of the competency development plan
- identifying and confirming the relevant training organisations
- monitoring and responding to a personal competency development plan
- periodically reviewing progress of the competency development activities
- reporting periodically competency development activities
- seeking assistance to assist in developing competency
- seeking clarification of how work is to be carried out in accordance with workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- enterprise work activities policies and procedures
- methods of monitoring and reporting competency development activities
- relevant industry bodies, customs and practices
- relevant manufacturer specifications
- relevant training organisations
- relevant work health and safety (WHS)/occupational health and safety (OHS) legislated requirements
- relevant workplace documentation

- relevant workplace policies and procedures
- responsibilities under a competency development plan.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to participating in development and following a personal competency development plan
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

Assessment Requirements for UEECO0008 Participate in fire protection control work and competency development activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
- identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
- identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the Registered Training Organisation (RTO) to all vocational education and training (VET) activities
- seeking clarification of how particular work is to be carried out and the procedures involved
- dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
- reporting periodically the competency development activities in accordance with requirements
- periodically reviewing progress of the competency development activities in accordance with requirements
- pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- progressing successfully against periodic or staged evaluative performance events according to requirements
- seeking assistance to overcome difficulties in developing competency
- dealing with unplanned events
- identifying, confirming and complying with relevant industry standards and workplace procedures
- monitoring and responding to a personal competency development plan.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- fire protection control work competency development activities, including:

- responsibilities under a competency development plan:
 - competency development (training) plans encompassing:
 - state/territory requirements (Acts/regulations)
 - competency development (training) contracts
 - competency development (training) period
 - purpose of competency development (training) plans
 - process in developing competency development (training) plans
 - parties involved in the competency development (training) plan
 - qualification structure encompassing:
 - scope of work
 - Training Packages – UEE Electrotechnology
 - units of competency
 - structure of qualification
 - off-the-job requirements
 - on-the-job requirements
 - responsibilities of parties to the contract encompassing:
 - employer responsibilities
 - learner responsibilities
 - RTO responsibilities
 - State/Territory Training Authorities (STA)
 - electrotechnology industry career opportunities encompassing:
 - industry areas
 - qualification levels
 - career paths
 - industry customs and practices encompassing:
 - industry bodies – employer and employee representatives
 - regulatory bodies – including licensing/registration, work health and safety (WHS)/occupational health and safety (OHS), industrial relations (IR), training authorities – apprentice/trainee regulation
 - VET system – Australian Qualification Framework (AQF) and credentials
 - monitoring of workplace evidence encompassing:
 - workplace exposure and practices and relationship with units of competency
 - methods of collecting workplace evidence
 - monitoring period cycle
 - requirements of workplace evidence
 - actions taken for unsatisfactory progression
 - role of STAs
 - apprentice/learner responsibilities
 - employer responsibilities
 - RTO policies encompassing:

- apprentice/learner responsibilities
- teacher/trainer responsibilities
- absenteeism
- off-the-job component assessment specifications
- on-the-job component assessment specifications
- qualification completion requirements and award
- advanced standing and/or recognition of prior learning (RPL)
- result review procedures
- apprentice/learner discipline policy encompassing:
 - apprentice/learner rights
 - apprentice/learner responsibilities
 - breaches of discipline
 - types of penalties apprentice/learner responsibilities
- attendance at the RTO encompassing:
 - importance of attendance
 - record management of attendance
 - attendance cards
 - advice to employer of absences
- fire and emergencies at the RTO encompassing:
 - designated fire and emergency exits
 - procedures in the event of a fire
 - evacuation procedures
 - assembly points importance of attendance
- WHS/OHS at the RTO encompassing:
 - eye protection
 - foot protection
 - protective clothing
 - personal injuries
 - mobile phones and personal belongings
 - dress regulations
 - rotating machinery, designated fire and emergency exits
- entry requirements encompassing:
 - numeracy requirements
 - literacy requirements
 - RTO support mechanisms
- RTO tour encompassing:
 - RTO layout
 - building layout
 - tour of building and RTO

- methods of monitoring and reporting competency development activities encompassing:
 - RTOs responsibility to receive and monitor workplace activities of the apprentice/learner
 - industry requirements for monitoring workplace evidence
 - acceptable methods for monitoring and reporting workplace activities
 - apprentice's/learner's responsibility to participate in the reporting of workplace activities
 - RTO requirements in periodically evaluating development of apprentices/learners from the workplace activities information gathered, and providing feedback and advice on areas requiring improvement
 - employer responsibilities to participate in monitoring, reporting and confirming workplace activities, and assisting in overcoming areas requiring development by the apprentice/learner
 - options for appeal or assistance from RTO or STA
- enterprise work activities policies and procedures encompassing:
 - need for policies and procedures
 - scope for an industry/enterprise to establish work activity policies and procedures - policies and procedure related to safety, effective work outcomes, customer relations, conflict resolution and competency development
 - following work activities procedures
- relevant training organisations
- relevant WHS/OHS legislated requirements
- relevant workplace documentation.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment and currently used in industry
- resources that reflect current industry practices in relation to participating in development and following a personal competency development plan

- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECO0009 Participate in instrumentation and control work and competency development activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to participate in instrumentation, control work and competency development activities.

It includes actively participating in work activities in a competency development plan. It also includes understanding responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting reporting of competency development requirements.

Permits may be required for some work environments, such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Commercial

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Comply with instrumentation, control

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Industry standards and workplace procedures for all

work and development plan		work requirements are identified and obtained
	1.2	Clarification on work and workplace procedures involved is sought from work supervisor and/or relevant person/s
	1.3	Unplanned situations are dealt with safely and in accordance with relevant industry standards and workplace procedures with approval of relevant person/s
2 Monitor and respond to competency development plan	2.1	Requirements of the competency development plan are confirmed in consultation with relevant person/s
	2.2	Requirements of competency development plan are followed in accordance with workplace procedures
	2.3	Skills and knowledge are applied to relevant competency requirements
	2.4	Assistance is sought from relevant person/s to develop skills and apply knowledge relevant to competency development plan requirement
	2.5	Competency development is self-monitored in accordance with competency development plan, relevant industry standards and workplace procedures
	2.6	Modifications to competency development plan are made in consultation with relevant person/s
	2.7	Report of competency development requirements are in accordance with workplace procedures
	2.8	Competency development report is validated by relevant person/s in accordance with relevant industry standards and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work

environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEC024B Participate in instrumentation and control work and competency development activities.

Assessment Requirements for UEECO0009 Participate in instrumentation and control work and competency development activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
- identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
- identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the Registered Training Organisation (RTO) to all vocational education and training (VET) activities
- seeking clarification of how particular work is to be carried out and the procedures involved
- dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
- reporting periodically the competency development activities in accordance with requirements
- periodically reviewing progress of the competency development activities in accordance with requirements
- pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- progressing successfully against periodic or staged evaluative performance events according to requirements
- seeking assistance to overcome difficulties in developing competency
- dealing with unplanned events
- identifying and obtaining relevant industry standards and workplace procedures
- responding to a personal competency development plan
- seeking clarification on work and workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- instrumentation and control work competency development activities, including:
 - responsibilities under a competency development plan:
 - competency development (training) plans encompassing:
 - state/territory requirements (Acts/regulations)
 - competency development (training) contracts
 - competency development (training) period
 - purpose of competency development (training) plans
 - process in developing competency development (training) plans
 - parties involved in the competency development (training) plan
 - qualification structure encompassing:
 - scope of work
 - Training Packages – UEE Electrotechnology
 - units of competency
 - structure of qualification
 - off-the-job requirements
 - on-the-job requirements
 - responsibilities of parties to the contract encompassing:
 - employer responsibilities
 - learner responsibilities
 - RTO responsibilities
 - State/Territory Training Authorities (STA)
 - electrotechnology industry career opportunities encompassing:
 - industry areas
 - qualification levels
 - career paths
 - industry customs and practices encompassing:
 - industry bodies – employer and employee representatives
 - regulatory bodies – including licensing/registration, work health and safety (WHS)/occupational health and safety (OHS), industrial relations (IR), training authorities – apprentice/trainee regulation
 - VET system – Australian Qualification Framework (AQF) and credentials
 - monitoring of workplace evidence encompassing:
 - workplace exposure and practices and relationship with units of competency
 - methods of collecting workplace evidence
 - monitoring period cycle
 - requirements of workplace evidence
 - actions taken for unsatisfactory progression
 - role of STA
 - apprentice/learner responsibilities
 - employer responsibilities

- RTO policies encompassing:
 - apprentice/learner responsibilities
 - teacher/trainer responsibilities
 - absenteeism
 - off-the-job component assessment specifications
 - on-the-job component assessment specifications
 - qualification completion requirements and award
 - advanced standing and/or recognition of prior learning (RPL)
 - result review procedures
- apprentice/learner discipline policy encompassing:
 - apprentice/learner rights
 - apprentice/learner responsibilities
 - breaches of discipline
 - types of penalties apprentice/learner responsibilities
- attendance at the RTO encompassing:
 - importance of attendance
 - record management of attendance
 - attendance cards
 - advice to employer of absences
- fire and emergencies at the RTO encompassing:
 - designated fire and emergency exits
 - procedures in the event of a fire
 - evacuation procedures
 - assembly points importance of attendance
- WHS/OHS at the RTO encompassing:
 - eye protection
 - foot protection
 - protective clothing
 - personal injuries
 - mobile phones and personal belongings
 - dress regulations
 - rotating machinery, designated fire and emergency exits
- entry requirements encompassing:
 - numeracy requirements
 - literacy requirements
 - RTO centre support mechanisms
- RTO tour encompassing:
 - RTO layout
 - building layout

- tour of building and RTO
- methods of monitoring and reporting competency development activities encompassing:
 - RTOs responsibility to receive and monitor workplace activities of the apprentice/learner
 - industry requirements for monitoring workplace evidence
 - acceptable methods for monitoring and reporting workplace activities
 - apprentice's/learner's responsibility to participate in the reporting of workplace activities
 - RTOs requirements in periodically evaluating development of apprentices/learners from the workplace activities information gathered, and providing feedback and advice on areas requiring improvement
 - employer responsibilities to participate in monitoring, reporting and confirming workplace activities, and assisting in overcoming areas requiring development by the apprentice/learner
 - options for appeal or assistance from RTO or STA
- enterprise work activities policies and procedures encompassing:
 - need for policies and procedures
 - scope for an industry/enterprise to establish work activity policies and procedures - policies and procedure related to safety, effective work outcomes, customer relations, conflict resolution and competency development
 - following work activities procedures
- problem-solving techniques
- relevant job safety assessments or risk mitigation processes
- relevant workplace documentation.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to participating in development and following a personal competency development plan

- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECO0010 Participate in refrigeration and air conditioning work and competency development activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to participate in refrigeration and air conditioning work and competency development activities.

It includes applying workplace policies and procedures and actively participating in refrigeration and air conditioning work activities in competency development. It also includes observing how refrigeration and air conditioning work is conducted, identifying responsibilities and obligations under a competency development plan, following activities for developing competency, self-monitoring competency development and meeting obligations for periodic reporting of competency development activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

Commercial

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Comply with refrigeration and air conditioning

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Workplace policies and procedures for refrigeration and air conditioning work activities are identified and

- workplace policies and procedures** applied
- 1.2** Clarification on how particular refrigeration and air conditioning work is to be carried out and the workplace procedures involved is sought from supervisor/appropriate person/s
- 1.3** Unplanned situations are dealt with safely in accordance with workplace policies and procedures and with the approval of authorised person/s in a manner that minimises risk to personnel and equipment
- 2 Monitor and respond to competency development plan**
- 2.1** Aspects of the refrigeration and air conditioning competency development plan are confirmed in consultation with appropriate person/s
- 2.2** Components of the refrigeration and air conditioning competency development plan are followed in accordance with workplace procedures
- 2.3** Opportunities to practise skills and apply knowledge relevant to a particular refrigeration and air conditioning competency are pursued
- 2.4** Assistance is sought from appropriate person/s to overcome difficulties in developing skills and applying knowledge relevant to refrigeration and air conditioning competency
- 2.5** Progress in competency development is self-monitored against the refrigeration and air conditioning competency development plan and workplace policies and procedures
- 2.6** Modifications to the competency development plan are made in consultation with appropriate person/s
- 2.7** Obligations are met for periodic and timely reporting of competency development activities
- 2.8** Periodic competency development activities report is validated by appropriate person/s in accordance with workplace policies and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEC025B Participate in refrigeration and air conditioning work and competency development activities.

Assessment Requirements for UEECO0010 Participate in refrigeration and air conditioning work and competency development activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements and workplace procedures and practices, including risk control measures
- applying sustainable energy principles and practices
- identifying and confirming the context, requirements and responsibilities of the competency development or training plan to be met
- identifying and confirming the workplace and regulatory policies, procedures and context applicable to refrigeration and air conditioning work activities
- participating in refrigeration and air conditioning work
- periodically reviewing progress of the competency development activities in accordance with workplace requirements
- progressing against periodic or staged evaluative performance events in accordance with workplace requirements
- pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- reporting periodically the competency development activities in accordance with workplace requirements
- seeking assistance to overcome difficulties in developing competency
- seeking clarification of how particular refrigeration and air conditioning work is to be carried out and the workplace procedures involved.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- competency development plan or training plan responsibilities
- methods of monitoring and reporting competency development activities
- relevant job safety assessments or risk mitigation processes

- relevant refrigeration and air conditioning manufacturer specifications
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- refrigeration and air conditioning resources that reflect current industry practices
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECO0011 Participate in security equipment work and competency development activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to participate in security equipment work and competency development activities.

It includes identifying responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting obligations for periodic reporting of competency development activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Commercial

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

- 1 Comply with relevant security equipment industry standards and workplace procedures**

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Relevant industry standards and workplace procedures for work activities are identified and obtained

- 1.2 Clarification on work to be carried out is sought from the supervisor/relevant person/s in accordance with workplace procedures
- 1.3 Unplanned situations are dealt with safely and in accordance with relevant industry standards and workplace procedures with approval of relevant person/s
- 2 **Monitor and respond to a personal competency development plan**
 - 2.1 Competency development plan is confirmed in consultation with relevant person/s
 - 2.2 Competency development plan components are followed
 - 2.3 Opportunities to apply skills and knowledge to a relevant competency are identified in accordance with competency development plan
 - 2.4 Assistance is sought from relevant person/s and/or organisation/s to assist in developing skills and applying knowledge to a relevant competency
 - 2.5 Progress in competency development is self-monitored in accordance with competency development plan, relevant industry standards and workplace procedures
 - 2.6 Modifications to competency development plan are made in consultation with relevant person/s
 - 2.7 Obligations for periodic and timely reporting of competency development activities are met
 - 2.8 Periodic competency development activities report is validated by relevant person/s in accordance with relevant industry standards and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package

Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEC026B Participate in security equipment work and competency development activities.

Assessment Requirements for UEECO0011 Participate in security equipment work and competency development activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
- identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
- identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the Registered Training Organisation (RTO) to all vocational education and training (VET) activities
- seeking clarification of how particular work is to be carried out and the procedures involved
- dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
- reporting periodically the competency development activities in accordance with requirements
- periodically reviewing progress of the competency development activities in accordance with requirements
- pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- progressing successfully against periodic or staged evaluative performance events according to requirements
- seeking assistance to overcome difficulties in developing competency
- dealing with unplanned events
- identifying, confirming and complying with relevant industry standards and workplace procedures
- monitoring and responding to a personal competency development plan.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- security equipment work competency development activities, including:

- responsibilities under a competency development plan:
 - competency development (training) plans encompassing:
 - state/territories requirements (Acts/regulations)
 - competency development (training) contracts
 - competency development (training) period
 - purpose of competency development (training) plans
 - process in developing competency development (training) plans
 - parties involved in the competency development (training) plan
 - qualification structure encompassing:
 - scope of work
 - Training Packages – UEE Electrotechnology
 - units of competency
 - structure of qualification
 - off-the-job requirements
 - on-the-job requirements
 - responsibilities of parties to the contract encompassing:
 - employer responsibilities
 - learner responsibilities
 - RTO responsibilities
 - State/Territory Training Authorities (STA)
 - electrotechnology industry career opportunities encompassing:
 - industry areas
 - qualification levels
 - career paths
 - industry customs and practices encompassing:
 - industry bodies – employer and employee representatives
 - regulatory bodies – including licensing/registration, work health and safety (WHS)/occupational health and safety (OHS), industrial relations (IR), training authorities – apprentice/trainee regulation
 - VET system – Australian Qualification Framework (AQF) and credentials
 - monitoring of workplace evidence encompassing:
 - workplace exposure and practices and relationship with units of competency
 - methods of collecting workplace evidence
 - monitoring period cycle
 - requirements of workplace evidence
 - actions taken for unsatisfactory progression
 - role of STAs
 - apprentice/learner responsibilities
 - employer responsibilities
 - RTO policies encompassing:

- apprentice/learner responsibilities
- teacher/trainer responsibilities
- absenteeism
- off-the-job component assessment specifications
- on-the-job component assessment specifications
- qualification completion requirements and award
- advanced standing and/or recognition of prior learning (RPL)
- result review procedures
- apprentice/learner discipline policy encompassing:
 - apprentice/learner rights
 - apprentice/learner responsibilities
 - breaches of discipline
 - types of penalties apprentice/learner responsibilities
- attendance at the RTO encompassing:
 - importance of attendance
 - record management of attendance
 - attendance cards
 - advice to employer of absences
- fire and emergencies at the RTO encompassing:
 - designated fire and emergency exits
 - procedures in the event of a fire
 - evacuation procedures
 - assembly points importance of attendance
- WHS/OHS at the RTO encompassing:
 - eye protection
 - foot protection
 - protective clothing
 - personal injuries
 - mobile phones and personal belongings
 - dress regulations
 - rotating machinery, designated fire and emergency exits
- entry requirements encompassing:
 - numeracy requirements
 - literacy requirements
 - RTO support mechanisms
- RTO tour encompassing:
 - RTO layout
 - building layout
 - tour of building and RTO

- methods of monitoring and reporting competency development activities encompassing:
 - RTOs responsibility to receive and monitor workplace activities of the apprentice/learner
 - industry requirements for monitoring workplace evidence
 - acceptable methods for monitoring and reporting workplace activities
 - apprentice's/learner's responsibility to participate in the reporting of workplace activities
 - RTO requirements in periodically evaluating development of apprentices/learners from the workplace activities information gathered, and providing feedback and advice on areas requiring improvement
 - employer responsibilities to participate in monitoring, reporting and confirming workplace activities, and assisting in overcoming areas requiring development by the apprentice/learner
 - options for appeal or assistance from RTO or STA
- enterprise work activities policies and procedures encompassing:
 - need for policies and procedures
 - scope for an industry/enterprise to establish work activity policies and procedures - policies and procedures related to safety, effective work outcomes, customer relations, conflict resolution and competency development
 - following work activities procedures
- relevant training organisations
- relevant WHS/OHS legislated requirements
- relevant workplace documentation.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to participating in development and following a personal competency development plan
- applicable documentation, including workplace procedures, equipment specifications,

regulations, codes of practice and operation manuals.

UEECO0012 Participate in voice and data communications work and competency development activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to participate in voice and data communications work and competency development activities.

It includes identifying responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting obligations for periodic reporting of competency development activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Commercial

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

- 1 Comply with relevant voice and data communications industry standards and workplace procedures**

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Relevant industry standards and workplace procedures for work activities are identified and obtained

- 1.2 Clarification on work to be carried out is sought from the supervisor/relevant person/s in accordance with workplace procedures
 - 1.3 Unplanned situations are dealt with safely and in accordance with relevant industry standards and workplace procedures with the approval of a relevant person
- 2 **Monitor and respond to a personal competency development plan**
 - 2.1 Competency development plan is confirmed in consultation with relevant person/s
 - 2.2 Competency development plan components are followed
 - 2.3 Opportunities to apply skills and knowledge to a relevant competency are identified in accordance with competency development plan
 - 2.4 Assistance is sought from relevant person/s and/or organisation/s to assist in developing skills and applying knowledge to a relevant competency
 - 2.5 Progress in competency development is self-monitored in accordance with competency development plan, relevant industry standards and workplace procedures
 - 2.6 Modifications to competency development plan are made in consultation with relevant person/s
 - 2.7 Obligations for periodic and timely reporting of competency development activities are met
 - 2.8 Periodic competency development activities report is validated by relevant person/s in accordance with relevant industry standards/enterprise policies and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work

environment.

Assessment Requirements for UEECO0012 Participate in voice and data communications work and competency development activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
- identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
- identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the Registered Training Organisation (RTO) to all vocational education and training (VET) activities
- seeking clarification of how particular work is to be carried out and the procedures involved
- dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
- reporting periodically the competency development activities in accordance with requirements
- periodically reviewing progress of the competency development activities in accordance with requirements
- pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- progressing successfully against periodic or staged evaluative performance events according to requirements
- seeking assistance to overcome difficulties in developing competency
- dealing with unplanned events
- identifying, confirming and complying with relevant industry standards and workplace procedures
- monitoring and responding to a personal competency development plan.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- voice and data communications work competency development activities, including:
 - responsibilities under a competency development plan:
 - competency development (training) plans encompassing:
 - state/territory requirements (Acts/regulations)
 - competency development (training) contracts
 - competency development (training) period
 - purpose of competency development (training) plans
 - process in developing competency development (training) plans
 - parties involved in the competency development (training) plan
 - qualification structure encompassing:
 - scope of work
 - Training Packages – UEE Electrotechnology
 - units of competency
 - structure of qualification
 - off-the-job requirements
 - on-the-job requirements
 - responsibilities of parties to the contract encompassing:
 - employer responsibilities
 - learner responsibilities
 - RTO responsibilities
 - State/Territory Training Authorities (STAs)
 - electrotechnology industry career opportunities encompassing:
 - industry areas
 - qualification levels
 - career paths
 - industry customs and practices encompassing:
 - industry bodies – employer and employee representatives
 - regulatory bodies – including licensing/registration, work health and safety (WHS)/occupational health and safety (OHS), industrial relations (IR), training authorities – apprentice/trainee regulation
 - vocational and technical education system – Australian Qualification Framework (AQF), credentials, Australian Qualification Training Framework (AQTF)
 - monitoring of workplace evidence encompassing:
 - workplace exposure and practices and relationship with units of competency
 - methods of collecting workplace evidence
 - monitoring period cycle
 - requirements of workplace evidence
 - actions taken for unsatisfactory progression
 - role of STA
 - apprentice/learner responsibilities

- employer responsibilities
- RTO policies encompassing:
 - apprentice/learner responsibilities
 - teacher/trainer responsibilities
 - absenteeism
 - off-the-job component assessment specifications
 - on-the-job component assessment specifications
 - qualification completion requirements and award
 - advanced standing and/or recognition of prior learning (RPL)
 - result review procedures
- apprentice/learner discipline policy encompassing:
 - apprentice/learner rights
 - apprentice/learner responsibilities
 - breaches of discipline
 - types of penalties apprentice/learner responsibilities
- attendance at the RTO encompassing:
 - importance of attendance
 - record management of attendance
 - attendance cards
 - advice to employer of absences
- fire and emergencies at the RTO encompassing:
 - designated fire and emergency exits
 - procedures in the event of a fire
 - evacuation procedures
 - assembly points importance of attendance
- WHS/OHS at the RTO encompassing:
 - eye protection
 - foot protection
 - protective clothing
 - personal injuries
 - mobile phones and personal belonging
 - dress regulations
 - rotating machinery, designated fire and emergency exits
- entry requirements encompassing:
 - numeracy requirements
 - literacy requirements
 - RTO support mechanisms
- RTO tour encompassing:
 - RTO layout

- building layout
- tour of building and RTO
- methods of monitoring and reporting competency development activities encompassing:
 - RTOs responsibility to receive and monitor workplace activities of the apprentice/learner
 - industry requirements for monitoring workplace evidence
 - acceptable methods for monitoring and reporting workplace activities
 - apprentice's/learner's responsibility to participate in the reporting of workplace activities
 - RTOs requirements in periodically evaluating development of apprentices/learners from the workplace activities information gathered, and providing feedback and advice on areas requiring improvement
 - employer responsibilities to participate in monitoring, reporting and confirming workplace activities, and assisting in overcoming areas requiring development by the apprentice/learner
 - options for appeal or assistance from RTO or STA
- enterprise work activities policies and procedures encompassing:
 - need for policies and procedures
 - scope for an industry/enterprise to establish work activity policies and procedures - policies and procedure related to safety, effective work outcomes, customer relations, conflict resolution and competency development
 - following work activities procedures
- relevant training organisations
- relevant WHS/OHS legislated requirements
- relevant workplace documentation.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to participating in development and

following a personal competency development plan

- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECO0013 Prepare specifications for the supply of materials and equipment for electrotechnology projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to write technical specifications for the supply of materials and equipment for electrotechnology projects.

It includes establishing performance requirements and prescribing parameters, and preparing specifications for the supply of materials and equipment. It also includes documenting and submitting quotations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

Commercial

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Determine performance and parameters of materials and equipment

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures are identified and applied

1.2 Extent of project work is determined from design brief

specifications, other relevant documentation and discussions with appropriate person/s

- 1.3** Performance and prescribed parameters of materials and equipment are established from design brief specifications, other relevant documentation and discussions with relevant person/s
 - 1.4** Required date for materials and equipment is determined from design brief specifications, other relevant documentation and discussions with relevant person/s
 - 1.5** Activities are planned to meet scheduled timeframes in consultation with relevant person/s
- 2 Prepare specifications for supply of materials and equipment**
- 2.1** Manufacturer specifications and limitations of materials and equipment are sought
 - 2.2** Manufacturer specifications and limitations are compared with the established performance and prescribed parameters for materials and equipment
 - 2.3** Sources and availability of materials and equipment are established in accordance with workplace procedures
 - 2.4** Specifications for the supply of materials and equipment, including required evidence of compliance, are developed in accordance with workplace procedures
 - 2.5** Additional services are incorporated in the specifications, as required
 - 2.6** Solutions to unplanned events are implemented in accordance with workplace procedures
- 3 Document and submit quotation**
- 3.1** Material and equipment supply documentation is forwarded to relevant person/s for processing in accordance with workplace procedures
 - 3.2** Material and equipment supply documentation is filed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Preparing specifications for the supply of materials and equipment must include at least two different electrotechnology projects exceeding \$20,000 and can apply to any of the following electrotechnology disciplines:

- automation technologies
- computers
- data communications
- electrical
- electrical machines
- electronics
- fire protection
- instrumentation
- refrigeration and air conditioning
- renewable/sustainable energy
- security technology

Unit Mapping Information

This unit replaces and is equivalent to UEENEEC004B Prepare specifications for the supply of materials and equipment for electrotechnology projects.

Links

Companion Volume implementation guides are found in VETNet - -

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEECO0013 Prepare specifications for the supply of materials and equipment for electrotechnology projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements
- ascertaining the extent of project work accurately
- dealing with suppliers and manufacturers
- dealing with unplanned events/situations in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
- determining performance and parameters of materials and equipment
- determining specification evidence of compliance
- documenting and submitting quotations, including specifications
- identifying need for additional services and incorporating into specifications
- preparing specifications for supply of materials and equipment
- sourcing materials and equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- materials and equipment evidence of compliance for electrotechnology project
- performance-based specifications
- prescriptive specifications
- purpose and nature of specification
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications including materials and equipment performance and parameters
- relevant WHS/OHS legislated requirements
- relevant workplace documentation, including specifications

- relevant workplace policies and procedures
- services required with the supply of equipment.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECO0014 Prepare tender submissions for electrotechnology projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to prepare tender documents for electrotechnology projects.

