Additional and/or other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Pre-requisite Unit

UEEEL0039 Design, install and verify compliance and functionality of general electrical installations

UEERE0055 Conduct site survey for off-grid photovoltaic/generating set systems

UEERE0078 Install battery storage to power conversion equipment

UEERE0079 Install off-grid power conversion equipment to electrical installation

Competency Field

Renewable Energy

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to work on wind energy systems

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 WHS/OHS processes and procedures for relevant work area are identified and applied in accordance with workplace procedures
- 1.2 WHS/OHS hazards are identified, risks assessed, reported to relevant person/s and workplace procedures for risk control measures applied in preparation for work
- 1.3 Nature, scope and location of the work are determined from documentation or relevant person/s
- 1.4 Work is planned in consultation with the customer and others impacted by the work and sequenced appropriately
- 1.5 Engagement and scheduling of contractors and other experts required for completion of work are arranged, and roles, responsibilities and levels of authority confirmed
- 1.6 Materials, components, tools, equipment and testing devices required are obtained in accordance with workplace procedures and checked for correct operation and safety
- 1.7 Live testing, measurement and isolation requirements determined in accordance with WHS/OHS requirements

- and workplace procedures
- 2 Install wind energy systems**
- 2.1** Nature of the installation is verified from design documentation and any design concerns identified referred to designer
 - 2.2** Transport of equipment to the site is confirmed in accordance with workplace procedures
 - 2.3** Installation/construction work of other parties is confirmed as compliant with industry standards, regulations and manufacturer specifications prior to commencing each stage of the project
 - 2.4** Circuits/machines/plant are isolated in accordance with WHS/OHS requirements and workplace procedures
 - 2.5** System components are installed in compliance with industry standards, regulations and job/manufacturer specifications, and with sufficient access to enable terminations, adjustment and maintenance
 - 2.6** Wiring is terminated at components and associated equipment in accordance with manufacturer specifications and functional and regulatory requirements
 - 2.7** Quality checks of installed apparatus are conducted in accordance with workplace procedures
 - 2.8** System installation is completed in accordance with design, industry standards, regulations and manufacturer specification
 - 2.9** Testing and commissioning of the system is conducted in accordance with design documentation, regulations, relevant industry standards and manufacturer specifications
 - 2.10** Worksite is cleaned and made safe in accordance with workplace procedures
 - 2.11** ‘As-installed’ system and associated equipment are documented, manuals produced, and system is handed over to required person/s as per legislation, regulations, industry standards and job requirements
- 3 Maintain wind energy systems**
- 3.1** Scope and nature of the maintenance is verified from relevant documentation and relevant person/s

- 3.2 Live testing, measurement and isolation requirements determined and applied in accordance with WHS/OHS requirements and workplace procedures
- 3.3 System is dismantled in accordance with manufacturer guides and instructions from relevant person/s
- 3.4 Component parts are tagged during dismantling to ensure correct and efficient reassembly and stored to protect against loss or damage
- 3.5 System is reassembled in required sequence with all parts placed, secured and connected in accordance with manufacturer guides or industry practice
- 3.6 Repairs are completed in accordance with industry standards, regulations and manufacturer specification
- 3.7 Testing, commissioning and reinstatement of the system is conducted in accordance with design documentation, regulations, relevant industry standards and manufacturer specifications
- 3.8 Worksite is cleaned and made safe in accordance with workplace procedures
- 3.9 'As-installed' system and associated equipment are documented, manuals updated, and system is handed over to required person/s as per legislation, regulations, industry standards and job requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Installation and maintenance of wind energy systems must include:

- verification of design
- installing power conversion equipment/electrics for a wind turbine.

Unit Mapping Information

This unit replaces and is not equivalent to UEERE0036 Install small wind energy conversion systems rated up to 10 kW for ELV stand-alone applications and UEERE0038 Install, configure and commission LV wind energy conversion systems rated up to 10 kW

Links

Companion Volume Implementation Guides are found in VETNet -

Assessment Requirements for UEERE0076 Install and maintain wind energy systems to power conversion equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is not equivalent to:

- UEERE0036 Install small wind energy conversion systems rated up to 10 kW for ELV stand-alone applications, and
- UEERE0038 Install, configure and commission LV wind energy conversion systems rated up to 10 kW

Modifications include:

- Unit title changed
- Unit application updated
- Prerequisites changed
- Significant amendments made to Elements and Performance Criteria
- Range of conditions updated
- Significant amendments to Performance and Knowledge Evidence.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two occasions and include:

- installing wind energy systems, including:
 - applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
 - verifying design and resolving any issues with designer
 - coordinating work with relevant person/s
 - applying appropriate installation methods for wind energy system
 - testing and verification wind energy system safely
 - connecting and commissioning in accordance with industry standards and regulations
 - completing documentation according to regulatory and industry standards.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- installation of wind energy systems including:
 - selection of an appropriate tower for the installation of a wind energy system taking into

consideration soil type and footings, local council approvals, appropriate codes, relevant Australian standards

- appropriate methods and safety procedures for raising tower and wind energy system, lightning protection, tower maintenance, safety in the erection and maintenance of the tower and wind energy system, and site management to minimise environmental impacts
- appropriate electrical transmission voltage and cable size from the wind energy system to the relevant PCE (if applicable)
- appropriate installation, commissioning, fault diagnosis and rectification using appropriate safety procedures, including wind energy system power output, voltage regulation, and transmission cable voltage drop, manual and automatic furling, and shutdown
- schematic and wiring diagrams for the wind energy system showing the general circuit layout and protection between the wind energy system and PCE according to relevant Australian standards and lightning protection requirements
- safety procedures for the installation, commissioning, fault diagnosis of system components
- maintenance of wind energy system including:
 - appropriate methods and safety procedures for tower maintenance
 - appropriate maintenance methods and safety procedures, including wind energy system power output, voltage regulation, and transmission cable voltage-drop, manual and automatic furling, and shutdown
 - safety procedures for the maintenance of system components
 - maintenance schedule for the system
 - tower maintenance
- relevant industry standards
- relevant manufacturer specifications
- relevant safe work method statements (SWMS)/job safety assessments or risk mitigation processes
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to installing and maintaining wind energy system for stand-alone applications
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERE0077 Install battery storage equipment power conversion equipment to grid

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is not equivalent to UEERE4001 Install, maintain and fault find battery storage systems for grid-connected photovoltaic systems. Modifications include:

- Unit title changed
- Unit application updated
- Prerequisites changed
- Significant amendments made to Elements and Performance Criteria
- Range of conditions updated
- Significant amendments to performance and knowledge evidence requirements and CVIG content developed
- Assessment conditions updated.

Application

This unit involves the skills and knowledge required to install battery storage equipment power conversion equipment (PCE) to grid.

It includes working safely and to industry installation standards, placing and securing system components accurately, making required circuit connections and completing the necessary installation documentation.

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations, which are designed to operate at voltages greater than 50 volt (V) alternating current (a.c.) or 120 V direct current (d.c.).

Competency development activities in this unit are subject to regulations directly related to licensing. Where a licence or permit to practice is not held, a relevant contract of training, such as an Australian Apprenticeship, is required.

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Note: Those holding an Unrestricted Electrician's Licence or equivalent issued in an Australian state or territory meet the prerequisite requirements of UEEEL0012 Install low voltage wiring, appliances, switchgear and associated accessories. All other prerequisite requirements must be met.

Pre-requisite Unit

UEEEL0012 Install low voltage wiring, appliances, switchgear and associated accessories

UEERE0054 Conduct site survey for grid-connected photovoltaic and battery storage systems

Competency Field

Renewable and Sustainable Energy

Unit Sector

Electrotechnology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Plan for the installation of battery storage equipment PCE to grid

- | | |
|------------|---|
| 1.1 | Nature of the installation is verified from design documentation and any design concerns identified are referred to designer |
| 1.2 | WHS/OHS processes and procedures for work are identified and applied in accordance with workplace procedures |
| 1.3 | Hazards associated with battery storage systems are identified and the risk control measures are listed in safe work method statements/job safety analysis |
| 1.4 | Work is planned in consultation with the customer and others impacted by the work and sequenced appropriately |
| 1.5 | Designer recommendations, relevant industry standards, regulations and manufacturer specifications are identified and applied to planning the system installation |
| 1.6 | Materials, tools, equipment and measuring devices required for installation are obtained in accordance with workplace procedures and checked for correct |

- operation and safety
- 2 Install battery storage equipment PCE to grid**
- 1.7** Live testing, measurement and isolation requirements determined and applied in accordance with WHS/OHS requirements and workplace procedures
 - 2.1** Job safety analysis is undertaken or safe work method statement is prepared and used to inform work processes in accordance with regulations and workplace procedures
 - 2.2** Energy storage system components are installed in compliance with industry standards, regulations and job/manufacture specifications, and with sufficient access to enable terminations, adjustment and maintenance
 - 2.3** Wiring is terminated at components and associated equipment in accordance with manufacturer specifications and functional and regulatory requirements
 - 2.4** System components are programmed in accordance with design, relevant industry standards, regulations and manufacturer specifications
 - 2.5** Quality checks of installed apparatus are conducted in accordance with workplace procedures
 - 2.6** Testing and commissioning of the system is conducted in accordance with design documentation, regulations, relevant industry standards and manufacturer specifications
 - 2.7** Worksite is cleaned and made safe in accordance with workplace procedures
 - 2.8** ‘As-installed’ system and associated equipment are documented, manuals produced, and system is handed over to required person/s as per legislation, regulations, industry standards and job requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Installation of battery storage equipment PCE to grid must include:

- installation of a section 5 or 6 system.

Unit Mapping Information

This unit replaces and is not equivalent to UEERE4001 Install, maintain and fault find battery storage systems for grid-connected photovoltaic systems.

Assessment Requirements for UEERE0077 Install battery storage equipment power conversion equipment to grid

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is not equivalent to UEERE4001 Install, maintain and fault find battery storage systems for grid-connected photovoltaic systems. Modifications include:

- Unit title changed
- Unit application updated
- Prerequisites changed
- Significant amendments made to Elements and Performance Criteria
- Range of conditions updated
- Significant amendments to performance and knowledge evidence requirements and CVIG content developed
- Assessment conditions updated.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two occasions and include:

- interpreting system design and verifying installation compliance with relevant industry standards, manufacturer specifications, building codes and regulations and any noncompliance referred to designer
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
- determining and applying live testing, measurement and isolation requirements
- installing battery storage systems including:
 - power conversion equipment (PCE) to grid and essential loads
 - balance of system to grid
 - programming components
- testing and commissioning the system
- completing required documentation
- instruct client on safe and correct system operation, recommended maintenance and system documentation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include

knowledge of the following. Additional advice and definitions for some items is provided in the UEE Training Package Companion Volume Implementation Guide (CVIG).

- grid-connected storage systems installations:
 - installation requirements including:
 - installing power conversion equipment (PCE) suitable for connecting to battery storage in accordance with system design documentation, relevant industry standards, regulations and manufacturer requirements
 - installing all balance of system equipment in accordance with system design documentation, relevant industry standards, regulations and manufacturer requirements
- types and applications of PCEs
- diagrams and drawings including:
 - electrical systems circuit diagrams of typical grid-connected energy storage systems including:
 - AC loads being supplied during periods when grid is unavailable
 - all major components
 - protection devices
 - earthing
 - isolation
 - switching
 - metering
 - equipment location plan/s to show the locations of equipment, fittings and cabling
 - single line diagrams of energy storage systems for grid-connected PV systems including modifications to switchboard to cater for specified loads
 - site diagrams to show the locations of equipment, fittings and cabling
- energy management strategies
- PCEs including:
 - differences between multimode and grid connect
 - output rating of a multimode PCE in relation to:
 - required maximum demand
 - capacity for battery charging
 - program parameters for a multimode inverter, for the correct operation of the system
 - blackout protection
- grid-connected storage systems fault finding:
 - fault finding procedures for individual equipment
 - fault finding procedures for interconnected systems
- maintenance requirements including relevant industry standards, regulations and manufacturer requirements
- grid-connected energy storage systems maintenance procedures including:
 - maintenance requirements for individual equipment
 - maintenance requirements for interconnected systems.

- grid-connected storage systems testing and commissioning procedures including:
 - safe testing of equipment
 - safe testing of system operation
- commissioning of energy storage system.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- Industry Standards
 - relevant industry standards
 - relevant industry product standards
- Documentation including reporting formats
 - manufacturer technical data site plans
 - system designer documentation relevant to installing the system
 - maintenance checklists and/or testing and commissioning sheet
- Measuring and testing equipment
 - multimeter insulation resistance tester clamp tester (DC and AC)
- Plant
 - an existing installed PV array along with the equipment to facilitate the installation of a battery storage system for grid-connected PV systems. This equipment shall comprise:
 - battery storage
 - multi-mode inverter/s
 - devices for interconnecting solar to system either including charge controller or an appropriate inverter and all required balance of system equipment including:
 - cables
 - protection and isolating devices
 - isolators and signage in accordance with relevant industry standards, regulations and industry guidelines
 - appropriate switchboard (or similar) to simulate interconnection of the system with an existing electrical installation

- Safety systems and personal protective equipment (PPE)
 - example of a job safety analysis or safe work method statement form relevant for the practical installation; PPE related to the types of battery storage included in the system
- Software/Systems
 - programming software for the inverter/s and charge controller/s
- Specialist requirements
 - specific manufacturer specifications for the equipment included in the battery storage system for grid-connected PV systems including:
 - installation manuals and user guides for typical components and those provided for the practical installation
 - special tools as required for installing specific equipment
 - special testing tools or equipment required for testing and commissioning, maintenance and fault finding of specific equipment
- Tools and equipment
 - hand tools and power tools.

Assessment Requirements for UEERE0078 Install battery storage to power conversion equipment

Modification History

Release 1. This is the first release of this unit of competency in the Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two occasions and include:

- interpreting system design and verifying installation compliance with relevant industry standards, manufacturer specifications, building codes and regulations and any noncompliance referred to designer
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
- coordinating work with relevant person/s
- determining and applying live testing, measurement and isolation requirements
- installing battery storage systems including:
 - battery storage components
 - PCE
 - balance of system to PCE
 - program components
- testing and commissioning battery storage system
- completing required documentation
- instruct client on safe and correct system operation recommended maintenance and system documentation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of the following. Additional advice and definitions for some items is provided in the UEE Training Package Companion Volume Implementation Guide (CVIG).

- batteries including:
 - meaning of the terms that define aspects of batteries including:
 - battery
 - cell
 - primary and secondary cells

- charge and discharge rate
- depth of discharge (DOD)
- nominal voltage
- amp hour capacity
- state of charge (SOC)
- watt hour capacity
- usable capacity
- cycle life
- major features of commercially available types of batteries suitable for battery storage systems
- factors affecting the life of commercially available types of batteries including the estimation of battery life
- common reasons for failure of commercially available batteries
- charging regimes suitable for commercially available types of batteries
- hazards associated with handling, installing or maintaining commercially available types of batteries and risk control measures
- hazards during fault conditions
- procedures for safe disposal and recycling of commercially available types of batteries
- battery storage systems including:
 - applications for battery storage including:
 - electrical energy supply during grid outages
 - electrical energy supply direct to loads during periods of high tariffs
 - network / aggregator provider requirements
 - purpose of each component in battery storage systems for PV systems
 - communications, monitoring and metering
 - objectives of battery storage
 - purpose of each component in a battery storage system for PV system
 - typical configurations of battery storage systems for PV systems
- types and applications of PCEs
- diagrams and drawings including:
 - electrical systems circuit diagrams of typical battery storage systems
 - all major components
 - protection devices
 - earthing
 - isolation
 - switching
 - metering
 - equipment location plan/s to show the locations of equipment, fittings and cabling
 - single line diagrams of battery storage systems
 - site diagrams to show the locations of equipment, fittings and cabling

- power conversion equipment
- battery storage systems fault finding:
 - fault finding procedures including:
 - fault finding procedures for individual equipment
 - fault finding procedures for interconnected systems
- maintenance requirements including relevant industry standards, regulations and manufacturer requirements
- battery storage systems maintenance procedures including:
 - maintenance requirements for individual equipment
 - maintenance requirements for interconnected systems.
- battery storage systems testing and commissioning procedures including:
 - safe testing of equipment
 - safe testing of system operation
- commissioning of energy storage system.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- Industry Standards
 - relevant industry standards
 - relevant industry product standards
 - AS/NZS 3000 Electrical installations (known as the Australian/New Zealand Wiring Rules)
- Documentation including reporting formats
 - manufacturer technical data site plans
 - system designer documentation relevant to installing the system
 - maintenance checklists and/or testing and commissioning sheet
- Measuring and testing equipment
 - multimeter insulation resistance tester clamp tester (DC and AC)
- Plant

- an existing installed PV array along with the equipment to facilitate the installation of a battery storage system for grid-connected PV systems. This equipment shall comprise:

UEERE0079 Install off-grid power conversion equipment to electrical installation

Modification History

Release 1. This is the first release of this unit of competency in the Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to install off-grid power conversion equipment to electrical installation.

It includes preparing to work on off-grid systems, installing off-grid system to electrical installation, and completing and reporting on installation activities.

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations, which are designed to operate at voltages greater than 50 volt (V) alternating current (a.c.) or 120 V direct current (d.c).

Competency development activities in this unit are subject to regulations directly related to licensing. Where a licence or permit to practice is not held, a relevant contract of training, such as an Australian Apprenticeship, is required.

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Pre-requisite Unit

UEEEL0039 Design, install and verify compliance and functionality of general electrical installations

UEERE0055 Conduct site survey for off-grid photovoltaic/generating set systems

UEERE0078 Install battery storage to power conversion equipment

UEERE0081 Install photovoltaic systems to power conversion equipment

Competency Field

Renewable Energy

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare to install off-grid power conversion equipment to electrical installation

- 1.1** Nature of the installation is verified from design documentation and any design concerns identified referred to designer
- 1.2** WHS/OHS processes and procedures for relevant work area are identified and applied in accordance with workplace procedures
- 1.3** WHS/OHS hazards are identified, risks assessed, reported to relevant person/s and workplace procedures for risk control measures applied in preparation for work
- 1.4** System installation is planned in consultation with others impacted by the work and sequenced appropriately
- 1.5** Location of system components is verified according to design within the constraints of the building structure and regulations
- 1.6** Materials, components, tools, equipment and testing devices required are obtained in accordance with workplace procedures and checked for correct operation and safety
- 1.7** Live testing, measurement and isolation requirements determined in accordance with WHS/OHS requirements and workplace procedures

2 Install off-grid power conversion equipment to electrical installation

- 2.1** Circuits/machines/plant are isolated in accordance with WHS/OHS requirements and workplace procedures
- 2.2** System components are installed to comply with design, manufacturer specifications, industry standards and regulatory requirements
- 2.3** Wiring is terminated at system components and mandatory tests conducted prior to energisation
- 2.4** Quality checks of installed apparatus are conducted in accordance with workplace procedures

- 2.5 System is programmed in accordance manufacturer specifications and design
- 2.6 Testing and commissioning of the system is conducted in accordance with design documentation, regulations, relevant industry standards and manufacturer specifications
- 2.7 Worksite is cleaned and made safe in accordance with workplace procedures
- 2.8 'As-installed' system and associated equipment are documented, manuals produced, and system is handed over to required person/s as per legislation, regulations, industry standards and job requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This is a new unit.

Assessment Requirements for UEERE0079 Install off-grid power conversion equipment to electrical installation

Modification History

Release 1. This is the first release of this unit of competency in the Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- installing off-grid systems to electrical installation, including:
 - applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
 - verifying design and resolving any issues with designer
 - coordinating work with relevant person/s
 - determining and applying live testing, measurement and isolation requirements
 - reading and interpreting drawings/diagrams related to apparatus locations and circuit connections
 - applying appropriate installation methods for off-grid systems
 - testing system operation and verifying compliance with standards and job specifications
 - connecting and commissioning in accordance with industry standards and regulations
 - completing necessary documentation, including handing over system operational documents to the customer.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- system configurations including multiple energy sources including:
 - systems with d.c. loads only
 - systems with d.c. and ac. loads
 - systems with a.c. loads
 - renewable energy only systems including PV, wind and micro-hydro
 - hybrid systems comprising one or more RE system with fuel generator
- electrical installation requirements including:
 - methods used in wiring and connecting the following in accordance with relevant Australian Standards and manufacturers requirements:

- multiple PCEs and associated control equipment
- PCEs with generating sets
- PCEs and fuel generators directly with loads or with switchboards or distribution board
- considerations involved in choosing the cable routes
- selection and locating the associated protection and isolating devices in accordance with relevant Australian standards and industry guidelines
- wiring diagrams for the off-grid RE system showing the general circuit layout and protection between the various system components
- system control installation including:
 - control and monitoring equipment
 - associated cabling
 - control programming
- system testing and commissioning
- system documentation
- relevant manufacturer specifications
- relevant safe work method statements (SWMS)/job safety assessments or risk mitigation processes
- relevant workplace documentation, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to installing and setting up off-grid systems
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERE0080 Install photovoltaic power conversion equipment to grid

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to install and commission photovoltaic (PV) power conversion equipment (PCE) to grid.

It includes working safely to industry installation standards, installing components in accordance with design, placing and securing system components accurately, making required circuit connections, testing and commissioning the installation and completing the necessary installation documentation.

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations, which are designed to operate at voltages greater than 50 volt (V) alternating current (a.c.) or 120 V direct current (d.c.).

Competency development activities in this unit are subject to regulations directly related to licensing. Where a licence or permit to practice is not held, a relevant contract of training, such as an Australian Apprenticeship, is required.

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Note: Those holding an Unrestricted Electrician's Licence or equivalent issued in an Australian state or territory meet the prerequisite requirements of UEEEL0012 Install low voltage wiring, appliances, switchgear and associated accessories. All other prerequisite requirements must be met.

Pre-requisite Unit

UEEEL0012 Install low voltage wiring, appliances, switchgear and associated accessories

UEERE0054 Conduct site survey for grid-connected photovoltaic and battery storage systems

Competency Field

Renewable Energy

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Plan to install photovoltaic power conversion equipment to grid

2 Install grid-connected systems

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Nature of the installation is verified from design documentation and any design concerns identified are referred to designer
- 1.2** WHS/OHS processes and procedures for work are identified and applied in accordance with workplace procedures
- 1.3** Work is planned in consultation with the customer and others impacted by the work and sequenced appropriately
- 1.4** Location of components is verified within the constraints of the building structure, design and industry standards and regulations
- 1.5** Material, tools, equipment and measuring devices required for the installation are obtained in accordance with design requirements
- 1.6** Live testing, measurement and isolation requirements determined and applied in accordance with WHS/OHS requirements and workplace procedures
- 2.1** Circuits/machines/plant are isolated in accordance with WHS/OHS requirements and workplace procedures
- 2.2** System installed in compliance with industry standards, regulations and job/manufacture specifications, and with sufficient access to enable terminations, adjustment and maintenance
- 2.3** Wiring is terminated at components and associated equipment in accordance with manufacturer specifications and functional and regulatory requirements

- 2.4 Quality checks of installed apparatus are conducted in accordance with workplace procedures
- 2.5 Testing and commissioning of the system is conducted in accordance with design documentation, regulations, relevant industry standards and manufacturer specifications
- 2.6 Worksite is cleaned and made safe in accordance with workplace procedures
- 2.7 'As-installed' system and associated equipment are documented, manuals produced, and system is handed over to required person/s as per legislation, regulations, industry standards and job requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Installation of PV PCE must include:

- installing, configuring and commissioning at least two different LV grid-connected PCEs to the grid.

Unit Mapping Information

This is a new unit.

Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEERE0080 Install photovoltaic power conversion equipment to grid

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
- verifying design, drawings and documentation and resolving any issues with designer
- installing grid-connected system safely
- testing and commissioning in accordance with industry standards and regulations
- completing documentation according to regulatory and industry standards.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- power conversion equipment (PCE), including:
 - types of PCEs used in grid-connected systems
 - the basic AC specifications and functions of an PCE
- PCE operation, including:
 - connection of a grid connected PCE and measurement of the PCE parameters for various loads
 - Industry Standards and regulation relevant to PCEs
- PV grid-connected system operation, including:
 - operation of grid interactive PV systems, including synchronisation, safety feature, power flow control, passive and active anti-islanding, secondary protection and metered energy for systems
 - schematic diagrams of common grid-connected PCE circuit configurations, including metering arrangements, isolation and connection with respect to residual current devices (RCDs) in accordance with relevant industry standards
- installation of grid-connected PCEs, including:
 - major installation requirements for all system components which will ensure correct operation, long life, safety and ease of maintenance consistent with relevant industry

- standards and WHS/OHS guidelines
- typical installation configurations for grid connection of energy systems via PCEs
- the function and operation of a grid protection device as specified by relevant industry standards
- labelling and signage requirements for switchboards supplied with power from grid connected PCEs, as set out in the relevant industry standards
- system commissioning and maintenance, including:
 - the isolation procedures required for grid-connected PCEs
 - relevant commissioning procedures, including start-up and shutdown procedures for grid-connected PCE systems in accordance with relevant industry standards
 - testing a grid-connected PCE system for correct operation
 - performing commissioning work on a PV power system in accordance with relevant industry standards.
- relevant workplace documentation, policies, procedures and standards.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERE0081 Install photovoltaic systems to power conversion equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is not equivalent to UEERE0016 Install, configure and commission LV grid-connected photovoltaic power systems. Modifications include:

- Unit title changed
- Unit application updated
- Prerequisites changed
- Significant amendments made to Elements and Performance Criteria
- Range of conditions updated
- Significant amendments to Performance and Knowledge Evidence.

Application

This unit involves the skills and knowledge required to install and commission a photovoltaic (PV) power system to power conversion equipment (PCE).

It includes working safely to industry installation standards, matching PV components specified for a given location, placing and securing system components accurately, making required circuit connections and completing the necessary installation documentation.

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations, which are designed to operate at voltages greater than 50 volt (V) alternating current (a.c.) or 120 V direct current (d.c.).

Competency development activities in this unit are subject to regulations directly related to licensing. Where a licence or permit to practice is not held, a relevant contract of training, such as an Australian Apprenticeship, is required.

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Note: Those holding an Unrestricted Electrician's Licence or equivalent issued in an Australian state or territory meet the prerequisite requirements of UEEL0012 Install low voltage wiring, appliances, switchgear and associated accessories. All other prerequisite requirements must be met.

Pre-requisite Unit

UEEL0012 Install low voltage wiring, appliances, switchgear and associated accessories

And

UEERE0054 Conduct site survey for grid-connected photovoltaic and battery storage systems

Or

UEERE0055 Conduct site survey for off-grid photovoltaic/genset systems

Competency Field

Renewable Energy

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Plan to install PV power system

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Nature of the installation is verified from design documentation and any design concerns identified are referred to designer
- 1.2 WHS/OHS processes and procedures for work are identified and applied in accordance with workplace procedures
- 1.3 WHS/OHS hazards are identified, risks assessed, reported to relevant person/s and workplace procedures for risk control measures applied in preparation for work
- 1.4 Work is planned in consultation with the customer and others impacted by the work and sequenced appropriately
- 1.5 PV array mounting methods are verified in accordance with relevant industry standards
- 1.6 Location of PV array components is verified within the constraints of the building structure, design and industry standards and regulations
- 1.7 Material, tools, equipment and measuring devices

- required for the PV installation are obtained in accordance with workplace procedures and checked against relevant diagrams and job requirements prior to installation
- 2 Install LV PV power array**
- 1.8** Live testing, measurement and isolation requirements determined and applied in accordance with WHS/OHS requirements and workplace procedures
 - 2.1** Circuits/machines/plant are isolated in accordance with WHS/OHS requirements and workplace procedures
 - 2.2** PV array is installed in compliance with industry standards, regulations and job/manufacture specifications, and with sufficient access to enable terminations, adjustment and maintenance
 - 2.3** Wiring is terminated at components and associated equipment in accordance with manufacturer specifications, and functional and regulatory requirements
 - 2.4** Quality checks of installed apparatus are conducted in accordance with workplace procedures
 - 2.5** Testing and commissioning of the system is conducted in accordance with design documentation, regulations, relevant industry standards and manufacturer specifications
 - 2.6** Worksite is cleaned and made safe in accordance with workplace procedures
 - 2.7** ‘As-installed’ system and associated equipment are documented, manuals produced, and system is handed over to required person/s as per legislation, regulations, industry standards and job requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Installation of PV array must include:

- two different types of mounting systems.

Unit Mapping Information

This unit replaces and is not equivalent to UEERE0016 Install, configure and commission LV grid-connected photovoltaic power systems.

Links

Companion Volume Implementation Guides are found in VETNet -

Assessment Requirements for UEERE0081 Install photovoltaic systems to power conversion equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is not equivalent to UEERE0016 Install, configure and commission LV grid-connected photovoltaic power systems. Modifications include:

- Unit title changed
- Unit application updated
- Prerequisites changed
- Significant amendments made to Elements and Performance Criteria
- Range of conditions updated
- Significant amendments to Performance and Knowledge Evidence.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two occasions and include:

- installing photovoltaic (PV) array, including:
 - applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
 - verifying design and resolving any issues with designer
 - coordinating work with relevant person/s
 - determining and applying live testing, measurement and isolation requirements
 - reading and interpreting drawings/diagrams related to apparatus locations and circuit connections
 - applying appropriate array mounting methods for roof sections
 - placing and securing components
 - terminating wiring correctly and safety
 - testing and verification PV systems safely
 - connecting and commissioning in accordance with industry standards and regulations
 - completing documentation according to regulatory and industry standards.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include

knowledge of:

- PV array installation requirements, including:
 - WHS/OHS requirements and methods for working on roofs
 - methods to ensure integrity of building and waterproofing
 - common types of PV array mounting frame construction and fixing methods
 - methods of tilt angle adjustment
- electrical PV array installation requirements, including:
 - methods used in wiring and connecting PV arrays in accordance with relevant industry standards
 - considerations involved in:
 - wiring of PV arrays
 - the location of associated system equipment
 - cable route from PV array/s to power conversion equipment (PCE)
- system installation including:
 - installation of a PV array in accordance with relevant industry standards and WHS/OHS guidelines
 - correct isolation and shutdown procedures
 - required vegetation control to remove or reduce shading or soiling on a PV array
- PCE including:
 - types of PCEs used in renewable energy systems
 - the basic function of a PCE
 - PCE operation
 - PCE characteristics
- PV modules, including:
 - cell, module, array
 - efficiency
 - typical applications
 - mechanical and electrical features necessary for the long life of a PV module
- module characteristics including:
 - I-V curve, operating point, MPP, power and voltage temperature co-efficient, Standard Test Conditions (STC), nominal operating cell temperature (NOCT)
 - major ratings of a PV module from manufacturer's information or nameplate data
 - configuration of a typical PV array
 - the effect of partial shading of a PV module or array
- Industry Standard requirements for the verification of system components selection including:
 - balance of the system components, including cabling and wiring systems, circuit protection and isolation equipment for a grid-connected PV system
 - schematic diagrams of common grid-connected PCE circuit configurations, including metering arrangements, isolation and connection with respect to residual circuit devices

(RCDs)"

- system documentation required by industry standards
- relevant manufacturer specifications
- relevant industry standards
- relevant WHS/OHS legislated requirements
- relevant workplace documentation, policies, procedures and standards
- risk mitigation processes.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERE0082 Maintain renewable energy (RE) apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to maintain renewable energy (RE) apparatus.

It includes preparing to maintain RE apparatus, completing routine maintenance of RE apparatus, completing and reporting on maintenance activities.

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations which are designed to operate at voltages greater than 50 volt (V) alternating current (a.c.) or 120 V direct current (d.c).

Competency development activities in this unit are subject to regulations directly related to licensing. Where a licence or permit to practice is not held, a relevant contract of training, such as an Australian Apprenticeship, is required.

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Note: Those holding an 'Unrestricted Electrician's Licence' or equivalent issued in an Australian state or territory meet the prerequisite requirements of this unit.

Pre-requisite Unit

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

and

UEECD0025 Lay wiring/cablings and terminate accessories for extra-low voltage (ELV) circuits

or

UEEEL0023 Terminate cables, cords and accessories for low voltage circuits

Competency Field

Renewable Energy

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|--|
| 1 Prepare to maintain RE apparatus | <p>1.1 Work health and safety (WHS)/occupational health and safety (OHS) processes and procedures for relevant work area are identified and applied in accordance with workplace procedures</p> <p>1.2 Maintenance schedule/s, specifications, drawings, plans, job requirements and material lists are obtained, interpreted, and applied in accordance with workplace procedures</p> <p>1.3 Work is prioritised and coordinated with relevant site personnel in accordance with workplace procedures</p> <p>1.4 Competencies required to conduct work are determined from job specifications and/or consultations with appropriate person/s</p> <p>1.5 Materials, tools, apparatus and testing devices required for the work are identified and accessed in accordance with workplace procedures</p> <p>1.6 Need to test or measure live electrical work is determined in accordance with WHS/OHS, regulatory and licencing requirements</p> |
| 2 Maintain RE apparatus | <p>2.1 Circuits/apparatus are confirmed as isolated, and other safety measures implemented, in accordance with WHS/OHS requirements and workplace procedures</p> <p>2.2 Visual inspection of site and equipment is conducted and any hazards and/or anomalies requiring attention noted</p> <p>2.3 System performance monitoring is completed and recorded in accordance with technical standards and workplace procedures</p> <p>2.4 Routine maintenance is conducted in accordance with</p> |

- schedule, technical standards and workplace procedures
- 2.5 Repairs are identified and completed in accordance with technical standards
 - 2.6 Maintenance quality checks are conducted in accordance with job specifications, technical standards, regulatory requirements and/or workplace procedures
 - 2.7 System is reenergised in accordance with technical standards and workplace procedures
- 3 Complete and report maintenance activities**
- 3.1 Work area is cleaned and made safe in accordance with workplace procedures
 - 3.2 Completion of work is documented and appropriate person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Repairs include the following:

- RE apparatus is limited to replacement or repair of components in which the fault has been previously determined.

Carrying out repairs to RE apparatus must include the following:

- two different RE apparatus in which three different types of components are faulty, one of which is mechanical.

Unit Mapping Information

New unit

Assessment Requirements for UEERE0082 Maintain renewable energy (RE) apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- completing visual inspection of system and identifying any hazards and/or anomalies
- completing routine scheduled maintenance in accordance with maintenance schedule, technical standards and safety requirements
- monitoring and documenting performance of system
- completing physical repairs
- completing required documentation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- relevant WHS/OHS requirements
- relevant workplace documentation, policies and procedures
- relevant manufacturer specifications, technical standards and maintenance guidelines
- relevant regulations including licencing requirements for electrical work
- commonly used renewable energy generating and storage systems including different equipment types, layout and their componentry
- maintenance procedures for:
 - PV arrays
 - batteries
 - generators
 - Power Conversion Equipment (PCEs)
- maintenance processes including:
 - maintenance terminology
 - maintenance function and role of maintenance department
 - system maintenance including:
 - visual site and system inspection
 - scheduled preventative maintenance
 - predictive maintenance
 - corrective maintenance
 - correct isolation, shut down and re-energisation processes and procedures
 - appropriate maintenance methods for system components using appropriate safety procedures
 - maintenance data acquisition
 - procedures for maintenance quality checks.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry

- resources that reflect current industry practices in relation to carrying out repairs to RE apparatus by replacement of components
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERE0083 Maintain safety and tidiness of remote area power supply systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERE0019 Maintain safety and tidiness of remote area power supply systems. Modifications include:

- Several duplicate performance criteria removed
- Range of conditions amended
- Updates to performance evidence.

Application

This unit involves the skills and knowledge required to maintain the safety and tidiness of remote area power supply (RAPS) systems.

It includes preparing to maintain safety and tidiness of RAPS system equipment, completing work and reporting issues.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEERE0088 Work safely with remote area power supply systems

Competency Field

Renewable Energy

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

1 Prepare to maintain safety and tidiness of RAPS system

- 1.1 Work health and safety (WHS)/ occupational health and safety (OHS) requirements and workplace procedures are identified and applied
- 1.2 Risks/hazards are identified, assessed, reported to relevant person/s and control measures implemented
- 1.3 Nature and location of the RAPS system is identified from work schedule and relevant person/s to determine the scope of work
- 1.4 Advice on coordinating work with relevant personnel and the local community is obtained from relevant person/s and applied
- 1.5 Tools and equipment required for cleaning work are obtained and checked for correct operation and safety
- 1.6 Need to test or measure live electrical work is determined in accordance with WHS/OHS requirements and conducted in accordance with workplace procedures

2 Maintain RAPS system

- 2.1 Circuits/machines/system are isolated in accordance with WHS/OHS requirements and workplace procedures
- 2.2 RAPS system and area are cleaned in accordance with workplace procedures
- 2.3 Cleaning is completed minimising waste of materials, energy, damage to apparatus, circuits, the surrounding environment and services
- 2.4 Quality checks are conducted in accordance with workplace procedures

3 Complete work and report outcomes

- 3.1 Cleaning and tidiness issues are reported to the local community in accordance with workplace procedures
- 3.2 Cleaning work is completed and issues are reported to relevant person/s in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

RAPS system must incorporate a battery bank and at least one of the following:

- generator set
- photovoltaic (PV) array
- wind generator.

Unit Mapping Information

This unit replaces and is equivalent to UEERE0019 Maintain safety and tidiness of remote area power supply systems.

Links

Companion Volume Implementation Guides are found in VETNet -

Assessment Requirements for UEERE0083 Maintain safety and tidiness of remote area power supply systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERE0019 Maintain safety and tidiness of remote area power supply systems. Modifications include:

- Several duplicate performance criteria removed
- Range of conditions amended
- Updates to performance evidence.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures and practices removing non-remote area power supply (RAPS) equipment
- coordinating work with relevant person/s and the local community
- determining live testing/measurement requirements
- safely removing insects, spiders and any animals
- safely removing dust and dirt from floors and equipment
- maintaining safety and tidiness of RAPS system
- conducting quality checks
- completing reporting requirements to relevant person/s and local community.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- RAPS plant area cleaning, and maintaining RAPS systems, including:
 - need for a clean and tidy plant area
 - RAPS system components and associated equipment and their location within the plant area
 - manual fuel pump, if available
 - plant cleaning techniques:

- fuel and oil
- acid spills
- removal of dust, insects, spiders and animals
- removal of non-RAPS equipment
- techniques for reporting and dealing with cleaning issues
- relevant safe work method statements (SWMS) or risk mitigation processes
- relevant WHS/OHS legislated requirements
- procedures for quality checks
- relevant workplace documentation, policies and procedures, including reporting requirements.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to maintaining safety and tidiness of a RAPS system
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERE0084 Manage renewable energy (RE) projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is not equivalent to UEERE0042 Manage renewable energy (RE) projects. Modifications include:

- Significant amendments made to Elements and Performance Criteria
- Range of conditions updated
- Updates to performance and knowledge evidence requirements and CVIG content developed.

Application

This unit involves the skills and knowledge required to manage renewable energy (RE) projects. It includes determining the scope of the project, managing the project and completing the project.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Renewable Energy

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Determine scope of the RE project

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Project scope, deliverables and budget are identified from project planning and other relevant documentation and consultation with relevant person/s

- 1.2 Appropriate project management tools, and relevant standard enterprise project management processes/techniques are identified
 - 1.3 Relevant work health and safety (WHS)/occupational health and safety (OHS) processes and procedures are identified and implemented
 - 1.4 Measurable outcomes that will apply across the life of the project are identified from project planning and other relevant documentation
 - 1.5 Plant, materials and skills required to achieve project outcome/s are identified from project planning and other relevant documentation
 - 1.6 Stakeholders that will be impacted and involved are identified and engaged
 - 1.7 Processes and procedures are developed for managing contract variations from discussions with relevant person/s and in accordance with contractual agreement
 - 1.8 Sustainable work practices to achieve required outcomes in all facets of project work are identified and implemented
- 2 Manage RE project**
- 2.1 WHS/OHS policies, procedures and programs are implemented and monitored
 - 2.2 Project risks are identified and strategies implemented to ensure outcomes achieved are in accordance with quality standards specified in the project plan and/or contract, safety requirements and workplace policies and procedures
 - 2.3 Equipment and personnel are coordinated, in accordance with project plan and requirements to achieve planned project outcomes
 - 2.4 Procurement processes and procedures are monitored to ensure on-time supply of plant and materials and in accordance with project plan and budget
 - 2.5 Project progress is monitored against schedule, quality requirements and budget
 - 2.6 Variations are managed in accordance with agreed processes and in accordance with the contract

- 2.7 Project records are maintained and progress reports written and provided to relevant person/s
- 3 Complete RE project**
- 3.1 Project outcomes are reviewed against original measures, implemented risk strategies, contract variations, safety record and budget
- 3.2 Project completion acceptance is sought from appropriate person/s and handover documented in accordance with workplace policies

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

RE project must include:

- engagement and management of multiple internal and external stakeholders
- involve multiple:
 - technologies, or
 - solution elements, or
 - sites.

Unit Mapping Information

This unit replaces and is not equivalent to UEERE0042 Manage renewable energy (RE) projects.

Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEERE0084 Manage renewable energy (RE) projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is not equivalent to UEERE0042 Manage renewable energy (RE) projects. Modifications include:

- Significant amendments made to Elements and Performance Criteria
- Range of conditions updated
- Updates to performance and knowledge evidence requirements and CVIG content developed.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures and practices
- developing and applying relevant hazard identification, risk assessment, relevant control measures and reporting
- establishing the scope of the project accurately
- ascertaining the input of a project
- developing effective management processes
- managing resources and variations effectively
- adopting risk management strategies
- maintaining records and submitting progress reports
- meeting project outcomes
- completing and handing over project.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of the following. The UEE Training Package Companion Volume Implementation Guide (CVIG) includes additional advice in Knowledge items which may assist with implementation.

- RE project management including:
 - defining project parameters
 - time management

- financial management
- quality management
- human resource management
- stakeholder engagement
- communication management
- risk management and contingencies
- procurement management
- physical resource management
- sustainable work practices
- contracts
- performance assessment and continuous improvement
- engineering ethics principles
- customer/client relations including:
 - importance of customer/client relations
 - interpersonal skills that enhance customer/client
 - dispute resolution
 - customer/client relations strategies
 - managing expectations
 - managing and resolving conflict
- RE industry sector customs and practices including:
 - technical aspects of project planning and management
 - method of ensuring equipment meets specified performance requirements
 - performance/cost-benefit analysis
 - equipment procurement
 - typical approaches to planning and management
 - successful planning techniques
 - best practice management methods and styles
- WHS/OHS and enterprise responsibilities
- relevant manufacturer specifications
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do

so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools and equipment currently used in industry
- resources that reflect current industry practices in relation to managing RE projects
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERE0085 Plan renewable energy (RE) projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is not equivalent to UEERE0044 Plan renewable energy (RE) projects. Modifications include:

- Significant amendments made to Elements and Performance Criteria
- Range of conditions updated
- Updates to performance and knowledge evidence requirements and CVIG content developed.

Application

This unit involves the skills and knowledge required to plan a renewable energy (RE) project.

It includes determining project requirements then developing and obtaining approval for a RE project plan.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Renewable Energy

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Determine RE project requirements

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Scope of the project is determined from relevant documentation and consultation with relevant person/s

- 1.2 Appropriate project planning tools, relevant standard enterprise project planning processes/techniques, any budgetary limitations and required project development cycle requirements and timeframes are identified
 - 1.3 Relevant work health and safety (WHS)/occupational health and safety (OHS) processes and procedures are identified
 - 1.4 Resources and stakeholders, and scope and scale of effort, required for RE project are identified
- 2 Develop RE project plan**
- 2.1 Estimated plant, material, labour, lifecycle, and other costs are obtained from relevant person/s in accordance with workplace policies and procedures
 - 2.2 Project budget is established from estimated plant, material, labour and other costs in accordance with workplace policies and procedures
 - 2.3 Critical path analysis is applied to project planning
 - 2.4 Sources and availability of materials, and human resources for the project are identified and engaged, in accordance with workplace policies and procedures
 - 2.5 Technical specifications are prepared to meet project requirements and timeframes
 - 2.6 Agreements with service providers and stakeholders are established in accordance with project budget, timeframes and requirements
 - 2.7 Areas for potential overrun and resource complications are identified and are assessed for risks, in accordance with workplace procedures and project requirements
 - 2.8 An integrated overview plan, including proposed performance measures is prepared and distributed for review by stakeholders
 - 2.9 Project plan is reviewed against all inputs and adjusted to rectify any anomalies
 - 2.10 Project plan is documented in accordance with workplace procedures and project requirements
- 3 Obtain approval for project plan**
- 3.1 Project plan is presented and discussed with relevant person/s

- 3.2 Alterations to the project plan resulting from the presentation/discussion are negotiated with relevant person/s within constraints of workplace policies
- 3.3 Final project plan is documented, and approval obtained from relevant person/s

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

RE project must include:

- engagement and management of multiple internal and external stakeholders
- involve multiple:
 - technologies, or
 - solution elements, or
 - sites.

Unit Mapping Information

This unit replaces and is not equivalent to UEERE0044 Plan renewable energy (RE) projects.

Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEERE0085 Plan renewable energy (RE) projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is not equivalent to UEERE0044 Plan renewable energy (RE) projects. Modifications include:

- Significant amendments made to Elements and Performance Criteria
- Range of conditions updated
- Updates to performance and knowledge evidence requirements and CVIG content developed.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures and practices, including the use of risk control measures
- determining the project scope and requirements accurately
- establishing a project budget
- developing effective workflow strategies
- determining and sourcing material, equipment and human resource requirements
- determining and applying relevant risk management strategies
- developing and documenting the project plan
- obtaining approval of the final plan.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of the following. The UEE Training Package Companion Volume Implementation Guide (CVIG) includes additional advice in Knowledge items which may assist with implementation.

- project planning including:
 - purpose of project planning
 - documents needed to plan a project
 - factors influencing sequence and restraints of project activities
- critical path project analysis including:
 - purpose of critical path analysis

- essential data
- relational sequence of work activities
- time/resource charts
- methods of representing time/rates
- monitoring methods
- RE industry sector project planning and management customs and practices including:
 - relevant technical aspects of RE equipment
 - method of ensuring equipment meets specified performance requirements
 - performance/cost-benefit analysis
 - contractual requirements
 - equipment procurement
 - typical approaches to planning and management
 - successful planning techniques
 - best practice management methods and styles
 - relevant manufacturer specifications
- WHS/OHS and enterprise responsibilities
- human and physical resource management concepts
- relevant workplace documentation, policies and procedures
- management arrangements relating to regulatory compliance.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- resources that reflect current industry practices in relation to planning RE projects
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERE0086 Promote sustainable energy practices

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is not equivalent to UEERE0020 Promote sustainable energy practices in the community. Modifications include:

- Unit title changed
- Unit application updated
- Significant amendments made to Elements and Performance Criteria
- Range of conditions updated
- Updates to performance and knowledge evidence requirements and CVIG content developed
- Assessment conditions updated.

Application

This unit involves the skills and knowledge required to promote sustainable energy practices.

It includes identifying the purpose of promotional opportunities, developing promotional strategies for different audiences, completing promotional activities that meet audience needs and organisational objectives, following up after promotion, making referrals, evaluating promotional activities, and completing relevant administration and documentation after promotion.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Renewable Energy

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare to promote sustainable energy practices

1.1 Work activities are identified, planned and sequenced to ensure work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace policies and procedures are followed

1.2 Purpose and audience and for promotional activities are identified, and intended outcomes confirmed

1.3 Promotional activities are planned in accordance audience needs and intended outcomes

1.4 Resources required to support promotional activities are identified and developed and/or obtained

1.5 Approval for proposed promotional strategy and resources is obtained in accordance with organisational policies and procedures

1.6 Relevant people are consulted to ensure promotional activities are coordinated with others

2 Promote sustainable energy practice

2.1 Promotional activities are conducted in accordance with approved promotional strategy

2.2 Questions posed during promotion are answered, and any follow-up activities and/or additional information required, are identified and recorded

2.3 Post-promotion information and/or resources are provided, and referrals to other personnel completed, in accordance with any commitments made during promotion

2.4 Promotional activities are evaluated and opportunities for improvement identified and documented

2.5 Documentation/reports are completed to ensure promotional activity requirements are met

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is not equivalent to UEERE0020 Promote sustainable energy practices in the community.

Links

Companion Volume Implementation Guides are found in VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEERE0086 Promote sustainable energy practices

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is not equivalent to UEERE0020 Promote sustainable energy practices in the community. Modifications include:

- Unit title changed
- Unit application updated
- Significant amendments made to Elements and Performance Criteria
- Range of conditions updated
- Updates to performance and knowledge evidence requirements and CVIG content developed
- Assessment conditions updated.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements
- developing promotional strategy based on purpose of promotion, audience needs and intended outcomes
- completing promotional activities in accordance with promotional strategy
- completing post-promotion activities including:
 - providing additional information/resources
 - making referrals to other relevant personnel
- evaluating promotional activities
- documenting promotional work activities after completion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of the following. Additional advice and definitions for some items is provided in the UEE Training Package Companion Volume Implementation Guide (CVIG).

- greenhouse reduction strategies, including:
 - climate change and its impacts

- greenhouse gas emissions profile
- Government incentives for sustainable practices
- efficient and sustainable energy use and supply
- efficient transport and sustainable urban planning
- greenhouse sinks and sustainable land management
- models of greenhouse best practice in industrial processes and waste management
- quality assessments
- renewable energy generation and storage including:
 - commonly used technologies and their application
 - difference between application of technologies in residential, commercial and industrial settings
- energy management techniques and technologies
- promotional strategies including:
 - presentation techniques
 - tailoring promotional activities for different audiences
 - questioning techniques
 - building logical arguments and reasons for change
 - techniques to influence behaviour
 - identifying triggers that may lead to behaviour change
 - basic sales techniques
- relevant promotional materials
- relevant evaluation and continuous improvement processes for promotional activities
- relevant WHS/OHS requirements
- relevant workplace documentation, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERE0087 Provide basic sustainable energy solutions for energy management in residential premises

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is not equivalent to UEERE0021 Provide basic sustainable energy solutions for energy reduction in residential premises. Modifications include:

- Unit title changed
- Unit application updated
- Significant amendments made to Elements and Performance Criteria
- Range of conditions updated
- Significant amendments to Performance and Knowledge Evidence
- Assessment conditions updated.

Application

This unit involves the skills and knowledge required to provide sustainable energy solutions for energy management in residential premises.

It includes preparing for and conducting monitoring of energy usage, analysing data from monitoring, and providing solutions for energy management. It also includes completing monitoring activities and reporting.

This unit is intended as an entry level introduction to energy efficiency principles through completing a basic energy efficiency assessment and compiling recommendations for potential energy management solutions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Renewable Energy

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare to monitor energy usage

- 1.1** Determine purpose, scope and nature of monitoring activities
- 1.2** Monitoring activities are, planned in accordance with stakeholder expectations and site requirements
- 1.3** Relevant work health and safety (WHS)/occupational health and safety (OHS) policies and workplace procedures are identified and applied
- 1.4** Relevant personnel are consulted to ensure work is coordinated effectively with others
- 1.5** Equipment and materials required for monitoring are identified, obtained and checked in accordance with requirements

2 Undertake monitoring of energy usage and provide solutions for energy management

- 2.1** Monitoring activities are conducted in accordance with requirements without damage or disruption to the surrounding environment or services
- 2.2** An energy use, loss and generation inventories are compiled from monitoring activities
- 2.3** Monitoring data is collated, analysed, compared against baseline, and performance determined in accordance with industry practice/standards
- 2.4** Energy performance is considered against installed equipment, appliance use and site conditions
- 2.5** Relevant Government initiatives are identified and considered in development of recommendations
- 2.6** Energy management recommendations are determined based on analysis, and documented including justification for, and potential benefits from, each recommendation
- 2.7** Energy management recommendations are provided to stakeholders, options discussed, and agreed

recommendation/s confirmed

- 2.8** Final recommendations are documented including implementation advice

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is not equivalent to UEERE0021 Provide basic sustainable energy solutions for energy reduction in residential premises.

Links

Companion Volume Implementation Guides are found in VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEERE0087 Provide basic sustainable energy solutions for energy management in residential premises

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is not equivalent to UEERE0021 Provide basic sustainable energy solutions for energy reduction in residential premises. Modifications include:

- Unit title changed
- Unit application updated
- Significant amendments made to Elements and Performance Criteria
- Range of conditions updated
- Significant amendments to Performance and Knowledge Evidence
- Assessment conditions updated.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures and practices
- planning monitoring activities based on stakeholder needs/expectations and site requirements
- conducted monitoring activities in accordance with agreed plan
- compiling energy use, loss and generation inventories
- collating and analysing monitoring data and comparing performance against baseline
- identifying relevant government initiatives that can contribute to solution/s
- determining, documenting and justifying energy management recommendations based on analysis
- completing required reporting.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- concepts of renewable energy (RE), including:
 - non-technical issues including current economic, social, environmental and political issues impacting on RE technology
 - energy services/demand for domestic dwellings including:

- terminology
- energy, power, temperature, symbols and units
- energy generation, grid types and storage
- sustainability of different energy sources
- energy conversion and efficiency
- energy consuming equipment including:
 - types
 - energy rating schemes and labelling
- emerging technologies renewable energy technologies including:
 - types
 - applications
 - benefits and limitations
 - generation resource
- stand-alone power system configuration including:
 - basic configuration series systems
 - components: functions, efficiencies, regulators, inverters, battery chargers and generators
- relevant industry standard energy consumption measurements and calculations
- sustainable energy solutions for energy reduction in residential premises
- relevant manufacturer specifications
- relevant WHS/OHS requirements
- relevant workplace documentation, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- resources that reflect current industry practices in relation to providing basic sustainable energy solutions for energy reduction in residential premises
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERE0088 Work safely with remote area power supply systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERE0023 Work safely with remote area power supply systems. Modifications include:

- Several duplicate performance criteria removed
- Range of conditions amended
- Performance evidence updated.

Application

This unit involves the skills and knowledge required to work safely on remote area power supply (RAPS) systems.

It includes preparing to enter a RAPS system, applying safe working practices, and following workplace procedures for hazard identification and risk control in RAPS system areas.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Renewable Energy

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|----------------------------------|---|
| 1 Prepare to enter a RAPS | 1.1 Hazards/risk control procedures for RAPS systems |
|----------------------------------|---|

system	maintenance are identified and applied
1.2	System access permit is obtained from relevant person/s
1.3	Preparation for electrical and non-electrical isolation is completed in accordance with workplace procedures
1.4	Tools and equipment required for work are checked for safety and correct functionality in accordance with workplace procedures
2 Apply safe working practices in RAPS system area	2.1 Circuits/machines/system are confirmed as isolated in accordance with work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures
	2.2 Safe work practices in RAPS system are applied in accordance with workplace procedures
	2.3 Safe working practices are applied minimising waste of materials, energy, damage to apparatus, circuits, the surrounding environment and services
	2.4 Quality checks are conducted in accordance with workplace procedures
3 Follow workplace procedures for hazard identification and risk control in RAPS system areas	3.1 Risks/hazards are identified, assessed and control measures implemented and monitored through consultation with relevant person/s and the local community
	3.2 Workplace hazards are identified and reported to relevant person/s in accordance with workplace procedures
	3.3 WHS/OHS incident reports are completed in accordance with regulatory requirements and workplace procedures
	3.4 Instructions and training are applied in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Must include at least two different RAPS systems incorporating:

- battery bank, generator set and a photo voltaic array
- at least one RAPS system with the addition of a wind generator.

Unit Mapping Information

This unit replaces and is equivalent to UEERE0023 Work safely with remote area power supply systems.

Links

Companion Volume Implementation Guides are found in VETNet -

Assessment Requirements for UEERE0088 Work safely with remote area power supply systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERE0023 Work safely with remote area power supply systems. Modifications include:

- Several duplicate performance criteria removed
- Range of conditions amended
- Performance evidence updated.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures and practices in RAPS system, including:
 - completing WHS/OHS incident reports
 - applying work procedures and instructions as they apply to risk control measures
 - participating in consultation processes, identifying hazards and implementing and monitoring control measures
 - dealing with accidents and emergencies
 - preparing for and checking isolation of circuits/machines/systems
 - preparing to enter the remote area power supply (RAPS) system including, permission to enter the area and to isolate RAPS equipment
 - obtaining and inspecting tools and equipment and reporting faults
- conducting RAPS system quality checks.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- RAPS safe working practices, including:
 - general safety encompassing:
 - general safety
 - risk assessment

- personal protective equipment (PPE)
- WHS/OHS procedures
- RAPS safety and risk assessment encompassing:
 - types of hazards in and around RAPS:
 - rotating machines
 - fuels and oils
 - exhaust fumes
 - acids and flammable gases from batteries
 - measures for dealing with hazards in and around RAPS
 - purpose and methods for isolation and de-energisation of power supplies
- correct isolation and de-energisation procedures encompassing:
 - processes for preventing generator from automatically starting
 - isolating photovoltaic (PV) arrays
 - isolating wind driven generators
 - isolating battery
 - isolating inverter power sources
- safety signage encompassing:
 - types of signs
 - location
 - condition
 - suitability
- access to system encompassing:
 - methods for limiting access to plant areas
- reporting
- access to RAPS, including:
 - obtaining access permit/s
- relevant manufacturer specifications
- procedures for quality checks
- relevant workplace documentation, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERL0001 Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to attach flexible cord and plug to electrical equipment for connection to a single phase supplies up to 230 volts (V) alternating current (a.c.) supply.

It includes planning and attaching flexible cord and plug, using test equipment for inspection and safety testing. It also includes locating, inspecting, testing and repairing faults in flexible cords and plugs.

This unit does not cover the knowledge and skills necessary for work associated with high current faults on complex electrical apparatus, circuits and electrical work; in hazardous areas or on electrical equipment that is part of an explosion-protection technique; nor, work associated with fixed wiring.

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations which are designed to operate at voltages greater than 50 V a.c. or 120 V direct current (d.c.).

Competency development activities in this unit are subject to regulations directly related to licensing. Where a licence or permit to practice is not held, a relevant contract of training, such as an Australian Apprenticeship, is required.

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Restricted Licensing

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Plan electrical equipment connection

2 Attach flexible cord and plugs

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work is planned, sequenced and prepared in accordance with WHS/OHS requirements and workplace procedures
- 1.2 Condition and ratings of cord and plugs are in accordance with workplace procedures and work instruction from appropriate person/s
- 1.3 Flexible cords and plugs are selected in accordance with relevant industry standards and workplace procedures for condition and rating
- 1.4 Materials necessary to complete work are obtained and checked in accordance with workplace procedures and work instructions
- 1.5 Tools, equipment and testing devices needed to carry out work are obtained in accordance with workplace procedures and checked for correct operation and safety
- 1.6 Flexible cord and plugs are prepared without damage to insulation and conductors and in accordance with relevant industry standards
- 2.1 WHS/OHS workplace policies and procedures are followed
- 2.2 Single insulated metal framed equipment is earthed in accordance with relevant industry standards and workplace procedures
- 2.3 Double insulated equipment is inspected and maintained in accordance with relevant industry standards and workplace procedures
- 2.4 Conductors are connected to terminals ensuring required polarity is in accordance with relevant industry standards

- | | | |
|--|------------|--|
| 3 Inspect and test equipment for operation and safety | 3.1 | Electrical installation and operation of cord and plug/s connected to electrical equipment are inspected and tested in accordance with relevant industry standards, work instructions and workplace procedures |
| | 3.2 | Quality checks of work are undertaken in accordance with workplace procedures |
| 4 Locate and repair fault in flexible cord and plug/s | 4.1 | Electrical equipment and attached flexible cord and plug/s are isolated in accordance with WHS/OHS requirements and workplace procedures |
| | 4.2 | WHS/OHS workplace policies and procedures are followed |
| | 4.3 | Quality checks of the attached flexible cord and plug/s are undertaken in accordance with workplace procedures to detect any abnormal, damage or fault |
| | 4.4 | Faults in attached flexible cord and plug/s are determined and details of components to be replaced are recorded in accordance with workplace procedures |
| | 4.5 | Faults in attached flexible cord and plug/s are repaired, as required, in accordance with workplace procedures |
| | 4.6 | Repairs are inspected and tested for compliance with industry standards |
| | 4.7 | Unplanned events are referred to supervisor for direction in accordance with workplace procedures |
| | 4.8 | Status report/s is completed and supervisor notified in accordance with workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Attaching cords and plugs to electrical equipment must include:

- any cord, cable and plug connected to equipment and cord extension leads intended for single phase supplies up to 230 V

Safe working procedures within in the scope of this unit must:

- be in accordance with AS/NZS 4836 Safe working on low-voltage electrical installations

Unit Mapping Information

This unit replaces and is equivalent to UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply.