It includes identifying tender requirements, verifying estimates and capacity to meet timelines. It also includes complying with legal requirements and documenting submissions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECO0001 Estimate electrotechnology projects

Competency Field

Commercial

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Ascertain tender requirements

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified, obtained and applied
- 1.2 WHS/OHS risk control measures and workplace procedures are followed

- 1.3 Work required under tender is determined from relevant documents
 - 1.4 Special conditions and requirements for lodging the tender are ascertained from relevant documents
 - 1.5 Appropriately competent person/s is engaged to estimate material labour and relevant costs
 - 1.6 Activities are planned to meet specified tender submission timeline
- 2 Assemble tender submission**
 - 2.1 All inputs to the tender are obtained and verified with relevant person/s responsible for their development
 - 2.2 Materials and human resources needed to complete the work under the conditions of the tender are confirmed with relevant person/s responsible
 - 2.3 Legal advice is sought on contingent aspects of the tender
 - 2.4 Contingency allowances are included in tender in accordance with workplace procedures
- 3 Document tender submission**
 - 3.1 Tender submission is documented in accordance with workplace procedures and relevant lodgement requirements
 - 3.2 Tender submission is verified for accuracy with relevant documents and prepared for lodgement in accordance with tender timeline

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEC006B Prepare tender submissions for electrotechnology projects.

Assessment Requirements for UEECO0014 Prepare tender submissions for electrotechnology projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - using risk control measures
- ascertaining the tender requirements, including:
 - planning tender submission activities
 - special conditions and requirements
- assembling tender submission, including:
 - ensuring tender submission is ready for lodgement before the closing date/time
- documenting tender submission.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant documents supplied with a tender
- relevant job safety assessments or risk mitigation processes
- relevant special conditions included in a tender
- relevant tender submission requirements
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace instructions, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to preparing tender submission for electrotechnology projects
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECO0015 Provide quotations for installation or service jobs

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to provide quotations for electrotechnology installation and service work that includes minor installations deemed to be less complex than a major installation requiring involved delivery structures and specialised supervision up to \$AU100,000.

It includes determining job specifications, using manufacturer catalogues, making enquiries, selecting compliant materials, pricing materials and labour costs, completing quotation documentation and applying workplace customer relations protocols.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Commercial

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Determine extent of installation or service work

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Scope of electrotechnology installation or service project work is determined from job specifications and discussions with customer and/or relevant person/s

- 1.2 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for the project work area are identified and applied
 - 1.3 WHS/OHS and regulatory requirements are assessed and incorporated in the work specification on which the quotation is based
 - 1.4 Scope of installation or service work for quotation is documented as a job specification and agreement sought with customer and/or relevant person/s
 - 1.5 Requests for alterations to job specification are negotiated with customer and/or relevant person/s in accordance with workplace procedures and regulatory requirements
- 2 Develop installation or service work quotation**
 - 2.1 List of materials are determined accurately and checked against job specification
 - 2.2 Materials, labour and other relevant service and margin costs are determined in accordance with workplace costing parameters and material supplier costs
 - 2.3 Quotation is quantified and costed against job specification and list of materials for costing accuracy in accordance with workplace procedures
 - 2.4 Unplanned customer situations are responded to in accordance with workplace procedures in a manner that minimises risk to service project
 - 2.5 Installation or service work quotation is reviewed and approved by delegated person in accordance with workplace procedures
- 3 Document and submit installation or service quotation**
 - 3.1 Quotation is documented in accordance with workplace policies and procedures
 - 3.2 Quotation is submitted to customer within specified timeframes

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Providing at least one quotation for a minor installation job and one for a service job not exceeding \$AU100,000 in value must include one of the following electrotechnology disciplines:

- automation technologies
- computers
- data communications
- electrical
- electrical machines
- electronics
- fire protection
- instrumentation
- refrigeration and air conditioning
- renewable/sustainable energy
- security technology

Unit Mapping Information

This unit replaces and is equivalent to UEENEEC003B Provide quotations for installation or service jobs.

Assessment Requirements for UEECO0015 Provide quotations for installation or service jobs

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements
- communicating effectively with suppliers and customers
- costing small or minor jobs up to the value of \$100,000, including:
 - allocating resources to be quantified and costed
 - costing labour plant and materials
 - calculating service costs and margins
- dealing with unplanned customer events/situations in accordance with workplace procedures
- determining list of material (also known as material take off), including type and quantity
- determining scope and extent of quotation work
- developing minor quotation and checking calculations using costing methods in accordance with workplace procedures
- documenting and submitting quotation in accordance with workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- enterprise communication methods, including:
 - communicating with personnel involving oral communications, written procedures, and work instructions
 - communicating with customers and suppliers
- work activities records, including:
 - methods for recording and maintaining work records
 - purpose and extent of maintaining work activities records in an enterprise
 - types of records for maintaining work activities in an enterprise

- work records required by regulation requirements
- enterprise customer relations protocols, including:
 - dealing with customer issues
 - procedures for dealing with customers
 - purpose of customer relations
- costing methods in an enterprise, including:
 - costing policy
 - labour charge out rates
 - margins
 - purchase prices and discounts for materials
- costing small jobs, including:
 - costing labour plant and materials
 - resources to be quantified and costed
 - service costs and margins
- relevant equipment manufacturer specifications
- relevant risk mitigation processes, including risk control measures
- relevant WHS/OHS legislated requirements
- relevant workplace costing policies.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals

UEECO0016 Receive and store materials and equipment for electrotechnology work

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to receive and store materials and equipment for electrotechnology work.

It includes receiving materials and equipment, checking consignment notes, storing materials and equipment, and completing the necessary documentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Commercial

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Receive materials and equipment

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified and applied
- 1.2 Hazards are identified, risks are assessed and control measures are implemented

- 1.3 Documentation for material and equipment deliveries is read and content is understood
 - 1.4 Deliveries are inspected for damage and checked against consignment documentation before receipt
 - 1.5 Discrepancies in deliveries are notified to work supervisor and relevant person/s in accordance with workplace procedures
 - 1.6 Materials and equipment are handled in accordance with WHS/OHS risk control work measures and workplace procedures
- 2 Store materials and equipment**
- 2.1 WHS/OHS risk control work measures and workplace procedures are followed
 - 2.2 Material and equipment are stored to prevent damage or loss in accordance with workplace procedures
 - 2.3 Security of the stored materials and equipment is maintained in accordance with workplace procedures
 - 2.4 Material and equipment documentation is forwarded to relevant person/s in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENECC008B Receive and store materials and equipment for electrotechnology work.

Assessment Requirements for UEECO0016 Receive and store materials and equipment for electrotechnology work

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- checking deliveries and dealing with and reporting discrepancies
- determining content and time of pending deliveries from relevant documentation
- implementing relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including risk control measures
- reading and forwarding documentation
- receiving and storing materials and equipment
- storing and securing materials and equipment to prevent damage or loss.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- enterprise communication methods, including:
 - communicating with personnel, including oral communications and written procedures and work instructions
 - communicating with suppliers
 - communicating with customers
- work activities records, including:
 - purpose and extent of maintaining work activities records in an enterprise
 - types of records for maintaining work activities in an enterprise
 - methods for recording and maintaining work records
 - work records required by regulation requirements
- stock control methods, including:
 - enterprise purchasing policy
 - stock database
 - purchase and sales entry mechanisms
 - reordering methods

- using basic computers and applications, including:
 - starting up
 - selecting application
 - entering information
 - saving
 - printing
- relevant job safety assessments or risk mitigation processes, including risk control measures
- relevant WHS/OHS legislated requirements
- relevant workplace documentation, including consignment notes
- relevant workplace policies and procedures
- stock loss prevention
- storage, handling and security of materials and equipment.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECO0017 Source and purchase material/parts for installation or service jobs

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to source and purchase/order materials/parts for installation or service jobs.

It includes determining job specifications, using manufacturer catalogues, making purchasing enquiries, selecting appropriate materials/parts and completing relevant purchasing documentation.

In this unit, the value of materials for small installation jobs is limited to \$AUD20,000.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Commercial

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Determine relevant materials/parts to purchase

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified, obtained and applied in accordance with

workplace procedures

- 1.2 WHS/OHS risk control measures and workplace procedures are followed
 - 1.3 Scope of installation or service work is determined from job specification drawings and/or results of service calls
 - 1.4 Materials/parts required for work are determined from job specifications or service calls
 - 1.5 Materials/parts required are documented in accordance with workplace procedures
- 2 Procure materials/parts**
- 2.1 Source of materials/parts are determined based on availability and price in accordance with workplace procurement procedures
 - 2.2 Approval to purchase alternative materials/parts is sought from supervisor in accordance with workplace procurement procedures
 - 2.3 Prices for the supply of materials/parts, particularly non-standard high-cost items, is sought in accordance with workplace procurement procedures
 - 2.4 Approval to purchase materials/parts is obtained in writing from the customer or relevant person/s in accordance with workplace procurement procedures
 - 2.5 Purchases are initiated based on price and availability of materials/parts within the required timeframe and in accordance with workplace procurement procedures
 - 2.6 Appropriate information technology is used to source and purchase materials/parts
- 3 Document materials/parts purchases**
- 3.1 Materials/parts purchased are allocated against the appropriate jobs
 - 3.2 Materials/parts purchases are documented in accordance with workplace procurement procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Sourcing and purchasing materials/parts must include at least one of the following electrotechnology disciplines:

- automation technologies
- computers
- data communications
- electrical
- electrical machines
- electronics
- fire protection
- instrumentation
- refrigeration and air conditioning
- renewable/sustainable energy
- security technology
- discounts
- goods and service tax (GST)
- delivery costs
- limited to \$AU20,000

Materials or parts purchased price documentation must include:

Purchase value of electrotechnology installation or service materials for small installation jobs is:

Unit Mapping Information

This unit replaces and is equivalent to UEENEEC002B Source and purchase material/parts for installation or service jobs.

Assessment Requirements for UEECO0017 Source and purchase material/parts for installation or service jobs

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying at least two different methods to source materials
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including risk control measures
- dealing with unplanned events in accordance with workplace procurement procedures
- determining material and part availability and arranging supply
- determining relevant materials/parts to purchase
- determining scope of work and materials/parts procurement requirements from job specifications
- documenting materials/parts purchases
- obtaining approval to purchase in accordance with workplace procurement procedures
- sourcing, obtaining quotes and purchasing appropriate materials/parts in accordance with workplace procurement procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- computers and applications, including:
 - entering information
 - printing
 - saving
 - selecting application
 - starting up
- job or project specifications
- relevant part and material manufacturer specifications
- relevant risk mitigation processes including risk control measures
- relevant WHS/OHS legislated requirements

- relevant workplace documentation, including:
 - methods for recording and maintaining work records
 - purpose and extent of work activities records
 - regulatory work record requirements
 - types of records for maintaining work activities
- relevant workplace policies and procedures, including procurement procedures, including:
 - common or preferred suppliers
 - delegated authority to purchase
 - procurement approvals process and procedures
 - purchasing systems
- sources or suppliers for obtaining materials/parts
- workplace communication methods, including:
 - communicating with customers
 - communicating with personnel
 - communicating with suppliers
 - oral and written communication.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEECO0018 Contribute to the commercialisation of products/applications/services

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to contribute to the commercialisation of products/applications/services.

It includes identifying and investigating opportunities for commercialisation within the organisation, commercialising a product/application/service and critically assessing the commercialisation process.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Commercial

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

- 1 Contribute to the identification and investigation of commercialisation opportunities**

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Commercialisation opportunities are identified and analysed in accordance with workplace procedures and organisational goals

- 1.2 Opportunities are evaluated to determine impact on current business and customer base
 - 1.3 Assessment of external factors, costs, benefits, risks, market opportunities and potential competitors is undertaken to determine the potential viability of opportunities
 - 1.4 Return on investment is determined in accordance with workplace procedures
 - 1.5 Design brief commercialisation opportunities for the product/application/service is developed in a team environment
 - 1.6 Approval for design brief is obtained from relevant person/s
- 2 **Prepare to develop a product/application/service**
 - 2.1 Required outcomes identified in design brief with relevant person/s are confirmed
 - 2.2 Product/application/service is developed in consultation with relevant production personnel
 - 2.3 Development procedure is formulated to meet quality outcomes and manufacturer instructions for tooling, process, materials and equipment in accordance with work health and safety (WHS)/occupational health and safety (OHS) requirements and relevant industry standards
 - 2.4 Approval of development procedure is obtained from relevant person/s
- 3 **Contribute to the development of design**
 - 3.1 Development procedure is confirmed with relevant person/s
 - 3.2 Development of a product/application/service product is coordinated in accordance with the design brief and workplace procedures
 - 3.3 Development results are recorded in accordance with workplace procedures
 - 3.4 Development results and characteristics outside of design and development specifications are analysed and identified

- 3.5 Changes are recommended, as required, to achieve product/application/service quality and production requirements
 - 3.6 Approval of changes is obtained from relevant person/s
 - 3.7 Product/application/service is revised, as required, to achieve quality and production requirements
- 4 **Document and report development outcomes**
 - 4.1 Product/application/service development objectives are met
 - 4.2 Product/application/service development reporting requirements are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEER006B Contribute to the commercialisation of products/applications/ services.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECO0018 Contribute to the commercialisation of products/applications/services

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and includes:

- employing techniques, procedures, information and resources available in the workplace
- analysing and identifying development results and characteristics outside design and development specifications
- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements, including using risk control measures
- assessing external factors to determine the potential viability
- consulting with relevant personnel for product/application/service development
- contributing to the development of design within a team
- contributing to the identification and investigation of commercialisation opportunities
- determining return on investment
- documenting and reporting product/application/service development outcomes
- evaluating opportunities to current business and customer base
- formulating and coordinating development procedures
- identifying design brief outcomes
- preparing to develop a product/application/service
- recommending changes to achieve product/application/service quality and production requirements
- recording development results.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- products/applications/services commercialisation and safe working practices, including:
 - work in a team encompassing:
 - types of teams - managerial, administrative, project-based, commercial and social
 - roles, responsibilities and accountabilities of team members - the role, responsibility and accountability of individuals, teams, organisational management and clients
 - working in a team - identification and utilisation of team member skills and

- knowledge; maximising benefits of team diversity; team planning; team commitment and cooperation; improving/maximising team performance to achieve goals; team monitoring and adjustment; plain English literacy and communication; leading, facilitating, participating, coaching and mentoring
- working with clients - client relations, client liaison and the practice of working with clients
 - conflict resolution – personality analysis tools and strategies for dealing with difficult people
 - intellectual property concepts encompassing:
 - intellectual property and Australian law - the place of intellectual property in Australian law, past cases and outcomes, and necessary considerations
 - the nature of intellectual property - what is intellectual property? what isn't intellectual property? why is intellectual property relevant? what can intellectual property rights do? what can't intellectual property rights do?
 - intellectual property rights - patents, copyright, designs, confidential information and other specialty rights
 - managing intellectual property - identifying intellectual property; deciding what to protect; strategies for managing intellectual property; how intellectual property rights work together; intellectual property versus time, effort and finances; sources of assistance, including publications, intellectual property professionals, lawyers, business advisors and marketing consultants
 - enforcement of intellectual property - the enforcement process, the role of lawyers and resolution
 - the changing face of intellectual property - development of intellectual property right laws; changes to intellectual property right laws; extensions of intellectual property rights into non-traditional areas, including cultural, property arenas and the global marketplace
 - commercialisation concepts encompassing:
 - commercialisation - definition of commercialisation; triggers for commercialisation; past commercialisation successes; past commercialisation failures; triggers for commercialisation; methods for identifying a good product/idea/service/application; sources of assistance in regard to commercialisation, including documents, lawyers, business advisors and marketing consultants
 - the commercialisation process - the concept; does the concept fit with the organisation's goals? is there a market? what is the market? will the product meet the market requirements? can the product be sold? how can the product be sold? can the product be produced? how can the product be produced? can the production be repeated?
 - commercialisation arrangements - sole ventures, joint ventures, licensing and legal aspects of commercialisation
 - commercialisation planning - costing, marketing, production/development, distribution and sales
 - competition - who are the competitors? what are they doing and how quickly? and internal development relevant to competition
 - critical analysis of the commercialisation process for continuous improvement -

- successes, opportunities for improvement, controllable influences, uncontrollable influences and formulation of recommendations
- WHS/OHS principles and fundamentals encompassing:
 - underlying principles of WHS/OHS
 - general aims and objectives of the relevant state or territory legislation relating to WHS/OHS
 - employer and employee responsibilities, rights and obligations
 - major functions of safety committees and representatives
 - powers given to WHS/OHS inspectors
 - housekeeping and potential hazards in relation to improper housekeeping
 - selecting appropriate personal protective equipment (PPE) given hazardous situations
 - the work environment encompassing:
 - typical hazards associated with a range of work environments
 - procedures used to control the risks associated with these hazards
 - principles of risk assessment/management and state the purpose of each
 - hierarchy of WHS/OHS hazard control measures
 - required documentation for risk assessment
 - commonly used workplace safety signs
 - workplace emergencies that pose a threat to health and safety and suitable procedure for an emergency workplace evacuation
 - appropriate fire extinguisher for a given type of fire
 - requirements for the location, mounting and maintenance of portable fire extinguishers
 - basic process of fighting a fire
 - safe premises, buildings and security are important in an industrial setting and the consequences of non-compliance with these
 - standard work procedure is and why they are required in some circumstances
 - manual handling encompassing:
 - typical manual handling injuries and the effect they can have on lifestyle
 - situations that may cause manual handling injuries
 - correct procedures for lifting and carrying to prevent manual handling injuries
 - chemicals in the workplace encompassing:
 - hazardous substances and dangerous goods
 - classification of chemicals as hazardous substances and/or dangerous goods
 - requirements for labelling of chemicals in the workplace
 - safe storage procedures for chemicals
 - purpose of and interpretation of SDS/MSDS
 - working at heights encompassing:
 - dangers associated with working on ladders and scaffolds
 - identification of work area as a height risk and use of appropriate safety equipment to prevent a fall

- selecting an appropriate ladder for a given situation and perform a safety check before use
- precautions that should be taken when ascending and working off a ladder
- precautions that should be taken when working on and around a scaffold and elevated platforms
- confined spaces encompassing:
 - hazards associated with working in a confined space
 - identifying workplace situations that could be classified as a confined space
 - control measures for working in a designated confined space
- physical and psychological hazards encompassing:
 - short and long-term effects of excessive noise and techniques to avoid damage to hearing due to excessive noise
 - effects of vibration on the human body and work practices to protect against vibration
 - effects of thermal stress on the human body and work practices to protect against thermal stress
 - effects of ultraviolet (UV) radiation on the human body and work practices to protect against UV radiation
 - dangers associated with laser operated equipment and tools and suitable protective measures to overcome the danger
 - occupational overuse syndrome, state examples of how it occurs and describe means to overcome it
 - factors that cause stress in the workplace, symptoms of a person suffering from stress and personal stress management techniques
 - detrimental effects and dangers of drug and alcohol use in the workplace
- working safely with electricity encompassing:
 - effects of electric shock on the human body
 - common causes of electrical accidents
 - precautions that can minimise the chance of electric shock (earthing, extra-low voltage (ELV), fuses, circuit breakers and residual current devices (RCDs))
 - protection offered by RCDs
 - need for ensuring the (safe) isolation of an electrical supply
 - appropriate method of removing an electric shock victim from a live electrical situation
- life support - cardiopulmonary resuscitation (CPR) in the workplace encompassing:
 - first aid
 - responsibilities of the first aider
 - priorities of first aid management for any accident or injury
 - procedures required at an accident scene
 - legal and ethical issues, which may impact on the management of care
 - duty of care
 - examination of a casualty for injuries

- effect of cardiopulmonary arrest on the body
- managing simulated conditions of airway obstruction; respiratory arrest and cardiopulmonary arrest
- single and two-person CPR
- signs and symptoms of an altered level of consciousness
- management of simulation of a casualty with an altered level of consciousness
- signs and symptoms of shock
- management of simulation of a casualty in shock
- commercialisation
- design brief
- relevant industry standards
- relevant manufacturer specifications and operating instructions
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace quality, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment used in industry
- resources that reflect current industry practices in relation to contributing to the commercialisation of products/applications/services
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECO0019 Contribute to the conduct of a research project

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to contribute to the conduct of a research project.

It includes identifying information sources, collecting and analysing information in accordance with research project objectives. It also includes compiling and presenting results in accordance with workplace procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Commercial

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Confirm research parameters

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Consultation with relevant person/s is undertaken to ensure scope, objectives and outcomes of research are identified
- 1.2 Timeframes, resources, budget and quality standards for research are confirmed and applied

- | | | |
|---|------------|--|
| | 1.3 | Research methodology and strategies are confirmed and agreed |
| 2 Identify sources and availability of information | 2.1 | Type and range of information required is identified for research objectives |
| | 2.2 | Information sources are identified and evaluated for contribution to research |
| | 2.3 | Protocols and workplace procedures required to access information are identified and relevant action taken |
| | 2.4 | Availability of material is identified and relevant action taken |
| | 2.5 | Obstacles to the collection of information are identified and relevant action taken |
| 3 Collect information for research objectives | 3.1 | Information collection methods are applied in accordance with workplace procedures and agreements with information sources |
| | 3.2 | Types and range of information collected is in accordance with research objectives |
| | 3.3 | Information is recorded in relevant format in accordance with workplace procedures |
| 4 Analyse and compile research information | 4.1 | Methods of analysis and compilation are confirmed as relevant for the information collected and research objectives |
| | 4.2 | Methodologies and current technological developments are incorporated in accordance with relevant industry standards |
| | 4.3 | Results are obtained within specified time, budget and quality constraints |
| | 4.4 | Results are recorded in relevant format in accordance with workplace procedures |
| | 4.5 | Results are interpreted and conclusions documented |
| | 4.6 | Results and conclusions are reviewed with relevant person/s |
| 5 Present research | 5.1 | Report/summary/presentation detailing research results and conclusions is developed in accordance with |

conclusions

workplace procedures

- 5.2 Confidential information is protected in accordance with agreements and/or workplace procedures
- 5.3 Sources of information are acknowledged or cited in a recognised and relevant format
- 5.4 Success of the research methodology is evaluated against research objectives

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEER002B Contribute to the conduct of a research project.

Assessment Requirements for UEECO0019 Contribute to the conduct of a research project

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- employing techniques, procedures, information and resources available in the workplace
- acknowledging and citing sources of information
- analysing and compiling research information
- collecting information to achieve research objectives
- confirming research parameters
- identifying scope, objectives and outcomes
- identifying sources and availability of information
- identifying type and range of information
- interpreting results and documenting conclusions
- presenting research results and conclusions
- recording information in relevant format.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- conducting research projects and safe working practices, including:
 - project planning encompassing:
 - purpose of project planning
 - documents needed to plan a project
 - factors influencing sequence and restraints of project activities
 - critical path analysis encompassing:
 - graphical representation methods
 - methods of representing time/rates
 - research concepts encompassing:
 - terminology - terminology used in a research workplace and terminology used in research-specific literature
 - theory – why conduct research, the history of research, past research successes, past

- research failures, research protocols and research practices
- the research environment - the research work environment; standard research practices; industrial, legal, ethical, political and market environment considerations; legislation and regulation; and contractual obligations of all parties
 - planning to conduct research - concept development and/or research brief analysis; research objectives; research deliverables; research project plan; literature reviews; methodology development, including experimental design, technology selection, and information management system selection
 - clients - identifying client viewpoints and stake in project; identifying client requirements and parameters; determining research budgets, timelines, milestones and quality attributes with clients
 - research, development and commercialisation - research and development goals versus commercialisation goals and realities, research and development to inspire a commercialisation process
 - work in a team encompassing:
 - types of teams - managerial, administrative, project-based, commercial and social
 - roles, responsibilities and accountabilities of team members - the role, responsibility and accountability of individuals, teams, organisational management and clients
 - working in a team - identification and utilisation of team member skills and knowledge; maximising benefits of team diversity; team planning; team commitment and cooperation; improving/maximising team performance to achieve goals; team monitoring and adjustment; plain English literacy and communication; and leading, facilitating, participating, coaching and mentoring
 - working with clients - client relations, client liaison, and the practice of working with clients
 - conflict resolution – personality analysis tools and strategies for dealing with difficult people
 - scientific writing and communication encompassing:
 - types of scientific writing and communication - the distinguishing characteristics of the different types of scientific writing
 - purpose of the different types of scientific writing - product development justification and specifications, management advice, scientific papers/publications, conference/meeting presentations, policy documents, planning documents and reports
 - types of audience - the features and characteristics of an audience, including an audience's professional, social, cultural, ethnic background and physical and academic capabilities; the importance of 'plain English' written and oral communication
 - scientific writing techniques - the component parts of scientific documents, including aim, materials, method, results, discussion, conclusion, references; the required content of each component part; scientific referencing techniques, including bibliographies, reference lists, citations, footnotes, quotes and acknowledgements; scientific labelling techniques, including graphs, tables, diagrams and figures; techniques for documenting results, including text, graphs, tables, diagrams and figures; organisational standards for document and presentation production, including standard organisational document templates, letterheads, headers, footers and logos
 - oral communication techniques - techniques for communicating to large groups,

- including conference presentations and speeches; techniques for communicating to small groups, including meeting presentations, team discussions and planning forums
- electronic communication formats - world-wide-web – protocols and practices; email – protocols and practices; transfer of information via CD Rom/floppy disk; use of PDF and other secure files
 - confidentiality considerations - confidentiality practices to protect the organisation, confidentiality practices to protect the client and confidentiality practices to protect providers of information/research cohorts
 - data collection techniques encompassing:
 - data types - quantitative data, including empirical, non-parametric and parametric; qualitative data; raw; graphic; diagrams; original; textual; multimedia and electronic
 - data collection - data sources; consultation protocols and practices; survey methodologies, including interviews, surveys, chat rooms and focus groups; literature reviews, including traditional and web-based; group facilitation and presentation; questioning, active listening and clarification; obstacles to data collection, including unavailable data, inconsistent data, confidentiality, security and data limitations
 - evaluating data quality - reliability, accuracy, clarity and validity; contribution to research and relevance to research objectives
 - data analysis and presentation encompassing:
 - data analysis techniques - univariate analysis, multivariate analysis, decision trees, genetic algorithms, neural networks, gap analysis, urgency and impact
 - data analysis technique selection - determining the correct analysis technique(s); determining the correct sequence of analysis techniques; accommodating influencing factors, including research objectives, budget, timeline and quality requirements, data limitations, confidentiality and security
 - data interpretation - determining results; determining conclusions; benchmarking; quality assurance, including consideration of accuracy, validity and clarity
 - data presentation encompassing:
 - determining the correct form of presentation for the audience, including colleagues, scientific community, marketing and commercialisation specialists, general community, industry and mixed (i.e. conference audience)
 - forms of documentary presentation, including reports, journal articles, scientific papers, graphs, tables, diagrams and electronic formats; forms of verbal presentation, including meetings, client briefings and conferences; support of a new concept; need for further research; commercialisation opportunity; and quality assurance, including accuracy, validity and clarity of information presented
 - product development and trials encompassing:
 - identifying client and managerial requirements for production and trials - required outcome(s), key performance indicators (KPIs), timelines, financing, resources and quality assurance
 - influencing factors - internal business goals and strategies; technical specifications (chemical, mechanical, environmental); industrial considerations; regulatory considerations; legislative considerations; intellectual property; Australian and international standards and codes of practice; market requirements; resource requirements, including personnel tools and equipment (principles and practices),

materials and finances

- product development arrangements - licensing agreements, joint ventures and sole ventures
- relevant documentation - codes of practice; standard operating procedures (SOPs); product formulation documentation; safety data sheets (SDS)/material safety data sheets (MSDS); equipment and quality manuals; calibration and maintenance schedules; enterprise recording and reporting procedures; and material, equipment and product specifications
- development and trial processes - proof of concept; trialling concepts; definitions/specifications; types of development and trial processes, including phase A product and trial, phase B product and trial, user trials, ergonomics and usability testing; pre-defined acceptance criteria, confidence limits; data collection and analysis; production; evaluation and recommendation formulation
- intellectual property concepts encompassing:
 - intellectual property and Australian law - the place of intellectual property in Australian law, past cases and outcomes, and necessary considerations
 - the nature of intellectual property - what is intellectual property? what isn't intellectual property? why is intellectual property relevant? what can intellectual property rights do? what can't intellectual property rights do?
 - intellectual property rights - patents, copyright, designs, confidential information and other specialty rights
 - managing intellectual property - identifying intellectual property; deciding what to protect; strategies for managing intellectual property; how intellectual property rights work together; intellectual property versus time, effort and finances; sources of assistance, including publications, intellectual property professionals, lawyers, business advisors and marketing consultants
 - enforcement of intellectual property - the enforcement process, the role of lawyers and resolution
 - the changing face of intellectual property - development of intellectual property right laws; changes to intellectual property right laws; extensions of intellectual property rights into non-traditional areas, including cultural, property arenas and the global marketplace
- work health and safety (WHS)/occupational health and safety (OHS) principles and fundamentals encompassing:
 - underlying principles of WHS/OHS
 - general aims and objectives of the relevant state or territory legislation relating to WHS/OHS
 - employer and employee responsibilities, rights and obligations
 - major functions of safety committees and representatives
 - powers given to occupational health and safety inspectors
 - housekeeping and potential hazards in relation to improper housekeeping
 - selecting appropriate personal protective equipment (PPE) given hazardous situations
- the work environment encompassing:
 - typical hazards associated with a range of work environments

- procedures used to control the risks associated with these hazards
- principles of risk assessment/management and state the purpose of each
- hierarchy of WHS/OHS hazard control measures
- required documentation for risk assessment
- commonly used workplace safety signs
- workplace emergencies that pose a threat to health and safety and suitable procedure for an emergency workplace evacuation
- appropriate fire extinguisher for a given type of fire
- requirements for the location, mounting and maintenance of portable fire extinguishers
- basic process of fighting a fire
- safe premises, buildings and security are important in an industrial setting and the consequences of non-compliance with these
- standard work procedure is and why they are required in some circumstances
- manual handling encompassing:
 - typical manual handling injuries and the effect they can have on lifestyle
 - situations that may cause manual handling injuries
 - correct procedures for lifting and carrying to prevent manual handling injuries
 - chemicals in the workplace encompassing:
 - hazardous substances and dangerous goods
 - classification of chemicals as hazardous substances and/or dangerous goods
 - requirements for labelling of chemicals in the workplace
 - safe storage procedures for chemicals
 - purpose of and interpretation of SDS/MSDS
- working at heights encompassing:
 - dangers associated with working on ladders and scaffolds
 - identification of work area as a height risk and use of appropriate safety equipment to prevent a fall
 - selecting an appropriate ladder for a given situation and performing a safety check before use
 - precautions that should be taken when ascending and working off a ladder
 - precautions that should be taken when working on and around a scaffold and elevated platforms
- confined spaces encompassing:
 - hazards associated with working in a confined space
 - identifying workplace situations that could be classified as a confined space
 - control measures for working in a designated confined space
- physical and psychological hazards encompassing:
 - short and long-term effects of excessive noise and techniques to avoid damage to hearing due to excessive noise
 - effects of vibration on the human body and work practices to protect against vibration

- effects of thermal stress on the human body and work practices to protect against thermal stress
- effects of ultraviolet (UV) radiation on the human body and work practices to protect against UV radiation
- dangers associated with laser operated equipment and tools and suitable protective measures to overcome the danger
- occupational overuse syndrome, how it occurs and means to overcome it
- factors that cause stress in the workplace, symptoms of a person suffering from stress and personal stress management techniques
- detrimental effects and dangers of drug and alcohol use in the workplace
- working safely with electricity encompassing:
 - effects of electric shock on the human body
 - common causes of electrical accidents
 - precautions that can minimise the chance of electric shock (earthing, extra-low voltage (ELV), fuses, circuit breakers and residual current devices (RCDs))
 - protection offered by RCDs
 - need for ensuring the (safe) isolation of an electrical supply
 - appropriate method of removing an electric shock victim from a live electrical situation
- life support - cardiopulmonary resuscitation (CPR) in the workplace encompassing:
 - first aid
 - responsibilities of the first aider
 - priorities of first aid management for any accident or injury
 - procedures required at an accident scene
 - legal and ethical issues, which may impact on the management of care
 - 'duty of care'
 - examination of a casualty for injuries
 - effect of cardiopulmonary arrest on the body
 - managing simulated conditions of airway obstruction; respiratory arrest and cardiopulmonary arrest
 - single and two-person CPR
 - signs and symptoms of an altered level of consciousness
 - management of simulation of a casualty with an altered level of consciousness
 - signs and symptoms of shock
 - management of simulation of a casualty in shock
- relevant manufacturer specifications
- relevant methodologies and technological developments
- relevant timeframes, resources and budget
- relevant workplace documentation
- relevant workplace quality, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment

Assessment must occur in similar workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated similar workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to contributing to the conduct of a research project
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECO0020 Contribute to the development of a product/application/service

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to contribute to the development of a product/application/service.

It includes assisting to plan, coordinate and report on the development of a product/application/service.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Commercial

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Contribute to the design brief for a product/application/service

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Technical specifications, regulatory, industrial, intellectual property and market requirements of the product/application/service to be developed are negotiated and agreed with client/s, stakeholder/s and management

- 1.2 Technical specifications, regulatory, industrial, intellectual property and market requirements of product/application/service to be developed are confirmed in accordance with workplace procedures
 - 1.3 Resource/s, personnel, equipment and materials required to develop product/application/service are confirmed in accordance with workplace procedures
 - 1.4 Quality requirements and standards for development of the product/application/service are confirmed in accordance with workplace procedures
 - 1.5 Design brief contributions for the product/application/service is developed within a team environment
 - 1.6 Approval is obtained for design brief from relevant person/s
 - 2 **Prepare to develop a product/application/service**
 - 2.1 Required outcomes identified in design brief are confirmed with relevant person/s
 - 2.2 Product/application/service is developed in consultation with relevant production personnel
 - 2.3 Development procedure is formulated to meet quality outcomes and manufacturer instructions for tooling, process, materials and equipment in accordance with work health and safety (WHS)/occupational health and safety (OHS) requirements and relevant industry standards
 - 2.4 Approval is obtained of development procedure from relevant person/s
 - 3 **Contribute to the development of product/application/service**
 - 3.1 Development procedure is confirmed with relevant person/s
 - 3.2 Product/application/service product is developed in accordance with design brief and development procedures
 - 3.3 Development results are recorded in accordance with workplace procedures

- 3.4** Development results and characteristics outside of design and development specifications are identified
 - 3.5** Changes are recommended, as required, to achieve product/application/service quality and production requirements
 - 3.6** Approval of change is obtained from relevant person/s
 - 3.7** Revision of the product/application/service to achieve quality and production requirements is coordinated, as required
- 4 Document and report development outcomes**
 - 4.1** Product/application/service development objectives are met
 - 4.2** Product/application/service development reporting requirements are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEER003B Contribute to the development of a product/application/ service.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECO0020 Contribute to the development of a product/application/service

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- employing techniques, procedures, information and resources available in the workplace
- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements, including using risk control measures
- completing development reporting in accordance with workplace procedures
- confirming quality requirements and standards
- confirming resources, personnel, equipment and materials required to develop product/application/service
- contributing to development of design brief for a product/application/service
- contributing to the development of a product/application/service
- documenting and reporting product/application/service development outcomes
- formulating development procedures in accordance with WHS/OHS and relevant industry standards
- identifying development results and characteristics outside of design and specifications
- preparing to develop a product/application/service
- recommending changes to product/application/service quality and production requirements
- recording development results.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- product/application/service development and safe working practices, including:
 - project planning encompassing:
 - purpose of project planning
 - documents needed to plan a project
 - factors influencing sequence and restraints of project activities
 - critical path analysis encompassing:
 - graphical representation methods

- methods of representing time/rates
- project management encompassing:
 - defining project parameters - project scope, project stakeholders and clients, project phases and the relationship between phases, time requirements and limitations, resource requirements and limitations, quality requirements and limitations
 - time management - time management concepts and standard practices for ensuring a project runs to time
 - financial management - financial management concepts; standard practices for managing project finances, project budgets, costs, variations and estimations; invoicing against project phases/deliverables and acquittals
 - quality management - quality management concepts and standard practices for managing quality within a project
 - human resource management - human resource management concepts and standard practices for managing personnel within a project
 - communication management - communication management concepts and standard practices for managing communication within a project
 - risk management and contingencies - risk management concepts, standard practices for managing risk within a project, internal risks, external risks, risk minimisation, risk removal and contingencies
 - procurement management - procurement management concepts and standard practices for managing procurement
 - physical resource management - types of physical resource, including equipment, technology, information and facilities; physical resource management concepts; and standard practices for managing physical resources
 - contracts - understanding project contracts; standard practices for working to contract specifications; contract format; contract content; legal obligations of contract parties; and accompanying documentation, including contract schedules
 - performance assessment and continuous improvement - standard performance assessment practices and standard continuous improvement practices
 - engineering ethics principles
- work in a team encompassing:
 - types of teams - managerial, administrative, project-based, commercial and social
 - roles, responsibilities and accountabilities of team members - the role, responsibility and accountability of individuals, teams, organisational management and clients
 - working in a team - identification and utilisation of team member skills and knowledge; maximising benefits of team diversity; team planning; team commitment and cooperation; improving/maximising team performance to achieve goals; team monitoring and adjustment; plain English literacy and communication; and leading, facilitating, participating, coaching and mentoring
 - working with clients - client relations, client liaison and the practice of working with clients
 - conflict resolution – personality analysis tools and strategies for dealing with difficult people
- scientific writing and communication encompassing:

- types of scientific writing and communication - the distinguishing characteristics of the different types of scientific writing
- purpose of the different types of scientific writing - product development justification and specifications, management advice, scientific papers/publications, conference/meeting presentations, policy documents, planning documents and reports
- types of audience - the features and characteristics of an audience, including an audience's professional, social, cultural, ethnic background and physical and academic capabilities; the importance of 'plain English' written and oral communication
- scientific writing techniques - the component parts of scientific documents, including aim, materials, method, results, discussion, conclusion, references; the required content of each component part; scientific referencing techniques, including bibliographies, reference lists, citations, footnotes, quotes and acknowledgements; scientific labelling techniques, including graphs, tables, diagrams and figures; techniques for documenting results, including text, graphs, tables, diagrams, and figures; organisational standards for document and presentation production, including standard organisational document templates, letterheads, headers, footers and logos
- oral communication techniques - techniques for communicating to large groups, including conference presentations and speeches; techniques for communicating to small groups, including meeting presentations, team discussions and planning forums
- electronic communication formats - world-wide-web – protocols and practices; email – protocols and practices; transfer of information via CD Rom/floppy disk; use of PDF and other secure files
- confidentiality considerations - confidentiality practices to protect the organisation, confidentiality practices to protect the client and confidentiality practices to protect providers of information/research cohorts
- data collection techniques encompassing:
 - data types - quantitative data, including empirical, non-parametric, parametric; qualitative data; raw; graphic; diagrams; original; textual; multimedia and electronic
 - data collection - data sources; consultation protocols and practices; survey methodologies, including interviews, surveys, chat rooms and focus groups; literature reviews, including traditional and web-based; group facilitation and presentation; questioning, active listening and clarification; obstacles to data collection, including unavailable data, inconsistent data, confidentiality, security and data limitations
 - evaluating data quality - reliability, accuracy, clarity and validity; contribution to research; and relevance to research objectives
- data analysis and presentation encompassing:
 - data analysis techniques - univariate analysis, multivariate analysis, decision trees, genetic algorithms, neural networks, gap analysis, urgency and impact
 - data analysis technique selection - determining the correct analysis technique(s); determining the correct sequence of analysis techniques; accommodating influencing factors, including research objectives, budget, timeline and quality requirements, data limitations, confidentiality and security
 - data interpretation - determining results; determining conclusions; benchmarking; quality assurance, including consideration of accuracy, validity and clarity
 - data presentation:

- determining the correct form of presentation for the audience, including colleagues, scientific community, marketing and commercialisation specialists, general community, industry and mixed (i.e. conference audience)
- forms of documentary presentation, including reports, journal articles, scientific papers, graphs, tables, diagrams and electronic formats; forms of verbal presentation, including meetings, client briefings and conferences; support of a new concept; need for further research; commercialisation opportunity; and quality assurance, including accuracy, validity and clarity of information presented
- product development and trials encompassing:
 - identifying client and managerial requirements for production and trials - required outcome(s), key performance indicators (KPIs), timelines, financing, resources and quality assurance
 - influencing factors - internal business goals and strategies; technical specifications (chemical, mechanical, environmental); industrial considerations; regulatory considerations; legislative considerations; intellectual property; Australian and international standards and codes of practice; market requirements; resource requirements, including personnel tools and equipment (principles and practices), materials and finances
 - product development arrangements - licensing agreements, joint ventures and sole ventures
 - relevant documentation - codes of practice, standard operating procedures (SOPs), product formulation documentation, safety data sheets (SDS)/material safety data sheets (MSDS), equipment and quality manuals, calibration and maintenance schedules, enterprise recording and reporting procedures, material, equipment and product specifications
 - development and trial processes - proof of concept; trailing concepts; definitions/specifications; types of development and trial processes, including phase A product and trial, phase B product and trial, user trials, ergonomics and usability testing; pre-defined acceptance criteria, confidence limits; data collection and analysis; production; evaluation and recommendation formulation
- intellectual property concepts encompassing:
 - intellectual property and Australian law - the place of intellectual property in Australian law, past cases and outcomes, and necessary considerations
 - the nature of intellectual property - what is intellectual property? what isn't intellectual property? why is intellectual property relevant? what can intellectual property rights do? what can't intellectual property rights do?
 - intellectual property rights - patents, copyright, designs, confidential information and other specialty rights
 - managing intellectual property - identifying intellectual property; deciding what to protect; strategies for managing intellectual property; how intellectual property rights work together; intellectual property versus time, effort, finances; sources of assistance, including publications, intellectual property professionals, lawyers, business advisors and marketing consultants
 - enforcement of intellectual property - the enforcement process, the role of lawyers and resolution

- the changing face of intellectual property - development of intellectual property right laws; changes to intellectual property right laws; extensions of intellectual property rights into non-traditional areas, including cultural, property arenas and the global marketplace
- work health and safety (WHS)/occupational health and safety (OHS) principles and fundamentals encompassing:
 - underlying principles of WHS/OHS
 - general aims and objectives of the relevant state or territory legislation relating to WHS/OHS
 - employer and employee responsibilities, rights and obligations
 - major functions of safety committees and representatives
 - powers given to occupational health and safety inspectors
 - housekeeping and potential hazards in relation to improper housekeeping
 - selecting appropriate personal protective equipment (PPE) given hazardous situations
- the work environment encompassing:
 - typical hazards associated with a range of work environments
 - procedures used to control the risks associated with these hazards
 - principles of risk assessment / management and state the purpose of each
 - hierarchy of WHS/OHS hazard control measures
 - required documentation for risk assessment
 - commonly used workplace safety signs
 - workplace emergencies that pose a threat to health and safety and suitable procedure for an emergency workplace evacuation
 - appropriate fire extinguisher for a given type of fire
 - requirements for the location, mounting and maintenance of portable fire extinguishers
 - basic process of fighting a fire
 - safe premises, buildings and security are important in an industrial setting and the consequences of non-compliance with these
 - standard work procedure is and why they are required in some circumstances
- manual handling encompassing:
 - typical manual handling injuries and the effect they can have on lifestyle
 - situations that may cause manual handling injuries
 - correct procedures for lifting and carrying to prevent manual handling injuries
 - chemicals in the workplace encompassing:
 - hazardous substances and dangerous goods
 - classification of chemicals as hazardous substances and/or dangerous goods
 - requirements for labelling of chemicals in the workplace
 - safe storage procedures for chemicals
 - purpose of and interpretation of SDS/MSDS
- working at heights encompassing:

- dangers associated with working on ladders and scaffolds
- identification of work area as a height risk and use appropriate safety equipment to prevent a fall
- selecting an appropriate ladder for a given situation and perform a safety check before use
- precautions that should be taken when ascending and working off a ladder
- precautions that should be taken when working on and around a scaffold and elevated platforms
- confined spaces encompassing:
 - hazards associated with working in a confined space
 - identifying workplace situations that could be classified as a confined space
 - control measures for working in a designated confined space
- physical and psychological hazards encompassing:
 - short and long-term effects of excessive noise and techniques to avoid damage to hearing due to excessive noise
 - effects of vibration on the human body and work practices to protect against vibration
 - effects of thermal stress on the human body and work practices to protect against thermal stress
 - effects of ultraviolet (UV) radiation on the human body and work practices to protect against UV radiation
 - dangers associated with laser operated equipment and tools and suitable protective measures to overcome the danger
 - occupational overuse syndrome, state examples of how it occurs and describe means to overcome it
 - factors that cause stress in the workplace, symptoms of a person suffering from stress and personal stress management techniques
 - detrimental effects and dangers of drug and alcohol use in the workplace
- working safely with electricity encompassing:
 - effects of electric shock on the human body
 - common causes of electrical accidents
 - precautions that can minimise the chance of electric shock (earthing, extra-low voltage (ELV), fuses, circuit breakers and residual current devices (RCDs))
 - protection offered by RCDs
 - need for ensuring the (safe) isolation of an electrical supply
 - appropriate method of removing an electric shock victim from a live electrical situation
- life support - cardiopulmonary resuscitation (CPR) in the workplace encompassing:
 - first aid
 - responsibilities of the first aider
 - priorities of first aid management for any accident or injury
 - procedures required at an accident scene

- legal and ethical issues, which may impact on the management of care
- duty of care
- examination of a casualty for injuries
- effect of cardiopulmonary arrest on the body
- managing simulated conditions of airway obstruction; respiratory arrest and cardiopulmonary arrest
- single and two-person CPR
- signs and symptoms of an altered level of consciousness
- management of simulation of a casualty with an altered level of consciousness
- signs and symptoms of shock
- management of simulation of a casualty in shock
- design brief
- relevant industry standards
- relevant manufacturer specifications and operating instructions
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace, quality, policies and procedures
- team environments.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to contributing to the development of a product/application/service
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECO0021 Contribute to the planning of a research project

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to contribute to the planning of a research project.

It includes the ability to gather background information relevant to a research project, interpret and analyse the context of the research project, and contribute to the development of a research plan.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Commercial

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Acquire and interpret information relevant to research project

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Information sources of research topic are identified and evaluated for reliability and validity

1.2 Information about the consumer product market and competition is collected, reviewed and interpreted

- 1.3 Key client/stakeholder views and interests are identified and recorded
 - 1.4 Industrial, legal, ethical and political context of the research project are identified and applied
 - 2 **Analyse the logistics of a research project**
 - 2.1 Client, stakeholder and organisational requirements are identified and explained
 - 2.2 Contractual obligations of project are identified and implemented
 - 2.3 Resources to support the project are identified and acquired
 - 2.4 Quality standards for the project are identified and maintained
 - 3 **Contribute to the planning of a research project**
 - 3.1 Project objectives, methodology and strategies appropriate to the requirements and contractual obligations of the project are identified and selected in accordance with workplace procedures
 - 3.2 Project phases, milestones, reporting and review points are identified in accordance with workplace procedures
 - 3.3 Criteria for evaluating each project deliverable against pre-defined quality standards are developed in accordance with workplace procedures
 - 3.4 A research plan is developed in accordance with workplace procedures
 - 4 **Seek endorsement and distribution of research project plan**
 - 4.1 Draft research plan is forwarded to client/s, stakeholder/s and/or relevant person/s for consideration and appraisal
 - 4.2 Draft research plan is amended to incorporate recommended improvements from client/s, stakeholder/s and/or relevant person/s
 - 4.3 Final research plan is confirmed in accordance with project deliverables by relevant person/s
 - 4.4 Final research plan is distributed to relevant person/s and team members

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEER001B Contribute to the planning of a research project.

Assessment Requirements for UEECO0021 Contribute to the planning of a research project

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- employing techniques, procedures, information and resources available in the workplace
- acquiring and interpreting information relevant to research project
- analysing logistics of a research project
- applying industrial, legal, ethical and political context
- contributing to the planning of a research project
- developing criteria for evaluating each project deliverable
- distributing final research plan
- identifying and evaluating information sources
- identifying and maintaining quality standards
- identifying contractual obligations of project
- incorporating improvements from clients/stakeholders/relevant personnel
- reviewing and interpreting consumer product market information
- seeking endorsement and distribution of a research project plan
- selecting project objectives, methodology and strategies.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- research project planning and safe working practices, including:
 - project planning encompassing:
 - purpose of project planning
 - documents needed to plan a project
 - factors influencing sequence and restraints of project activities
 - critical path analysis encompassing:
 - graphical representation methods
 - methods of representing time/rates
 - project management encompassing:

- defining project parameters - project scope; project stakeholders and clients; project phases and the relationship between phases; time requirements and limitations; resource requirements and limitations; quality requirements and limitations
- time management - time management concepts and standard practices for ensuring a project runs to time
- financial management - financial management concepts; standard practices for managing project finances, project budgets, costs, variations and estimations; invoicing against project phases/deliverables and acquittals
- quality management - quality management concepts and standard practices for managing quality within a project
- human resource management - human resource management concepts and standard practices for managing personnel within a project
- communication management - communication management concepts and standard practices for managing communication within a project
- risk management and contingencies - risk management concepts; standard practices for managing risk within a project; internal risks; external risks; risk minimisation; risk removal and contingencies
- procurement management - procurement management concepts and standard practices for managing procurement
- physical resource management - types of physical resource, including equipment, technology, information and facilities; physical resource management concepts; and standard practices for managing physical resources
- contracts - understanding project contracts; standard practices for working to contract specifications; contract format; contract content; legal obligations of contract parties; and accompanying documentation, including contract schedules
- performance assessment and continuous improvement - standard performance assessment practices; standard continuous improvement practices
- engineering ethics principles
- research concepts encompassing:
 - terminology - terminology used in a research workplace and terminology used in research-specific literature
 - theory – why conduct research, the history of research, past research successes, past research failures, research protocols and research practices
 - the research environment - the research work environment; standard research practices; industrial, legal, ethical, political and market environment considerations; legislation and regulation; and contractual obligations of all parties
 - planning to conduct research - concept development and/or research brief analysis; research objectives; research deliverables; research project plan; literature reviews; and methodology development, including experimental design, technology selection, and information management system selection
 - clients - identifying client viewpoints and stake in project; identifying client requirements and parameters; determining research budgets, timelines, milestones and quality attributes with clients
 - research, development and commercialisation - research and development goals

versus commercialisation goals and realities; research and development to inspire a commercialisation process

- work in a team encompassing:
 - types of teams - managerial, administrative, project-based, commercial and social
 - roles, responsibilities and accountabilities of team members - the role, responsibility and accountability of individuals, teams, organisational management and clients
 - working in a team - identification and utilisation of team member skills and knowledge; maximising benefits of team diversity; team planning; team commitment and cooperation; improving/maximising team performance to achieve goals; team monitoring and adjustment; plain English literacy and communication; and leading, facilitating, participating, coaching and mentoring
 - working with clients - client relations, client liaison and the practice of working with clients
 - conflict resolution – personality analysis tools and strategies for dealing with difficult people
- scientific writing and communication encompassing:
 - types of scientific writing and communication - the distinguishing characteristics of the different types of scientific writing
 - purpose of the different types of scientific writing - product development justification and specifications; management advice; scientific papers/publications; conference/meeting presentations; policy documents; planning documents and reports
 - types of audience - the features and characteristics of an audience, including an audience's professional, social, cultural, ethnic background and physical and academic capabilities; the importance of 'plain English' written and oral communication
 - scientific writing techniques - the component parts of scientific documents, including aim, materials, method, results, discussion, conclusion, references and the required content of each component part; scientific referencing techniques, including bibliographies, reference lists, citations, footnotes, quotes, and acknowledgements; scientific labelling techniques, including graphs, tables, diagrams and figures; techniques for documenting results, including text, graphs, tables, diagrams and figures; organisational standards for document and presentation production, including standard organisational document templates, letterheads, headers, footers and logos
 - oral communication techniques - techniques for communicating to large groups, including conference presentations and speeches; techniques for communicating to small groups, including meeting presentations, team discussions and planning forums
 - electronic communication formats - world-wide-web – protocols and practices; email – protocols and practices; transfer of information via CD Rom/floppy disk; use of PDF and other secure files
 - confidentiality considerations - confidentiality practices to protect the organisation, confidentiality practices to protect the client, and confidentiality practices to protect providers of information/research cohorts
- data collection techniques encompassing:
 - data types - quantitative data, including empirical, non-parametric, parametric; qualitative data; raw; graphic; diagrams; original; textual; multimedia and electronic

- data collection - data sources; consultation protocols and practices; survey methodologies, including interviews, surveys, chat rooms and focus groups; literature reviews, including traditional and web-based; group facilitation and presentation; questioning; active listening and clarification; obstacles to data collection, including unavailable data, inconsistent data, confidentiality, security and data limitations
- evaluating data quality - reliability, accuracy, clarity, validity, contribution to research and relevance to research objectives
- data analysis and presentation encompassing:
 - data analysis techniques - univariate analysis, multivariate analysis, decision trees, genetic algorithms, neural networks, gap analysis, urgency and impact
 - data analysis technique selection - determining the correct analysis techniques; determining the correct sequence of analysis techniques; accommodating influencing factors, including research objectives, budget, timeline and quality requirements, data limitations, confidentiality and security
 - data interpretation - determining results; determining conclusions; benchmarking; quality assurance, including consideration of accuracy, validity and clarity
- data presentation:
 - determining the correct form of presentation for the audience, including colleagues, scientific community, marketing and commercialisation specialists, general community, industry and mixed (i.e. conference audience)
 - forms of documentary presentation, including reports, journal articles, scientific papers, graphs, tables, diagrams, electronic formats; forms of verbal presentation, including meetings, client briefings and conferences; support of a new concept; need for further research; commercialisation opportunity; and quality assurance, including accuracy, validity and clarity of information presented
- product development and trials encompassing:
 - identifying client and managerial requirements for production and trials - required outcome(s), key performance indicators (KPIs), timelines, financing, resources and quality assurance
 - influencing factors - internal business goals and strategies; technical specifications (chemical, mechanical and environmental); industrial considerations; regulatory considerations; legislative considerations; intellectual property; Australian and international standards and codes of practice; market requirements; resource requirements, including personnel tools and equipment (principles and practices), materials and finances
 - product development arrangements - licensing agreements, joint ventures and sole ventures
 - relevant documentation - codes of practice; standard operating procedures (SOPs); product formulation documentation; safety data sheets (SDS)/material safety data sheets (MSDS); equipment and quality manuals; calibration and maintenance schedules; enterprise recording and reporting procedures; material, equipment and product specifications
 - development and trial processes - proof of concept; trialling concepts; definitions/specifications; types of development and trial processes, including phase A product and trial, phase B product and trial, user trials, ergonomics and usability

- testing; pre-defined acceptance criteria, confidence limits; data collection and analysis; production; evaluation and recommendation formulation
- intellectual property concepts encompassing:
 - intellectual property and Australian law - the place of intellectual property in Australian law, past cases and outcomes, and necessary considerations
 - the nature of intellectual property - what is intellectual property? what isn't intellectual property? why is intellectual property relevant? what can intellectual property rights do and what can't intellectual property rights do?
 - intellectual property rights - patents, copyright, designs, confidential information and other specialty rights
 - managing intellectual property - identifying intellectual property; deciding what to protect; strategies for managing intellectual property; how can intellectual property rights work together; intellectual property versus time, effort, finances; sources of assistance, including publications, intellectual property professionals, lawyers, business advisors and marketing consultants
 - enforcement of intellectual property - the enforcement process, the role of lawyers and resolution
 - the changing face of intellectual property - development of intellectual property right laws; changes to intellectual property right laws; extensions of intellectual property rights into non-traditional areas, including cultural, property arenas and the global marketplace
 - commercialisation concepts encompassing:
 - commercialisation - definition of commercialisation; triggers for commercialisation; past commercialisation successes; past commercialisation failures; triggers for commercialisation; methods for identifying a good product/idea/service/application; sources of assistance in regard to commercialisation, including documents, lawyers, business advisors and marketing consultants
 - the commercialisation process - the concept; does the concept fit with the organisation's goals? is there a market? what is the market? will the product meet the market requirements? can the product be sold? how can the product be sold? can the product be produced? how can the product be produced? can the production be repeated?
 - commercialisation arrangements - sole venture, joint venture, licensing and legal aspects of commercialisation
 - commercialisation planning - costing, marketing, production/development, distribution and sales
 - competition - who are the competitors? what are they doing and how quickly? And internal development relevant to competition
 - critical analysis of the commercialisation process for continuous improvement - successes, opportunities for improvement, controllable influences, uncontrollable influences and formulation of recommendations
 - work health and safety (WHS)/occupational health and safety (OHS) principles and fundamentals encompassing:
 - underlying principles of WHS/OHS