Assessment Requirements for UEERL0001 Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant industry standards
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
- applying quality to workplace procedures and instructions
- attaching flexible cord/s and plug/s and without damage
- inspecting flexible cords and plugs for damage, faults or abnormalities
- dealing with unplanned events in accordance with problem-solving techniques and workplace procedures
- determining the current rating of a range of commonly used flexible cords
- drawing of a basic electrical circuit using correct symbols
- testing flexible cords, plugs and connected equipment for operation and safety up to 230 volts (V) alternating current (a.c.), including polarity and continuity testing
- finding and repairing faults in attached flexible cords and plugs in accordance with established procedures
- preparing to attach flexible cord and plug supplies up to 230 V a.c. supply
- providing status report/s
- using testing equipment
- selecting appropriate flexible cords for a range of single phase appliances relating to application, load and service duty
- identifying correct plug and socket polarities for the range of commonly used 230 V plug socket combinations
- selecting the correct plug and socket combinations for a range of applications, including use in damp areas
- fitting a range of various plugs and sockets with attention to requirements, colour code, polarity and correct termination of conductors with the sheath well into the body, and the cord grip anchored
- terminating cords to several appliances utilising the appropriate cord type and rating.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- electrical safety requirements, including the requirements of AS/NZS 4836 Safe working on low-voltage electrical installations
- basic electrical circuits, including:
 - simple electric circuit (supply, control device and load)
 - industry standard symbols, units of measurement and the abbreviation for electromotive force, potential difference, current and resistance
 - using multiples and sub-multiples for voltage, current and resistance values
 - a.c and direct current (d.c.) supplies
 - single phase electrical loads
 - electrical circuit protection devices
- relationships in an electrical circuit, including:
 - relationship between voltage, current and resistance (Ohm's Law)
 - changes in circuit parameters for altered values of voltage, current and resistance
 - electrical power in relationship to d.c. or resistive a.c. circuits
- test equipment - resistance measurement, including:
 - types of electrical test equipment used for resistance measurement (analogue and digital multimeters, insulation resistance testers and continuity testers)
 - selection of appropriate electrical test instrument for continuity and insulation resistance measurement
 - using analogue and digital multimeters for resistance measurement (ensuring zero setting, correct scale selection, avoidance of parallax error and estimation of between division readings for analogue multimeters)
 - continuity tests and using a continuity tester to check the polarity of a three-core extension cord
 - insulation resistance tests and minimum values for insulation resistance for low voltage (LV) equipment
 - reasons for insulation resistance testing is conducted at higher than supply voltage to relevant industry standards
 - using insulation resistance handheld tester
 - care and storage of electrical instruments
 - regulatory requirements relating to the maintenance and testing of test instrumentation for resistance measurement
- selection of flexible cords and plugs to suit given applications, including:
 - types, structures and applications of common cores, including:
 - parallel two core unsheathed ('figure 8')
 - cords, light duty sheathed
 - ordinary duty sheathed

- heavy duty sheathed
- textile braided
- service duty
- purpose of colour coding and the recommended single phase colour code
- conventional code used in the most common alternative colours
- factors affecting the choice of plugs and sockets, including ingress protection (IP) rating
- connecting flexible cords and plugs to appliances, including:
 - design features of plugs and sockets which protect the conductor terminations from undue force when disconnecting a cord - tortuous path
 - cord preparation - not to mark/damage the inner core when stripping the sheath for termination, double the end of the conductor to be terminated
 - purpose of earthing
 - structure of double insulated appliances, symbol, reasons they should not be earthed, and maintenance of the integrity of the double insulation
 - preparation of the surfaces at an earthing connection before and after completion of the termination, including terminations exposed to corrosion, and those for which no specific earthing terminal is provided
 - techniques for fitting plugs and sockets
 - techniques for terminating cords and conductors including consequences of poor electrical terminations
- testing, including:
 - importance of conducting both visual and electrical tests to ensure leads are safe and appropriate for connection to supply in regard to physical condition
 - checking the polarity of plug, and for any abnormal or obvious damage or fault
 - minimum acceptable value of insulation resistance between active neutral and earth
 - conducting insulation resistance and continuity tests prior to, and after, connecting cords and plugs to appliances
 - visually checking that the cord/plug assembly has a suitable IP rating for the operating environment
 - visual checks to ensure that arrangements for protection against dangers of mechanical movement as relevant are undamaged and in place
 - techniques for fault finding attached cords and plugs, and cord extension leads
- producing documentation and reports, including:
 - nature and content of, and the need to produce, status reports and documents
- relevant WHS/OHS legislated requirements including inspection and testing of electrical equipment
- relevant industry standards
- relevant manufacturer specifications and operating instruction for tools, equipment and testing devices
- relevant safe job safety assessments or risk mitigation processes
- relevant workplace policies, procedures and instructions, including relevant workplace quality procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, relevant industry standards, codes of practice and operation manuals.

UEERL0002 Attach cords, cables and plugs to electrical equipment for connection to 1000 V a.c. or 1500 V d.c.

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to attach flexible cords, cables and plugs to electrical equipment connected to a supply up to 1,000 volts (V) alternating current (a.c.) or 1,500 V direct current (d.c.).

It includes planning and attaching flexible cords, cables and plugs; and using test equipment for inspection and safety testing. It also includes locating, inspecting, testing and repairing faults in flexible cords and plugs.

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Competency development activities in this unit are subject to regulations directly related to licensing. Where a licence or permit to practice is not held, a relevant contract of training, such as an Australian Apprenticeship, may be required.

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Pre-requisite Unit

UEERL0001 Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply.

Competency Field

Restricted Licensing

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Plan electrical equipment connection

1.1 Work is planned, sequenced and prepared in accordance with WHS/OHS requirements and workplace procedures

1.2 Condition and ratings of cords, cables and plugs is in accordance with workplace procedures and work instruction from relevant person/s

1.3 Flexible cords, cables and plugs are selected in accordance with relevant industry standards and workplace procedures for condition and rating

1.4 Materials necessary to complete work are obtained in accordance with workplace procedures and checked against work instructions

1.5 Tools, equipment and testing devices needed to carry out work are obtained in accordance with workplace procedures and checked for correct operation and safety

1.6 Flexible cords, cables and plugs are prepared without damage to insulation and conductors and in accordance with relevant industry standards

2 Attach flexible cords, cables and plugs

2.1 WHS/OHS policies and workplace procedures are followed

2.2 Single insulated metal framed equipment is earthed in accordance with relevant industry standards and workplace procedures

2.3 Double insulated equipment is inspected and maintained in accordance with relevant industry standards and workplace procedures

2.4 Conductors are connected to terminals ensuring required polarity is in accordance with relevant industry standards

3 Inspect and test equipment for operation and safety

3.1 Electrical installation and operation of the cord/cable/s and plug/s connected to equipment are inspected and tested in accordance with relevant industry standards, work instructions and workplace procedures

- 3.2** Quality checks of work are undertaken in accordance with workplace procedures
- 4 Locate and repair faults in attached flexible cords, cables and plugs**
- 4.1** Electrical equipment and attached flexible cords, cables and plugs are checked and isolated in accordance with workplace procedures
- 4.2** WHS/OHS policies and workplace procedures are followed
- 4.3** Visual inspection and checks of the attached flexible cords, cables and plugs are conducted in accordance with workplace procedures to detect any abnormal, damage or fault
- 4.4** Faults in attached flexible cords, cables and plugs are confirmed and determined, components to be replaced are identified and details recorded in accordance with workplace procedures
- 4.5** Faults in attached flexible cords, cables and plugs are repaired in accordance with workplace procedures
- 4.6** Unplanned events are referred to relevant person/s for direction in accordance with workplace procedures
- 4.7** Status report/s is completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Attaching cords, cables and plugs to electrical equipment must include the following:

- cords, cables and plugs connected to equipment or cords, cables extension leads intended for multi-phase supplies up to 1,000 V a.c. to 1,500 V d.c.

This unit does not cover the knowledge and

skills necessary for the following work:

- competencies associated with fixed wiring
- in hazardous areas or on electrical equipment that is part of an explosion-protection technique
- on complex electrical apparatus, circuits and electrical work.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply.

Assessment Requirements for UEERL0002 Attach cords, cables and plugs to electrical equipment for connection to 1000 V a.c. or 1500 V d.c.

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant industry standards
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
- applying to quality, workplace procedures and instructions
- attaching cords, cables and plugs to electrical equipment for connection to 1,000 volts (V) alternating current (a.c.) or 1,500 volts (V) direct current (d.c.) supply
- attaching, replacing and repairing flexible cords, cables and plugs to equipment for operation, safely up to 1,000 V a.c. to 1,500 V d.c.
- dealing with unplanned events in accordance with problem-solving techniques and workplace procedures
- finding and repairing fault/s in attached flexible cords, cables and plugs
- inspecting and testing flexible cords, cables, plugs and equipment for operation and safety up to 1,000 V a.c. to 1,500 V d.c.
- planning and preparing to attach flexible cords, cables and plugs up to 1,000 V a.c. to 1,500 V d.c.
- providing status reports
- replacing and repairing flexible cords, cables and plugs up to 1,000 V a.c. to 1,500 V d.c.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- safety, including:
 - WHS/OHS and electrical safety requirements
 - requirements of AS/NZS 4836 Safe working practices on low voltage installations
- selection of flexible cords, cables and plugs to suit given applications, including:

- multi-phase systems
- structure of plug pin configuration
- applications of commonly used flexible cords, cables and plugs for connection to 1,000 V a.c. or 1,500 V d.c. supply
- determining the current rating of a range of commonly used flexible cords, cables and plugs for connection to 1,000 V a.c. or 1,500 V d.c. supply
- determining the number of cores/pins required for given situations
- multi-phase colour code and the conventional code used in the most common cords and cables
- selecting flexible cords and cables for given multi-phase loads to 1,000 V and service duty
- selecting multi-phase plugs to 1,000 V for a given load and ingress protection (IP) rating
- selecting the correct plug and socket combinations for a range of applications, including use in damp areas
- flexible cords, cables and plugs connected to multi-phase equipment, including:
 - design features of plugs and sockets which protect the conductor terminations from undue force when disconnecting a cord - tortuous path
 - cord preparation - not to mark/damage the inner core when stripping the sheath for termination, double the end of the conductor to be terminated
 - preparation of the surfaces at an earthing connection before and after completion of the termination, including terminations exposed to corrosion, and those for which no specific earthing terminal is provided
 - prepare flexible cords, cables for connection
 - single insulated metal framed equipment is earthed in accordance with requirements or the integrity of double insulated equipment is maintained
 - fitting a range of various multiphase flexible cords, cables, plugs, and sockets with attention to tortuous path requirements, colour code, polarity and correct termination of conductors with the sheath well into the body, and the cord grip anchored
- determine that a flexible cord, cable and plug is safe and is connected correctly, including:
 - importance of conducting both visual and electrical tests to ensure leads are safe and appropriate for connection to supply in regard to physical condition, sufficiently high insulation resistance, continuity, arrangements for protection against indirect contact are undamaged and in place, appropriate IP rating, and arrangements for protection against dangers of mechanical movement as relevant are undamaged and in place
 - check polarity of plug, and for any abnormal or obvious damage or fault
 - minimum acceptable value of insulation resistance between actives, neutral and earth
 - insulation resistance and continuity tests prior to, and after, connecting cords, cables and plugs to appliances
 - fault finding attached multi-phase flexible cords, cables and plugs, and multi-phase cord extension leads
- producing documentation and reports, including:
 - nature and content of, and the need to produce, status reports and documents
 - producing status reports and documents

- problem-solving techniques
- producing documentation and reports
- relevant industry standards
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications and operating instruction for tools, equipment and testing devices
- relevant WHS/OHS legislated requirements, including relevant inspections and tests
- relevant workplace policies, procedures and instructions
- relevant workplace quality procedures
- selection of flexible cords, cables and plugs to suit given applications.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to attaching cords, cables and plugs to electrical equipment for connection to 1,000 V a.c. or 1,500 V d.c. supply
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERL0003 Conduct in-service safety testing of electrical cord connected equipment and cord assemblies

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to conduct in-service safety testing of electrical cord connected equipment and cord assemblies.

It includes working safely, using portable appliance tester (PAT), identifying faults, applying tagging, arranging for repair of faulty equipment and complete testing documentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Restricted Licensing

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to test cord connected apparatus and cord assemblies

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified, obtained and applied
- 1.2** WHS/OHS risk control work preparation measures and procedures are followed

- 1.3 Advice is sought from relevant person/s to ensure work is effectively coordinated with others
 - 1.4 Cord connected apparatus and cord assemblies to be tested are obtained in accordance with workplace procedures
 - 1.5 PAT device is checked for correct operation and safety in accordance with relevant industry standards and workplace procedures
- 2 Test cord connected apparatus and cord assemblies**
- 2.1 WHS/OHS risk control work measures and procedures are followed
 - 2.2 Measures are followed to ensure that cord connected apparatus and cord assemblies to be tested are not connected to the electrical supply in accordance with relevant industry standards
 - 2.3 Electrical safety requirements and parameters are applied to ensure correct test results are in accordance with relevant industry standards
 - 2.4 Visual inspection and checks of the cord connected apparatus and cord assemblies are carried out in accordance with workplace procedures to detect any abnormal damage or fault
 - 2.5 Approval is obtained in accordance with workplace procedures from relevant person/s before any contingencies are implemented
 - 2.6 PAT routines are followed to test cord connected apparatus and cord assemblies in accordance with workplace procedures
 - 2.7 Unsafe cord connected apparatus and cord assemblies are identified from test results in accordance with workplace procedures
 - 2.8 Testing is undertaken effectively to minimise waste of energy and damage to apparatus
- 3 Tag cord connected apparatus and cord assemblies and document testing activities**
- 3.1 WHS/OHS work completion risk control measures and procedures are followed

- 3.2 Worksite is cleaned and made safe in accordance with workplace procedures
- 3.3 Cord connected apparatus and cord assemblies are tagged in accordance with workplace procedures for their safety status
- 3.4 Arrangements are made for unsafe cord connected apparatus and cord assemblies to be repaired by relevant person/s
- 3.5 Safety testing activities are documented in accordance with relevant industry standards and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

In-service safety testing must include the following:

- at least two different electrical cords and three different items of cord connected equipment with safety faults, including:
 - a device containing an element
 - a device containing a motor
 - a device containing metal oxide varistors (MOV)

Unit Mapping Information

This unit replaces and is equivalent to UEENEOP026A Conduct in-service safety testing of electrical cord connected equipment and cord assemblies.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEERL0003 Conduct in-service safety testing of electrical cord connected equipment and cord assemblies

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying appropriate tagging
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
- connecting cords and apparatus to the testing device
- dealing with unplanned events in accordance with problem-solving techniques and workplace procedures
- documenting testing activities, including workplace register
- identifying safe and unsafe cords and apparatus
- preparing to test cord connected apparatus and cord assemblies
- preparing and using the portable appliance tester (PAT)
- safety testing of electrical cord connected equipment and cord assemblies
- tagging tested cord connected apparatus and cord assemblies and document testing activities
- using test results to determine the safety status.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- Australian Standards and Commonwealth/state/territory legislation and regulations including:
 - Australian Standard AS/NZS 3760 In-service safety inspection and testing of electrical equipment
 - Commonwealth/state/territory WHS/OHS Acts and regulations
 - limitations of work that can be undertaken
 - codes of practice and associated guidance material
 - risk management principles

- basic electrical testing concepts, including:
 - basic electrical circuits
 - functions of electrical circuit
 - conductors and insulators
 - basic electrical supply system
 - relationship of electrical quantities
 - effects of electrical currents
 - methods/devices used to negate or minimise electrical shock
 - PAT
 - PAT maintenance and calibration
- electrical equipment and cord assemblies testing, including:
 - classification of electrical equipment
 - inspection of electrical equipment (visual inspections)
 - using PAT:
 - earth continuity testing
 - insulation resistance testing
 - polarity testing (extension cords and IEC cords)
- testing and tagging documentation requirements, including:
 - risk assessment documentation
 - frequency of inspection and testing
 - tagging of equipment
 - records maintenance
- electrical cord testing and tagging documentation requirements
- electrical equipment and cord assemblies testing
- electrical testing concepts
- problem-solving techniques
- relevant job safety assessments or risk mitigation processes
- relevant legislation and regulations
- relevant manufacturer specifications
- relevant testing and tagging of portable and cord connected electrical apparatus
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to conducting in-service safety testing of electrical cord connected equipment and cord assemblies
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERL0004 Disconnect - reconnect electrical equipment connected to low voltage (LV) installation wiring

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to disconnect and reconnect electrical equipment connected to low voltage (LV) installation wiring.

It includes preparing electrical equipment for disconnecting and then reconnecting equipment connected to LV installation wiring. It also includes inspecting and testing the reconnected electrical equipment for safe operation, identifying and reporting electrical faults and providing status reports. This must be incidental to a primary or regular function of the workplace.

The unit excludes disconnecting or reconnecting circuits at a switchboard or to general electrical accessories (including switches, socket outlets and circuit protective devices), or installation of or alteration to any part of the fixed electrical wiring system (defined as electrical installation work).

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations which are designed to operate at voltages greater than 50 volt (V) alternating current (a.c.) or 120 V direct current (d.c.).

The skills and knowledge described in this unit may require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Additional and/or other conditions may also apply under State and Territory legislation and regulations related to licencing, electrical work and work health and safety (WHS)/occupational health and safety (OHS) regulations, which must be confirmed prior to commencing this unit.

In some jurisdictions additional information related to licencing may be required on certification documentation. Further guidance can be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Restricted Licensing

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to disconnect electrical equipment

2 Disconnect electrical equipment

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Electrical equipment disconnection is planned to ensure WHS/OHS policies and procedures are followed
- 1.2 Relevant person/s is consulted to ensure work is coordinated effectively with others involved at the worksite
- 1.3 Safety hazards which have not previously been identified are documented, risks assessed, and control measures determined and implemented in consultation with relevant person/s and in accordance with workplace procedures
- 1.4 Point of isolation of electrical equipment to be disconnected is determined
- 1.5 Tools, equipment and testing devices needed to carry out electrical work are obtained in accordance with workplace procedures and checked for correct operation and safety
- 2.1 WHS/OHS policies and workplace procedures are followed
- 2.2 Electrical equipment is isolated in accordance with relevant electrical installation industry standards and workplace procedures
- 2.3 Isolated equipment is confirmed as de-energised
- 2.4 Conductor connection sequence is recorded and labelled in accordance with workplace procedures

- 2.5 Visual inspection and checks of the electrical equipment and associated wiring are carried out in accordance with workplace procedures to detect any abnormal or obvious damage or fault
 - 2.6 Electrical equipment is disconnected from fixed wiring without damage to other components
 - 2.7 Disconnected conductors/cables are terminated in accordance with relevant industry standards to ensure they are safe and present no potential hazard
 - 2.8 Approval is obtained in accordance with workplace procedures from relevant person/s before any contingencies are implemented
- 3 Prepare to reconnect electrical equipment**
- 3.1 Reconnection is planned to ensure WHS/OHS policies and workplace procedures are followed
 - 3.2 Relevant person/s is consulted to ensure work is coordinated effectively with others involved in the work site
 - 3.3 Point of isolation of the circuit to which the electrical equipment to be connected is determined
 - 3.4 Replacement electrical equipment is selected on the basis of rating and specifications being the same as that of the original electrical equipment
 - 3.5 Appropriate person/s is consulted in the event that replacement electrical equipment is not available
 - 3.6 Original and/or replacement electrical equipment is inspected and tested to ensure it is safe to connect to the electrical supply and use
 - 3.7 Tools, equipment and testing devices needed to carry out electrical work, are obtained in accordance with workplace procedures and checked for correct operation and safety
- 4 Reconnect electrical equipment**
- 4.1 WHS/OHS policies and procedures are followed
 - 4.2 Measures are taken to ensure circuit to which electrical equipment is to be connected remains isolated and de-energised in accordance with relevant electrical installation industry standards and workplace procedures

- 4.3 Earth continuity of the equipment is tested to determine whether it is in accordance with relevant industry standards
 - 4.4 Insulation resistance of the equipment is tested to confirm that it is in accordance with relevant industry standards
 - 4.5 Appropriate person/s is consulted regarding any non-compliant conditions identified during testing
 - 4.6 Electrical equipment is connected in accordance with previously recorded conductor connection sequence and relevant industry standards
 - 4.7 Connections to the equipment are checked to confirm they are correct
 - 4.8 Continuity between exposed conductive parts of the equipment and the main earth or metal switchboard enclosure is confirmed
- 5 Test the reconnected electrical equipment for safe operation**
- 5.1 WHS/OHS policies and workplace procedures for the reinstatement of isolated circuits and electrical equipment is followed
 - 5.2 Supply is reinstated to equipment and checked in accordance with established procedures and industry requirements
 - 5.3 Arrangements are made with relevant person/s to test the operation of the electrical equipment in accordance with workplace procedures
 - 5.4 Operational non-conformances are identified and reported in accordance with workplace procedures
- 6 Complete compliance documentation**
- 6.1 Equipment status report/s are completed and relevant person/s notified in accordance with task requirements and workplace procedures
 - 6.2 Complete compliance documentation in accordance with industry standards and regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Disconnection and reconnection of electrical equipment must include at least one of the following, and must be selected to align with the candidates' primary trade or work function:

- air conditioning/refrigeration equipment
- instrumentation equipment
- electronic equipment
- electrical equipment
- neon signs
- composite equipment
- control devices
- water heaters
- motors
- gas appliances
- electrical work associated with fixed wiring, circuits at a switchboard or to general electrical equipment, including switches, socket outlets, circuit protective devices etc
- in hazardous areas or on electrical equipment that is part of an explosion-protection technique
- where high fault currents are possible
- which are luminaires

MUST NOT INCLUDE:

disconnect/reconnect electrical equipment connected to supplies up to 1,000 volts (V) alternating current (a.c.) or 1,500 V direct current (d.c.) must not include the following:

Unit Mapping Information

No equivalent unit

Assessment Requirements for UEERL0004 Disconnect - reconnect electrical equipment connected to low voltage (LV) installation wiring

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - selecting and using an appropriate range of personal protective equipment (PPE)
 - hazard identification
 - using risk control measures
 - using safe working practices when carrying out electrical disconnect/reconnect work
 - working safely with low voltage (LV) electrical installations
- determining electrical characteristics of electrical equipment
- selecting tools, equipment and testing devices
- identifying the point of isolation
- preparing to disconnect and reconnect electrical equipment
- disconnecting and reconnecting electrical equipment
- connecting circuits from the schematic diagrams
- connecting and using voltmeters and ammeters, including selecting the correct range in terms of magnitude and whether the supply is alternating current (a.c.) or direct current (d.c.)
- isolating, testing and tagging accessories
- connecting a simple electrical circuit, including supply, control switch and load
- measuring voltage and current within a simple circuit
- producing a wiring diagram of the connections used in following the schematic diagram
- connecting a simple circuit following a wiring diagram
- producing a schematic diagram from the wiring diagram
- using an analogue multimeter for voltage measurement ensuring the following: setting zero, correct scale, a.c. or d.c., polarity and magnitude, avoiding parallax error and estimating between division readings
- using a digital multimeter for voltage measurement ensuring the following: correct range and no active conductors are connected to any meter earth
- measuring resistance using a digital multimeter

- conducting insulation resistance tests using a handheld insulation tester after checking for zero and meter calibration
- checking the polarity of a three-core extension cord using a continuity tester
- measuring current using a clip-on (tong tester) taking each circuit conductor in turn
- terminating cables using stud, screw, tunnel and lug terminal types employing the correct preparation and the relevant terminating tools
- identifying the type and arrangement of circuits supplying equipment that is to be disconnected
- testing the availability of supply for electrical equipment about to be disconnected
- locating isolation device/s, including lockable adjacent switching device, and/or identification of fuse/circuit breaker at switchboard, and use of equipment schedules where provided
- determining the method of isolation to be used; which available device
- isolating a supply at a fuse, ensuring the fuse wedge is removed only after the electrical equipment is turned off and demonstrating why the empty wedge is replaced once the fusible link has been removed
- isolating a supply at a circuit breaker, ensuring the circuit breaker is locked and secured in the open position
- undertaking tests to determine if the electrical equipment is turned off when isolating at a fuse/circuit breaker
- using danger tags at the point of isolation
- identifying the type and arrangement of circuits supplying equipment that is to be disconnected from a single phase and/or multiphase supply of voltages up to 1,000 V a.c. or 1,500 V d.c.
- applying procedures that ensure the safe isolation of the supply to equipment which is to be disconnected
- disconnecting isolated equipment from fixed wiring with minimal damage to wiring system after ensuring no visible faults or damage, and the recording of conductor connection sequence
- applying termination practices in regard to disconnected wiring
- checking the new electrical equipment nameplate details against those of the electrical equipment being replaced
- visually inspecting and testing equipment's electrical characteristics using suitable test equipment to ensure equipment is safe to connect in regard to sufficiently high insulation resistance, arrangements for protection against indirect contact are undamaged and in place, appropriate ingress protection (IP) rating, and arrangements for protection against dangers of mechanical movement are undamaged and in place
- testing compliance of the electrical equipment, i.e. insulation resistance and continuity
- testing the disconnected electrical equipment for faults (open circuits, partial open circuits, short circuits, partial short circuits and earth faults), and recognise any unsatisfactory test results obtained identifying the type and arrangement of circuits supplying equipment that is to be reconnected to a single phase and/or multi-phase supply of voltages up to 1,000 V a.c. or 1,500 V d.c.
- reconnecting electrical equipment to fixed wiring with minimal damage to wiring system
- ensuring continuity between exposed conductive parts of the equipment and the main earth or

metal switchboard enclosure

- restoring supply after ensuring correct connections, and all safety requirements have been met
- testing the supply at the electrical equipment
- restoring all mechanical protection, e.g. terminal covers
- checking operation of reconnected equipment
- dealing with unplanned events/situations in accordance with workplace procedures and in a manner that minimises risk to personnel and equipment
- producing reports and documents to describe a suitable procedure to safely disconnect a component from a single-phase supply and/or multi-phase supply in accordance with workplace, industry and regulatory requirements
- producing reports and compliance documentation for the safe reconnection/commissioning of a component to the supply in accordance with workplace, industry and regulatory requirements
- completing required regulatory compliance documentation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- the basic electrical circuit, including:
 - elements of a simple electric circuit (supply, control switch, protection device and load)
 - definition, the symbol and the abbreviation of the unit for electromotive force, potential difference, current and resistance
 - types of electrical load
 - need for devices to afford electrical protection and the mechanisms used in protection devices, including resetting
 - a.c supply (both single and multi-phase) and d.c. supply
 - need for isolating, testing and tagging electrical circuits
- relationships in an electrical circuit, including:
 - relationship between voltage, current and resistance
 - definition of power in electrical terms (for d.c. or resistive a.c. circuits)
 - electrical diagrams, including:
 - symbols used for fuse, circuit breaker, isolator, normally open contacts, normally closed contacts, coil, energy meter, a.c. motor and transformer
 - using a block diagram as means of developing concepts and understanding
 - function of single line diagrams, including their application in three phase systems
 - definition of a circuit or schematic diagrams
 - wiring diagrams
- test equipment selection and care, including:
 - fault currents and the implications of incorrectly connecting a meter to a high fault current

source

- category ratings of multimeters in terms of their breaking capacity (fault current interruption) and identification of the appropriate category of instrument for typical domestic work and for typical commercial work
- regulatory requirements in regard to the maintenance and testing of test instrumentation
- steps and procedures for the safe use, care and storage of electrical instruments
- selecting test equipment for given situations
- test equipment - voltage measurement, including:
 - voltage measurement - meters connected in parallel
- test equipment - resistance measurement, including:
 - insulation resistance, and the required minimum values for insulation resistance LV equipment (including the insulation resistance values for electrical equipment incorporating heating elements)
 - insulation resistance needs to be measured at higher than supply voltage and the voltages to be used
 - continuity and what a continuity tester does
- test equipment - current measurement, including advantage/s of the clip-on method of current measurement
- cable connections, including:
 - construction of typical power cables
 - principle of operation of the following types of terminals stud, screw, tunnel and lugs
 - cable preparation and terminating methods appropriate to each type of terminal, including any special requirements which apply
- protection for safety, including:
 - dangers associated with earth-faults
 - protection of persons against electric shock from earth-faults
 - maintaining a low earth-fault current path resistance
 - components in an earth-fault current path
 - regulatory issues/requirements/limitations in regard to working live
- safety testing preparation and procedures, including:
 - faulty earth-fault current paths
 - using safe working practices when carrying out fault-finding work
 - identification of earthing system components
 - unsatisfactory resistance of a fault current path
 - actions to rectify unsatisfactory resistance of an earth-fault current path or insulation
- isolating supplies, including:
 - regulatory requirements in regard to working de-energised, and ensuring and maintaining isolation
 - reasons for advising all personnel likely to be affected
 - preventing others wanting to remake supply
 - reason for isolation and approximate time of outage to allow planning of alternate

activities

- identification of the type and arrangement of circuits supplying equipment that is to be disconnected
- use of and reason for danger tags at the point of isolation
- reason for the following steps: testing on a known live supply, testing for isolation, retesting on a known live supply after confirming isolation
- disconnecting electrical equipment - LV, including:
 - identification of the type and arrangement of circuits supplying equipment that is to be disconnected from a single phase and/or multi-phase supply of voltages up to 1,000 V a.c. or 1,500 V d.c.
 - procedures that ensure the safe isolation of the supply to equipment which is to be disconnected
 - disconnection of isolated equipment from fixed wiring with minimal damage to wiring system after ensuring no visible faults or damage, and the recording of conductor connection sequence
- reconnecting electrical equipment - LV, including:
 - importance of checking the new electrical equipment nameplate details against those of the electrical equipment being replaced
 - need to visually inspect and test the equipment's electrical characteristics using suitable test equipment to ensure equipment is safe to connect in regard to sufficiently high insulation resistance, arrangements for protection against indirect contact are undamaged and in place, appropriate IP rating, and arrangements for protection against dangers of mechanical movement are undamaged and in place
 - procedures for equipment with unsatisfactory results - unsuitability for reconnection
 - identification of the type and arrangement of circuits supplying equipment that is to be reconnected to a single phase and/or multi-phase supply of voltages up to 1,000 V a.c. or 1,500 V d.c.
 - procedures ensuring isolation of supply
 - engaging appropriately qualified person to rectify any non-compliance
- produce documentation and reports in accordance with workplace, industry and regulatory requirements, including:
 - need to produce status reports and documents to locate and identify isolation mechanisms for a wide range of circuits and associated loads
 - production of reports and documents to use a suitable procedure to safely disconnect a component from a single-phase supply and/or multi-phase supply
 - content required in reports and documents used to safely determine the suitability of a component for reconnection to supply
 - production of reports and documents for the safe reconnection/commissioning of a component to the supply.
 - need to comply with regulatory compliance documentation requirements.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, including where not permissible under regulatory and licencing requirements, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources used should reflect current industry practices in relation to disconnecting and reconnecting electrical equipment connected to a LV supply
- applicable documentation, including workplace procedures, equipment specifications, regulations, standards, codes of practice and operation manuals.

UEERL0005 Locate and rectify faults in low voltage (LV) electrical equipment using set procedures

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to locate and rectify faults in low voltage (LV) electrical equipment.

It includes following workplace procedures to inspect and test electrical equipment, identify and rectify faults and complete reporting. This must be incidental to a primary or regular function of the workplace. The Range of Conditions describes exclusions for this unit of competency.

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations which are designed to operate at voltages greater than 50 volt (V) alternating current (a.c.) or 120 V direct current (d.c.).

The skills and knowledge described in this unit may require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Additional and/or other conditions may also apply under State and Territory legislation and regulations related to licencing, electrical work and work health and safety (WHS)/occupational health and safety (OHS) regulations, which must be confirmed prior to commencing this unit.

In some jurisdictions additional information related to licencing may be required on certification documentation. Further guidance can be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEERL0004 Disconnect - reconnect electrical equipment connected to low voltage (LV) installation wiring

Competency Field

Restricted Licensing

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to identify faults

2 Locate faults in the electrical equipment

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work is planned to ensure WHS/OHS policies and workplace procedures are applied
- 1.2 Tools, electrical equipment and testing devices required for work are obtained in accordance with workplace procedures and checked for correct operation and safety
- 1.3 Relevant person/s is consulted to ensure the work is coordinated with others
- 1.4 Electrical characteristics of electrical equipment and electrical supply are determined and recorded in accordance with workplace procedures
- 1.5 Electrical equipment and associated circuits are identified for isolation purposes in accordance with workplace procedures
- 2.1 Electrical equipment and associated circuits are isolated in accordance with workplace procedures
- 2.2 WHS/OHS workplace policies and procedures are followed
- 2.3 Visual inspection and checks of the electrical equipment and components are carried out to detect any abnormality, damage or fault in accordance with workplace procedures
- 2.4 Wiring diagrams are checked and possible fault causes identified based on the wiring diagrams
- 2.5 Faults are confirmed and components to be replaced or adjusted are determined and details recorded in accordance with workplace procedures
- 2.6 Electrical equipment is dismantled and/or removed, as required, and components stored to protect them against

loss or damage in accordance with workplace procedures

2.7 Quality checks of work are undertaken in accordance with workplace procedures

3 Rectify faults

3.1 Materials and resources required to complete work are obtained in accordance with workplace procedures and job requirements

3.2 Adjustments are made to electrical equipment for operation and parameters in accordance with manufacturers requirements, workplace procedures and relevant industry standards

3.3 Faults are rectified in accordance with workplace procedures

3.4 Approval for contingencies is obtained from appropriate person/s before implementation in accordance with workplace procedures

3.5 Tests on the electrical equipment are performed in accordance with industry procedures to ensure safe return to service and operation of equipment

3.6 Report/s, documentation and compliance certifications are completed in accordance with workplace, industry and regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Locating and rectifying faults in LV electrical equipment must include at least one single phase and one multi-phase item of equipment of any of the following, and must be selected to align with the candidates' primary trade or

- air conditioning/refrigeration equipment
- instrumentation equipment
- electronic equipment
- electrical equipment
- neon signs

work function:

- composite equipment
- control devices
- water heaters
- motors
- gas appliances
- electrical work associated with fixed wiring, circuits at a switchboard or to general electrical equipment, including:
 - switches, socket outlets, circuit protective devices etc); or
 - installation of or alteration to any part of the fixed electrical wiring system (defined as electrical installation work)
- in hazardous areas or on electrical equipment that is part of an explosion-protection technique
- where high fault currents are possible
- which are luminaries

MUST NOT INCLUDE locating and rectifying faults in electrical equipment intended to operate from fixed wired supply up to 1,000 V a.c. or 1,500 V d.c. and not listed above. This includes:

Assessment Requirements for UEERL0005 Locate and rectify faults in low voltage (LV) electrical equipment using set procedures

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - selecting and using an appropriate range of personal protective equipment (PPE)
 - hazard identification
 - using risk control measures
 - using safe working practices when carrying out electrical disconnect/reconnect work
 - working safely with low voltage (LV) electrical installations
- dealing with unplanned events
- using routine fault-finding techniques, workplace procedures and problem-solving techniques to locate and rectify faults in LV electrical equipment
- following safe work method statements (SWMS) and procedures
- using wiring diagrams to assist in identifying fault locations
- identifying, inspecting, testing and isolation of electrical equipment
- preparing to replace, implementing repairs and reconnecting electrical equipment
- applying safe procedures to discharge a capacitor
- returning to service and testing for polarity, continuity and insulation resistance
- using safe working practices when carrying out fault finding
- identifying common types of electrical faults (open circuit, short circuit, partial open circuit and partial short circuit)
- interpreting ratings from nameplates for comparison with any replacement
- visual checking techniques on a range of single and multi-phase equipment
- using test instrumentation, safely conduct procedures to identify faults in a range of single and multi-phase equipment
- rectifying all identified faults and ensuring appropriate consultation/approval before implementing contingencies
- checking repaired equipment for safe and correct operation
- producing reports and documents for the identification and rectification of faults in electrical

LV equipment in accordance with workplace procedures and regulatory and compliance documentation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- safe fault finding, including:
 - identification of common types of electrical faults (open circuit, short circuit, partial open circuit and partial short circuit) in single and multi-phase equipment
 - test equipment to locate common faults
 - techniques for using wiring diagrams to identify possible fault locations
- types of single and multi-phase equipment, including:
 - identifying basic principles of operation of typical equipment
 - visual inspection and checking techniques on a range of single/multi-phase equipment
 - interpretation of ratings from nameplates for comparison with any replacement
 - principles of operation of control equipment and protection devices associated with a range of single/multi-phase equipment
- problem-solving techniques, including:
 - symptoms of common faults
 - common faults that occur in single and multi-phase equipment and the indicators of such faults
 - techniques to ensure the electrical isolation and the maintenance of electrical isolation of single/multi-phase equipment when conducting fault finding
 - regulatory requirements/obligations regarding any live testing that may be unavoidable
 - fault-finding procedures
 - rectification of identified faults ensuring appropriate consultation/approval before implementing contingencies
- documentation and reporting- including:
 - reporting and recording systems
 - relevant workplace documentation, including quality, policies and procedures
 - status reports and documents related to locating and identifying isolation mechanisms for a wide range of circuits and associated loads
 - reports, documents and procedures related to safely locating and rectifying faults in electrical LV equipment
- relevant job safety assessments or risk mitigation processes include safe working methods statements
- relevant industry standards, including AS/NZS 4836 Safe working on or near low-voltage electrical installations and equipment
- relevant manufacturer specifications
- relevant WHS/OHS legislated requirements.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, including where not permissible under regulatory and licencing requirements, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- resources used should reflect current industry practices in relation to disconnecting and reconnecting electrical equipment connected to a LV supply
- applicable documentation, including workplace procedures, equipment specifications, regulations, Standards, codes of practice and operation manuals.

UEERL0006 Attach HV flexible cables and plugs

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to attach flexible cords, cables and plugs, including trailing and feeder cables, to high voltage (HV) electrical equipment connected to a supply exceeding 1,000 volts (V) alternating current (a.c.) or 1,500 volts (V) direct current (d.c.).

It includes working safely; identifying plug configurations; selecting and using inspecting, testing and measuring devices; terminating and connecting HV flexible cables, plugs and conductors; safety testing and reporting.

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Competency development activities in this unit are subject to regulations directly related to licensing. Where a licence or permit to practice is not held, a relevant contract of training, such as an Australian Apprenticeship, may be required.

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEERL0001 Attach cords and plugs to electrical equipment for connection to a single phase 230 volt supply

UEERL0002 Attach cords, cables and plugs to electrical equipment for connection to 1,000 V a.c. or 1500 V d.c. supply

Competency Field

Restricted Licensing

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Plan to attach flexible cables and plugs

1.1 Work is planned, sequenced and prepared in accordance with WHS/OHS requirements and workplace procedures

1.2 Condition and ratings of cables and plugs are determined from relevant industry standards and work instructions from relevant person/s

1.3 Flexible cables and plugs are selected in accordance with relevant industry standards and workplace procedure for condition and rating

1.4 Materials necessary to complete work are obtained in accordance with workplace procedures and checked against work instruction

1.5 Tools, equipment and testing devices needed to carry out work are obtained in accordance with workplace procedures and checked for correct operation and safety

2 Attach flexible cables and plugs

2.1 WHS/OHS policies and procedures are followed

2.2 Flexible cables and plugs are prepared without damage to insulation and conductors and in accordance with relevant industry standards

2.3 Equipment is earthed in accordance with relevant industry standards and confirmed de-energised

2.4 Visual inspection and checks of the electrical equipment and associated wiring are conducted in accordance with workplace procedures to detect any abnormal damage or fault

2.5 Approval is obtained in accordance with workplace procedures from relevant person/s before any contingencies are implemented

2.6 Insulated equipment is inspected and maintained in accordance with relevant industry standards and workplace procedures

- 2.7** Conductors are connected to terminals ensuring the required polarity is in accordance with relevant industry standards
- 3 Inspect and test equipment for operation and safety**
- 3.1** HV electrical installation and operation of cables and plugs connected to equipment are inspected and tested in accordance with relevant industry standards, work instructions and workplace procedures
- 3.2** Approval is obtained from relevant person/s to confirm completion of work is in accordance with workplace procedures before supply is connected
- 3.3** Status reports are completed in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Flexible cables and plugs for connecting equipment intended to operate at HV must not include:

- where high fault currents are possible
- on complex electrical work
- competencies associated with fixed wiring

Unit Mapping Information

This unit replaces and is equivalent to UEENEEP023A HV Flexible Cables and Plugs.

Assessment Requirements for UEERL0006 Attach HV flexible cables and plugs

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant industry standards
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
- applying quality, workplace procedures and instructions
- attaching flexible cables and plugs to electrical equipment connected to high voltage (HV) electrical equipment
- attaching, replacing and repairing flexible cables and plugs connected to HV electrical equipment
- connecting flexible cables and plugs to multi-phase appliances
- dealing with unplanned events in accordance with problem-solving techniques and workplace procedures
- inspecting and testing flexible cables, plugs and electrical equipment connected to HV electrical equipment for operation and safety
- planning and preparing to attach flexible cables and plugs connected to HV electrical equipment
- providing status reports.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- flexible cords/cables and plugs to suit given HV applications, including:
 - flexible cables and plugs to suit given HV applications
 - types of multi-phase plug HV for a specific load and ingress protection (IP) rating requirements
- safety of a HV electrical apparatus (including basic principles of its operation non-mathematical and control) of an appliance for connection to the supply, including:

- appropriate test equipment to check that apparatus is safe
- procedures to be followed to ensure the correct use of test equipment
- basic principles of operation and control of apparatus supplied by the flexible cables and plugs
- test results that show apparatus is unsafe
- connection of flexible cables and plugs to multi-phase appliances, including:
 - preparation of flexible cables for connection to HV apparatus
 - connection of flexible cables to HV apparatus
 - connection of a HV plug to a flexible cable
- safety of flexible cable and plug assembly, including:
 - plug and cord testing procedures
 - safe operation of apparatus supplied by HV cable and plug assembly
- connection of flexible cables and plugs to multi-phase appliances
- flexible cords/cables and plugs to suit given HV applications
- problem-solving techniques
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies, procedures and instructions
- safety of flexible cable and plug assembly
- types of multi-phase plug HV for specific load and IP rating requirements.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to attaching flexible cables and plugs to a variety of electrical equipment connected to a HV supply

- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERL0007 Disconnect-reconnect 3.3 kV electric propulsion components of self-propelled earth moving vehicles

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to isolate, disconnect and reconnect high voltage (HV) electric propulsion components on engine driven, self-propelled earth moving vehicles under the restrictions of designated electrical equipment and conditions specified, operating at 3,300 volts (V).

It includes working safely, identifying circuit and isolation arrangements, following isolation procedures, selecting and using HV testing and measuring devices, terminating and connecting HV cables and conductors, safety testing and reporting.

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations which are designed to operate at voltages greater than 50 V alternating current (a.c.) or 120 V direct current (d.c.).

Competency development activities in this unit are subject to regulations directly related to licensing. Where a licence or permit to practice is not held, a relevant contract of training, such as an Australian Apprenticeship, may be required.

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Restricted Licensing

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare for disconnection or reconnection

- 1.1** Designated HV electric propulsion components to be replaced are identified and purpose of the work is verified with relevant person/s
- 1.2** WHS/OHS requirements and workplace procedures are followed in accordance with relevant industry standards
- 1.3** Work clearances are obtained, and isolation and disconnection are followed in accordance with workplace procedures

2 Disconnect designated HV electric propulsion components

- 2.1** Relevant electrical characteristics and protection specifications are identified in accordance with workplace procedures
- 2.2** On-board cables are identified and marked, and connection sequence recorded
- 2.3** Designated HV electric propulsion components are inspected for damage and conclusions verified with relevant person/s
- 2.4** Visual inspections and checks of the designated HV electric propulsion components and associated wiring are carried out in accordance with workplace procedures to detect any abnormal or obvious damage or fault
- 2.5** Isolated equipment is confirmed as de-energised
- 2.6** Approval is obtained in accordance with workplace procedures from relevant person/s before any contingencies are implemented
- 2.7** On-board cables are disconnected, where appropriate, without damage to terminals or components
- 2.8** Designated HV electric propulsion component/s are dismantled, removed and/or replaced in accordance with relevant industry standards
- 2.9** Designated HV electric propulsion components parts and/or associated components are stored appropriately to

- protect against damage
- 2.10** Repairs to the removed equipment are in accordance with relevant industry standards and workplace procedures
- 3 Reconnect designated HV electric propulsion components**
- 3.1** Cables are re-connected without damage to terminals or components
- 3.2** Connections are checked and tested to confirm correct polarity and continuity
- 3.3** Designated HV electric propulsion components are assembled and checked in accordance with relevant industry standards
- 3.4** Designated HV electric propulsion components are inspected and tested for safety and correct operation
- 4 Prepare for return to service**
- 4.1** Isolation devices are removed and work clearance is released in accordance with workplace procedures
- 4.2** Documentation is completed in accordance with workplace procedures
- 4.3** Relevant person/s is notified when designated HV electric propulsion components are ready for return to service in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Disconnecting and reconnecting of HV electric propulsion components on engine driven, self-propelled earth moving vehicles operating at 3,300 V must not include the following:

- associated electrical work other than to disconnect and reconnect of HV electric propulsion components of off-road HV electric propulsion components on engine driven, self-propelled earth moving vehicles

operating at 3,300 V

- competencies associated with fixed wiring
- on complex electrical work
- where high fault currents are possible

Unit Mapping Information

This unit replaces and is equivalent to UEENEEP022A Disconnect and reconnect 3.3 kV electric propulsion components of self-propelled earth moving vehicles.

Assessment Requirements for UEERL0007 Disconnect-reconnect 3.3 kV electric propulsion components of self-propelled earth moving vehicles

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - hazard identification
 - using risk control measures
- dealing with unplanned events in accordance with problem-solving techniques and workplace procedures
- disconnecting and reconnecting 3.3 kilovolts (kV) electric propulsion components of self-propelled earth moving vehicles
- disconnecting of high voltage (HV) electric propulsion components
- preparing of HV electric propulsion components for return to service
- preparing to disconnect or reconnect of HV electric propulsion components of operating at 3,300 volts (V)
- providing status report/s
- reconnecting of HV electric propulsion components
- repairing in accordance with workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- basic electrical circuits, including:
 - elements of a simple electric circuit (supply, control switch, protection device and load)
 - definition, the symbol and the abbreviation of the unit for electromotive force, potential difference, current and resistance
 - types of electrical load
 - need for devices to afford electrical protection and the mechanisms used in protection

- devices, including resetting
- symbols for the components of a basic electrical circuit
- connection of the circuit from the schematic diagram
- alternating current (a.c.) supply (both single and three phase) and direct current (d.c.) supply
- correct connection and use of voltmeters and ammeters, including the selection of correct range in terms of magnitude and whether the supply is a.c. or d.c.
- need for isolating, testing and tagging electrical circuits
- isolation, testing and tagging accessories in a simulated environment
- connecting a simple electrical circuit including supply, control switch and load
- measuring voltage and current within a simple circuit
- relationships in an electrical circuit, including:
 - relationship between voltage, current and resistance
 - connection of meters to determine resistance from voltmeter and ammeter readings using a variation of the Ohm's Law relationship
 - predicting changes in circuit parameters for altered values of voltage, current and resistance
 - definition of power in electrical terms (for d.c. or resistive a.c. circuits)
 - using circuit readings determine power using the appropriate equations, symbols and unit abbreviations, including the use of multiples and sub-multiples
- electrical diagrams, including:
 - symbols used for fuse, circuit breaker, isolator, normally open contacts, normally closed contacts, coil, energy meter, a.c. motor and transformer
 - using a block diagram as means of developing concepts and understanding
 - producing a block diagram of a simple circuit
 - function of single line diagrams, including their application in three phase systems
 - definition of a circuit or schematic diagrams
 - wiring diagrams
 - connecting a simple circuit using a schematic diagram noting the wide degree of variety in the way the conductors may be run
 - producing the wiring diagram of the connections used in following the schematic diagram
 - connecting a simple circuit following a wiring diagram
 - producing a schematic diagram from the wiring diagram
- test equipment selection and care, including:
 - fault currents and the implications of incorrectly connecting a meter to a high fault current source
 - category ratings of multimeters in terms of their breaking capacity (fault current interruption) and identification of the appropriate category of instrument for typical domestic work and for typical commercial work
 - regulatory requirements in regard to the maintenance and testing of test instrumentation
 - steps and procedures for the safe use, care and storage of electrical instruments

- selecting test equipment for given situations
- test equipment - voltage measurement, including:
 - voltage measurement-meters connected in parallel
 - operation of series test lamps
 - construction of a set of series test lamps with emphasis on safety requirements
 - using a set of series test lamps
 - operation of neon test pencils and test screwdrivers with emphasis on the limitations of their safe use
 - operation and limitations of voltage probes, including their limitations
 - using an analogue multimeter for voltage measurement ensuring the following - setting zero, correct scale; a.c or d.c., polarity and magnitude, avoiding parallax error and estimating between division readings
 - using a digital multimeter for voltage measurement ensuring the following - correct range and no active conductors are connected to any meter earth
- test equipment - resistance measurement, including:
 - voltmeter-ammeter method of resistance measurement
 - measuring resistance in a simple circuit using the voltmeter-ammeter method with emphasis on the correct choice of long or short shunt
 - measuring resistance in a simple circuit using an analogue multimeter ensuring the following - setting zero, selecting correct range and estimating of between division readings
 - measuring resistance using a digital multimeter
 - insulation resistance and list the required minimum values for insulation resistance for low voltage (LV) wiring and LV equipment (insulation resistance between active and earth the value for appliances incorporating heating elements)
 - insulation resistance needs to be measured at higher than supply voltage and the voltages to be used
 - conducting insulation resistance tests using a handheld tester after checking for zero and meter calibration
 - continuity and what a continuity tester does
 - checking the polarity of a three-core extension cord using a continuity tester
- test equipment - current measurement, including:
 - advantages of the clip-on method of current measurement
 - measuring current in a simple circuit using a multimeter on the correct current range and why a series connection must be used
 - measuring current using a clip-on (tong tester) taking each circuit conductor in turn
- cable connections, including:
 - construction of typical power cables
 - principle of operation of the following types of terminals stud, screw, tunnel, faston and soldered
 - cable preparation and terminating methods appropriate to each type of terminal, including any special requirements which apply

- terminating cables using all of the above terminal types employing the correct preparation and the relevant terminating tools, including the correct size soldering equipment
- protection for safety, including:
 - dangers associated with earth-faults
 - protection of persons against electric shock from earth-faults
 - maintaining a low earth-fault current path resistance
 - components in an earth-fault current path
 - testing the resistance of a fault current path
 - regulatory issues/requirements/limitations relating to working live
- safety testing preparation and procedures, including:
 - faulty earth-fault current paths
 - using safe working practices when carrying out fault-finding work
 - identification of earthing system components
 - unsatisfactory resistance of a fault current path
 - actions to rectify unsatisfactory resistance of an earth-fault current path or insulation
- isolating supplies, including:
 - regulatory requirements relating to working de-energised, and ensuring and maintaining isolation
 - reasons for advising all personnel likely to be affected
 - preventing others wanting to remake supply
 - reason for isolation and approximate time of outage to allow planning of alternate activities
 - identification the type and arrangement of circuits supplying equipment that is to be disconnected
 - availability of supply is tested at components about to be disconnected
 - locating isolation device/s, e.g. lockable adjacent isolating switch or fuse/circuit breaker at a distribution board usually identified at the appliance
 - determining the method of isolation to be used and which available device
 - isolating a supply at a fuse, the fuse wedge is removed only after the components is turned off and why the empty wedge is replaced once the fusible link has been removed
 - tests to determine if a component is turned off when isolating at a fuse/circuit breaker
 - use of and reason for danger tags at the point of isolation
 - reason for the following steps: testing on a known live supply, testing for isolation, retesting on a known live supply after confirming isolation
- disconnecting 3.3 kV electric propulsion components, including:
 - identification of the type and arrangement of circuits supplying electric propulsion components that is to be disconnected from a 3.3 kV supply
 - procedures that ensure the safe isolation of the supply to electric propulsion components which is to be disconnected
 - disconnection of isolated electric propulsion components from fixed wiring with minimal damage to wiring system after ensuring no visible faults or damage, and the recording of

- conductor connection sequence
- termination practices relating to disconnected wiring
- reconnecting 3.3 kV electric propulsion components, including:
 - importance of checking the new electric propulsion components nameplate details against those of the electric propulsion components being replaced
 - need to visually inspect and test the electric propulsion components electrical characteristics using suitable test equipment to ensure electric propulsion components are safe to connect in regard to sufficiently high insulation resistance, arrangements for protection against indirect contact are undamaged and in place, appropriate ingress protection (IP) rating, and arrangements for protection against dangers of mechanical movement are undamaged and in place
 - compliance testing of the fixed electric propulsion components, i.e. insulation resistance and continuity
 - testing the disconnected electric propulsion components for faults (open circuits, partial open circuits, short circuits, partial short circuits and earth-faults), and any unsatisfactory test results obtained
 - procedures for electric propulsion components with unsatisfactory results - unsuitability for reconnection
 - identification of the type and arrangement of circuits supplying electric propulsion components that are to be reconnected to a 3.3 kV supply
 - procedures ensuring isolation of supply
 - process to establish the integrity of the circuit to which the disconnected electric propulsion components are to be connected
 - testing the resistance between the protective earthing conductor and neutral conductor as applicable is sufficiently low, i.e. not greater than 2 ohms
 - insulation resistance of the active conductors is greater than 1 megohm
 - engaging appropriately qualified person to rectify any non-compliance
 - appropriate cable termination practices
 - reconnection of electric propulsion components to fixed wiring with minimal damage to wiring system
 - continuity between exposed conductive parts of the electric propulsion components and the main earth or metal switchboard enclosure
 - restoring supply after ensuring correct connections, and all safety requirements have been met
 - testing the supply at electric propulsion components
 - restoring all mechanical protection, e.g. terminal covers
 - checking operation of reconnected electric propulsion components
- documentation and reports, including:
 - need to produce status reports and documents to locate and identify isolation mechanisms for a wide range of circuits and associated loads
 - production of reports and documents to use a suitable procedure to safely disconnect a component from a 3.3 kV supply
 - content required in reports and documents used to safely determine the suitability of a

- component for reconnection to supply
- producing reports and documents for the safe reconnection/commissioning of a component to the supply
- enterprise reporting and recording system, including:
 - purpose and extent of maintaining work activities records in an enterprise
 - types of records for maintaining work activities in an enterprise
 - methods for recording and maintaining work records
 - work records for regulation requirements
 - producing enterprise records and documents for the safe reconnection/commissioning of a component to the supply
- disconnection and reconnection HV electric propulsion components on off-road earth moving trucks
- electrical circuit
- electrical diagrams
- isolating supplies
- protection for safety
- relationships in an electrical circuit
- relevant manufacturer specifications
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- risk mitigation processes
- safety inspecting and testing preparation and procedures
- working de-energised and ensuring and maintaining isolation regulatory requirements.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to disconnecting and reconnecting

3.3 kV electric propulsion components of self-propelled earth moving vehicles

- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERL0008 Disconnect-reconnect explosion-protected appliances and control devices connected to LV installation

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to disconnect and reconnect flameproof (Ex 'd'), increased safety (Ex 'e') and intrinsic safety (Ex 'i') electrical equipment to supply up to 1,000 volts (V) alternating current (a.c.) or 1,500 volts (V) direct current (d.c.).

It includes working safely in hazardous areas, identifying supply arrangements, following isolation procedures, handling explosion-protected equipment, selecting and using testing and measuring devices, terminating and connecting cables and conductors, safety testing, reporting electrical faults and providing status report/s.

Hazardous area is one in which an explosive atmosphere is present, or may be expected to be present, in quantities such as to require special precautions for the construction, installation and use of equipment. In hazardous areas, precautions should be taken to reduce the likelihood of installed electrical equipment causing an ignition.

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Competency development activities in this unit are subject to regulations directly related to licensing. Where a licence or permit to practice is not held, a relevant contract of training, such as an Australian Apprenticeship, may be required.

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEERL0004 Disconnect-reconnect electrical equipment connected to low voltage (LV) installation wiring

Competency Field

Restricted Licensing

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to disconnect electrical equipment

2 Disconnect electrical equipment

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Electrical equipment disconnection is planned to ensure WHS/OHS policies and workplace procedures are followed
- 1.2 Relevant person/s is consulted to ensure work is coordinated effectively with others
- 1.3 Safety hazards which have not previously been identified are documented, risks assessed, and control measures determined and implemented in consultation with relevant person/s in accordance with workplace procedures
- 1.4 Point of isolation of electrical equipment to be disconnected is determined
- 1.5 Tools, equipment and testing devices required for electrical work are obtained in accordance with workplace procedures and checked for correct operation and safety
- 2.1 WHS/OHS policies and procedures are followed
- 2.2 Electrical equipment is isolated in accordance with relevant electrical installations, industry standards and workplace procedures
- 2.3 Conductor connection sequence is recorded and labelled in accordance with workplace procedures
- 2.4 Visual inspections and checks of the electrical equipment and associated wiring are carried out in accordance with workplace procedures to detect any abnormal or obvious damage or fault
- 2.5 Isolated equipment is confirmed as de-energised

- 2.6 Electrical equipment is disconnected from fixed wiring without damage to other components
 - 2.7 Approval is obtained in accordance with workplace procedures from relevant person/s before any contingencies are implemented
 - 2.8 Disconnected conductors/cables are terminated in accordance with relevant industry standards to ensure they are safe and present no potential hazard
- 3 Prepare to reconnect electrical equipment**
 - 3.1 Reconnection is planned to ensure WHS/OHS policies and workplace procedures are followed
 - 3.2 Relevant person/s is consulted to ensure work is coordinated effectively with others
 - 3.3 Point of isolation of the circuit to which the electrical equipment is to be connected is determined
 - 3.4 Replacement electrical equipment is selected on the basis of rating and specifications in accordance with designated electrical equipment and conditions
 - 3.5 Relevant person/s is consulted in the event that replacement electrical equipment is not available
 - 3.6 Original and/or replacement electrical equipment is inspected and tested to ensure it is safe to connect to the electrical supply and use
 - 3.7 Tools, equipment and testing devices needed to carry out the electrical work are obtained in accordance with workplace procedures and checked for correct operation and safety
- 4 Reconnect electrical equipment**
 - 4.1 WHS/OHS policies and procedures are followed
 - 4.2 Measures are taken to ensure circuit to which electrical equipment is to be connected remains isolated and de-energised in accordance with relevant electrical installations, industry standards and workplace procedures
 - 4.3 Continuity of the protective earthing conductor is tested to determine whether it is sufficiently low
 - 4.4 Resistance between the protective earthing conductor

and the neutral conductor is inspected and tested to determine that it is in accordance with relevant industry standards

4.5 Insulation resistance of active conductors is inspected and tested to confirm that it is in accordance with relevant industry standards

4.6 Appropriate person/s is consulted to regarding any non-compliance condition identified during the earthing and resistance conductor inspection and testing

4.7 Continuity between exposed conductive parts of the appliance and the main earth or metal switchboard enclosure is confirmed

4.8 Electrical equipment is connected in accordance with relevant industry standards

4.9 Connections to the electrical equipment are checked to confirm they are correct

5 Test the reconnected electrical equipment for safe operation

5.1 WHS/OHS policies and workplace procedures for the reinstatement of isolated circuits and electrical equipment are followed

5.2 Arrangements are made with relevant person/s to test the operation of the electrical equipment in accordance with workplace procedures

5.3 Operational non-conformances are identified and reported in accordance with workplace procedures

6 Identify and report faults

6.1 Electrical equipment is isolated in accordance with workplace procedures

6.2 WHS/OHS policies and procedures are followed

6.3 Visual inspection and checks of the electrical equipment to be disconnected and/or reconnected are carried out in accordance with workplace procedures to detect any abnormal or damage or fault

6.4 Faults at point of disconnection and/or reconnection are identified and reported in accordance with workplace procedures

6.5 Approval is obtained in accordance with workplace procedures from relevant person/s before any

contingencies are implemented

- 6.6** Status report/s is completed and relevant person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Disconnecting and reconnecting equipment connected to supplies up to 1,000 V a.c. or 1,500 V d.c. explosion-protection techniques must include the following:

- flameproof (Ex 'd')
- increased safety (Ex 'e')
- intrinsic safety (Ex 'i')

MUST NOT INCLUDE

Disconnecting and reconnecting equipment connected to supplies up to 1,000 V a.c. or 1,500 V d.c. explosion-protection techniques must not include the following:

- comprised of complex electrical apparatus and circuits:
 - associated with fixed wiring, including locating and rectifying faults of circuits at a switchboard or to general electrical accessories (including switches, socket outlets, circuit protective devices); or
 - installation of or alteration to any part of the fixed electrical wiring system (defined as electrical installing work)
- where high fault currents are possible
- which are luminaries
- in hazardous areas or on electrical equipment that is part of an explosion-protection technique

Unit Mapping Information

This unit replaces and is equivalent to UEENEEP021A Disconnect - reconnect explosion-protected appliances and control devices connected to low voltage installation wiring.