- general aims and objectives of the relevant state or territory legislation relating to WHS/OHS
- employer and employee responsibilities, rights and obligations
- major functions of safety committees and representatives
- powers given to WHS/OHS inspectors
- housekeeping and potential hazards in relation to improper housekeeping
- selecting appropriate personal protective equipment (PPE) given hazardous situations
- the work environment encompassing:
 - typical hazards associated with a range of work environments
 - procedures used to control the risks associated with these hazards
 - principles of risk assessment / management and state the purpose of each
 - hierarchy of WHS/OHS hazard control measures
 - required documentation for risk assessment
 - commonly used workplace safety signs
 - workplace emergencies that pose a threat to health and safety and suitable procedures for an emergency workplace evacuation
 - appropriate fire extinguisher for a given type of fire
 - requirements for the location, mounting and maintenance of portable fire extinguishers
 - basic process of fighting a fire
 - importance of safe premises, buildings and security in an industrial setting and the consequences of non-compliance with these
 - standard work procedures and why they are required in some circumstances
- manual handling encompassing:
 - typical manual handling injuries and the effect they can have on lifestyle
 - situations that may cause manual handling injuries
 - correct procedures for lifting and carrying to prevent manual handling injuries
 - chemicals in the workplace encompassing:
 - hazardous substances and dangerous goods
 - classification of chemicals as hazardous substances and/or dangerous goods
 - requirements for labelling of chemicals in the workplace
 - safe storage procedures for chemicals
 - purpose of and interpretation of SDS/MSDS
- working at heights encompassing:
 - dangers associated with working on ladders and scaffolds
 - identification of work area as a height risk and use appropriate safety equipment to prevent a fall
 - selecting an appropriate ladder for a given situation and performing a safety check before use
 - precautions that should be taken when ascending and working off a ladder
 - precautions that should be taken when working on and around a scaffold and elevated

platforms

- confined spaces encompassing:
 - hazards associated with working in a confined space
 - identifying workplace situations that could be classified as a confined space
 - control measures for working in a designated confined space
- physical and psychological hazards encompassing:
 - short and long-term effects of excessive noise and techniques to avoid damage to hearing due to excessive noise
 - effects of vibration on the human body and work practices to protect against vibration
 - effects of thermal stress on the human body and work practices to protect against thermal stress
 - effects of ultraviolet (UV) radiation on the human body and work practices to protect against UV radiation
 - dangers associated with laser operated equipment and tools and suitable protective measures to overcome the danger
 - occupational overuse syndrome, how it occurs and means to overcome it
 - factors that cause stress in the workplace, symptoms of a person suffering from stress and personal stress management techniques
 - detrimental effects and dangers of drug and alcohol use in the workplace
- working safely with electricity encompassing:
 - effects of electric shock on the human body
 - common causes of electrical accidents
 - precautions that can minimise the chance of electric shock (earthing, extra-low voltage (ELV), fuses, circuit breakers and residual current devices (RCDs))
 - protection offered by RCDs
 - need for ensuring the (safe) isolation of an electrical supply
 - appropriate method of removing an electric shock victim from a live electrical situation
- life support - cardiopulmonary resuscitation (CPR) in the workplace encompassing:
 - first aid
 - responsibilities of the first aider
 - priorities of first aid management for any accident or injury
 - procedures required at an accident scene
 - legal and ethical issues, which may impact on the management of care
 - 'duty of care'
 - examination of a casualty for injuries
 - effect of cardiopulmonary arrest on the body
 - managing simulated conditions of airway obstruction; respiratory arrest and cardiopulmonary arrest
 - single and two-person CPR
 - signs and symptoms of an altered level of consciousness

- management of simulation of a casualty with an altered level of consciousness
- signs and symptoms of shock
- management of simulation of a casualty in shock
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to contributing to the planning of a research project
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECO0022 Participate in electrical machine repair work and competency development activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to participate in electrical machine repair work and competency development activities.

It includes participating in and complying with electrical machine repair workplace policies and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Commercial

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Comply with electrical machine repair workplace policies and procedures

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Workplace policies and procedures for work activities are identified and applied

1.2 Work activities and relevant workplace procedures are

- sought and clarified with supervisor/relevant person/s
- 1.3** Unplanned situations are dealt with safely and in accordance with workplace policies and procedures and with approval of relevant person/s
- 2 Participate in electrical machine repair work**
- 2.1** Skills and knowledge required for work activities are confirmed in consultation with relevant person/s
- 2.2** Opportunities to practise skills and apply relevant knowledge to work activities are pursued
- 2.3** Assistance is sought from appropriate person/s to overcome difficulties in developing skills and applying knowledge to relevant to work activities
- 2.4** Feedback on progress in electrical machine repair competency development is self-monitored against required skills, knowledge and workplace procedures
- 2.5** Additional skill development is sought in consultation with relevant person/s
- 2.6** Electrical machine repair work activities are completed and validated by relevant person/s in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENECC018B Participate in electrical machine repair work and competency development activities.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECO0022 Participate in electrical machine repair work and competency development activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
- identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
- identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the Registered Training Organisation (RTO) to all vocational education and training (VET) activities
- seeking clarification of how particular work is to be carried out and the procedures involved
- dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
- reporting periodically the competency development activities in accordance with requirements
- periodically reviewing progress of the competency development activities in accordance with requirements
- pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- progressing successfully against periodic or staged evaluative performance events according to requirements
- seeking assistance to overcome difficulties in developing competency
- dealing with unplanned events
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- completing machine repair work activities
- complying with electrical machine repair workplace policies and procedures
- identifying and confirming industry standards, regulatory and workplace procedures
- identifying skill development opportunities
- participating in electrical machine repair work.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- electrical machine repair work competency development activities, including:
 - responsibilities under a competency development plan:
 - competency development (training) plans encompassing:
 - state/territory requirements (Acts/regulations)
 - competency development (training) contracts
 - competency development (training) period
 - purpose of competency development (training) plans
 - process in developing competency development (training) plans
 - parties involved in the competency development (training) plan
 - qualification structure encompassing:
 - scope of work
 - Training Packages – UEE Electrotechnology
 - units of competency
 - structure of qualification
 - off-the-job requirements
 - on-the-job requirements
 - responsibilities of parties to the contract encompassing:
 - employer responsibilities
 - learner responsibilities
 - RTO responsibilities
 - State/Territory Training Authorities (STAs)
 - electrotechnology industry career opportunities encompassing:
 - industry areas
 - qualification levels
 - career paths
 - industry customs and practices encompassing:
 - industry bodies – employer and employee representatives
 - regulatory bodies – including licensing/registration, WHS/OHS, industrial relations (IR), training authorities – apprentice/trainee regulation
 - VET system – Australian Qualification Framework (AQF) and credentials
 - monitoring of workplace evidence encompassing:
 - workplace exposure and practices and relationship with units of competency
 - methods of collecting workplace evidence
 - monitoring period cycle
 - requirements of workplace evidence
 - actions taken for unsatisfactory progression

- role of STA
- apprentice/learner responsibilities
- employer responsibilities
- RTO policies encompassing:
 - apprentice/learner responsibilities
 - teacher/trainer responsibilities
 - absenteeism
 - off-the-job component assessment specifications
 - on-the-job component assessment specifications
 - qualification completion requirements and award
 - advanced standing and/or recognition of prior learning (RPL)
 - result review procedures
- apprentice/learner discipline policy encompassing:
 - apprentice/learner rights
 - apprentice/learner responsibilities
 - breaches of discipline
 - types of penalties
- attendance at the RTO encompassing:
 - importance of attendance
 - record management of attendance
 - attendance cards
 - advice to employer of absences
- fire and emergencies at the RTO encompassing:
 - designated fire and emergency exits
 - procedures in the event of a fire
 - evacuation procedures
 - assembly points importance of attendance
- WHS/OHS at the RTO encompassing:
 - eye protection
 - foot protection
 - protective clothing
 - personal injuries
 - mobile phones and personal belongings
 - dress regulations
 - rotating machinery, designated fire and emergency exits
- entry requirements encompassing:
 - numeracy requirements
 - literacy requirements
 - RTO support mechanisms

- RTO tour encompassing:
 - RTO layout
 - building layout
 - tour of building and RTO
- methods of monitoring and reporting competency development activities encompassing:
 - RTOs responsibility to receive and monitor workplace activities of the apprentice/learner
 - industry requirements for monitoring workplace evidence
 - acceptable methods for monitoring and reporting workplace activities
 - apprentice's/learner's responsibility to participate in the reporting of workplace activities
 - RTOs requirements in periodically evaluating development of apprentices/learners from the workplace activities information gathered, and providing feedback and advice on areas requiring improvement
 - employer responsibilities to participate in monitoring, reporting and confirming workplace activities, and assisting in overcoming areas requiring development by the apprentice/learner
 - options for appeal or assistance from RTO or STA
- enterprise work activities policies and procedures encompassing:
 - need for policies and procedures
 - scope for an industry/enterprise to establish work activity policies and procedures - policies and procedure related to safety, effective work outcomes, customer relations, conflict resolution and competency development
 - following work activities procedures
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications
- relevant WHS/OHS legislated requirements.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECO0023 Participate in electrical work and competency development activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to participate in electrical work and related activities that contribute to the ongoing development of competency.

It includes complying with electrical industry and organisational policies and procedures, undertaking work and related activities in accordance with a competency development plan, documenting and periodically reporting work activities, and participating in periodic reviews to monitor one's own competency development.

Competency development activities in this unit are subject to regulations directly related to licensing. Where a licence or permit to practice is not held, a relevant contract of training, such as an Australian Apprenticeship, may be required.

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Those holding an 'Unrestricted Electrician's Licence' or equivalent issued in an Australian state or territory meet the requirements of this unit.

Pre-requisite Unit

Not applicable

Competency Field

Commercial

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Engage in a competency development plan

- 1.1 Context and conditions under which the competency development plan is to be undertaken are identified and confirmed
- 1.2 Roles and obligations of all parties/stakeholders with respect to the competency development plan are identified and confirmed
- 1.3 Competency development plan is agreed upon, finalised and executed by all relevant parties/stakeholders

2 Participate in electrical competency development work activities

- 2.1 Industry/organisational policies and procedures for work and competency development activities are identified, obtained and reviewed
- 2.2 Electrical work is undertaken in accordance with the competency development plan and applicable industry/organisational policies and procedures
- 2.3 Opportunities to practise skills and apply knowledge relevant to the development of competency are utilised

3 Monitor and report on competency development

- 3.1 Records of competency development work activities are maintained and updated on a regular basis
- 3.2 Obligations are met for periodic and timely reporting of competency development activities
- 3.3 Periodic competency development report is verified and validated by appropriate person/s within accepted industry timelines
- 3.4 Progress in the competency development plan is self-monitored and assistance is sought from appropriate person/s to overcome difficulties or deficiencies
- 3.5 Modifications to the competency development plan are made in consultation with appropriate person/s

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

This unit must be demonstrated under the relevant State/Territory Training Act and must include one of the following:

- an apprenticeship
- other approved training contract or arrangement permitted under state/territory legislation

Electrical competency development work activities must include the following:

- installing and terminating cables and conductors
- installing wiring systems and supports
- installing electrical equipment
- servicing or maintaining electrical equipment
- testing and inspecting electrical circuits and equipment
- fault finding and repairing electrical circuits and equipment

Unit Mapping Information

This unit replaces and is equivalent to UEENECC020B Participate in electrical work and competency development activities.

Links

Assessment Requirements for UEECO0023 Participate in electrical work and competency development activities

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include:

- participating in the development of a competency development plan for a specified electrotechnology work function, including:
 - identifying competencies to be undertaken
 - identifying responsibilities of all relevant parties/stakeholders
- undertaking electrical work relevant to the scope of competencies specified in the competency development plan, including:
 - experience in relevant work areas
 - exposure to a relevant range of equipment
- periodically documenting and reporting electrical work activities to the relevant parties/stakeholders, including:
 - the workplace activities that have been undertaken
 - the range of equipment used for the work
 - the level of supervision under which the work was undertaken
 - submitting work activities records for verification by authorised personnel
- participating in regular periodic reviews to evaluate progress in competency development, including:
 - consultation with relevant parties/stakeholders overseeing the administration of the competency development plan
 - review of participation in undertaking, documenting and reporting electrical work activities
 - review of progress against agreed benchmarks
 - develop and implement strategies in consultation with appropriate personnel to address any difficulties or deficiencies.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include

knowledge of:

- competency development plans, including:
 - formal training agreements, including:
 - state/territory regulations
 - employer, learner and training organisation roles and responsibilities
 - training plans or individual learning plans, including:
 - parties involved
 - scope of competencies specified
 - nominal training periods
- roles of electrotechnology industry bodies applicable to the context and conditions under which the competency development plan will be undertaken, including:
 - unions
 - employer associations
 - work health and safety (WHS)/occupational health and safety (OHS) regulatory bodies
 - electrical regulatory bodies
- training organisation policies and procedures applicable to the context and conditions under which the competency development plan will be undertaken
- electrotechnology workplace policies and procedures applicable to the context and conditions under which the competency development plan will be undertaken, including:
 - health and safety
 - anti-discrimination
 - effective work outcomes
 - customer relations
 - conflict resolution
 - supervision and competency development
- documenting and reporting evidence of work activities, including:
 - methods of documenting evidence of workplace activities
 - aspects of work activities evidence, including:
 - work task/area
 - degree of participation
 - range of equipment
 - levels of supervision
 - learner responsibilities in relation to periodic reporting of work activities and consequences of failing to meet obligations
 - employer responsibilities in relation to verifying work activities evidence
 - training organisation responsibilities in relation to monitoring work activities evidence
 - procedures for periodic review of work activities evidence
 - procedures for addressing difficulties or deficiencies in various aspects of work activities evidence.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
- identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
- identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the Registered Training Organisation (RTO) to all vocational education and training (VET) activities
- seeking clarification of how particular work is to be carried out and the procedures involved
- dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
- reporting periodically the competency development activities in accordance with requirements
- periodically reviewing progress of the competency development activities in accordance with requirements
- pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- progressing successfully against periodic or staged evaluative performance events according to requirements
- seeking assistance to overcome difficulties in developing competency
- dealing with unplanned events
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- participating and completing switchgear and control gear work activities
- complying with switchgear and control gear workplace policies and procedures
- identifying skill development opportunities.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

the requirements of the elements and performance criteria and include knowledge of:

- switchgear and control gear work competency development activities, including:
 - responsibilities under a competency development plan:
 - competency development (training) plans encompassing:
 - state/territory requirements (Acts/regulations)
 - competency development (training) contracts
 - competency development (training) period
 - purpose of competency development (training) plans
 - process in developing competency development (training) plans
 - parties involved in the competency development (training) plan
 - qualification structure encompassing:
 - scope of work
 - Training Packages – UEE Electrotechnology
 - units of competency
 - structure of qualification
 - off-the-job requirements
 - on-the-job requirements
 - responsibilities of parties to the contract encompassing:
 - employer responsibilities
 - learner responsibilities
 - RTO responsibilities
 - State/Territory Training Authorities (STAs)
 - electrotechnology industry career opportunities encompassing:
 - industry areas
 - qualification levels
 - career paths
 - industry customs and practices encompassing:
 - industry bodies – employer and employee representatives
 - regulatory bodies – including licensing/registration, WHS/OHS, industrial relations (IR), training authorities – apprentice/trainee regulation
 - VET system – Australian Qualification Framework (AQF) and credentials
 - monitoring of workplace evidence encompassing:
 - workplace exposure and practices and relationship with units of competency
 - methods of collecting workplace evidence
 - monitoring period cycle
 - requirements of workplace evidence
 - actions taken for unsatisfactory progression
 - role of STA
 - apprentice/learner responsibilities

- employer responsibilities
- RTO policies encompassing:
 - apprentice/learner responsibilities
 - teacher/trainer responsibilities
 - absenteeism
 - off-the-job component assessment specifications
 - on-the-job component assessment specifications
 - qualification completion requirements and award
 - advanced standing and/or recognition of prior learning (RPL)
 - result review procedures
- apprentice/learner discipline policy encompassing:
 - apprentice/learner rights
 - apprentice/learner responsibilities
 - breaches of discipline
 - types of penalties
- attendance at the RTO encompassing:
 - importance of attendance
 - record management of attendance
 - attendance cards
 - advice to employer of absences
- fire and emergencies at the RTO encompassing:
 - designated fire and emergency exits
 - procedures in the event of a fire
 - evacuation procedures
 - assembly points
- WHS/OHS at the RTO encompassing:
 - eye protection
 - foot protection
 - protective clothing
 - personal injuries
 - mobile phones and personal belongings
 - dress regulations
 - rotating machinery
 - designated fire and emergency exits
- entry requirements encompassing:
 - numeracy requirements
 - literacy requirements
 - RTO support mechanisms
- RTO tour encompassing:

- RTO layout
- building layout
- tour of building and RTO
- methods of monitoring and reporting competency development activities encompassing:
 - RTOs responsibility to receive and monitor workplace activities of the apprentice/learner
 - industry requirements for monitoring workplace evidence
 - acceptable methods for monitoring and reporting workplace activities
 - apprentice's/learner's responsibility to participate in the reporting of workplace activities
 - RTOs requirements in periodically evaluating development of apprentices/learners from the workplace activities information gathered, and providing feedback and advice on areas requiring improvement
 - employer responsibilities to participate in monitoring, reporting and confirming workplace activities, and assisting in overcoming areas requiring development by the apprentice/learner
 - options for appeal or assistance from RTO and STA
- enterprise work activities policies and procedures encompassing:
 - need for policies and procedures
 - scope for an industry/enterprise to establish work activity policies and procedures - policies and procedure related to safety, effective work outcomes, customer relations, conflict resolution and competency development
 - following work activities procedures
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications
- relevant WHS/OHS legislated requirements.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE)

currently used in industry

- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECO0025 Provide quotations for inspection and compliance audit services

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to provide quotations for inspections and compliance audit services.

It includes planning, developing, documenting and submitting quotations. It also includes reading job specifications, pricing labour and site costs, completing quotation documentation and applying customer communication protocols.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Commercial

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Determine extent of audit services work

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures are identified

1.2 Hazards are identified, risks are assessed and control

measures implemented

- | | |
|---|---|
| 1.3 | Extent of inspection or audit service work is determined from job specifications and drawings and discussions with appropriate person/s |
| 1.4 | Extent of inspection or audit service work is documented as a job specification and agreement sought with relevant person/s |
| 1.5 | WHS/OHS and regulatory requirements are incorporated in the work contained in quotation |
| 1.6 | Timeframes specified in quotations are agreed with relevant person/s |
| 2 Develop audit services quotation | |
| 2.1 | Labour and other costs are determined from relevant workplace documentation |
| 2.2 | Costing is performed and checked against job specifications |
| 2.3 | Costings used in job specifications and quotations are checked for accuracy |
| 3 Document and submit quotation | |
| 3.1 | Quotation is documented in accordance with workplace procedures |
| 3.2 | Quotation is submitted to customer within agreed timeframes and in accordance with workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Providing at least one quotation for an inspection job and one for a compliance audit must include quotation jobs not exceeding

- automation technologies
- computers
- data communications

\$20,000 for any of the following electrotechnology disciplines:

- electrical
- electrical machines
- electronics
- fire protection
- instrumentation
- refrigeration and air conditioning
- renewable/sustainable energy
- security technology

Unit Mapping Information

This unit replaces and is equivalent to UEENEEC009B Provide quotations for inspection and compliance audit services.

Assessment Requirements for UEECO0025 Provide quotations for inspection and compliance audit services

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupation health and safety (OHS) requirements, including implementing risk control measures
- checking quotations
- complying with timeframes
- costing jobs
- determining labour and other relevant costs
- documenting and submitting quotations
- determining extent of work for quotation
- planning and developing quotations
- reading job specifications and drawings.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- communication protocols
- compliance audit services
- job specifications
- labour costs and other relevant costs
- relevant job safety assessments or risk mitigation processes, including risk control measures
- relevant manufacturer specifications
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEEC S0001 Administer computer networks

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to administer computer networks.

It includes working safely; planning server installations and upgrades; planning for infrastructure services roles; determining and maintaining user and group permissions, delegated administration, network security and shared resource management; monitoring and maintaining servers for performance evaluation and optimisation, terminal server infrastructure and application deployment; planning for business continuity and high availability; and documenting all administration activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to install, upgrade and maintain network operations

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied

- 1.2 Scope of the network is determined from network specifications and in consultation with relevant person/s
 - 1.3 Activities are planned in accordance with workplace procedures for timelines and in consultation with others involved
 - 1.4 Network operating system versions and updates required to maintain the network are obtained in accordance with workplace procedures and network requirements
- 2 Administer network operations and document activities**
- 2.1 Server operating systems are installed, upgraded and configured in accordance with developer instructions and network requirements
 - 2.2 Devices and drivers, desktop environment, network protocols, and services and system security are implemented in accordance with requirements
 - 2.3 Access to resources is configured within the limitations specified for each user
 - 2.4 Network malfunctions are identified and rectified using logical techniques and knowledge of devices and driver storage network protocols, connections and services and system security configuration processes
 - 2.5 Network performance and reliability is monitored and optimised in accordance with established procedures
 - 2.6 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes
 - 2.7 Network administration is carried out efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or other services
 - 2.8 Written justification is produced for network maintenance and upgrade and appropriate person/s notified in accordance with established procedures
 - 2.9 Network administration and documentation are maintained in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEED115A Administer computer networks.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECS0001 Administer computer networks

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety /occupational health and safety (WHS/OHS) requirements, including using risk control measures
- carrying out network administration without waste of materials and energy or damage to apparatus, the surrounding environment or other services
- dealing with unplanned events
- determining network requirements and operating system versions and updates
- documenting network administration activities
- identifying and rectifying network malfunctions
- implementing devices and drivers, desktop environment, network protocols, services and system security
- installing, upgrading and maintaining network operations
- installing, upgrading and configuring server operating system in accordance with network requirements
- monitoring and maintaining server performance evaluation and optimisation, and monitoring and maintaining security and policies
- obtaining network operating system versions and updates required to maintain the network
- preparing to install, upgrade and maintain network operations
- optimising network performance, including implementing a patch management strategy, monitoring servers for performance evaluation and optimisation, removing redundant components and maintaining storage capacity, and monitoring and maintaining security and policies
- installing and configuring domain name system (DNS) servers, creating and configuring DNS zones and records
- installing and configuring dynamic host configuration protocol (DHCP) and managing and maintaining DHCP
- implementing network connectivity solutions, implementing network address translation (NAT), configuring routing and implementing virtual private network (VPN)
- implementing network policy server; configuring a RADIUS server, including RADIUS proxy; and configuring RADIUS clients

- implementing IPv4 and IPv6 addressing
- implementing high performance network solutions.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application and data provisioning
- business continuity and high availability
- network operating system versions and updates
- new deployment, complete version upgrade, incremental updates, and security and bug patches
- problem-solving techniques
- relevant devices and drivers, desktop environment, network protocols, services and system security
- relevant industry standards
- relevant manufacturer specifications and installation instructions
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- server deployment
- server management.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to administering user networks
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEEC S0002 Analyse and implement biometric measuring techniques and applications

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to analyse and implement biometric measuring techniques and applications.

It includes analysing and implementing the various biometric techniques and applications implemented in the field of biometric measurements and evaluating biometric system from enrolment phase. It also includes working safely, following instructions, evaluating performance and documenting outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to analyse and implement biometric techniques and applications

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied

- 1.2 Technical requirements for the design and system rollout in criminal, civil and commercial settings are identified
 - 1.3 Scope of biometric system work requirements for implementation and system rollout are identified in accordance with workplace procedures
 - 1.4 Existing and planned technical and environmental requirements are evaluated and documented in accordance with workplace procedures
 - 1.5 Work team/group is assembled of relevant persons in accordance with work requirements and workplace procedures
 - 1.6 Activities are planned in accordance with workplace procedures for timelines and in consultation with others involved
 - 1.7 Correct operation and safety of software, tools, equipment and testing devices required to carry out work are obtained and checked in accordance with relevant industry standards
 - 1.8 Work supervisor and/or customer/s are consulted to determine functions and parameters of the system and confirmation documented in accordance with workplace procedures
- 2 Analyse and implement biometric systems**
- 2.1 Technology and implementation processes are applied with biometric systems in analysing and implementing biometric techniques and applications in accordance with workplace procedures
 - 2.2 Performance of landline versus mobile telephony in association with biometric systems is analysed and evaluated in accordance with workplace procedures
 - 2.3 Safety, functional and budgetary requirements are incorporated in the installation design plan, analysed and evaluated in accordance with workplace procedures and relevant industry standards
 - 2.4 Hardware and software required for biometric system are analysed and implemented in accordance with the design plan and workplace procedures
 - 2.5 Relevant industry standards and/or codes of practice are

used to evaluate compliance in accordance with workplace procedures and relevant industry standards

- 2.6 Practical aspects and limitations of biometric system implementation are demonstrated through the use of multi-biometrics
 - 2.7 Location of device/s in the installation of the biometric system is tested for correct operation of system functions and documented in accordance with workplace procedures
 - 2.8 Unplanned situations are responded to in accordance with relevant industry standards and workplace procedures
- 3 Report on biometric system analysis and implementation**
- 3.1 Hardware and software required for the biometric system are analysed in accordance with WHS/OHS requirements, relevant industry standards and workplace procedures
 - 3.2 Activities are planned in accordance with workplace procedures for timelines and in consultation with others involved
 - 3.3 Implemented system analysis techniques of biometric systems are used to identify system malfunctions
 - 3.4 Issues/problems are analysed to provide effective solutions in accordance with workplace procedures
 - 3.5 Work completion is documented and relevant person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Analysing and implementing a biometric system must include at least two of the following features:

- analysis and evaluation development process
- target enrolment
- identification and verification
- system installation requirements
- software
- equipment requirements and instructions

Unit Mapping Information

This unit replaces and is equivalent to UEENEED154A Analyse and implement biometric measuring techniques and applications.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECS0002 Analyse and implement biometric measuring techniques and applications

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- analysing and implementing biometric techniques and applications
- analysing and implementing hardware and software required for biometric system
- applying relevant industry standards and/or codes of practice
- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements. including using risk control measures
- assembling work group/team
- dealing with unplanned situations
- documenting and recording results in accordance with workplace procedures
- evaluating technology techniques and applications for biometric use
- identifying technical requirements for the design and system rollout in criminal, civil and commercial settings
- incorporating safety, functional and budgetary requirements into installation design plan, analysis and evaluation
- preparing to analyse and implement biometric systems
- reporting on biometric system analysis and implementation
- testing and documenting correct operation of system functions.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- forms of automatic data capture, advantages and disadvantages
- functional design and construction of a simple system
- interfacing issues between systems involving different hardware and software
- problem-solving techniques
- relevant criminal, civil and commercial settings
- relevant hardware, software, tools, equipment and testing devices

- relevant industry standards
- relevant manufacturer specifications and operating instructions
- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace budgets, timelines, policies and procedures
- relevant workplace documentation
- technical principles, parameters and processes underpinning each biometric system technology in identity and verification recognition
- typical selection, evaluation and testing criterion and methods of biometrics systems.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to analysing and implementing a biometric system for in field use
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEEC S0003 Assemble, set up and test computing devices

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to assemble, set up and test computing devices.

It includes applying safe working practices; checking computer components; assembling components; installing and testing operating system, drivers and application software; following instructions and completing work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Assemble computing devices

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) processes and workplace procedures for a given work area are identified, obtained and applied
- 1.2 WHS/OHS risk control measures and workplace procedures in relation to computer and keyboard use are

followed

- 1.3 Advice is sought from work supervisor to ensure work is coordinated effectively with others
 - 1.4 Computer components, operating system, application software and testing devices are obtained in accordance with workplace procedures and relevant industry standards
 - 1.5 Computer components are assembled and connected in accordance with manufacturer instructions
 - 1.6 Quality checks are carried out in accordance with workplace procedures and instructions
 - 1.7 Unplanned events are referred to supervisor for directions
- 2 Install operating system and application software**
- 2.1 WHS/OHS risk control measures and workplace procedures for carrying out the work are followed
 - 2.2 Hardware requirements are determined for operating system to be installed in accordance with workplace procedures and application instructions
 - 2.3 Computer start-up instructions for installation of the operating system, drivers and network interfaces to default configuration are followed in accordance with workplace procedures and application instructions
 - 2.4 Application software is installed to default configuration in accordance with application instructions
 - 2.5 Authentication, data security, integrity, antivirus and logins are implemented on computing device
 - 2.6 Computer shutdown procedures are followed
 - 2.7 Quality checks are carried out in accordance with workplace procedures and application instructions
 - 2.8 Workplace procedures for referring non-routine events to immediate supervisor for directions are followed in accordance with workplace procedures
- 3 Test computer operation**
- 3.1 WHS/OHS risk control measures and workplace procedures for carrying out the work are followed in accordance with workplace procedures and instructions

- 3.2 Computer start-up procedures are followed and checked in accordance with application instructions
 - 3.3 Computer network operating system and application programs are tested and operated correctly in accordance with application instructions and workplace procedures
 - 3.4 Faults are identified of hardware and/or software in accordance with workplace procedures
 - 3.5 Need to test and measure live work is determined in accordance with WHS/OHS requirements and workplace procedures
 - 3.6 Faults are rectified in accordance with workplace procedures and application instructions
 - 3.7 Workplace procedures for referring non-routine events to immediate supervisor for directions are followed in accordance with workplace procedures
 - 3.8 Computer shutdown procedures are followed in accordance with workplace procedures and application instructions
 - 3.9 Work is carried out efficiently without waste of materials or damage to apparatus, circuits, the surrounding environment or services using sustainable energy principles
- 4 Complete work and report**
- 4.1 WHS/OHS risk control work completion measures and workplace procedures are followed
 - 4.2 Work area is cleaned and made safe in accordance with workplace procedures
 - 4.3 Work supervisor is notified of the completion of work in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEED102A Assemble, set-up and test computing devices.

Links

Assessment Requirements for UEECS0003 Assemble, set up and test computing devices

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - using risk control measures
- assembling and connecting computing devices components
- carrying out quality checks
- completing and reporting work
- determining hardware requirements for operating system to be installed
- determining to test and measure live work
- following computer shutdown workplace procedures
- following computer start-up instructions
- identifying and rectifying hardware and/or software faults
- installing application software to default configuration.
- obtaining computer components, operating system and application software
- referring unplanned events to supervisor for directions
- seeking advice from work supervisor to ensure work is coordinated
- testing computer network operation
- using sustainable energy practices.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- problem-solving techniques
- relevant assembling and dismantling techniques
- relevant authentication and file and directory security
- relevant computer components, operating system, application software and testing devices
- relevant hardware faults and troubleshooting techniques

- relevant manufacturers specifications and operating instructions
- relevant network hardware and components
- relevant operating system installation and configuration
- relevant operating systems in use
- relevant repair techniques
- relevant job safety assessments or risk mitigation processes
- relevant set-up of standard network configuration
- relevant WHS/OHS legislated requirements, including:
 - computing device assembly/disassembly
- relevant workplace documentation
- relevant workplace quality, instructions, policies and procedures
- sustainable energy principles
- testing and measuring live work.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to assembling, setting up and testing personal computers
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECS0004 Commission industrial computer systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to commission industrial computer systems.

It encompasses applying safe working practices, testing system parameters, adjusting to assure optimum performance, following workplace procedures, and documenting final adjustment parameters and settings.

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations which are designed to operate at voltages greater than 50 volt (V) alternating current (a.c.) or 120 V direct current (d.c.).

Competency development activities in this unit are subject to regulations directly related to licensing. Where a licence or permit to practice is not held, skills and knowledge described in this unit require a relevant contract of training, such as an Australian Apprenticeship.

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Permits may also be required for some work environments, such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare to commission computer systems

- 1.1 WHS/OHS processes and workplace procedures for a given work area are identified, obtained and applied
- 1.2 WHS/OHS risk control measures and workplace procedures in preparation for the work are followed
- 1.3 Safety hazards that have not previously been identified are noted and risk control measures implemented
- 1.4 Relevant person/s is consulted to ensure work is coordinated effectively with others involved on the worksite
- 1.5 System operating parameters are identified by reviewing system specifications and component technical data
- 1.6 Tools, equipment, applications and testing devices required for work are obtained in accordance with workplace procedures and checked for correct operation and safety
- 1.7 Preparatory work is checked to ensure no damage has occurred in accordance with workplace procedures
- 1.8 Circuits are checked and isolated in accordance with WHS/OHS requirements and workplace procedures

2 Commission computer systems

- 2.1 WHS/OHS risk control measures and workplace procedures for carrying out the work are followed
- 2.2 Testing/measuring devices are connected and set up in accordance with relevant industry standards
- 2.3 Measurements and adjustments are made to computer equipment to provide optimum system performance in accordance with system specifications and/or relevant industry standards
- 2.4 Decisions for dealing with unplanned situations are dealt with in consultation with relevant person/s and job specifications in accordance with relevant industry standards

- 2.5 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes
 - 2.6 Systems commissioning workplace procedures are performed in accordance with relevant industry standards
 - 2.7 Commissioning is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy principles
- 3 Complete and report commissioning activities**
- 3.1 WHS/OHS risk control work completion measures and workplace procedures are followed
 - 3.2 Adjustment settings are documented in accordance with workplace procedures
 - 3.3 Worksite is cleaned and made safe in accordance with workplace procedures
 - 3.4 Commissioning results and work completion are notified to relevant person/s in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Commissioning industrial computer systems must include at least two of the following:

- different types of computer systems
- associated components
- controls

Unit Mapping Information

This unit replaces and is equivalent to UEENEED144A Commission industrial computer

systems.

Assessment Requirements for UEECS0004 Commission industrial computer systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - using risk control measures
- checking and isolating circuits
- checking work to ensure no damage and/or waste to apparatus, environment, materials and services
- commissioning systems in accordance with workplace procedures
- connecting and setting up testing/measuring devices
- dealing with unplanned events in consultation with relevant person/s and job specifications
- consulting with relevant person/s to ensure work is coordinated effectively
- documenting adjustment settings in accordance with workplace procedures
- identifying system performance parameters by reviewing system specifications and component technical data
- measuring and adjusting computer equipment to provide optimum system performance
- obtaining tools, equipment, applications and testing devices required for work
- preparing to commission computer systems
- using sustainable energy practices.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- problem-solving techniques
- relevant commissioning, including:
 - commissioning, planning and documentation
 - purpose of commissioning
 - workplace procedures for commissioning systems

- relevant industrial computer systems
- relevant industry standards
- relevant manufacturer specifications and installation instructions
- relevant materials, apparatus, environment and services
- relevant job safety assessments or risk mitigation processes
- relevant system operating parameters
- relevant tools, equipment, applications and testing/measuring devices
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- sustainable energy principles.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to commissioning computer systems
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECS0005 Design and implement advanced routing for internetworking systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to design and implement advanced routing for internetworking systems.

It includes working safely, applying design principles, complying with relevant industry standards, incorporating advanced configuration of remote access, documenting design and monitoring performance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to design internetworking systems

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied

- 1.2 Scope of design brief for advanced routing is developed and documented in consultation with relevant person/s
 - 1.3 Work team/group is arranged of relevant persons in accordance with design brief and workplace procedures
 - 1.4 Activities are planned in accordance with workplace procedures for timelines and in consultation with others involved
 - 1.5 Strategies are implemented to ensure network development is in accordance with design brief and workplace procedures
- 2 Design internetworking systems**
- 2.1 Internetworking system is designed with economical design solutions in accordance with design brief, relevant industry standards and workplace procedures
 - 2.2 Advanced routing technologies are included in the internetworking system design in accordance with relevant industry standards and workplace procedures
 - 2.3 Internetworking system design specification of required media is in accordance with relevant industry standards
 - 2.4 Internetworking system design is documented in accordance with workplace procedures
 - 2.5 Internetworking system design is presented and discussed with relevant person/s in accordance with workplace procedures
 - 2.6 Alterations to the internetworking system design resulting from the presentation/discussion are negotiated with relevant person/s in accordance with workplace procedures
 - 2.7 Final internetworking system design is documented and approval obtained from relevant person/s in accordance with workplace procedures
- 3 Implement internetworking systems**
- 3.1 Activities are planned in accordance with workplace procedures and timelines and in consultation with others involved
 - 3.2 Relevant development tools and software are selected in accordance with design brief and relevant industry

standards

- 3.3 Advance routing technologies are installed, configured and tested in accordance with design brief and relevant industry standards
- 3.4 System malfunctions are identified and rectified using techniques in accordance with workplace procedures and relevant industry standards
- 3.5 Unplanned events are analysed to provide solutions in accordance with workplace procedures
- 3.6 Quality of work is monitored in accordance with workplace procedures and/or relevant industry standards
- 3.7 Final internetworking system design and implementation are documented in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Designing and implementing internetworking systems - advanced routing must include at least the following:

- between two local area networks (LANs) to form a wide area network (WAN) or
- between a LAN and the internet

Unit Mapping Information

This unit replaces and is equivalent to UEENEED119A Design and implement advanced routing for internetworking systems.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECS0005 Design and implement advanced routing for internet working systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements, including the use of risk control measures
- arranging work team/group of relevant persons
- dealing with unplanned events
- designing advanced routing based on economic and effective solutions that meet design brief requirements
- designing internetworking system with economical design solutions
- detailing advanced routing technologies and specifications for internetworking media in the design
- developing a design brief for advanced remote access technologies in an internetworking system
- documenting and presenting design for approval
- documenting internetworking installation and configuration activities
- identifying and rectifying system malfunctions and performance issues
- implementing strategies to ensure network development
- implementing internetworking system design
- implementing internetworking systems, including advanced wireless local area network (LAN) technologies in internetworking system design
- monitoring quality of work
- negotiating alterations to internetworking system design
- planning work activities, including requirements for work team/group
- preparing to design internetworking systems
- presenting and discussing internetworking system design with relevant person/s
- acquiring media for internetworking system design specification
- selecting relevant development tools and software.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- default route
- multi-protocol routing
- problem-solving techniques
- relevant industry standards
- relevant manufacturer specifications
- relevant media
- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace budget, instructions, quality, policies and procedures
- relevant workplace documentation
- routing process
- routing protocols in current use
- scalable internet protocol (IP) addresses.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to designing and implementing internetworking systems – advanced routing
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECS0006 Design and implement multi-layer switching for internetworking systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to design and implement multi-layer switching for internetworking systems.

It includes working safely, applying design principles, complying with relevant industry standards, incorporating advanced multi-layer switching technologies access, documenting design and monitoring performance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to design internetworking systems

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied

- 1.2 Scope of design brief for advanced multi-layer switching technologies is developed and documented in accordance with workplace procedures and in consultation with relevant person/s
 - 1.3 Work team/group is arranged of relevant persons in accordance with design brief and workplace procedures
 - 1.4 Activities are planned in accordance with workplace procedures for timelines and in consultation with others involved
 - 1.5 Strategies are implemented to ensure network development is in accordance with design brief and workplace procedures
- 2 Design internetworking systems
 - 2.1 Internetworking system is designed with economical design solutions in accordance with design brief, relevant industry standards and workplace procedures
 - 2.2 Advanced multi-layer switching technologies are included in internetworking system design in accordance with relevant industry standards and workplace procedures
 - 2.3 Internetworking system design specification of required media is in accordance with relevant industry standards
 - 2.4 Internetworking system design is documented in accordance with workplace procedures
 - 2.5 Internetworking system design is presented and discussed with relevant person/s in accordance with workplace procedures
 - 2.6 Alterations to the internetworking system design resulting from the presentation/discussion are negotiated with relevant person/s in accordance with workplace procedures
 - 2.7 Final internetworking system design is documented and approval obtained from relevant person/s in accordance with workplace procedures
- 3 Implement internetworking systems
 - 3.1 Activities are planned in accordance with workplace procedures for timelines and in consultation with others involved
 - 3.2 Relevant development tools and software are selected in

accordance with design brief and relevant industry standards

- 3.3 Advance routing technologies are installed, configured and tested in accordance with design brief and relevant industry standards
- 3.4 System malfunctions are identified and rectified using techniques in accordance with workplace procedures and relevant industry standards
- 3.5 Unplanned events are analysed to provide solutions in accordance with workplace procedures
- 3.6 Quality of work is monitored in accordance with workplace procedures and relevant industry standards
- 3.7 Final internetworking system design and implementation are documented in accordance workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Designing and implementing advanced configuration of multi-layer switching in an internetworking system must include at least the following:

- between two local area networks (LANs) to form a wide area network (WAN) or
- between a LAN and the internet

Unit Mapping Information

This unit replaces and is equivalent to UEENEED121A Design and implement multi-layer switching for Internetworking systems.

Assessment Requirements for UEECS0006 Design and implement multi-layer switching for internetworking systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements, including the use of risk control measures
- arranging work team/group of relevant persons
- dealing with unplanned events
- designing internetworking systems with economical design solutions
- detailing multi-layer switching technologies and specification for internetworking media in the design
- developing a design brief for multi-layer switching technologies in an internetworking system
- documenting and presenting design for approval
- documenting internetworking installation and configuration activities
- identifying and rectifying system malfunctions and performance issues
- implementing strategies to ensure network development
- implementing internetworking system design
- implementing internetworking systems, including advanced wireless local area network (LAN) technologies in internetworking system design
- monitoring quality of work
- negotiating alterations to internetworking system design
- planning work activities, including requirements for work team/group
- preparing to design internetworking systems
- preparing to design internetworking systems
- presenting and discussing internetworking system design with relevant person/s
- acquiring media for internetworking system design specification
- selecting relevant development tools and software.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- campus network design
- controlling access to the campus network
- fast layer 2 services
- inter virtual local area networks (VLAN) routing
- managing network traffic
- managing redundant links
- multi-cast
- problem-solving techniques
- relevant development tools and software
- relevant industry standards
- relevant manufacturer specifications
- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace budgets, instructions, quality, policies and procedures
- relevant workplace documentation.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to designing and implementing multi-layer switching internetworking systems
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECS0007 Design and implement network systems for internetworking

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to design and implement network systems for internetworking.

It includes safe working practice, applying design principles, using wide area network (WAN) technologies, complying with relevant industry standards, and documentation of design and performance monitoring.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to design internetworking systems

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied

- 1.2 Scope of design brief for internetworking is developed and documented in consultation with relevant person/s
 - 1.3 Work team/group is arranged of relevant persons in accordance with design brief and workplace procedures
 - 1.4 Activities are planned in accordance with workplace procedures for timelines and in consultation with others involved
 - 1.5 Strategies are implemented to ensure network development is in accordance with design brief and workplace procedures
- 2 Design internetworking systems**
- 2.1 Internetworking system is designed with economical design solutions in accordance with design brief, relevant industry standards and workplace procedures
 - 2.2 Switching routing and WAN technologies are included in the internetworking system design in accordance with relevant industry standards and workplace procedures
 - 2.3 Internetworking system design specification of required media is in accordance with relevant industry standards
 - 2.4 Internetworking system design is documented in accordance with workplace procedures
 - 2.5 Internetworking system design is presented and discussed with relevant person/s in accordance with workplace procedures
 - 2.6 Alterations to the internetworking system design resulting from the presentation/discussion are negotiated with relevant person/s in accordance with workplace procedures
 - 2.7 Final internetworking system design is documented and approval obtained from relevant person/s in accordance with workplace procedures
- 3 Implement internetworking systems**
- 3.1 Activities are planned in accordance with workplace procedures, timelines and in consultation with others involved
 - 3.2 Relevant development tools and software are selected in accordance with design brief and relevant industry standards

- 3.3 Switching routing and WAN technologies are installed, configured and tested in accordance with design brief and relevant industry standards
- 3.4 System malfunctions are identified and rectified using techniques in accordance with workplace procedures and relevant industry standards
- 3.5 Unplanned events are analysed to provide solutions in accordance with workplace procedures
- 3.6 Quality of work is monitored in accordance with workplace procedures and relevant industry standards
- 3.7 Final internetworking system design and implementation are documented in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Designing and implementing internetworking systems must include at least the following:

- between two local area networks (LANs) to form a wide area network (WAN) or
- between a LAN and the internet

Assessment Requirements for UEECS0007 Design and implement network systems for internetworking

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements
- arranging work team/group of relevant persons
- dealing with unplanned events
- designing internetworking system based on economic and effective solutions that meet design brief requirements
- designing internetworking system with economical design solutions
- detailing switching, routing and wide area network (WAN) technologies and specification for internetworking media in the design
- developing an internetworking system design brief
- documenting and presenting design for approval
- documenting internetworking installation and configuration activities
- identifying and rectifying system malfunctions and performance issues
- implementing strategies to ensure network development
- implementing internetworking system design, including advanced wireless local area network (LAN) technologies in internetworking system design
- monitoring quality of work
- negotiating alterations to internetworking system design
- planning work activities, including requirements for work team/group
- preparing to design internetworking systems
- presenting and discussing internetworking system design with relevant person/s
- troubleshooting internetworking system
- acquiring media for internetworking system design specification
- selecting relevant development tools and software.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- access lists configuration
- configure dynamic host configuration protocol (DHCP) service
- configure inter-virtual local area network (VLAN) routing
- configure spanning tree protocol
- configure VLAN trunking protocol
- design report presentation
- interior gateway protocol (IGP) configuration
- LAN design
- network performance assessment
- network security and risk management
- problem solving techniques
- relevant industry standards
- relevant manufacturer specifications
- relevant media
- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace budget, instructions, quality, policies and procedures
- relevant workplace documentation
- switch configuration
- VLAN configuration
- VLAN design
- WAN design
- WAN management and security
- WAN protocols
- WAN technologies
- wireless LAN configuration
- troubleshoot multi-VLAN issues
- layer 3 switching
- link aggregation and router redundancy
- dynamic routing
- interior gateway protocol (IGP) tuning and troubleshooting
- WAN monitoring
- quality of service
- network evolution
- network troubleshooting
- emerging technologies.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training

Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to designing and implementing internetworking systems
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECS0008 Design and implement remote access for internetworking systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to design and implement remote access for internetworking systems.

It includes working safely, applying design principles, complying with relevant industry standards, incorporating advanced configuration of remote access, documenting design and monitoring performance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to design internetworking systems

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied

- 1.2 Scope of design brief for advanced remote access is developed and documented in consultation with relevant person/s
 - 1.3 Work team/group is arranged of relevant persons in accordance with design brief and workplace procedures
 - 1.4 Activities are planned in accordance with workplace procedures for timelines and in consultation with others involved
 - 1.5 Strategies are implemented to ensure network development is in accordance with design brief and workplace procedures
- 2 Design internetworking systems**
- 2.1 Internetworking system is designed with economical design solutions in accordance with design brief, relevant industry standards and workplace procedures
 - 2.2 Advanced remote access technologies are included in the internetworking system design in accordance with relevant industry standards and workplace procedures
 - 2.3 Internetworking system design specification of required media is in accordance with relevant industry standards
 - 2.4 Internetworking system design is documented in accordance with workplace procedures
 - 2.5 Internetworking system design is presented and discussed with relevant person/s in accordance with workplace procedures
 - 2.6 Alterations to the internetworking system design resulting from the presentation/discussion are negotiated with relevant person/s in accordance with workplace procedures
 - 2.7 Final internetworking system design is documented and approval obtained from relevant person/s in accordance with workplace procedures
- 3 Implement internetworking systems**
- 3.1 Activities are planned in accordance with workplace procedures, timelines and in consultation with others involved
 - 3.2 Relevant development tools and software are selected in accordance with design brief and relevant industry standards

- 3.3 Advance routing technologies are installed, configured and tested in accordance with design brief and relevant industry standards
- 3.4 System malfunctions are identified and rectified using techniques in accordance with workplace procedures and relevant industry standards
- 3.5 Unplanned events are analysed to provide solutions in accordance with workplace procedures
- 3.6 Quality of work is monitored in accordance with workplace procedures and relevant industry standards
- 3.7 Final internetworking system design and implementation are documented in accordance workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Designing and implementing internetworking system - remote access technologies must include at least the following:

- between two local area networks (LANs) to form a wide area network (WAN) or
- between a LAN and the internet

Unit Mapping Information

This unit replaces and is equivalent to UEENEED120A Design and implement remote access for Internetworking systems.

Assessment Requirements for UEECS0008 Design and implement remote access for internetworking systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements, including the use of risk control measures
- arranging work team/group of relevant persons
- dealing with unplanned events
- designing internetworking system with economical design solutions
- detailing with advanced remote access technologies and specifications for internetworking media in the design
- developing a design brief for advanced remote access technologies in an internetworking system
- documenting and presenting design for approval
- documenting internetworking installation and configuration activities
- identifying and rectifying system malfunctions and performance issues
- implementing strategies to ensure network development
- implementing internetworking system design, including advanced wireless local area network (LAN) technologies in internetworking system design
- monitoring quality of work
- negotiating alterations to internetworking system design
- planning work activities, including requirements for work team/group
- preparing to design internetworking systems
- presenting and discussing internetworking system design with relevant person/s
- acquiring media for internetworking system design specification
- selecting relevant development tools and software.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- asynchronous on-demand wide area network (WAN) services
- control of corporate network access
- network devices and feature sets used for remote access networks
- problem-solving techniques
- relevant industry standards
- relevant manufacturer specifications
- relevant media
- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace budget, instructions, quality, policies and procedures
- relevant workplace documentation
- scaling remote access networks with network address translation (NAT) and port address translation (PAT)
- synchronous and leased WAN connectivity
- troubleshooting the remote access network.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to designing and implementing remote access internetworking systems
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEEC S0009 Design and implement security for internetworking systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to design and implement security for internetworking systems.

It includes working safely, applying design principles, complying with relevant industry standards, incorporating advanced security technologies, documenting design and monitoring performance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to design internetworking systems

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied

- 1.2 Scope of design brief for advanced security technologies is developed and documented in accordance with workplace procedures and in consultation with relevant person/s
 - 1.3 Work team/group is arranged of relevant persons in accordance with design brief and workplace procedures
 - 1.4 Activities are planned in accordance with workplace procedures for timelines and in consultation with others involved
 - 1.5 Strategies are implemented to ensure network development is in accordance with design brief and workplace procedures
- 2 Design internetworking systems**
- 2.1 Internetworking system is designed with economical design solutions in accordance with design brief, relevant industry standards and workplace procedures
 - 2.2 Advanced security technologies are included in internetworking system design in accordance with relevant industry standards and workplace security policy
 - 2.3 Internetworking system design specification of required media is in accordance with relevant industry standards
 - 2.4 Internetworking system design is documented in accordance with workplace security policy
 - 2.5 Internetworking system design is presented and discussed with relevant person/s in accordance with workplace security policy
 - 2.6 Alterations to the internetworking system design resulting from the presentation/discussion are negotiated with relevant person/s in accordance with workplace security policy
 - 2.7 Final internetworking system design is documented and approval obtained from relevant person/s in accordance with workplace procedures
- 3 Implement internetworking systems**
- 3.1 Activities are planned in accordance with workplace security policy for timelines and in consultation with others involved
 - 3.2 Relevant development tools and software are selected in

accordance with design brief and relevant industry standards

- 3.3 Advanced routing technologies are installed, configured and tested in accordance with design brief and relevant industry standards
- 3.4 System malfunctions are identified and rectified using techniques in accordance with workplace security policy and relevant industry standards
- 3.5 Unplanned events are analysed to provide solutions in accordance with workplace security policy
- 3.6 Quality of work is monitored in accordance with workplace procedures and/or relevant industry standards
- 3.7 Final internetworking system design and implementation are documented in accordance with workplace security policy

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Designing and implementing security for internetworking systems must include at least the following:

- between two local area networks (LANs) to form a wide area network (WAN) or
- between a LAN and the internet.

Unit Mapping Information

This unit replaces and is equivalent to UEENEED122A Design and implement security for Internetworking systems.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECS0009 Design and implement security for internetworking systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one or more separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements, including the use of risk control measures
- arranging work team/group of relevant persons
- dealing with unplanned events
- designing internetworking system with economical design solutions
- developing a design brief for advanced security technologies in an internetworking system design brief
- developing a disaster recovery plan
- documenting and presenting design for approval
- documenting internetworking installation and configuration activities
- identifying and rectifying system malfunctions and performance issues
- implementing internetworking system design
- monitoring quality of work
- negotiating alterations to internetworking system design
- planning work activities including requirements for work team/group
- presenting and discussing internetworking system design with relevant person/s
- selecting relevant development tools and software.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- access control lists (ACLs)
- ACLs for firewalls
- cryptographic services
- virtual private network (VPN)
- firewalls

- internet protocol (IP) security
- intrusion detection systems (IDS)
- network security testing
- relevant network security industry standards
- relevant manufacturer specifications
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- network security policies
- secure network design
- securing perimeter routers.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to designing and implementing security for internetworking systems
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECS0010 Design and implement wireless LANs/WANs for internetworking systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to design and implement wireless local area networks (LANs)/wide area networks (WANs) for internetworking systems.

It includes working safely, applying design principles, complying with relevant industry standards, incorporating advanced wireless LAN/WAN technologies, and documenting design and performance monitoring.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to design internetworking systems

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied

- 1.2 Scope of design brief for advanced wireless LAN/WAN technologies is developed and documented in consultation with relevant person/s
 - 1.3 Work team/group is arranged of relevant persons in accordance with design brief and workplace procedures
 - 1.4 Activities are planned in accordance with workplace procedures for timelines and in consultation with others involved
- 2 Design internetworking systems**
- 2.1 Internetworking system is designed with economical design solutions in accordance with design brief, relevant industry standards and workplace procedures
 - 2.2 Advanced wireless LAN/WAN technologies are included in internetworking system design in accordance with relevant industry standards and workplace procedures
 - 2.3 Internetworking system design specification of required media is in accordance with relevant industry standards
 - 2.4 Internetworking system design is documented in accordance with workplace procedures
 - 2.5 Internetworking system design is presented and discussed with relevant person/s in accordance with workplace procedures
 - 2.6 Alterations to the internetworking system design resulting from the presentation/discussion are negotiated with relevant person/s in accordance with workplace procedures
 - 2.7 Final internetworking system design is documented and approval obtained from relevant person/s in accordance with workplace procedures
- 3 Implement internetworking systems**
- 3.1 Activities are planned in accordance with workplace procedures for timelines and in consultation with others involved
 - 3.2 Relevant development tools and software are selected in accordance with design brief and relevant industry standards
 - 3.3 Advance wireless LAN/WAN technologies are installed, configured and tested in accordance with design brief

and relevant industry standards

- 3.4 System malfunctions and performance issues are identified and rectified using techniques in accordance with workplace procedures and relevant industry standards
- 3.5 Unplanned events are analysed to provide solutions in accordance with workplace procedures
- 3.6 Quality of work is monitored in accordance with workplace procedures and/or relevant industry standards
- 3.7 Final internetworking system design and implementation are documented in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Designing and implementing wireless LANs/WANs internetworking systems must include at least the following:

- between two LANs/wireless local area network (WLANs) to form a WAN, or a WLAN and the internet

Unit Mapping Information

This unit replaces and is equivalent to UEENEED123A Design and implement wireless LANs/WANs for internetworking systems.