Links

Companion Volume implementation guides are found in VETNet - -

Assessment Requirements for UEERL0008 Disconnect-reconnect explosion-protected appliances and control devices connected to LV installation

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant electrical installations industry standards
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
- applying sustainable energy principles and practices
- completing workplace documentation
- dealing with unplanned events/situations in accordance with workplace procedures to minimise risk to personnel and equipment
- determining electrical characteristics of explosion-protected electrical equipment
- disconnecting and reconnecting fixed wired electrical equipment connected to a low voltage (LV) supply
- disconnecting and reconnecting electrical equipment
- disconnecting explosion-protected electrical equipment
- identifying and isolating circuit
- identifying and reporting faults
- identifying faults at point of disconnection and reconnection in accordance with workplace procedures
- identifying point of installation
- inspecting and testing disconnected and reconnected electrical equipment for safe operation
- preparing to disconnect and reconnect electrical equipment
- preparing to disconnect explosion-protected electrical equipment
- preparing to reconnect explosion-protected electrical equipment
- reconnecting explosion-protected electrical equipment
- selecting tools, equipment and testing devices
- testing of the reconnected explosion-protected electrical equipment for safe operation, including polarity and earth continuity
- undertaking visual checks of the explosion-protected electrical equipment and associated wiring to detect and report any abnormal damage or faults.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- hazardous area safe working practices, including:
 - WHS/OHS responsibilities related to hazardous areas: the main features and purpose of a clearance to work (including hot work permit systems) system
 - typical safety procedures that should be followed before entering a hazardous area
 - the purpose of gas detectors and their use and limitations
 - effects of temperature on gas and vapour detection; frequency of monitoring for presence of gas or vapours, i.e. effects of temperature rise; factors affecting the accuracy of gas detectors, for example, contamination, condensation, temperature; and safety in use of gas detectors, for example, read and run concept
 - safety measures to be taken when working in a hazardous area
 - the roles of the parties (including standard bodies and experienced consultants) involved in the safety of hazardous areas: common Acts and regulations related to the safety of hazardous areas and the authorities responsible for their implementation; where assistance and further information can be obtained to assist persons with hazardous area responsibilities: persons with hazardous area responsibilities, including the hazardous area responsibilities of the owner of premises in which a hazardous area exists; the occupier of premises in which a hazardous area exists; enterprises and personnel engaged in installation and/or maintenance of explosion-protection systems; enterprises and personnel engaged in the classification of hazardous areas and/or design of explosion-protection systems; enterprises and personnel engaged in the overhaul, modification and/or assessment of explosion-protected equipment; enterprises and personnel engaged in the inspection of explosion-protection installations; manufacturers of explosion-protected equipment; designated authorities and insurers
- hazardous area and explosion-protection principles, including:
 - properties of combustible substances and their potential to create an explosive hazard; condition in the workplace that will lead to an explosion; the terms combustion, ignition and propagation; explosive range of substances encountered in the workplace i.e. lower explosion limit (LEL)/upper explosion limit (UEL); and explosive parameters of substances as given in tables of substance properties
 - combustible materials, including gases, vapours (from liquids) and dusts; flash point; the difference between gases and vapours; and the toxic nature of gases and vapours and potential harmful consequences
 - the nature of hazardous areas: the standard definition of a hazardous area; the recommended methods for classifying the type and degree of explosion hazard in an area; hazardous area classifications as defined by standards; and factors that are considered when a hazardous area is classified
 - the basics of how explosion-protection is achieved by the methods of exclusion, containment, energy limitation, dilution and avoidance of ignition source
- explosion-protected techniques and principles, including:
 - the principles of each explosion-protection technique, the methods used and how each

technique works

- how explosion-protected equipment is identified by the Ex symbol marked on the equipment, including old equipment and equipment certified in another country
- visible conditions or actions that would void the explosion-protection provided by a particular technique
- flameproof (Ex 'd') explosion-protection technique, including:
 - the purpose and characteristics of the design features of apparatus and circuits protected by the Ex 'd' technique (flame paths, integrity under pressure, pressure piling and enclosure entries)
 - typical situations where the Ex 'd' explosion-protection technique is used
 - actions or conditions that would void the protection provided by the Ex 'd' technique
 - the use of standards in determining the requirements to which the installation of Ex 'd' explosion-protected apparatus shall comply
- increased safety (Ex 'e') explosion-protection technique, including:
 - the purpose and characteristics of the design features of apparatus and circuits protected by the Ex 'e' technique (temperature rise, maximum power dissipation, protection devices, certified components, creepage and clearance distances, absence of sparking contacts and enclosure entries)
 - typical situations where the Ex 'e' explosion-protection technique is used
 - actions or conditions that would void the protection provided by the Ex 'e' technique
 - the use of standards in determining the requirements to which the installation of Ex 'e' explosion-protected apparatus shall comply
- intrinsic safety (Ex 'i') explosion-protection technique, including:
 - the purpose and characteristics of the design features of apparatus and circuits protected by the Ex 'i' technique (field devices, cables, safe area devices, earthing, entity versus integrated system concept, simple devices and interface devices and their parameters, segregation, infallible components, current and voltage limiting, creepage and clearance distances)
 - typical situations where the Ex 'i' explosion-protection technique is used
 - actions or conditions that would void the protection provided by the Ex 'i' technique
 - the use of standards in determining the requirements to which the installation of Ex 'i' explosion-protected apparatus shall comply
- common characteristics of explosion-protection techniques, including:
 - the purposes of temperature classification and gas grouping/apparatus grouping
 - compliance plate markings
 - limitations of non-metallic or specific alloy enclosures
 - the purpose of conformity and certification/approval for equipment used in hazardous areas
 - environmental conditions that may impact on explosion-protection techniques
 - features and purpose of conduit seals and cable termination devices designed for use in hazardous areas (conduit seals and barrier and compression glands for cables with or without armouring, screening and/or drain wires)
- hazardous areas cable termination devices and applications, including:

- explosion-protection features of cable terminations devices
- selecting compliant cable termination devices
- hazardous areas cable termination techniques, including:
 - installing conduit systems, where applicable, including seals to meet hazardous areas requirements (gases only)
 - terminating a cable with a barrier gland (gases only)
 - terminating a multipair, steel wire armoured (SWA), overall screened and individual screened cable into an enclosure
 - testing termination/connections of installed cables/circuits
- enterprise reporting and recording system, including:
 - purpose and extent of maintaining work activities records in an enterprise
 - types of records for maintaining work activities in an enterprise
 - methods for recording and maintaining work records
 - work records for regulation requirements
 - producing enterprise records and documents for the safe reconnection/commissioning of a component to the supply
- disconnect and reconnect explosion-protected electrical equipment, including:
 - common characteristics of explosion-protection techniques
 - explosion-protected techniques and principles
 - Ex 'd' explosion-protection technique
 - hazardous area and explosion protection principles
 - hazardous areas cable termination devices and applications
 - hazardous areas cable termination techniques
 - Ex 'e' explosion-protection technique
- relevant job safety assessments or risk mitigation processes, including working in hazardous areas and precautions to reduce the likelihood of electrical equipment causing an ignition
- relevant manufacturer specifications
- relevant relationships in an electrical circuit
- relevant testing equipment
- relevant WHS/OHS legislated requirements
- relevant workplace documentation, including purpose and extent of maintaining work activities records
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to disconnecting and reconnecting fixed wired explosion-protected electrical equipment connected to a LV supply
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0020 Apply rail signalling principles

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to interpret and apply rail signalling principles.

It includes identifying signalling equipment, explaining signalling terminology and conventions and explaining railway signalling principles. It also includes the interpretation of key signalling design documents as well as applying health and safety legislative requirements to different signalling work.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Identify health and safety

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Basic roles, responsibilities and rights of rail signalling

legislative requirements of different signalling works	work are identified and explained according to jurisdictional health and safety legislative requirements
	1.2 Duty of care requirements are identified
	1.3 Onsite rail signalling safe work practices are identified and explained
2 Identify types of signalling equipment	2.1 Principal components of the signalling system and their purpose are identified
	2.2 Different types of signalling interlocking systems are identified
3 Identify key information in signalling design documents	3.1 The major design document types/categories and their purpose are identified
	3.2 Signalling arrangement plans/track plans are interpreted and equipment and structures are identified when inspecting a rail signalling works/site
	3.3 Key information is located in a track insulation/bonding plan when inspecting a rail signalling works/site
	3.4 The structure of a circuit book is interpreted, and key information is located
4 Apply basic signalling terminology and conventions	4.1 Basic terminology for signalling infrastructure, systems and operation is applied
	4.2 Naming and numbering conventions are applied to a range of signalling designs
	4.3 Relevant signalling standards are accessed and interpreted
	4.4 Fail safe, right side and wrong side failures are identified
5 Apply rail signalling principles	5.1 Methods of ensuring safe distances are maintained between rail vehicles are identified
	5.2 The difference between controlled and automatic signalling is identified
	5.3 Workplace procedures for maintaining independence when conducting checking or verifying actions are interpreted and applied

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This is a new unit.

Links

Companion Volume Implementation Guides are found in VETNet -

Assessment Requirements for UEERS0020 Apply rail signalling principles

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- reading and interpreting relevant railway signalling standards and procedures
- reading a signal arrangement plan and identifying the signal equipment and its location on the rail network
- reading a signalling circuit drawing and identifying the equipment type
- using relevant standard nomenclature to identify basic signalling functions associated with signals, track circuits and point machines
- identifying the relevant technical records and documentation for construction and maintenance activities
- applying rail safe working practices and relevant industry standards, codes and rail safety regulations
- identifying relevant requirements for maintenance and construction signalling activities, including:
 - work health and safety (WHS)/occupational health and safety (OHS)
 - signalling safety practices and principles when working on signalling circuits
 - workplace procedures and practices
 - risk control measures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant industry standards for railway signalling and where they can be accessed
- purpose and importance of signalling standards
- the scope of AS7711 Signalling Principles
- the role of the rail regulator and investigation organisations
- rail safety legislative requirements
- train dynamics including:
 - types of rail vehicles, including suburban/country passenger, freight, maintenance

- vehicles and heritage/tourism
- braking distance
- gradients/terrain
- sighting distance
- essentials of safe movement of trains including:
 - the role of the signalling system in enabling safe and efficient movement of trains
 - standard operating conditions as per operating timetable/schedule
- purpose of rail signalling including:
 - safe distances between rail vehicles
 - safe movement of rail vehicles
 - conflicting movement between rail vehicles
 - how the signalling system provides driver information
 - how the driver interprets the information to safely control a train
 - restrictions on the signaller and driver following an operation error, including signals passed at stop, driver exceeding speed requirement and signaller setting incorrect route
- railway signalling principles, including:
 - maintaining a safe distance between trains on the same track to prevent a collision with a preceding train
 - preventing conflicting signal movements including vehicles entering a single line from opposing directions
 - safeguarding the movement of trains at points and crossings and ensuring no conflicting movements at junctions
 - maintaining the route set during the passage of a train
 - regulating the passage of trains according to the service density and speed required
- identification and purpose of signalling equipment including:
 - signals, point machines, interlockings, train detection, level crossings, power supplies, signal control panels, non-vital telemetry, wayside protection systems
 - signal plans and nomenclature
- railway signalling practice principles:
 - the purposes and role of independence when changing the configuration of signalling
 - that only signalling design documentation that has been approved can be used
 - the purpose of applying standards and procedures for all work
 - the purpose of recording the results of work activities
 - the purpose of railway signalling documentation version control
 - the signalling equipment is tested to ensure it performs to the design
- signalling systems design safety characteristics including:
 - a failure of an item of equipment will only result in a safe state for the rail system (Failsafe)
 - design of the equipment and the circuits protects against a single failure and ensures a safe state.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials and documentation currently used in industry
- resources that reflect current industry practices in relation to the application of signalling principles
- applicable documentation, including workplace procedures, standards and signalling designs.

UEERS0021 Assemble and wire electrical rail signalling equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is not equivalent to UEERS0001 Assemble and wire internal electrical rail signalling equipment.

Modifications in the second release of this unit of competency in the UEE Electrotechnology Training Package include:

- Title changed.
- Application updated to reflect title change.
- UEERS0020 added to prerequisites.
- Element titles and performance criteria amended to reflect title change.
- Performance criteria 3.5 added.
- Performance evidence updated for clarity.
- Content related to inverters in Knowledge Evidence moved to a different unit.
- Minor text amendments made to assessment conditions.

Application

This unit involves the skills and knowledge required to assemble and wire electrical rail signalling equipment.

It includes relevant workplace procedures for: assembling and mounting components, performing wiring, terminating cables, and wiring to comply with signalling designs and standards.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEEEL0003 Arrange circuits, control and protection for general electrical installations

UEERS0020 Apply rail signalling principles

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to assemble and wire signalling equipment

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for work area are identified and applied
- 1.2 Hazards are identified, risks assessed, and control measures and workplace procedures are implemented
- 1.3 Safety hazards that have not previously been identified are noted on the job safety assessments and existing risk control measures implemented
- 1.4 Technical requirements relating to specific signalling equipment are obtained
- 1.5 Assembly and wiring are appropriately sequenced in accordance with job schedule
- 1.6 Appropriate person/s is consulted to ensure work is coordinated effectively with others involved on the worksite
- 1.7 Materials needed for assembly wiring and cabling are obtained in accordance with workplace procedures and checked against job requirements
- 1.8 Tools, equipment, and testing devices needed to assemble and wire equipment are obtained in accordance with workplace procedures and checked for correct operation and safety
- 1.9 Rail signalling equipment is prepared for assembly and wiring in accordance with workplace procedures,

- drawings/diagrams and relevant specifications
- 2 Assemble and wire signalling equipment**
- 2.1** WHS/OHS risk control measures and workplace procedures for carrying out the work are followed
 - 2.2** Equipment is assembled, wired, connected and labelled to comply with technical standards and job specification requirements
 - 2.3** Risk control measures for dealing with unplanned situations are discussed with appropriate person/s and documented in job safety assessments
 - 2.4** Unplanned situations are dealt with safely in a manner that minimises risk to personnel and equipment and with the approval of authorised person/s
 - 2.5** Equipment is assembled, wired, connected and labelled efficiently without waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
- 3 Complete assembly and wiring of signalling equipment**
- 3.1** WHS/OHS work completion risk control measures and workplace procedures are followed
 - 3.2** Wire and cable terminations are checked in accordance with workplace installation procedures to ensure tightness and functionality
 - 3.3** Continuity and insulation tests are carried out in accordance with workplace test procedures to ensure and verify system standards are met
 - 3.4** Wiring and cabling diagrams, quality requirements and safety issues are addressed and relevant reports/documentation are updated and completed in accordance with workplace procedures
 - 3.5** Completed signalling equipment is reported and released for independent testing and certification

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is not equivalent to UEERS0001 Assemble and wire internal electrical rail signalling equipment.

Links

Assessment Requirements for UEERS0021 Assemble and wire electrical rail signalling equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is not equivalent to UEERS0001 Assemble and wire internal electrical rail signalling equipment.

Modifications in the second release of this unit of competency in the UEE Electrotechnology Training Package include:

- Title changed.
- Application updated to reflect title change.
- UEERS0020 added to prerequisites.
- Element titles and performance criteria amended to reflect title change.
- Performance criteria 3.5 added.
- Performance evidence updated for clarity.
- Content related to inverters in Knowledge Evidence moved to a different unit.
- Minor text amendments made to assessment conditions.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including risk control measures
- following relevant codes of practice and industry standards
- applying sustainable energy and environmental protection principles and practices
- preparing to assemble and wire signalling equipment
- applying relevant rail signalling regulations and codes
- applying relevant technical manuals and catalogues to workplace practices
- using appropriate tools correctly and safely
- interpreting signalling circuit diagrams
- interpreting specifications correctly
- assembling and wiring equipment to specified/technical workplace requirements
- ensuring assembled/wired equipment operates to specifications
- following correct testing procedures
- conducting mandatory tests and identifying non-conformance using effective workplace methods
- completing the assembly and wiring of signalling equipment

- completing relevant technical reports, mandatory reporting, records and documentation
- dealing with unplanned events/situations in accordance with workplace procedures in a manner that minimises risk to personnel and equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- WHS/OHS requirements including:
 - processes for conducting risk assessment and implementing risk mitigation
 - rail safe working practices, protection and management
 - electrical safe working practices and workplace procedures
 - hazards associated with low voltage (LV), extra-low voltage (ELV) and high currents, including:
 - arrangement of power distribution and circuits in an electrical installation
 - parts of an electrical system and equipment that operate at LV and ELV
 - parts of an electrical system and equipment where high currents are likely
 - risks and control measures associated with harmful dusts and airborne contaminants - thermal insulation, fibrous cement materials and asbestos, and other fibre reinforced switchboard materials
 - risks and control measures associated with LV, including:
 - control measures before, during and after working on electrical installations, circuits or equipment
 - control measures for working live
 - isolation and tagging-off procedures
 - risks and restrictions in working live
 - risks associated with modifying electrical installations, fault finding, maintenance and repair
 - risks and control measures associated with high voltage (HV), including:
 - parts of an electrical system and equipment that operate at HV
 - terms ‘touch voltage’, ‘step voltage’, ‘induced voltage’ and ‘creepage’ as they relate to the hazards of HV, and control measures used for dealing with the hazards of HV
 - safety, selection, use, maintenance and care of test equipment, including:
 - checks and storage methods for maintaining the safety of testing devices
 - safety characteristics and safe use of electrical testing devices
- rail signalling, drawings and diagrams, including layouts, conventions and symbols
- mechanical rail signalling equipment including their components, operating principles and servicing procedures
- optical fibre safety
- rail signalling and electro-pneumatic equipment, including operating principles and parameters, and servicing procedures
- relevant cable and equipment schedules

- relevant rail signalling, regulations and codes of practice
- scope of AS7716 Signalling Testing Process
- relevant workplace policies, procedures and documentation
- relevant manufacturer specifications, manuals and catalogues.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- relay, racks/frames/enclosures, switch circuit controllers, telephone technology and vital computer-based interlocking modules
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0022 Find and repair rail signalling system faults

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0004 Find and repair rail signalling system faults.

Modifications this release include:

- Performance criteria 1.9, 2.2 and 3.4 added.
- Performance and Knowledge Evidence updated for clarity.

Application

This unit involves the skills and knowledge required to find and repair rail signalling system faults.

It includes preparing to find and repair signalling system faults, using appropriate fault-finding techniques, repairing or rectifying faults and completing reporting requirements.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0027 Install and maintain computer-based interlocking systems

or

UEERS0034 Install and maintain vital relay interlocking systems

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to find and repair rail signalling system fault/s

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and clarified
- 1.2** Hazards are identified, WHS/OHS risks assessed, and control measures and workplace procedures are implemented in preparation for work
- 1.3** Safety hazards that have not previously been identified are documented on job safety assessments, risks are assessed, and control measures determined and implemented in consultation with appropriate person/s
- 1.4** Appropriate person/s is consulted to determine the nature and scope of the fault/s and to coordinate effectively with others affected by the fault/s
- 1.5** Likely causes of the fault/s and order of probability are determined from system data and historical trends
- 1.6** Impact of the fault on system is ascertained and appropriate person/s notified in accordance with workplace procedures
- 1.7** Materials needed to find and repair the fault are obtained in accordance with workplace procedures and checked against job specifications
- 1.8** Tools, equipment and testing devices needed to find and repair the fault/s are obtained in accordance with workplace procedures and checked for correct operation and safety
- 1.9** Authorisation to take temporarily out of service or disable systems is obtained in accordance with workplace procedures
- 1.10** Circuits/equipment are inspected and checked as being isolated, where necessary, in strict accordance with operational procedures and WHS/OHS requirements

- 2 Find and repair rail signalling system faults**
- 2.1 WHS/OHS risk control measures and workplace procedures for carrying out work are followed
 - 2.2 On-track safe working requirements are identified and applied in accordance with workplace procedures and safety management system
 - 2.3 Signalling system performance parameters/standards are applied to appropriate fault-finding techniques
 - 2.4 Inspection and tests are conducted to determine the type and location of fault/s
 - 2.5 Wiring system is visually inspected for physical damage or installation defects, as required
 - 2.6 Methods for dealing with unplanned situations are selected on the basis of safety, operational requirements and specified work outcomes
 - 2.7 Ongoing inspections and checks of the signalling system are undertaken to confirm the continued rectification of the fault
 - 2.8 Fault/s are located and identified efficiently, without waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
 - 2.9 Signalling system faults are rectified in accordance with workplace procedures
- 3 Complete repair/s to rail signalling system**
- 3.1 WHS/OHS risk control measures and workplace procedures for carrying out work are followed
 - 3.2 Unresolved faults are reported to appropriate person/s for further action in accordance with workplace procedures
 - 3.3 Inspection and test results, actions taken or recommended are documented and appropriate person/s notified in accordance with workplace procedures
 - 3.4 On-track safe working requirements are removed in accordance with workplace procedures and safety management system
 - 3.5 Component fault/s, test result/s, authorisation/s and permit/s documentation are completed to provide an

accurate database and facilitate follow-up action and relevant reports

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Essential operating conditions include:

- locating and repairing faults on three different types of rail signalling equipment/systems.

Unit Mapping Information

This unit replaces and is equivalent to UEERS0004 Find and repair rail signalling system faults.

Links

Companion Volume Implementation Guides are found in VETNet -

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEERS0022 Find and repair rail signalling system faults

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0004 Find and repair rail signalling system faults.

Modifications this release include:

- Performance criteria 1.9, 2.2 and 3.4 added.
- Performance and Knowledge Evidence updated for clarity.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - implementing workplace procedures and practices
 - using risk control measures
 - applying rail safe working practices and rail safety regulations
- locating and repairing rail signalling system faults, including:
 - interpreting plans and specifications correctly
 - identifying and interpreting fault history
 - confirming fault history and symptoms through observation and application of first-line tests
 - identifying faults efficiently
 - rectifying faults promptly using appropriate diagnostic techniques
 - minimising interruption to rail traffic and services
 - using testing equipment and tools correctly and safely
 - confirming the integrity of the signalling system
 - completing relevant technical reports, documentation and records
- applying relevant industry standards and codes of practice
- applying sustainable energy principles and practices
- dealing with unplanned events.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

the requirements of the elements and performance criteria and include knowledge of:

- rail signalling system fault finding and repair, safe working practices and relevant standards, codes and regulations, fault-finding and diagnostic techniques including:
 - establishing an accurate description of the fault situation by appropriate questioning of client or operator
 - questioning techniques to efficiently and effectively obtain a description of a fault situation from a client/operator
 - confirming the fault history and symptoms through observation and application of first-line tests
 - drawing valid conclusions from observations
 - identifying concepts of broad first-line testing
 - in the absence of the client or operator, to establish the symptoms through application of systematic tests and observation
 - identifying appropriate diagnostic tests for given symptoms using manufacturers' charts, handbooks and specification sheets
 - using results of systematic tests to identify symptoms
- rail signalling system fault finding including:
 - system operational and safety requirements
 - common mechanical faults, symptoms and testing
 - common electrical faults, symptoms and testing
 - common control faults, symptoms and testing
- rail signalling system repairs including:
 - system operational and safety requirements
 - fault/circuit/system isolation
 - repairing/replacing faulty components
 - component testing
 - reconnection of component/circuit/system
- relevant job safety assessments or risk mitigation processes, including possessions protection and management
- relevant industry standards, codes of practice, regulations and WHS/OHS legislated requirements
- relevant manufacturer specifications and manuals
- relevant workplace documentation, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to locating and repairing rail signalling system faults
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0023 Inspect, test and certify rail power signal equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0018 Test and commission rail power equipment.

Modifications this release include:

- Title changed.
- Element titles and performance criteria amended to reflect title change.
- UEERS0007 and UEERS0008 removed from prerequisites
- Minor amendments made to Performance Criteria text.
- Performance criteria 2.2 and 3.3 added.
- Essential conditions added to Range of Conditions.
- Performance and Knowledge Evidence updated for clarity.
- Minor text changes to Assessment Conditions.

Application

This unit involves the skills and knowledge required to independently inspect, test and certify rail signalling power equipment into service on rail networks.

It includes preparing, inspecting, testing and certifying rail power signalling circuits, equipment and components. It also includes completing connection of wiring circuitry, equipment and components; testing of wiring circuitry, equipment and components; finding and repairing faults; testing of control and indicating equipment; and reporting requirements.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0022 Find and repair rail signalling system faults

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to inspect, test and certify power signalling circuits, equipment and components

2 Inspect, test and certify power signalling circuits, equipment and components

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified, obtained and clarified
- 1.2 Hazards are identified, WHS/OHS risks assessed, and control measures and workplace procedures implemented in preparation for work
- 1.3 Scope of inspection, testing and certifying is determined from job specifications, design drawings and regulatory requirements
- 1.4 Appropriate safe working person/s is consulted to ensure work activity is coordinated effectively with others involved on the worksite
- 1.5 Materials needed for testing and certifying of power signalling circuits, equipment and components are obtained in accordance with workplace procedures and checked against job specifications
- 1.6 Tools, equipment and testing devices needed to inspect, test and certify power signalling circuits, equipment and components are obtained in accordance with workplace procedures and checked for correct operation and safety
- 1.7 Test leads and bridges are identified and recorded to ensure that they are in accordance with the relevant standard

- 2.1 WHS/OHS risk control measures and procedures for carrying out work are followed

- 2.2 On-track safe working requirements are identified and applied in accordance with workplace procedures and safety management system
 - 2.3 Inspection is carried out and circuits, equipment and components are checked to ensure they are in accordance with manufacturer and system specifications
 - 2.4 Inspecting, testing and certifying work includes installation, termination and operation of the signalling equipment; and checking indicators and signal system operation is completed in accordance with network requirements and relevant industry standards
 - 2.5 Methods for dealing with unplanned situations are selected on the basis of safety and specified work outcomes
 - 2.6 Inspection, testing, certifying and repairs are performed efficiently, without waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
 - 2.7 Straps and bridges are used in accordance with the relevant standard and with the appropriate authority
 - 2.8 System and design faults are verified using relevant industry technical standards information, fault-finding and diagnostic techniques to identify faulty wiring equipment and components
 - 2.9 Identified irregularities and non-conforming wiring, equipment or components are documented and immediate follow-up action is initiated to ensure faults are rectified
 - 2.10 Faulty signalling equipment is replaced, adjusted and secured in accordance with manufacturer specifications and workplace procedures
- 3 **Complete testing and certifying work and reports**
 - 3.1 WHS/OHS work completion risk control measures and workplace procedures are followed
 - 3.2 Inspection and test results are documented in accordance with workplace procedures and faulty or replaced equipment is tagged and despatched to

maintain equipment spares

- 3.3 All straps and bridges are removed and compared against the initial record of leads, straps and bridges
- 3.4 Incomplete testing is recorded and handed over to approved/ person/s for follow up
- 3.5 Operational equipment is handed over to approved person/s in accordance with handover workplace procedures and final documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Essential operating conditions include:

- all of the following:
 - inspection
 - correlation check
 - wiring continuity and insulation test
 - installation check
 - set to work check.
- at least one the above tests must be conducted on each of the following types of equipment:
 - point machine
 - train detection equipment
 - power supply
 - signal
 - level crossing boom mechanism or flashing lights.

Unit Mapping Information

This unit replaces and is equivalent to UEERS0018 Test and commission rail power equipment.

Links

Companion Volume Implementation Guides are found in VETNet -

Assessment Requirements for UEERS0023 Inspect, test and certify rail power signal equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0018 Test and commission rail power equipment.

Modifications this release include:

- Title changed.
- Element titles and performance criteria amended to reflect title change.
- UEERS0007 and UEERS0008 removed from prerequisites
- Minor amendments made to Performance Criteria text.
- Performance criteria 2.2 and 3.3 added.
- Essential conditions added to Range of Conditions.
- Performance and Knowledge Evidence updated for clarity.
- Minor text changes to Assessment Conditions.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - implementing workplace procedures and practices
 - using risk control measures
- applying sustainable energy principles and practices
- applying rail safe working practices and relevant industry standards, codes and rail safety regulations
- following relevant codes of practice, environmental protection procedures and requirements
- reading and interpreting testing plans and specifications correctly
- inspecting, testing and certifying signalling circuits, equipment and components to meet operational and technical standards
- using effective fault diagnosis and repair/replacement techniques to specified model level
- confirming circuits, equipment and components operated within specified technical parameters
- testing equipment and instruments
- using tools correctly
- completing relevant technical reports, records and documentation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- power signalling inspecting, testing and certifying, safe working practices and relevant standards, codes and regulations, including power signalling system design, including:
 - characteristics
 - diagrams
 - specifications
- the standards and procedures associated with the use of straps and bridges
- power signalling components including:
 - types
 - testing
 - adjustments
- power signalling system certifying including:
 - requirements
 - hazards
 - procedures
 - records and reporting
- rail safe working and safety management systems
- relevant industry standards (scope of AS7716 Signalling Testing Process), codes of practice, regulations and WHS/OHS legislated requirements
- relevant manufacturer specifications and manuals
- relevant workplace documentation.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry

- resources that reflect current industry practices in relation to inspecting, testing and certifying power signalling equipment
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0024 Install and maintain rail track circuit leads and bonds

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0011 Install and maintain rail track circuit leads and bonds.

Modifications this release include:

- Element titles and performance criteria amended.
- Minor amendments made to Performance Criteria text.
- Performance criteria 1.4, 2.2 and 3.3 added.
- Performance and Knowledge Evidence updated for clarity.

Application

This unit involves the skills and knowledge required to install/maintain track circuit leads and bonds of rail signalling electrical power and control systems.

It includes following workplace procedures, job planning, running and positioning, connecting track leads and bonds, maintaining and testing track leads and bonds, and completing required documentation.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0021 Assemble and wire electrical rail signalling equipment

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare to install/maintain track circuit leads and bonds

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for work area are identified, obtained and applied
- 1.2 Hazards are identified, risks assessed, and control measures and workplace procedures implemented
- 1.3 Safety hazards that have not previously been identified are noted on job safety assessments and existing risk control measures implemented
- 1.4 Any rails or cables with traction return current are identified and protection measures planned
- 1.5 Missing or broken bonding cables are identified using track circuit bonding drawings
- 1.6 Appropriate person/s is consulted to ensure work is coordinated effectively with others involved on the worksite
- 1.7 Installation/maintenance instructions are reviewed to obtain clear and concise work requirements
- 1.8 Site bonding layout plan is reviewed to clarify bonding requirements
- 1.9 Material to install/maintain track circuit leads and bonds is obtained in accordance with workplace procedures and checked against job specifications
- 1.10 Tools, equipment and testing devices to install/maintain track circuit leads and bonds are obtained in accordance with workplace procedures and checked for correct operation and safety
- 1.11 Preparatory work is checked to ensure no unnecessary damage has occurred and complies with job specifications

2 Install/maintain track

- 2.1 WHS/OHS risk control measures and workplace

circuit leads and bonds

procedures for carrying out work are followed

- 2.2 On-track safe working requirements are identified and applied in accordance with workplace procedures and safety management system
- 2.3 Specified leads and bonds are run and positioned appropriately to the formation conditions and to minimise potential damage from track maintenance machines
- 2.4 Protection measures for traction return current are implemented prior to removing any cables, bonds or cutting rails
- 2.5 Installation/maintenance of track circuit leads and bonds are appropriately sequenced in accordance with job schedule
- 2.6 Positions of boxes and cable pits are checked to ensure compliance with specifications and appropriate follow-up action is initiated, as required
- 2.7 Components and rail surfaces are prepared to ensure secure and sound connections in accordance with job specifications
- 2.8 Leads or bonds are connected using specified fastening techniques ensuring technical compliance is achieved
- 2.9 Established methods for dealing with unplanned situations are discussed with appropriate person/s and documented in accordance with workplace procedures
- 2.10 Unplanned situations are dealt with safely in a manner that minimises risk to personnel and equipment and with the approval of an authorised person
- 2.11 Track circuit leads and bonds are installed and connected efficiently without waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
- 2.12 Bonds, leads and rail connections are inspected for damage or deterioration and appropriate corrective action is initiated in accordance with workplace

procedures

- 2.13** Appropriate tests are completed to identify components requiring repair or replacement in accordance with workplace procedures and job specifications
 - 2.14** Repair or replacement of components is carried out with due regard to train movements and safety of person/s involved
 - 2.15** Temporary bonding is installed, as required, and electrical readings on bonds/lead connections and insulated rail joints are taken to ensure compliance with specifications and site bonding layout plan
 - 2.16** Track-related equipment is inspected for faults or damage and all faults are documented and appropriate follow-up action is initiated in accordance with workplace procedures
- 3 Complete installation/maintenance of track circuit leads and bonds**
- 3.1** WHS/OHS risk control, work completion measures and workplace procedures are followed
 - 3.2** All cables and bonds associated with traction return current are reinstated and no additional bonds or current paths that may impact on track circuit correct operation are present
 - 3.3** Worksite is cleaned and made safe in accordance with workplace procedures
 - 3.4** On-track safe working requirements are removed in accordance with workplace procedures and safety management system
 - 3.5** Work completion is documented, relevant reports produced and appropriate person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEERS0011 Install and maintain rail track circuit leads and bonds.

Links

Companion Volume Implementation Guides are found in VETNet -

Assessment Requirements for UEERS0024 Install and maintain rail track circuit leads and bonds

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0011 Install and maintain rail track circuit leads and bonds.

Modifications this release include:

- Element titles and performance criteria amended.
- Minor amendments made to Performance Criteria text.
- Performance criteria 1.4, 2.2 and 3.3 added.
- Performance and Knowledge Evidence updated for clarity.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant codes of practice, work health and safety (WHS)/occupational health and safety (OHS) requirements, industry regulation and environmental procedures
- preparing to install/maintain track circuit leads and bonds
- selecting and using tools correctly.
- performing plant hazard assessment on power tools used for rail fitting and cable termination
- interpreting relevant specifications, diagrams and track insulation plans correctly
- selecting correct cable and rail connection termination part, sizes and types
- installing/maintaining track circuit leads and bonds correctly
- applying bonding techniques correctly
- dealing with unplanned events in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
- ensuring bonds and leads testing and test results comply with technical requirements
- completing installation/maintenance of track circuit leads and bonds
- completing relevant technical reports, records and documentation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- rail terminology, including signalling nomenclature, signalling symbols and terms relevant to

- each state or territory
- relationship to the signalling arrangement plan/scheme
- basic track circuit operation
- purpose and application of bonding plans
- track circuit connection methods and types
- track connections/track circuit leads
- bonding of turnouts (series /parallel)
- renewal of track leads and bonds
- traction bonding in electrified areas
- safe movement of rail vehicles and trains, including
 - role of the track circuit in rail signalling system in enabling safe and efficient movement of trains
 - relevant track circuit testing requirements
- typical issues/faults affecting rail electrotechnology services and systems
- scheduled and unscheduled infrastructure maintenance requirements
- track circuit leads and bonds installation and maintenance procedures
- methods for recording and maintaining work records and documentation
- relevant manufacturer specifications and manuals

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0025 Maintain active level crossing equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0005 Install and maintain active level crossing equipment.

Modifications this release include:

- Title changed.
- Application updated to reflect title change.
- Element titles and performance criteria amended to reflect title change.
- Performance criteria 1.6, 2.2, 3.2 and 3.4 added.
- Performance and Knowledge Evidence updated for clarity.

Application

This unit involves the skills and knowledge required to maintain active level crossing equipment on rail networks for road and pedestrian crossings.

It includes maintaining and recertifying and testing active level crossing equipment.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0033 Maintain train detection equipment

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare to maintain active level crossing equipment

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified and applied
- 1.2 Hazards are identified, WHS/OHS risks are assessed, and control measures and workplace procedures implemented in preparation for work
- 1.3 Scope of maintenance is determined from maintenance schedules, job specifications, drawings and regulatory requirements
- 1.4 Appropriate rail safe working person/s is consulted to ensure work is coordinated effectively with others to minimise rail traffic disruption
- 1.5 Materials needed for the maintenance work are obtained in accordance with workplace procedures and checked against job specifications
- 1.6 Tools, equipment and testing devices needed for maintenance work are obtained in accordance with workplace procedures and checked for correct operation and safety
- 1.7 Appropriate safe procedures for road vehicles, pedestrians and rail vehicles using the crossing during the maintenance activity are confirmed to be in place
- 1.8 Authorisation to take temporarily out of service or disable systems is obtained in accordance with workplace procedures

2 Maintain active level crossing equipment

- 2.1 WHS/OHS risk control measures and workplace procedures for carrying out work are followed
- 2.2 On-track safe working requirements are identified and applied in accordance with workplace procedures and safety management system
- 2.3 Equipment function is determined from relevant technical manuals and operating instructions to identify

- accessible operating requirements
- 2.4 Equipment and components are cleaned, lubricated and adjusted to specified standard
 - 2.5 Equipment/component abnormalities are identified and appropriate remedial actions taken to ensure equipment conforms and performs to technical specifications
 - 2.6 Maintenance is performed efficiently, without waste of materials, damage to apparatus, the surrounding environment or services using sustainable energy practices
 - 2.7 Equipment faults/damage are identified using efficient fault-finding and diagnostic techniques, including fault indicators, error codes and maintenance records
 - 2.8 Maintenance are performed using appropriate tools, inspection and test equipment to ensure signalling equipment operates to required technical and operational standards
 - 2.9 Faulty, worn, damaged or insecure components are replaced, repaired or secured in accordance with manufacturer specifications and workplace requirements
 - 2.10 Methods for dealing with unplanned situations are determined on the basis of safety and specified work outcomes
 - 2.11 Fault-finding and repairs are carried out efficiently, without waste of materials, damage to apparatus, the surrounding environment or services using sustainable energy practices
 - 2.12 Equipment is inspected, tested and adjusted using appropriate test equipment and workplace procedures to ensure it operates within the specified technical standards
 - 2.13 Level crossing lamp alignments are carried out as part of testing and adjusting workplace procedures, as required
- 3 **Complete active level crossing equipment maintenance**
 - 3.1 WHS/OHS work completion risk control measures and workplace procedures are followed
 - 3.2 Confirmation that system is functional and that no

alarms are present or indicated

- 3.3 Equipment is taken out of service/brought back into use, as required, and documentation is completed in accordance with workplace procedures
- 3.4 On-track safe working requirements are removed in accordance with workplace procedures and safety management system
- 3.5 Work records and documentation are completed to ensure accurate maintenance records are maintained
- 3.6 Worksite/equipment is reinstated in accordance with organisation requirements and faulty components are tagged, recorded and dispatched for repair/replacement

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEERS0005 Install and maintain active level crossing equipment.

Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEERS0025 Maintain active level crossing equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0005 Install and maintain active level crossing equipment.

Modifications this release include:

- Title changed.
- Application updated to reflect title change.
- Element titles and performance criteria amended to reflect title change.
- Performance criteria 1.6, 2.2, 3.2 and 3.4 added.
- Performance and Knowledge Evidence updated for clarity.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- identifying and implementing:
 - required workplace procedures and practices
 - relevant WHS/OHS requirements, including identifying risks and applying control measures
 - rail safe working practices and relevant industry standards, codes and rail safety regulations
 - environmental protection procedures and requirements and sustainable energy principles and practices
- interpreting specifications correctly
- preparing to maintain active level crossing equipment for roads and pedestrians
- identifying tools and equipment required for maintenance and using them correctly
- recertifying electrically-operated level crossing equipment to operational requirements
- using appropriate fault-finding techniques
- maintaining electrically-operated level crossing equipment to operational requirements
- maintaining active level crossing equipment
- organising work to minimise road and rail traffic disruptions
- completing relevant technical reports, records and documentation
- dealing with unplanned events.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- active level crossing equipment maintenance including:
 - rail signalling and active level crossing equipment
 - equipment and their components encompassing:
 - visual and audible warnings
 - barriers
 - control systems
 - alarm monitoring
 - operating principles and parameters encompassing:
 - controls
 - remote alarm monitoring
 - failure modes
 - emergency operation
 - interpreting circuits diagrams to evaluate correct operation and relationship to other signalling circuits
 - correct operation in accordance with control and locking tables
 - servicing procedures encompassing:
 - maintenance documentation
 - coordination/planning sequence
 - operational test procedures
 - scheduled/preventative maintenance
 - unscheduled/corrective maintenance
 - certification of active level crossing equipment
 - certifying procedures applicable for compliance with rail operator and/or enterprise standards
- WHS/OHS requirements including:
 - relevant job safety assessments or risk mitigation processes
 - legislated requirements
 - rail safe systems of working
 - safety management system
 - safe working practices
- relevant standards (scope of AS7658 Level Crossings), codes and regulations
- relevant manufacturer specifications and manuals
- relevant workplace policies and procedures, including rail transport operator safety management system.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to maintaining active level crossing equipment
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0026 Maintain communications based signalling equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to maintain communications based signalling (CBS) equipment.

It includes working safely, completing equipment prechecks, maintenance and post service tasks related to communications based signalling equipment.

It covers maintenance of trackside equipment as part of communications based signalling systems.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rules and/or guidelines.

Persons achieving this competence will then need to complete equipment specific training for the relevant CBS equipment and related tools.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0020 Apply rail signalling principles

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare to maintain communications based signalling equipment

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified and applied
- 1.2 Hazards are identified, WHS/OHS risks are assessed, and control measures and workplace procedures implemented in preparation for work
- 1.3 Scope of maintenance is determined from maintenance schedules, job specifications, workplace requirements
- 1.4 Appropriate rail safe working person/s is consulted to ensure work is coordinated effectively with others to minimise rail traffic disruption
- 1.5 Materials needed for the maintenance work are obtained in accordance with workplace procedures and checked against job specifications
- 1.6 Tools, equipment and testing devices needed for maintenance work are obtained in accordance with workplace procedures and checked for correct operation and safety
- 1.7 Equipment prechecks are completed in accordance with workplace procedures
- 1.8 Authorisation to take temporarily out of service is obtained in accordance with workplace procedures

2 Maintain communications based signalling equipment

- 2.1 WHS/OHS risk control measures and workplace procedures for carrying out work are followed
- 2.2 On-track safe working requirements are identified and applied in accordance with workplace procedures and safety management system
- 2.3 Connection points are located and connection established in accordance with workplace procedures
- 2.4 Pre-service tasks and tests are completed in accordance with workplace procedures
- 2.5 Equipment faults/damage are identified using efficient fault-finding and diagnostic techniques, including fault

- indicators, error codes and maintenance records
- 2.6 Equipment/component abnormalities are identified, and appropriate remedial actions taken to ensure equipment conforms and performs to technical specifications
 - 2.7 Maintenance is conducted in accordance with schedule and workplace procedures without waste of materials, damage to apparatus, the surrounding environment or services using sustainable energy practices
 - 2.8 Methods for dealing with unplanned situations are determined on the basis of safety and specified work outcomes
- 3 Complete communications based signalling equipment maintenance**
- 3.1 WHS/OHS work completion risk control measures and workplace procedures are followed
 - 3.2 Post-service tasks are completed in accordance with workplace procedures
 - 3.3 Confirmation that system is functional and that no alarms are present or indicated
 - 3.4 Equipment is taken out of service/brought back into use, as required, and documentation is completed in accordance with workplace procedures
 - 3.5 Work records and documentation are completed to ensure accurate maintenance records are maintained
 - 3.6 Worksite/equipment is reinstated in accordance with organisation requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This is a new unit

Assessment Requirements for UEERS0026 Maintain communications based signalling equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- following relevant codes of practice, work health and safety (WHS)/occupational health and safety (OHS) sustainable energy principles and practices and environmental protection procedures and requirements
- applying rail safe working practices and relevant industry standards, codes and rail safety regulations
- interpreting standards and procedures correctly
- completing pre-service tasks correctly
- establishing connection to equipment
- completing maintenance on communications based signalling equipment in accordance with schedule and operational requirements
- using appropriate diagnostic and fault-finding techniques
- organising work to minimise road and rail traffic disruptions
- using tools correctly
- completing relevant technical reports, records and documentation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- architecture of the communications based signalling equipment
- identifying the communications path between trackside and trainborne systems
- identifying the means of enforcement of train authorities
- identifying the train location equipment
- identifying the train authority management system
- degraded mode of operation of the trackside system and total system
- cyber security relevant to the system
- communications based signalling equipment maintenance WHS/OHS legislated requirements, safe working practices and relevant standards, codes and regulations

- relevant job safety assessments or risk mitigation processes
- safety management system
- relevant manufacturer specifications.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to maintaining communications based signalling equipment
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0027 Maintain computer-based interlocking rail systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0006 Install and maintain computer based interlocking rail systems.

Modifications this release include:

- Title changed.
- Application updated to reflect title change.
- Element titles and performance criteria amended to reflect title change.
- Performance criteria 1.6, 2.2, 3.2 and 3.3 added.
- Performance and Knowledge Evidence updated for clarity.
- Knowledge Evidence items added.

Application

This unit involves the skills and knowledge required to maintain computer-based interlocking equipment for rail network signalling system.

It includes preparing, maintaining and recertifying computer-based interlocking (CBI) equipment. It also includes completing maintenance of CBI systems and replacing faulty equipment requirements.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0025 Maintain active level crossing equipment

UEERS0030 Maintain power-operated point actuating devices

UEERS0032 Maintain trackside signal and train protection equipment

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare to maintain CBI rail equipment

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and clarified
- 1.2 Hazards are identified, WHS/OHS risks assessed, and control measures and workplace procedures are implemented in preparation for work
- 1.3 Scope of maintenance work is determined from job specifications, drawings and regulatory requirements
- 1.4 The version of the signalling data and executive software of the CBI is identified by reference to the engineering records
- 1.5 Materials needed for the maintenance work are obtained in accordance with workplace procedures and checked against job specifications
- 1.6 Tools, equipment and testing devices needed for maintenance work are obtained in accordance with workplace procedures and checked for correct operation and safety
- 1.7 Authorisation to take temporarily out of service or disable systems is obtained in accordance with workplace procedures

2 Maintain CBI rail system

- 2.1 WHS/OHS risk control measures and workplace procedures for carrying out the work are followed
- 2.2 On-track safe working requirements are identified and applied in accordance with workplace procedures and safety management system
- 2.3 Reports or fault logs are identified and accessed

- 2.4 Fault correction activities are prioritised by reviewing the fault reports and previous corrective actions
- 2.5 Records of previously corrective actioned faults are managed
- 2.6 Source of the fault is identified
- 2.7 Corrective action required is determined and implemented
- 2.8 Checking that the CBI has the correct version of the signalling data and software is completed
- 2.9 System is checked for the correct version of signalling data and software if applicable part of the CBI equipment is replaced
- 2.10 Appropriate mechanisms for the safe and efficient rectification of the fault are determined
- 2.11 Methods for dealing with unplanned situations are determined on the basis of safety and specified work outcomes
- 2.12 Rail system monitoring is conducted efficiently, without waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
- 2.13 Replacement equipment is obtained from spare stock as required to comply with identified fault repair requirements
- 2.14 Faulty component/equipment is identified and removed as required in accordance with organisation practices and procedures
- 2.15 Replacement component/equipment is installed and connected to power in accordance with manufacturer specifications
- 2.16 Correct test procedures are identified and implemented to confirm all operations are within specifications
- 2.17 Equipment operations are monitored to ensure system integrity
- 2.18 Signal and voltage levels are monitored, checked and adjusted, as required, in accordance with operational

requirements

- 2.19** Completed records and equipment/operational management information are accurately recorded and maintained to support ongoing monitoring of systems and equipment performance
- 3 Complete CBI rail system maintenance**
- 3.1** WHS/OHS risk control work completion measures and workplace procedures are followed
- 3.2** Confirmation that system is functional and that no alarms are present or indicated
- 3.3** On-track safe working requirements are removed in accordance with workplace procedures and safety management system
- 3.4** Non-conforming equipment is identified and tagged for repair type and extent of fault is identified and recorded, as required
- 3.5** Faulty equipment requiring repair is segregated as required and appropriate records are completed in preparation for despatching to repairer
- 3.6** Spare equipment stocks are reviewed to ensure adequate availability
- 3.7** Priority for repair and/or replacement of equipment is determined in consultation with authorised person by evaluation of stock levels and fault logs
- 3.8** Work completion is documented and appropriate person/s notified of repair and replacement priorities in accordance with workplace procedures and relevant reports produced

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package

Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEERS0006 Install and maintain computer based interlocking rail systems.

Links

Companion Volume Implementation Guides are found in VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEERS0027 Maintain computer-based interlocking rail systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0006 Install and maintain computer based interlocking rail systems.

Modifications this release include:

- Title changed.
- Application updated to reflect title change.
- Element titles and performance criteria amended to reflect title change.
- Performance criteria 1.6, 2.2, 3.2 and 3.3 added.
- Performance and Knowledge Evidence updated for clarity.
- Knowledge Evidence items added.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and includes:

- following relevant codes of practice, work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures requirements
- implementing workplace procedures and practices
- applying rail safe working practices and relevant industry standards, codes and rail safety regulations
- applying sustainable energy principles and practices
- interpreting specifications and plans correctly
- using appropriate testing and fault-finding techniques
- maintaining computer-based interlocking equipment to operational requirements, plans and specifications
- rectifying faults with minimal disruption to rail traffic and services
- using tools and test equipment correctly
- completing maintenance of computer-based interlocking (CBI) system
- maintaining CBI system
- dealing with unplanned events
- completing relevant technical reports, records and documentation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

the requirements of the elements and performance criteria and include knowledge of:

- interlocking operating principles and parameters including:
 - normal mode operation
 - route selection logic
 - signal approach logic and timers
 - point release logic and timers
 - panel displays and logic
 - wrong-side protection mode
 - alarm mode
 - use of control tables
 - relay interfaces
 - emergency operation
 - correct operation in accordance with control and locking tables
- electronic communications, principles including:
 - requirements of a basic communications system
 - simple transmitter and receiver circuits (block diagram level)
 - optical communications principles
- rail signalling - electronic equipment including:
 - equipment and their components
 - operating principles and parameters
 - servicing procedures
- rail signalling - CBI including:
 - equipment and their components
 - operating principles and parameters
 - servicing procedures
- rail signalling - computer applications including:
 - types of software and their scope - interrogator software for loggers, monitors and CBI and database
 - setting up and use
- serial communications
- importance of cyber security for the signalling asset
- internet protocol including:
 - set an IP address
 - visual diagnostics
 - web interface diagnostics
 - upgrading/downgrading firmware
 - uploading/downloading configuration file
- signaller controls/indications
- servicing procedures including:
 - maintenance documentation

- coordination/planning sequence
- operational test procedures
- scheduled/preventative maintenance
- unscheduled/corrective maintenance
- certifying interlocking equipment
- rail signalling, drawings and diagrams
- drawing types and applications encompassing:
 - drawing layouts and conventions
 - drawing symbols
 - cable and equipment schedules
- certifying procedures applicable for compliance with rail operator and/or enterprise standards
- relevant manufacturer specifications and manuals.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to maintaining computer-based and SSI systems
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0028 Maintain mechanical rail signalling equipment and infrastructure

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0016 Maintain mechanical rail signalling equipment and infrastructure.

Modifications this release include:

- Minor amendments made to Performance Criteria text.
- Performance criteria 2.2 and 3.8 added.
- Performance and Knowledge Evidence updated for clarity.

Application

This unit involves the skills and knowledge required to maintain mechanical rail signalling and infrastructure connected to electromechanical equipment.

It includes preparing, carrying out and completing the maintenance of mechanical rail signalling equipment and infrastructure.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare mechanical signalling equipment and infrastructure

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified, obtained and applied
- 1.2** Hazards are identified, risks assessed and control measures and workplace procedures implemented
- 1.3** Safety hazards that have not previously been identified are noted on job safety assessments and existing risk control measures are implemented
- 1.4** Maintenance is sequenced in accordance with job specification
- 1.5** Appropriate rail safe working person/s is consulted to ensure work is coordinated effectively with others involved on the worksite
- 1.6** Location of equipment to be maintained is determined from job specifications and diagrams
- 1.7** Materials needed for maintenance are obtained in accordance with workplace procedures and checked against job specification
- 1.8** Tools, equipment and testing devices needed to conduct maintenance work are obtained in accordance with workplace procedures and checked for correct operation and safety

2 Carry out mechanical signalling equipment and infrastructure maintenance

- 2.1** WHS/OHS risk control measures and workplace procedures for carrying out work are followed
- 2.2** On-track safe working requirements are identified and applied in accordance with workplace procedures and safety management system
- 2.3** Chemicals, lubricants and consumables are used and disposed of in accordance with material safety data sheets (MSDS)/safety data sheets (SDS) and WHS/OHS

codes of practice

- 2.4 Rubbish, weeds and obstructions are removed from equipment and housings
 - 2.5 Visual inspections and checking of operational equipment are performed to identify any equipment faults
 - 2.6 External surfaces are prepared/painted in accordance with organisational standards to protect equipment
 - 2.7 Internal surfaces and operational components are cleaned and lubricated to ensure operational effectiveness
 - 2.8 Maintenance is carried out in accordance with relevant industry standards and workplace procedures
 - 2.9 Existing methods for dealing with unplanned situations are discussed with appropriate person/s and documented in accordance with workplace procedures
 - 2.10 Unplanned situations are dealt with safely in a manner that minimises risk to personnel and with the approval of authorised person/s
 - 2.11 Maintenance is carried out efficiently without waste of materials, damage to apparatus, the surrounding environment or services using sustainable energy practices
- 3 Complete mechanical signalling equipment and infrastructure maintenance**
- 3.1 WHS/OHS work completion risk control measures and procedures are followed
 - 3.2 Approval to conduct a check of equipment operation is obtained in accordance with relevant rail operational rules and procedures
 - 3.3 Track clearance check is made before conducting equipment operation check to ensure safe train movement
 - 3.4 Authorised equipment check is carried out in accordance with workplace procedures to identify any equipment faults

- 3.5 Operational effectiveness of equipment is confirmed through observation during train movements, as required
- 3.6 Equipment faults are identified, recorded and corrective action is taken
- 3.7 Equipment is locked and secured to prevent unauthorised access
- 3.8 On-track safe working requirements are removed in accordance with workplace procedures and safety management system
- 3.9 Work completion is documented and appropriate person/s notified in accordance with workplace procedures and relevant report/s completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEERS0016 Maintain mechanical rail signalling equipment and infrastructure.

Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEERS0028 Maintain mechanical rail signalling equipment and infrastructure

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0016 Maintain mechanical rail signalling equipment and infrastructure.

Modifications this release include:

- Minor amendments made to Performance Criteria text.
- Performance criteria 2.2 and 3.8 added.
- Performance and Knowledge Evidence updated for clarity.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- following relevant codes of practice, work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and requirements
- implementing workplace procedures and practices
- applying sustainable energy principles and practices
- applying rail safe working practices and relevant standards, codes and rail safety regulations
- preparing rail mechanical signalling equipment and infrastructure for maintenance
- interpreting drawings, plans and specifications correctly
- ensuring safe trained movement through work area
- maintaining equipment in accordance with workplace procedures
- using chemicals and tools safely
- testing that equipment is fully functional after maintenance
- checking that technical/operational specifications are met and that equipment is in compliance with work orders
- applying effective fault diagnosis techniques
- completing rail mechanical signalling equipment and infrastructure maintenance
- completing relevant technical reports, records, documentation and follow-up work orders.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- mechanical rail signalling equipment and infrastructure maintenance requirements and

techniques, safe working practices and relevant standards, codes and regulations, including:

- relevant technical manuals, manufacturer specifications and catalogues
- environmental and heritage awareness
- enterprise work activities records encompassing:
 - purpose and extent of maintaining work activities records in an enterprise
 - types of records for maintaining work activities in an enterprise
 - methods for recording and maintaining work records
 - work records required by regulation requirements
- safe working practices encompassing:
 - risk assessment and management of risk
 - hazards associated with electrical equipment and traction rail return currents
 - safety, selection, use, maintenance and care of test equipment
 - legislated requirements
- rail safe working practices encompassing:
 - rail enterprise safety standards and procedures
 - rail safe working requirements
 - possessions protection and management
- rail signalling, drawings and diagrams
- drawing types and applications encompassing:
 - drawing layouts and conventions
 - drawing symbols
 - cable and equipment schedules
- rail signalling principles - mechanical encompassing:
 - overview of mechanical rail signalling
 - purpose of elements of a mechanical rail signalling system
- rail signalling equipment servicing procedures and frequency
- components and operating principles of rail signalling:
 - mechanical equipment
 - point actuating devices
 - interlocking systems - mechanical
 - electro-pneumatic equipment
- relevant workplace policies, procedures and documentation
- operational test procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to servicing mechanical rail signalling equipment and infrastructure
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0029 Maintain non-vital telemetry systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0008 Install and maintain non-vital telemetry systems.

Modifications this release include:

- Title changed.
- Application updated to reflect title change.
- Element titles and performance criteria amended to reflect title change.
- Performance criteria 1.7, 2.2, 3.2 and 3.3 added.
- Performance and Knowledge Evidence updated for clarity.

Application

This unit involves the skills and knowledge required to maintain non-vital telemetry equipment and systems in a rail network.