Assessment Requirements for UEECS0010 Design and implement wireless LANs/WANs for internetworking systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- acquiring media for internetworking system design specification
- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements
- conducting wireless local area network (WLAN) maintenance and troubleshooting
- configuring and testing a controller-based WLAN
- configuring and testing WLAN security
- designing internetworking system with economical design solutions
- developing a design brief for advanced wireless local area network (LAN)/wide area network (WAN) technologies in an internetworking system design brief
- documenting and presenting design for approval
- documenting internetworking installation and configuration activities
- identifying and rectifying system malfunctions and performance issues
- implementing internetworking system design, including advanced wireless LAN/WAN technologies in internetworking system design
- monitoring quality of work
- negotiating alterations to internetworking system design
- planning and conducting a site survey for setting up a wireless network
- preparing to design wireless internetworking system
- selecting relevant development tools and software
- using technologies and media specifications used in the design of advanced wireless LAN/WAN technologies.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- access points

- advanced wireless LAN/WAN technologies
- antennas
- application design and site survey preparation
- authentication and encryption methods
- emerging technologies
- radio frequency (RF) fundamentals
- relevant industry standards
- relevant manufacturer specifications
- relevant media
- security
- troubleshooting, management, monitoring and diagnostics
- wireless bridges and routers
- wireless LAN/WAN network management software tools
- wireless radio technologies
- wireless roaming
- wireless standards
- wireless topologies
- WLAN architecture and devices
- WLAN implementation and deployment.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECS0011 Design and manage enterprise computer networks

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to design and manage enterprise computer networks.

It includes safe working practices, the design and management of network and application services, core identity and access management components, directory services infrastructure components, designing physical and logical directory service topologies, designing for business continuity and data availability, and documenting all design and management activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Develop design for a network

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied

- 1.2 Scope of the network design is determined from design brief and/or in consultation with relevant person/s
- 1.3 Business requirements for existing and projected business model, organisational and information technology management structures are analysed in accordance with workplace procedures
- 1.4 Design is developed to include business priorities, growth, growth strategy, regulatory framework, risk and relevant cost in accordance with workplace
- 1.5 Existing and planned technical and environment goals of the enterprise are evaluated and documented in accordance with workplace procedures and design specifications
- 1.6 Design is developed with relevant technical factors in accordance with workplace procedures and design specifications
- 1.7 Client access, end-user needs and usage patterns, and disaster recovery requirements are evaluated and documented
- 1.8 Design specifications, analysis and evaluations are documented in accordance with workplace procedures and design specifications
- 1.9 Network specification is presented and discussed with relevant person/s
- 1.10 Alterations to the network specification resulting from the presentation/discussion are negotiated with relevant person/s in accordance with workplace procedures

2 Design a network

- 2.1 Alternative network infrastructures and technologies are applied to network design
- 2.2 Network design is developed with required wide area network (WAN) infrastructure, internet connectivity, and implementation and management strategies
- 2.3 Risk management strategies are sought, obtained and incorporated into the network design
- 2.4 Network design is reviewed and adjusted to rectify any anomalies in accordance with workplace procedures

- 2.5 Network design proposal is documented in accordance with workplace procedures
 - 2.6 Network design is presented and discussed with relevant person/s
 - 2.7 Alterations to network design from the presentation/discussion are negotiated with relevant person/s in accordance with workplace procedures
 - 2.8 Optimised project charter design is documented and approval obtained from relevant person/s
- 3 Implement and manage a network**
- 3.1 Server and client systems are installed and configured in accordance with design specifications and network industry standards
 - 3.2 User and group objects security is implemented in accordance with network specifications
 - 3.3 Directory services, data storage, shared resources, web, remote access and network security are managed to ensure operation of the network is in accordance with workplace procedures and design specifications
 - 3.4 Issues/problems are analysed to provide effective solutions in accordance with workplace procedures and design specifications
 - 3.5 Quality of work is monitored in accordance with workplace procedures and relevant industry standards
- 4 Diagnose network malfunctions**
- 4.1 Network operation is monitored using network diagnostic tools and malfunctions are diagnosed to determine cause in accordance with workplace procedure and design specifications
 - 4.2 Network malfunctions are rectified using appropriate tests of the network in accordance with workplace procedures
 - 4.3 Approaches to issues/problems are analysed to provide most effective solutions
 - 4.4 Quality of work is monitored in accordance with workplace procedures and relevant industry standards
- 5 Report network management activities**
- 5.1 Finalised project charter documentation is written and forwarded to relevant person/s in accordance with

workplace procedures

- 5.2** Network service records are maintained in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEED114A Design and manage enterprise computer networks.

Assessment Requirements for UEECS0011 Design and manage enterprise computer networks

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing business requirements
- analysing technical requirements
- analysing resources, services, network infrastructure, protocols and hosts, transmission control protocol and internet protocol (IP) hardware, planned upgrades, support and network and systems management
- applying alternative network infrastructures and technologies to network design
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- designing a network in accordance with design specifications and relevant industry standards
- diagnosing and rectifying the cause of network malfunctions
- documenting justification for network solutions
- evaluating and documenting client access, end-user needs and usage patterns, and disaster recovery requirements
- implementing and managing an enterprise network
- implementing network design
- obtaining and incorporating risk management strategies
- obtaining approval for network design specification
- presenting network specification
- reporting network management activities
- configuring of user and group objects, groups configuring accounts via a directory service, searching for objects, use of templates for creating user accounts and resetting accounts
- installing and configuring domain name system (DNS) servers, and creating and configuring DNS zones and records
- installing and configuring dynamic host configuration protocol (DHCP), managing and maintaining DHCP, implementing and maintaining IP address management
- implementing network connectivity solutions, implementing network address translation (NAT) and configuring routing
- implementing network policy server and configuring a RADIUS server, including RADIUS proxy
- implementing IPv4 and IPv6 addressing and implementing distributed file system

- implementing high performance network solutions
- determining scenarios and requirements for implementing software-defined networking (SDN).

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- design network considering company size, user and resource distribution, various site connectivity, bandwidth, service performance, availability and scalability, data and system access patterns, network roles and responsibilities and security considerations
- design and management of DHCP
- design and management of DNS
- design of network connectivity and remote access solutions
- design of core and distributed network solutions
- design of an advanced network infrastructure design and manage business continuity and data availability
- design and manage identity management components
- plan for network and application services
- problem-solving techniques
- relevant business requirements
- relevant manufacturer specifications and operating instructions
- relevant network diagnostic tools
- relevant network infrastructures
- relevant risk management strategies
- relevant technical requirements
- relevant WHS/OHS legislated requirements
- relevant workplace documentation, including network design proposal
- relevant workplace instructions, quality, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to design and management of enterprise computer networks
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEEC S0012 Design embedded controller control systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to design embedded controller control systems.

It includes preparing and designing embedded systems. It also includes obtaining approval for designs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to design embedded systems

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) processes and workplace procedures for a given work area are identified, obtained and applied
- 1.2** WHS/OHS risk control measures and workplace procedures are followed in preparation for the work

- 1.3 Scope of the proposed embedded system development is determined from the design brief and/or in consultation with relevant person/s
 - 1.4 Design development work is planned in accordance with workplace procedures for timelines and in consultation with others involved
 - 1.5 Materials and devices/components required for work are selected on compatibility with embedded system and in accordance with project budget requirements
 - 1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
- 2 Design and develop embedded systems**
- 2.1 WHS/OHS risk control work measures and workplace procedures are followed
 - 2.2 Range of embedded devices and systems and compliance standards are considered and applied to the design
 - 2.3 Alternative arrangements for the design are evaluated in accordance with the design brief
 - 2.4 Safety, functional and budget considerations are in accordance with the design
 - 2.5 Prototype devices and circuits are constructed and tested in accordance with the design brief and relevant industry standards
 - 2.6 Prototype malfunctions are identified, rectified and re-tested in accordance with workplace procedures and design brief
 - 2.7 Embedded system design is documented and submitted to relevant person/s for approval
 - 2.8 Unplanned situations are identified and resolution techniques are applied in accordance with workplace procedures
- 3 Obtain approval for embedded systems design**
- 3.1 Embedded system design is presented to client representative and/or relevant person/s
 - 3.2 Design modifications are negotiated with relevant person/s in accordance with workplace procedures

- 3.3 Final design is documented and approval obtained from relevant person/s
- 3.4 Quality of work is monitored in accordance with workplace procedures and/or relevant industry standards

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Designing and developing an embedded control system must include the following:

- at least three input/output (I/O) devices and/or functions

Unit Mapping Information

This unit replaces and is equivalent to UEENEED152A Design embedded controller control systems.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECS0012 Design embedded controller control systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - using risk control measures
- constructing and testing prototype devices and circuits
- dealing with unplanned situations in accordance with problem-solving techniques and workplace procedures
- designing and developing embedded systems
- developing alternative designs
- developing the design within safety, functional and budget requirements
- documenting and presenting design
- negotiating design alteration requests
- obtaining approval for embedded systems design
- obtaining approval for final design
- preparing to design and develop embedded systems.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- relevant manufacturer specifications
- relevant materials, tools, equipment and testing devices and components
- relevant microprocessor assembly language and high-level language programming, including:
 - complex data types and structures
 - central processing unit (CPU) architecture
 - documentation
 - interfacing high-level languages to assembler

- interrupt service routines
- modular programming
- processor and system support
- relevant problem-solving techniques
- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace instructions, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to designing embedded controller systems
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEEC S0013 Develop and validate biometric equipment/systems installation

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to develop and validate biometric equipment/systems installation.

It includes working safely, identifying operating parameters, following instructions, validating biometric equipment/systems installation and documenting outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to develop and validate biometric equipment/systems installation

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied
- 1.2 Technical factors relevant to the system installation in

criminal, civil and commercial settings are identified

- 1.3 Scope of the biometric system installation and factors affecting the integration and application of proprietary or open source packages are identified and evaluated in accordance with workplace procedures
 - 1.4 Existing and planned technical and environmental requirements are evaluated and documented in accordance with workplace procedures
 - 1.5 Work team/group is assembled of relevant persons in accordance with work requirements and workplace procedures
 - 1.6 Existing and projected business model, organisational and information technology management structures and legal aspects of biometrics are analysed in accordance with workplace procedures and relevant industry standards
 - 1.7 Activities are planned in accordance with workplace procedures for timelines and in consultation with others involved
 - 1.8 Correct operation and safety of software, tools equipment and testing devices required to carry out work are obtained and checked in accordance with relevant industry standards
 - 1.9 Work supervisor and/or customer/s are consulted to determine functions and parameters of the system and confirmation documented in accordance with workplace procedures
- 2 Develop and validate biometric equipment/systems installation with relevant instructions**
- 2.1 Biometric system is developed with relevant technology of biometric systems, information technology, network security, installation performance standards, compliance methods and service equipment in accordance with workplace procedures and relevant industry standards
 - 2.2 Development process for installation, equipment, instructions and validation requirements of the biometric system are evaluated in accordance with workplace procedures and relevant industry standards
 - 2.3 Safety, functional and budgetary requirements are incorporated in the installation plan, analysed and evaluated in accordance with workplace procedures and

relevant industry standards

- 2.4 Equipment required for the biometric system are validated in accordance with the biometric system installation and workplace procedures
 - 2.5 Australian and international standards and/or codes of practice are used to evaluate compliance
 - 2.6 Status and parameters of function system devices are entered in accordance with workplace procedures, manufacturer instructions and work requirements
 - 2.7 Location of device/s in the installation of the biometric system is tested for correct operation of system functions and documented in accordance with workplace procedures
 - 2.8 Unplanned situation/s are responded to in accordance with relevant industry standards and workplace procedures
- 3 Validate and report on biometric equipment/systems installation**
- 3.1 Biometric system is tested in accordance with WHS/OHS requirements, relevant industry standards and workplace procedures
 - 3.2 Operating anomalies are identified and reported in accordance with workplace procedures
 - 3.3 System malfunctions are identified during testing using techniques in accordance with relevant industry standards and workplace procedures
 - 3.4 Approaches to solving issues/problems are analysed to provide most effective solutions
 - 3.5 Work completion is documented and relevant person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work

environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Developing biometric system installation, instructions and validating requirements of biometric equipment/systems must include at least two of the following features:

- securing computer networks
- database design
- measurement of a biometric system
- equipment requirements and instructions

Unit Mapping Information

This unit replaces and is equivalent to UEENEED155A Develop and validate biometric equipment/systems installation.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECS0013 Develop and validate biometric equipment/systems installation

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant industry standards and/or codes of practice
- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements, including the use of risk control measures
- assembling work group/team
- correcting system anomalies effectively
- dealing with unplanned situations
- developing and validating biometric equipment/systems installation with relevant instructions
- documenting and recording results in accordance with workplace procedures
- entering functions and parameters correctly
- identifying equipment requirements and instructions
- evaluating operating functions and parameters
- evaluating technology techniques and applications
- identifying technical requirements for the design and system rollout in criminal, civil and commercial settings
- incorporating safety, functional and budgetary requirements into installation design plan, analysis and evaluation
- preparing to develop and validate biometric equipment/systems installation
- selecting appropriate equipment
- testing and verifying system operation
- validating and reporting on biometric equipment/systems installation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- compliance requirements for assuring information technology network security and capital planning measures

- compliance requirements for implementing security on personal computers and computer networks
- compliance requirements for securing voice over the internet
- deployment principles for rollout of biometrics systems
- laws, standards and compliance guidelines
- measurement of a biometric system
- problem-solving techniques
- relevant criminal, civil and commercial settings
- relevant industry standards
- relevant manufacturer specifications and operating instructions
- relevant job safety assessments or risk mitigation processes
- relevant software, tools equipment and testing devices
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- security implementation
- technical principles, parameters and processes in identity recognition
- technology applications used in forensics, genetics, civil and commercial environments and government departments for verification of identities
- typical selection, evaluation and testing criterion and methods of biometrics equipment.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to developing and validating biometric equipment/systems installation
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECS0014 Develop computer network services

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to develop computer network services.

It includes applying safe working practices, planning network services, installing and configuring network infrastructure components update services, monitoring performance and documenting development activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to develop network services

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) processes and workplace procedures for a given work area are identified, obtained and applied
- 1.2 WHS/OHS risk control measures and workplace procedures are followed in preparation for the work

- 1.3 Scope of network services for development is determined from network performance specifications and in consultation with relevant person/s
 - 1.4 Activities are planned in accordance with workplace procedures for timelines and in consultation with others involved
 - 1.5 Development tools and software are selected based on specified requirements and performance standards
 - 1.6 Strategies are implemented to ensure network development is carried out efficiently
- 2 Install, configure and manage network services**
- 2.1 WHS/OHS risk control measures and workplace procedures for carrying out the work are followed
 - 2.2 Complexities of network infrastructure are applied to developing network services
 - 2.3 Network infrastructure components in use and installed are configured and variants specified for the network in accordance with relevant industry standards
 - 2.4 Management components of network services are configured and requirements specified for the network are in accordance with relevant industry standards
 - 2.5 Security components of network services are created and requirements specified for the network are in accordance with relevant industry standards
 - 2.6 Network malfunctions are identified and rectified using techniques in accordance with relevant industry standards
 - 2.7 Network is monitored and solutions developed to optimise network performance and reliability in accordance with workplace procedures
 - 2.8 Approaches to issues/problems are analysed to provide effective solutions
 - 2.9 Quality of work is monitored in accordance with workplace procedures and relevant industry standards
- 3 Report network administration activities**
- 3.1 Written justification is produced for network services development activities and relevant person/s notified in accordance with workplace procedures

- 3.2** Network service development records are maintained in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEED116A Develop computer network services.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECS0014 Develop computer network services

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- analysing approaches to issues/problems to provide effective solutions
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including
 - using risk control measures
- configuring management components of network services
- consulting with relevant person/s and planning activities to meet scheduled timelines
- creating security components of network services
- determining the scope of network services for development
- developing solutions to optimise network performance
- documenting justification and network services development activities
- identifying and rectifying network malfunctions
- implementing strategies to ensure network development is carried out effectively
- installing and configuring network infrastructure components
- monitoring quality of work
- preparing to develop network services
- selecting development tools and software based on specified requirements and performance standards.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- remote access
- file and print services
- configure routing and firewalls
- domain name service (DNS) encompassing
- dynamic host configuration protocol (DHCP)
- internet protocol (IP) version 4 (IPv4) and IP version 6 (IPv6) addresses

- monitoring and maintaining of network services
- problem-solving techniques
- relevant components, development tools and software
- relevant industry standards
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications and installation instructions
- relevant network services and infrastructure
- relevant rectifying malfunctions techniques
- relevant WHS/OHS legislated requirements
- relevant workplace documentation, including
 - network service development records
- relevant workplace instructions, quality, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to developing network services
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEEC S0015 Develop energy sector computer network applications infrastructure

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to develop energy sector computer network applications infrastructure.

It includes preparing to install and configuring components for network applications infrastructure. It also includes applying safe working practices and documenting activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to develop a network applications infrastructure

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) processes and workplace procedures for a given work area are identified, obtained and applied
- 1.2** WHS/OHS risk control measures and workplace procedures are followed in preparation for the work

- 1.3 Network application infrastructure to be developed is determined from network performance specifications and in consultation with relevant person/s
 - 1.4 Activities are planned in accordance with workplace procedures to meet timelines in consultation with others involved
 - 1.5 Development tools and software are selected in accordance with relevant industry standards and network performance requirements
 - 1.6 Activities are implemented to ensure network development is carried out efficiently
- 2 Install and configure components**
- 2.1 WHS/OHS risk control measures and workplace procedures for carrying out the work are followed
 - 2.2 Complexities of network applications infrastructure are applied to developing the network
 - 2.3 Network applications infrastructure components in use and installed are configured for the network in accordance with industry standards
 - 2.4 Management components of the network applications infrastructure are configured in accordance with relevant industry standards and requirements of the network
 - 2.5 Security components of the network applications infrastructure are created in accordance with relevant industry standards and requirements of the network
 - 2.6 Network malfunctions are identified and rectified using techniques in accordance with workplace procedures and relevant industry standards
 - 2.7 Network is monitored and solutions are developed to optimise network performance in accordance with workplace procedures
 - 2.8 Security events are analysed and actions taken in accordance with workplace procedures
 - 2.9 Unplanned events are identified and resolution techniques are applied in accordance with workplace procedures
 - 2.10 Quality of work is monitored in accordance with

workplace procedures and/or relevant industry standards

3 Complete network activities report/s

- 3.1** Documentation is produced for network services completed activities and relevant person/s notified in accordance with workplace procedures
- 3.2** Network applications infrastructure development records are maintained in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEED149A Develop energy sector computer network applications infrastructure.

Assessment Requirements for UEECS0015 Develop energy sector computer network applications infrastructure

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - using risk control measures
- completing network activity reports
- configuring management components of the network applications infrastructure
- configuring security components of the network applications infrastructure
- dealing with unplanned events in accordance with problem-solving techniques and workplace procedures
- determining network applications infrastructure to be developed
- developing solutions to optimise network performance.
- documenting network applications infrastructure development activities
- identifying and rectifying network malfunctions
- installing and configuring components
- preparing to develop a network applications infrastructure.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- configuring network application services
- problem-solving techniques
- relevant components of network applications
- relevant manufacturer specifications
- relevant job safety assessments or risk mitigation processes
- relevant security procedures
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace quality, instructions, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to developing energy sector network applications infrastructure
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEEC S0016 Develop energy sector directory services

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to develop energy sector directory services.

It includes applying safe working practices, and installing and configuring directory services infrastructure. It also includes maintaining the directory services environment and documenting development activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to develop energy sector directory services

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|-----|---|
| 1.1 | Work health and safety (WHS)/occupational health and safety (OHS) processes and workplace procedures for a given work area are identified, obtained and applied |
| 1.2 | WHS/OHS risk control measures and workplace procedures are followed in preparation for work |

- 1.3 Directory services to be developed are determined from network performance specifications and in consultation with relevant person/s
 - 1.4 Activities are planned in accordance with workplace procedures for timelines and in consultation with others involved
 - 1.5 Development tools and software are selected based on directory service requirements and network performance specifications
 - 1.6 Activities are implemented to ensure directory service development is carried out in accordance with workplace procedures
- 2 Install, configure and manage energy sector directory services**
- 2.1 WHS/OHS risk control measures and workplace procedures for carrying out the work are followed
 - 2.2 Complexities of directory services are applied to developing a directory services infrastructure
 - 2.3 Structural components of directory services are installed and configured in accordance with relevant industry standards and specified for the network
 - 2.4 Management components of directory services are configured in accordance with relevant industry standards and specified for the network
 - 2.5 Security components of directory services are created using appropriate policy tools in accordance with relevant industry standards and network requirements
 - 2.6 Directory service malfunctions are identified and rectified using techniques in accordance with workplace procedures and relevant industry standards
 - 2.7 Directory services are monitored and solutions are developed for network performance and reliability in accordance with workplace procedures
 - 2.8 Security events are analysed and actions taken in accordance with workplace procedures
 - 2.9 Approaches to issues/problems are analysed to provide effective solutions

- 2.10** Quality of work is monitored in accordance with workplace procedures and/or directory service requirements or relevant industry standards
- 3 Report network administration activities**
 - 3.1** Justification for directory services development activities are documented and relevant person/s notified in accordance with workplace procedures
 - 3.2** Directory services development records are maintained in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEED147A Develop energy sector directory services.

Assessment Requirements for UEECS0016 Develop energy sector directory services

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - using risk control measures
- configuring directory services components
- dealing with unplanned events in accordance with workplace procedures and safe work practices
- documenting directory services development activities
- installing and configuring a directory services infrastructure
- installing, configuring and managing energy sector directory services
- preparing to develop energy sector directory services
- testing and maintaining directory services.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- configuring directory service roles and services
- configuring the directory services infrastructure
- creating and maintaining directory service objects
- maintaining the directory services environment
- relevant manufacturer specifications
- relevant job safety assessments or risk mitigation processes
- relevant tools and software
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

UEEC S0017 Develop industrial control programs for microcomputer equipped devices

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to develop industrial control programs for microcomputer equipped devices.

It includes preparing and developing devices, circuits and control programs for microcomputer equipped devices. It also includes evaluating and completing documentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare microcomputer equipped devices

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) processes and workplace procedures for a given work area are identified, obtained and applied
- 1.2 WHS/OHS risk control measures and workplace procedures are followed in preparation for the work

- 1.3 Scope of development work is determined from design brief and in consultation with relevant person/s
 - 1.4 Development work is planned in accordance with workplace procedures for timelines in consultation with others involved
 - 1.5 Development tools and software are selected based on design brief requirements and performance standards
 - 1.6 Materials and devices/components required for the work are selected on compatibility of control program and in accordance with design brief and project budget
 - 1.7 Activities are implemented to ensure development work is carried out efficiently
- 2 Develop devices, circuits and control programs**
- 2.1 WHS/OHS risk control measures and procedures for carrying out the work are followed
 - 2.2 Knowledge of computer-equipped devices and systems and compliance standards are applied to the design
 - 2.3 Alternative arrangements for the development are evaluated in accordance with the design brief
 - 2.4 Safety, functional and budget considerations are in accordance with design
 - 2.5 Prototype devices and circuits are constructed and tested in accordance with the design brief and relevant industry standards
 - 2.6 Programming language code functions and features in current use are applied to developing control programs
 - 2.7 Prototype malfunctions are identified, rectified and re-tested in accordance with workplace procedures and design brief
 - 2.8 Program development is documented and submitted to appropriate person/s for approval
 - 2.9 Unplanned events are identified and resolution techniques are applied in accordance with workplace procedures
 - 2.10 Quality of work is monitored in accordance with workplace procedures and/or relevant industry standards

3 Evaluate and complete documentation

- 3.1** Testing and workplace procedures are developed to evaluate control program in accordance with workplace procedures
- 3.2** Problems and errors in program are identified and rectified in accordance with workplace procedures and design brief
- 3.3** Intermediate and final work reports are completed in accordance with workplace procedures and presented to relevant person/s

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Developing control programs for microcomputer equipped devices must include the following:

- at least three interacting functions using a relevant industry programming language

Unit Mapping Information

This unit replaces and is equivalent to UEENEED150A Develop industrial control programs for microcomputer equipped devices.

Links

Companion Volume implementation guides are found in VETNet - -

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEECS0017 Develop industrial control programs for microcomputer equipped devices

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements
- completing documentation and presenting program development effectively
- dealing with unplanned events in accordance with problem-solving techniques and workplace procedures
- determining development work requirements
- developing control program within safety and functional requirements and budget limitations
- identifying the appropriate development tools and software
- obtaining approval for final program
- preparing to develop control programs for microcomputer equipped devices
- selecting devices/components compatibility.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- problem-solving techniques
- programming terms, including:
 - complex data types and structures
 - documentation and debugging
 - interfacing high-level languages to assembler
 - interrupt service routines
 - language levels and their features
 - language programming
 - language simulators and emulators
 - modular programming

- relevant manufacturer specifications
- relevant job safety assessments or risk mitigation processes
- relevant tools and software
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace instructions, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to developing control programs for microcomputer equipped devices
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECS0018 Develop web pages for engineering applications

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to develop web pages for engineering applications.

It includes working safely, developing web pages using authoring tools, client-side scripting, fundamental server-side scripting and documenting development activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to develop web pages for engineering applications

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied

- 1.2 Scope of development work is determined from page development specifications and in consultation with relevant person/s
 - 1.3 Activities are planned in accordance with workplace procedures for timelines and in consultation with others involved
 - 1.4 Relevant development tools and software are selected in accordance with development requirements and relevant industry standards
 - 1.5 Strategies are implemented to ensure development work is in accordance with workplace procedures
- 2 Develop web pages for engineering applications**
- 2.1 Syntax functions and features of mark-up language scripts are applied to developing client-side programming in accordance with development requirements and workplace procedures
 - 2.2 Pages are created and rendered with relative and absolute links, images and table formatting in accordance with development requirements and workplace procedures
 - 2.3 Forms are created with relevant elements and element groupings in accordance with development requirements and workplace procedures
 - 2.4 Server scripting languages are applied to scripting to developing client-side programming and validations in accordance with development requirements and workplace procedures
 - 2.5 Unplanned events are analysed to provide effective solutions in accordance with workplace procedures
 - 2.6 Quality of work is monitored in accordance with workplace procedures and relevant industry standards
- 3 Test, evaluate, implement and document developed web pages**
- 3.1 Tests and workplace procedures are developed to evaluate web page programming in accordance with development requirements
 - 3.2 Problems and bugs in web page programming are identified and rectified in accordance with development requirements
 - 3.3 Intermediate and final work reports are completed in

accordance with relevant industry standards and presented to relevant person/s

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Developing, implementing and testing hypertext mark-up language (HTML) pages must include at least four of the following features:

- relative and absolute links, images and table formatting
- cascaded styles sheets
- forms
- new browser windows
- validation of form data.
- form data input response
- form data processing
- database access
- output of database table contents
- insertion of table data to database.

Developing, implementing and testing of server scripting for database access must include at least four of the following features:

Unit Mapping Information

This unit replaces and is equivalent to UEENEED129A Develop web pages for engineering applications.

Assessment Requirements for UEECS0018 Develop web pages for engineering applications

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- analysing and dealing with unplanned events to provide solutions
- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements, including using risk control measures
- applying server scripting languages to scripting to developing client-side programming and validations
- applying syntax functions and features of mark-up language scripts
- completing intermediate and final work reports
- creating and rendering effective web pages
- creating and rendering pages with relative and absolute links, images and table formatting
- creating forms with relevant elements and element groupings
- developing and testing workplace procedures
- developing web pages for engineering applications
- identifying and rectifying problem and bugs in web page program
- identifying relevant development tools and software
- implementing strategies for development work
- interpreting page development requirements
- monitoring quality of work
- preparing to develop web pages for engineering applications
- providing basic web functionality
- selecting relevant development tools and software
- testing, evaluating, implementing and documenting developed web pages.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- client server architecture

- configurations and profile overview
- consideration for system architecture
- extensible mark-up language (XML)
- extensible stylesheet language (XSL) generating hypertext mark-up language (HTML) from XML
- HTML scripting
- HTML
- problem-solving techniques
- relevant development tools and software
- relevant forms
- relevant manufacturer specifications and installation instructions
- relevant job safety assessments or risk mitigation processes
- relevant server scripting languages
- relevant syntax functions and features
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace instructions, quality, policies and procedures
- wireless thin client programming.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to developing basic web pages for engineering applications
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECS0019 Develop, implement and test object-oriented code

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to develop, implement and test object-oriented code.

It includes following development scope, using appropriate development software, writing code and documenting development activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to develop object-oriented code

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) processes and workplace procedures for a given work area are identified, obtained and applied
- 1.2 WHS/OHS risk control measures and workplace procedures in preparation for the work are followed

- 1.3 Scope of code development work is determined from job performance specifications and in consultation with relevant person/s
 - 1.4 Activities are planned in accordance with workplace procedures for timelines and in consultation with others involved
 - 1.5 Relevant development kit and software are selected in accordance with specified requirements and performance standards
 - 1.6 Strategies are implemented to ensure programming is carried out efficiently
- 2 Develop object-oriented code**
- 2.1 WHS/OHS risk control measures and workplace procedures for carrying out the work are followed
 - 2.2 Correct syntax is applied to developing code
 - 2.3 Features of object-orientated programming language are applied to develop and test solutions
 - 2.4 Code written features data encapsulation, inheritance and libraries
 - 2.5 Approaches to issues/problems are analysed to provide effective solutions
 - 2.6 Quality of work is monitored in accordance with workplace procedures and relevant industry standards
- 3 Test and document the development of object-oriented code**
- 3.1 Testing procedures are developed to analyse code in accordance with job performance specifications and workplace procedures
 - 3.2 Problems in code are rectified to ensure job performance specifications are met
 - 3.3 Intermediate and final documentation is completed in accordance with relevant industry standards and presented to relevant person/s

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Developing object-oriented code must consist of multiple user-classes and include at least the following:

- inheritance
- arrays
- graphical user interface (GUI) components
- exceptions
- file input/output (I/O)
- event handling

Unit Mapping Information

This unit replaces and is equivalent to UEENEED111A Develop, implement and test object oriented code.

Links

Companion Volume implementation guides are found in VETNet - -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEECS0019 Develop, implement and test object-oriented code

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying correct syntax to developing code
- applying features of object-oriented programming language
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - using risk control measures
- creating new classes
- determining code development work from job performance specifications and in consultation with relevant person/s
- developing code
- developing and testing workplace procedures
- documenting outcomes in accordance with relevant industry standards
- identifying issues/problems and bugs in code to provide solutions
- implementing strategies to ensure programming is carried out efficiently
- monitoring quality of work
- planning activities to meet scheduled timelines
- preparing to develop object-oriented code
- rectifying problems in code
- selecting development kit and software
- defining and using arrays
- creating graphical user interfaces (GUI) applications using library classes
- using GUI components and event-driven programming.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- file input/output (I/O)

- multi-threading
- object-oriented programming language elements
- object-oriented programming language operators and control structures
- relevant code written features, including:
 - data encapsulation
 - inheritance
 - system libraries
- relevant collections and collection framework
- relevant development kit and software
- relevant exception handling
- relevant features of object-oriented programming
- relevant programming
- job safety assessments or risk mitigation processes
- relevant syntax to developing code
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace instructions, quality policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to developing object-oriented code
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECS0020 Evaluate and modify object-oriented code programs

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to evaluate and modify object-oriented code programs.

It includes applying safe working practices, following work instructions and workplace procedures, applying object-oriented code scripting, and testing and documenting outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to evaluate and modify programs in object-oriented code

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied
- 1.2** Scope of program modification work is determined from job performance specification and/or in consultation

with relevant person/s

- 1.3 Activities are planned in accordance with workplace procedures for timelines and consultation with others involved
 - 1.4 Relevant development kit and software are selected in accordance with job specifications and relevant industry standards
 - 1.5 Strategies are implemented to ensure programming is in accordance with workplace procedures
 - 2 **Evaluate and modify programs in object-oriented code**
 - 2.1 Functions are applied to object-oriented programming in accordance with job specifications and workplace procedures
 - 2.2 Syntax is applied to evaluating and modifying programs in accordance with job specifications and workplace procedures
 - 2.3 Key features of the object-orientated programming language are applied to evaluation and modification in accordance with job specifications and workplace procedures
 - 2.4 Unplanned events are analysed to provide effective solutions in accordance with workplace procedures
 - 2.5 Quality of work is monitored in accordance with workplace procedures and/or relevant industry standards
 - 3 **Test and document modified programs**
 - 3.1 Procedures are developed to test modified programming in accordance with job specifications and workplace procedures
 - 3.2 Problems and bugs in code are rectified in accordance with job specifications and workplace procedures
 - 3.3 Intermediate and final work reports are written in accordance with relevant industry standards and presented to relevant person/s

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEED103A Evaluate and modify object oriented code programs.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECS0020 Evaluate and modify object-oriented code programs

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying computer functions to object-oriented programming
- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements
- applying syntax to evaluating and modifying programs
- dealing with unplanned events
- developing testing procedures
- evaluating and modifying programs in object-oriented code
- identifying problem and bugs in code
- rectifying problem and bugs in code
- selecting relevant development kit and software
- testing and documenting modified programs in object-oriented code
- using key features of object-oriented programming to evaluate and modify program.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- object-oriented programming language elements
- object-oriented programming language operators and control structure
- problem-solving techniques
- relevant development kit and software currently used in industry
- relevant industry standards
- relevant specifications
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace instructions, quality, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to evaluating and modifying programs written in object-oriented code
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECS0021 Install and administer UNIX/LINUX-based networked computers

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to install and administer UNIX/LINUX-based networked computers.

It includes safe working practices, performing UNIX/LINUX, LINUX or Mac OSX operating system installation, administration functions of logging in and out, setting up graphic user interface (GUI) applications, manipulating text files, creating and searching files and directories, changing permissions, using text editors, identifying and modifying initialisation files, streamlining command, execution using shell features, using network commands and documenting all administration activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to install, upgrade and maintain

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures

- network operations** for a given work area are identified, obtained and applied
- 1.2 Scope of the administration work is determined from network specifications and in consultation with relevant person/s
 - 1.3 Activities are planned in accordance with workplace procedures for timelines and consultation with others involved
 - 1.4 UNIX/LINUX system variants, versions and updates required to maintain computers and networks are identified and obtained in accordance with workplace procedures and job specifications
- 2 Install, upgrade and maintain UNIX/LINUX-based computers and network operations**
- 2.1 UNIX/LINUX operating system is installed, upgraded and configured on computers and servers in accordance with developer instructions and network requirements
 - 2.2 Desktop environment, network protocols and services and system security are implemented in accordance with workplace procedures and job specifications
 - 2.3 Access to resources is configured and limitations specified for users in accordance with workplace procedures and job specifications
 - 2.4 UNIX/LINUX-based network malfunctions are identified and rectified in accordance with workplace procedures and job specifications using tests of devices and drivers, storage, network protocols, connections and services and system security configuration processes
 - 2.5 Network performance and reliability is monitored and optimised in accordance with workplace procedures
 - 2.6 UNIX/LINUX-based network administration is carried out efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or relevant services
- 3 Document network administration activities**
- 3.1 Written justification is produced for network upgrading and maintenance and relevant person/s notified in accordance with workplace procedures
 - 3.2 Network administration and documentation are

maintained in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Installing and configuring the operating system and administering must include at least the following:

- two networked computers
- one of the following:
 - UNIX
 - LINUX

Unit Mapping Information

This unit replaces and is equivalent to UEENEED113A Install and administer UNIX based networked computers.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECS0021 Install and administer UNIX/LINUX-based networked computers

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements, including the use of risk control measures
- configuring access to resources for users
- dealing with unplanned events
- documenting computer/network administration activities
- documenting network administration activities
- identify the UNIX/LINUX-based operating system variants, versions and updates required
- identifying computer/network malfunctions
- installing, upgrading and maintaining UNIX/LINUX-based computers and network operations
- installing, upgrading and configuring computer operating system
- preparing to install, upgrade and maintain network operations
- rectifying computer/network malfunctions
- carrying out UNIX/LINUX-based network administration efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or relevant services.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- accessing UNIX/LINUX and server and graphic user interface (GUI)
- backup and restoring data
- devices and drivers, storage, network protocols, connections, services and system security configuration processes
- directory and file management
- GUI applications

- networking/internet set-up procedures
- installing applications software
- operating system components and structure
- operating systems malfunctions and solutions
- printing
- relevant manufacturer specifications and developer instructions
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace instructions, policies and procedures
- system processes and memory management (Korn and C shells)
- system tools
- UNIX/LINUX operating systems.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to installing and administering UNIX/LINUX-based computers
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECS0022 Install and configure a client computer operating system and software

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to install and configure a client computer operating system and software.

It includes working safely, installing and testing the operating system and application software, testing functionality, rectifying operating anomalies, following work instructions and completing documentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to install and configure a computer operating system and software

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied

- 1.2 Scope of work is determined from documentation and/or discussions with work supervisor
 - 1.3 Operating system and application software versions required for the installation are obtained in accordance with workplace procedures and job requirements
- 2 Upgrade computer and peripheral software**
 - 2.1 Operating system, application and network software components are installed in accordance with installation instructions and relevant industry standards
 - 2.2 Operating system, software applications and network device drivers are tested in preparation for return to service/customer in accordance with workplace procedures
 - 2.3 Operating system network and software malfunctions are identified using logical techniques in accordance with operating system configuration and workplace procedures
 - 2.4 Malfunctions are rectified using relevant software in accordance with workplace procedures and relevant industry standards
 - 2.5 Methods for dealing with unplanned situations are in accordance with WHS/OHS and workplace procedures
 - 2.6 Installation and configuration are carried out efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or relevant services
- 3 Complete and report upgrading and maintenance activities**
 - 3.1 Work area is cleaned and made safe in accordance with workplace procedures
 - 3.2 Operating system network and software installation is documented in accordance with workplace procedures and relevant person/s notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Installing and configuring operating system, including device drivers and network software, must include at least one of the following:

- software application for a client computing device

Unit Mapping Information

This unit replaces and is equivalent to UEENEED143A Install and configure a client computer operating system and software.

Links

Companion Volume implementation guides are found in VETNet - -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEECS0022 Install and configure a client computer operating system and software

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements, including the use of risk control measures
- carrying out installation and configuration without waste of materials and energy or damage to apparatus, the surrounding environment or relevant services
- completing and reporting upgrading and maintenance activities
- dealing with unplanned situation
- documenting installation activities
- identifying and rectifying operating systems and application malfunctions
- installing and configuring operating system
- installing and configuring software for an application
- installing operating system, application and network software
- obtaining relevant operating and software versions
- preparing to install and configure a computer operating system and software
- testing operating system, software applications and network device drivers
- upgrading computer and software.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- file structure and management
- function, components and concepts
- operating system components and structure
- operating systems available
- operating systems malfunctions and solutions
- problem-solving techniques
- relevant job safety assessments or risk mitigation processes

- relevant manufacturer specifications and operating instructions
- relevant materials, energy, surrounding environment and relevant services
- relevant operating system, application and network software
- relevant software
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace instructions, policies and procedures
- system installation and configuration
- system tools.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment used in industry
- resources that reflect current industry practices in relation to installing and configuring a computer operating system and software
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECS0023 Install and configure network systems for internetworking

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to install and configure network systems for internetworking.

It includes applying safe working practice, installing and configuring routers, and documenting installation and configuration activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to install and configure internetworking systems

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) processes and workplace procedures for a given work area are identified, obtained and applied
- 1.2 WHS/OHS risk control measures and workplace procedures in preparation for the work are followed

- 1.3 Internetworking installation and configuration are determined from internetworking performance specifications and in consultation with relevant person/s
 - 1.4 Media and software required for internetworking is selected in accordance with workplace procedures
 - 1.5 Network cabling test reports are obtained and reviewed to determine internetworking systems in accordance with relevant industry standards
 - 1.6 Activities are planned in accordance with workplace procedures for timelines and in consultation with others involved
 - 1.7 Development tools and software are selected in accordance with relevant industry standards
 - 1.8 Strategies are implemented to ensure network development is carried out efficiently
- 2 Install and configure internetworking systems**
- 2.1 WHS/OHS risk control measures and workplace procedures for carrying out the work are followed
 - 2.2 Internetworking arrangements, sub-netting and routing protocols are applied to installing, configuring routers and transmission control protocol (TCP)/internet protocol (IP) addresses
 - 2.3 Routing protocols are selected and configured as specified for internetworking systems
 - 2.4 Routing, TCP/IP and access malfunctions are identified and rectified using solutions of basic internetworking arrangements and protocols
 - 2.5 Approaches to issues/problems are analysed to provide effective solutions
 - 2.6 Quality of work is monitored in accordance with workplace procedures and relevant industry standards
- 3 Complete documentation of internetworking systems**
- 3.1 Justification for internetworking installation and configuring activities is documented and relevant person/s notified in accordance with workplace procedures
 - 3.2 Network services records are maintained in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Installing and configuring internetworking systems must include at least the following:

between two:

- local area networks (LANs) to form a wide area network (WAN)

or

- a LAN and the internet

Unit Mapping Information

This unit replaces and is equivalent to UEENEED117A Install and configure network systems for internetworking.

Links

Companion Volume implementation guides are found in VETNet - -

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEECS0023 Install and configure network systems for internetworking

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- analysing issues/problems
- applying internetworking arrangements, subnetting and routing protocols
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - using risk control measures
- engaging with relevant person/s to meet scheduled timelines
- determining internetworking installation and configuration activities
- documenting internetworking installation and configuration activities
- identifying and rectifying routing, transmission control protocol (TCP)/internet protocol (IP) and access malfunctions
- implementing strategies for network development
- installing and configuring routing and TCP/IP
- monitoring quality of work in accordance with workplace procedures and relevant industry standards
- obtaining and reviewing network cabling
- preparing to install and configure internetworking systems
- selecting development tools and software
- selecting internetworking media and software.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- router security
- router boot sequence
- router operating system management
- password recovery

- router components and interfaces
- troubleshooting at all layers
- interior and exterior routing protocols
- distance vector routing protocols
- link-state routing protocols
- routing tables
- metrics used by routing protocols to find routes
- advantages and disadvantages of distance vector and link-state routing protocols
- problem-solving techniques
- relevant development tools and software
- relevant industry standards
- relevant internetworking arrangements, sub-netting and routing protocols
- relevant internetworking performance specifications
- relevant manufacturer specifications and installation instructions
- relevant route summarisation
- relevant router configuration
- relevant routing protocols
- relevant routing, TCP/IP and access malfunctions
- relevant job safety assessments or risk mitigation processes
- relevant TCP/IP
- relevant WHS/OHS legislated requirements
- relevant workplace documentation, including:
 - network service records
- relevant workplace instructions, quality, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in installing and configuring networking

systems

- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECS0024 Integrate multiple computer operating systems on a client server local area network

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to integrate multiple computer operating systems on a client server local area network (LAN).

It encompasses applying different computer and network operating systems on a single LAN, using network standards and protocols, selecting network topology and physical media, disaster planning recovery, performance management and documentation of work activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to install multiple operating systems on computers and a client server network

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied

- 1.2 Operating systems, devices, software and services required are determined from network performance specifications and in consultation with relevant person/s
 - 1.3 Network security policy is reviewed in accordance with network performance specifications and in consultation with relevant person/s
 - 1.4 Activities are planned in accordance with workplace procedures and security policies for timelines and in consultation with others involved
 - 1.5 Relevant person/s is consulted to ensure the work is coordinated effectively with others in accordance with workplace procedures
- 2 Install and configure computer and network operating systems**
- 2.1 Operating systems and software on computers and client server are installed and configured in accordance with network performance specifications and relevant industry standards
 - 2.2 Network protocols are installed and configured to integrate computers with different operating systems in accordance with relevant industry standards and network performance specifications
 - 2.3 Security measures of the network are implemented in accordance with workplace procedures, relevant industry standards and network performance specifications
 - 2.4 Disaster recovery plan is tested in accordance with workplace procedures and security measures
 - 2.5 Methods for dealing with unplanned situations are selected in accordance with and workplace procedures
- 3 Monitor and optimise computer and network performance**
- 3.1 Network is monitored and methods are implemented to optimise system performance in accordance with workplace procedures and network performance specifications
 - 3.2 Computer and server malfunctions are identified and rectified using techniques and solutions in accordance with workplace procedures and network performance specifications
 - 3.3 Computer and server operating system incremental updates and security patches are installed in accordance

with workplace procedures and network performance specifications

3.4 Methods for dealing with unplanned situations are selected in accordance with workplace procedures and security policies

3.5 Quality checks of work outcomes are conducted in accordance with workplace procedures, network performance specifications and relevant industry standards

3.6 Work is carried out efficiently without unnecessary waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices

4 Report integration and outcome of network monitoring activities

4.1 Documented justification is made for solutions used to rectify malfunctions and relevant person/s notified in accordance with workplace procedures

4.2 Computer and network installation and monitoring records are maintained in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Integrating multiple computer operating systems on a client server network must include at least two of the following:

- different operating systems for a client server, and
- computers connected to the server to form a client server network.

Unit Mapping Information

This unit replaces and is equivalent to UEENEED124A Integrate multiple computer operating systems on a client server local area network.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECS0024 Integrate multiple computer operating systems on a client server local area network

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements, including the use of risk control measures
- carrying out work efficiently without unnecessary waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
- dealing with unplanned events
- determining the correct operating system, devices, software and services required
- following quality monitoring
- identifying and rectifying common malfunctions using solutions
- implementing system security measures
- installing and configuring client server network operating system and software
- installing network protocols and configuring to integrate computers with different operating systems
- maintaining computer and network monitoring and security records
- monitoring and optimising computer and network performance
- preparing to install multiple operating systems on computers and a client server network
- providing justification for solutions used to rectify malfunctions
- reporting integration and outcome of network monitoring activities
- testing effectiveness of disaster recovery plan.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- network operating systems
- networking fundamentals
- problem-solving techniques
- relevant industry standards

- relevant manufacturer specifications
- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace instructions, quality, policies and procedures
- sustainable energy principles.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to integrating multiple computer operating systems on a client server network
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECS0025 Modify/redesign industrial computer systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to modify/redesign industrial computer systems.

It includes applying safe working practices, identifying system parameters, modifying systems, following procedures and documenting final modifications for approval.

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations which are designed to operate at voltages greater than 50 volt (V) alternating current (a.c.) or 120 V direct current (d.c.).

Competency development activities in this unit are subject to regulations directly related to licensing. Where a licence or permit to practice is not held, skills and knowledge described in this unit require a relevant contract of training, such as an Australian Apprenticeship.

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Permits may also be required for some work environments, such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare to modify/redesign computer systems

- 1.1 WHS/ OHS processes and workplace procedures for a given work area are obtained and applied
- 1.2 WHS/OHS risk control measures and workplace procedures in preparation for the work are followed
- 1.3 Safety hazards that have not previously been identified are noted and risk control measures implemented
- 1.4 Relevant person/s is consulted to ensure work is coordinated effectively with others involved on the worksite
- 1.5 System operating parameters are identified by reviewing system specifications and component technical data
- 1.6 Limitations and operation of the system to be modified are determined from specifications and manufacturers' data
- 1.7 Modification is determined from measurements, tests, inspections, system limitations and relevant industry requirements
- 1.8 Specifications and work instructions for the modifications are documented in accordance with workplace procedures
- 1.9 Tools, equipment, applications and testing devices required for work are obtained in accordance with workplace procedures and checked for correct operation and safety
- 1.10 Preparatory work is checked to ensure no damage has occurred in accordance with workplace procedures

2 Generate modification/redesign of computer systems

- 2.1 WHS/OHS risk control measures and workplace procedures for carrying out the work are followed
- 2.2 Alternative modification arrangements are discussed

with relevant person/s

- 2.3 Safety, functionality and economic considerations are incorporated in the proposed modification design
 - 2.4 Proposed modification for alteration of the system/s and specifications is documented in accordance with relevant industry standards
 - 2.5 Changed outcomes in the use and operation of the system/s of the proposed modification are documented
 - 2.6 Unplanned situations are dealt with in consultation with relevant person/s and job specifications in accordance with relevant industry standards
 - 2.7 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes
 - 2.8 Modification/redesign is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles
- 3 Complete and report modification/redesign activities**
- 3.1 WHS/OHS risk control work completion measures and workplace procedures are followed
 - 3.2 Proposed modification is checked in accordance with workplace procedures and relevant industry standards
 - 3.3 Worksite is cleaned and made safe in accordance with workplace procedures
 - 3.4 Proposed modification is submitted for workplace and relevant industry standard approval
 - 3.5 Approved modification/redesign documents are completed and stored in accordance with workplace procedures and relevant industry standards

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Modifying/redesigning computer systems must include at least two of the following:

- computer systems
- associated components
- applications
- controls

Unit Mapping Information

This unit replaces and is equivalent to UEENEED145A Modify-redesign of industrial computer systems.

Links

Assessment Requirements for UEECS0025 Modify/redesign industrial computer systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - using risk control measures
- checking work to ensure no damage and/or waste to apparatus, environment, materials and services
- consulting with relevant person/s to ensure work is coordinated effectively
- dealing with unplanned events in consultation with relevant person/s and job specifications
- determining limitations and operation of the system to be modified
- developing outlines of alternative designs
- developing the modified/redesigned system within safety and functional requirements and budget considerations
- discussing alternative modification arrangements
- documenting and presenting modifications/redesigns
- documenting specifications and work instructions for the modifications
- generating modification/redesign of computer system/s
- identifying system operating parameters by reviewing system specifications and component technical data
- obtaining approval for final modified/redesigned system
- obtaining tools, equipment, applications and testing devices and checking for correct operation and safety
- preparing to modify/redesign of computer system/s
- using sustainable energy practices.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- design objectives (specifications)
- functional and non-functional requirements of customer/s
- implementation of the selected design
- optimisation of the proposed solution
- problem-solving techniques
- relevant analysis
- relevant computer system and modifications
- relevant industry standards
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications and installation instructions
- relevant materials, apparatus, environment and services
- relevant modification/redesign specifications?
- relevant system limitations and operation
- relevant system operating parameters
- relevant tools, equipment, applications and testing/measuring devices
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace instructions, policies and procedures
- sustainable energy principles
- validations of the resulting design.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to modifying/redesigning computer systems
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECS0026 Plan industrial computer systems projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to plan industrial computer systems projects.

The unit includes establishing budgets; conducting critical path analysis; developing workflow strategies; and documenting, presenting and negotiating budgets.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to plan project

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied
- 1.2** Project planning techniques are reviewed and implemented in accordance with workplace procedures

- | | | |
|---|------------|--|
| | 1.3 | Scope of the project is determined from design brief, specifications and/or relevant documentation and discussions with relevant person/s |
| 2 Develop project plan proposal | 2.1 | Estimated plant, material, labour and relevant costs are sought and obtained from relevant person/s in accordance with workplace procedures |
| | 2.2 | Project budget is determined from estimated plant, material, labour and relevant costs in accordance with workplace procedures |
| | 2.3 | Critical path analysis is applied to developing workflow strategies |
| | 2.4 | Sources and availability of materials and human resources required for the project are determined in accordance with workplace procedures |
| | 2.5 | Risk management strategies are sought and obtained for incorporating into the project plan |
| | 2.6 | Project plan is reviewed and adjusted to rectify any anomalies in accordance with design brief, specifications and workplace procedures |
| | 2.7 | Project plan proposal is documented in accordance with workplace procedures |
| 3 Obtain approval for project plan | 3.1 | Project plan is presented and discussed with relevant person/s of authority |
| | 3.2 | Alterations to the project plan resulting from the presentation/discussion are negotiated with relevant person/s in accordance with workplace procedures |
| | 3.3 | Final project plan is documented and approval obtained from relevant person/s |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work

environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Planning of a computer system project must include at least all of the following features:

- redundancy
- scalability
- 100 users
- catering multiple operating systems.

Unit Mapping Information

This unit replaces and is equivalent to UEENEED148A Plan industrial computer systems projects.

Assessment Requirements for UEECS0026 Plan industrial computer systems projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements, including the use of risk control measures
- determining a project budget
- determining sources and availability of materials and human resources required for the project
- determining the scope of the project
- developing workflow strategies
- documenting project plan proposal
- negotiating alterations to the proposed project plan
- obtaining approval of the final plan
- obtaining plant, material, labour and relevant costs
- obtaining risk management strategies for incorporation
- preparing to plan project
- reviewing and adjusting project plan to rectify anomalies
- reviewing and implementing project planning techniques.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- critical path analysis techniques
- factors influencing sequence and restraints of project activities
- purpose of project planning
- relevant manufacturer specifications
- relevant materials and human resources
- relevant plant, material, labour and relevant costs
- relevant project planning techniques

- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace budget, instructions, policies and procedures
- relevant workplace documentation.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to planning computer systems projects
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECS0027 Provide programming solution for computer systems engineering problems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to provide programming solutions for computer systems engineering problems.

It includes identifying and developing programming solutions and documenting development activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to identify computer systems engineering problem

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) processes and workplace procedures for a given work area are identified, obtained and understood
- 1.2** WHS/OHS risk control measures and workplace procedures are followed in preparation for the work

- 1.3 Scope of engineering programming problem is determined from performance specifications and/or documentation and in consultation with relevant person/s
 - 1.4 Activities are planned in accordance with workplace procedures for timelines in consultation with others involved
 - 1.5 Software development tools are selected based on programming requirements and performance specification
 - 1.6 Activities are implemented to ensure programming is carried out in accordance with workplace procedures
- 2 Develop programming solutions**
- 2.1 WHS/OHS risk control measures and workplace procedures for carrying out the work are followed
 - 2.2 Demonstrated structured programming functions and features are applied to provide a programming solution
 - 2.3 Code in programs are analysed and modifications and/or corrections are made to rectify engineering programming problem
 - 2.4 Key features of the programming language are applied to develop and test solutions
 - 2.5 Unplanned issues/problems are analysed and effective solutions identified in accordance with workplace procedures
 - 2.6 Quality of work is monitored in accordance with workplace procedures and/or relevant industry standards
- 3 Test and document the programming solutions**
- 3.1 Test methods are developed to analyse code in accordance with relevant programming language and workplace procedures
 - 3.2 Problems and errors in program are rectified in accordance with program performance requirements and relevant industry standards
 - 3.3 Intermediate and final documentation are completed and relevant person/s notified in accordance with relevant industry standards and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEED151A Provide programming solution for computer systems engineering problems.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECS0027 Provide programming solution for computer systems engineering problems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements
- determining the engineering programming problem
- developing testing procedures
- identifying problems and errors in code
- preparing to identify computer systems engineering problems and developing programming solutions
- rectifying problems and errors in code
- using key features of programming language.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- problem-solving techniques
- relevant manufacturer specifications
- relevant programming fundamentals and high-level language programming, including:
 - complex data types and structures
 - control applications of software
 - interfacing high-level languages to assembler
 - interrupt service routines
 - program development
 - programming concepts, including:
 - programming languages currently used by industry
 - software terminology
- relevant job safety assessments or risk mitigation processes
- relevant tools and software

- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace instructions, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to providing programming solution for engineering problems
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECS0028 Select, install, configure and test multimedia components

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to select, install, configure and test multimedia components.