It includes preparing maintaining and recertifying non-vital telemetry system. It also includes completing the maintenance of non-vital telemetry systems and data communications, repairing faults, testing telemetry equipment and reporting requirements.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare to maintain non-vital telemetry system

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and clarified
- 1.2 Hazards are identified, WHS/OHS risks assessed, and control measures and workplace procedures implemented in preparation for work
- 1.3 Safety hazards not previously identified are noted on job safety assessments, and risk control measures are determined and implemented
- 1.4 Function of equipment is determined in accordance with operating manuals, rail system specifications and rail transport operator's interface
- 1.5 Materials needed to maintain non-vital telemetry system are obtained in accordance with system specifications and workplace procedures
- 1.6 Tools, equipment and testing devices needed to maintain non-vital telemetry system and diagnose the fault are obtained in accordance with workplace procedures and checked for correct operation and safety
- 1.7 Authorisation to take temporarily out of service or disable systems is obtained in accordance with workplace procedures

2 Maintain non-vital telemetry system

- 2.1 WHS/OHS risk control measures and workplace procedures for carrying out the work are followed
- 2.2 On-track safe working requirements are identified and applied in accordance with workplace procedures and safety management system
- 2.3 Maintenance work is carried out in accordance with manufacturer specifications and/or workplace procedures
- 2.4 Normal function and operating parameters are confirmed in accordance with appropriate manuals,

job/manufacture specifications and rail operator's interface

- 2.5 Fault-finding and diagnostic techniques are undertaken using circuit diagrams and manufacturer specifications to verify system/faults
 - 2.6 Methods for dealing with unplanned situations are determined on the basis of safety, operational requirements, workplace procedures and specified work outcomes
 - 2.7 Maintenance work is carried out efficiently, without waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
 - 2.8 Fault/s is isolated and assessed to determine appropriate repair method, tools, test and measurement instruments to be used
 - 2.9 Faulty, damaged or insecure components are replaced/repared or secured in accordance with manufacturer/technical specifications, workplace procedures and returned to service
 - 2.10 Parts/components identified as suitable for replacement are replaced from available parts/component resources
 - 2.11 Faults are diagnosed and rectified efficiently and in a logical sequence without waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
 - 2.12 Repaired/replaced equipment is tested using approved test equipment in accordance with appropriate test procedures to ensure equipment is fully operational
 - 2.13 Test equipment is checked to ensure it is calibrated to manufacturer/technical specifications in accordance with industry standards and workplace procedures
 - 2.14 Appropriate adjustments are carried out to manufacturer/technical specifications in accordance with industry standards and workplace procedures
- 3 Complete non-vital telemetry system maintenance**
- 3.1 WHS/OHS work completion risk control measures and workplace procedures are followed

- 3.2 Confirmation that system is functional and that no alarms are present or indicated
- 3.3 On-track safe working requirements are removed in accordance with workplace procedures and safety management system
- 3.4 Parts/components requiring repairs beyond the repair capacity of the service centre are despatched for external repairs or disposed of in accordance with workplace procedures
- 3.5 Documentation is completed to confirm equipment has been repaired to manufacturer specifications and relevant technical reports produced
- 3.6 Arrangements are made for the safe return of equipment to the customer and in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEERS0008 Install and maintain non-vital telemetry systems.

Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEERS0029 Maintain non-vital telemetry systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0008 Install and maintain non-vital telemetry systems.

Modifications this release include:

- Title changed.
- Application updated to reflect title change.
- Element titles and performance criteria amended to reflect title change.
- Performance criteria 1.7, 2.2, 3.2 and 3.3 added.
- Performance and Knowledge Evidence updated for clarity.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying rail safe working practices and relevant industry standards, codes and rail safety regulations
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - implementing workplace procedures and practices
 - using risk control measures
- following relevant codes of practice, environmental protection procedures and requirements
- applying sustainable energy principles and practices
- following correct liaison procedures
- using Safety Critical Communications where required
- interpreting plans and specifications correctly
- calibrating and using test equipment and tools correctly
- maintaining and testing of non-vital telemetry equipment in accordance with workplace procedures
- using effective and efficient diagnostic fault-finding techniques
- using resources efficiently
- repairing equipment in accordance with workplace procedures
- ensuring repaired equipment conforms to manufacturer specifications/workplace requirements
- checking protective earthing, surge and lightning protection

- checking communications links for correct performance, errors or faults
- checking power supply quality
- reading mimics and animated graphics
- interpreting block diagrams and circuits
- completing relevant technical reports records and documentation
- dealing with unplanned events
- completing preventative/reactive maintenance of non-vital telemetry systems.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- non-vital telemetry systems maintenance, safe working practices and relevant standards, codes and regulations, including:
 - electronic switching encompassing:
 - devices and used for electronic switching and their switching characteristic
 - circuit configuration and switch-on, switch-off conditions
 - faults in electronic switching devices/circuits
 - typical applications of electronic switching
 - using supervisory control and data acquisition systems (SCADA) encompassing:
 - SCADA system features and applications
 - industries in which SCADA systems are used
 - associate benefits of the package
 - features and facilities of different SCADA packages
 - hardware requirements
 - rail signalling - remote control systems encompassing:
 - equipment and their components - programmable logic controllers (PLCs), dedicated PCs and prep systems
 - operating principles and parameters
 - servicing procedures
 - transmission protocols encompassing:
 - carriers
 - time division multiplexing
 - relay and computer-based interlocking (CBI) interfaces
 - block diagram identification of components
 - data structure
 - elements, including addressing, parity, cyclic redundancy check, network block diagrams, direction control data and indication data
 - reading mimics and animated graphics
 - viewing data and graphical representation of selected information

- trend graphs and data matching
- alarm logging
- analysing select data
- corrective action of alarm status
- quality of power supply requirements
- correct function of earthing protection, surge & lightning protection equipment
- communications link operation
- servicing procedures, including:
 - maintenance documentation
 - coordination/planning sequence
 - operational test procedures
 - scheduled/preventative maintenance
 - unscheduled/corrective maintenance
 - relevant rail transport operator certifying train detection equipment, checklists, survey records, and workplace procedures.
- WHS/OHS requirements including:
 - Legislated requirements
 - safe working practices
 - relevant job safety assessments or risk mitigation processes
- relevant standards, safety critical communications, codes and regulations
- relevant workplace documentation, policies and procedures
- relevant manufacturer specifications and manuals

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to maintaining non-vital telemetry systems

- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0030 Maintain power-operated point actuating devices

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0009 Install and maintain power operated point actuating devices.

Modifications this release include:

- Title changed.
- Application updated to reflect title change.
- Element titles and performance criteria amended to reflect title change.
- Performance criteria 1.7, 2.2, 3.2 and 3.3 added.
- Performance and Knowledge Evidence updated for clarity.

Application

This unit involves the skills and knowledge required to maintain power-operated point actuating devices in rail networks.

It includes preparing and maintaining power-operated point actuating devices. It also includes completing maintenance of power-operated point actuating device, performing operational tests and reporting requirements.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0033 Maintain train detection equipment

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare to maintain power-operated point actuating device

- 1.1 Work health and safety (WHS)/Occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and clarified
- 1.2 Hazards are identified, WHS/OHS risks are assessed, control measures and workplace procedures are implemented in preparation for work
- 1.3 Scope of the maintenance is determined from maintenance schedules, job specifications, drawings and regulatory requirements
- 1.4 Appropriate rail safe working personnel are consulted to ensure work is coordinated effectively with others involved on the worksite
- 1.5 Materials needed for the maintenance are obtained in accordance with workplace procedures and checked against job specifications
- 1.6 Tools, equipment and testing devices needed for maintenance work are obtained in accordance with workplace procedures and checked for correct operation and safety
- 1.7 Authorisation to take temporarily out of service or disable systems is obtained in accordance with workplace procedures

2 Maintain power-operated point actuating device

- 2.1 WHS/OHS risk control measures and workplace procedures for carrying out work are followed
- 2.2 On-track safe working requirements are identified and applied in accordance with workplace procedures and safety management system
- 2.3 Maintenance, cleaning, brushing and lubricating work are carried out on point actuating devices in accordance with technical and operational specifications

- 2.4 Adjustments to point actuating devices are made to ensure correct operation, and perway fastenings and timbers are inspected in accordance with operational specifications
 - 2.5 Position and mounting of point actuating devices are checked in accordance with site layout and operational specifications
 - 2.6 Maintenance is performed efficiently, without waste of materials, damage to apparatus, the surrounding environment or services using sustainable energy practices
 - 2.7 Function of equipment is determined from technical data, maintenance handbooks, workplace and equipment operating procedures
 - 2.8 Faulty, worn, damaged or insecure components are replaced, repaired or secured in accordance with technical and manufacturer specifications to ensure operational effectiveness
 - 2.9 Equipment is inspected and tested in accordance with workplace testing procedures to ensure operational and technical requirements are achieved
 - 2.10 Methods for dealing with unplanned situations are determined on the basis of safety and specified work outcomes
- 3 Complete power-operated point actuating device maintenance**
- 3.1 WHS/OHS work completion risk control measures and workplace procedures are followed
 - 3.2 Confirmation that system is functional and that no alarms are present or indicated
 - 3.3 On-track safe working requirements are removed in accordance with workplace procedures and safety management system
 - 3.4 Documentation is completed to provide an accurate maintenance record and Network Control Officer informed of work status details
 - 3.5 Reusable, faulty or worn components are tagged and despatched for repair to maintain adequate spares

- 3.6 Faulty perway conditions/components are documented to provide details for corrective/follow-up action
- 3.7 Point actuating devices are temporarily taken out of service, reinstated back into service and certified in accordance with organisation requirements and workplace procedures
- 3.8 Maintenance work activities are recorded in accordance with organisation requirements to provide accurate records and produce relevant reports

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEERS0009 Install and maintain power operated point actuating devices.

Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEERS0030 Maintain power-operated point actuating devices

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0009 Install and maintain power operated point actuating devices.

Modifications this release include:

- Title changed.
- Application updated to reflect title change.
- Element titles and performance criteria amended to reflect title change.
- Performance criteria 1.7, 2.2, 3.2 and 3.3 added.
- Performance and Knowledge Evidence updated for clarity.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- interpreting plans and specifications correctly
- maintaining point actuating devices to operational requirements
- using appropriate fault-finding techniques
- documenting perway defects accurately
- using tools correctly
- following relevant codes of practice, work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and requirements, including:
 - implementing workplace procedures and practices
 - using risk control measures
- checking normal and reverse detection of the point blades to requirements of the relevant standard
- checking the operation of the facing point lock against the requirements of the relevant standard
- completing relevant technical reports, records and documentation
- dealing with unplanned events
- applying rail safe working practices and relevant industry standards, codes and rail safety regulations
- applying sustainable energy principles and practices
- completing the maintenance of power-operated point actuating devices.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- power-operated point actuating device maintenance, safe working practices and relevant standards, codes and regulations, including:
 - rail signalling principles - electrical
 - overview of electrical rail signalling including:
 - types of rail signalling/safe working systems, including remote control, automatic, controlled and interlocked signalling
 - advantages of electrical over mechanical signalling
 - differences between computer-based interlocking (CBI) and electrical signalling systems
 - effects of overhead traction systems on electrical signalling systems (where applicable)
 - purpose of elements of an electrical rail signalling system, including signals and aspect systems, train protection systems, point actuating systems, mechanical locking, relay interlocking, CBI, train detection systems, control input devices, indicators, diagrams and monitors, and safe working systems
 - rail signalling - point actuating devices
 - equipment and their components including:
 - point actuating mechanisms, including mechanical, pneumatic, hydraulic and electric powered units
 - blade and operation detection devices
 - on-rail locking devices
 - off-rail locking devices
 - swing nose devices
 - fixtures and ancillary mechanical equipment
 - equipment, including point machines, detectors, claw/clamp locks, swing nose mechanisms and in-bearer mechanisms
 - operating principles including:
 - point operation, normal and reverse
 - point locking, normal and reverse
 - point detection, normal and reverse
 - detectors
 - the values for point detection for acceptable and fail values as detailed in the relevant standard
 - the values for the facing point lock for acceptable and fail values as detailed in the relevant standard
 - off-rail locking operation
 - on-rail locking operation
 - electric operation of contactors, motor control and detection circuits

- interpreting circuit diagrams to evaluate correct operation and relationship to other signalling circuits
- normal mechanical movement
- failure mode mechanical movement, including wrong side and right-side conditions identifying if movement should be possible
- correct operation in accordance with control and locking tables
- servicing procedures including:
 - maintenance documentation
 - coordination/planning sequence
 - operational test procedures
 - scheduled/preventative maintenance
 - unscheduled/corrective maintenance
 - certifying point equipment (commission and decommission)
 - certifying procedures applicable for compliance with rail operator/enterprise standards
- WHS/OHS requirements including:
 - legislated requirements
 - safe working practices and relevant standards, codes and regulations
 - job safety assessments or risk mitigation processes
- relevant workplace policies and procedures, including rail transport operator safety management system
- relevant manufacturer specifications and manuals

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to maintaining onsite power-operated point actuating devices
- applicable documentation, including workplace procedures, equipment specifications,

regulations, codes of practice and operation manuals.

UEERS0031 Maintain rail signalling power supplies

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0010 Install and maintain rail signalling power supplies.

Modifications this release include:

- Title changed.
- Application updated to reflect title change.
- Element titles and performance criteria amended to reflect title change.
- Performance criteria 1.7, 2.2, 3.2 and 3.3 added.
- Performance and Knowledge Evidence updated for clarity.

Application

This unit involves the skills and knowledge required to maintain rail signalling power supplies.

It includes preparing and maintaining rail signalling power supplies by working safely to maintenance industry standards, matching equipment with that specified for location, terminating cables and connecting wiring compliance, functional testing, certifying and reporting.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0021 Assemble and wire electrical rail signalling equipment

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare to maintain rail signalling power supplies

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and clarified
- 1.2 Hazards are identified, risks assessed, and control measures and workplace procedures implemented
- 1.3 Safety hazards which have not previously been identified are noted on job safety assessments and risk control measures are implemented
- 1.4 Scope of work and location of power supply are determined by site inspection and from job instructions, specifications and/or diagrams
- 1.5 Batteries and type within the signalling location and management processes for the associated safety hazards are identified
- 1.6 Materials needed for the maintenance work are obtained in accordance with workplace procedures and checked against job specifications
- 1.7 Tools, equipment and testing devices needed to maintain power supplies are obtained in accordance with workplace procedures and checked for correct operation and safety
- 1.8 Authorisation to take temporarily out of service or disable systems is obtained in accordance with workplace procedures

2 Maintain rail signalling power supplies

- 2.1 WHS/OHS risk control measures and workplace procedures for carrying out work are followed
- 2.2 On-track safe working requirements are identified and applied in accordance with workplace procedures and safety management system
- 2.3 Power supply is checked to comply with technical industry standards, job specifications and requirements

- 2.4 Wiring and cable terminations are inspected to comply with technical industry standards, approved design drawings and requirements
 - 2.5 Inspection and tests are conducted to ensure maintained power supply complies with job specifications and functions as intended
 - 2.6 Maintenance of power supply is carried out efficiently, without waste of materials, damage to apparatus, the surrounding environment or services using sustainable energy practices
 - 2.7 Correct functioning of equipment is established from reference to manuals, system specifications and commissioning data
 - 2.8 Batteries are inspected and tested to ensure satisfactory operation and condition
 - 2.9 Faults are identified in accordance with relevant technical information of power supplies and fault-finding techniques
 - 2.10 Faulty, worn, damaged or insecure components are replaced, repaired or secured in accordance with manufacturer specifications and workplace procedures
 - 2.11 Existing methods for dealing with unplanned situations are discussed with appropriate person/s and documented in accordance with workplace procedures
- 3 Complete rail signalling power supplies maintenance**
- 3.1 WHS/OHS work completion risk control measures and workplace procedures are followed
 - 3.2 Confirmation that system is functional and that no alarms are present or indicated
 - 3.3 Test results for the batteries and power supplies are recorded
 - 3.4 Worksite is cleaned and made safe in accordance with workplace procedures
 - 3.5 Work completion is documented, and appropriate person/s notified in accordance with workplace procedures and relevant reports produced

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEERS0010 Install and maintain rail signalling power supplies.

Links

Companion Volume Implementation Guides are found in VETNet -

Assessment Requirements for UEERS0031 Maintain rail signalling power supplies

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0010 Install and maintain rail signalling power supplies.

Modifications this release include:

- Title changed.
- Application updated to reflect title change.
- Element titles and performance criteria amended to reflect title change.
- Performance criteria 1.7, 2.2, 3.2 and 3.3 added.
- Performance and Knowledge Evidence updated for clarity.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - implementing workplace procedures and practices
 - using risk control measures
- applying sustainable energy principles and practices
- following relevant codes of practice, procedures and requirements
- interpreting specifications and circuit diagrams correctly
- using tools and test instruments correctly
- maintaining power supplies correctly
- using appropriate diagnostic and fault-finding techniques
- checking:
 - quality of the DC power supply feeding the equipment
 - quality & operation of the communications links, where applicable
 - availability of any protective earthing, surge protection
- completing relevant technical reports, records and documentation
- completing installation/maintenance of rail signalling power supplies
- dealing with unplanned events

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- rail terminology including:
 - rail signalling nomenclature
 - rail signalling symbols
 - relevant state/territory standards
 - standard glossary of terms relevant to each state/territory and where the standard originated from and how new standards are developed to meet a national standard
- power supply alarms and their significance to reliable operation of the signalling system
- the relationship to the signalling arrangement plan/scheme
- abnormal train operating conditions, including signaller operation error, driver operation error, train delayed and train breakdown
- emergency train and signal system operation including
 - degraded signalling system performance, including a partial failure of signalling infrastructure or a system override
 - unscheduled infrastructure maintenance
- rail signal power supply maintenance, safe working practices and relevant standards, codes and regulations for basic rail operations, including:
 - typical issues affecting electrotechnology services and systems
 - equipment and their components including:
 - transformers
 - batteries
 - converters
 - uninterruptable power supplies (UPS)
 - synchronising switches (STS)
 - generator
 - solar panels, including Regulation and solar charging for remote standalone SELV DC
 - earthing requirements including relevant operators and Australian Standards and area specific designs
 - surge protection including relevant operators and Australian Standards and area specific designs
 - switchboards
 - high voltage (HV) and low voltage (LV) power distribution
 - automatic power changeover panels
 - wiring and termination
 - operating principles and parameters including:
 - normal mode operation
 - alarm mode
 - redundancy mode

- power interruption/standby mode
- interpreting circuits diagrams to evaluate correct operation and relationship to other signalling circuits and equipment
- servicing procedures including:
 - maintenance documentation
 - coordination/planning sequence
 - operational test procedures
 - scheduled/preventative maintenance
 - unscheduled/corrective maintenance
 - certifying power supply equipment, including certifying procedures applicable for compliance with rail operator and/or enterprise standards
- inverters including:
 - faults in inverters
 - features and characteristic of inverters under load and no-load characteristics - circuit configuration, input and output wave forms, relationship between input and output voltages and output voltage under load conditions
 - linear and switch mode power supplies, including:
 - direct current (d.c.) to d.c. converters
 - diagnostic procedures to isolate faults
 - isolation requirements and circuitry
 - characteristics of switched mode power supplies
 - operation of step-down and step-up regulators, variable frequency and pulse width modulated regulation techniques, and switched mode power supplies
 - radiation suppression circuitry
 - typical applications of inverters.
- environmental and heritage requirements and regulation
- WHS/OHS requirements including:
 - legislated requirements
 - safe working practices
 - job safety assessments or risk mitigation processes
- maintaining work activities records including:
 - purpose and extent of records
 - types of records
 - methods for recording
 - records required by regulation
- relevant standards, codes and regulations
- relevant manufacturer specifications and manuals
- relevant workplace documentation, policies and procedures

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to maintaining rail signalling power supplies
- applicable documentation, including workplace procedures, equipment specifications, regulations, enterprise work activities records, codes of practice and operation manuals.

UEERS0032 Maintain trackside signal and train protection equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0012 Install and maintain trackside signal and train protection equipment.

Modifications this release include:

- Title changed.
- Element titles and performance criteria amended to reflect title change.
- Minor amendments made to Performance Criteria text.
- Performance criteria 1.7, 2.2, 3.2 and 3.4 added.
- Performance and Knowledge Evidence updated for clarity.

Application

This unit involves the skills and knowledge required to maintain trackside signal and train protection equipment.

It includes preparing and maintaining trackside signal and train protection equipment. It also includes completing maintenance of trackside signal and train protection equipment and repairing faults, performing operational tests and reporting requirements.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0033 Maintain train detection equipment

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare to maintain trackside signal and train protection equipment

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and clarified
- 1.2 Hazards are identified, WHS/OHS risks assessed, and control measures and workplace procedures implemented in preparation for work
- 1.3 Safety hazards that have not previously been identified are documented as part of the job safety assessments, and risk control measures are determined and implemented in consultation with appropriate person/s
- 1.4 Appropriate rail safe working person/s is consulted to ensure work can proceed without delaying or compromising rail operational safety of train movements
- 1.5 Materials needed for the maintenance work are obtained in accordance with workplace procedures and checked against job specifications
- 1.6 Tools, equipment and testing devices needed for maintenance work are obtained in accordance with workplace procedures and checked for correct operation and safety
- 1.7 Authorisation to take temporarily out of service or disable systems is obtained in accordance with workplace procedures

2 Maintain trackside signal and train protection equipment

- 2.1 WHS/OHS risk control measures and workplace procedures for carrying out the work are followed
- 2.2 On-track safe working requirements are identified and applied in accordance with workplace procedures and

safety management system

- 2.3** Signal and train protection equipment are checked in accordance with job and technical specifications
- 2.4** Sub-assemblies of signal and train protection equipment are assembled in accordance with work/job specifications and checked to confirm circuit integrity
- 2.5** Assembled sub-assemblies are inspected and tested off-site, where possible, in accordance with job and technical specifications
- 2.6** Maintenance, wiring and assembly of signal and train protection equipment are completed efficiently, without waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
- 2.7** Signal and train protection components and sub-assemblies are inspected, checked and installed in accordance with job specifications
- 2.8** Component and wiring test/s are conducted under live test conditions to ensure train protection equipment functions correctly
- 2.9** Methods for dealing with unplanned situations are determined on the basis of safety and specified work outcomes
- 2.10** Maintenance work is carried out in accordance with manufacturer specifications, workplace procedures and relevant industry standards
- 2.11** Appropriate operational inspection and test procedures are applied to ensure equipment and components are operational
- 2.12** Signal/s and train protection equipment are monitored, inspected and tested to ensure they operate in accordance with technical parameters specified and job specifications
- 2.13** Testing is performed efficiently, without waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices

- 3 Complete trackside signal and train protection equipment maintenance**
- 3.1** WHS/OHS work completion risk control measures and workplace procedures are followed
 - 3.2** Confirmation that system is functional and that no alarms are present or indicated
 - 3.3** Worksite is made safe in accordance with workplace safety management procedures
 - 3.4** On-track safe working requirements are removed in accordance with workplace procedures and safety management system
 - 3.5** Test results and documentation are completed to confirm system operational compliance to job specifications and relevant reports produced
 - 3.6** Work completion is documented and appropriate rail safety person/s notified in accordance with workplace safe working procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEERS0012 Install and maintain trackside signal and train protection equipment.

Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEERS0032 Maintain trackside signal and train protection equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0012 Install and maintain trackside signal and train protection equipment.

Modifications this release include:

- Title changed.
- Element titles and performance criteria amended to reflect title change.
- Minor amendments made to Performance Criteria text.
- Performance criteria 1.7, 2.2, 3.2 and 3.4 added.
- Performance and Knowledge Evidence updated for clarity.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two occasions and include:

- interpreting specifications and circuit diagrams correctly
- using appropriate fault-finding techniques
- maintaining trackside signal and train protection equipment to operational requirements
- organising work to minimise traffic disruptions
- using tools and test equipment correctly
- following relevant codes of practice and environmental protection procedures and requirements
- completing relevant technical reports and documentation
- dealing with unplanned events
- applying rail safe working practices and relevant industry standards, codes and rail safety regulations
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - implementing workplace procedures and practices
 - using risk control measures
- applying sustainable energy principles and practices
- completing maintenance of trackside signal and train protection equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

the requirements of the elements and performance criteria and include knowledge of:

- trackside signal and train protection equipment maintenance, safe working practices and relevant standards, codes and regulations, including:
 - rail signalling principles - electrical
 - overview of electrical rail signalling including:
 - types of rail signalling/safe working systems including computer-based interlocking (CBI), automatic, controlled and interlocked signalling
 - advantages of electrical over mechanical signalling
 - advantages of CBI over electrical signalling systems
 - rail signalling principles - mechanical
 - overview of mechanical rail signalling including:
 - types of mechanical rail signalling systems for different rail traffic
 - deficiencies of mechanical signalling systems
 - effects of overhead traction systems on mechanical signalling systems (where applicable)
 - effects of external factors on the mechanical rail signalling system
 - purpose of elements of a mechanical rail signalling system including:
 - signals, point actuating systems, locking and train detection systems, control input devices, indicators, diagrams and monitors, mechanical interlocking frames, safe working systems and electro-mechanical interfaces
 - rail signalling and signal equipment
 - equipment and their components including:
 - incandescent lamps
 - light-emitting diode (LED) lamps
 - electro-mechanical
 - mechanical
 - interfacing to different interlocking systems, e.g. relay and CBI
 - operating principles and parameters including:
 - automatic signal control circuits
 - controlled signal control circuits
 - approach control circuits
 - bi-directional block control circuits
 - lamp proving circuits
 - failure mode
 - interpreting circuits diagrams to evaluate correct operation and relationship to other signalling circuits
 - correct operation in accordance with control and locking tables
 - servicing procedures including:
 - maintenance documentation
 - coordination/planning sequence

- operational test procedures
- scheduled/corrective maintenance
- unscheduled/preventative maintenance
- certifying signal equipment (commission and de-commission)
- certifying procedures applicable for compliance with rail operator/enterprise standards
- rail signalling, train protection equipment
- equipment and their components including:
 - electro-mechanical (e.g. train-stops or other relevant equipment)
 - electro-magnetic (e.g. automatic warning system (AWS or other relevant system))
 - electronic (e.g. train protection warning system (TPWS or other relevant system))
 - automatic train protection (ATP) system - Balise/beacon based
- operating principles including:
 - permissive operation
 - restrictive operation
 - failure modes
 - interpreting circuits diagrams to evaluate correct operation and relationship to other signalling circuits
 - correct operation in accordance with control and locking tables
- relevant WHS/OHS requirements including:
 - legislated requirements
 - safe working practices and relevant standards, codes and regulations
 - relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications and manuals
- relevant workplace documentation, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective

equipment (PPE) currently used in industry

- resources that reflect current industry practices in relation to maintaining trackside signal and protection equipment
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0033 Maintain train detection equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0013 Install and maintain train detection equipment.

Modifications this release include:

- Title changed.
- Element titles and performance criteria amended to reflect title change.
- Minor amendments made to Performance Criteria text.
- Performance criteria 1.7, 2.2, 3.2 and 3.3 added.
- Performance and Knowledge Evidence updated for clarity.

Application

This unit involves the skills and knowledge required to maintain train detection equipment in a rail network.

It includes preparing and maintaining train detection equipment. It also includes completing the maintenance of train detection equipment and repairing faults, performing operational tests and reporting requirements.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0024 Install and maintain rail track circuit leads and bonds

UEERS0031 Maintain rail signalling power supplies

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare to maintain train detection equipment

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and clarified
- 1.2 Hazards are identified, WHS/OHS risks assessed, and control measures and workplace procedures implemented in preparation for work
- 1.3 Scope of the maintenance is determined from maintenance schedules, job specifications, drawings and regulatory requirements
- 1.4 Appropriate rail safe working person/s is consulted to ensure work is coordinated effectively with others involved on the worksite
- 1.5 Materials needed for the maintenance work are obtained in accordance with workplace procedures and checked against job specifications
- 1.6 Tools, equipment and testing devices needed for maintenance work are obtained in accordance with workplace procedures and checked for correct operation and safety
- 1.7 Authorisation to take temporarily out of service or disable systems is obtained in accordance with workplace procedures

2 Maintain train detection equipment

- 2.1 WHS/OHS risk control measures and workplace procedures for carrying out work are followed
- 2.2 On-track safe working requirements are identified and applied in accordance with workplace procedures and safety management system

- 2.3 Maintenance work is carried out in accordance with manufacturer specifications and workplace procedures
 - 2.4 Normal function and operating parameters are confirmed in accordance with appropriate manuals, job specifications and commissioning data
 - 2.5 Fault-finding and diagnostic techniques are used to verify system/faults
 - 2.6 Faulty, damaged or insecure components are replaced/repaired or secured in accordance with manufacturer specifications and workplace procedures
 - 2.7 Maintenance, adjusting and testing work is carried out efficiently, without waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
 - 2.8 Appropriate readings are measured and recorded using relevant test instruments
 - 2.9 Equipment is tested and adjusted in accordance with manufacturer specifications, workplace and equipment operating procedures
 - 2.10 Equipment operational inspections and tests are completed in accordance with job specifications and workplace procedures
 - 2.11 Methods for dealing with unplanned situations are determined on the basis of safety and specified work outcomes
- 3 Complete train detection equipment maintenance**
- 3.1 WHS/OHS risk control work completion measures and workplace procedures are followed
 - 3.2 Confirmation that system is functional and that no alarms are present or indicated
 - 3.3 On-track safe working requirements are removed in accordance with workplace procedures and safety management system
 - 3.4 Calibration of equipment is verified and equipment is confirmed by functional tests in accordance with workplace and equipment operating procedures
 - 3.5 Work completion is documented and appropriate rail

safe working person/s notified in accordance with workplace procedures and relevant reports produced

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEERS0013 Install and maintain train detection equipment.

Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEERS0033 Maintain train detection equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0013 Install and maintain train detection equipment.

Modifications this release include:

- Title changed.
- Element titles and performance criteria amended to reflect title change.
- Minor amendments made to Performance Criteria text.
- Performance criteria 1.7, 2.2, 3.2 and 3.3 added.
- Performance and Knowledge Evidence updated for clarity.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- following, work health and safety (WHS)/occupational health and safety (OHS) and requirements, including:
 - implementing risk control measures
 - rail safe working practices
- applying workplace procedures and practices
- applying environmental protection procedures
- applying and relevant industry standards, codes and rail safety regulations
- interpreting plans and specifications correctly
- maintaining, adjusting and testing equipment
- checking that technical operational specifications are met and equipment is in compliance with work orders
- using tools and test equipment safely
- completing relevant technical reports, records and documentation
- dealing with unplanned events

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- train detection equipment maintenance, safe working practices and relevant standards, codes and regulations, including:
 - rail signalling, train detection equipment
 - train detection equipment and their components encompassing:
 - track circuits, including jointed and jointless
 - other methods of train detection
 - transmitters and receivers
 - relays
 - track shunts and other testing devices
 - overlay train detection systems
 - coded track circuits
 - diagnostics
 - operating principles and parameters encompassing:
 - interpreting circuits diagrams and special controls identified on control tables
 - normal mode operation
 - absence of train
 - presence of train
 - failure modes
 - rightside failure failsafe
 - wrongside failure
 - servicing procedures encompassing:
 - coordination/planning sequence
 - operational test procedures
 - scheduled/preventative maintenance
 - unscheduled/corrective maintenance
 - RE certification of train detection equipment using certifying procedures complying with rail operator and/or enterprise standards
- relevant manufacturer specifications and manuals
- relevant WHS/OHS legislated requirements
- relevant standards, codes, regulations and workplace policies, procedures and documentation.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace

operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to maintaining train detection equipment
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0034 Maintain vital relay interlocking systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0014 Install and maintain vital relay interlocking systems.

Modifications this release include:

- Title changed.
- Element titles and performance criteria amended to reflect title change.
- Minor amendments made to Performance Criteria text.
- Performance criteria 1.7, 2.2, 3.2 and 3.3 added.
- Performance and Knowledge Evidence updated for clarity.

Application

This unit involves the skills and knowledge required to maintain vital relay interlocking systems in a rail network.

It includes preparing and maintaining vital relay interlocking system. It also includes completing the maintenance of vital relay interlocking system, repairing system faults, performing operational tests and reporting requirements.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0025 Maintain active level crossing equipment

UEERS0030 Maintain power-operated point actuating devices

UEERS0032 Maintain trackside signal and train protection equipment

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare to maintain vital relay interlocking system

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and clarified
- 1.2 Hazards are identified, WHS/OHS risks assessed, and control measures and workplace procedures are implemented in preparation for work
- 1.3 Scope of maintenance work is determined from job specifications, drawings and regulatory requirements
- 1.4 Appropriate rail safe working person/s is consulted to ensure work is coordinated effectively with others to minimise traffic disruptions
- 1.5 Materials needed for maintenance work are obtained in accordance with workplace procedures and checked against job specifications
- 1.6 Tools, equipment and testing devices needed for maintenance work are obtained in accordance with workplace procedures and checked for correct operation and safety
- 1.7 Authorisation to take temporarily out of service or disable systems is obtained in accordance with workplace procedures

2 Maintain vital relay interlocking system

- 2.1 WHS/OHS risk control measures and workplace procedures for carrying out the work are followed
- 2.2 On-track safe working requirements are identified and applied in accordance with workplace procedures and safety management system
- 2.3 Visual inspection of wiring and equipment is carried out

to identify damaged or faulty equipment

- 2.4 Damaged or faulty component/s identified during inspection is replaced in accordance with technical instructions, manufacturer specifications and workplace maintenance procedures
- 2.5 Maintenance is performed efficiently, without waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
- 2.6 Systems are investigated using appropriate fault-finding and diagnostic techniques to identify faults
- 2.7 Fault circuit indicators and maintenance records are used to assist in the identification of electrical faults
- 2.8 Repairs, replacement and/or adjustment of equipment/systems are carried out using appropriate tools and test equipment to ensure equipment/systems function to relevant technical and operational standards
- 2.9 Faulty, worn, damaged or insecure components are repaired/replaced or secured whilst ensuring system safety integrity is maintained in accordance with technical and/or manufacturer specifications
- 2.10 Methods for dealing with unplanned situations are determined on the basis of safety and specified work outcomes
- 2.11 Vital relay interlocking system is inspected and tested in accordance with workplace test procedures and relevant equipment is used to ensure it operates within specified technical parameters

3 Complete vital relay interlocking system maintenance

- 3.1 WHS/OHS work completion risk control measures and workplace procedures are followed
- 3.2 Confirmation that system is functional and that no alarms are present or indicated
- 3.3 On-track safe working requirements are removed in accordance with workplace procedures and safety management system
- 3.4 Reusable, faulty and worn components are tagged and despatched for repair in accordance with workplace

procedures

- 3.5 Maintenance work activities are recorded in accordance with workplace procedures and organisation requirements
- 3.6 Documentation, including component faults test results, authorisations and permits, is completed to provide an accurate database and facilitate follow-up action and relevant reports produced

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEERS0014 Install and maintain vital relay interlocking systems.

Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEERS0034 Maintain vital relay interlocking systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0014 Install and maintain vital relay interlocking systems.

Modifications this release include:

- Title changed.
- Element titles and performance criteria amended to reflect title change.
- Minor amendments made to Performance Criteria text.
- Performance criteria 1.7, 2.2, 3.2 and 3.3 added.
- Performance and Knowledge Evidence updated for clarity.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- following relevant codes of practice, work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and requirements
- applying rail safe working practices and relevant industry standards, codes and rail safety regulations
- implementing workplace procedures and practices
- applying sustainable energy principles and practices
- interpreting plans and specifications correctly
- using appropriate fault-finding techniques
- maintaining vital relay interlocking systems to operational requirements
- organising work to minimise rail traffic disruptions
- using tools correctly
- completing maintenance of vital relay interlocking systems
- dealing with unplanned events
- completing relevant technical reports, records and documentation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- vital relay interlocking systems maintenance, including:
 - rail signalling, interlocking systems - electrical
 - equipment and their components including:
 - power supplies
 - relays - timers
 - relays - latching/delatching
 - relays - line
 - relays - biased
 - signaller controls/indications
 - geographic modules
 - mechanical interface
 - interlocking operating principles and parameters including:
 - normal mode operation
 - route selection circuits
 - signal approach circuits and timers
 - point release circuits and timers
 - panel indications and circuits
 - wrong-side protection mode
 - alarm mode
 - emergency operation
 - correct operation in accordance with control and locking tables
 - servicing procedures including:
 - maintenance documentation
 - coordination/planning sequence
 - operational test procedures
 - scheduled/preventative maintenance
 - unscheduled/corrective maintenance
 - certifying interlocking equipment
 - certifying procedures applicable for compliance with rail operator and/or enterprise standards
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications and manuals
- relevant WHS/OHS legislated requirements
- relevant workplace policies and procedures
- safe working practices and relevant industry standards, codes and regulations.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to maintaining power signalling and protective relay interlocking systems
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0035 Maintain wayside asset protection equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to maintain wayside asset protection equipment.

It includes safe working, regulatory requirements and following work procedures, installing, maintaining, fault finding and testing asset protection equipment.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0020 Apply rail signalling principles

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare to maintain asset protection equipment

1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified and applied

- 1.2 Hazards are identified, WHS/OHS risks are assessed, and control measures and workplace procedures implemented in preparation for work
 - 1.3 Scope of maintenance is determined from maintenance schedules, job specifications, drawings and regulatory requirements
 - 1.4 Appropriate rail safe working person/s is consulted to confirm access times and methods, and ensure work is coordinated effectively with others to minimise rail traffic disruption
 - 1.5 Scope of the work and location of asset protection equipment is determined by site inspection and from job instructions, specifications and /or diagrams
 - 1.6 Materials needed for the maintenance work are obtained in accordance with workplace procedures and checked against job specifications
 - 1.7 Tools, equipment and testing devices needed for maintenance work are obtained in accordance with workplace procedures and checked for correct operation and safety
 - 1.8 Authorisation to take temporarily out of service or disable systems is obtained in accordance with workplace procedures
- 2 Maintain asset protection equipment**
- 2.1 WHS/OHS risk control measures and workplace procedures for carrying out work are followed
 - 2.2 On-track safe working requirements are identified and applied in accordance with workplace procedures and safety management system
 - 2.3 Asset protection equipment is maintained to comply with technical standards, job specifications and requirements
 - 2.4 Wiring and cabling is inspected to comply with technical standards, job specifications and requirements
 - 2.5 Tests are conducted to ensure equipment complies with specification and functions as intended
 - 2.6 Work is carried out efficiently, without waste of materials, damage to apparatus, the surrounding environment or services using sustainable energy

- practices
- 2.7** Methods for dealing with unplanned situations are determined on the basis of safety and specified work outcomes
- 2.8** Faulty, worn, damaged or insecure components are replaced, repaired or secured in accordance with manufacturer specifications and workplace requirements
- 3 Complete wayside asset protection equipment maintenance**
- 3.1** WHS/OHS work completion risk control measures and workplace procedures are followed
- 3.2** Confirmation that system is functional and that no alarms are present or indicated
- 3.3** On-track safe working requirements are removed in accordance with workplace procedures and safety management system
- 3.4** Equipment is taken out of service/brought back into use, as required, and documentation is completed in accordance with workplace procedures
- 3.5** Work records and documentation are completed to ensure accurate maintenance records are maintained
- 3.6** Worksite/equipment is reinstated in accordance with organisation requirements and faulty components are tagged, recorded and dispatched for repair/replacement

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This is a new unit

Assessment Requirements for UEERS0035 Maintain wayside asset protection equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- performing maintenance of asset protection equipment and including:
 - resourcing appropriate equipment to maintain asset protection equipment
 - interpreting circuit diagrams and site requirements
 - maintaining and repairing asset protection equipment effectively
 - using testing devices and tools correctly and safely
 - organising work to minimise traffic disruptions
 - locating and rectifying causes of failures and non conformances
 - completing relevant records and documentation
 - effectively dealing with unplanned events.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- types, operation and purpose of maintain wayside asset protection equipment
- technical standards and regulations that apply to rail networks
- typical format, and how to read and apply information from technical manuals and catalogues
- environmental and heritage awareness and regulation
- essentials of safe movement of trains
- rail wayside equipment, drawings and diagrams including:
 - drawing types and applications
 - drawing layouts and conventions
 - drawing symbols
 - cable and equipment schedules
 - circuit diagrams
- relevant rail wayside equipment, regulations and codes including:

- codes philosophy and format
- how to read and apply a code
- codes that apply to rail signalling
- rail wayside asset protection equipment including:
 - rolling stock conformance monitoring equipment
 - environmental condition monitors
 - automatic car identification equipment
 - safety monitoring devices
- relevant manufacturer specifications and manuals.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to maintaining asset protection
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0036 Repair rail signalling power and control cables

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0017 Repair rail signalling power and control cables.

Modifications this release include:

- Minor amendments made to Performance Criteria text.
- Performance criteria 2.2 and 3.3 added.
- Performance and Knowledge Evidence updated for clarity.

Application

This unit involves the skills and knowledge required to repair of signalling power cables and multi-core signalling control cables up to 50 cores.

It includes following workplace procedures, selecting and using appropriate cable joining methods, testing continuity and insulation resistance of repaired cable cores, and reporting repair activities.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0021 Assemble and wire electrical rail signalling equipment

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare to repair rail signalling cables

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for work area are identified, obtained and applied
- 1.2 Hazards are identified, risks assessed, and control measures and workplace procedures implemented
- 1.3 Safety hazards that have not previously been identified are noted on the job safety assessments and existing risk control measures implemented
- 1.4 Access times and safe work methods are confirmed to comply with customer requirements and relevant rail safety legislation
- 1.5 Appropriate person/s is consulted to ensure work is coordinated effectively with others on the worksite
- 1.6 Extent and nature of the fault or damage to the rail signalling cable is confirmed with appropriate person/s in accordance with workplace procedures
- 1.7 Cable joining kit is obtained in accordance with workplace procedures and components checked with manufacturer specifications
- 1.8 Cable diagrams necessary to effect repairs are obtained, read and interpreted
- 1.9 Tools and cable testing devices for cable repair are obtained in accordance with workplace procedures and checked for correct operation and safety

2 Repair damaged rail signalling cables

- 2.1 Work area is made safe, damaged rail signalling cable is isolated for repair and WHS/OHS risk control measures and workplace procedures for carrying out the repair/s are followed
- 2.2 On-track safe working requirements are identified and applied in accordance with workplace procedures and safety management system

- 2.3 Corresponding ends of broken cable core are identified by core marking and confirmed by continuity test in accordance with workplace procedures
 - 2.4 Cable joining kit is used to repair damaged cable following manufacturer specifications and workplace procedures
 - 2.5 Repair to damaged cable is tested for cable core continuity insulation between cable cores and cores to earth in accordance with workplace procedures
 - 2.6 Cause of failed cable test is located and rectified in accordance with workplace procedures
 - 2.7 Existing work methods for dealing with unplanned situations are dealt with safely in a manner that minimises risk to personnel and equipment and with the approval of an authorised person/s
 - 2.8 Cable repair is completed without waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
- 3 Complete rail signalling cable repairs**
- 3.1 WHS/OHS work completion risk control measures and workplace procedures are followed
 - 3.2 Work area is cleaned and made safe in accordance with workplace procedures
 - 3.3 On-track safe working requirements are removed in accordance with workplace procedures and safety management system
 - 3.4 Cable repair work, test results and relevant reports are documented and appropriate person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

- Essential operating conditions include:
- repairing at least one signalling power cable relevant to a particular rail transport operator
 - repairing at least one signalling multi-core control cable, six cores or greater, relevant to a particular rail transport operator
 - repairing signalling cables using at least one approved jointing kit.

Unit Mapping Information

This unit replaces and is equivalent to UEERS0017 Repair rail signalling power and control cables.

Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEERS0036 Repair rail signalling power and control cables

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0017 Repair rail signalling power and control cables.

Modifications this release include:

- Minor amendments made to Performance Criteria text.
- Performance criteria 2.2 and 3.3 added.
- Performance and Knowledge Evidence updated for clarity.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
- applying sustainable energy principles and practices
- prepare to repair rail signalling cables
- interpreting cable diagrams
- using testing devices and tools correctly and safely
- identifying corresponding ends of broken cable cores accurately
- locating and rectifying causes of failed cable test
- selecting approved cable joining kit, cable repair tools and testing devices
- repairing damaged rail signalling cables effectively and in accordance with workplace procedures
- completing relevant technical reports, records and documentation
- dealing with unplanned events in a manner that minimises risk to personnel and equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- conductor continuity and core insulation and earth testing procedures and acceptable results, including:

- testing to confirm de-energised cores
- continuity of repaired cores, earth resistance of repaired cores and insulation between repaired cores
- acceptable cable test results standards
- recording of test results
- methods of joining broken cable core conductors and reinstating insulation, including:
 - using hand tools to remove insulation and apply crimp lugs
 - selecting inline joiner lugs
 - selecting appropriate jointing materials and kits
- special termination tools and their use, including:
 - insulation removal tools
 - inline crimping tools
 - conducting tool tests
 - checking calibration date
 - recording tests
- types of cable used for rail signalling including signalling power and multi-core control cables
- types of cable joining kits used to repair damaged signal cables
- workplace procedures for identifying corresponding ends of broken cable cores, including cable isolation methods and testing de-energised cable cores
- relevant manufacturer specifications and manuals
- relevant WHS/OHS requirements, job safety assessments and risk mitigation processes
- relevant workplace documentation, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications,

regulations, codes of practice and operation manuals.

UEERS0037 Test copper rail signalling cables

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0019 Test copper rail signalling cables.

Modifications this release include:

- Prerequisite unit changed.
- Amendments made to Performance Criteria text.
- Performance criteria 3.4 removed.
- Range of Conditions updated.
- Performance and Knowledge Evidence updated for clarity.

Application

This unit involves the skills and knowledge required to test signal and communication copper cables.

It includes following workplace procedures, determining tools required, setting up and conducting tests, interpreting test results, determining activities to maintain system integrity and reporting activities.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0021 Assemble and wire electrical rail signalling equipment

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare to inspect and test copper rail signalling cable

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for work area are identified and applied
- 1.2** Hazards are identified, risks assessed, and control measures and workplace procedures implemented
- 1.3** Safety hazards that have not previously been identified are noted and risk control measures implemented
- 1.4** Access times and work methods are confirmed to comply with customer requirements and relevant rail safety legislation
- 1.5** Rail service access is checked prior to testing and signalling cable is isolated/disconnected from rail network/equipment to ensure no equipment damage can occur during testing
- 1.6** Required inspection, test procedures and purpose are identified from site and recorded using client documentation and complying with manufacturer specifications
- 1.7** Tools and testing devices needed for cable testing are obtained in accordance with workplace procedures and checked for correct operation and safety
- 1.8** Testing devices calibration certification is checked and is current in accordance with manufacturer's specifications

2 Inspect and test copper rail signal cables

- 2.1** Work area and rail cable system is made safe for testing in accordance with WHS/OHS risk control measures and workplace procedures
- 2.2** Rail signal cables are inspected in accordance with workplace procedures and relevant specifications
- 2.3** Tests are set up and performed in accordance with safety risk control measures and manufacturer specifications

- 2.4 Test results are read accurately and compared against manufacturer and site specifications for rail cable performance
 - 2.5 Existing methods for dealing with unplanned situations are dealt with safely in a manner that minimises risk to personnel and equipment and with the approval of an authorised person/s
 - 2.6 Testing is performed efficiently without waste of materials or damage to apparatus, the surrounding environment or services in accordance with sustainable energy practices
 - 2.7 Available services are connected and tested for functionality to ensure all previous services have been resumed
- 3 Report test results**
- 3.1 WHS/OHS work completion risk control measures and workplace procedures are followed
 - 3.2 Recommendations and required actions to maintain cable system integrity resulting from cable tests are reported and documented
 - 3.3 Cable test results are documented accurately and recorded in the relevant system

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Identifying and testing of copper rail signalling cables must include the following:

- fully documented copper rail cable test results including compliant and non-compliant results

Unit Mapping Information

This unit replaces and is equivalent to UEERS0019 Test copper rail signalling cables.

Links

Companion Volume Implementation Guides are found in VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6>

Assessment Requirements for UEERS0037 Test copper rail signalling cables

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

This unit replaces and is equivalent to UEERS0019 Test copper rail signalling cables.

Modifications this release include:

- Prerequisite unit changed.
- Amendments made to Performance Criteria text.
- Performance criteria 3.4 removed.
- Range of Conditions updated.
- Performance and Knowledge Evidence updated for clarity.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including risk control measures
- performing copper rail signalling cable tests, including:
 - checking that technical/operational specifications are met and that cables comply with specifications
 - completing relevant technical reports, records and documentation
 - confirming the integrity of a cable system
 - dealing with unplanned events
 - following relevant codes of practice, procedures and requirements
 - interpreting plans and specifications correctly
 - testing cable in accordance with workplace procedures
 - using test equipment and tools correctly and safely
- preparing to test rail signalling cable
- reporting test results
- testing rail signal cables.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include

knowledge of:

- performance parameters associated with copper rail signalling cables, including:
 - characteristic impedance
 - insulation resistance (leakage)
 - loop resistance
 - noise
 - open circuit, short circuit and continuity
- rail signalling cable testing techniques
- relevant industry standards and requirements relating to results for compliance for copper cables, including:
 - operation of test equipment for correct evaluation of specific cable performance parameters and to obtain accurate and reliable results
 - test equipment and leads needed to evaluate a given performance parameter
 - tests required to evaluate a given performance parameter
 - transmission performance requirements
 - typical/common causes of non-compliant test results
 - scope of AS7716 Signalling Testing Process
- relevant manufacturer specifications
- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation, including:
 - methods for recording and maintaining work records
 - purpose, and extent for maintaining work activities records
 - records required by regulation/regulator
 - types of records for maintaining work activities
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to testing copper rail signalling cables
- applicable documentation, including policy and workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

BSBHRM413 Support the learning and development of teams and individuals

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to determine individual and team development needs and to facilitate the development of the workgroup.

The unit applies to individuals with a broad knowledge of learning and development who apply their skills in addressing development needs to meet team objectives. They may have responsibility to provide guidance or to delegate aspects of tasks to others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Technical Skills – Human Resources

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Contribute to needs development	1.1 Collect information on performance of team members from relevant sources 1.2 Identify individual and team learning and development needs in line with organisational requirements 1.3 Confirm learning plans meet individual and group training and development needs 1.4 Provide opportunities to individuals to self-evaluate performance and identify areas for improvement
2. Support implementation of	2.1 Develop collaborative learning plans to match skill needs of individuals and groups and match the competency standards

ELEMENT	PERFORMANCE CRITERIA
learning and development	<p>relevant to the industry</p> <p>2.2 Ensure learning delivery methods are relevant to the participants</p> <p>2.3 Identify and coordinate workplace learning opportunities to facilitate individual and team achievement of competencies</p> <p>2.4 Identify and manage resources and timelines relevant for learning activities according to organisational requirements</p>
3. Monitor and evaluate workplace learning	<p>3.1 Monitor learning plans to improve the efficiency and effectiveness of learning</p> <p>3.2 Seek feedback from individuals or teams to identify and implement improvements in future learning arrangements</p> <p>3.3 Assess and record outcomes and performance of individuals and teams to determine the effectiveness of development programs and the extent of additional development support</p> <p>3.4 Document and maintain records and reports of competency according to organisational requirements</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> • Uses structured approaches to set goals, monitor progress and adjust learning approaches for self and others • Builds on knowledge and experience to facilitate interaction and learning with others
Reading	<ul style="list-style-type: none"> • Analyses textual information from a range of sources to identify organisational requirements • Analyses information from a range of sources to evaluate performance
Writing	<ul style="list-style-type: none"> • Develops materials to suit the requirements of different roles and individuals in the organisation • Maintains records using correct technical and organisational vocabulary
Oral Communication	<ul style="list-style-type: none"> • Uses vocabulary appropriate to context and to establish a supportive and learning environment • Uses listening and questioning techniques to confirm or show understanding of different perspectives • Selects and uses appropriate conventions and protocols when communicating with co-workers in a range of work contexts

SKILL	DESCRIPTION
Self-management	<ul style="list-style-type: none"> Recognises and responds to explicit and implicit organisational procedures and protocols Understands how own role meshes with others and contributes to broader goals
Teamwork	<ul style="list-style-type: none"> Recognises the importance of building rapport to establish effective working relationships Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction Negotiates with others to achieve agreeable outcomes playing an active role in facilitating consensus in potentially contentious situations
Problem solving	<ul style="list-style-type: none"> Uses logical planning processes to organise, implement and monitor learning and development needs Systematically gathers and analyses all relevant information and evaluates options to make informed decisions Evaluates outcomes of decisions to identify opportunities for improvement

Unit Mapping Information

Supersedes and is equivalent to BSBLED401 Develop teams and individuals.

Supersedes but is not equivalent to:

- BSBFLM311 Support a workplace learning environment
- BSBLED301 Undertake e-learning.

Assessment Requirements for BSBHRM413 Support the learning and development of teams and individuals

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- contribute to, facilitate and monitor learning and development for at least one team and for at least one individual.

In the course of the above, the candidate must:

- collect data on team and individual and team development needs
- collaboratively develop learning plans to match skill needs of individuals and groups
- coordinate learning opportunities
- give and receive feedback during the implementation of learning plans
- monitor and review workplace learning plan implementation plans.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- facilitation techniques to support team development and improvement
- organisational policies, plans and procedures for developing teams
- career paths and competency standards relevant to the industry
- key sources of information relevant to inform development needs
- key features of learning and development methods.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- learning and development plans, policies and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBINS402 Coordinate workplace information systems

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to implement and review workplace information systems. It involves identification, collection, initial analysis and use of information.

The applies to individuals whose work will normally be carried out within methods and procedures which require planning and evaluation, leadership and guidance of others, and some discretion and judgement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Technical Skills – Information Services

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify and review information needs	1.1 Identify information required by relevant stakeholders 1.2 Review information requirements to determine suitability, accessibility, currency and reliability of information according to organisational policies and procedures
2. Collect, analyse and report information	2.1 Collect information which is adequate and relevant to the requirements of relevant stakeholders 2.2 Confirm information is in a format suitable for analysis, interpretation and distribution 2.3 Analyse information, identify and report relevant trends according to the requirements for which it was collected

ELEMENT	PERFORMANCE CRITERIA
3. Implement information systems	<p>3.1 Implement information systems effectively to store, retrieve and regularly review information for decision making purposes</p> <p>3.2 Use technology available in the work area to manage information effectively</p> <p>3.3 Recommend improvements to information system to relevant stakeholders</p>
4. Support information system continuous improvement	<p>4.1 Collect data about information system future needs in consultation with relevant stakeholders</p> <p>4.2 Confirm identified information system future needs reflect the organisation's business plans</p> <p>4.3 Assist development of proposals for continuous improvement of information system</p> <p>4.4 Distribute information to relevant stakeholders on information system changes, where required</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Critically analyses documentation from a variety of sources and consolidates information
Writing	<ul style="list-style-type: none"> Develops information for a specific audience using clear and detailed language
Oral Communication	<ul style="list-style-type: none"> Uses active listening and questioning to convey and clarify information and to confirm understanding
Numeracy	<ul style="list-style-type: none"> Selects from and uses mathematical strategies to perform initial analysis on information
Planning and organising	<ul style="list-style-type: none"> Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes
Teamwork	<ul style="list-style-type: none"> Cooperates with others and contributes to work practices where joint outcomes are expected and deadlines are to be met
Problem solving	<ul style="list-style-type: none"> Contributes to continuous improvement of current work practices by applying basic principles of analytical thinking
Technology	<ul style="list-style-type: none"> Uses digital technologies and systems to access, enter, present and distribute information

Unit Mapping Information

Supersedes and is equivalent to BSBINM401 Implement workplace information system.

Assessment Requirements for BSBINS402 Coordinate workplace information systems

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- distribute information to relevant stakeholders in response to three different workplace information needs
- implement and review a workplace information system on at least one occasion.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key aspects of workplace information systems including:
 - budgets and financial management systems
 - customer information software or records
 - databases
 - product and service information
 - project management software
 - record management systems
 - spreadsheets.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a workplace information system
- organisational policies and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Modification History

Release	Comments
Release 2	This version first released with the Business Services Training Package Version 8.0. Typographical error in Foundation Skills corrected.
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- implement and review one information management system
- implement and review one knowledge management system
- facilitate learning on both these information and knowledge management systems.

In the course of the above, the candidate must:

- identify learning needs and plan and implement learning activities to enable personnel to use information and knowledge management system
- monitor performance and address issues and contingencies as they arise including:
 - accessing technical specialists, as required
 - applying correct policies and procedures for the information or knowledge management system
 - evaluating effectiveness of information or knowledge management system for intended outcomes
- recommend improvements to systems, policies and practices, where required.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- relevant legislation, regulation, standards and codes
- organisational policies and procedures, including those related to:
 - information management
 - knowledge management

- organisational operations and existing data and information systems
- relevant learning activities and key performance indicators.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- legislation, regulation, standards and codes relevant to information and knowledge management
- workplace systems, documentation and resources relevant to performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for BSBLDR413 Lead effective workplace relationships

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- lead effective workplace relationships on at least four occasions with different individuals or groups.

In the course of the above, the candidate must:

- access and analyse information required to achieve planned outcomes
- collaborate with work team to develop and implement a work task strategy
- apply techniques for resolving problems and conflicts, and dealing with poor performance according to organisational and legislative requirements
- monitor and communicate work progress to relevant internal and external stakeholders
- seek and review feedback to improve workplace leadership.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- considerations for communicating information including audience cultural and social diversity
- consultation processes including internal and external sources of consultees
- impacts of relationships, cultural and social environment, in supporting or hindering the achievement of planned outcomes
- techniques for developing positive work relationships and building trust and confidence in a team, including:
 - interpersonal styles
 - communications
 - consultation
 - cultural and social sensitivity
 - networking

- impact of legislation and organisational policies on workplace relationships
- techniques for communicating information and ideas to a range of stakeholders
- common methods to resolve workplace conflict
- common methods to manage poor work performance
- common methods to monitor, analyse and improve work relationships.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- legislation, regulations, standards and codes relevant to performance evidence
- workplace documentation and resources
- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBLDR414 Lead team effectiveness

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills, knowledge and outcomes required to lead the performance of a team and to develop team cohesion.

The unit applies team leaders, supervisors and new emerging managers who have an important leadership role in the development of efficient and effective work teams. Leaders at this level also provide leadership for the team and bridge the gap between the management of the organisation and the team members. As such they must 'manage up' as well as manage their team/s.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Social Competence – Leadership

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan team outcomes	1.1 Lead team to identify and establish team objectives and work processes 1.2 Support team to document identified objectives and work processes according to organisational processes 1.3 Encourage team members to incorporate innovation and productivity measures in work plans 1.4 Lead and support team members to meet expected outcomes
2. Promote team cohesion	2.1 Provide opportunities for input of team members into planning, decision making and operational aspects of work team

ELEMENT	PERFORMANCE CRITERIA
	2.2 Support team members to take responsibility for own work and to assist each other in undertaking required roles and responsibilities 2.3 Provide feedback to team members on their efforts and contributions 2.4 Address or refer issues, concerns and problems identified by team members 2.5 Model expected behaviours and approaches
3. Supervise team performance	3.1 Encourage team members to participate in and take responsibility for team activities and communication processes 3.2 Support team to identify and resolve problems which impede performance 3.3 Ensure own contribution to work team serves as a role model for others
4. Liaise with management	4.1 Establish open communication with line management 4.2 Communicate information from line management to the team 4.3 Communicate unresolved issues, concerns and problems raised by the team to line management to action 4.4 Communicate issues raised by management to the team to action

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Writing	<ul style="list-style-type: none"> Prepares workplace plans that communicate intent and elicits feedback clearly and effectively
Oral communication	<ul style="list-style-type: none"> Engages in discussions or provides information using structure and language appropriate to the audience and situation
Teamwork	<ul style="list-style-type: none"> Selects and uses appropriate conventions and protocols when communicating with team members Adapts personal communication style to model required behaviours, build trust and positive working relationships and to show respect for the opinions and values of others Plays a lead role in situations requiring effective collaboration, demonstrating conflict resolution skills and ability to engage and motivate others

Planning and organising	<ul style="list-style-type: none">• Develops, implements and monitors plans and processes to ensure team engagement and effectiveness• Uses formal analytical thinking techniques to identify issues and generate possible solutions, seeking input from others, as required
-------------------------	---

Assessment Requirements for BSBLDR522 Manage people performance

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage performance of at least two individuals
- manage performance of at least one team.

In the course of the above, the candidate must:

- consult with stakeholders to identify work requirements, performance standards and agreed performance indicators
- develop work plans and allocate work to achieve outcomes efficiently and within organisational and legal requirements
- assess performance against performance indicators according to performance management and review processes
- monitor, evaluate and provide feedback on performance and provide coaching or training, as needed
- keep records and documentation in accordance with the organisational performance management system
- reinforce excellence in performance through recognition and continuous feedback
- respond to underperforming individuals according to organisational policies, as required.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislative and regulatory and organisational requirements for performance management and review
- organisational risk management plan
- organisational human resource support services
- organisational performance measurement systems
- key features of unlawful dismissal rules and due process

- staff development options and information.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- legislation on performance management
- workplace documentation and resources for performance management and review.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for BSBOPS203 Deliver a service to customers

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- deliver a service to at least three different customers.

In the course of the above, the candidate must:

- greet the customer and establish rapport according to organisational requirements
- identify customer needs using interpersonal skills
- provide prompt service to address customer needs
- identify and follow up opportunities to increase the quality of service and products
- respond to and record all customer feedback according to organisational standards, policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key provisions of customer service legislation and consumer law
- requirements for responding to the needs of customers from a diverse background
- workplace organisational policies and procedures relating to customer service and the customer service process.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- workplace documents, and organisational policies and procedures for customer service
- examples of customer complaints and feedback.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBOPS402 Coordinate business operational plans

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to implement operational plans by planning and acquiring resources, monitoring and adjusting operational performance and providing reports on performance, as required.

The unit applies to individuals who plan activities to achieve team and organisational objectives. At this level, work will normally be carried out within routine and non-routine methods and involve procedures that require planning, evaluation, leadership and guidance of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Business Competence – Business Operations

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to implement operational plan	1.1 Consult with stakeholders to identify resource requirements relevant to operational plan 1.2 Collate, analyse and document details of resource requirements 1.3 Develop operational plan and determine implementation method 1.4 Plan for contingencies 1.5 Develop and present proposals for resource requirements
2. Implement operational plan	2.1 Assist in recruiting and onboarding employees required to implement operational plan according to organisational policies

ELEMENT	PERFORMANCE CRITERIA
	<p>and procedures</p> <p>2.2 Acquire physical resources and services according to organisational policies and procedures</p> <p>2.3 Support efficient, cost-effective and safe use of resources</p> <p>2.4 Adjust implementation of the operational plan in consultation with others to manage contingencies</p>
3. Monitor operational performance	<p>3.1 Collate relevant information and determine operational and productivity performance</p> <p>3.2 Identify and use key performance indicators (KPIs) and assess operational performance</p> <p>3.3 Identify unsatisfactory performance and take action to rectify the situation according to organisational policies</p>
4. Review operations based on performance	<p>4.1 Develop recommendations for variation to operational plans</p> <p>4.2 Present recommendations to the designated persons or groups to gain approval</p> <p>4.3 Maintain records related to operational performance according to organisational policies and procedures</p> <p>4.4 Report information on operational performance to management</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Description
Reading	<ul style="list-style-type: none"> Identifies, interprets, analyses and reviews textual information related to the operational plan and monitoring of operational performance
Writing	<ul style="list-style-type: none"> Communicates relationships between ideas and information, matching style of writing to purpose and audience Researches, plans and prepares workplace documentation for relevant stakeholders using organisational formats
Oral communication	<ul style="list-style-type: none"> Participates in a variety of spoken exchanges with a range of audiences varying structure and language to suit the audience
Numeracy	<ul style="list-style-type: none"> Selects and uses familiar mathematical techniques to organise timely supply of adequate resources for the operational plan and to use budgetary information to monitor performance
Enterprise and initiative	<ul style="list-style-type: none"> Monitors adherence to organisational policies and procedures and considers own role in terms of its contribution to broader goals of the work environment

Skill	Description
Teamwork	<ul style="list-style-type: none"> • Selects and uses appropriate conventions and protocols when communicating with diverse individuals to build rapport, seek or present information • Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group communication, influencing direction and taking a leadership role on occasion
Planning and organising	<ul style="list-style-type: none"> • Takes responsibility for planning, organising, implementing and monitoring tasks required to achieve required outcomes • Evaluates effectiveness of decisions in terms of how well they met stated goals • Identifies and addresses an increasing range of familiar problems by implementing contingency plans

Unit Mapping Information

No equivalent unit. Supersedes but is not equivalent to:

- BSBFLM305 Support operational plan
- BSBMGT402 Implement operational plan.

Assessment Requirements for BSBOPS402 Coordinate business operational plans

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- prepare, implement and review two operational plans.

In the course of the above, the candidate must:

- interact with a range of people and groups to identify resource requirements, performance objectives, systems, procedures and records relating to the operational plan
- plan and acquire physical and human resources using organisation's systems and procedures
- manage and support personnel to achieve performance objectives including facilitating new employee onboarding
- present information and recommendations to support implementation and variation of the operational plan
- monitor operational performance against the performance objectives and budgets and implement improvements to rectify unsatisfactory performance
- vary the operational plan and gain approval to deal with contingencies
- document and provide reports on performance as required by the organisation.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- processes to identify resource requirements
- sources of information to identify resource requirements
- methods to manage contingencies including through consultation with relevant stakeholders
- key features of performance monitoring systems and processes
- common methods for problem solving
- methods to support staff including mentoring, coaching and supervision

- implementation methods for operational plan
- budget and other financial information related to the organisation
- organisational objectives including costs, identified shortfalls and surpluses.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- organisational operational plans, policies and procedures relevant to performance evidence
- workplace documentation and resources including budgets
- physical and human resource procurement documentation
- employee onboarding and performance monitoring procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBPEF402 Develop personal work priorities

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to plan and prioritise own work tasks. It also addresses the skills and knowledge to monitor and obtain feedback on personal work performance.

The unit applies to individuals who are required to design their own work schedules and work plans and to establish priorities for their work. They will typically hold some responsibilities for the work of others and have some autonomy in relation to their own role.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Critical Thinking & Problem Solving – Personal Effectiveness

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan personal work schedule	1.1 Identify task requirements 1.2 Identify own accountabilities in line with task requirements 1.3 Assess barriers for performance of personal accountabilities 1.4 Develop a personal work schedule
2. Implement personal work schedule	2.1 Communicate personal work schedule to relevant personnel 2.2 Monitor own performance according to personal work schedule 2.3 Document variations between expected and actual work performance according to task requirements and communicate to relevant personnel

ELEMENT	PERFORMANCE CRITERIA
3. Review personal work priorities	3.1 Seek and evaluate feedback from relevant stakeholders on own work performance 3.2 Analyse variations between expected and actual work performance 3.3 Update personal work schedule according to internal and external feedback and changes in circumstances

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Learning	<ul style="list-style-type: none"> Develops strategies to reflect on own performance and obtain feedback
Reading	<ul style="list-style-type: none"> Identifies and applies textual information from relevant sources to understand organisation's policies and practices
Writing	<ul style="list-style-type: none"> Prepares written reports and workplace documentation that communicate complex information clearly and effectively
Numeracy	<ul style="list-style-type: none"> Analyses numerical information related work accountabilities
Enterprise and initiative	<ul style="list-style-type: none"> Identifies and understands roles and responsibilities in relation to organisational objectives, policies and procedures
Planning and organising	<ul style="list-style-type: none"> Plans, organises and implements tasks to meet organisational requirements Uses the main features and functions of digital technologies and tools to complete work tasks efficiently and effectively

Unit Mapping Information

Supersedes and is equivalent to BSBWOR404 Develop work priorities.

Supersedes but is not equivalent to:

- BSBSMB408 Manage personal, family, cultural and business obligations
- BSBWOR424 Develop a time management plan.

Assessment Requirements for BSBPEF402 Develop personal work priorities

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop, implement and review one personal work schedule.

In the course of the above, the candidate must:

- identify personal responsibilities and barriers to their fulfilment according to task requirements
- prepare a personal work schedule
- communicate work schedule to relevant personnel
- monitor personal work performance to identify variations between expected and actual work performance
- review own work performance against workgroup objectives through self-assessment and seeking and acting on feedback from internal and external stakeholders.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- content of work plans including:
 - resource requirements
 - stakeholder needs
 - workgroup targets
- business technology applications to schedule tasks and plan work
- methods of personal work performance review including:
 - self-assessment
 - feedback from others
- techniques to prepare personal plans and establish priorities
- methods to elicit, analyse and interpret feedback.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to challenges and situations to demonstrate the application of performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for BSBSTR401 Promote innovation in team environments

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- on at least two occasions assist a team to create an innovative team environment.

In the course of the above, the candidate must:

- encourage others to contribute to innovation
- identify ways of working
- implement and communicate improvements
- plan and schedule activities
- reflect on activities, feedback and challenges to identify improvement options
- model open and respectful communications
- contribute to the make-up and rules of the team.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- types of innovation and their benefits
- ways of working, including:
 - working hours
 - working spaces
 - agile working
- workplace policies and procedures
- internal and external factors that contribute to a team becoming and remaining innovative, including:
 - team characteristics
 - role of group dynamics and diversity
 - broader environmental factors

- activities that can encourage and hinder innovation in a team, including:
 - allocation of time and activities
 - modelling behaviour
 - rewards and recognition
 - communications
 - feedback.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- workplace equipment and resources relevant to performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for BSBSR402 Implement continuous improvement

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- implement at least one continuous improvement system or process in an organisation or work area.

In the course of the above, the candidate must:

- provide support to enable individuals and teams to participate in decisions, take responsibility, show initiative and implement improvement processes
- communicate effectively to support the implementation of improvements and improvement system and processes
- implement, monitor and update improvement plans, processes and procedures to improve performance
- document performance to identify further opportunities for improvement
- manage records and reports in the systems and procedures of the organisation.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- continuous improvement systems and processes
- coaching and mentoring needs to support continuous improvement
- change management techniques that support continuous improvement and initiative
- organisation's systems and data used for benchmarking and monitoring performance for continuous improvement.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- workplace documentation and resources relevant to performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBSTR501 Establish innovative work environments

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to create an environment that enables and supports practice which focuses on a holistic approach to the integration of innovation across all areas of work practice.

The unit applies to individuals working in leadership or management roles in any industry or community context. The individual could be employed by the organisation, but may also be an external contractor, the leader of a cross organisation team or of a self-formed team of individuals.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Critical Thinking and Problem Solving – Business Strategy

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Establish work practices	1.1 Identify relevant stakeholders 1.2 Identify organisational objectives and practices 1.3 Evaluate current work conditions 1.4 Determine working conditions that allow innovative practices according to organisational policies and procedures 1.5 Identify organisational resources relating to innovation 1.6 Build and lead team and maximise opportunities for innovation
2. Create an innovative	2.1 Evaluate the impacts of changing work environment

ELEMENT	PERFORMANCE CRITERIA
environment	2.2 Collaborate with stakeholders and develop ideas for enhancing work environment 2.3 Identify and select resources required for enhancing work environment 2.4 Assess the ability of the workspace to support innovation 2.5 Assist team members to adapt and perform in new work environment
3. Implement innovative work environment	3.1 Encourage creative mindsets, collaborative working and development of positive workplace relationships 3.2 Reinforce the value of innovation according to organisational vision and objectives 3.3 Take risks to open up opportunities for innovation 3.4 Select ways of celebrating and encouraging innovation 3.5 Encourage and support evaluation of innovative ideas
4. Share and evaluate innovative ideas and work environment	4.1 Share relevant information, knowledge and skills on innovative practices with stakeholders 4.2 Provide and encourage formal and informal learning opportunities to develop skills required for innovation 4.3 Create opportunities where individuals can learn from the experience of others 4.4 Seek and respond to suggestions, improvements and innovations from all team members

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets and evaluates information that may deal with complex ideas related to issues both within and outside a given workplace context
Writing	<ul style="list-style-type: none"> Develops information for others using language to suit the context and audience
Oral communication	<ul style="list-style-type: none"> Presents ideas and concepts to a range of audiences using structure and language to suit the audience Uses active listening and questioning to discuss and clarify information and to confirm understanding
Self-management	<ul style="list-style-type: none"> Takes responsibility for implementing practices and procedures to achieve organisational objectives in innovation according to role

SKILL	DESCRIPTION
	requirements <ul style="list-style-type: none"> • Accepts responsibility for planning and implementing tasks and practices to achieve organisational goals, negotiating key aspects with others and taking into account current capabilities and needs
Initiative and enterprise	<ul style="list-style-type: none"> • Develops new and innovative ideas through exploration, evaluation, analysis and critical thinking
Teamwork	<ul style="list-style-type: none"> • Uses required communication techniques to build rapport and foster strong relationships with co-workers in a range of work contexts • Uses inclusive and collaborative techniques to share, promote and convey complex information about new ideas and systems within the workplace • Facilitates a climate where people feel comfortable suggesting and discussing improvements and new ideas
Problem Solving	<ul style="list-style-type: none"> • Uses problem solving processes to identify, assess and respond to challenges and risks around innovation

Unit Mapping Information

No equivalent unit. Supersedes but is not equivalent to:

- BSBINN501 Establish systems that support innovation
- BSBINN502 Build and sustain an innovative work environment.

Assessment Requirements for BSBSTR501 Establish innovative work environments

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- establish at least two different procedures and practices that foster innovation in areas of work practice, including at least three of the following:
 - collaborative work arrangements
 - building team capacity to contribute to innovation
 - providing formal and informal learning opportunities
 - evaluating ideas of innovation in work environment
 - celebrating and encouraging innovation
 - consulting with relevant stakeholders
 - changing physical work environment, including designing, fitting-out and decorating workspaces
 - communicating and sharing of ideas and feedback.

In the course of the above, the candidate must:

- reinforce the value of innovation to the vision and objectives of the organisation
- model behaviour, including:
 - being receptive to ideas
 - giving constructive advice
 - establishing and maintaining relationships based on mutual respect and trust
 - taking considered risks that provide opportunities for innovation
- support innovation and collaboration of ideas to make improvements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- concepts and theories of innovation

- context for innovation in the workplace, including:
 - core business values
 - overall objectives
 - broader environmental context
 - value and benefit of innovative ideas and projects
- factors and tools that motivate individuals
- creative thinking and innovative work practices
- ways of celebrating and promoting innovation in the workplace
- approaches to management and leadership and how they support and hinder innovation
- challenges and barriers to innovation and ways of overcoming them, including:
 - rewarding and celebrating innovation
 - coaching and learning
 - modelling behaviour and managing the physical environment.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- relevant legislation and codes of practice
- relevant organisational policies and procedures
- workplace equipment and resources.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBSTR502 Facilitate continuous improvement

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to lead and manage continuous improvement systems and processes. Particular emphasis is on the development of systems and the analysis of information to monitor and adjust performance strategies, and to manage opportunities for further improvements.

The unit applies to individuals who take an active role in managing a continuous improvement process in order to achieve an organisation's objectives. At this level, work will normally be carried out using complex and diverse methods and procedures which require the exercise of considerable discretion and judgement, using a range of problem-solving and decision-making strategies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Critical Thinking and Problem Solving – Business Strategy

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish systems and processes	1.1 Identify current systems and processes that facilitate continuous improvement 1.2 Identify and define improvement needs and opportunities for the organisation 1.3 Develop decision-making processes to assist continuous improvement and communicate to relevant stakeholders 1.4 Develop strategies for continuous improvement and encourage

ELEMENT	PERFORMANCE CRITERIA
	<p>team members to participate in decision-making processes</p> <p>1.5 Develop knowledge management systems to capture team progress, insights and experiences from business activities</p> <p>1.6 Develop new systems and processes that facilitate continuous improvement according to improvement needs and opportunities</p> <p>1.7 Establish processes that confirm team members are informed about continuous improvement outcomes</p>
2. Monitor and adjust performance strategies	<p>2.1 Confirm relevant systems and processes meet organisation sustainability requirements</p> <p>2.2 Confirm team progress, insights and experiences are captured and accessible using knowledge management systems</p> <p>2.3 Coach individuals and teams to implement and support continuous improvement systems and processes</p> <p>2.4 Identify and evaluate ways in which planning and operations could be improved</p> <p>2.5 Make recommendations and communicate strategies to relevant stakeholders</p>
3. Manage opportunities for further improvement	<p>3.1 Evaluate outcomes and identify opportunities for improvement</p> <p>3.2 Seek feedback from relevant stakeholders on systems and processes</p> <p>3.3 Identify other areas for improvement and document feedback for future planning</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> • Identifies and extracts required information from a range of complex texts • Locates, interprets and analyses workplace documentation to gather information relating to continuous improvement
Writing	<ul style="list-style-type: none"> • Develops complex texts related to continuous improvement processes according to organisational requirements • Ensures the vocabulary, grammatical structures and conventions are required for the context and target audience
Oral	<ul style="list-style-type: none"> • Presents information to a range of audiences using appropriate structure and language

SKILL	DESCRIPTION
communication	<ul style="list-style-type: none"> • Listens and comprehends information from a variety of spoken exchanges with clients, co-workers and other stakeholders • Confirms understanding through questioning and active listening
Initiative and enterprise	<ul style="list-style-type: none"> • Monitors adherence to organisational policies, procedures and protocols and considers own role in terms of its contribution to broader goals of the work environment • Identifies and uses appropriate conventions and protocols when communicating with colleagues and external stakeholders
Problem solving	<ul style="list-style-type: none"> • Uses analytical and lateral thinking to review current practices and develop ideas for improvement
Teamwork	<ul style="list-style-type: none"> • Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction and influencing direction
Self-management	<ul style="list-style-type: none"> • Takes responsibility for developing, implementing and monitoring systems and processes to achieve organisational outcomes
Technology	<ul style="list-style-type: none"> • Reflects on the ways in which digital systems and tools are used, or could be used, to achieve work goals

Unit Mapping Information

Assessment Requirements for BSBSTR502 Facilitate continuous improvement

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- lead and manage continuous improvement systems and processes for at least one organisation or work area.

In the course of the above, the candidate must:

- address organisational sustainability requirements
- incorporate mentoring, coaching and other support to enable individuals to participate in continuous improvement processes
- capture progress, insights and experiences using established knowledge management systems
- encourage participation in decision making processes and ideas for continuous improvement.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- systems and processes facilitating continuous improvement
- common decision-making processes
- organisational policies and procedures relating to digital systems, decision-making processes and continuous improvement systems
- business systems and requirements, including:
 - knowledge management
 - quality
 - sustainability
 - performance management.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- workplace documentation and resources relevant to performance evidence
- organisational policies and procedures relevant to performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBTWK502 Manage team effectiveness

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to lead teams in the workplace and to actively engage with the management of the organisation.

The unit applies to individuals working at a managerial level who lead and build a positive culture within their work teams. At this level, work will normally be carried out using complex and diverse methods and procedures requiring the exercise of considerable discretion and judgement. It will also involve using a range of problem solving and decision-making strategies.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Social Competence – Teamwork and Relationships

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish team performance plan	1.1 Identify team purpose, roles, and responsibilities according to organisational and task objectives 1.2 Develop performance plans with expected outcomes, key performance indicators (KPIs) and goals for work team 1.3 Support team members in meeting expected performance outcomes
2. Develop and facilitate team cohesion	2.1 Develop strategies for facilitating team member input into planning, decision making and operational aspects of team tasks 2.2 Develop or modify policies and procedures for promoting team

ELEMENT	PERFORMANCE CRITERIA
	<p>member accountability for personal work and team tasks</p> <p>2.3 Provide feedback to team members on team effort and contributions</p> <p>2.4 Develop processes for identifying and addressing issues, concerns and problems identified by team members</p>
3. Facilitate teamwork	<p>3.1 Encourage team members to participate in and to take responsibility for team activities</p> <p>3.2 Support the team in identifying and resolving work performance problems</p> <p>3.3 Promote work team collaboration through individual behaviour</p>
4. Liaise with stakeholders	<p>4.1 Establish and maintain open communication processes with relevant stakeholders</p> <p>4.2 Communicate information from line management to the team</p> <p>4.3 Communicate and follow-up unresolved issues, concerns and problems raised by team members with line management</p> <p>4.4 Address unresolved issues, concerns and problems raised by stakeholders</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Analyses and interprets textual information from the organisation's policies, goals and objectives to establish team goals or to determine corrective action
Writing	<ul style="list-style-type: none"> Prepares workplace documentation that communicates complex information clearly and effectively
Oral Communication	<ul style="list-style-type: none"> Engages in discussions or provides information using appropriate vocabulary and non-verbal features Uses listening and questioning techniques to confirm understanding and to engage the audience
Enterprise and initiative	<ul style="list-style-type: none"> Identifies how own role contributes to broader organisational goals Modifies or develops policies and procedures to achieve organisational goals
Teamwork	<ul style="list-style-type: none"> Selects and uses appropriate conventions and protocols when communicating with diverse stakeholders Uses interpersonal skills to gain trust and confidence of team and

	<p>provides feedback to others in forms that can be understood and used</p> <ul style="list-style-type: none"> Adapts personal communication style to build positive working relationships and to show respect for the opinions, values and particular needs of others
Planning and organising	<ul style="list-style-type: none"> Develops, implements and monitors plans and processes to ensure team effectiveness Monitors and actively supports processes and development activities to ensure the team is focused on work outcomes Plans for unexpected outcomes and implements creative responses to overcome challenges

Unit Mapping Information

Supersedes and is equivalent to BSBWOR502 Lead and manage team effectiveness.

Supersedes but is not equivalent to:

- BSBMGT520 Plan and manage the flexible workforce
- BSBWRK409 Prepare for and participate in dispute resolution.

Assessment Requirements for BSBTWK502 Manage team effectiveness

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage the effectiveness of at least one work team.

In the course of the above, the candidate must:

- provide feedback to encourage, value and reward others
- model desired behaviour and practices
- encourage and foster shared understanding of purpose, roles and responsibilities
- support team to meet expected performance outcomes including providing formal and informal learning opportunities as needed
- develop performance plans with key performance indicators (KPIs), outputs and goals for individuals or the team which incorporate input from stakeholders
- communicate effectively with a range of stakeholders about team performance plans and team performance
- evaluate and take necessary corrective action regarding unresolved issues, concerns and problems raised by internal or external stakeholders.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- impacts of group dynamics on team performance
- methods of establishing team activities including communication processes
- strategies that can support team cohesion, participation and performance
- strategies for gaining consensus
- issue resolution strategies.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- workplace documents relevant to team task objectives.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

CPCCWHS1001 Prepare to work safely in the construction industry

Modification History

Release Comment

Version 1 Replaces superseded equivalent CPCCOHS1001A Work safely in the construction industry.

Application

This unit of competency specifies the mandatory work health and safety training required prior to undertaking construction work. The unit requires the person to demonstrate personal awareness and knowledge of health and safety legislative requirements in order to work safely and prevent injury or harm to self and others. It covers identifying and orally reporting common construction hazards, understanding basic risk control measures, and identifying procedures for responding to potential incidents and emergencies. It also covers correctly selecting and fitting common personal protective equipment (PPE) used for construction work.

This unit meets the general construction induction training requirements of:

- Part 1.1 Definitions and Part 6.5 of the Model Work Health and Safety Regulations;
- Division 11 of Part 3 of the Occupational Safety and Health Regulations 1996 for Western Australia; and
- Division 3 of Part 5.1 of the Occupational Health and Safety Regulations 2007 for Victoria.

It is expected that site-specific induction training will be conducted prior to conducting construction work.

Licensing, legislative, regulatory or certification requirements apply to this unit. Relevant work health and safety state and territory regulatory authorities should be consulted to confirm jurisdictional requirements.

Pre-requisite Unit

Nil

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.
1. Identify health and safety legislative requirements of construction work.	1.1. Basic roles, responsibilities and rights of duty holders are identified and explained according to <i>jurisdictional health and safety legislative requirements</i> . 1.2. Duty of care requirements are identified. 1.3. Construction safe work practices are identified and explained.
2. Identify construction hazards and risk control measures.	2.1. Basic principles of risk management are identified. 2.2. Construction hazards are identified and discussed. 2.3. Purpose and use of PPE are identified and demonstrated. 2.4. Measures for controlling hazards are identified.
3. Identify health and safety communication and reporting processes.	3.1. Health and safety documents are identified and discussed. 3.2. Roles of designated health and safety personnel are identified and explained. 3.3. Safety signs and symbols are identified and explained. 3.4. Procedures for reporting hazards, incidents and injuries are identified.
4. Identify incident and emergency response	4.1. Procedures for responding to incidents and emergencies are identified and explained. 4.2. Procedures for accessing first aid are identified.

procedures.

- 4.3. Types and purpose of fire safety equipment are identified and discussed.

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

Skill	Performance feature
Numeracy skills to:	<ul style="list-style-type: none"> • locate and recognise numbers commonly used in safety signs.
Oral communication skills to:	<ul style="list-style-type: none"> • ask questions to clarify instructions • listen to instructions to identify key safety information • tell another person about a construction problem or hazard.
Reading skills to:	<ul style="list-style-type: none"> • follow simple pictorial safety instructions • follow simple safety instructions that are written in English.
Problem-solving skills to:	<ul style="list-style-type: none"> • select risk control measures.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Jurisdictional health and safety legislative requirements</i> must include at least one of the following state and territory Acts or their equivalent:	<ul style="list-style-type: none"> • Australian Capital Territory: Work Health and Safety Act 2011 • New South Wales: Work Health and Safety Act 2011 • Northern Territory: Work Health and Safety (National Uniform Legislation) Act 2011 • Queensland: Work Health and Safety Act 2011 • South Australia: Work Health and Safety Act 2012 • Tasmania: Work Health and Safety Act 2012 • Victoria: Occupational Health and Safety Act 2004 • Western Australia: Occupational Safety and Health Act 1984.

Assessment Requirements for CPCCWHS1001 Prepare to work safely in the construction industry

Modification History

Release Comment

Version 1 Replaces superseded equivalent CPCCOHS1001A Work safely in the construction industry.

Performance Evidence

A person demonstrating competency in this unit must satisfy the requirements of the elements, performance criteria, foundation skills, and range of conditions of this unit, in addition to the specific performance and knowledge evidence described below.

The person must:

- identify and orally report two construction hazards
- orally explain how risk could be reduced or removed in relation to those two hazards
- select appropriate personal protective equipment (PPE) to control the risk
- orally explain basic procedures for responding to incidents and emergencies, including types and purpose of the following fire safety equipment:
 - fire blankets
 - fire extinguishers, including water, carbon dioxide, powder and foam
 - hose reels and mains
- identify and orally explain the meaning of required safety signs and symbols
- orally explain the purpose of job safety analyses (JSAs), safe work method statements (SWMS) and safety data sheets (SDS)
- orally explain the roles of the following designated health and safety personnel:
 - first aid officers
 - work health and safety representatives
 - work health and safety committee members
 - supervisors.

The person must also demonstrate correctly fitting to themselves the PPE listed below:

- eye protection
- hearing protection
- hard hat

- high visibility retro reflective vest.

Knowledge Evidence

A person must demonstrate knowledge of:

- basic duty of care, and the roles, rights and responsibilities of business owners and workers in relation to working safely while undertaking construction work
- basic meaning of the terms ‘hazard’ and ‘risk’
- basic principles of risk management, including the following five steps in order:
 - identify hazard
 - assess risk
 - consult and report
 - control hazard
 - review
- basic procedures for accessing first aid
- construction hazards, including those relating to:
 - asbestos
 - confined spaces
 - electrical: power lines, cords and equipment
 - excavations and trenches, including underground services
 - dust
 - falling objects
 - hazardous substances and dangerous goods
 - hot and cold work environments
 - manual handling
 - noise
 - plant and equipment operation
 - traffic and mobile plant
 - unplanned collapse
 - ultraviolet radiation
 - working at heights, including scaffolding
- construction work that requires a high risk work licence
- types, purpose and use of PPE used in construction, as specified in the performance evidence, and including safety footwear, harnesses and respiratory protection, and ultraviolet (UV) protective clothing and sunscreen
- construction emergencies, including:
 - chemical spill
 - fire
 - injury to personnel
 - structural collapse
 - toxic or flammable vapour emission

- vehicle or mobile plant accident
- construction incidents, including:
 - incidents resulting in personal injury or damage to property
 - near misses or dangerous occurrences that do not cause injury but may pose an immediate and significant risk to persons or property, and need to be reported so that action can be taken to prevent recurrence
- safe work practices that should be followed in construction work, including:
 - accessing and using site amenities for drinking water, hand washing and toilets
 - following safety procedures when performing work tasks and using equipment
 - identifying and reporting hazards, incidents and injuries in the workplace
 - keeping the work area clean, tidy and free from debris
 - not using or being affected by drugs and/or alcohol while at work
 - preventing bullying and harassment in the workplace
 - selecting and using required PPE
 - smoking only in designated areas
 - storing and removing waste and debris in designated areas
- meanings and symbols associated with construction safety signs, symbols and tags, including:
 - emergency information signs: exits, emergency equipment and first aid
 - fire signs: location of fire alarms and firefighting equipment
 - hazard signs and symbols: danger and warning
 - regulatory signs and symbols: prohibition, mandatory and limitation or restriction
 - safety and lockout tags: danger and out-of-service tags.

Assessment Conditions

The following must be present and available to learners during assessment activities:

- equipment:
 - all of the PPE listed in the performance evidence
- specifications:
 - state or territory Act relevant to the location of the learner, as specified in the range of conditions.

The assessment of performance evidence must be done by direct observation of the learner by an assessor, either by an assessor observing the learner physically and/or by an assessor observing the learner via audio and visual media in real time.

Assessor requirements

As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

Assessors must hold the unit *CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry*, or its successor.

Numeracy skills to:	<ul style="list-style-type: none"> locate and recognise numbers commonly used in safety signs.
Oral communication skills to:	<ul style="list-style-type: none"> ask questions to clarify instructions listen to instructions to identify key safety information tell another person about a construction problem or hazard.
Reading skills to:	<ul style="list-style-type: none"> follow simple pictorial safety instructions follow simple safety instructions that are written in English.
Problem-solving skills to:	<ul style="list-style-type: none"> select risk control measures.
Written skills to:	<ul style="list-style-type: none"> complete a basic form.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Jurisdictional health and safety legislative requirements must include at least one of the following state and territory Acts or their equivalent:

- Australian Capital Territory: Work Health and Safety Act 2011
- New South Wales: Work Health and Safety Act 2011
- Northern Territory: Work Health and Safety (National Uniform Legislation) Act 2011
- Queensland: Work Health and Safety Act 2011
- South Australia: Work Health and Safety Act 2012
- Tasmania: Work Health and Safety Act 2012
- Victoria: Occupational Health and Safety Act 2004
- Western Australia: Occupational Safety and Health Act 1984.

Unit Mapping Information

Supersedes and is equivalent to CPCCWHS1001 Prepare to work safely in the construction industry.

Performance Evidence

A person demonstrating competency in this unit must satisfy the requirements of the elements, performance criteria, foundation skills, and range of conditions of this unit, in addition to the specific performance and knowledge evidence described below.

The person must:

- identify and orally report two construction hazards
- explain how risk could be reduced or removed in relation to those two hazards
- select appropriate personal protective equipment (PPE) to control the risk
- explain basic procedures for responding to incidents and emergencies, including types and purpose of the following fire safety equipment:
 - fire blankets
 - fire-extinguishers, including water, carbon dioxide, powder and foam
 - hose reels and mains
- identify and orally explain the meaning of required safety signs and symbols
- explain the purpose of job safety analyses (JSAs), safe work method statements (SWMS) and safety data sheets (SDS)
- explain the roles of the following designated health and safety personnel:
 - first aid officers
 - work health and safety (WHS) representatives
 - WHS committee members
 - supervisors.

The person must also demonstrate correctly fitting to themselves the PPE listed below:

- eye protection
- hearing protection
- hard hat
- high visibility vest, shirt or jacket.

Knowledge Evidence

A person must demonstrate knowledge of:

- basic duty of care, and the roles, rights and responsibilities of business owners and workers in relation to working safely while undertaking construction work
- basic meaning of the terms ‘hazard’ and ‘risk’
- basic principles of risk management, including the following five steps in order:
 - identify hazard
 - assess risk
 - consult and report
 - control hazard
 - review
- basic procedures for accessing first aid

- construction hazards, including those relating to:
 - asbestos
 - confined spaces
 - electrical: power lines, cords and equipment
 - excavations and trenches, including underground services
 - dust
 - falling objects
 - hazardous substances and dangerous goods
 - hot and cold work environments
 - manual handling
 - noise
 - plant and equipment operation
 - traffic and mobile plant
 - unplanned collapse
 - ultraviolet (UV) radiation
 - working at heights, including scaffolding
- construction work that requires a high-risk work licence
- types, purpose and use of PPE used in construction, as specified in the performance evidence, and including safety footwear, harnesses and respiratory protection, and UV protective clothing and sunscreen
- construction emergencies, including:
 - chemical spill
 - fire
 - injury to personnel
 - structural collapse
 - toxic or flammable vapour emission
 - vehicle or mobile plant accident
- construction incidents, including:
 - incidents resulting in personal injury or damage to property
 - near misses or dangerous occurrences that do not cause injury but may pose an immediate and significant risk to persons or property, and need to be reported so that action can be taken to prevent recurrence
- safe work practices that should be followed in construction work, including:
 - accessing and using site amenities for drinking water, hand washing and toilets
 - following safety procedures when performing work tasks and using equipment
 - identifying and reporting hazards, incidents and injuries in the workplace
 - keeping the work area clean, tidy and free from debris
 - not using or being affected by drugs and/or alcohol while at work
 - preventing bullying and harassment in the workplace
 - selecting and using required PPE

- smoking only in designated areas
- storing and removing waste and debris in designated areas
- meanings and symbols associated with construction safety signs, symbols and tags, including:
 - emergency information signs: exits, emergency equipment and first aid
 - fire signs: location of fire alarms and firefighting equipment
 - hazard signs and symbols: danger and warning
 - regulatory signs and symbols: prohibition, mandatory and limitation or restriction
 - safety and lockout tags: danger and out-of-service tags.

Assessment Conditions

The following must be present and available to learners during assessment activities:

- equipment:
 - all of the PPE listed in the performance evidence
- specifications:
 - state or territory Act relevant to the location of the learner, as specified in the range of conditions.

The assessment must reflect a range of methods including practical demonstration, oral and written reporting.

The assessment of performance evidence must be conducted by direct observation of the learner by an assessor, either by an assessor observing the learner physically and/or by an assessor observing the learner via audio and visual media in real time.

Assessor requirements

As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

Assessors must hold the unit *CPCWHS2001 Apply WHS requirements, policies and procedures in the construction industry*, or its successor.

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad>

CPPBDN6106 Produce building information modelling for building design projects

Modification History

Release 1 This version first released with CPP Property Services Training Package Release 11.0.

Supersedes and is equivalent to CPPBDN5013A Develop and collaborate on building information models for small-scale building design projects. Updated to meet the Standards for Training Packages 2012.

Application

This unit specifies the skills and knowledge required to develop building information modelling (BIM) for residential, commercial or industrial building design projects. It includes BIM authoring, collaborating with consultants and contractors from other disciplines and creating project documentation using modelling software programs.

This unit is suitable for experienced building designers who draw on broad theoretical and technical knowledge and high-level technology skills to develop BIM models to support building design.

This unit forms part of the licensing requirements for people engaged in building design in some states and territories. For further information, check with the relevant regulatory authority.

Pre-requisite Unit

Nil.

Unit Sector

Building Design

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|-------------------------------------|---|
| 1 Confirm BIM project requirements. | 1.1 Plan and confirm BIM project processes and schedules in consultation with relevant persons. |
|-------------------------------------|---|

- 1.2 Identify accurate and reliable exchange procedures for project models.
 - 1.3 Use outputs of appropriate functions of design technology tools to generate required project models.
- 2 Develop BIM project.
- 2.1 Apply information relating to building design project to plans for BIM development.
 - 2.2 Develop process map, task list and schedule for BIM implementation.
 - 2.3 Create three-dimensional (3-D) models according to workplace and project requirements and design technology software instructions.
 - 2.4 Embed building design data in project model objects in required project documentation.
 - 2.5 Identify and resolve possible conflicts between model elements.
 - 2.6 Check and test BIM to confirm accuracy and functionality.
- 3 Exchange and collaborate on project models.
- 3.1 Test transfer of BIM files to ensure integrity of format and data is retained.
 - 3.2 Provide BIMs to relevant persons for addition of specialist data according to data sharing protocols.
 - 3.3 Import or link BIMs or BIM data provided by relevant persons checking for integrity.
 - 3.4 Amend and manipulate BIMs in collaboration with relevant persons.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- reading skills to research, interpret and apply complex technical instructions, legislation, codes and standards.

Unit Mapping Information

Supersedes and is equivalent to CPPBDN5013A Develop and collaborate on building information models for small-scale building design projects.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=6f3f9672-30e8-4835-b348-205dfcf13d9b>

Assessment Requirements for CPPBDN6106 Produce building information modelling for building design projects

Modification History

Release 1 This version first released with CPP Property Services Training Package Release 11.0.

Supersedes and is equivalent to CPPBDN5013A Develop and collaborate on building information models for small-scale building design projects. Updated to meet the Standards for Training Packages 2012.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by producing interactive building information modelling (BIM) in consultation with project team, for one residential building design project and one commercial or industrial building design project.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- relevant legislation, regulations, codes and standards
- workplace and project requirements and limits
- software manufacturer specifications for BIM-capable building design software
- strengths and challenges of BIM-capable building design software
- benefits and challenges of a BIM approach to design production and documentation
- client requirements
- principles and strategies of:
 - project management
 - integrated project delivery
 - basic principles of structural engineering
- duty of care of building designers to ensure quality of designs
- contextual and site constraints
- design drawing and representation methods.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations. Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting where these skills and knowledge would be performed. This includes access to:

- relevant legislation, regulations, codes and standards
- technical references and software manuals
- computer with internet access and BIM-capable building design software.

CPPFES2043 Apply regulations to prevent ozone depleting substance and synthetic greenhouse gas emissions

Modification History

- Release 1 This version first released with CPP Property Services Training Package Release 13.0.
- Supersedes and is equivalent to CPPFES2043A Prevent ozone depleting substance and synthetic greenhouse gas emissions. Unit updated to meet the Standards for Training Packages 2012. Minor title change.

Application

This unit of competency specifies the skills and knowledge required to apply regulations and industry licensing requirements to the use of ozone depleting substances (ODS) and synthetic greenhouse gases (SGG) extinguishing agents to prevent emissions that cause ozone layer depletion and climate change.

The unit is suitable for those with basic skills and knowledge undertaking routine work tasks under the direction of more experienced workers.

ODS and SGG are gaseous fire-extinguishing agents listed in Schedule 1 of the Ozone Protection and Synthetic Greenhouse Gas Management Act 1989 and by law, can only be handled by people who hold an appropriate extinguishing agent handling licence (EAHL). This unit supports one or more EAHLs prescribed under the Act. For further information, check with the relevant regulatory authority.

Pre-requisite Unit

Nil.

Unit Sector

Fire Protection Inspection and Testing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- | | |
|---|--|
| 1 Apply regulatory requirements to use of | 1.1 Read work instructions to clarify planned use of ODS and SGG extinguishing agents. |
|---|--|

- | | | |
|---|-----|--|
| ODS and SGG extinguishing agents. | 1.2 | Identify compliance requirements of relevant regulations and check against work instructions to identify potential and actual breaches of ODS and SGG regulations. |
| | 1.3 | Record and report identified regulatory non-compliances to prevent ODS and SGG emissions. |
| 2 Identify ODS and SGG handling licences, trading authorisations and usage permits. | 2.1 | Identify types of ODS and SGG extinguishing agents used in the fire protection industry. |
| | 2.2 | Identify types and requirements of ODS and SGG EAHLs and licensee entitlements. |
| | 2.3 | Identify extinguishant trading authorisations. |
| | 2.4 | Identify halon special permit usage requirements. |
| | 2.5 | Apply requirements of ODS and SGG handling licences, trading authorisations and usage permits to work instructions to ensure compliance. |
| 3 Apply understanding of ozone layer depletion and global warming. | 3.1 | Use information technology to access and assess information to identify the basic role and functions of the ozone layer. |
| | 3.2 | Identify the main factors involved with, and effects of, global warming. |
| | 3.3 | Identify the major effects of ozone depletion and climate change on human health and the environment. |
| | 3.4 | Identify the impact of ODS and SGG emissions on the ozone layer and climate change. |
| | 3.5 | Identify common ODS and SGG work practices in the fire protection industry and propose improvements to reduce the risk of accidental emissions. |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPPFES2043A Prevent ozone depleting substance and synthetic greenhouse gas emissions.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=6f3f9672-30e8-4835-b348-205dfcf13d9b>

Assessment Requirements for CPPFES2043 Apply regulations to prevent ozone depleting substance and synthetic greenhouse gas emissions

Modification History

Release 1 This version first released with CPP Property Services Training Package Release 13.0.

Supersedes and is equivalent to CPPFES2043A Prevent ozone depleting substance and synthetic greenhouse gas emissions. Unit updated to meet the Standards for Training Packages 2012. Minor title change.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by applying regulations to prevent ozone depleting substance (ODS) and synthetic greenhouse gases (SGG) emissions, including:

- reviewing two different sets of work instructions associated with ODS and SGG agent extinguishers or systems, or both, and documenting requirements for the extinguishing agent handling licence (EAHL) holder undertaking those duties
- proposing two improvements to ODS and SGG work practices to reduce the risk of accidental emissions.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- actions to take when potential and actual breaches of regulations, work health and safety (WHS) or other policy are identified when applying regulations to prevent ODS and SGG emissions
- compliance requirements of relevant regulations, licensing, agreements, protocols, fire protection industry codes of practice and Australian Standards associated with the use of ODS and SGG extinguishing agents:
 - environmental protection
 - EAHL types, associated responsibilities, usage permits and trading authorisations
 - ODS and SGG legal requirements for handling and trading in extinguishing agents in the fire protection industry
- effects of:
 - ODS and SGG emissions on ozone layer depletion and climate change
 - ozone layer depletion and climate change on the environment and human health
- implications of not applying ODS and SGG regulations to work practices

- key factors involved in climate change
- role and function of the ozone layer
- workplace requirements for preventing ODS and SGG emissions:
 - use of ODS and SGG extinguishing agents
 - WHS.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to technologies, work instructions, documentation and other information required to achieve the performance evidence.

Links

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=6f3f9672-30e8-4835-b348-205dfcf13d9b>

CPPFES2043A Prevent ozone depleting substance and synthetic greenhouse gas emissions

Modification History

Revised unit

Unit updated and equivalent to PRMPFES43A Prevent ozone depleting substance and synthetic greenhouse gas emissions

Unit Descriptor

This unit of competency specifies the outcomes required to identify and describe agreements, protocols, legislation, regulations, codes of practice and handling licences developed to reduce ozone layer depletion and global warming.

Application of the Unit

This unit of competency supports individuals responsible for:

- complying with legal, industry, regulatory and licensing requirements relating to ozone depleting substance (ODS) and synthetic greenhouse gas (SGG) extinguishing agents used in fire protection
- considering the impact of work practices in the fire protection industry on ozone layer depletion and global warming
- proposing changes to reduce the risk of accidental emissions that contribute to ozone layer depletion and global warming.

Licensing/Regulatory Information

The unit supports one or more fire protection industry extinguishing agent handling licences (EAHL) prescribed under the Ozone Protection and Synthetic Greenhouse Gas Management Act 1989.

Different states and territories may have regulatory mechanisms that apply to this unit. Candidates are advised to check for regulatory limitations.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---|-----|---|
| 1 | Apply rules and regulations to the use of ODS and SGG extinguishing agents. | 1.1 | Requirements of relevant <i>rules and regulations</i> are <i>confirmed</i> and applied to <i>work procedures</i> to prevent ODS and SGG emissions. |
| | | 1.2 | <i>Compliance requirements are checked</i> and <i>action</i> is taken according to organisational policies and procedures, ODS and SGG policies and procedures, and best practice requirements. |
| 2 | Identify ODS and SGG handling licences, trading authorisations and usage permits. | 2.1 | Types of ODS and SGG <i>extinguishing agent handling licences</i> , licence requirements and <i>entitlements of licensees</i> are identified. |
| | | 2.2 | Extinguishant trading authorisations are identified. |
| | | 2.3 | Halon special permit usage requirements are identified. |
| 3 | Apply an understanding of ozone layer depletion and global warming. | 3.1 | Role and functions of <i>ozone layer</i> are identified and explained. |
| | | 3.2 | Factors involved with, and effects of, <i>global warming</i> are identified and described. |
| | | 3.3 | <i>ODS and SGG extinguishing agents</i> used in fire protection industry are identified by type. |
| | | 3.4 | <i>Effect of ozone depletion and global warming</i> on |

human health, environment and fire protection industry work practices is described.

3.5 Relevant fire protection industry ODS and SGG work practices are identified.

3.6 Improvements to ODS and SGG work practices are identified and proposed to reduce the risk of accidental emissions.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- language, literacy and numeracy skills to:
 - communicate with others clearly and concisely, verbally and in writing
 - read and comply with work industry regulations and codes of practice
 - interpret information
- initiative and enterprise skills to:
 - seek advice on license requirements
 - apply understanding of ozone layer depletion and global warming to change and improve fire protection industry work practices
 - identify and act upon learning opportunities
- technology skills to use technology to access information

Required knowledge

- effect of ozone layer
- actions to take where a breach of ODS and SGG policies and procedures occurs
- effect of:
 - ODS and SGG emissions on ozone depletion and global warming
 - ozone depletion and global warming on environment and human health
- factors involved in global warming
- implications of not applying ODS and SGG legislative requirements to the workplace
- key features of:
 - legislation, regulations and standards applicable to ozone protection in the fire protection industry
 - fire protection industry codes of practice
- ODS and SGG substances used in the fire protection industry
- ODS and SGG EAHL features and requirements, authorisations and permit requirements

- relevant federal, state or territory legislation that affects organisational operations

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>This unit of competency could be assessed by oral or written questioning covering:</p> <ul style="list-style-type: none"> • underpinning knowledge of the effects of ODS and SGG emissions and current arrangements • workplace examples of action taken to reduce risk of emissions and responses to potential or actual breaches of legislation.
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified in this unit.</p> <p>In particular the person should demonstrate the ability to:</p> <ul style="list-style-type: none"> • apply understanding of ozone layer depletion and global warming for: <ul style="list-style-type: none"> • discussing the effect of ODS and SGG emissions on the ozone layer and global warming • describing the impact of ozone depletion and global warming on human health and the environment • assessing impact on fire protection industry work practices • proposing changes to fire protection industry work practices to meet ODS and SGG legal requirements • taking action to respond to potential and actual breaches of ODS and SGG regulations • locate, interpret and explain: <ul style="list-style-type: none"> • ODS and SGG legal requirements for handling extinguishing agents in the fire protection industry • EAHL types, associated responsibilities, usage permits and trading authorisations • agreements, protocols, regulatory requirements, fire protection industry code of practice, and Australian standards relevant to EAHL.
<p>Context of and specific resources for assessment</p>	<p>Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.</p>

	<p>Resource implications for assessment include:</p> <ul style="list-style-type: none"> • assessment documentation • necessary legislation and regulatory documents, manuals, textbooks and other relevant documentation • training and assessment record books.
Method of assessment	<p>Assessment methods must:</p> <ul style="list-style-type: none"> • satisfy the endorsed Assessment Guidelines of the Property Services Training Package • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application • reinforce the integration of employability skills with workplace tasks and job roles • confirm that competency is verified and able to be transferred to other circumstances and environments.
Guidance information for assessment	<p>Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.</p> <p>Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.</p> <p>This unit could be assessed on its own or in combination with other units relevant to the job function.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Rules and regulations</i> may include:</p>	<ul style="list-style-type: none"> • dangerous goods regulations • environmental regulations • fire protection industry codes of practice • licensing arrangements, such as EAHL • manufacturers' system manuals • ODS and SGG legislation, codes and regulations, including
---	--

	<ul style="list-style-type: none"> penalties and policing • OHS legislation, regulations and codes • other relevant legislation relating to fire protection equipment, including: <ul style="list-style-type: none"> • international shipping codes • marine codes for different Australian States • requirements of Australian petroleum industry • relevant agreements and protocols • relevant Australian standards, such as: <ul style="list-style-type: none"> • AS 1851 Maintenance of fire protection systems and equipment • note: Australian standards are frequently revised and users must always check for currency and amendments • relevant federal, state and territory Acts, regulations and codes.
Requirements may be <i>confirmed</i> with:	<ul style="list-style-type: none"> • colleagues • managers • supervisors • team leaders.
<i>Work procedures</i> may include:	<ul style="list-style-type: none"> • assignment instructions • equipment manufacturers' requirements • instructions from colleagues, supervisor or manager • personal protective equipment requirements • reporting and documentation requirements • specific customer requirements.
<i>Checking compliance requirements</i> may include ensuring that:	<ul style="list-style-type: none"> • persons trading in ODS and SGG hold the appropriate trading authorisation or ODS and SGG permit • scope of work to be undertaken is covered by the appropriate license.
<i>Action</i> may include:	<ul style="list-style-type: none"> • advising customer • documenting non-compliance • making equipment safe • reporting, as required.
Types of <i>extinguishing agent handling licence</i> include:	<ul style="list-style-type: none"> • control systems installation, commissioning and decommissioning • fixed system installation and decommissioning • fixed system testing and maintenance • portable fire extinguisher maintenance • recovery, reclamation, fill and recycling • warehouse maintenance.
<i>Entitlements of licensees</i> include:	<ul style="list-style-type: none"> • portable fire extinguisher maintenance licence entitles holder: <ul style="list-style-type: none"> • to charge and recharge a portable fire extinguisher with

	<ul style="list-style-type: none">• non-ODS and SGG agent<ul style="list-style-type: none">• note: a reclaim and refill licence is required to charge or recharge a portable extinguisher with ODS or SGG• repair the extinguisher valve• fixed system installation and decommissioning licence entitles holder to:<ul style="list-style-type: none">• install and decommission a gaseous fire-extinguishing system (fire protection equipment) including to:<ul style="list-style-type: none">• install and disconnect actuation devices (mechanisms) to and from container valves• install and disconnect gaseous agent containers• install and disconnect interconnections to other gaseous system containers• install and disconnect ancillary equipment connections to manifold and pipework• attach and remove transport equipment, such as valve outlet and actuator port caps, plugs and locking devices installed to prevent accidental discharge• commission actuation control devices set to operate and engage safety devices as needed and decommission these devices• fixed system testing and maintenance licence entitles holder to:<ul style="list-style-type: none">• test and maintain a gaseous fire-extinguishing system (fire protection equipment), including to:<ul style="list-style-type: none">• test actuation release systems• disconnect and reconnect actuation devices (mechanisms)• disconnect and reconnect interconnections to other gaseous system containers• disconnect and reconnect ancillary equipment connections from containers to manifold and pipework• test actuation devices (mechanisms)• perform tests and maintenance on any fire detection and alarm system, including any remote operation panel and actuation and control system that interfaces with or forms part of a gaseous fire-extinguishing system• perform tests and maintenance on gaseous agent containers and ancillary equipment connections from containers to manifold and pipework• recovery, reclamation, fill and recycling licence entitles holder to:<ul style="list-style-type: none">• recover, reclaim, fill and recycle an extinguishing agent into and from a fire extinguisher and gaseous fire-extinguishing system container, from and to a bulk agent container
--	---

	<ul style="list-style-type: none"> • warehouse maintenance licence entitles holder to: <ul style="list-style-type: none"> • monitor for leakage stocks of extinguishing agent bulk agent containers in a warehouse and, as needed, to transfer extinguishing agent from a leaking storage container • control systems installation, commissioning and decommissioning licence entitles holder to: <ul style="list-style-type: none"> • install, commission and decommission a fire detection and alarm system, including any remote operation panel and actuation and control system that interfaces with or forms part of a gaseous fire-extinguishing system.
<p><i>Ozone layer</i> facts include:</p>	<ul style="list-style-type: none"> • composed of ozone (O₃), which is a form of oxygen in which the oxygen molecule contains three atoms of oxygen instead of the usual two • ozone forms less than 0.4 parts per million of the atmosphere • about 90% of ozone is in upper part of atmosphere (stratosphere) • most ozone is in the layer from 20 to 25 km above the earth's surface.
<p><i>Global warming</i> involves:</p>	<ul style="list-style-type: none"> • carbon dioxide found in small quantities (about 350 parts per million) in the atmosphere • carbon dioxide trapping infra red (heat) radiation and warming the atmosphere – the greenhouse effect.
<p><i>ODS and SGG extinguishing agents</i> may include:</p> <p>Note list format: product name (other names) use</p> <p>Check the latest amendments to the Ozone Protection and Synthetic Greenhouse Gas Management Act for the current list of ODS and SGG extinguishing agents.</p>	<ul style="list-style-type: none"> • ODS and SGG extinguishing agents commonly used in Australia: <ul style="list-style-type: none"> • FM200 (FE-227 Heptafluoropropane, HFC-227ea) used as a total flooding extinguishing agent and as a replacement for Halon 1301 • Halon 1211 (BCF, Halon 1211 BCF, Bromochlorodifluoromethane) used as a streaming agent – requires a special permit in Australia • Halon 1301 (BTM, Halon 1301 BTM, Bromotrifluoromethane) used as a total flooding agent – requires a special permit in Australia • NAF-P-III (HCFC Blend C) used as a streaming agent • NAF-P-IV (HCFC Blend E) used as a streaming agent • NAF-S-III (HCFC Blend A) used as a total flooding agent • SF₆ (Sulfurhexafluoride) used as an inerting agent in sealed high voltage switchgear • ODS and SGG extinguishing agents not commonly used in Australia: <ul style="list-style-type: none"> • Blitz III (HCFC Blend D) used in flooding systems • CFC-11 (Trichlorofluoromethane) may be found as a propellant in some powder fire extinguishers (this product is banned in Australia but may be found on incoming foreign

	<p>vessels)</p> <ul style="list-style-type: none"> • FC-2-1-8 (CEA-308) used in flooding systems • FC-3-1-10 (CEA-410) used in flooding systems • FC-5-1-14 (CEA-614) used as a streaming agent • FE-13 (Trifluoromethane, HFC-23) used as a total flooding agent • FE-241 (Chlorotetrafluoroethane, HCFC-124) used as a total flooding agent for non-occupied spaces and as a streaming agent • FE-25 (Pentafluoroethane, HFC-125) used in inerting and explosion suppression applications • FE-36 (Hexafluoropropane, HFC-236fa) used in portable fire extinguishers – is a replacement for Halon 1211 and Halon 1301 • FM100 (HBFC-22B1) used in portable fire extinguishers • Halon 2402 (Dibromotetrafluoroethane) limited use in military systems – requires a special permit in Australia • Halotron I (HCFC Blend B or HCFC-123) used as a total flooding agent and streaming agent • Halotron II (blend of HFC-143a and HFC-125) used as a total flooding agent and as a replacement for Halon 1301 • HCFC-22 (Chlorodifluoromethane) used as a propellant in some powder fire extinguishers (this product is banned in Australia but may be found on incoming foreign vessels) • HFC-134a (Unsymmetric tetrafluoroethane) used as a propellant in some powder fire extinguishers.
<p><i>Effect of ozone depletion and global warming on human health and the environment may include:</i></p>	<ul style="list-style-type: none"> • changes to work practices, including those in the fire protection industry • constraints on: <ul style="list-style-type: none"> • aquatic ecosystems • human immune system • increased: <ul style="list-style-type: none"> • incidence of photochemical smog • risk of: <ul style="list-style-type: none"> • cataracts • skin cancer • inhibited growth of plants • reduced production of agriculture.

CPPHES4005 Assess household energy use and efficiency improvements

Modification History

Release 2 This version first released with CPP Property Services Training Package Release 14.0.

Updated reference to reflect correction in Modification History from CPC Property Services 5.0 to CPP Property Services 9.0.

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and equivalent to CPPHSA4001A Assess household energy use.
Updated to meet the Standards for Training Packages.

Application

This unit specifies the skills and knowledge required to source and analyse information on household energy use and to advise on ways to improve energy efficiency and reduce energy costs in the home.

This unit is for individuals who work independently as home sustainability assessors using specialised knowledge to complete household energy assessments. It involves completing routine and non-routine tasks and dealing with predictable and sometimes unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

None.

Unit Sector

Home Sustainability.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Plan and organise energy assessment.
 - 1.1 Consult with client to clarify purpose of energy use assessment and respond to questions and concerns.
 - 1.2 Confirm assessment requirements in line with client needs, legislation, regulations, standards, codes and government incentive programs for energy efficiency.
 - 1.3 Plan energy use assessment in consultation with client and according to work health and safety (WHS) procedures.
 - 1.4 Prepare energy use assessment documentation.
 - 1.5 Confirm that required tools and equipment are available and in working order.

- 2 Compile information on household energy generation, use, and costs.
 - 2.1 Gather information on energy use, onsite energy production and storage and energy costs.
 - 2.2 Access and interpret energy bills and metering data.
 - 2.3 Identify main sources of energy use.
 - 2.4 Carry out measurements and observations safely during on-site inspection to estimate energy usage for key energy using appliances.
 - 2.5 Gather information on household occupant behaviours and preferences that impact energy use.
 - 2.6 Record gathered information using suitable data collection tool.

- 3 Analyse data on household energy use.
 - 3.1 Identify key features of household energy usage and estimate costs and greenhouse gas emissions for key appliances.
 - 3.2 Reconcile energy use with energy billing data.
 - 3.3 Identify cost effective measures and behavioural opportunities for improving energy efficiency.
 - 3.4 Identify government rebates and other assistance programs for improving household energy efficiency.
 - 3.5 Estimate energy, emissions and cost savings to be gained

by implementing measures for improving energy efficiency.

- | | | |
|--|-----|---|
| 4 Provide information on residential renewable energy. | 4.1 | Source technical information on renewal energy production and storage technologies and inform client. |
| | 4.2 | Evaluate suitability of using residential property for renewable energy systems and discuss with client. |
| | 4.3 | Identify feed in tariffs, government rebates and other assistance programs for installing energy production and storage technologies. |
| 5 Report findings of household energy assessment. | 5.1 | Collate results, recommendations and supporting evidence of energy use assessment. |
| | 5.2 | Document options and potential savings and prioritise recommendations for energy efficiency measures in line with client needs. |
| | 5.3 | Explain report, indicative costs and improvements in household energy efficiency to client. |

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- oral communication skills to interact with clients from diverse social, economic and cultural backgrounds
- numeracy skills to interpret data from gas and electricity meters and accounts and calculate costs and greenhouse gas emissions
- reading skills to interpret data from gas and electricity meters and the outputs of energy measuring tools, technical data from product specifications
- technology skills to use basic computer functions, calculators and measuring tools.

Unit Mapping Information

Supersedes and equivalent to CPPHSA4001A Assess household energy use.

Companion volumes to this training package are available at the VETNet website -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=6f3f9672-30e8-4835-b348-205dfcf13d9b>

Assessment Requirements for CPPHES4005 Assess household energy use and efficiency improvements

Modification History

Release 2 This version first released with CPP Property Services Training Package Release 14.0.

Updated reference to reflect correction in Modification History from CPC Property Services 5.0 to CPP Property Services 9.0.

Release 1 This version first released with CPC Property Services Training Package Release 5.0.

Supersedes and equivalent to CPPHSA4001A Assess household energy use.
Updated to meet the Standards for Training Packages.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by safely conducting energy use assessments and identifying efficiency improvements for three different households.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- alternative energy production and storage technologies applicable to residential buildings
- energy ratings and power consumption of common household appliances
- energy types and units of measurement
- hazards and risks and types of personal protective equipment (PPE) to be used when conducting on-site assessments of household energy use
- key requirements of relevant codes, standards, regulations and government incentive programs for household energy efficiency
- major systems and other sources of household energy use:
 - cooking
 - refrigeration
 - washing and drying
 - home entertainment and home office equipment
 - heating and cooling
 - internal and external appliances
 - lighting
 - swimming pools and spas

- water heating
- water pumps
- methods for interpreting household energy bills:
 - actual and estimated bills
 - plans
 - tariffs
- strategies for improving household energy efficiency including impact of building shell on heating/cooling energy use, upgrade options and behavioural changes
- trends in energy use and emissions
- types and uses of energy measuring tools.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- residential buildings to allow achievement of the performance evidence
- codes, standards, legislation and government programs relevant to energy efficiency
- manufacturers' product information on domestic appliances, water heating systems, heating and cooling systems, lighting and electronic products
- technical information on energy production and storage technologies
- personal protective equipment and energy measurement and data collection tools and documentation.

Companion volumes to this training package are available at the VETNet website - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=6f3f9672-30e8-4835-b348-205dfcf13d9b>

HLTAID009 Provide cardiopulmonary resuscitation

Modification History

Not applicable.

Application

This unit describes the skills and knowledge required to perform cardiopulmonary resuscitation (CPR) in line with the Australian Resuscitation Council (ARC) guidelines.

This unit applies to all persons who may be required to provide CPR, in a range of situations, including community and workplace settings.

Specific licensing/regulatory requirements relating to this competency, including requirements for refresher training should be obtained from the relevant national/state/territory Work Health and Safety Regulatory Authorities.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes

Performance criteria describe the performance needed to demonstrate achievement of the element.

1. Respond to an emergency situation.

- 1.1. Recognise and assess an emergency situation.
- 1.2. Ensure safety for self, bystanders and casualty.
- 1.3. Assess the casualty and recognise the need for cardiopulmonary resuscitation (CPR).
- 1.4. Seek assistance from emergency services.

2. Perform CPR procedures.

- 2.1. Perform CPR in accordance with the ARC guidelines.
- 2.2. Display respectful behaviour towards casualty.
- 2.3. Operate an automated external defibrillator (AED) according to manufacturers' instructions.

3. Communicate details of the incident.

- 3.1. Accurately convey incident details to emergency services.
- 3.2. Report details of incident in line with appropriate workplace or site procedures.
- 3.3. Maintain privacy and confidentiality of information in line with statutory or organisational policies.

4. Review the incident.
- 4.1. Recognise the possible psychological impacts on self and other rescuers and seek help when required.
 - 4.2. Contribute to a review of the first aid response as required.

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and not equivalent to HLTAID001 Perform cardiopulmonary resuscitation

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for HLTAID009 Provide cardiopulmonary resuscitation

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the workplace or community setting.

There must be evidence that the candidate has completed the following tasks in line with State/Territory regulations, first aid codes of practice, first aid guidelines determined by the Australian Resuscitation Council (ARC) and other Australian national peak clinical bodies and workplace or site procedures:

- managed, in line with ARC guidelines, the unconscious, breathing casualty including appropriate positioning to reduce the risk of airway compromise
- managed, in line with ARC guidelines, the unconscious, non-breathing adult, including:
 - performing at least 2 minutes of uninterrupted single rescuer cardiopulmonary resuscitation (CPR) (5 cycles of both compressions and ventilations) on an adult resuscitation manikin placed on the floor
 - following the prompts of an automated external defibrillator (AED) to deliver at least one shock
 - demonstrating a rotation of single rescuer operators with minimal interruptions to compressions
 - responding appropriately in the event of regurgitation or vomiting
 - handing over to emergency services
 - providing an accurate verbal report of the incident
 - reviewing the incident
- managed, in line with ARC guidelines, the unconscious, non-breathing infant, including:
 - performing at least 2 minutes of uninterrupted single rescuer CPR (5 cycles both compressions and ventilations) on an infant resuscitation manikin placed on a firm surface.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- guidelines and procedures including:
 - relevant ARC guidelines to managing the unconscious breathing and non-breathing casualty and provision of CPR
 - potential incident hazards and risk minimisation processes when providing first aid

- infection control procedures, including use of standard precautions and resuscitation barrier devices
- requirements for currency of skill and knowledge
- first aid codes of practice
- appropriate workplace or site procedures relevant to the provision of first aid
- legal, workplace and community considerations, including:
 - duty of care requirements
 - own skills and limitations
 - consent and how it relates to the conscious and unconscious casualty
 - privacy and confidentiality requirements
 - awareness of potential need for stress management techniques and available support for rescuers
- considerations when providing CPR, including:
 - upper airway and effect of positional change
 - appropriate duration and cessation of CPR
 - appropriate use of an AED
 - safety and maintenance procedures for an AED
 - chain of survival
 - how to access emergency services
- techniques for providing CPR to adults, children and infants including:
 - how to recognise that a casualty is unconscious and not breathing normally
 - rate, ratio and depth of compressions and ventilations
 - correct hand positioning for compressions
 - basic anatomy, physiology and the differences between adults, children and infants relating to CPR.

Assessment Conditions

Each candidate to demonstrate skills in an environment that provides realistic in-depth, scenarios and simulations to assess candidates' skills and knowledge.

Due to the nature of this type of training, it is acceptable for the performance evidence to be collected in a simulated environment.

Compression and ventilation skills must be demonstrated on resuscitation manikins following ARC guidelines for the purpose of assessment of CPR procedures.

Assessment must ensure access to:

- adult and infant resuscitation manikins following ARC guidelines for the purpose of assessment of CPR procedures
- AED training devices
- personal protective equipment (PPE).

Simulated assessment environments must simulate real-life situations where these skills and knowledge would be performed, with all the relevant equipment and resources of that workplace or community environment.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors and must hold this unit or demonstrate equivalent skills and knowledge to that contained within this unit.

HLTAID011 Provide First Aid

Modification History

Not applicable.

Application

This unit describes the skills and knowledge required to provide a first aid response to a casualty in line with first aid guidelines determined by the Australian Resuscitation Council (ARC) and other Australian national peak clinical bodies.

The unit applies to all persons who may be required to provide a first aid response in a range of situations, including community and workplace settings.

Specific licensing/regulatory requirements relating to this competency, including requirements for refresher training should be obtained from the relevant national/state/territory Work Health and Safety Regulatory Authorities.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes

Performance criteria describe the performance needed to demonstrate achievement of the element.

1. Respond to an emergency situation.

- 1.1. Recognise and assess an emergency situation.
- 1.2. Ensure safety for self, bystanders and casualty.
- 1.3. Assess the casualty and recognise the need for first aid response.
- 1.4. Seek assistance from emergency services.

2. Apply appropriate first aid procedures.

- 2.1. Perform cardiopulmonary resuscitation (CPR) in accordance ARC guidelines.
- 2.2. Provide first aid in accordance with established first aid principles.
- 2.3. Display respectful behaviour towards casualty.
- 2.4. Obtain consent from casualty where possible.
- 2.5. Use available resources and equipment to make the casualty as comfortable as possible.
- 2.6. Operate first aid equipment according to manufacturers' instructions.
- 2.7. Monitor the casualty's condition and respond in accordance with first aid principles.

3. Communicate details of the incident.
 - 3.1. Accurately convey incident details to emergency services.
 - 3.2. Report details of incident in line with appropriate workplace or site procedures.
 - 3.3. Complete applicable workplace or site documentation, including incident report form.
 - 3.4. Maintain privacy and confidentiality of information in line with statutory or organisational policies.
4. Review the incident.
 - 4.1. Recognise the possible psychological impacts on self and other rescuers and seek help when required.
 - 4.2. Contribute to a review of the first aid response as required.

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and not equivalent to HLTAID003 Provide first aid

Assessment Requirements for HLTAID011 Provide First Aid

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the workplace or community setting.

There must be evidence that the candidate has completed the following tasks in line with State/Territory regulations, first aid codes of practice, first aid guidelines determined by the Australian Resuscitation Council (ARC) and other Australian national peak clinical bodies and workplace or site procedures:

- managed, in line with ARC guidelines, the unconscious, breathing casualty including appropriate positioning to reduce the risk of airway compromise
- managed, in line with ARC guidelines, the unconscious, non-breathing adult, including:
 - performing at least 2 minutes of uninterrupted single rescuer cardiopulmonary resuscitation (CPR) (5 cycles of both compressions and ventilations) on an adult resuscitation manikin placed on the floor
 - following the prompts of an automated external defibrillator (AED) to deliver at least one shock
 - demonstrating a rotation of single rescuer operators with minimal interruptions to compressions
 - responding appropriately in the event of regurgitation or vomiting
- managed, in line with ARC guidelines, the unconscious, non-breathing infant, including:
 - performing at least 2 minutes of uninterrupted single rescuer CPR (5 cycles both compressions and ventilations) on an infant resuscitation manikin placed on a firm surface
- managed casualties, with the following:
 - anaphylaxis
 - asthma
 - non-life-threatening bleeding
 - choking
 - envenomation, using pressure immobilisation
 - fractures, dislocations, sprains and strains, using appropriate immobilisation techniques
 - minor wound cleaning and dressing
 - nosebleed
 - shock

- responded to at least one simulated first aid incident contextualised to the candidate's workplace or community setting, where the candidate has no knowledge of the casualty's condition prior to starting treatment, including:
 - identifying the casualty's illness or injury through history, signs and symptoms
 - using personal protective equipment (PPE) as required
 - providing appropriate first aid treatment
 - conveying incident details to emergency services or advising casualty on any required post incident action
 - providing an accurate verbal and written report of the incident
 - reviewing the incident.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- guidelines and procedures including:
 - ARC guidelines relevant to the provision of first aid
 - first aid guidelines from Australian national peak clinical bodies
 - potential incident hazards and risk minimisation processes when providing first aid
 - infection control procedures, including use of standard precautions and resuscitation barrier devices
 - requirements for currency of skill and knowledge
 - first aid codes of practice
 - appropriate workplace or site procedures relevant to the provision of first aid
 - contents of first aid kits
- legal, workplace and community considerations including:
 - duty of care requirements
 - own skills and limitations
 - consent and how it relates to the conscious and unconscious casualty
 - privacy and confidentiality requirements
 - awareness of potential need for stress management techniques and available support for rescuers
- considerations when providing CPR, including:
 - upper airway and effect of positional change
 - appropriate duration and cessation of CPR
 - appropriate use of an AED
 - safety and maintenance procedures for an AED
 - chain of survival
 - how to access emergency services
- techniques for providing CPR to adults, children and infants including:
 - how to recognise that a casualty is unconscious and not breathing normally

- rate, ratio and depth of compressions and ventilations
- correct hand positioning for compressions
- basic anatomy, physiology and the differences between adults, children and infants relating to CPR
- signs, symptoms and management of the following conditions and injuries:
 - allergic reaction
 - anaphylaxis
 - asthma
 - non-life-threatening and life-threatening bleeding
 - burns
 - cardiac conditions, including chest pain
 - choking
 - diabetes
 - drowning
 - envenomation - all current treatments
 - eye injuries
 - fractures, dislocations, strains and sprains
 - head, neck and spinal injuries
 - hypothermia
 - hyperthermia
 - minor wounds
 - nose-bleed
 - poisoning
 - seizures
 - shock
 - sharps injuries
 - stroke.

Assessment Conditions

Each candidate to demonstrate skills in an environment that provides realistic in-depth, scenarios and simulations to assess candidates' skills and knowledge.

Due to the nature of this type of training, it is acceptable for the performance evidence to be collected in a simulated environment.

Compression and ventilation skills must be demonstrated on resuscitation manikins following ARC guidelines for the purpose of assessment of CPR procedures.

Assessment must ensure access to:

- adult and infant resuscitation manikins following ARC guidelines for the purpose of assessment of CPR procedures
- adrenaline auto-injector training device

- AED training devices
- workplace first aid kit
- placebo bronchodilator and spacer device
- different types of wound dressings and bandages
- blankets and items to treat for shock
- personal protective equipment (PPE)
- workplace injury, trauma or illness record, or other applicable workplace or site incident report form.

Simulated assessment environments must simulate real-life situations where these skills and knowledge would be performed, with all the relevant equipment and resources of that workplace or community environment.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors and must hold this unit or demonstrate equivalent skills and knowledge to that contained within this unit.

ICTICT203 Operate application software packages

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to identify, select and operate three commercial software packages, including a word-processing and a spreadsheet application package.

It applies to individuals who utilise different software applications within a small to large office environment to produce diverse documents.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Use appropriate workplace health and safety (WHS) office work practices	1.1 Use safe work practices to ensure ergonomic, work organisation, energy and resource conservation requirements are addressed 1.2 Use wrist rests and document holders where appropriate 1.3 Use monitor anti-glare and radiation reduction screens where appropriate
2. Use appropriate	2.1 Select word-processing software appropriate to perform

ELEMENT	PERFORMANCE CRITERIA
word-processing software	<p>activity</p> <p>2.2 Identify document purpose, audience and presentation requirements, and clarify with personnel as required</p> <p>2.3 Identify organisational requirements for text-based business documents, and design document structure and layout to ensure consistency of style and image</p> <p>2.4 Match document requirements with software functions to provide efficient production of documents</p> <p>2.5 Use technical functions, other data and formatting to finalise documents</p> <p>2.6 Ensure the naming and storing of documents in appropriate directories or folders and the printing of documents to the required specifications</p>
3. Use appropriate spreadsheet software	<p>3.1 Select spreadsheet software appropriate to perform activity</p> <p>3.2 Identify document purpose, audience and presentation requirements, and clarify with personnel as required</p> <p>3.3 Enter simple formulas and functions using cell referencing where required</p> <p>3.4 Customise spreadsheet settings to meet requirements</p> <p>3.5 Ensure the naming and storing of documents in appropriate directories or folders and the printing of documents to the required specifications</p>
4. Use a third application software package	<p>4.1 Select software application package appropriate to perform activity</p> <p>4.2 Identify purpose, audience and presentation requirements, and clarify with personnel as required</p> <p>4.3 Use technical functions, other data and formatting to finalise documents</p> <p>4.4 Ensure documents are named and stored in appropriate directories or folders and printed to required specifications</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	2.2-2.5, 3.2-3.4, 4.2, 4.3	<ul style="list-style-type: none"> Recognises and interprets textual information to determine organisational standards and job requirements Interprets and comprehends symbols, icons and text associated with applications software
Writing	2.3-2.6, 3.3- 3.5, 4.3, 4.4	<ul style="list-style-type: none"> Enters both written and verbally received information and data into a format suitable for the software application Selects vocabulary, syntax, terminology, labelling and naming conventions suitable for the program
Oral Communication	2.2, 2.3, 3.2, 4.2	<ul style="list-style-type: none"> Uses simple, relevant language, effective questioning, and active listening techniques to clarify work requirements
Numeracy	3.2-3.4	<ul style="list-style-type: none"> Adds, subtracts, multiplies and divides whole numbers and decimals, identifying and selecting the correct formulas and functions to use Applies the order of operations in calculations
Navigate the world of work	1.1	<ul style="list-style-type: none"> Takes some personal responsibility for adherence to legal and regulatory requirements
Get the work done	1.2, 1.3, 2.1-2.6, 3.1-3.5, 4.1-4.4	<ul style="list-style-type: none"> Follows routine procedures for using digital technology to enter, store and retrieve information directly relevant to role Understands purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks, adapting some functions to improve personal efficiency Plans routine tasks with familiar goals and outcomes, taking some limited responsibility for decisions regarding sequencing

Assessment Requirements for ICTICT203 Operate application software packages

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- produce workplace documents using a minimum of three different software application packages
- open, amend and save files and documents according to organisational requirements
- apply workplace health and safety (WHS) principles and responsibilities for ergonomics, such as work periods and breaks
- use help manuals and online help.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify application software packages used by the organisation and list the purpose of each
- explain basic technical terminology related to reading help files and responding to system help prompts
- outline current business practices related to using software to prepare reports
- list features and functions of commercial computing packages
- describe import and export software functions
- describe the process of linking documents
- outline WHS principles and responsibilities for ergonomics, such as work periods and breaks
- explain the purpose of input and output devices.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a personal computer (PC) and printer
- software currently used in industry
- documents detailing organisational style guide and policy
- documents or information containing data suitable for developing software application documents.

Assessors must satisfy NVR/AQTF assessor requirements.

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to operate software packages	1.1 Set up workstation according to work health and safety standards and organisational requirements 1.2 Determine word-processing software task requirements 1.3 Determine spreadsheet software task requirements 1.4 Determine software application according to task

ELEMENT	PERFORMANCE CRITERIA
	requirements 1.5 Identify document purpose, audience and presentation requirements and clarify with required personnel
2. Use word-processing software	2.1 Identify document purpose, audience and presentation requirements and clarify with required personnel 2.2 Determine text-based business document style guide requirements 2.3 Finalise documents using software and technical functions and formatting according to task requirements 2.4 Name, save and print to a Portable Document Format (PDF) according to task requirements
3. Use spreadsheet software	3.1 Identify document purpose, audience and presentation requirements and clarify with personnel as required 3.2 Enter formulas and functions and customise spreadsheet settings according to task requirements 3.3 Name, save and print to PDF document according to task requirements
4. Use third application software package	4.1 Select software application package according to task requirements 4.2 Determine purpose, audience and presentation requirements 4.3 Use technical functions, other data and formatting to finalise document 4.4 Name, save and print to PDF document according to task requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none"> • Adds, subtracts, multiplies and divides whole numbers and decimals, identifying and selecting formulas and functions to use • Applies order of operations in calculations
Oral communication	<ul style="list-style-type: none"> • Clarifies work requirements using required language, questioning and active listening techniques
Reading	<ul style="list-style-type: none"> • Interprets textual information and determines organisational standards and job requirements • Identifies and applies symbols, icons and text associated with

Skill	Description
	applications software
Writing	<ul style="list-style-type: none"> Enters both written and verbally received information and data into a format applicable to software application Selects vocabulary, syntax, terminology, labelling and naming conventions applicable to program
Planning and organising	<ul style="list-style-type: none"> Plans routine tasks with goals and outcomes, taking some limited responsibility in decisions regarding sequencing
Self-management	<ul style="list-style-type: none"> Follows routine procedures in using digital technology and enters, stores and retrieves information directly applicable to own role
Technology	<ul style="list-style-type: none"> Identifies and evaluates purposes, specific functions and key features of basic digital systems and tools Operates digital systems and tools in completing routine tasks and adapting some functions

Unit Mapping Information

Supersedes and is equivalent to ICTICT203 Operate application software packages.

Assessment Requirements for ICTICT214 Operate application software packages

Modification History

Release	Comments
Release 2	This version first released with the Information and Communications Technology Training Package Version 8.0. Minor typographical correction in Knowledge Evidence.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce three workplace documents using three different software packages including word processing, spreadsheets and one additional software application package on at least one occasion.

In the course of the above, the candidate must:

- apply workplace health and safety (WHS) principles and responsibilities
- follow organisational requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational application software packages
- technical terminology applicable to reading help files and responding to system help prompts
- industry standard business practices applicable to preparing reports
- features and functions of commercial computing packages and of the industry standard software
- functions and features of Portable Document Formats (PDFs)
- import and export software functions
- document linking functions
- WHS principles and responsibilities

- purpose of input and output devices.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware device
- industry standard software
- documents detailing organisational style guide and policy
- data required in developing software application documents.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT518 Research and review hardware technology options for organisations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to research and evaluate existing and emerging technologies and hardware solutions to support organisational strategic goals.

The unit applies to those in senior roles who administer and manage information and communications technology (ICT) support in small-to-medium enterprises (SMEs) using a wide range of general ICT technologies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine organisational needs	1.1 Establish organisational requirements and selection criteria for new technology 1.2 Review strategic goals and determine future requirements 1.3 Assess physical infrastructure and financial parameters against strategic goals 1.4 Determine and document organisational technology requirements
2. Research vendors and suppliers	2.1 Identify supplier and vendor options according to organisational technology requirements

ELEMENT	PERFORMANCE CRITERIA
	2.2 Source information from suppliers and vendors 2.3 Assess vendor information against industry standards 2.4 Review emerging standards and applications for compatibility with supplier and vendor information 2.5 Select suppliers and vendors according to organisational requirements
3. Evaluate and report on hardware technology options	3.1 Review and test hardware and confirm it meets organisational requirements 3.2 Identify project risks associated with identified hardware 3.3 Document findings in a report and present to required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identifies, interprets and evaluates technical online and hard copy documentation containing complex terminology and diagrams to identify hardware technology that will benefit the organisation
Writing	<ul style="list-style-type: none"> Uses specialised, cohesive language to present an evaluation of hardware technology to a specific audience
Numeracy	<ul style="list-style-type: none"> Interprets financial information and applies mathematical calculations relating to time constraints and budgetary information
Self-management	<ul style="list-style-type: none"> Recognises and identifies the implications of organisational policies and procedures when planning and undertaking work
Teamwork	<ul style="list-style-type: none"> Identifies the requirements of important communication exchanges, selecting channels, format, tone and content according to purpose and audience
Planning and organising	<ul style="list-style-type: none"> Applies formal processes when planning more complex tasks, producing plans with logically sequenced steps and reflecting some awareness of resource constraints
Technology	<ul style="list-style-type: none"> Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot and understand the uses and potential of new technology

Unit Mapping Information

Supersedes and is equivalent to ICTICT501 Research and review hardware technology options for organisations.

Assessment Requirements for ICTICT518 Research and review hardware technology options for organisations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify hardware technology improvements for an organisation on at least one occasion, including:
 - analysing and planning approaches to technical problems and management requirements
 - accessing and conveying conceptual information regarding emerging technology in relation to organisational needs
 - forecasting future needs for planning and research purposes and recommending technology options
 - documenting findings in a report and seeking and responding to feedback.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key features of business planning processes applicable to researching technology
- client business needs that can be satisfied by the provision of information and communications technology (ICT) products and services
- current business practices for preparing reports
- current industry and technology information sources
- general features and capabilities of current industry accepted hardware, cabling and software products, and emerging trends and product design
- equipment performance benchmarking
- industry networks, key individuals and organisations within the ICT industry that influence and report on hardware technology
- information gathering techniques required when researching and reviewing hardware technology options
- quality assurance practices that promote reliable investigation processes

- vendor product directions, including those for:
 - access and security products
 - next generation networks
 - self-configuring asymmetric digital subscriber line (ADSL) or cable modem-router-switch for the small office and home office (SOHO) market
 - wireless standards.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- network and computer layout documentation and premises plans
- network components
- equipment specifications
- organisational guidelines
- business plan or model
- journals of industry and professional associations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK307 Provide network systems administration

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to manage the technical elements of a network, including contributing to a disaster recovery plan and network systems performance monitoring.

It applies to individuals working as frontline technical support personnel, who are responsible for network systems administration.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to provide network systems administration	1.1 Identify network performance requirements 1.2 Determine required security level according to organisational requirements 1.3 Determine required capacity of network according to organisational requirements 1.4 Determine required user access privileges and usage according to user account records and organisation policies and procedures
2. Provide client access and security features	2.1 Provide logins, passwords and applications to users according to organisational requirements 2.2 Provide file access to required users according to

ELEMENT	PERFORMANCE CRITERIA
	organisational requirements 2.3 Prepare documented security user data according to organisational policies and procedures
3. Monitor network performance	3.1 Analyse and respond to diagnostic information according to organisational requirements 3.2 Monitor software usage and identify any inappropriate or illegal use according to organisational policies and procedures 3.3 Delete any identified illegal software from network 3.4 Monitor hardware response time, and required performance indicators 3.5 Provide feedback to required personnel on performance indicators

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets contextual information from organisational guidelines Interprets systems design terminology, syntax and diagrams, and applies information to task
Writing	<ul style="list-style-type: none"> Prepares documentation outlining security user data according to organisational procedures
Oral Communication	<ul style="list-style-type: none"> Obtains information to confirm task requirements and provides feedback to required personnel using succinct verbal language
Numeracy	<ul style="list-style-type: none"> Interprets numerical data relating to network operations and performance indicators
Teamwork	<ul style="list-style-type: none"> Selects appropriate form, channel and mode of communication for a specific purpose, relevant to own role
Planning and organising	<ul style="list-style-type: none"> Plans own work requirements and prioritises actions to achieve required outcomes Ensures tasks are completed within workplace timeframes Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency, and considering how to link with work of others
Problem solving	<ul style="list-style-type: none"> Responds to highly obvious routine problems, using step by step instruction and procedures, or by a trial and error process, for

	non-critical situations
Technology	<ul style="list-style-type: none">• Demonstrates an understanding of purposes, specific functions and key features of common digital systems, and tools, and operates them effectively to complete routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTNWK301 Provide network systems administration.

Assessment Requirements for ICTNWK307 Provide network systems administration

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- sustain the operation of at least one network and meet organisational specifications
- use diagnostic test results to maintain network's integrity.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- network's operating system
- key elements of a disaster recovery policy
- features of network file and folder permissions
- vendor service-level agreements
- operating systems supported by an organisation, including functions and basic features
- organisational policies and procedures including:
 - access, security and networks
 - protection against, and elimination of computer viruses
 - deleting, restoring and archiving files
 - creating logons
- personal responsibilities for software copyright.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a live network

- industry standard systems administration tools
- organisational policy and procedures
- industry standard hardware, software, tools, licenses and digital devices
- business and client requirements
- project deliverables.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK309 Configure and administer network operating systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to create a network operating system and set up and use administrative tools to manage the network.

It applies to individuals who are required to provide frontline technical support to maintain network continuity to a network operating system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify and assess network features	1.1 Determine organisational policies and procedures used to administer network operating systems 1.2 Determine interfaces used by organisation's existing network 1.3 Identify potential network integration compatibility issues and risks
2. Administer and support system	2.1 Format hard drives, set up security restrictions and establish user log-in information according to organisational requirements 2.2 Determine organisational data requirements and data access frequency on systems interaction map 2.3 Plan required upgrades and reconfigurations to network

ELEMENT	PERFORMANCE CRITERIA
	operating system according to organisational requirements 2.4 Implement planned upgrades and reconfigurations according to task requirements
3. Set up and manage network file system	3.1 Create file and folder structure according to organisational requirements, policies and procedures 3.2 Set security access and sharing of file system to meet organisational requirements 3.3 Identify and implement required network operating system virus protection
4. Administer user services and user accounts	4.1 Create users and groups required to facilitate user security and network access according to user authorisation and organisational requirements 4.2 Verify successful user access to authorised network data and resources, and documents outcomes
5. Provide backup security support	5.1 Scan and clean network of viruses 5.2 Perform backup of network according to organisational procedures and requirements 5.3 Document processes used and lodge with required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Analyses and consolidates technical information and data from a range of sources against defined criteria and requirements
Writing	<ul style="list-style-type: none"> Prepares documentation describing outcomes and processes using relevant language according to organisational requirements
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to articulate information and task requirements using succinct verbal language
Teamwork	<ul style="list-style-type: none"> Uses appropriate methods to communicate with a range of stake holders and co-workers across different contexts Uses a range of strategies to establish a sense of connection and build rapport with clients and co workers
Planning and organising	<ul style="list-style-type: none"> Plans own work requirements and prioritises actions to achieve required outcomes Ensures tasks are completed within workplace timeframes

Unit Mapping Information

Supersedes and is equivalent to ICTNWK303 Configure and administer a network operating system.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTNWK309 Configure and administer network operating systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- set up and manage at least one network operating system.

In the course of the above, the candidate must:

- use network administrative tools to carry out system administration tasks
- manage the network file system
- create the network configuration required by the client
- provide user services and user accounts
- provide backup and service restoration capability.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- antivirus software, its operation, installation and update procedures
- organisational and industry standard network operating system (NOS)
- facilities available in an operating environment
- features and capabilities of networking technologies
- implementation of network security in a local area network (LAN) including:
 - file and folder permissions
 - users and group settings
- monitoring aspects of network performance or traffic including:
 - system administration tools
 - third-party tools.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard ICT blueprint
- user network requirements
- antivirus software
- network administration tools
- a live network with a representative range of networked environments and operating systems
- a server
- technical records, organisational policies, access policy and documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK424 Install and operate small enterprise branch networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to utilise networking fundamentals, including wide area network (WAN) technologies, basic security, route and switch operations as well as to configure simple networks.

It applies to individuals involved in network support positions with the Information Communications Technologies (ICT) skills required to use tools, equipment, software and protocols to install, operate, a small enterprise branch network.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to install network	1.1 Determine organisational network performance and data flow requirements 1.2 Identify protocols in OSI and TCP/IP models according to organisational requirements 1.3 Identify common network problems at layers 1, 2, 3 and 7
2. Install small switched network	2.1 Select media, cables, ports, and connectors according to task requirements 2.2 Identify network segmentation, traffic management and switching requirements

ELEMENT	PERFORMANCE CRITERIA
	2.3 Perform, save and verify initial switch configuration according to task requirements 2.4 Verify network status and switch operation according to technical and organisational standards 2.5 Implement and verify security level for switch according to organisational requirements
3. Implement IP addressing scheme and services	3.1 Create and implement addressing scheme to network according to task requirements and technical standards 3.2 Assign and verify live IP addresses to hosts, servers and networking devices in a local area network (LAN) environment 3.3 Implement static and dynamic addressing services for hosts 3.4 Enable and verify operation of network address translation (NAT) 3.5 Configure and implement dynamic host configuration protocol (DHCP) on router according to task requirements
4. Install small routed network	4.1 Select media, cables, ports, and connectors according to task requirements 4.2 Perform, save and verify basic router configuration according to task requirements 4.3 Install and verify classless routing protocol and network connectivity with required personnel 4.4 Implement password and physical security according to organisational requirements
5. Connect WAN links	5.1 Determine required method for connecting to a WAN 5.2 Implement and verify basic WAN serial connection
6. Finalise branch network activities	6.1 Seek network performance capability feedback from required personnel 6.2 Document finalised process and submit to required personnel 6.3 Store unused ICT equipment according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
-------	-------------

Oral Communication	<ul style="list-style-type: none">• Uses listening and questioning techniques to confirm information and requirements and gather feedback from required personnel
Reading	<ul style="list-style-type: none">• Interprets and critically analyses complex texts• Applies appropriate strategies to construct meaning from complex texts
Writing	<ul style="list-style-type: none">• Prepares documentation detailing finalised process• Writes and edits code and technical data in a logical manner using required syntax and specifications

Unit Mapping Information

Supersedes and is equivalent to ICTNWK404 Install, operate and troubleshoot a small enterprise branch network.

Links

Companion Volume Implementation Guide is found on VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a53af4e4-b400-484e-b778-71c9e9d6aff2>

Assessment Requirements for ICTNWK424 Install and operate small enterprise branch networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- configure, install and operate one small enterprise branch network
- identify, test and verify performance capability issues for a small enterprise branch network.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- internet protocol (IP) addressing scheme architecture
- network topologies, protocols and security solutions defined network problems
- Open Systems Interconnection (OSI) layers of networking
- Transmission Control Protocol (TCP)
- Network Address translation (NAT)
- dynamic host configuration protocol.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where network installation may be conducted
- small enterprise routers and switches
- network's design documentation
- equipment specifications
- hardware and software required to install and operate small enterprise branch networks
- organisational guidelines

- computers
- documents including policies and procedures that may affect installation and operation of a network.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK426 Install and configure client-server applications and services

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to install, configure, maintain and support server-side applications on network workstations, in both Windows and Linux based networks.

It applies to individuals working as network administrators and network support roles who implement the installation and configuration of client-server-based software.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to provide client-server software requirements	1.1 Identify client-server output requirements according to organisational needs 1.2 Plan client-server solution according to organisational requirements 1.3 Determine required hardware to implement client-server solution 1.4 Determine host operating system for client-server software
2. Install, configure, and manage services	2.1 Install client-server software and client hardware according to organisational policies, procedures and

ELEMENT	PERFORMANCE CRITERIA
	<p>guidelines</p> <p>2.2 Configure client-server software according to vendor guidelines</p> <p>2.3 Manage installation of upgrades and patches to client-server software environment</p> <p>2.4 Backup client-server software according to technical and organisational requirements</p>
3. Determine configuration effect on network design	<p>3.1 Identify required utilities to monitor and determine network performance capability according to task requirements</p> <p>3.2 Create network performance benchmarks</p> <p>3.3 Determine performance effect on network after installation of client-server software</p>
4. Test and finalise client-server activities	<p>4.1 Test operation of client-server software against task requirements</p> <p>4.2 Store unused ICT equipment according to manufacturer specifications and organisational procedures</p> <p>4.3 Obtain sign-off from required personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Interprets numerical information to analyse memory, hard disk and performance requirements
Oral communication	<ul style="list-style-type: none"> Selects appropriate form, channel and mode of communication for a specific purpose relevant to own role
Reading	<ul style="list-style-type: none"> Recognises and interprets technical and vendor-specific information to determine business requirements

Unit Mapping Information

Supersedes and is equivalent to ICTNWK407 Install and configure client-server applications and services.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTNWK426 Install and configure client-server applications and services

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install, configure, monitor and maintain at least one server-based client software to communicate with existing server software.

In the course of the above, the candidate must:

- test operation of client-server software
- identify and implement required updates for client-server software
- monitor performance of client-server software
- backup and maintain client-server software.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- requirements for client-server applications and services, including:
 - computer hardware and software required
 - internet protocol (IP) addressing
 - networking fundamentals
 - operating systems
- operating system help and support utilities required, including:
 - procedures for implementing backup and recovery
 - software installation and configuration
 - user account and password management
 - troubleshooting tools and techniques
 - network diagnostic utilities.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware and software supplies
- server and networking tools
- client-server based network
- appropriate client-server software
- ICT equipment used in industry
- relevant equipment documentation
- work health and safety guidelines
- ICT storage guidelines.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK561 Design enterprise wireless local area networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to design an enterprise wireless local area network (WLAN) and analyse existing network layouts and parameters.

It applies to individuals working in the networking area who are required to evaluate client requirements and design a WLAN.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Document WLAN network configuration	1.1 Obtain work details and scope from relevant personnel and arrange for site access in compliance with security arrangements, legislation, codes, regulations and standards 1.2 Obtain details of network layout and parameters 1.3 Hold consultations with planned stakeholders 1.4 Document the network configuration, network topology and links to carrier
2. Research client needs of WLAN	2.1 Discuss current and future network needs with client according to organisational requirements 2.2 Document current and future needs according to organisational requirements

ELEMENT	PERFORMANCE CRITERIA
3. Implement site survey	3.1 Select diagnostic tools and measurement processes for site survey 3.2 Select test equipment and confirm calibration for site survey 3.3 Measure and diagnose wireless working environment by conducting a site survey with minimum disruption to client and confirm safe working environment for all relevant personnel 3.4 Record physical infrastructure, building use, aesthetics and other identified issues that will impact on future network performance and acceptance by the client 3.5 Record radiofrequency interference issues, sources and subsequent resolution 3.6 Document results of site survey
4. Develop specifications for upgrade of local area network	4.1 Document relevant network performance equipment and capacity for the expanded network 4.2 Assess interferences to radiofrequency, topographic barriers, climate, obstacles, transmission distances and construction materials 4.3 Assess optimal location and position of access points, repeaters, routers and other equipment 4.4 Develop cabling plans and repeater links and power requirements 4.5 Determine frequency to be used based on client and user requirements
5. Model local area network	5.1 Determine required test and modelling routines 5.2 Determine estimated network traffic and planned growth 5.3 Test planned network using modelling tools and techniques 5.4 Document outcome of tests and revise design where required
6. Determine components for local area network	6.1 Select and test vendor products and equipment where required 6.2 Identify sustainable compatibility, economic running costs and user connectivity access according to vendor requirements 6.3 Finalise components list 6.4 Prepare implementation plans according to organisational requirements
7. Present local area network design to client	7.1 Present the design to client according to organisational requirements 7.2 Advise client of design rationale 7.3 Inform the client of design limitations, performance expectations, unanticipated outcomes and security threats 7.4 Obtain and document feedback from client 7.5 Modify design if required

ELEMENT	PERFORMANCE CRITERIA
	7.6 Complete design documentation and obtain client endorsement

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Interprets numerical data to estimate and project traffic needs, carry out a cost benefit analysis and accurately calibrate equipment
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning skills to confirm knowledge for requirements and participates in a verbal exchange of ideas/solutions Uses required, detailed and clear language to address stakeholders, users and industry bodies to disseminate information
Reading	<ul style="list-style-type: none"> Recognises and interprets legislative, organisational and technical material to determine job requirements
Writing	<ul style="list-style-type: none"> Develops a broad range of technical material and creates records for a specific audience, using clear and detailed language to convey explicit information, requirements and recommendations
Teamwork	<ul style="list-style-type: none"> Identifies the requirements of important communication exchanges, selecting required channels, format, tone and content to suit purpose and audience
Planning and organising	<ul style="list-style-type: none"> Demonstrates a sophisticated knowledge of principles, concepts, language and practices associated with the digital world Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues Takes responsibility for high-impact decisions in complex situations involving many variables and constraints Uses nuanced knowledge of context to recognise anomalies and subtle deviations to normal expectations, focussing attention on critical issues and variables
Problem solving	<ul style="list-style-type: none"> Understands own legal rights and responsibilities and is extending knowledge of general legal principles applicable across work contexts
Technology	<ul style="list-style-type: none"> Uses digital tools to access and organise complex data and analyse multiple sources of information for strategic purposes

Unit Mapping Information

Supersedes and is equivalent to ICTNWK518 Design an enterprise wireless local area network.

Assessment Requirements for ICTNWK561 Design enterprise wireless local area networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design at least two enterprise wireless local area networks.

In the course of the above, the candidate must:

- assess wireless network performance requirements for the client
- measure and diagnose wireless working environment
- produce wireless models and network specifications that meet client requirements
- produce wireless network designs and component lists
- document the design and obtain client approval.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- wireless network survey techniques, including:
 - audit and intrusion detection systems
 - auditing and penetration testing techniques
 - bandwidth and quality of service
 - factors affecting signal quality
- key technical considerations for designing a wireless network, including:
 - features of antenna design
 - layer 2 and layer 3 design issues
 - impact of radio frequency
 - problems associated with topography and obstacles in radio transmission path
 - wireless topologies

- wireless local area networks (WLAN) and wireless metropolitan access network (WMAN) solutions
- Wi-Fi access points
- key client organisation considerations when designing a wireless network, including:
 - small office home office (SOHO) and enterprise local area networks (LANs)
 - transmission control protocols and internet protocols (TCP/IP) and applications
 - wireless security strategies
 - security threats
- software considerations when designing wireless networks, including:
 - network protocols and operating systems
 - security protocols, standards and data encryption
- organisational requirements regarding:
 - discussing and documenting current and future network needs for clients
 - preparing implementation plans
 - presenting network designs to clients
- required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) requirements for scoped work.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- network infrastructure, including wireless hardware and software
- network technical requirements
- real or simulated wireless networks
- required diagnostic equipment and standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK624 Configure advanced internet network routing solutions

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <ul style="list-style-type: none"> • Supersedes and is equivalent to ICTNWK603 Plan, configure and test advanced internet network routing solutions. • Supersedes and is not equivalent to ICTNWK605 Design and configure secure integrated wireless systems. <p>Updated title to better reflect unit scope.</p>

Application

This unit describes the skills and knowledge required to plan, install and test scalable and secure internet protocol version 4 (IPv4) and internet protocol version 6 (IPv6) internet network routing solutions to local area networks (LANs) and wide area networks (WANs).

The unit applies to individuals who may have advanced information and communications technology (ICT) skills and knowledge working in roles such as security specialists, network and communications engineers, senior network administrators, network managers, branch officers and mobile workers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Develop IP routing	1.1 Confirm work brief and tasks according to organisational

ELEMENT	PERFORMANCE CRITERIA
solutions	<p>policies and procedures</p> <p>1.2 Analyse and select appropriate advanced IPv4 and IPv6 routing protocols according to work brief</p> <p>1.3 Select and source configuration hardware, software and tools</p> <p>1.4 Confirm component serviceability</p> <p>1.5 Create routing solution implementation and verification plan</p> <p>1.6 Configure and test routing solution according to plan</p> <p>1.7 Rectify any routing issues</p>
2. Create IPv6-based network	<p>2.1 Determine IPv6-based network requirements</p> <p>2.2 Create implementation and verification plan for IP-based network solution in consultation with required personnel</p> <p>2.3 Perform IPv6 interoperation with IPv4-based network</p> <p>2.4 Verify and test IPv6-based network solution and rectify any issues</p>
3. Confirm network redistribution	<p>3.1 Complete network redistribution analysis</p> <p>3.2 Create IPv6 redistribution plan according to analysis findings</p> <p>3.3 Conduct and verify IPv6-based network redistribution</p> <p>3.4 Test redistribution solution and rectify any issues</p> <p>3.5 Develop and securely file documentation on completed work tasks according to organisational policies and procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interprets complex technical information to confirm requirements
Writing	<ul style="list-style-type: none"> Prepares workplace documentation that includes all completed work tasks in a format appropriate to organisational requirements
Planning and organising	<ul style="list-style-type: none"> Uses a combination of formal planning processes to identify threats and risks

Skill	Description
Problem solving	<ul style="list-style-type: none">• Uses nuanced knowledge of context to solve problems in complex and dynamic environments
Technology	<ul style="list-style-type: none">• Interprets the strategic and operational potential of digital trends to achieve work goals, enhance work processes, create opportunities and enhance or reduce risks

Unit Mapping Information

Supersedes and is equivalent to ICTNWK603 Plan, configure and test advanced internet network routing solutions.

Supersedes and is not equivalent to ICTNWK605 Design and configure secure integrated wireless systems.

Assessment Requirements for ICTNWK624 Configure advanced internetwork routing solutions

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <ul style="list-style-type: none">• Supersedes and is equivalent to ICTNWK603 Plan, configure and test advanced internetwork routing solutions.• Supersedes and is not equivalent to ICTNWK605 Design and configure secure integrated wireless systems. <p>Updated title to better reflect unit scope.</p>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- configure at least one internet protocol version 4 (IPv4) routing solution in which the work must include one of the following:
 - distance vector routing protocol solution
 - link-state routing protocol solution
- configure at least one internet protocol version 6 (IPv6) routing solution.

In the course of the above, the candidate must:

- produce and securely file documentation of work tasks performed
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key types of IPv4 and IPv6 routing protocols and solutions, including:
 - distance vector routing solutions
 - link-state routing protocol solutions
 - hybrid routing solutions

- functions and features relevant to configuring advanced internet network routing solutions, including:
 - broadband technologies
 - routing tables
 - external factors that impact network design
 - business component implementation
 - implementation and verification plans
 - virtual private networks (VPN)
 - IPv6-based networks
 - IPv4-based networks
 - IPv4 and IPv6 redistribution and interoperation processes
 - local area networks (LANs)
 - wide area networks (WANs)
 - routing solutions
- configuration procedures for IPv6-based networks
- methods and technical guidelines required to configure network components
- network testing tools and operations for complex networks
- risk management strategies and practices for complex networks, including:
 - protocols and operational processes
 - operating security technologies
 - formal and structured approaches to network management
- organisational formats for documentation
- organisational policies and procedures and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- technical network requirements, including access to different operating systems on different devices
- network infrastructure, including servers, tools, hardware and software
- LAN and WAN systems required to demonstrate the performance evidence
- organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK625 Plan and configure advanced internetwork switching solutions

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTNWK604 Plan and configure advanced internetwork switching solutions.

Application

This unit describes the skills and knowledge required to plan and configure advanced internetwork switching and layer-based routing solutions for enterprises. It includes the secure integration of multilayer switches, virtual local area networks (VLANs), wireless local area networks (WLANs), and video voice features into high-availability networks.

The unit applies to individuals who may work in roles such as network specialists, network engineers, network infrastructure engineers, senior network administrators, network and systems managers, information and communications technology (ICT) security specialists and engineers, and communications managers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Test VLAN-based solutions	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Analyse and select VLAN-based solution and network

ELEMENT	PERFORMANCE CRITERIA
	<p>design option according to work brief</p> <p>1.3 Create implementation and verification plan for VLAN-based network solution</p> <p>1.4 Verify switch-to-switch connectivity, loop prevention and access ports for VLAN-based solution</p> <p>1.5 Configure and verify private VLAN-based solution</p> <p>1.6 Document implementation and verification results according to work brief</p>
2. Secure multilayer switch-based solutions	<p>2.1 Analyse and select layer 2 and switch-based layer 3 network solution according to work brief</p> <p>2.2 Create implementation and verification plan for each network solution</p> <p>2.3 Configure and verify layer 2 network solution</p> <p>2.4 Configure and verify routing interfaces and switch-based layer 3 network solution</p> <p>2.5 Document implementation and verification results according to work brief</p>
3. Prepare wireless support infrastructure	<p>3.1 Analyse and select wireless extensions according to work brief</p> <p>3.2 Configure and verify wireless extensions</p> <p>3.3 Implement voice over internet protocol (VoIP) and video application support solutions according to work brief</p> <p>3.4 Test multilayer wireless extension functionality and rectify any issues</p>
4. Develop high-availability multilayer switches	<p>4.1 Identify high-availability multilayer switching solutions</p> <p>4.2 Create implementation and verification plan for high-availability network</p> <p>4.3 Configure and verify first hop redundancy protocols (FHRP) according to work brief</p> <p>4.4 Implement switch supervisor redundancy and verify high-availability network solution</p> <p>4.5 Test multilayer switches and rectify any issues according to work brief and organisational policies and procedures</p> <p>4.6 Develop and securely file documentation on completed work tasks according to organisational policies and procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interprets complex technical information to confirm requirements
Writing	<ul style="list-style-type: none"> Develops a broad range of plans and documentation for work tasks Conveys explicit information, requirements and recommendations using concise and detailed language
Initiative and enterprise	<ul style="list-style-type: none"> Responds to protocols in complex work contexts and follows protocols in changing situations
Planning and organising	<ul style="list-style-type: none"> Uses a broad range of strategies to store, access and organise virtual information, identifying how information is retrieved and how it may be interpreted and used
Problem solving	<ul style="list-style-type: none"> Uses a mix of intuitive and formal processes to identify key information and issues, evaluate alternative strategies, anticipate consequences and consider implementation issues and contingencies
Technology	<ul style="list-style-type: none"> Operates from a broad conceptual plan to identify functional, performance and management features associated with the operation of complex switched networks Implements measures to monitor and control access to digitally stored and transmitted information

Unit Mapping Information

Supersedes and is equivalent to ICTNWK604 Plan and configure advanced internetwork switching solutions.

Assessment Requirements for ICTNWK625 Plan and configure advanced internetwork switching solutions

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTNWK604 Plan and configure advanced internetwork switching solutions.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan and configure at least two different advanced internetwork switching solutions.

In the course of the above, the candidate must:

- configure one private virtual local area network (VLAN)-based solution
- configure one multilayer switch-based solution
- configure one wireless extension with multi-layered (layer 3) switches
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of formal and structured network management, including:
 - integrated and unified enterprise networks
 - wireless standards and certifications
 - external factors on switched enterprise networks
 - maintenance tools and practices
 - types of network topologies
- methods to configure network components using technical guidelines
- functions and features of advanced internetworking switching solutions, including:
 - local area networks (LANs)

- VLANs
- wide area networks (WANs)
- virtual private networks (VPN)
- implementation and verification plans
- switching and routing technologies
- multilayer switches
- high availability network solutions and switching solutions
- first hop redundancy protocols (FHRPs)
- voice over internet protocol (VoIP)
- wireless extensions
- layer 3 networks
- layer 2 networks
- switch-to-switch connectivity
- video application support solutions
- key risk management strategies and practices for complex networks, including:
 - protocols and operational processes
 - operating security technologies
 - formal and structured approaches to network management
 - internetwork testing procedures
- security features of networks
- organisational formats for documentation
- organisational policies and procedures and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- technical network requirements, including access to different operating systems on different devices
- network infrastructure, including servers, tools, hardware and software
- LAN and WAN systems required to demonstrate the performance evidence
- organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG302 Apply introductory programming techniques

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to create simple applications through introductory programming techniques.

It applies to those who have responsibility for creating applications and includes applying language syntax, control structures to create code, using programming standards, testing and debugging.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish application task	1.1 Clarify task with required personnel 1.2 Identify design specifications, programming standards and guidelines according to task requirements
2. Apply language syntax and layout	2.1 Apply basic language syntax rules 2.2 Create code using language data types, operators and expressions 2.3 Apply variables and variable scope 2.4 Use program library functions 2.5 Clarify meaning of code using commenting techniques
3. Apply control structures	3.1 Apply language syntax in sequence, selection and

ELEMENT	PERFORMANCE CRITERIA
	iteration constructs 3.2 Create expressions in selection and iteration constructs using logical operators
4. Code using standard programming algorithms	4.1 Develop algorithms using sequence, selection and iteration constructs 4.2 Create and use data structures 4.3 Code standard sequential access algorithms used in reading and writing text files 4.4 Apply string manipulation
5. Test code	5.1 Examine variable contents and use debugging techniques to detect and correct errors 5.2 Create and conduct simple tests and confirm code meets design specification 5.3 Document actions carried out and results of tests performed
6. Create a simple application and seek feedback	6.1 Design an algorithm in response to basic program specifications 6.2 Develop application to meet program specification 6.3 Confirm application meets initial specifications 6.4 Present application to required personnel 6.5 Obtain feedback and sign off from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral Communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to confirm requirements and articulate complex concepts
Numeracy	<ul style="list-style-type: none"> Confirms program specifications are met using mathematical formulae
Writing	<ul style="list-style-type: none"> Writes and edits code and technical data in a logical manner using required syntax Develops documentation outlining changes and tests performed using appropriate structure, layout and technical programming language
Planning and	<ul style="list-style-type: none"> Takes responsibility for planning, sequencing and prioritising tasks

SKILL	DESCRIPTION
organising	and own workload
Problem solving	<ul style="list-style-type: none">• Analyses required outcomes and determines program code using problem-solving techniques• Uses a formal decision-making process, identifying and evaluating several choices against a limited set of criteria when selecting syntax• Evaluates decisions in terms of how well they meet stated design specifications
Technology	<ul style="list-style-type: none">• Completes complex tasks using features of digital tools

Assessment Requirements for ICTPRG302 Apply introductory programming techniques

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and build one simple application according to programming standards and program specifications.

In the course of the above, the candidate must:

- apply programming language syntax, sequence, selection and iteration constructs
- document changes and tests performed
- review code according to feedback obtained during design and development of application.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- language data types, operators, expressions and variables
- basic language syntax rules
- sequence, selection and iteration constructs
- the development of small-sized applications
- industry programming standards and guidelines
- commenting techniques
- debugging techniques
- application testing methods
- basic data structures.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- programming standards and guidelines
- programming software
- required hardware and its components
- industry standard software development tools
- an integrated development environment (IDE).

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG430 Apply introductory object-oriented language skills

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 4.0.

Application

This unit describes the performance outcomes, skills and knowledge required to undertake introductory programming tasks using an object-oriented programming language including tool usage, documentation, debugging, and testing techniques.

It applies to individuals who are programmers in a variety of fields and who are required to produce simple programs in object-oriented languages.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1 Determine application design	1.1 Review and clarify user requirements with user 1.2 Plan and determine application design specifications to satisfy user requirements
2. Implement the application design	2.1 Develop application according to application design and organisational code conventions 2.2 Document application according to organisational documentation conventions

3. Test the application	<p>3.1 Develop tests to determine that application logic and syntax satisfies user requirements and application specifications, and modify application to meet user requirements and application specifications</p> <p>3.2 Document tests according to organisational documentation conventions</p>
4. Hand over the application to the user	<p>4.1 Review application against user requirements to ensure user requirements are satisfied</p> <p>4.2 Present application to user and obtain user acceptance</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Evaluates, and integrates, information and ideas to construct meaning and selects, and applies reading strategies in relation to design specifications, coding standards, and coding- language documentation
Writing	<ul style="list-style-type: none"> Communicates relationships between ideas and information, in a style appropriate to the audience and purpose, and selects the vocabulary, grammatical structures and conventions appropriate to the text, in relation to coding, recording outcomes, and documenting activities
Numeracy	<ul style="list-style-type: none"> Selects from, and flexibly applies, mathematical and problem-solving strategies and techniques, in a programming context Uses formal written mathematical language and representation, in the context of programming
Navigate the world of work	<ul style="list-style-type: none"> Recognises and follows, explicit and implicit standard and meets expectations associated with own role when developing code that is compliant with standards and guidelines
Get the work done	<ul style="list-style-type: none"> Uses a formal decision-making process, identifying and evaluating several choices against a limited set of criteria, when selecting language data types, operators and expressions Evaluates the effectiveness of decisions, in terms of how well they meet the stated design specifications Uses analytical processes to decide on a course of action when debugging Utilises features within applications in order to develop software programs Recognises, and uses language and symbols, when applying the coding syntax

	<ul style="list-style-type: none"> Actively identifies systems, devices and applications with the potential to meet current and future needs regarding programming
--	---

Assessment Requirements for ICTPRG430 Apply introductory object-oriented language skills

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 4.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit; including evidence of the ability to:

- Select and use three language data types, three operators and three expressions
- Use correct language syntax for one sequence, one selection and two iteration constructs
- Use a modular approach to implement the logic for one object operation
- Implement a class that uses arrays of primitive data types twice.
- Read from and write to one text file
- Implement two classes that each contain four instance variables
- Implement one class that contains two options for object construction
- Implement one class that uses user-defined object aggregation
- Implement polymorphism once for code extensibility
- Use one debugging tool
- Apply code and documentation conventions that specify at least 3 aspects, according to organisational requirements
- Perform and document two unit test cases
-

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Processes and techniques related to object-oriented programming, including the concepts and language
- Syntax language rules, data types structures
- Primitive instance variables
- Class variables
- Small-size application development processes
- Polymorphism and inheritance

- Debugging and testing approaches and techniques
- Constructors
- Object aggregation
- Sequence, selection and iteration constructs
- Organisational documentation
-

Assessment Conditions

Skills must be demonstrated in a workplace or simulated environment where conditions are typical of those in an ICT working environment or workplace. This includes:

- Integrated development environment
- Applications relevant to software development
- Organisational code and documentation conventions
- User requirements
- Individual user to consult

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG440 Apply introductory programming skills in different languages

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to carry out introductory programming activities including application of basic language syntax, coding and debugging code in different languages.

It applies to those who work in programming, development and technical roles. This includes programmers, software developers and as IT staff responsible for conducting programming activities, including writing, maintaining and updating programs, defining data and file handling.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Apply basic language syntax and layout	1.1 Identify basic language syntax rules 1.2 Use language data types, operators and expressions 1.3 Use sequence, selection and iteration constructs using required language syntax
2. Code using data structures and standard algorithms	2.1 Use data structures 2.2 Create and manipulate data structures through code 2.3 Create sequential search, binary search, insertion and

	deletion algorithms on data structures
3. Debug, document and test code	<p>3.1 Debug code using stand-alone debugging tools and tools provided by integrated development environment (IDE)</p> <p>3.2 Trace code execution and examine variable contents using debugger</p> <p>3.3 Develop maintainable code according to organisational guidelines and provided coding standard when documenting activities</p> <p>3.4 Apply internal documentation to all code created using documentation tools available in target language</p> <p>3.5 Design and document tests according to organisational guidelines</p> <p>3.6 Capture and record test results according to organisational requirements</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets and critically analyses and applies strategies and constructs meaning from complex texts
Writing	<ul style="list-style-type: none"> Prepares documentation recording process and results for tests performed according to organisational requirements Writes and edits code and technical data in a logical manner using required syntax
Problem solving	<ul style="list-style-type: none"> Decides on a course of action using analytical processes
Self-management	<ul style="list-style-type: none"> Takes personal responsibility and follows explicit and implicit policies, procedures and industry standards Automatically implements standard procedures in routine decisions when programming according to guidelines and standards
Technology	<ul style="list-style-type: none"> Interprets key principles and concepts underpinning the design and operation of digital systems and tools

Unit Mapping Information

Supersedes and is equivalent to ICTPRG414 Apply introductory programming skills in another language.

Assessment Requirements for ICTPRG440 Apply introductory programming skills in different languages

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create, maintain and update at least one program using coding activities, basic language syntax and layout.

In the course of the above, the candidate must:

- write code using at least two data structures and at least two standard algorithms according to organisational guidelines
- debug at least one program written above using debugging tools provided by integrated development environment (IDE)
- document activities undertaken in at least one program developed above according to organisational guidelines and coding standards
- test program created above and confirm specifications are met
- record results for tests performed above, according to organisational guidelines.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- language syntax rules
- organisational procedures and guidelines that may be used to apply introductory programming skills in different languages
- coding techniques and standards
- documentation techniques that may be used to document programming activities
- application development processes, debugging methodologies, testing techniques and basic data structures guidelines that may be used to apply introductory programming skills in different languages.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- integrated development environment (IDE) for determined language
- specific tools and licences, depending on particular platform and language.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG443 Apply intermediate programming skills in different languages

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to carry out intermediate programming activities involving coding, debugging and testing of code, and creating applications using different programming languages.

It applies to those who are programmers in a variety of fields and are required to conduct programming activities and produce software programs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish task requirements and define data structures and code	1.1 Establish user requirements and specifications 1.2 Design, define and use data structures that are aggregate of other data types 1.3 Code using user-defined data structures 1.4 Create, manipulate and destroy dynamic variables, including data structures, using facilities in language
2. Code using standard algorithms	2.1 Code using modular programming approach, including pass-by-reference parameter passing 2.2 Create and manipulate 2-D data structures using code

ELEMENT	PERFORMANCE CRITERIA
	2.3 Create and maintain sorted data structures and use language-provided facilities 2.4 Code using simple binary search technique 2.5 Code binary file-handling solutions using random-access algorithms
3. Debug, document and test code	3.1 Use stand-alone debugging tools and tools provided by integrated development environment (IDE) 3.2 Trace code execution and examine variable contents using debugger 3.3 Develop and document maintainable code according to organisational guidelines and coding standards 3.4 Apply internal documentation to code using documentation tools available in target language 3.5 Design and document tests according to organisational guidelines 3.6 Test produced code and confirm compliance with program specification 3.7 Capture and record test results
4. Develop, test and document files and application	4.1 Build application according to user requirement 4.2 Access multiple source-code files 4.3 Employ integrated development environment (IDE) project maintenance facilities and automate program building using created files 4.4 Develop program specification solution according to coding standards 4.5 Design algorithm and document, construct and test applications according to problem description using target language 4.6 Document completed application according to organisational procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets and applies applicable strategies and constructs meaning from texts relating to organisational guidelines and coding standards

SKILL	DESCRIPTION
Writing	<ul style="list-style-type: none"> • Prepares required documentation expressing ideas and information for specific audiences according to organisational procedures • Writes and edits code and technical data in a logical manner using required syntax
Problem solving	<ul style="list-style-type: none"> • Decides on a course of action using analytical processes • Identifies possible solutions to difficult problems using a systematic process
Self-management	<ul style="list-style-type: none"> • Takes personal responsibility and follows explicit and implicit policies, procedures and industry standards • Uses systematic processes, setting goals, gathering required information and identifying and evaluating options against agreed criteria
Technology	<ul style="list-style-type: none"> • Interprets key principles and concepts underpinning the design and operation of digital systems and tools

Unit Mapping Information

Supersedes and is not equivalent to ICTPRG418 Apply intermediate programming skills in another language.

Assessment Requirements for ICTPRG443 Apply intermediate programming skills in different languages

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and build an application in response to user requirements and specifications.

In the course of the above, the candidate must:

- code using user-defined data structures and standard algorithms
- develop a maintainable code
- design a test for code and record and document test results
- produce a technical documentation of activities and completed application.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- dynamic variables
- modular programming approach to coding
- medium-size application development processes
- data structures including but not limited to:
 - lists
 - arrays
 - linked lists
 - stack
 - queues
 - trees
 - graphs
 - sets
 - hash tables

- random-access algorithms
- user-defined data structures
- project maintenance and required language-provided facilities
- development methodologies and their application
- organisational guidelines and coding standards applicable to applying intermediate programming skills
- programming methodologies
- documentation techniques and tools within target languages that may be used to apply intermediate programming skills in different languages
- debugging tools and methodologies
- code testing procedures.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- an integrated development environment (IDE) for determined language and its tools and licenses
- coding standards
- user requirements and specifications
- technical requirements
- required hardware and its components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG444 Analyse software requirements

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to research and analyse client requirements, produce a range of options for business process efficiencies and create a software-requirements document.

It applies to those who are required to perform an analysis role in formulating software requirements in a range of work environments. They may work as database or computer developers, business analysts, or project managers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Gather and confirm client requirements	1.1 Confirm requirement and scope of project with required personnel 1.2 Gather information regarding requirements via sources of information and business processes 1.3 Analyse client requirements and problem context and opportunity faced by client 1.4 Document client requirements, project scope, related problems and sources of information according to organisational procedures 1.5 Submit document to required personnel and seek

	and respond to feedback
2. Analyse functional and related non-functional requirements and feasibility of project	<p>2.1 Map business processes using modelling tool including unified modelling language (UML)</p> <p>2.2 Determine opportunities in business process efficiencies</p> <p>2.3 Document functional and non-functional processes according to organisational procedures</p> <p>2.4 Analyse technical and operational feasibility of project</p> <p>2.5 Determine budget and schedule feasibility of project</p> <p>2.6 Examine purpose and intent of project within organisation</p>
3. Develop high-level system solutions	<p>3.1 Develop and document feasible solutions according to client requirements</p> <p>3.2 Explore and document the feasibility of each solution</p> <p>3.3 Examine alternatives against project constraints</p> <p>3.4 Document assumptions, dependencies and required resources</p> <p>3.5 Produce a project risk analysis according to project requirements</p> <p>3.6 Document future requirements according to organisational procedures</p>
4. Prepare and publish software-requirements documentation	<p>4.1 Develop software-requirements document according to organisational procedures</p> <p>4.2 Submit software-requirements report to required personnel and obtain project approval</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Selects from, and applies an expanding range of mathematical and problem-solving techniques when determining project budget and schedule feasibility
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to obtain information and requirements using industry language for intended audience

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets and critically analyses and applies strategies and constructs meaning from complex texts when gathering and analysing information
Writing	<ul style="list-style-type: none"> Develops documentation detailing requirements, scope of work and solutions using appropriate structure, layout and technical programming language
Planning and organising	<ul style="list-style-type: none"> Sequences and schedules complex activities, monitors implementation and manages communication
Problem solving	<ul style="list-style-type: none"> Decides on a course of action using analytical processes Uses a systematic process and identifies possible solutions to a difficult problem Uses systematic processes in predictable and unpredictable situations, setting goals and gathering information
Self-management	<ul style="list-style-type: none"> Identifies and responds to both explicit and implicit protocols when submitting report to required personnel for approval
Technology	<ul style="list-style-type: none"> Accesses, organises, analyses and displays information applicable to software requirements using a range of digital systems and tools

Unit Mapping Information

Supersedes and is not equivalent to ICTPRG419 Analyse software requirements.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTPRG444 Analyse software requirements

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least two high-level system solutions for one set of software requirements according to client requirements.

In the course of the above, the candidate must:

- analysing and document at least two functional and at least two non-functional requirements
- document requirements and work performed according to organisational procedures
- submit documents and obtain approval.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- tools and techniques that may be used to analyse software requirements including;
 - client business domain
 - content features including clarity and readability
 - system functionality
 - document design and usability
 - budget creation techniques
 - modelling tools including unified modelling language (UML)
 - documentation techniques
 - risk analysis techniques
 - functions and features, of templates and style guides
 - the role of stakeholders and the degree of stakeholder involvement
 - software development life cycle overview

- systems development methodologies
- organisational procedures.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- documentation regarding client and software functionality requirements
- sources of information including client business processes
- word processing software and its features
- required hardware and digital devices
- industry standard modelling software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG534 Deploy applications to production environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the, skills and knowledge required to install, uninstall, and configure an application to a production environment.

It applies to those responsible for the software deployments of enterprise applications. They may work as application DevOps engineers, developers, administrators, release managers or deployment coordinators.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan software installation	1.1 Determine client system and server system according to installation requirements 1.2 Determine installation method according to installation requirements 1.3 Determine organisational security requirements 1.4 Determine and document software-installation plan according to organisational policies and procedures
2. Perform software installation	2.1 Create an install package for application according to installation plan 2.2 Test install package in test environment 2.3 Deploy install package to production environment

ELEMENT	PERFORMANCE CRITERIA
3. Plan and test application removal	3.1 Create uninstall package according to production environment 3.2 Test uninstall package in test environment according to production environment 3.3 Deploy uninstall package to production environment
4. Perform database installation	4.1 Deploy database from development environment to production environment 4.2 Specify connection string to database according to production environment 4.3 Test database installation according to production environment
5. Manage application configuration	5.1 Configure application to required parameters for the production environment 5.2 Modify deployment variables and use configuration files 5.3 Configure security features application to required parameters for the production environment

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets, and critically analyses, complex texts and applies the required strategies to construct meaning from complex texts
Writing	<ul style="list-style-type: none"> Writes and edits code and technical data in a logical manner using required syntax
Planning and organising	<ul style="list-style-type: none"> Sequences and schedules complex activities, monitors implementation, and manages relevant communication
Problem solving	<ul style="list-style-type: none"> Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying, and evaluating options against the agreed criteria Uses analytical processes to decide on a course of action, establishing the criteria for deciding between options
Self-management	<ul style="list-style-type: none"> Identifies and complies with organisational requirements relevant to deployment of applications
Technology	<ul style="list-style-type: none"> Understands the key principles and concepts underpinning the design, and operation, of digital systems and tools

Unit Mapping Information

Supersedes and is equivalent to ICTPRG504 Deploy an application to a production environment.

Links

Companion Volume Implementation Guide is found on VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a53af4e4-b400-484e-b778-71c9e9d6aff2>

Assessment Requirements for ICTPRG534 Deploy applications to production environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- deploy at least one application to a production environment.

In the course of the above, the candidate must:

- configure variables, parameters and security features for a production environment
- prepare plans for software installation, including account data, resource and security requirements
- install and uninstall packages
- test and troubleshoot issues.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- principles of database management systems applicable to deploying applications to production environments
- software development life cycle (SDLC) that may be used in deploying applications to production environments
- programming language used to create deployment applications
- Information and Communications Technology (ICT) hardware, software, security protocols and standards and organisational policies relevant to deployment of applications.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- packages on client and server system
- database management system software
- required tools and licences
- integrated development environment (IDE).
- end user device.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG549 Apply intermediate object-oriented language skills

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to undertake intermediate level programming tasks using an object-oriented programming language.

It applies to software developers in a variety of fields who are required to produce programs in object-oriented languages.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Build applications	1.1 Determine and document program requirements according to object-orientated programming specifications 1.2 Divide multiple source-code files into logical units and packages and collect data in internal storage 1.3 Implement internal data-sorting and searching facilities according to object-orientated programming specifications 1.4 Employ integrated-development environment facilities and make files to automate program building 1.5 Use facilities in specific language for persisting objects to binary files and confirm program stability
2. Write interactive database programs	2.1 Design, document and implement programs that connect to the required database according to program specifications

ELEMENT	PERFORMANCE CRITERIA
	<p>2.2 Design, document and implement programs that use language facilities according to program specifications</p> <p>2.3 Design, document and implement programs that use language facilities to manipulate database structure</p> <p>2.4 Write programs that deliver transactional integrity according to program requirements</p>
3. Write graphical user interface	<p>3.1 Employ graphical user interface (GUI) framework according to language requirements</p> <p>3.2 Use standard GUI components according to object-orientated programming specifications</p> <p>3.3 Respond to user and program-generated events and according to program requirements</p>
4. Debug and test application	<p>4.1 Examine variables and trace running code</p> <p>4.2 Detect logical and coding errors according to program requirements</p> <p>4.3 Examine variable contents during execution and detect and correct errors</p> <p>4.4 Design and document limited tests of code</p> <p>4.5 Test and document produced code and determine compliance with the program specification</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Monitors outcomes of decisions and results and identifies key concepts and principles that may be adaptable in the future
Oral communication	<ul style="list-style-type: none"> Articulates information and requirements, using effective communication techniques and industry standard technical language intended for audience and environment
Reading	<ul style="list-style-type: none"> Analyses and interprets technical documents
Writing	<ul style="list-style-type: none"> Accurately records and completes documentation according to organisational formats and procedures Writes and edits code and technical data in a logical manner using required syntax
Planning and	<ul style="list-style-type: none"> Creates, and selects, a required application that meets the set requirements

SKILL	DESCRIPTION
organising	
Problem solving	<ul style="list-style-type: none">• Identifies technical or conceptual issues, and applies analytical processes, to resolve these issues• Uses analytical and lateral thinking to review current practices, and to develop new or improved software or systems
Self-management	<ul style="list-style-type: none">• Uses systematic processes, setting goals, gathering required information and identifying and evaluating options against agreed criteria
Technology	<ul style="list-style-type: none">• Uses a range of digitally based technologies to access, extract, and share relevant information in order to achieve the required outcomes

Unit Mapping Information

Supersedes and is equivalent to ICTPRG527 Apply intermediate object-oriented language skills.

Links

Assessment Requirements for ICTPRG549 Apply intermediate object-oriented language skills

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and build at least one simple application program from a problem scenario and program specification.

In the course of the above, the candidate must:

- use different object-oriented programming language techniques
- check code optimisation.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- data structures applicable to applying intermediate object-oriented language skills
- object-oriented programming concepts and programming language required to apply intermediate object-oriented language skills
- process and techniques related to use of a graphical user interface (GUI), to interact with an operator
- documenting applications required to apply intermediate object-oriented language skills.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- oriented design structures
- programming languages that support object-oriented development
- integrated development environment (IDE)

- database management system (DBMS).

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN203 Install and configure a home or small office network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes the skills and knowledge required for entry level networking support to establish a small office or home office (SOHO) internet connected PC network.

It applies to individuals who may work as an installer or network technician configuring small networks with simple internet protocol (IP) addressing schemes that share a limited range of resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for installation of home or small office network	1.1 Prepare for given work confirming site-specific work health and safety (WHS) and environmental requirements with appropriate personnel 1.2 Identify safety hazards and implement risk control measures in consultation with appropriate personnel 1.3 Determine nature and scope of the network and network resources from job briefs or appropriate personnel

ELEMENT	PERFORMANCE CRITERIA
	1.4 Select and obtain personal computer system and network device requirements according to enterprise procedures 1.5 Obtain operating instructions, manuals, hardware and software testing methodologies 1.6 Consult appropriate personnel to ensure task is coordinated effectively with others involved at the worksite
2. Install and troubleshoot home or small office network	2.1 Set up personal computer systems according to manufacturer's specifications and enterprise procedures 2.2 Set up, configure and share network resources between network devices 2.3 Determine network addressing scheme for network connectivity and confirm using calculations 2.4 Troubleshoot network and internet connectivity according to manufacturer's specifications and enterprise procedures 2.5 Identify security threats and initiate control measures according to enterprise procedures
3. Complete and document network installation	3.1 Restore worksite to safe condition according to established safety procedures 3.2 Record and store essential installation information according to enterprise procedures 3.3 Notify appropriate personnel of completion of the task according to enterprise procedures 3.4 Notify appropriate personnel and obtain sign-off

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Writing	3.2, 3.4	<ul style="list-style-type: none"> Completes workplace documentation accurately using appropriate form and vocabulary for intended audience
Oral Communication	3.3, 3.4	<ul style="list-style-type: none"> Conveys specific messages efficiently and uses an appropriate tone and vocabulary for intended audience

Numeracy	2.3	<ul style="list-style-type: none"> Confirms decisions using basic calculations and predictions
Navigate the world of work	1.1-1.4, 2.4, 2.5, 3.1-3.3	<ul style="list-style-type: none"> Follows legislative requirements and organisational protocols, policies and procedures relevant to own role
Interact with others	1.1-1.3, 1.6	<ul style="list-style-type: none"> Collaborates and cooperates with others to achieve specific outcomes
Get the work done	1.4, 1.5, 2.1-2.5	<ul style="list-style-type: none"> Prioritises and plans work to meet organisational requirements and client expectations Recognises and anticipates a range of problems, actively looking for early warning signs and implementing contingency plans when appropriate

Unit Mapping Information

Code and title current version	Code and title previous version	Comments	Equivalence status
ICTTEN203 Install and configure a home or small office network	ICTTEN2207A Install and configure a home or small office network	Updated to meet Standards for Training Packages.	Equivalent unit

Assessment Requirements for ICTTEN203 Install and configure a home or small office network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

Evidence of ability to:

- implement work health and safety (WHS) workplace procedures and practices
- plan installation of an internet connected network with advice and approvals of relevant personnel
- set up and configure wired and wireless networks with simple addressing schemes
- troubleshoot network and internet connectivity
- set up resource sharing
- deploy simple firewall network security
- obtain sign-off with relevant personnel.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline correct usage of tools and equipment
- describe enterprise WHS procedures
- outline basic computer systems and network operating systems
- describe computer networking principles (wired and wireless)
- outline network addressing systems (basic)
- explain network services and associated network models and protocols
- outline network security management
- outline troubleshooting procedures.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications network engineering field of work and include access to:

- a site where installation of a small office home office network may be conducted
- tools, equipment and materials currently used in the industry
- relevant workplace procedures, specifications and reference materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN204 Install and configure a small to medium business network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to establish and support a small to medium business network capable of providing wide area network (WAN) connectivity and common web internet services.

It applies to individuals who may be working as a small to medium enterprise (SME) internet protocol (IP) network installer, network technician or SME network support person.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications networks engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for installation of small to medium enterprise network	1.1 Prepare for given work, confirming site-specific work health and safety (WHS) and environmental requirements with appropriate personnel 1.2 Identify safety hazards and implement risk control measures in consultation with appropriate personnel

ELEMENT	PERFORMANCE CRITERIA
	<p>1.3 Determine nature and scope of business network and network resources from job briefs or appropriate personnel</p> <p>1.4 Select and obtain computer system and network device requirements according to enterprise procedures</p> <p>1.5 Obtain operating instructions, manuals, hardware and software testing methodologies</p> <p>1.6 Consult appropriate personnel to ensure the task is coordinated effectively with others involved at worksite</p>
2. Install and configure small to medium enterprise network	<p>2.1 Set up wired infrastructure according to manufacturer's specifications and enterprise procedures</p> <p>2.2 Set up and configure resource sharing on a network server</p> <p>2.3 Install WAN connection and ISP services and configure according to enterprise procedures</p> <p>2.4 Troubleshoot network and internet connectivity according to manufacturer's specifications and enterprise procedures</p> <p>2.5 Implement data back-up and disaster recovery measures according to enterprise procedures</p>
3. Complete and document network installation	<p>3.1 Restore worksite to safe condition according to established safety procedures</p> <p>3.2 Record and store essential installation information according to enterprise procedures</p> <p>3.3 Notify appropriate personnel of completion of the task according to enterprise procedures</p> <p>3.4 Notify customer and obtain sign-off</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.3	<ul style="list-style-type: none"> Identifies and interprets scope of job and relevant procedures
Writing	3.2, 3.4	<ul style="list-style-type: none"> Completes workplace documentation accurately using appropriate form and vocabulary for the intended

		audience
Oral Communication	3.3, 3.4	<ul style="list-style-type: none"> Conveys specific messages efficiently and uses an appropriate tone and vocabulary for intended audience
Numeracy	1.3, 2.1	<ul style="list-style-type: none"> Makes calculations appropriate for measuring and estimating materials and for installation
Navigate the world of work	1.1-1.3, 2.1, 2.3-2.5, 3.1-3.3	<ul style="list-style-type: none"> Follows legislative requirements and organisational protocols, policies and procedures relevant to own role
Interact with others	1.1-1.3, 1.6	<ul style="list-style-type: none"> Collaborates and cooperates with others to achieve desired outcomes
Get the work done	1.4, 1.5, 2.3-2.5	<ul style="list-style-type: none"> Prioritises and plans work to meet organisational standards, regulatory requirements and client expectations Recognises and anticipates a range of problems, actively looking for early warning signs and implementing contingency plans when appropriate Uses digital technologies and systems to complete work tasks

Assessment Requirements for ICTTEN204 Install and configure a small to medium business network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

Evidence of ability to:

- implement work health and safety (WHS) workplace procedures and practices
- plan installation of a network that uses subnet addressing and provides internet service provider (ISP) services
- set up and configure wired infrastructure
- troubleshoot local network and wide area network (WAN) connectivity and services
- configure resource sharing on a network server
- provide network data back-up and disaster recovery.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify correct usage of tools and equipment
- outline data back-up services and procedures
- describe enterprise WHS procedures
- define ISP services
- outline network device configuration
- describe network models and topologies
- define subnet addressing
- outline troubleshooting procedures
- describe WAN services and ISP responsibilities.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications network engineering field of work and include access to:

- a site where installation of a small to medium business network may be conducted
- tools, equipment and materials currently used in industry
- relevant workplace procedures
- product and manufacturing specifications and reference materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN205 Build and maintain a secure network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to build a simple and secure wired local area network (LAN) or wide area network (WAN) using a range of client server applications and services.

It applies to individuals who may work in job roles such as an installer of internet protocol (IP) networks, a WAN and LAN network technician or a WAN and LAN network support person.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to build LAN or WAN	1.1 Prepare for given work confirming site-specific work health and safety (WHS) and environmental requirements, with appropriate personnel 1.2 Identify safety hazards and implement risk control measures in consultation with appropriate personnel 1.3 Determine network design specification from job briefs or

ELEMENT	PERFORMANCE CRITERIA
	<p>appropriate personnel</p> <p>1.4 Determine network addressing scheme for network connectivity and confirm using calculations</p> <p>1.5 Select and obtain network hardware according to established procedures</p> <p>1.6 Obtain operating instructions, manuals, hardware and software testing methodologies</p> <p>1.7 Consult appropriate personnel to ensure the task is coordinated effectively with others involved at the worksite</p>
2. Build and verify network	<p>2.1 Establish connections between network hardware according to manufacturer's specifications and established procedures</p> <p>2.2 Verify network routing and switching to conform to network design specification</p> <p>2.3 Set up, configure and share network resources between network devices</p>
3. Monitor network performance and troubleshoot network	<p>3.1 Monitor network traffic and assess performance metrics against manufacturer's specifications and established procedures</p> <p>3.2 Identify security threats and initiate control measures according to enterprise procedures</p> <p>3.3 Troubleshoot network and internet connectivity according to manufacturer's specifications and enterprise procedures</p>
4. Complete and document network build	<p>4.1 Restore worksite to safe condition according to established safety procedures</p> <p>4.2 Record and store network schematics and network addressing scheme</p> <p>4.3 Notify appropriate personnel of completion of the task</p> <p>4.4 Notify customer and obtain sign-off</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description

Reading	1.3, 2.1	<ul style="list-style-type: none"> Identifies and interprets scope of job and relevant procedures
Writing	4.2, 4.4	<ul style="list-style-type: none"> Completes workplace documentation accurately using appropriate form and vocabulary for intended audience
Oral Communication	4.3, 4.4	<ul style="list-style-type: none"> Articulates specific messages in a tone and manner appropriate for intended audience
Numeracy	1.4, 3.1	<ul style="list-style-type: none"> Confirms and checks decisions using basic calculations and predictions
Navigate the world of work	1.1, 1.2, 1.4, 1.5, 2.1, 3.1-3.3, 4.1	<ul style="list-style-type: none"> Follows legislative requirements and organisational protocols, policies and procedures relevant to own role
Interact with others	1.1-1.3, 1.7,	<ul style="list-style-type: none"> Collaborates and cooperates with others to achieve specific outcomes
Get the work done	1.5, 1.6, 2.1, 2.2, 3.1-3.3, 4.2	<ul style="list-style-type: none"> Plans and prioritises tasks, developing and implementing a work program in line with organisational expectations, legislative requirements and work role Recognises and anticipates a range of problems, actively looking for early warning signs and implementing contingency plans when appropriate Uses digital technologies and systems to complete required tasks

Assessment Requirements for ICTTEN205 Build and maintain a secure network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

Evidence of ability to:

- effectively implement work health and safety (WHS) workplace procedures and practices
- develop a network addressing scheme
- determine required network components to build the network
- plan, build, configure, test and analyse performance of a network
- troubleshoot network problems.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe enterprise WHS procedures
- explain internet and computer network communication
- outline network addressing schemes including open systems interconnect (OSI) and transmission control protocol (TCP)/IP model
- describe planning the cabling of ethernet networks
- define the seven layer OSI model
- identify correct tool and equipment usage
- identify troubleshooting procedures.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications network engineering field of work and include access to:

- a site where building and maintenance of secure network may be conducted
- tools, equipment and materials currently used in industry
- relevant workplace procedures
- product and manufacturing specifications and reference material.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN312 Install telecommunications network equipment

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to effectively install and test telecommunications network equipment. It includes processes for checking plans, obtaining equipment, and handling equipment and supplies.

It applies to field officers, technicians or technical supervisors working for carriers, contractors or other service providers who install switching, transmission and radio networks and various transmission paths. It includes cable, optical fibre, radio, microwave and satellite telecommunications equipment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Network Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1 Plan for installation of telecommunications network equipment	1.1 Prepare for given work according to relevant work health and safety (WHS) and environmental requirements 1.2 Obtain access to site and assess the options for network installation 1.3 Identify existing and potential site hazards 1.4 Verify network equipment installation according to appropriate plans obtained from authorised personnel

ELEMENT	PERFORMANCE CRITERIA
	<p>1.5 Investigate how equipment is to be connected to existing network systems</p> <p>1.6 Develop and finalise installation plans to ensure minimal workplace disruption according to relevant legislation, regulations, codes and standards</p> <p>1.7 Obtain tools and test equipment required for safe work practice</p> <p>1.8 Notify affected parties of possible network outage</p>
2 Install network hardware and cabling	<p>2.1 Install network equipment according to plan and manufacturer instructions, using safe industry practices</p> <p>2.2 Install equipment or insert equipment cards and modules</p> <p>2.3 Install all cables according to specifications</p> <p>2.4 Confirm service interruption is within limits agreed with customer</p> <p>2.5 Document all installation drawings for customer</p>
3 Install equipment accessories	<p>3.1 Install alarms according to instruction manuals and specifications</p> <p>3.2 Install operations administration and maintenance system according to specification</p> <p>3.3 Install communication facilities for operational staff according to specification, taking into account any special needs of site and operational staff</p> <p>3.4 Install operator communication facilities according to needs and specifications</p>
4 Configure and test system	<p>4.1 Install software and configuration instructions according to system specifications as required</p> <p>4.2 Test to verify system performance according to customer requirements</p> <p>4.3 Recommend changes as required and confirm with customer</p> <p>4.4 Record all test results</p>
5 Clean-up worksite and complete documentation	<p>5.1 Remove and dispose of installation waste and debris from worksite according to environmental requirements</p> <p>5.2 Restore changes made to work area during installation according to customer satisfaction</p> <p>5.3 Complete all installation documents and present to customer</p> <p>5.4 Declare asset ready for commissioning and integration</p> <p>5.5 Notify customer and obtain sign-off</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interprets information from plans, specifications and manufacturer instruction manuals
Writing	<ul style="list-style-type: none"> Uses clear and specific terminology to produce installation plans and instructions appropriate for audience Records results of tests in required format using industry-specific language
Oral Communication	<ul style="list-style-type: none"> Uses appropriate strategies to establish and maintain dialogue, notify parties of disruptions and changes to planned work
Numeracy	<ul style="list-style-type: none"> Accurately interprets measurements from plans and applies results to installation plans and documents Calibrates test equipment and calculates and compares results with specifications
Navigate the world of work	<ul style="list-style-type: none"> Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements Identifies and acts on issues that contravene relevant policies, procedures and legal requirements
Interact with others	<ul style="list-style-type: none"> Follows accepted communication practices and protocols Uses a range of strategies to establish a sense of connection and build rapport with customers and co-workers
Get the work done	<ul style="list-style-type: none"> Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes, occasionally negotiating changes Maintains required records and reports according to enterprise requirements Makes routine decisions and implements standard procedures for routine tasks, using formal decision-making processes for more complex and non-routine situations

Unit Mapping Information

ICTTEN312 Install telecommunications network equipment supersedes and is equivalent to ICTTEN302 Install telecommunications network equipment.

Links

Companion Volume Implementation Guides are available from VETNet -

Assessment Requirements for ICTTEN312 Install telecommunications network equipment

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- plan for and install network hardware and cabling according to equipment or system manuals and customer specifications
- configure and test installation
- verify cable continuity
- comply with all work health and safety (WHS) and environmental requirements and work practices
- notify customer of work progress and obtain sign-off.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- WHS requirements and environmental procedures relating to the activity and site conditions
- cabling types, connectors and cabling structures
- equipment and connections to carrier infrastructure and internet service provider (ISP) technologies for single and multi-dwelling environments:
 - carrier, asymmetric digital subscriber line, very-high-bit-rate digital subscriber line, fibre network termination device (NTD), hybrid fibre coaxial (HFC) modems
- electrical and/or optical properties of installation
- network and transmission equipment principles
- power requirements and electrical safety

- typical performance parameters and faults that may be encountered in customer equipment and related connection and transmission media
- various test equipment types suitable for tests to be made
- handling and environmental compliance for waste disposal.
-

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where installation of telecommunications network equipment can be conducted
- network testing equipment currently used in industry
- relevant regulatory and equipment documentation that impact telecommunications network equipment installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN409 Commission an electronic system

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to commission an electronic system with applications, including cellular telemetry, voice over IP (VoIP), radio frequency identification (RFID), supervisory control and data acquisition (SCADA) networks and SCADA security, telephony, data, video, IP television (IPTV) and multimedia.

It applies to individuals who may work as field officers and technicians employed by telecommunications carriers, service providers or contractors.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to commission electronic system	1.1 Prepare for work following work health and safety (WHS) requirements 1.2 Organise resources based on existing and potential site hazards 1.3 Contact customer or network operations personnel for site access and network specifications 1.4 Determine function and requirements of electronic system from

ELEMENT	PERFORMANCE CRITERIA
	<p>specifications</p> <p>1.5 Identify potential security threats and vulnerability where remote monitoring and control via public telecommunications network or internet are used, and report to appropriate personnel</p> <p>1.6 Verify installed electronic system and associated cabling conform to specifications, and assess compatibility of system units</p> <p>1.7 Establish commissioning dates with all parties and establish planned outage</p> <p>1.8 Check suitability and calibration status of test equipment</p> <p>1.9 Produce a preliminary commissioning plan according to manufacturer's instructions and enterprise guidelines for discussion with the customer</p>
2. Organise planned outages	<p>2.1 Negotiate outage times with appropriate groups and affected customers to minimise disruptions</p> <p>2.2 Arrange for emergency communications based on contingency plans</p> <p>2.3 Notify alarm management centre of planned action</p> <p>2.4 Obtain authority to proceed from relevant control centre and notify customers affected by the outage</p>
3. Perform commissioning procedures	<p>3.1 Configure electronic system parameters and install software according to manufacturer's specifications and customer requirements</p> <p>3.2 Conduct tests according to manufacturer's specifications and industry practice</p> <p>3.3 Conduct cut over according to project design and industry practice in consultation with appropriate personnel</p> <p>3.4 Conduct a security audit, including remote threat analysis in applications where the public telecommunications network or internet is linked to the overall electronic system</p>
4. Finalise commissioning	<p>4.1 Record configuration information and update relevant databases according to enterprise and network guidelines</p> <p>4.2 Notify appropriate person of commissioning results and work completion</p> <p>4.3 Complete administrative tasks according to industry practice and enterprise guidelines</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.4	<ul style="list-style-type: none"> Interprets complex information to determine job requirements
Writing	1.9, 4.1	<ul style="list-style-type: none"> Completes technical workplace documentation using vocabulary and form appropriate to intended audience
Navigate the world of work	1.1, 1.5-1.7, 4.1, 4.3	<ul style="list-style-type: none"> Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements relevant to own work context
Interact with others	1.3, 1.5, 1.6, 2.1, 2.3, 2.4, 4.2	<ul style="list-style-type: none"> Collaborates and negotiates with others to achieve specific goals Selects appropriate form, channel and mode of communication when liaising with customers and personnel on technical and operational matters
Get the work done	1.2, 1.4, 1.7, 1.8, 1.9, 2.2, 3.1-3.4	<ul style="list-style-type: none"> Considers a range of complex factors when completing set tasks to ensure work is completed accurately and safely Recognises and anticipates a range of problems, actively looking for early warning signs and implementing contingency plans when appropriate Uses digital technologies and systems to complete required tasks

Unit Mapping Information

Assessment Requirements for ICTTEN409 Commission an electronic system

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

Evidence of ability to:

- effectively negotiate arrangements for commissioning
- accurately configure electronic equipment and system parameters
- commission electronic system according to specifications and following work health and safety (WHS) requirements
- deal with faults and problems and provide solutions
- identify potential security threats and vulnerability.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain acceptance testing
- formulate a commissioning procedure and commissioning tests for an electronic system
- identify electrical and optical properties to be measured
- evaluate an extensive range of networking equipment
- outline legislation and licensing associated with installation of telecommunications equipment
- outline network operation procedures
- explain power requirements and electrical safety
- explain setup and operation of test equipment applicable to a wide range of measurements
- outline transmission type and signals that may be encountered.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- sites on which installation and commissioning procedures may be conducted
- relevant regulatory and equipment documentation
- testing equipment currently used in industry.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN419 Implement and troubleshoot enterprise routers and switches

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to determine customer needs, use information communication technologies (ICT) to meet network requirements, rectify equipment errors and create appropriate workplace documentation.

It applies to individuals working as installers of internet protocol (IP) networks, enterprise network technicians, network administrators and other network support personnel.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1 Prepare for implementation of network routers and switches	1.1 Prepare for given job according to work health and safety (WHS) and environmental requirements with appropriate personnel 1.2 Identify safety hazards and implement risk control measures in consultation with appropriate personnel 1.3 Determine nature and scope of network routers, network switches and network resources from job briefs or appropriate

ELEMENT	PERFORMANCE CRITERIA
	<p>personnel</p> <p>1.4 Select and obtain network services and network application requirements according to enterprise procedures</p> <p>1.5 Obtain identified operating instructions, manuals, hardware and software testing methodologies</p> <p>1.6 Consult appropriate personnel to ensure the task is coordinated effectively with others involved at the worksite</p>
2 Implement network switches and routers	<p>2.1 Configure routers and switches according to manufacturer's specifications and enterprise procedures</p> <p>2.2 Determine network addressing scheme for network connectivity, and verify using calculations</p> <p>2.3 Activate, and verify wide area network (WAN) links provide network connectivity</p> <p>2.4 Enable network services and network applications to the network to complete network connectivity process</p> <p>2.5 Set up traffic access and filtering according to enterprise procedures</p>
3 Troubleshoot network switches and routers	<p>3.1 Monitor network performance and isolate faults using diagnostic and analysis tools</p> <p>3.2 Troubleshoot network and internet connectivity according to manufacturer's specifications and enterprise procedures</p>
4 Document configuration and troubleshooting records	<p>4.1 Restore work-site to safe condition according to established safety procedures</p> <p>4.2 Record and store essential implementation information according to enterprise procedures</p> <p>4.3 Notify appropriate personnel of completion of the task according to enterprise procedures</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description

Reading	1.1, 1.3, 1.4, 2.1, 2.5, 3.2, 4.2, 4.3	<ul style="list-style-type: none"> Recognises and interprets technical, legislative and operational documentation to determine job requirements
Writing	1.1, 1.2, 4.2, 4.3	<ul style="list-style-type: none"> Uses clear, specific and industry-related terminology to produce and update workplace documentation and in communications with relevant personnel
Oral Communication	1.1-1.3, 4.3	<ul style="list-style-type: none"> Clearly liaises with personnel on technical matters Uses listening and questioning skills to confirm understanding for requirements
Numeracy	2.2	<ul style="list-style-type: none"> Interprets technical data and performs calculations to verify information
Navigate the world of work	1.1, 1.2, 4.1	<ul style="list-style-type: none"> Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work, and draws attention to any issues that may affect self or others Recognises and follows explicit and implicit protocols and meets expectations associated with own role
Interact with others	1.6	<ul style="list-style-type: none"> Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction
Get the work done	1.4, 1.5, 2.1-2.5, 3.1, 3.2	<ul style="list-style-type: none"> Understands key principles and concepts underpinning design and operation of digital systems and tools, and applies these as required including troubleshooting common network problems Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency Implements actions according to a predetermined plan, making adjustments if necessary Makes decisions quickly and intuitively in familiar situations requiring immediate attention, drawing on past experience to identify key variables and determine the best course of action Recognises and anticipates an increasing range of unexpected problems, their symptoms and causes on the basis of safety and specified work outcomes

Assessment Requirements for ICTTEN419 Implement and troubleshoot enterprise routers and switches

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

Evidence of ability to:

- determine customer networking requirements
- configure routers and switches using hierarchical addressing over virtual local area networks (VLANs) to meet network link requirements
- enable and control access to network services and applications across the network
- diagnose and rectify network hardware and device configuration faults
- document configuration information, fault-finding history and remediation action.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise access control lists
- give examples of characteristics of a typical enterprise including:
 - features and applications
 - work health and safety (WHS) procedures
 - record keeping procedures
 - switching and routing protocols and strategies:
 - hierarchical addressing
 - multilayer switching
 - routing protocols
 - VLAN routing
- summarise implementation of enterprise wide area networks (WAN) links
- explain network diagnostic and troubleshooting techniques
- describe network modelling

- specify how to configure and activate network access and security measures
- describe the process of configuring switches and routers to enable local area networks (LAN) and WAN links
- describe the connection process for enterprise networks using WAN services and applications
- describe the purpose of maintaining enterprise network documentation
- summarise the process and importance of troubleshooting network faults and implementing recovery actions
- describe the use of a hierarchical internet protocol (IP) network address scheme
- select and use tools and equipment to analyse enterprise networks.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- a network facility and workstations
- operating instructions, installation documents and manuals
- hardware and software testing tools currently used in industry.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN420 Design, install and configure an internetwork

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to determine customer needs, create appropriate workplace documentation, connect and organise an internetwork according to design specifications, resolving technical problems as they arise.

It applies to individuals who design and install internet protocol (IP) networks including enterprise internetwork technicians, network administrators and network support personnel for large, medium and small office home office (SOHO) enterprises.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for design and installation of internetwork	1.1 Prepare for given work according to work health and safety (WHS) and environmental requirements with appropriate personnel 1.2 Identify safety hazards and implement risk control measures in consultation with appropriate personnel 1.3 Determine nature and scope of internetwork from job briefs and appropriate personnel

ELEMENT	PERFORMANCE CRITERIA
	1.4 Obtain operating instructions, manuals, hardware and software testing methodologies 1.5 Consult appropriate personnel to ensure the task is coordinated effectively with others involved at the worksite
2. Design enterprise internetwork	2.1 Produce enterprise internetwork topology after considering technical requirements, physical and financial constraints and expansion projections 2.2 Determine network devices and network resources, according to enterprise procedures 2.3 Produce internetwork design including network security and router and switch configurations to meet design specifications and enterprise procedures
3. Install and configure designed internetwork	3.1 Install network hardware to network topology design plan according to enterprise procedures 3.2 Determine network addressing scheme for network connectivity, and verify using calculations 3.3 Configure routers and switches to perform logical connection of the internetwork 3.4 Conduct connectivity and performance tests to verify network installation meets design specification 3.5 Troubleshoot internetwork and internet connectivity according to manufacturer's specifications and enterprise procedures
4. Complete and document network design and installation	4.1 Restore worksite to safe condition according to established safety procedures 4.2 Record and store essential design and installation information according to enterprise procedures 4.3 Notify appropriate personnel of completion of the task according to enterprise procedures

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description

Reading	1.1, 1.3, 2.2, 2.3, 3.1, 3.4, 3.5, 4.2, 4.3	<ul style="list-style-type: none"> Recognises and interprets legislation, enterprise procedures, manuals and technical specifications to determine job requirements
Writing	2.1, 2.3, 4.2, 4.3	<ul style="list-style-type: none"> Uses clear, specific and industry-related terminology to produce network documentation and maintain network records Writes concisely when communicating with relevant personnel
Oral Communication	1.2, 4.3	<ul style="list-style-type: none"> Negotiates with customers and peers to achieve design specifications Uses listening and questioning skills to confirm understanding for requirements
Numeracy	3.2	<ul style="list-style-type: none"> Interprets technical data and performs calculations to verify information
Navigate the world of work	1.1, 1.2, 2.2, 2.3, 3.1, 3.5, 4.1-4.3	<ul style="list-style-type: none"> Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work, and draws attention to any issues that may affect self or others Recognises and follows organisational procedures protocols and meets expectations associated with own role
Interact with others	1.3, 1.5	<ul style="list-style-type: none"> Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction
Get the work done	1.4, 2.1, 2.3, 3.1, 3.3-3.5	<ul style="list-style-type: none"> Understands key principles and concepts underpinning design and operation of digital systems and tools, and applies these as required including troubleshooting common network problems according to helpdesk procedures Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency Implements actions according to a predetermined plan, making adjustments if necessary Makes decisions quickly and intuitively in familiar situations requiring immediate attention, drawing on past experience to identify key variables and determine the best course of action Recognises and anticipates an increasing range of unexpected problems, their symptoms and causes, on the basis of safety and specified work outcomes

Unit Mapping Information

Assessment Requirements for ICTTEN420 Design, install and configure an internetwork

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

Evidence of ability to:

- determine customer requirements
- design internetwork that uses advanced routing and addressing techniques
- install internetwork according to design specification
- configure network devices to meet design functionality
- document internetwork design, installation and configuration.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe enterprise work health and safety (WHS) procedures
- summarise open systems interconnect (OSI) layered communication model
- outline network requirements including:
 - applications
 - lifecycle
 - manageability
 - quality of service
- clarify network design concepts including:
 - business requirements
 - network topologies
 - physical and financial constraints
 - security
 - wired or wireless options

- describe tool and equipment use
- outline troubleshooting components of this work including:
 - impact of network failure
 - maintenance
 - troubleshooting methodologies
- analyse impact of applications on traffic flow in the network
- describe network design methodologies used to design networks providing a range of services and applications found in larger networks
- define technical requirements, constraints and manageability issues for a given customer network
- identify and describe common tools and equipment used in internet work.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- a site where design and installation of an internet network may be conducted
- tools, equipment and materials currently used in industry
- relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN421 Apply advanced routing protocols to network design

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to use software tools, equipment, software and protocols to configure and troubleshoot network routers.

It applies to individuals who work cooperatively with others, interpret technical information accurately and work proficiently with information communication technology (ICT). Installers of internet protocol (IP), small and medium sized enterprise (SME) network technicians, network administrators and network support personnel complete this type of work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan to apply routing protocols	1.1 Prepare for given work according to work health and safety (WHS) and environmental requirements with appropriate personnel 1.2 Identify safety hazards and implement risk control measures in consultation with appropriate personnel 1.3 Determine nature and scope of network and network routing

ELEMENT	PERFORMANCE CRITERIA
	requirements from job briefs and appropriate personnel 1.4 Determine hardware and software diagnostic test methodologies and testing resources according to enterprise procedures 1.5 Obtain operating instructions, manuals, hardware and software testing methodologies 1.6 Consult appropriate personnel to ensure task is coordinated effectively with others involved at the worksite
2. Build and test advanced routing	2.1 Set up router interfaces according to manufacturer's specifications and established procedures 2.2 Implement advanced routing protocols to achieve network design requirements 2.3 Implement classless addressing across a network to perform logical connectivity, and confirm using calculations 2.4 Troubleshoot network routing according to manufacturer's specifications and established procedures 2.5 Identify security threats and initiate control measures according to enterprise procedures
3. Complete and document advanced router installation	3.1 Restore worksite to safe condition according to established safety procedures 3.2 Record and store essential installation information according to enterprise procedures 3.3 Notify appropriate personnel of completion of the task according to enterprise procedures

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.3, 2.1, 2.4, 2.5, 3.2, 3.3	<ul style="list-style-type: none"> Recognises and interprets enterprise procedures, manuals and specifications to determine job requirements
Writing	1.2, 3.2, 3.3	<ul style="list-style-type: none"> Uses clear, specific and industry-related terminology to develop network documentation and maintain network records

		<ul style="list-style-type: none"> Writes concisely when communicating with relevant personnel
Oral Communication	1.2, 1.3, 3.3	<ul style="list-style-type: none"> Liaises and negotiates with customers and peers to achieve design specifications Uses listening and questioning skills to confirm understanding for requirements
Numeracy	2.3	<ul style="list-style-type: none"> Interprets technical data and performs calculations to verify information
Navigate the world of work	1.1, 1.4, 2.4, 2.5, 3.1-3.3	<ul style="list-style-type: none"> Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work context and draws attention to any issues that may affect self or others Recognises and follows organisational procedures and protocols and meets expectations associated with own role
Interact with others	1.6	<ul style="list-style-type: none"> Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction
Get the work done	1.4, 1.5, 2.1-2.5, 3.2	<ul style="list-style-type: none"> Understands key principles and concepts underpinning design and operation of digital systems and tools, and applies these as required including troubleshooting common network problems according to helpdesk procedures Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency Implements actions according to a predetermined plan, making adjustments if necessary Makes decisions quickly and intuitively in familiar situations requiring immediate attention, drawing on past experience to identify key variables and determine the best course of action Recognises and anticipates an increasing range of unexpected problems, their symptoms and causes on the basis of safety and specified work outcomes

Assessment Requirements for ICTTEN421 Apply advanced routing protocols to network design

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

Evidence of ability to:

- plan network routing requirements to meet design specification
- configure advanced protocols on network routers
- manage network addressing
- troubleshoot network
- install network security.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain distance vector routing protocols RIP v1 and v2
- outline dynamic routing
- summarise enterprise work health and safety (WHS) procedures
- outline hybrid routing protocols enhanced interior gateway routing protocol (EIGRP)
- explain link-state routing protocols open shortest path first (OSPF)
- explain routing and packet forwarding
- describe routing tables
- summarise scalable routing strategies variable length subnet masking (VLSM) and classless inter-domain routing (CIDR)
- outline security protocols using access lists
- clarify static routing
- explain the use of software tools and equipment.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- a network facility and workstations
- tools, equipment and materials currently used in industry
- relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN422 Configure and troubleshoot advanced network switching

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to perform network switch configuration and troubleshooting. This unit applies to large networks involving wireless local area networks (WLANs), virtual local area networks (VLANs), interVLAN routing, remote access management and operating system management of network devices.

It applies to individuals who work cooperatively with others, interpret technical information accurately, and work proficiently with information communication technology (ICT). Installers of internet protocol (IP), enterprise network technicians, network administrators and network support personnel complete this type of work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to work on switched network	1.1 Prepare for given work according to work health and safety (WHS) and environmental requirements with appropriate personnel 1.2 Identify safety hazards and implement risk control measures in

ELEMENT	PERFORMANCE CRITERIA
	consultation with appropriate personnel 1.3 Determine nature and scope of network and network topology from job briefs or appropriate personnel 1.4 Select and obtain wireless and wired network components requirements according to enterprise procedures 1.5 Obtain operating instructions, manuals, hardware and software testing methodologies 1.6 Consult appropriate personnel to ensure task is coordinated effectively with others involved at the worksite
2. Configure network switches	2.1 Set up and configure network switches according to manufacturer's specifications and enterprise procedures 2.2 Build and configure a routed network using remote access management 2.3 Establish multiple VLANs across the network to manage access and traffic across the network
3. Troubleshoot network	3.1 Monitor network traffic and assess performance against manufacturer's specifications and established procedures 3.2 Troubleshoot network according to manufacturer's specifications and enterprise procedures 3.3 Identify and rectify faults according to enterprise procedures
4. Complete and document network installation and configuration	4.1 Restore worksite to safe condition according to established safety procedures 4.2 Record and store essential configuration information according to enterprise procedures 4.3 Notify appropriate personnel of completion of the task according to enterprise procedures

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.3, 1.4, 2.1,	<ul style="list-style-type: none"> Recognises and interprets enterprise procedures, manuals and specifications to determine job

	3.2, 3.3, 4.2, 4.3	requirements
Writing	4.2, 4.3	<ul style="list-style-type: none"> • Uses clear, specific and industry-related terminology to develop network documentation and maintain network records • Writes concisely when communicating with relevant personnel
Oral Communication	1.2, 1.3, 4.3	<ul style="list-style-type: none"> • Liaises and negotiates with customers and peers to achieve outcomes • Uses listening and questioning skills to confirm understanding of requirements
Numeracy	2.2, 2.3, 3.1-3.3	<ul style="list-style-type: none"> • Interprets technical data and performs calculations to verify information
Navigate the world of work	1.1, 1.2, 2.1, 3.1-3.3, 4.1-4.3	<ul style="list-style-type: none"> • Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work, and draws attention to any issues that may affect self or others • Recognises and follows organisational procedures and protocols and meets expectations associated with own role
Interact with others	1.6	<ul style="list-style-type: none"> • Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction • Selects and uses appropriate conventions and protocols when communicating with co-workers in a range of work contexts
Get the work done	1.4, 1.5, 2.1-2.3, 3.1-3.3	<ul style="list-style-type: none"> • Understands key principles and concepts underpinning design and operation of digital systems and tools, and applies these as required including troubleshooting network malfunctions • Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency • Implements actions according to a predetermined plan, making adjustments if necessary • Makes decisions quickly and intuitively in familiar situations requiring immediate attention, drawing on past experience to identify key variables and determine the best course of action • Recognises and anticipates an increasing range of unexpected problems, their symptoms and causes, on the basis of safety and specified work outcomes

Assessment Requirements for ICTTEN422 Configure and troubleshoot advanced network switching

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

Evidence of ability to:

- build and configure a routed network
- configure a virtual local area networks (VLAN) on a given network topology
- configure VLAN trunking and spanning tree protocols
- establish VLANs over a wireless network
- design and deploy remote access and network security.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline enterprise work health and safety (WHS) procedures
- explain interVLAN routing
- describe spanning tree protocol
- clarify switch and remote network security management
- describe the tool and equipment required, and their correct usage
- outline troubleshooting procedures
- summarise VLAN trunking protocol
- explain wireless local area network (LAN) set-up and access configuration.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- a site where configuring advanced network switching may be conducted
- tools, equipment and materials currently used in industry
- relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN423 Install and maintain a wide area network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to use appropriate tools, equipment, software and protocols to connect and support a wide area network (WAN).

It applies to individuals who work cooperatively with others, interpret technical information accurately and work proficiently with information communication technology (ICT). Installers of internet protocol (IP) networks, IP network technicians, network administrators and network support personnel complete this type of work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for installation and maintenance of network with WAN access	1.1 Prepare for given work according to work health and safety (WHS) and environmental requirements with appropriate personnel 1.2 Identify safety hazards and implement risk control measures in consultation with appropriate personnel 1.3 Determine network nature and scope from job briefs or appropriate personnel

ELEMENT	PERFORMANCE CRITERIA
	1.4 Select and obtain network hardware, software, WAN protocol and technology requirements according to enterprise procedures 1.5 Obtain operating instructions, manuals, installation procedures, hardware and software testing methodologies and testing resources 1.6 Consult appropriate personnel to ensure task is coordinated effectively with others involved at the worksite
2. Install and maintain WAN accessible network	2.1 Determine network addressing scheme for network connectivity, and confirm using calculations 2.2 Identify security threats and initiate control measures according to enterprise procedures 2.3 Set up and configure network to provide WAN access according to manufacturer's specifications and enterprise procedures 2.4 Use hardware and software analysis and diagnostic methodologies to test network connectivity
3. Complete and document WAN network installation	3.1 Restore worksite to safe condition according to established safety procedures 3.2 Record and store essential installation information according to enterprise procedures 3.3 Notify appropriate personnel of completion of the task according to enterprise procedures

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.3, 1.4, 2.2, 2.3, 3.2, 3.3	<ul style="list-style-type: none"> Recognises and interprets enterprise procedures, manuals and specifications to determine job requirements
Writing	1.2, 3.2, 3.3	<ul style="list-style-type: none"> Uses clear, specific and industry-related terminology to develop network documentation and maintain network records Writes concisely when communicating with relevant personnel

Oral Communication	1.2, 1.3, 1.6, 3.3	<ul style="list-style-type: none"> • Liaises and negotiates with others to achieve outcomes • Uses listening and questioning skills to confirm understanding for requirements
Numeracy	2.1	<ul style="list-style-type: none"> • Interprets technical data and performs calculations to verify information
Navigate the world of work	1.1, 1.2, 1.4, 2.2, 2.3, 3.1-3.3	<ul style="list-style-type: none"> • Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work, and draws attention to any issues that may affect self or others • Recognises and follows organisational procedures and protocols and meets expectations associated with own role

Assessment Requirements for ICTTEN423 Install and maintain a wide area network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

Evidence of ability to:

- plan installation of a wide area network (WAN) accessible network
- select and apply WAN link protocols
- configure internet protocol (IP) addressing across WAN
- troubleshoot WAN communication issues
- install WAN access security measures.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline enterprise work health and safety (WHS) procedures
- explain IP addressing services and network scaling
- summarise methods of securing network services including access control lists
- explain Open Systems Interconnection (OSI) layered communication model
- outline requirements to provide teleworker network services
- describe correct usage of relevant tools and equipment
- outline WAN link protocols including:
 - frame relay
 - high-level data link control (HDLC)
 - link access procedure, balanced (LAPB)
 - point-to-point protocol (PPP)
- summarise WAN troubleshooting methodologies and analysis and diagnostic tools.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- a site where installation and maintenance of a WAN may be conducted
- tools, equipment and materials currently used in industry
- relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTWEB447 Build basic website using development software and ICT tools

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to build a basic website, consistent with the design, technical requirements and expectations, of a client's business, using industry standard software and tools.

The unit applies to individuals working as web developers who use a wide range of knowledge and skills across a range of general information and communications technology (ICT) environments and support small to medium enterprises (SMEs) requiring broader, rather than more specialised, ICT support.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Web

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Analyse website structure and select required software and development tools	1.1 Analyse client specifications and select required development software according to business requirements 1.2 Identify website technical needs and select applicable software tools 1.3 Identify and confirm website design including structure and navigation flow and document according to organisational procedures

ELEMENT	PERFORMANCE CRITERIA
	1.4 Review design documentation and integrate design work according to web development standards
2. Construct site	2.1 Build website using selected development software and applicable tools according to client specifications 2.2 Take action and confirm user input during website construction 2.3 Validate existing information and basic content when incorporating data on website 2.4 Apply consistent design specifications to all aspects of website 2.5 Gather feedback from user on web design, content, accessibility and structure, using feedback mechanisms
3. Complete and validate website construction and content	3.1 Undertake an evaluation of website against technical requirements and design specification 3.2 Test each function and process of website and confirm functionality on various browsers and devices 3.3 Conduct navigation tests and hypertext markup language (HTML) compliance with website standards 3.4 Test and debug website according to cyber security procedures and protocols 3.5 Stress test website and confirm design criteria and user load are met 3.6 Record testing results and confirm website meets user requirements 3.7 Obtain sign-off and approval of required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Critically analyses complex documentation from a variety of sources and consolidates information relating to specific criteria to determine requirements
Writing	<ul style="list-style-type: none"> Prepares and produces dynamic material for a specific audience, using clear and detailed language and conveys explicit information, requirements and recommendations

SKILL	DESCRIPTION
Teamwork	<ul style="list-style-type: none"> • Selects and uses applicable conventions and protocols when communicating with clients in a range of work contexts • Establishes a sense of connection and builds rapport with clients and co-workers using a range of strategies
Problem solving	<ul style="list-style-type: none"> • Makes routine decisions and implements standard procedures for routine tasks, using formal decision-making processes for more complex and non-routine situations • Addresses less predictable problems and initiates standard procedures in response to these problems, applying problem-solving processes in determining a solution
Self-management	<ul style="list-style-type: none"> • Accepts responsibility and ownership for task and makes decisions on completion parameters and need for coordination with others • Takes personal responsibility for following explicit and implicit policies, procedures and standards • Elicits and provides feedback to others • Takes responsibility for planning, sequencing and prioritising tasks and own workload
Technology	<ul style="list-style-type: none"> • Uses familiar digital technologies and systems to access information, search and enter data and code, present information and communicate with others, cognisant of data security and safety

Unit Mapping Information

Supersedes and is equivalent to ICTWEB418 Use development software and ICT tools to build a basic website.

Links

Assessment Requirements for ICTWEB447 Build basic website using development software and ICT tools

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- build a basic website using development software and ICT tools according to client specifications.

In the course of the above, the candidate must:

- conduct an assessment of specifications relating to client website requirements including technical needs and structure
- select applicable software tools
- validate final web design against client requirements and make changes as required
- test and debug website and confirm functionality on at least two different browsers and at least two different devices
- document testing results and obtain client sign off.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- website functionality including structure and navigation flow
- website design principles issues around accessibility and equity principles
- software and tools used in website development
- general principles of hypertext markup language (HTML) and associated documentation standards
- technical attributes specific to building basic websites using development software and ICT tools
- documentation techniques applicable to building basic websites using development software and ICT tools
- types of code used in website generation

- testing and debugging methodologies
- organisational and industry procedures and standards applicable to building websites
- cyber security procedures and protocols
- web development standards.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- basic website specifications and guidelines
- website development software and tools
- the internet
- required hardware and its components
- range of browsers and devices.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

MEM16006 Organise and communicate information

Modification History

Release 1. Supersedes and is equivalent to MEM16006A Organise and communicate information

Application

This unit of competency covers the skills and knowledge required to access, organise and communicate information related to production, maintenance or associated processes or tasks that apply in manufacturing, engineering or related environments.

For accessing and recording of data requiring system knowledge and judgement, Unit MEM16008 Interact with computing technology should be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 2

Pre-requisite Unit

MEM13015 Work safely and effectively in manufacturing and engineering

Competency Field

Communication

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|---------------------------|-----|---|
| 1 | Access information | 1.1 | Determine information requirements of tasks and access relevant information from a range of sources |
| | | 1.2 | Recognise and use workplace terminology correctly |

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
2 Organise and analyse information	2.1 Interpret information and organise in accordance with work requirements
	2.2 Determine relevance and implications for immediate work requirements
3 Communicate organised information using established workplace methods	3.1 Identify purpose of communication and appropriate communication method
	3.2 Communicate information using established workplace methods

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Range of sources include using one (1) or more of the following:	• job instructions
	• specifications
	• standard operating procedures (SOPs)
	• charts
	• lists
	• documents
	• computer data
	• drawings
	• sketches
	• tables

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- technical manuals and/or charts
- other applicable reference material

Determining relevance of information includes one (1) or more of the following:

- checking relevance of information to own work
- selecting task relevant information from a larger document or from a diagram
- preparing an opinion based on analysis of simple facts
- expressing an opinion on the cause of faults

Workplace terminology refers to one (1) or more of the following:

- equipment
- processes
- workplace areas
- staff
- procedures

Established workplace methods include using one (1) or more of the following:

- proforma reports
- data entry
- verbal
- drawings

Purpose of communication includes one (1) or more of the following:

- simple incident/non-conformance report
- maintenance request
- production records
- material usage records
- work records
- other standard workplace records

Unit Mapping Information

Assessment Requirements for MEM16006 Organise and communicate information

Modification History

Release 1. Supersedes and is equivalent to MEM16006A Organise and communicate information

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- accessing and recording relevant information from a range of sources
- recognising and using workplace appropriate terminology
- reading, interpreting and following information in workplace documentation
- checking and clarifying information
- organising, categorising and sequencing information
- communicating using appropriate methods and procedures for a variety of situations.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- types of information relevant to the workplace and required tasks
- terminology used in the workplace relevant to own work
- available sources of information
- information analysis techniques appropriate to tasks and position
- methods of categorising and organising information including correct sequencing of information
- methods of recording and communicating information.

Assessment Conditions

- Assessors must:
 - have vocational competency in organising and communicating information at least to the level being assessed with relevant industry knowledge and experience

- satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM16008 Interact with computing technology

Modification History

Release 1. Supersedes and is equivalent to MEM16008A Interact with computing technology

Application

This unit of competency defines the skills and knowledge required to use a range of computing technology typically used in manufacturing, engineering or related environments to access, input and store information.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 2

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Communication

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures and comply with work health and safety (WHS) requirements at all times
		1.2	Identify job requirements from specifications, job sheets or work instructions
		1.3	Identify information/data required to be accessed, input

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.
or stored and its source

- | | | | |
|---|--------------------------------------|-----|---|
| 2 | Access information/data | 2.1 | Follow access procedures and navigate technology to find the required information/data |
| | | 2.2 | Use relevant software application menus, functions and commands to locate required information/data |
| | | 2.3 | Retrieve information/data using organisational procedures |
| | | 2.4 | Check information/data for relevance to job requirements |
| 3 | Input information/data | 3.1 | Use relevant software menus, functions and commands to manipulate information/data |
| | | 3.2 | Enter, change or remove information/data, as required |
| 4 | Store information/data | 4.1 | Save data/files following standard procedures prior to exiting the application |
| | | 4.2 | Produce data output, as required |
| | | 4.3 | Follow procedures for shutting down/logging off/exiting computing technology |
| 5 | Access assistance as required | 5.1 | Identify appropriate personnel and consult, as required |
| | | 5.2 | Identify manuals, online help and other reference materials and use, as required |

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Access procedures include one (1) or more of the following:**
- logging on
 - security procedures
 - virus checks
 - start-up routines
 - application start-up

- Technology includes one (1) or more of the following:**
- hand held data recording devices
 - screen based equipment
 - personal computers
 - bar coders
 - tablets

- Applications include one (1) or more of the following:**
- word processing
 - spreadsheets
 - databases
 - customised engineering and manufacturing applications
 - material resource planning (MRP)
 - warehousing inventory applications
 - predictive reliability and maintenance applications
 - production data management applications

- Data output includes one (1) or more of the following:**
- report
 - email
 - chart
 - graph
 - printout
 - data transfer
 - labels

Assessment Requirements for MEM16008 Interact with computing technology

Modification History

Release 1. Supersedes and is equivalent to MEM16008A Interact with computing technology

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- accessing, inputting, manipulating and storing information using workplace computing technology whilst following standard procedures
- accessing assistance, where required.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- functions and capabilities of computing technology used in the workplace
- functions of software applications
- use and features of data outputs.

Assessment Conditions

- Assessors must:
 - have vocational competency in interacting with computing technology at least to the level being assessed with relevant industry knowledge and experience
 - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills

- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM234010A Design microcontroller applications

Modification History

New unit

Unit Descriptor

This unit of competency covers the design of an automated device for a machine or equipment using a microcontroller. The automated device may use digital or analog input/output (I/O) and may involve feedback control. The microcontroller application may be an autonomous device or it may be integrated into a local area network (LAN) or distributed control system (DCS) using wired or wireless communications. It includes sustainability implications, occupational health and safety (OHS) and automation safety.

Application of the Unit

This unit applies to the design of automated devices using microcontrollers across all forms of manufacturing and engineering. Design activities may also include reverse engineering, and design rectification or modifications of an existing design. The unit is suitable for automated device or systems designers and maintenance personnel, and those pursuing engineering or related qualifications and careers.

Prior experience in the application of basic computing, controllers, mathematics, electrical, electronic, and evaluation of microprocessor systems and safety procedures is required. Mechanical, fluid power, thermodynamic, manufacturing methods and processes experience may be required by particular system designs.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---|-----|---|
| 1 | Clarify client brief or contract requirements | 1.1 | Establish, in consultation with the client, the required features and functions of the microcontroller application |
| | | 1.2 | Determine technical, commercial and environmental parameters to the brief or contract |
| | | 1.3 | Determine stakeholders to be consulted in design process |
| | | 1.4 | Provide initial advice to client on the feasibility of the project |
| 2 | Prepare concept proposal | 2.1 | Carry out initial investigations and measurements |
| | | 2.2 | Carry out required modelling and calculations |
| | | 2.3 | Where appropriate, consider need for continuous improvement, constraints and contingency management, as part of concept proposal |
| | | 2.4 | Generate a range of microcontroller application design options |
| | | 2.5 | Check feasibility and evaluate solutions against design criteria ensuring conformity to OHS, regulatory, sustainability and environmental requirements |
| | | 2.6 | Prepare a device design proposal that includes appropriate consideration of results of feasibility study, required modelling and calculations, and any required expert opinions |
| | | 2.7 | Review concept proposal with client and select preferred solution |

- | | | | |
|---|-------------------------------|-----|---|
| 3 | Design microcontrolled device | 3.1 | Finalise selected device design |
| | | 3.2 | Provide documentation, drawings, specifications and instructions |
| | | 3.3 | Consult with client and stakeholders to obtain sign-off on design |
| | | 3.4 | Monitor installation and commissioning with stakeholders, when required, and make any necessary modifications |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- determining the features and functions of the application, including OHS, regulatory and risk management requirements
- interpreting parameters to the brief or contract
- researching latest trends and techniques in application of microcontrollers
- researching latest trends and techniques in reverse engineering
- investigating, measuring, modelling and calculating for options
- investigating faults in existing designs and arriving at solutions
- prototyping and systematically programming and testing actuators and interfaces, input sensor/transducers, communications and network connections, human machine interfaces (HMIs) and graphical user interfaces (GUIs)
- generating and evaluating a range of solutions for feasibility against design criteria
- evaluating solutions for feasibility against design criteria, including relevant engineering and financial calculations and analysis
- selecting actuators, interfaces, microcontroller, sensor/transducers, signal conditioning, HMIs, communication and network software and connections, if required
- communicating, negotiating and reviewing with stakeholders and client throughout process to obtain agreement on proposal and sign-off on design
- documenting design with drawings, specifications and instructions

Required knowledge

Required knowledge includes:

- contemporary engineering microcontroller application design methods
- research and investigations methods
- techniques for:
 - continuous improvement
 - problem solving and decision making
 - root cause analysis (RCA) or failure mode and effects analysis (FMEA) or design review based on failure mode (DRBFM), and Pareto analysis
- engineering design software options
- software simulation/validation processes
- documentation, drawings, specifications and instructions
- OHS and regulatory requirements, codes of practice, standards, risk minimisation and registration requirements
- microcontroller software programming techniques
- control options
- device component options which may include microcontroller, user interfaces, HMIs and GUIs, software, data communications, telemetry, modems and networking topology, as appropriate
- specifications for I/O and I/O channels

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • interpret features and functions of the application and parameters to the brief or contract • determine sustainability, automation safety, OHS, regulatory and risk management • research and test system components • investigate and measure, model and calculate for options • generate and evaluate a range of solutions • design microcontrolled system solution • consider continuous improvement, constraint and contingency management requirements in design options, where this is appropriate to the application • select system components • prototype and systematically program and test system component
---	---

	<p>function</p> <ul style="list-style-type: none"> • ensure automation safety using appropriate licensed technical and professional assistance • communicate, negotiate and review with stakeholders and client throughout process to obtain agreement on proposal and sign-off on design • document design with drawings, specifications and instructions.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- determining the features and functions of the application, including OHS, regulatory and risk management requirements
- interpreting parameters to the brief or contract
- researching latest trends and techniques in application of microcontrollers
- researching latest trends and techniques in reverse engineering
- investigating, measuring, modelling and calculating for options
- investigating faults in existing designs and arriving at solutions
- prototyping and systematically programming and testing actuators and interfaces, input sensor/transducers, communications and network connections, human machine interfaces (HMIs) and graphical user interfaces (GUIs)
- generating and evaluating a range of solutions for feasibility against design criteria
- evaluating solutions for feasibility against design criteria, including relevant engineering and financial calculations and analysis
- selecting actuators, interfaces, microcontroller, sensor/transducers, signal conditioning, HMIs, communication and network software and connections, if required
- communicating, negotiating and reviewing with stakeholders and client throughout process to obtain agreement on proposal and sign-off on design
- documenting design with drawings, specifications and instructions

Required knowledge

Required knowledge includes:

- contemporary engineering microcontroller application design methods
- research and investigations methods
- techniques for:
- continuous improvement
- problem solving and decision making
- root cause analysis (RCA) or failure mode and effects analysis (FMEA) or design review based on failure mode (DRBFM), and Pareto analysis
- engineering design software options
- software simulation/validation processes
- documentation, drawings, specifications and instructions
- OHS and regulatory requirements, codes of practice, standards, risk minimisation and registration requirements
- microcontroller software programming techniques
- control options

- device component options which may include microcontroller, user interfaces, HMIs and GUIs, software, data communications, telemetry, modems and networking topology, as appropriate
- specifications for I/O and I/O channels

MEM234014A Design a robotic system

Modification History

New unit

Unit Descriptor

This unit of competency covers the design of an engineering application employing a robot and integrating it with other equipment and systems. It includes the use and integration of actuators, sensors, end effectors, including tactile effectors, dynamic analysis of strength and stability, programming and protocols for communications and networking, as appropriate.

Application of the Unit

This unit applies to the design of a robotic system across all forms of manufacturing and engineering. Design activities may also include reverse engineering, design rectification, integration of off the shelf components, or modifications of an existing design. It is suitable for robotic system designers or maintenance technologists, and those pursuing qualifications and careers in engineering design involving robotics and automation.

Prior experience in the application of computing technology, mathematics, scientific principles and techniques, including kinematics and kinetics, electrical and fluid power principles and techniques, programming of computers and controllers, robotic systems evaluation and mechanical construction techniques is required.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised

unit of competency. text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---|-----|---|
| 1 | Clarify client brief or contract requirements | 1.1 | Establish, in consultation with the client, the required features and functions of the the application and establish control requirements |
| | | 1.2 | Determine technical, commercial and environmental parameters to the brief or contract |
| | | 1.3 | Determine stakeholders to be consulted in the design and application process |
| | | 1.4 | Provide initial advice to client on the feasibility of the project |
| 2 | Prepare concept proposal | 2.1 | Investigate and take initial measurements to define robotic system performance parameters |
| | | 2.2 | Carry out required modelling, simulations and calculations using appropriate techniques, software and validation techniques |
| | | 2.3 | Generate a range of robotic system solutions that may include consideration of motions, loads, accuracy, precision and repeatability, kinematics, kinetics and dynamic stability, sensing, control, end effectors, data requirements, hardware requirements, system integration, network topology and communication protocols |
| | | 2.4 | Check feasibility and evaluate solutions against design criteria ensuring conformity to occupational health and safety (OHS), regulatory, sustainability and environmental requirements |
| | | 2.5 | Review concept proposals with clients and select preferred solution |

- | | | | |
|---|---------------------------------|-----|---|
| 3 | Design robotic device or system | 3.1 | Finalise design of robotic system |
| | | 3.2 | Provide documentation, drawings, specifications and instructions |
| | | 3.3 | Consult and negotiate with clients and stakeholders to obtain sign-off on design |
| | | 3.4 | Monitor installation and commissioning with stakeholders, when required, and make any necessary modifications |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- determining the features and functions of the application, including OHS, regulatory and risk management requirements
- interpreting parameters to the brief or contract
- researching latest trends and techniques in application of robots, robot functions, programming options and reverse engineering
- investigating and measuring, modelling and calculating for options
- investigating faults in existing designs and proposing solutions
- simulating and systematically programming and testing
- generating and evaluating a range of solutions for feasibility against design criteria
- evaluating solutions for feasibility against design criteria, including relevant engineering and financial calculations and analysis
- evaluating suitability of off the shelf components
- communicating, negotiating and reviewing with stakeholders and client throughout process to obtain agreement on proposal and sign-off on design
- documenting design with drawings, specifications and instructions

Required knowledge

Required knowledge includes:

- contemporary engineering for robot and robotic application design methods
- robotic fundamentals, including mechanical, electrical, fluid, electronic and information technologies, sensor/transducers, controllers, interfacing and signal conditioning, networking, software, data sharing and control functions

- techniques for:
 - continuous improvement
 - problem solving and decision making
 - root cause analysis (RCA) or failure mode and effects analysis (FMEA) or design review based on failure mode (DRBFM), and Pareto analysis
- OHS and regulatory requirements, codes of practice, standards, risk management and registration requirements
- processes for investigation, developing options, modelling and calculating, generating a range of solutions, completing feasibility and evaluation studies, and preparing proposals and designing
- software modelling techniques to analyse robot capability including motions, loads, accuracy, precision and repeatability, kinematics, kinetics and dynamic stability
- validation techniques, including use of simple case traditional methods and calculations:
 - robot drive systems
 - manipulators and end effector options
- fundamentals of locomotion for mobile robots, such as wheels, legs, combined leg and wheels and tracks:
 - object detection and sensor options
- program techniques for a range of robot functions, such as:
 - pick and place
 - proximity detection (presence and distance)
 - motion control algorithms
- system control and data acquisition (SCADA) or distributed control systems (DCS), communications methods and protocols, and networking requirements
- programs and programming techniques for robot functions, communications and networking, as required by design
- documentation, drawings, specifications, programs and instructions

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> • consult and negotiate throughout the design process • interpret features of the robotic system • confirm parameters to the brief or contract and provide initial advice based on discipline knowledge, standards, OHS, regulatory and risk assessment requirements
---	--

	<ul style="list-style-type: none"> • research sustainability and current and emerging trends • investigate and review robotic concept proposals and performance parameters and options • measure, model and calculate using appropriate techniques, software and validation techniques • apply innovation and creativity to generate a range of solutions • evaluate solutions against design criteria ensuring conformity to OHS requirements • prepare robotic system proposal • design a robotic system • provide documentation, drawings, specifications and instructions • obtain sign-off on design.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Client	<p>Client may be:</p> <ul style="list-style-type: none"> • internal or external to the designer’s organisation
Parameters to the design brief	<p>The design brief may include the design of new equipment or fault analysis, rectification or modification to an existing design. Parameters to the design brief may include:</p> <ul style="list-style-type: none"> • determination of the degree of innovation and creativity expected by the client • design process limits and budgets • product cost limits and budgets • performance specifications • equipment availability, capacities and restrictions • specified administrative, communication and approval procedures • use and integration of off the shelf components • other special features and limits in the design brief
Robotic system	<p>A robotic system is a system that includes a self-controlling machine (robot) that can perform functions automatically without human initiation and assistance after initial programming and other components to allow integration with other equipment and systems within the workplace. The robot may have sensory elements, electrical, hydraulic or pneumatic actuators for linear or rotary motion and components to perform functions (e.g. grasping hands, lifting magnets and heating pads). The robot may be networked so as to serve an automated environment.</p> <p>Robots are usually programmed to perform repetitive tasks or tasks unsuitable for humans.</p>
OHS, regulatory, sustainability and environmental issues	<p>OHS, regulatory, sustainability and environmental issues may include:</p> <ul style="list-style-type: none"> • OHS Acts and regulations • relevant standards • industry codes of practice • risk assessments • registration requirements • safe work practices • minimising ecological and environmental footprint of process, plant

	<p>and product</p> <ul style="list-style-type: none">• maximising economic benefit of process plant and product to the organisation and the community• minimising the negative OHS impact on employees, community and customer• state and territory regulatory requirements
Standards and codes	Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular design task

- planning
- assessing
- problem solving
- analysing
- reading and interpreting engineering specifications, standard operating procedures and other applicable reference documents
- organising information
- using numeral operations, geometry and calculations/formulae within the scope of this unit
- checking for conformance to specifications
- planning and sequencing operations
- checking and clarifying task-related information

Required knowledge

Look for evidence that confirms knowledge of:

- hazards and control measures associated with preparing basic programs for PLC, including housekeeping
- safe work practices and procedures
- General knowledge of programmable controllers including:
 - basic PLC operation: definitions, terminology and block diagrams; scan cycle
 - basic programming rules; addressing for I/O; halt; run
 - programming (using a hand programmer): flowcharts/steps to use when programming; clearing of memory; ladder format
 - Boolean/mnemonic/statement list format; series circuits; parallel circuits; latching circuits; stack register operation; combination series/parallel circuits; inversion elements; timers
 - counters; monitoring of discrete I/O and timer/counter values; edit (insert and delete elements)
- connection of discrete input and output devices to a PLC

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

EVIDENCE GUIDE	
Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to prepare basic programs for programmable logic controllers.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with preparing basic programs for programmable logic controllers, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Programs

Includes series elements, parallel elements, combination series parallel elements, basic timers and counters

Engineering technician

MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers the skills and knowledge required to apply functions of computer-aided design (CAD) software programs that are typically used in the production of detail drawings.

Application of the Unit

This unit is suitable for those working within a CAD or drafting work environment and may be applied across engineering and manufacturing environments. It covers competent use of a CAD program to perform basic drawing tasks used in the development of detail drawings. Drawings may include plans, diagrams, charts, circuits, systems or schematics.

This unit includes using computer equipment and selecting software functions in order to generate basic drawing elements.

Work is conducted under supervision.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of

performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---------------------------------------|-----|---|
| 1 | Confirm drawing requirements | 1.1 | Confirm purpose, scope, and information and presentation requirements for drawing |
| | | 1.2 | Review available information relevant to project and work requirements, and identify and address further information needs |
| | | 1.3 | Identify computing equipment and software used in the organisation |
| | | 1.4 | Identify work flow and procedures for work supervision |
| | | 1.5 | Examine requirements for presentation of drawings |
| 2 | Identify key features of CAD software | 2.1 | Describe types of CAD software used for detail drafting, their key features and suitability for producing specific drawing outcomes |
| | | 2.2 | Describe types of CAD software used for design drafting, their key features and suitability for producing specific drawing outcomes |
| | | 2.3 | Identify differences in CAD process to generate 2-D drawings and 3-D models, and reasons for each presentation |
| | | 2.4 | Identify differences in CAD process to generate single and multiple view drawings, and reasons for each presentation |
| | | 2.5 | Identify CAD software used in the organisation and confirm compatibility with other software programs and peripheral equipment |
| | | 2.6 | Identify software features for linked specifications, catalogues or materials ordering |
| 3 | Access software and set up for | 3.1 | Open software and navigate organisational filing and library system |

drawing work	3.2	Identify organisational and software templates and determine uses	
	3.3	Identify organisational symbols, codes and standards to be applied in drafting work and how these are accessed and applied	
	3.4	Apply workplace procedures to retrieve and manipulate required information and navigate computing technology	
	3.5	Set up working environment	
4	Produce basic drawing elements	4.1	Use CAD functions to produce basic drawing elements
		4.2	Use editing and transfer tools and methods to modify drawing elements
		4.3	Apply dimensions, text and symbols to drawing elements
		4.4	Import and export files into/out of working space
		4.5	Generate different views and perspectives
		4.6	Organise presentation of work
5	Complete CAD operations	5.1	Save and file drawing elements according to organisational procedures
		5.2	Print drawing elements and evaluate presentation
		5.3	Evaluate work and identify areas for improvement
		5.4	Close applications, perform CAD housekeeping and maintain organisational filing system

Required Skills and Knowledge

Required skills

Required skills include:

- literacy skills sufficient to read instructions for drawings work

- using computer technologies and navigating software
- numeracy skills sufficient to interpret technical information and determine scaling and layout issues
- navigating software to:
 - manipulate drawing entities
 - modify dimension styles
 - create and use layers
 - manipulate the drawing origin
 - define and utilise symbol libraries
 - utilise grids/grid snaps and object snaps
 - display views at multiple scales
 - add title blocks/frame to layout a drawing for printing
 - prepare advanced drawings in plane orthogonal or equivalent
 - set up prototype drawings
 - define and extract attribute data
 - create bills of materials (BOM) utilising attribute data and third-party application software

Required knowledge

Required knowledge includes:

- general knowledge of different approaches to drawing
- awareness of copyright and intellectual property issues and legislation in relation to drawing
- environmental and occupational health and safety (OHS) issues associated with the tools and materials used for drawing
- quality assurance procedures
- CAD program capabilities and processes

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to use CAD software to produce graphics commonly used in drafting work.
Critical aspects for assessment and evidence required to demonstrate competency in this	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required

<p>unit</p>	<p>knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Specifically the candidate must be able to:</p> <ul style="list-style-type: none"> • work within typical site/teamwork structures and methods • apply worksite communication procedures • comply with organisational policies and procedures, including quality requirements • participate in work meetings • comply with quality requirements • use industry terminology • apply appropriate safety procedures • identify drawing work requirements and determine appropriate software functions and features • identify features and uses of CAD software used in detail and design drafting • access and use computing equipment and CAD software functions to produce drawing elements.
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with drafting or other units requiring the exercise of the skills and knowledge covered by this unit.</p>

Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

MEM30032A Produce basic engineering drawings

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers producing drawings or similar graphical representations where the critical dimensions and associated tolerances and design specifications are predetermined.

Application of the Unit

This unit applies to any of the full range of engineering disciplines. All work is carried out under supervision and all specifications, dimensions and tolerances are predetermined. The unit covers application of introductory drafting skills to select and apply drawing protocols. Manual drafting or computer-aided design (CAD) drawing equipment may be used.

If CAD skills are required, MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements, should be selected.

Drawings are completed to Australian Standard (AS) 1100.101–1992 Technical drawing – General principles.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of

performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | |
|---|-------------------------------|---|
| 1 | Identify drawing requirements | 1.1 Identify information requirements for work and obtain all relevant job requirements and design specifications in accordance with workplace procedures |
| | | 1.2 Identify, interpret and analyse drawing requirements, specifications and relevant workplace information |
| | | 1.3 Interpret and apply industry terminology for drawing work |
| | | 1.4 Confirm communication practices required during drawing work |
| | | 1.5 Estimate time requirements for completing work |
| 2 | Select drawing features | 2.1 Set up drawing list or register |
| | | 2.2 Determine level of detail and numbers of drawings required for work |
| | | 2.3 Plan presentation and layout, and determine drawing sheets, text style and size, and scales, appropriate for drawing work |
| | | 2.4 Identify features and applications of line types and thicknesses and select for drawing work |
| | | 2.5 Establish datums and dimensions |
| 3 | Prepare and detail drawings | 3.1 Prepare drawings in plane orthogonal, isometric projection or equivalent |
| | | 3.2 Detail drawings in third angle projection, including auxiliary views, sections and assemblies |
| | | 3.3 Draw sections through engineering components incorporating correct use of cutting plane symbols and conventions |

		3.4	Include appropriate symbols for limits and fits, surface texture and geometric tolerances
		3.5	Resolve problems in consultation with a supervisor
		3.6	Check drawing compliance with work instructions and specifications
4	Select physical dimensions and produce engineering parts list	4.1	Where required, select components and/or materials from supplier/manufacturer catalogues using predetermined design specifications
		4.2	Produce an engineering parts list in accordance with workplace procedures
5	Complete drawing documentation	5.1	Obtain approval for drawings and/or parts list
		5.2	Store approved drawings and/or parts lists
		5.3	Catalogue and issue drawing and documentation in accordance with workplace procedures

Required Skills and Knowledge

Required skills

Required skills include:

- correctly using and maintaining equipment, including CAD
- manual drafting, filing and printing
- reading and interpreting specifications
- communicating with supervisor to confirm work requirements and outcomes
- visualising components
- preparing a drawing in plane orthogonal, isometric projection or equivalent
- determining drawing protocols required to complete drawing to industry standard
- selecting and locating text to support presentation
- establishing datums and dimensions for drawings
- drawing sections through an engineering component incorporating correct use of cutting plane symbols and conventions

Required knowledge

Required knowledge includes:

- drafting media, including cartridge paper, tracing paper, drafting film and plain printing paper
- layout conventions
- effective use of blank space, location of notes and symbols
- sectioning
- overview of graphical techniques
- assembly drawings and explosion drawings
- schematics/line drawings, graphs and pictorials
- standard engineering drawing symbols, references and terminology
- application of surface finish symbols to drawings
- uses of different scales in industry applications
- uses and types of line weights
- uses and types of drawing sheets
- type of information provided with drawings

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

MEM30033A Use computer-aided design (CAD) to create and display 3-D models

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers using a computer-aided design (CAD) program to produce and plot basic 3-D view drawings.

Application of the Unit

This unit applies to the production of 3-D models using CAD software and associated equipment. This will include the use of region and solid modelling techniques, section views and pre-drawn library files. Work also includes extraction of properties and application of basic rendering techniques.

All work is conducted under supervision.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of

performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Confirm drawing requirements	1.1	Confirm purpose, scope and information and presentation requirements for drawing
		1.2	Identify, interpret and analyse available information relevant to project and work requirements, and identify and address further information needs
		1.3	Identify computing equipment and software used in the organisation
		1.4	Identify work flow and procedures for work supervision and confirm communication requirements through project
		1.5	Examine requirements for presentation of drawings
2	Create and display 3-D views	2.1	Set up a 3-D environment on the screen to allow multiple viewing
		2.2	Create 3-D views on the screen by manipulation of drawing planes and insertion of 3-D geometric shapes
		2.3	Draw on any plane of the 3-D view
		2.4	Use editing functions to modify 3-D geometric shapes in creating 3-D views
		2.5	Produce wire line, surface and solid face displays in isometric, perspective and orthographic projections
3	Detail 3-D model	3.1	Extract the mass and surface area of a given solid model made from a nominated material
		3.2	Apply basic rendering techniques to render solid model to a specified set of criteria
4	Save completed	4.1	Save file in an appropriate format to enable retrieval and

drawing file in
various formats

use in a CAD system

- 4.2 Save file in other formats to enable retrieval in other software applications

Required Skills and Knowledge

Required skills

Required skills include:

- reading and interpreting engineering specifications
- organising information
- using computer and peripherals
- using CAD program
- saving 3-D models in various file formats
- preparing drawings in plane orthogonal, isometric projection or equivalent

Required knowledge

Required knowledge includes:

- region modelling techniques
- solid modelling techniques
- development of sectioned models
- use of cutting plane
- use of cross hatching
- use of pre-drawn library files and primitives to produce a 3-D model
- use of third level software to produce 3-D models
- how to extract mass and area properties
- how to extract area properties from region models
- application of basic rendering techniques to a 3-D model

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

MSS402003 Apply competitive systems and practices

Modification History

Release 1. Unit code changed. Application changed. Elements changed. Performance criteria changed. Foundation Skills changed. Range of Conditions removed. Assessment requirements changed. Supersedes and is equivalent to MSS402001 Apply competitive systems and practices.

Application

This unit describes the skills and knowledge required to apply basic improvement concepts and practices.

This unit applies to an individual who is required to recognise their own role in the value chain, apply improvement methods within the organisation's competitive systems and practices framework and contribute ideas to the improvement process.

For the purpose of this unit, customer features are functions or aspects of a product, process or service, and 'customer benefits' refers to expected value for the customer.

This unit applies to any organisation that is implementing competitive systems and practices.

No licensing or certification requirements exist at the time of publication. Relevant legislation, industry standards and codes of practice within Australia must be applied.

Competency Field

Competitive systems and practices

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Identify own place in the value chain	1.1 Identify customers relevant to own work and their needs or requirements 1.2 Identify suppliers for own work 1.3 Identify value contributions along chain 1.4 Identify and recommend methods of increasing own contribution to

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	value chain
2. Improve the product or service and process value	<p>2.1 Identify customer features and/or benefits in product or service and process</p> <p>2.2 Identify aspects of product or service and process which contribute to customer features and/or benefits</p> <p>2.3 Identify aspects of product and process which do not contribute to customer features and/or benefits</p> <p>2.4 Recommend methods of reducing waste or increasing features and/or benefits</p>
3. Use competitive systems and practices	<p>3.1 Identify competitive systems and practices used in organisation and own work area</p> <p>3.2 Apply practices appropriate for job or process</p> <p>3.3 Monitor job or process and make adjustments to improve it in accordance with procedures</p> <p>3.4 Identify own skill requirements and, if required, seek skill development</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

- Oral communication skills to communicate improvement ideas and development needs
- Numeracy skills to monitor improvements using basic arithmetic with simple measures of time, quantity and value
- Learning skills to identify own development needs.

Other foundation skills essential to performance are explicit in the performance criteria of this unit.

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSS402001 Apply competitive systems and practices.

Assessment Requirements for MSS402003 Apply competitive systems and practices

Modification History

Release 1. Unit code changed. Application changed. Elements changed. Performance criteria changed. Foundation Skills changed. Range of Conditions removed. Assessment requirements changed. Supersedes and is equivalent to MSS402001 Apply competitive systems and practices.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and demonstrated the ability to:

- apply at least one competitive system or practice, as required by the organisation, to own work on at least 2 occasions
- recommend at least 2 improvements to product or service and/or process. The improvement ideas must target one or both of:
 - reduced waste (muda)
 - improved features or benefits to the customer.
 -

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- features of competitive operational practices being used in own work area
- internal and external customers relevant to own work
- customer needs or requirements for product or service
- own role in fulfilling customer needs or requirements
- value chain for products or services
- own place in the value chain
- supply chain for products or services
- identifying and reducing muda (waste) relevant to own work
- simple measures of improvement relevant to own work including time, quantity and value.
-

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources
- modelling of industry operating conditions, including:
 - implementation of competitive systems and practices environment.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSS402022 Apply quick changeover procedures

Modification History

Release 1. Unit code changed. Application changed. Performance Criteria changed. Foundation Skills populated. Range of Conditions removed. Assessment Requirements changed. Supersedes and is equivalent to MSS402020 Apply quick changeover procedures.

Application

This unit describes the skills and knowledge required to prepare for and apply quick changeover according to procedures.

This unit applies to individuals who are required to apply quick changeover of equipment, processes, batches, product or service type or other aspects of the work.

This unit applies to any organisation that is implementing quick changeover, typically within competitive systems and practices.

This unit may not be applicable to a totally continuous operation producing only one product, or simultaneous range of products. The unit is also not applicable to a maintenance/pressure vessel inspection shutdown as experienced by continuous process manufacturers.

No licensing or certification requirements exist at the time of publication. Relevant legislation, industry standards and codes of practice within Australia must be applied.

Competency Field

Competitive systems and practices

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare for changeover	1.1 Determine when changeover will be required 1.2 Review plans and instructions for quick changeover 1.3 Identify role of others in quick changeover 1.4 Obtain and organise all tools, parts and materials required for

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	changeover 1.5 Organise changeover process taking into account internal and external set-up activities 1.6 Identify quality specifications and targets relevant to changeover
2. Make quick changeover	2.1 Plan changeover according to quick changeover principles 2.2 Liaise and work with relevant people in quick changeover 2.3 Complete changeover according to procedures 2.4 Check output meets specification 2.5 Debrief with all relevant stakeholders 2.6 Note any steps which result in waste 2.7 Recommend changes to reduce waste
3. Improve work health and safety (WHS)	3.1 Identify hazards to self or others in all steps or actions in changeover process 3.2 Determine risks from each hazard 3.3 Identify actions which may be performed in a more ergonomic manner 3.4 Recommend changes to improve WHS

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

- Reading skills to understand workplace documentation
- Oral communication skills to debrief and make recommendations
- Numeracy skills to check outputs, identify waste.

Other foundation skills essential to performance are explicit in the performance criteria of this unit.

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSS402020 Apply quick changeover procedures.

Links

Companion Volume Implementation Guides are found in VETNet -

Assessment Requirements for MSS402022 Apply quick changeover procedures

Modification History

Release 1. Unit code changed. Application changed. Performance Criteria changed. Foundation Skills populated. Range of Conditions removed. Assessment Requirements changed. Supersedes and is equivalent to MSS402020 Apply quick changeover procedures.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and demonstrated the ability to:

- perform, and suggest improvements to, at least 3 quick changeovers.
-

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- principles of quick changeover, including:
 - setting of target time for changeover
 - conversion of internal set-up time to external set-up time, where appropriate
 - simplification of changeover steps
 - monitoring and continuous improvement of changeovers
- purpose and requirements of changeover
- types of muda (waste) relevant to the changeover, including 'required' muda
- methods of minimising muda
- quality requirements for process, products or services affected by changeover
- relevant operational procedures
- health, safety and environment (HSE) procedures relevant to own job.
-

Assessment Conditions

and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
 - documented quick changeover processes or procedures
- modelling of industry operating conditions.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSS402023 Apply Just in Time procedures

Modification History

Release 1. Unit code changed. Application changed. Performance Criteria changed. Range of Conditions removed. Foundation Skills populated. Assessment Requirements changed. Supersedes and is equivalent to MSS402021 Apply Just in Time procedures.

Application

This unit describes the skills and knowledge required to apply procedures to own work within a Just in Time (JIT) system.

This unit applies to an individual who is required to perform their role within a pull system, recognise and respond to indicators of demand, and facilitate operation of flow authorisation.

This unit applies to any organisation that is implementing a Just in Time system.

No licensing or certification requirements exist at the time of publication. Relevant legislation, industry standards and codes of practice within Australia must be applied.

Competency Field

Competitive systems and practices

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Respond to indicator of demand	1.1 Identify pull of product through work role 1.2 Recognise indicator of flow authorisation and take action according to JIT procedures 1.3 Identify production or service required by indicator
2. Make products or deliver service to demand	2.1 Make product or deliver service as required by indicator 2.2 Identify any factors likely to prevent demand being satisfied in own work or work of team

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	2.3 Take action in accordance with procedures
3. Update demand information as required	3.1 Record information about demand and flow according to procedures 3.2 Facilitate operation of flow authorisation as part of work
4. Recommend improvements	4.1 Examine the operation of the JIT system as it relates to own work 4.2 Identify areas for improvement 4.3 Identify own additional skills needed to implement JIT procedures 4.4 Recommend improvements according to procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

- Reading skills to interpret job specifications and indicator/flow processes
- Writing skills to update demand and flow information
- Oral communication skills to recommend improvements
- Numeracy skills to interpret indicators of demand for quantity, quality and time of delivery
- Learning skills to recognise and act on problems and recognise own skill needs.

Other foundation skills essential to performance are explicit in the performance criteria of this unit.

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSS402021 Apply Just in Time procedures.

Links

Companion Volume Implementation Guides are found in VETNet --
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=5b04f318-804f-4dc0-9463-c3fb9a3fe998>

Assessment Requirements for MSS402023 Apply Just in Time procedures

Modification History

Release 1. Unit code changed. Application changed. Performance Criteria changed. Range of Conditions removed. Foundation Skills populated. Assessment Requirements changed. Supersedes and is equivalent to MSS402021 Apply Just in Time procedures.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and demonstrated the ability to:

- apply at least 2 instances of JIT procedures to own work
- make at least 2 improvement suggestions relevant to own role in JIT system.
-

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- JIT methods relevant to own job
- indicator/s of demands relevant to own job
- own role in controlled flow and flow authorisation
- faults and other issues that may threaten the JIT delivery of own product or service
- procedures for recommending improvements.
-

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources
- modelling of industry operating conditions, including:
 - JIT procedures
 - demand/pull indicator system.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSS402042 Apply 5S procedures

Modification History

Release 1. Unit code changed. Application changed. Performance Criteria changed. Foundation Skills populated. Range of Conditions removed. Assessment Requirements changed. Supersedes and is equivalent to MSS402041 Apply 5S in an office and MSS402040 Apply 5S procedures.

Application

This unit describes the skills and knowledge required to identify and implement 5S practices to make improvements in own job and work area.

This unit applies to workers who have a discrete role, individually manage a process or who have been given authority by a supervisor or manager to make changes to work practices in a work area.

This unit applies to any organisation that is implementing continuous improvement or more formal competitive systems and practices.

No licensing or certification requirements exist at the time of publication. Relevant legislation, industry standards and codes of practice within Australia must be applied.

Competency Field

Competitive systems and practices

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare for implementation of 5S	1.1 Identify own functions in target work area in terms of internal and/or external customer requirements 1.2 Identify how own and team tasks contribute to work area functions 1.3 Identify key steps in work tasks 1.4 Confirm arrangements for assistance and reporting for 5S implementation

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
2. Sort needed items from unneeded	2.1 Identify all items in target work area 2.2 Distinguish between essential items for achieving work area functions and non-essential items 2.3 Place any non-essential item in an appropriate location other than work area/space 2.4 Regularly check that only essential items are in work area 2.5 Seek input from supervisor and any team members to confirm non-essential items and what to do with them
3. Set the workplace in order	3.1 Identify best location, state or condition for each essential item to minimise waste (muda) 3.2 Set each essential item in its assigned location, state or condition 3.3 After use, immediately return each essential item to its assigned location, state or condition 3.4 Regularly check that each essential item is in its assigned location, state or condition
4. Shine the work area	4.1 Keep work area clean and organised before, during and after shift 4.2 Identify cleaning and maintenance routines within own area of responsibility in work area 4.3 Apply cleaning and maintenance routines according to schedules. 4.4 Check work area and essential items for signs of wear, malfunction, damage and/or safety risks that require immediate attention and report according to workplace procedures
5. Standardise activities	5.1 Identify and apply procedures or activities to maintain clean and organised work area 5.2 Apply standardised approach to procedures or activities using a simple checklist, schedule or reminder system 5.3 Keep work area to specified standard
6. Sustain the 5S system	6.1 Clean and organise work area after completion of job and before commencing next job 6.2 Identify situations where conformance to standards is unlikely and take actions specified in procedures 6.3 Inspect work area regularly for conformance to specified standard 6.4 Recommend improvements to lift the level of conformance in the

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	workplace

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

- Reading skills to interpret familiar workplace procedures and work documentation
- Writing skills to complete familiar workplace documentation
- Oral communication skills to report issues and recommendations and participate in discussions
- Numeracy skills to perform simple arithmetic with whole numbers and routine fractions or percentages.

Other foundation skills essential to performance are explicit in the performance criteria of this unit.

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSS402041 Apply 5S in an office and MSS402040 Apply 5S procedures.

Links

Companion Volume Implementation Guides are found in VETNet --

Assessment Requirements for MSS402042 Apply 5S procedures

Modification History

Release 1. Unit code changed. Application changed. Performance Criteria changed. Foundation Skills populated. Range of Conditions removed. Assessment Requirements changed. Supersedes and is equivalent to MSS402041 Apply 5S in an office and MSS402040 Apply 5S procedures.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and demonstrated the ability to:

- identify, apply and sustain 5S procedures to improve at least one aspect of a work area.
-

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- 5S concepts and procedures including:
 - meaning and application of 5S to own job and work area
 - purpose and steps of 5S
- workplace procedures, instructions or similar for own activities and of others in team or work area
- principles of efficient workplace organisation
- types of muda (waste) including:
 - defects/rework
 - overprocessing
 - overproduction
 - unnecessary motion
 - unnecessary transport
 - excess inventory
 - underutilised resources or talent
- potential muda (waste) within the work area and types of improvements related to location and use of:
 - supplies, equipment, materials, furniture
 - lighting, heating, cooling
 - paperwork, reference materials, files, storage systems
 - safety and personal protective equipment (PPE)
- simple methods to estimate the amount of muda (waste) and the benefits from improvements

- procedures for recommending improvements.
-

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources
- modelling of industry operating conditions.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSS402084 Undertake root cause analysis

Modification History

Release 1. Unit code changed. Application changed. Performance Criteria changed. Foundation Skills populated. Range of Conditions removed. Assessment Requirements changed. Supersedes and is equivalent to MSS402080 Undertake root cause analysis.

Application

This unit describes the skills and knowledge required to use analysis tools and diagrams and/or charts in formal problem solving to root cause.

This unit applies to individuals who are required, in their own work or as part of a formal or ad hoc team, to identify problems and their root causes; and to apply immediate fix and long term solutions.

This unit applies to any organisation.

No licensing or certification requirements exist at the time of publication. Relevant legislation, industry standards and codes of practice within Australia must be applied.

Pre-requisite Unit

Nil

Competency Field

Competitive systems and practices

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Recognise problem	1.1 Identify features or occurrences indicative of problem 1.2 Select and use tools and diagrams and/or charts to define problem
2. Implement quick fix	2.1 Recommend quick fix within own scope of competency and authority 2.2 Use technology or processes relevant to problem to implement quick

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	fix
3. Determine root cause	3.1 Identify range of possible causes of problem 3.2 Gather data and other information to eliminate or confirm possible causes 3.3 Use available data and information to link causes and effects 3.4 Seek assistance to obtain additional information if problem is beyond own competency or authority 3.5 Identify root cause
4. Develop permanent solution	4.1 Identify options to eliminate root cause or break the cause tree 4.2 Evaluate options to identify most appropriate solution 4.3 Liaise with relevant people to gather ideas on solutions and implementation 4.4 Recommend or implement solution within limits of competency and authority. 4.5 Monitor impact of solution and report areas of suboptimal or negative impact

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

- Reading skills to interpret data and information
- Writing skills to document process and/or results and diagrams and/or charts
- Oral communication skills to liaise with others on problems, solutions and implementation and to make recommendations
- Numeracy skills to interpret and manipulate data on problems, causes and effects, impact of solutions
- Learning skills to seek assistance if needed.

Other foundation skills essential to performance are explicit in the performance criteria of this unit.

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSS402080 Undertake root cause analysis.

Assessment Requirements for MSS402084 Undertake root cause analysis

Modification History

Release 1. Unit code changed. Application changed. Performance Criteria changed. Foundation Skills populated. Range of Conditions removed. Assessment Requirements changed. Supersedes and is equivalent to MSS402080 Undertake root cause analysis.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and demonstrated the ability to:

- identify at least 2 problems and for each one:
 - use a different RCA tool to determine root cause
 - identify and apply a quick fix
 - recommend a permanent solution
- implement permanent solution to at least one problem and monitor the impact of solution.
-

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- methodology of root cause analysis, including:
 - difference between quick fix and root cause elimination
 - breaking of causal tree
- indicators of problems and variances to normal operation
- application of analysis tools including at least three of the following:
 - Pareto charts
 - 5 Whys
 - Cause and effect diagrams
 - Control charts or run charts
 - Tree diagrams
 - 4W analysis.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:

- data and information on problems to be analysed
- modelling of industry operating conditions.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

Links

Companion Volume Implementation Guides are found in VETNet -

MSS402085 Contribute to the application of a proactive maintenance strategy

Modification History

Release 1. Unit code changed. Application changed. Elements changed. Performance Criteria changed. Foundation Skills populated. Range of Conditions removed. Assessment Requirements changed. Supersedes and is equivalent to MSS402081 Contribute to the application of a proactive maintenance strategy.

Application

This unit describes the skills and knowledge required to apply proactive maintenance procedures to own work and equipment and/or plant.

This unit applies to an individual who is required to follow procedures for cleaning, servicing and adjusting equipment and/or plant within their area of responsibility and to contribute to equipment uptime and overall equipment effectiveness (OEE).

This unit applies to any organisation that is implementing total preventative and/or productive maintenance (TPM), reliability centred maintenance (RCM) or similar proactive maintenance strategies.

No licensing or certification requirements exist at the time of publication. Relevant legislation, industry standards and codes of practice within Australia must be applied.

Competency Field

Competitive systems and practices

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Maintain equipment/plant	1.1 Keep equipment/plant within area of responsibility clean 1.2 Ensure equipment/plant is serviced and adjusted in accordance with procedures and own level of responsibility 1.3 Access manufacturer manuals and specifications to expand

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	knowledge on maintenance of equipment/plant 1.4 Access documentation and update records on equipment and/or plant operation and maintenance in accordance with workplace procedures
2. Monitor operation of equipment/plant	2.1 Regularly check key conditions of equipment/plant as defined in workplace procedures 2.2 Check equipment/plant OEE in accordance with schedules 2.3 Note any deviation from conditions specified in procedures
3. Identify deviations	3.1 Identify any previous occurrences of deviation 3.2 Identify any related deviations which have occurred 3.3 Identify any unusual occurrence which may be related to deviation
4. Take action in response to deviation	4.1 Liaise with relevant people regarding the deviation and possible solutions 4.2 Implement solution within area of responsibility and/or assist others with implementation of solution

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

- Reading skills to interpret workplace documentation and manufacturer manuals and specifications
- Writing skills to update records
- Oral communication skills to discuss deviations and solutions
- Numeracy skills to interpret and apply servicing and adjustment specifications, identify deviation
- Learning skills to identify own development needs.

Other foundation skills essential to performance are explicit in the performance criteria of this unit.

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSS402081 Contribute to the application of a proactive maintenance strategy.

Links

Companion Volume Implementation Guides are found in VETNet --

Assessment Requirements for MSS402085 Contribute to the application of a proactive maintenance strategy

Modification History

Release 1. Unit code changed. Application changed. Elements changed. Performance Criteria changed. Foundation Skills populated. Range of Conditions removed. Assessment Requirements changed. Supersedes and is equivalent to MSS402081 Contribute to the application of a proactive maintenance strategy.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and demonstrated the ability to:

- complete these requirements, either:
 - in relation to at least 2 items of equipment/plant; or
 - on at least 2 occasions in relation to one item of equipment/plant.
 -

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- identifying trends and other non-random variation
- determining OEE (availability x performance x quality rate) and uptime metrics
- principles of operation of plant/equipment and factors likely to cause deviations in performance
- identifying deviations requiring action
- appropriate actions for dealing with deviations
- equipment manuals and specifications.
-

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
 - proactive maintenance system and procedures
- modelling of industry operating conditions.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

PMASUP410 Develop plant documentation

Modification History

Release 1. Supersedes and is equivalent to PMASUP410B Develop plant documentation

Application

This unit of competency covers the skills and knowledge required to develop, establish and evaluate plant documentation in response to identified information requirements. Examples of information requirements include workplace documents for the introduction of new systems, processes, equipment and record keeping requirements.

This unit of competency applies to senior technicians, team leaders and supervisors, or those in similar roles who are required to apply in-depth knowledge of process and plant in order to investigate the need for new plant documentation, determine operating principles and best practice in consultation with others, draft and validate the plant documentation, and communicate and distribute the new/amended documentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Support

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|---|-----|---|
| 1 | Identify information need/deficiency | 1.1 | Identify the need for documentation in accordance with company requirements |
| | | 1.2 | Evaluate current documentation where existent |

- 1.3 Define information need/deficiency
 - 1.4 Discuss information requirements with appropriate personnel
- 2 **Develop plant documentation**
 - 2.1 Specify information need and set/prioritise objectives
 - 2.2 Analyse existing documentation/records in accordance with specified requirements
 - 2.3 Source information and determine operating principles, best practice and other content as required.
 - 2.4 Develop/amend documentation as a draft in accordance with specifications to standard format
 - 2.5 Issue documentation to appropriate personnel for review
 - 2.6 Edit documentation and amend in accordance with review requirements
 - 2.7 Complete documentation to satisfy the initial identified need/deficiency
- 3 **Communicate changes to plant documentation**
 - 3.1 Explain and communicate documentation to all relevant personnel
 - 3.2 Distribute documentation to all appropriate personnel
 - 3.3 Evaluate implementation of documentation
 - 3.4 Amend documents, if required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Plant documentation

Plant documentation to be developed/amended includes one or more of the following:

- operating procedures
- work instructions
- incident procedures
- operating manuals
- quality manuals and procedures
- training program contents/materials

Unit Mapping Information

Release 1. Supersedes and is equivalent to PMASUP410B Develop plant documentation

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for PMASUP410 Develop plant documentation

Modification History

Release 1. Supersedes and is equivalent to PMASUP410B Develop plant documentation

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- review and interpret a range of relevant sources of information and select relevant content
- communicate and consult effectively with all stakeholders
- clearly convey complex/technical information in writing
- use language, structures and formats that are appropriate to information needs, the reader and organisation requirements.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- principles of operation of plant/equipment
- process-specific science (e.g. physics, chemistry and biochemistry) and mathematics
- organisation procedures, including those covering:
 - information systems
 - data management
 - quality
 - safety, emergency and hazard control
 - policy/procedure development
 - document control and approvals
 - style guides and standards for documentation
 - use of internet
 - relevant standard operating procedures
- standard codes of practice relevant to developing plant documentation
- sources of information, including:
 - manufacturing specifications
 - product specifications
 - company policies and procedures
 - customer requirements
 - industry/work place codes of practice
 - state/territory work health and safety (WHS) legislation and regulations

- ISO and other industry standards and regulations
- industry associations, networks and professional bodies.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
 - should occur over a range of situations which include typical disruptions to normal, smooth operations
 - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
 - must include developing and/or amending at least two (2) types of plant documentation, the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems
 - may use industry-based simulation for part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
 - walk-throughs
 - pilot plant operation
 - demonstration of skills
 - industry-based case studies/scenarios
 - 'what ifs'.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.

- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
 - relevant VET or other qualification/Statement of Attainment
 - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
 - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
 - being currently employed undertaking the type of work being assessed
 - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
 - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
 - conducting on-the-job training/assessments of the type of work being assessed
 - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

RIIRAI609D Establish and maintain electrical installations, reticulation and protection system

Modification History

Release	Comment
1	This unit replaces RIIQAI609A Establish and maintain electrical installations, reticulation and protection system
2	Plan and Prepare element added.
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit develops a participant's skills and knowledge required to establish and maintain electrical installations, reticulation and protection systems in Coal mining.

This unit is appropriate for those working in management or technical specialist roles.

No licensing, legislative or certification requirements apply to this unit at the time of publication

Unit Sector

Coal mining

Elements and Performance Criteria

1. Plan and prepare for electrical installations, reticulation and protection	1.1 Access, interpret and apply electrical installations, reticulation and protection system documentation and ensure the work activity is compliant 1.2 Obtain, read, interpret, clarify and confirm work requirements 1.3 Identify and address potential risks, hazards and environmental issues and implement control measures 1.4 Select and wear personal protective equipment appropriate for
---	--

	<p>work activities</p> <p>1.5 Identify design/selection specifications and critical aspects of the systems from a comprehensive analysis of operating requirements</p> <p>1.6 Identify systems options from an analysis of all relevant technical, operational and financial information</p> <p>1.7 Select the preferred systems options on the basis of performance against specification requirements</p>
<p>2. Provide power supply systems for the mine site</p>	<p>2.1 Install, maintain, review and modify mine power supply systems</p> <p>2.2 Undertake processes and procedures and ensure reliability and quality of supply taking into account transients, harmonics, over-voltages, voltage regulation, lightning and stray currents</p> <p>2.3 Plan and install alternative power supply associated with mine site conditions and safety needs</p> <p>2.4 Undertake processes and procedures to protect high energy sources (sub stations and transformers) through the selection and installation of switchgear and protective devices</p> <p>2.5 Provide mine illumination systems and equipment</p> <p>2.6 Plan and install battery and associated charging equipment</p> <p>2.7 Review, audit, report and maintain all power supply systems</p>
<p>3. Provide electrical protection system for mine sites</p>	<p>3.1 Access, interpret and apply the compliance documentation requirements related to mine electrical protection system</p> <p>3.2 Install and maintain the electrical protection system</p> <p>3.3 Identify, isolate, rectify faults in electrical installations and verify ability of the system through recognised decision-making processes, including the use of fault level calculations, discrimination and component ratings</p> <p>3.4 Apply management decision-making processes for the maintenance, examination and testing of electrical protection systems relative to mine site and safety needs</p> <p>3.5 Review, modify, audit and maintain all electrical protection systems and devices</p>
<p>4. Provide cables from power source to point of usage</p>	<p>4.1 Access, interpret, apply and implement the compliance documentation requirements related to provision and use of mine cables</p> <p>4.2 Identify, select and install mine cables</p> <p>4.3 Identify, report and rectify mine cable faults and hazards in accordance with mine site and hazard control requirements</p>

	<p>4.4 Inspect mine cables for their integrity, usage, consequence of fault/damage and previous repairs</p> <p>4.5 Carry out management, inspection, application, testing, fault finding and repair</p>
<p>5. Provide mobile machinery and electrical apparatus</p>	<p>5.1 Access, interpret, clarify and apply the compliance documentation requirements related to provision and use of mobile machinery and electrical apparatus</p> <p>5.2 Identify, select and install mobile machinery and electrical apparatus</p> <p>5.3 Inspect, monitor, report and rectify mobile machinery and electrical apparatus faults and hazards</p> <p>5.4 Carry out testing</p>
<p>6. Provide overall electrical services that apply to production systems</p>	<p>6.1 Access, interpret, clarify and apply the compliance documentation requirements related to overall electrical services that apply to production systems</p> <p>6.2 Select, install, monitor and maintain mine communication systems</p> <p>6.3 Select, install, monitor, modify and maintain the electrical components of the gas monitoring and detection systems</p> <p>6.4 Select, install, monitor, modify and maintain control systems</p> <p>6.5 Control, monitor and rectify electromagnetic interference that may affect the safe use of electrical systems and other mining equipment</p> <p>6.6 Select, install, monitor, modify and maintain remote control systems on mining equipment</p> <p>6.7 Select, install, monitor, modify and maintain welding equipment and energy delivery sources, including pre and post operations</p> <p>6.8 Identify, control and manage hazards from electrostatic charges</p>
<p>7. Provide safe electrical work procedures</p>	<p>7.1 Access, interpret, clarify and implement the compliance documentation requirements related to safe electrical work procedures</p> <p>7.2 Monitor and audit safe electrical work procedures</p> <p>7.3 Determine and implement training needs</p>

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Unit Mapping Information

No equivalent unit

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=88a61002-9a21-4386-aaf8-69c76e675272>

Assessment Requirements for RIIRAI609D Establish and maintain electrical installations, reticulation and protection system

Modification History

Release	Comment
1	This unit replaces RIIQAI609A Establish and maintain electrical installations, reticulation and protection system
2	Plan and Prepare element added.
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant legislation, documentation, policies and procedures
- implements procedures and techniques for the safe, effective and efficient completion of the establishing and maintenance of mine electrical installations, reticulation and protection systems including:
 - accessing, interpreting and applying legislative, organisation and site requirements and procedures
 - accessing, interpreting and applying:
 - technical information
 - records and reports
 - applying the principles of electrical installations, reticulation, control and protection system theory
 - applying procedures for the evaluation of designs and installations of electrical installations, reticulation, control and protection systems at a mine in terms of safety requirements
 - applying risk management processes for the risks associated with and consequences of failure of electrical installations, reticulation, control and protection systems at a mine

- applying risk management processes for the risks associated with and consequences of changes to electrical installations, reticulation, control and protection systems at a mine
- applying development procedures, for the management, operation, testing and maintenance of the mines electrical installations, reticulation, control and protection systems
- applying procedures for the planning, coordination and documentation of work on the mines electrical installations, reticulation, control and protection systems
- applying training needs analysis
- works effectively with others to establish and maintain mine electrical installations, reticulation and protection systems including:
 - managing people and processes
 - resolving conflict
 - coordinating human, financial and physical resources
 - developing, initiating and administering work plans
 - interpreting and applying operational performance data
 - engaging internal and external stakeholders
- demonstrates completion of the establishing and maintenance of mine electrical installations, reticulation and protection systems that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
 - identifying the relevant information and scope of the work
 - identifying the full range of specification requirements
 - identifying all aspects of mine power supply systems
 - identifying options for power supply systems, electrical protection systems, and cables from power source to point of usage

Knowledge Evidence

The candidate must demonstrate knowledge of the in establishing and maintaining electrical installations, reticulation and protection systems through:

- legislative, organisation and site requirements and procedures for;
 - inspections and reporting
 - hazards associated with high energy systems in mining
- electrical protection theory, including earthing systems, coordination and fault level calculations, step and touch potential management
- fault discrimination and fault clearance characteristics of equipment
- mining electrical protection systems, including earth continuity monitoring, earth leakage protection, earth fault current limitation and relevant standards
- typical low and high voltage switching and distribution systems on mines
- transient over-voltages, harmonics and lightning theory, hazards and protection schemes

- mining cables, faults and consequences, cable protection systems, standards and cable repair
- classification of hazardous areas and explosion-protected electrical equipment principles, general requirements, verification, testing and standards
- automatic control system hazards, protection schemes and standards
- electromagnetic interference hazards, protection schemes and standards
- management and control of processes for change to software and hard wired based systems
- electromagnetic interference hazards, protection schemes and standards
- radio remote control systems hazards, protection schemes and standards
- safety protective devices associated with welding machines such as Voltage Reducing Devices
- the principles of electrical installations, reticulation, control and protection system theory
- the risks associated with and consequences of failure of electrical installations, reticulation, control and protection systems at a mine
- the risks associated with and consequences of changes to electrical installations, reticulation, control and protection systems at a mine

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit must be assessed in the context of this sector's work environment; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Industry sector	AQF** Level	Required assessor or Industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.	

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=88a61002-9a21-4386-aaf8-69c76e675272>

RIIRIS601D Establish and maintain the risk management system

Modification History

Release	Comment
1	This unit replaces RIIRI601A Establish and maintain the risk management system
2	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to establish and maintain the risk management system in the Resources and Infrastructure Industries.

This unit is appropriate for those working in management roles.

No licensing, legislation or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

1. Plan and prepare to establish the framework for the risk management system	<p>1.1 Access, interpret and apply risk management documentation, and ensure the work activity is compliant</p> <p>1.2 Develop the policy and objectives that express the organisation's commitment to risk management</p> <p>1.3 Establish and implement the structure and framework</p> <p>1.4 Define, allocate and document responsibilities for risk management in job descriptions and duty statements</p>
2. Establish processes to support the risk management system	<p>2.1 Develop, document and communicate procedures covering risk identification, assessment, treatment, communication, consultation, monitoring and review</p> <p>2.2 Provide or arrange appropriate development and/or training for personnel</p> <p>2.3 Identify, obtain and maintain information sources to support the system, and make them available to personnel to implement</p> <p>2.4 Provide information on known and intended process changes</p>

	<p>and enhancements to responsible personnel</p> <p>2.5 Determine and make available organisation's criteria for assessing the acceptability of risks to responsible personnel</p> <p>2.6 Obtain and provide expert advice to responsible personnel</p>
3. Plan and facilitate the implementation of the risk management system	<p>3.1 Plan, schedule and document the systems coverage</p> <p>3.2 Monitor activities and achievement targets, and provide and focus resources to ensure the work plan is satisfied</p> <p>3.3 Provide support and encouragement to those responsible for the system activities</p> <p>3.4 Review and update the system work plan when changing circumstances are anticipated or occur</p>
4. Audit the management processes	<p>4.1 Formally audit risk management processes, including operating procedures and implementation processes, to ensure compliance and effectiveness</p> <p>4.2 Respond to changed requirements disclosed during audits in a systematic and timely manner</p> <p>4.3 Complete and retain risk management documentation including the reasons for and changes made to the system</p>
5. Monitor completion of records and reports	<p>5.1 Ensure all risk management documentation is produced and processed</p> <p>5.2 Ensure all risk management documentation is maintained</p>

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Unit Mapping Information

RIIRIS601A Establish and maintain the risk management system

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=88a61002-9a21-4386-aaf8-69c76e675272>

Assessment Requirements for RIIRIS601D Establish and maintain the risk management system

Modification History

Release	Comment
1	This unit replaces RIIRI601A Establish and maintain the risk management system
2	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locate and apply relevant documentation, policies and procedures
- demonstrates completion of the establishment and maintenance of the risk management system that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
 - reading, interpreting and applying risk management legislation to develop and maintain risk management systems
 - applying procedures for developing and maintaining procedures and policies
 - applying procedures for facilitating and documenting management planning
 - applying procedures for monitoring and deciding on changes to process
 - explaining complex risk management information to superiors/subordinates
 - applying coaching and mentoring support to supervisors who are carrying out risk management activities
 - actively encouraging the free exchange of information through consultation, using technology mediums and policies
 - preparing written reports communicating the options for managing risk, clarifying the decision and reviewing of outcomes
 - performing audits of risk management processes, recognising positive behaviours of others contributing to the management of risk, and providing direction and amendment to others and processes when the compliance is not achieved

Knowledge Evidence

The candidate must demonstrate knowledge of establishing and maintaining risk management systems through:

- applies active listening, identifies barriers to communication and provides clarification to make meaning
- action planning methods
- actions based on cost, safety, and welfare issues
- work procedures
- risk management system reporting and recording procedures
- hazard identification, risk assessment and risk treatment processes

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector's work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Industry sector	AQF** Level	Required assessor or Industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.	

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=88a61002-9a21-4386-aaf8-69c76e675272>

RIIWH202E Enter and work in confined spaces

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 5.0.
Release 2	Minor amendment to Knowledge Evidence to correct typographical error.

Application

This unit describes the skills and knowledge required to enter and work in confined spaces in the resources and infrastructure industries.

It applies to those working in operational roles. They generally work under supervision to undertake a prescribed range of functions involving known routines and procedures and take responsibility for the quality of work outcomes.

Licensing, legislative and certification requirements that apply to this unit can vary between states, territories and industry sectors. Users must check requirements with relevant body before applying the unit.

Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan and prepare for working in confined space	1.1 Obtain, interpret and confirm work requirements 1.2 Access, interpret and apply documentation required to enter and work in confined spaces 1.3 Identify and address potential risks, hazards and environmental issues, and implement control measures according to workplace procedures 1.4 Obtain and confirm authorisation of a confined space entry permit

ELEMENT	PERFORMANCE CRITERIA
	<p>that meets regulatory requirements</p> <p>1.5 Select and wear appropriate personal protective equipment for planned work activities</p> <p>1.6 Obtain and interpret emergency procedures with the stand-by person, and be prepared for emergency situations</p> <p>1.7 Identify, obtain and implement signage and barrier requirements according to workplace procedures</p> <p>1.8 Select tools and equipment for the tasks, check for serviceability and rectify or report any faults to relevant personnel</p> <p>1.9 Position rescue equipment by the entry permit</p>
2. Work in confined space	<p>2.1 Gain access to confined space</p> <p>2.2 Test and monitor the atmosphere for harmful elements according to workplace procedures</p> <p>2.3 Correctly apply tagging and lock-out procedures</p> <p>2.4 Enter the confined space according to workplace procedures</p> <p>2.5 Maintain ongoing communication with the stand-by person</p> <p>2.6 Comply with entry permit requirements</p> <p>2.7 Monitor and adhere to allocated entry time</p>
3. Exit confined space	<p>3.1 Exit confined space according to workplace procedures</p> <p>3.2 Recover tools, equipment and materials</p> <p>3.3 Conduct inspection of the confined spaces according to workplace procedures</p> <p>3.4 Remove tagging and lock-out procedures</p> <p>3.5 Complete confined space entry permit requirements according to workplace procedures</p>
4. Clean up	<p>4.1 Clear work area and dispose of materials according to workplace procedures</p> <p>4.2 Remove, clean and store barriers and signs</p> <p>4.3 Conduct equipment inspections to identify faults according to manufacturer specifications and workplace procedures and report to relevant personnel</p> <p>4.4 Conduct routine operational servicing, lubrication and housekeeping activities according to workplace procedures</p> <p>4.5 Process written maintenance records according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Identifies and interprets information from workplace procedures, documentation and regulations
Writing	<ul style="list-style-type: none">Produces and completes written documents required for workplace procedures
Self-management	<ul style="list-style-type: none">Monitors and minimises own exposure to worksite risks and hazards during activities
Oral communication	<ul style="list-style-type: none">Uses a range of communication techniques and systems to communicate with others

Unit Mapping Information

Supersedes and is equivalent to RIIWHS202D Entering and working in confined spaces.

Links

Companion Volume Implementation Guide is found on VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=88a61002-9a21-4386-aaf8-69c76e675272>

Assessment Requirements for RIIWHS202E Enter and work in confined spaces

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 5.0.
Release 2	Minor amendment to Knowledge Evidence to correct typographical error.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- enter and work in confined spaces on at least two occasions, including:
 - obtaining the required entry permit and instructions for