It includes working safely; selecting, installing, configuring and testing multimedia computer system components, applications and driver software; following work instructions and completing reports.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Select and prepare to install multimedia components

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied

- 1.2 Advice is sought from the work supervisor to ensure work is coordinated with others in accordance with workplace procedures
 - 1.3 Multimedia components, drivers and application software are obtained and checked in accordance with workplace procedures and job requirements
 - 1.4 Multimedia devices, drivers and application software are prepared for installing in accordance with job requirements and manufacturer specifications
- 2 Install multimedia components**
- 2.1 Multimedia components are assembled and connected in accordance with manufacturer instructions
 - 2.2 Multimedia devices, drivers and application software are selected in accordance with job requirements and manufacturer specifications
 - 2.3 Multimedia devices are installed and checked where hot pluggable computer is switched on and start-up conducted in accordance with workplace procedures
 - 2.4 Multimedia devices, operating system, application programs and multimedia devices are checked in accordance with workplace procedures and manufacturer specifications
 - 2.5 Multimedia devices and drivers are tested in accordance with workplace procedures, relevant industry standards and manufacturer specifications
 - 2.6 Hardware and/or software faults are identified in accordance with workplace procedures and manufacturer specifications
 - 2.7 Faults are rectified in accordance with WHS/OHS requirements and manufacturer specifications
 - 2.8 Unplanned events are referred to supervisor for direction in accordance with workplace procedures
 - 2.9 Computer is shut down in accordance with workplace procedures
 - 2.10 Work is carried out without waste of materials or damage to apparatus, circuits, the surrounding environment or services using sustainable energy principles

- 3 Complete work and report**
- 3.1** Work area is cleaned and made safe in accordance with workplace procedures
 - 3.2** Work report is completed and supervisor notified of completion of work in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEED130A Select, install, configure and test multimedia components.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECS0028 Select, install, configure and test multimedia components

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements, including the use of risk control measures
- assembling multimedia computer devices
- carrying out work without waste of materials or damage to apparatus, circuits, the surrounding environment or services using sustainable energy principles
- completing work and reporting
- connecting computer, components and peripherals in accordance with requirements
- dealing with unplanned events
- documenting and reporting multimedia computer device activities and results
- identifying faults in hardware and/or software
- installing multimedia components
- installing multimedia devices
- obtaining and checking multimedia devices, drivers and application software
- preparing multimedia devices, drivers and application software
- rectifying faults
- selecting and preparing to install multimedia components
- setting up multimedia computer devices
- testing multimedia computer devices.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- colour printers
- colour scanners
- multimedia storage devices
- multimedia sub-systems
- problem-solving techniques

- relevant job safety assessments or risk mitigation processes
- relevant compact disc read-only memory (CD-ROM), CD-ROM/digital versatile disc (DVD) standards
- relevant industry standards
- relevant manufacturer specifications and operating instructions
- relevant multimedia devices, drivers and application software
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace instructions, policies and procedures
- sound cards and sound card standards
- sustainable energy principles
- video cards, types and specifications.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to selecting, installing, configuring and testing multimedia devices
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECS0029 Set up and configure basic local area network (LAN)

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to set up and configure local area network (LAN).

It includes planning, setting up, configuring, maintaining, completing work and documenting activities for LAN of up to 20 connected devices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECS0003 Assemble, set up and test computing devices

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to set up and configure LAN

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures are identified and applied
- 1.2 Extent of set-up and configuration work is determined from job specifications and consultations with relevant

person/s

- 1.3 Relevant person/s is consulted to coordinate work effectively with others on work site
 - 1.4 Hardware and software needed for work are obtained in accordance with workplace procedures and checked against job requirements
 - 1.5 Work is checked to ensure damage has not occurred and complies with requirements
- 2 Set up, configure and maintain LAN**
- 2.1 Hazards are identified, risks are assessed and control measures are implemented
 - 2.2 Layout of network hardware cabling and outlets is determined from job specifications and/or consultations with relevant person/s
 - 2.3 Hardware is installed in accordance with workplace procedures
 - 2.4 Network software and protocols are installed and configured in accordance with network requirements
 - 2.5 Network operations are tested and anomalies identified and corrected
 - 2.6 Reported network failures and faults are responded to using appropriate tools and methods
 - 2.7 Identified causes of reported problems are rectified and network is tested in accordance with workplace procedures
 - 2.8 Unplanned situations are responded to in accordance with workplace procedures and approval of authorised person/s
 - 2.9 Set-up, configuration and maintenance are completed without waste of materials, damage apparatus, surrounding environments or services using sustainable energy practices in accordance with workplace procedures
- 3 Complete work and document activities**
- 3.1 WHS/OHS risk control work completion measures and procedures are followed
 - 3.2 Worksite is cleaned and made safe in accordance with workplace procedures

- 3.3** Network configuration and maintenance records are maintained in accordance with workplace procedures
- 3.4** Service report is completed and forwarded to appropriate person/s in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Setting up and configuring LAN must include at least two the following:

- two personal computers/workstations
- one server
- switch or router
- one input or output device

Unit Mapping Information

This unit replaces and is equivalent to UEENEED146A Set up and configure basic local area network (LAN).

Links

Companion Volume implementation guides are found in VETNet - -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEECS0029 Set up and configure basic local area network (LAN)

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including implementing risk control measures
- applying sustainable energy principles and practices
- cleaning worksite and making safe
- completing work and documenting activities
- coordinating work with others
- dealing with unplanned events/situations in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
- identifying and correcting anomalies
- identifying the extent of work
- installing and configuring software and installing hardware
- obtaining specified hardware and software and checking against job requirements
- planning and configuring local area network (LAN)
- rectifying network problems and maintaining maintenance records
- setting up, configuring and maintaining LAN.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- analogue and digital signals, including:
 - how information is carried
 - signal distortion, including attenuation, reflection, noise, dispersion, jitter, latency and collisions
- the open systems interconnection (OSI) model for computer system interconnect, including:
 - physical layer
 - data link layer

- network layer
- transport layer
- session layer
- presentation layer
- application layer
- purpose of each layer of OSI model
- comparing transmission control protocol (TCP) and internet protocol (IP)
- TCP and user datagram protocol (UDP)
- TCP segment format
- UDP segment format
- TCP connection methods
- types of networks, network components and hardware
- LAN architectures, including:
 - general principle of LAN, including:
 - benefits of a LAN
 - the elements of a LAN
 - the different types of network topology and their applications
 - cabling and termination arrangements for a LAN system
- multiple access units and their function, including switches, access points and routers
- LAN standards, including ethernet (IEEE 802.3) and wireless ethernet (IEEE 802.11)
- basic principle of medium access methods such as polling and CSMA/CD
- current network operating systems available for establishing a LAN, including:
 - network protocols
 - concepts of TCP/IP addressing
 - peer-to-peer and server based
 - establishing workgroups
 - file and device sharing
- network hardware installation methods, including installing network cards, and installing switches and routers
- concepts and the hardware required for internet and world wide web working LANs
- network security
- network device set-up and configuration
- hardware requirements
- network testing and diagnostic tools and methods
- networking protocols
- network security
- network signal propagation
- basics of encoding networking signals
- IP addressing and sub-netting
- cabling layouts
- network protocols and faults

- network software and hardware installation and configuration methods
- relevant manufacturer specifications
- relevant job safety assessments or risk mitigation processes, including risk control measures
- relevant WHS/OHS legislated requirements
- relevant workplace documentation including maintenance records and service records
- relevant workplace policies and procedures
- sustainable energy principles and practices.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEEC S0030 Set up, configure and test biometric devices

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to set up, configure and test biometric devices.

It includes working safely, following written and oral instructions, applying knowledge of biometric devices, installing and testing performance, and documenting outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to set up and test biometrics devices

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|------------|--|
| 1.1 | Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied |
| 1.2 | Scope of device, set-up and configuration work is determined from job specifications and in consultation |

outcomes

workplace procedures

- 3.2 Biometric device installation and maintenance records are maintained in accordance with workplace procedures
- 3.3 Service report is completed and forwarded to relevant person/s in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Setting up and testing must include at least the following:

- four different types of biometric devices

Unit Mapping Information

This unit replaces and is equivalent to UEENEED153A Set up, configure and test biometric devices.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECS0030 Set up, configure and test biometric devices

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- carrying out biometric device work efficiently without waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
- checking and isolating circuits/equipment
- completing set-up, testing and reporting
- dealing with unplanned situations
- determining layout of biometric system network hardware, cabling and outlets
- identifying and rectifying problems
- obtaining hardware, software and materials required for work
- placing equipment in accordance with regulatory and customer requirements
- preparing to set up and test biometrics devices
- responding to system anomalies to effect functionality of devices
- selecting appropriate equipment
- setting up and testing biometric devices
- testing and verifying functional operation of devices.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- biometric device tools, software and testing techniques
- biometrics techniques and processes, including definitions, terminology, advantages, disadvantages and applications
- legal aspects of biometrics
- physical interaction with biometric devices, including operation and installation of biometric devices (e.g. iris scanners, hand scanners, voice recognition apparatus, facial recognition)

- devices and relevant equipment)
- problem-solving techniques
 - relevant hardware, software and materials
 - relevant manufacturer specifications and operating instructions
 - relevant job safety assessments or risk mitigation processes
 - relevant WHS/OHS legislated requirements
 - relevant workplace documentation
 - relevant workplace policies and procedures
 - sustainable energy principles.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to setting up and testing biometric devices
- applicable documentation including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEEC S0031 Set up, create and implement content for a web server

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to set up, create and implement content for a web server.

It includes working safely, installing and administering server software and databases, server scripting, configuring access and security, and documenting work activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to develop and implement web-based server

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) processes and workplace procedures for a given work area are identified, obtained and applied
- 1.2 WHS/OHS risk control measures and workplace procedures are followed in preparation for the work

- 1.3 Development work is determined from server performance specifications and in consultation with relevant person/s
 - 1.4 Activities are planned to meet scheduled timelines in consultation with others involved in work
 - 1.5 Development tools, testing devices and software are selected on specified requirements in accordance with relevant industry standards and workplace procedures
 - 1.6 Strategies are implemented to ensure development work is carried out in accordance with workplace procedures
- 2 Develop web services**
- 2.1 WHS/OHS risk control measures and workplace procedures for carrying out the work are followed
 - 2.2 Server software is installed and configured to functionality and security in accordance with workplace procedures and specifications
 - 2.3 Syntax functions and features of mark-up language scripts are applied to developing client-side programming in accordance with workplace procedures and specifications
 - 2.4 Pages are created, rendered with relative and absolute links, images and table formatting using cascaded styles sheets in accordance with workplace procedures and specifications
 - 2.5 Forms are created with a variety of relevant elements and element groupings in accordance with workplace procedures and specifications
 - 2.6 Server scripting languages are applied to developing client-side programming and validated in accordance with workplace procedures and specifications
 - 2.7 Written scripts are interpreted for web functionality and management of relation databases in accordance with workplace procedures and specifications
 - 2.8 Written scripts are interpreted for web functionality and management of browser windows, security, web application deployment and administration consoles in accordance with workplace procedures and specifications

- | | |
|---|---|
| 3 Test, evaluate, implement and complete documentation | <p>2.9 Solutions are integrated in accordance with server performance specifications</p> <p>2.10 Approaches to issues/problems are analysed to provide effective solutions in accordance with workplace procedures</p> <p>2.11 Quality of work is monitored in accordance with workplace procedures and relevant industry standards</p> <p>3.1 Testing and workplace procedures are developed to evaluate client-side programming and web applications and services</p> <p>3.2 Problems in client-side programming and web service functionality are identified and rectified in accordance with workplace procedures and server performance</p> <p>3.3 Intermediate and final work reports are written in accordance with relevant industry standards and presented to relevant person/s</p> |
|---|---|

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Developing, implementing and testing hypertext mark-up language (HTML) pages must include at least four of the following:

- relative and absolute links, images and table formatting
- cascaded styles sheets
- forms
- new browser windows
- validation of form data
- form data input response
- form data processing
- database access
- output of database table contents
- insertion of table data to database

Developing, implementing and testing of server scripting for database access must include at least four of the following:

- installation and administration of key features of web and web application servers

Unit Mapping Information

This unit replaces and is equivalent to UEENEED110A Set up, create and implement content for a web server.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEECS0031 Set up, create and implement content for a web server

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- analysing approaches to issues/problems
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - using risk control measures
- applying syntax functions and features of mark-up language scripts
- consulting and planning with others to meet scheduled timelines
- creating and rendering web pages
- determining development server performance specifications
- developing and testing workplace procedures to evaluate client-side programming
- developing web services
- identifying problem/s in client-side programming and web services functionality
- implementing strategies to ensure work is carried out
- installing and configure web server software
- monitoring quality of work
- providing web functionality and management of browser windows, security, web application deployment and administration consoles
- providing web functionality and management of relation databases
- rectifying problem/s
- selecting development tools and testing devices and software
- writing intermediate and final work reports.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- problem-solving techniques
- relevant comparison of application servers and platforms

- relevant development tools, testing devices and software
- relevant hypertext transfer protocol (HTTP) servers
- relevant industry standards
- relevant manufacturer specifications and installation instructions
- relevant parameters of different programming languages
- relevant job safety assessments or risk mitigation processes
- relevant server scripting technologies and language
- relevant server software
- relevant testing and validation
- relevant web application technologies
- relevant web services overview
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace quality, instructions, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to setting up and creating content in a web server
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECS0032 Support computer hardware and software for engineering applications

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to support computer hardware and software for engineering applications.

It includes applying safe working practices, installing and testing the upgrading components, locating faults in hardware components, replacing faulty sub-systems, installing and testing the operating system and application software, testing functionality, rectifying malfunctions, following work instructions and completing documentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to upgrade and maintain computer hardware and software

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied

- 1.2 Scope of computer and/or peripheral hardware/software upgrade or maintenance is determined in consultation with relevant person/s
 - 1.3 Relevant person/s is consulted to ensure work is coordinated effectively with others in accordance with workplace procedures
 - 1.4 Hardware sub-systems required to upgrade and/or maintain computers and peripherals are obtained in accordance with workplace procedures and job requirements
 - 1.5 Software versions are installed in accordance with workplace procedures and job requirements
- 2 Upgrade computer hardware and software**
- 2.1 Computers are checked and isolated in accordance with WHS/OHS and workplace procedures
 - 2.2 Computers and/or peripherals are dismantled, as required, for upgrading and parts stored to prevent loss or damage in accordance with manufacturer instructions and/or relevant industry standards
 - 2.3 Upgrading components are fitted and computer/peripheral apparatus is reassembled in accordance with manufacturer instructions and/or relevant industry standards
 - 2.4 Upgrading software components are installed in accordance with manufacturer instructions and/or relevant industry standards
 - 2.5 Operating system, device drivers and application software are tested for return to service/customer in accordance with workplace procedures
 - 2.6 Computer/peripheral apparatus is tested and prepared for return to customer
- 3 Maintain operation of computer hardware and software**
- 3.1 Need to test and measure live work is determined in accordance with WHS/OHS and workplace procedures
 - 3.2 Computers are checked and isolated in accordance with WHS/OHS and workplace procedures
 - 3.3 Computers and/or peripherals are dismantled, as required, to find and rectify faults and parts stored to

prevent loss or damage in accordance with manufacturer instructions and relevant industry standards

- 3.4 Faults are identified using tests and measured values of operating parameters of computer/peripheral hardware components in accordance with workplace procedures
 - 3.5 Faulty components are re-checked and fault status confirmed
 - 3.6 Operating system malfunctions are identified using tests of operating system configuration requirements in accordance with workplace procedures
 - 3.7 Device driver malfunctions are identified using test of device driver software configuration requirements in accordance with workplace procedures
 - 3.8 Application software malfunctions are identified and tests of software configuration requirements conducted in accordance with workplace procedures
 - 3.9 Malfunctions are rectified using latest software versions, incremental updates and bug and security patches in accordance with workplace procedures
 - 3.10 Computer hardware/peripheral device, operating system device drivers and application software are tested for return to service/customer in accordance with workplace procedures
 - 3.11 Redundant files are removed and disposed or archived in accordance with workplace procedures
 - 3.12 Methods for dealing with unplanned situations are selected in accordance with WHS/OHS and workplace procedures
 - 3.13 Maintenance is carried out efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or relevant services
- 4 Complete and report upgrade and maintenance activities**
- 4.1 Work area is cleaned and made safe in accordance with workplace procedures
 - 4.2 Written justification is produced for hardware software upgrade and maintenance

- 4.3** Upgrade and maintenance are documented and relevant person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Maintaining and upgrading the operating system and device drivers must include at least the following:

- two engineering application software types for a client device (e.g. computer, mobile device, embedded system) and server

Maintaining a computer and peripheral devices must include at least the following:

- one computer
- two external peripheral devices

Unit Mapping Information

This unit replaces and is equivalent to UEENEED112A Support computer hardware and software for engineering applications.

Links

Companion Volume implementation guides are found in VETNet - -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEECS0032 Support computer hardware and software for engineering applications

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements
- completing and reporting upgrading and maintenance activities
- configuring authorisation and authentication
- configuring backup and recovery options
- configuring data access and usage
- configuring networking
- dealing with redundant files
- dealing with unplanned events
- dismantling, fitting upgrading sub-systems and reassembling correctly
- documenting maintenance activities
- documenting upgrading activities
- identifying application malfunctions
- identifying deployment or upgrade needs
- identifying device driver malfunctions
- identifying operating system malfunctions
- installing and configuring operating systems and applications software
- maintaining operation of computer hardware and software
- monitoring and maintaining an operating system using system tools
- obtaining appropriate upgrading sub-systems
- preparing to upgrade and maintain computer hardware and software
- rectifying software malfunctions
- testing and identifying faulty components
- testing maintenance repair
- testing upgraded software.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- authentication and authorisation
- configuring file and folder access
- configuring hardware, device drivers and applications
- configuring network connectivity
- file structure and management
- management of peripheral devices
- operating principles of computer peripheral hardware
- operating system components and structure
- operating system imaging and deployment
- operating system installation, upgrades and migration
- operating system malfunctions and solutions
- relevant manufacturer specifications and operating instructions
- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- remote access
- troubleshooting techniques
- types and applications of computer peripherals
- WHS/OHS requirements
- computing device assembly/disassembly and computer operating systems.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities and equipment used in industry

- resources that reflect current industry practices required to support computer hardware and software
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEECS0033 Use engineering applications software on personal computers

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to use computer application software relevant to engineering support work functions.

It includes using computer engineering application software, menus and tools, entering and retrieving information, transferring and printing files and shutting down computer applications.

This unit applies to personnel using computer application software relevant to a workplace. Typically, this will apply to individuals working under supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to use computer application software

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for an engineering work area are identified, obtained and

- applied
- 1.2** WHS/OHS risk control measures and procedures in relation to computer and keyboard use are followed in accordance with workplace procedures
 - 1.3** Application software and information/instructions required for use are obtained
 - 1.4** On-screen instructions in relation to any anomaly are followed in accordance with workplace procedures
 - 1.5** Help menu is used to resolve any common start-up, access issues or anomalies
- 2 Use engineering software application**
- 2.1** WHS/OHS risk control measures and workplace procedures for carrying out work are followed
 - 2.2** Techniques specific to software packages are used to produce relevant files and engineering information
 - 2.3** Checks are made to ensure accuracy of information produced
- 3 Output information from software application**
- 3.1** Completed files are stored appropriately in accordance with workplace policies and procedures
 - 3.2** Files are printed and stored electronically as formal records and/or forwarded to relevant personnel
- 4 Shut down computer**
- 4.1** Files are named, arranged, saved and backed up in accordance with workplace policies and procedures
 - 4.2** Computer shutdown procedures are followed in accordance with workplace procedures and computer powered off

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package

Companion Volume Implementation Guide.

Unit demonstration must include at least two of the following types of engineering applications:

- office applications
- computer-aided design (CAD)
- engineering data analysis software
- engineering modelling
- project management
- network simulator
- protocol analyser

Unit Mapping Information

This unit replaces and is equivalent to UEENEED104A Use engineering applications software on personal computers.

Links

Companion Volume implementation guides are found in VETNet - -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEECS0033 Use engineering applications software on personal computers

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including risk control measures
- using online 'Help' function to resolve common problems
- following application instructions to input and output information
- outputting information to relevant devices
- preparing to use computer applications
- reading and applying software instructions
- saving, storing information and backing up files
- saving, storing, outputting and forwarding information electronically
- shutting down computer
- transferring information between software applications
- using engineering application software.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- software operating system
- relevant engineering computer software applications, including:
 - computer-aided design (CAD)
 - engineering data analysis software
 - engineering modelling
 - project management
 - network simulator
 - protocol analyser
- relevant job safety assessments or risk mitigation processes, including risk control measures

- relevant manufacturer specifications
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEEDV0001 Assemble and connect telecommunication frames and cabinets

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to assemble and connect telecommunication frames and cabinets.

It includes identifying, assembling, connecting and checking quality of assembled telecommunication frames and cabinets.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0020 Fix and secure electrotechnology equipment

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

Competency Field

Data and Voice

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Identify telecommunication frame

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures

- and cabinet** are identified and applied
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
 - 1.3 Work instructions and relevant diagrams are identified and applied
 - 1.4 Advice is sought from workplace supervisor to ensure work is coordinated with relevant person/s
 - 1.5 Materials required for work are obtained in accordance with workplace procedures
 - 1.6 Tools, equipment and testing devices required for work are obtained in accordance with workplace procedures and checked for correct operation and safety
- 2 Assemble and connect telecommunication frame and cabinet**
- 2.1 WHS/OHS risk control workplace measures are followed
 - 2.2 Equipment is checked and isolated in accordance with WHS/OHS requirements and workplace procedures
 - 2.3 Frame/cabinet and communication components are fitted in accordance with work instructions, industry standards, manufacturer instructions and workplace procedures
 - 2.4 Interconnections are made in accordance with workplace procedures
 - 2.5 Installation and equipment are checked for compliance with relevant industry standards
 - 2.6 Completed communication frames/cabinets are checked/tested against manufacturer instructions, industry standards and workplace procedures
 - 2.7 Unplanned situations are responded to in accordance with workplace procedures and approval of authorised person/s
 - 2.8 Work is performed using sustainable energy principles and practices without wasting materials, damaging apparatus, surrounding environments or services in accordance with workplace procedures
- 3 Check quality of**
- 3.1 WHS/OHS risk control measures for work completion

**assembled
telecommunication frame
and cabinet**

are followed

- 3.2** Quality of assembled frame/cabinet is checked/tested against work instructions, industry standards, manufacturer instructions and workplace procedures
- 3.3** Appropriate solutions are used where corrective actions to assembled components are required in accordance with workplace procedures
- 3.4** Work report forms are completed and appropriate person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEF115A Assemble and connect telecommunication frames and cabinets.

Assessment Requirements for UEEDV0001 Assemble and connect telecommunication frames and cabinets

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including implementing risk control measures
- applying sustainable energy principles and practices
- checking and testing quality of assembled telecommunication frame and cabinet, including adhering to quality procedures
- completing work report forms
- dealing with unplanned events/situations in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
- determining and using appropriate solutions in accordance with workplace procedures
- following assembly instructions
- identifying, assembling and connecting telecommunication frame and cabinet
- isolating in accordance with relevant industry standards
- making connection without damaging apparatus
- obtaining relevant equipment, tools, testing devices and materials
- seeking advice from supervisor
- using manufacturer instructions.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- cabinet internal cable routing and management provisions
- cabinet ventilation requirements
- cabinet structure, including:
 - internal framework
 - cable entry
 - removable panels
 - multiple cabinets

- doors, locks and hinges
- mounting rails
- access to equipment and cabling
- earthing arrangements and methods
- mounting requirements for components, including:
 - rack units
 - patch panels
 - routers
 - servers
- communication cable and conductor terminations, including:
 - approved termination devices and sockets
 - special termination tools and their use
 - cable colour coding up to 100 pair indoor and outdoor cable
- methods of terminating cables, including:
 - cables less than twenty pair
 - twenty pair cable and greater
 - structured cables
 - coaxial cables
 - optical fibre cables
 - termination safety practices
- cable labelling devices, including quality checks and tests
- component installation and interconnections
- relevant job safety assessments or risk mitigation processes, including risk control measures
- relevant manufacturer specifications and instructions
- relevant tools, equipment and testing devices
- relevant WHS/OHS legislated requirements
- relevant workplace documentation and diagrams
- relevant workplace policies and procedures
- sustainable energy principles and practices
- telecommunication cabinet assembly, cabling and terminations.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEEDV0002 Install aerial telecommunication cables

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to install aerial telecommunication cables. It includes working safely, installing catenary cable, fixing communication cables and completing documentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0020 Fix and secure electrotechnology equipment

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEDV0005 Install and maintain cabling for multiple access to telecommunication services and

UEECD0043 Solve problems in direct current circuits

or

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

Competency Field

Data and Voice

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare to install aerial communication cables

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied
- 1.2** WHS/OHS risks are identified, and risk control measures and workplace procedures are followed in preparation for the work
- 1.3** Safety hazards not previously identified are noted and risk control measures implemented
- 1.4** Cabling installation is prepared in consultation with others affected by the work and sequenced in accordance with workplace procedures
- 1.5** Scope of work is determined from documentation and/or discussions with relevant person/s to establish the work to be undertaken
- 1.6** Cable routes are planned in accordance with the precinct, structure, significants and relevant industry standards
- 1.7** Advice is sought from relevant person/s to ensure the work is coordinated effectively with others
- 1.8** Material required for installation work is obtained in accordance with workplace procedures and job specifications
- 1.9** Tools, equipment and testing devices required for the installation work are obtained in accordance with workplace procedures and checked for correct operation and safety
- 1.10** Preparatory work is checked to ensure no damage has occurred in accordance with relevant industry standards

2 Install aerial communication cables

- 2.1** WHS/OHS risk control measures and workplace procedures for carrying out the work are followed

- 2.2 Poles are checked for soundness in accordance with workplace procedures
 - 2.3 Catenary cables are installed ensuring sufficient clearances are in accordance with relevant industry standards
 - 2.4 Cables are attached to catenary without strain or damage in accordance with relevant industry standards
 - 2.5 Cable ends are protected from damage in preparation for termination
 - 2.6 Methods for dealing with unplanned situations are discussed with relevant person/s for approval and documented in accordance with workplace procedures
 - 2.7 Unexpected situations are dealt with safely and with the approval of relevant person/s
 - 2.8 Quality checks of the installed aerial communication cables are conducted in accordance with workplace procedures
 - 2.9 Cable installation is carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment using sustainable energy practices
- 3 Document and verify cabling installation**
- 3.1 WHS/OHS work completion risk control measures and workplace procedures are followed
 - 3.2 Worksite is cleaned and made safe in accordance with workplace procedures
 - 3.3 Documenting cable installation is carried out in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEF112A Install aerial telecommunication cables.

Assessment Requirements for UEEDV0002 Install aerial telecommunication cables

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- reading and interpreting drawings related to cable schedules and routes
- installing catenary cables correctly
- attaching communications cable to catenary without damage
- protecting cable ends
- completing the necessary documentation accurately
- dealing with unplanned events
- applying relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements, including using risk control measures
- carrying out cable installation efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment using sustainable energy practices
- checking poles for soundness
- documenting and verifying cabling installation
- installing aerial communication cables
- obtaining material required for installation
- obtaining tools, equipment and testing devices and checking for correct operation and safety
- planning cable routes in accordance with precinct, structure, significant and relevant industry standards
- preparing to install aerial communication cables
- quality checking the installed aerial communication cables.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- telecommunication aerial cabling requirements and techniques, safe working practices and relevant standards, codes and regulations, including:
 - hazards and control measures in aerial cabling working environment encompassing:
 - risk management and assessment of risk:
 - principle and purpose of risk management

- processes for conducting a risk assessment
- hazards associated with low voltage (LV), extra-low voltage (ELV) and high currents encompassing:
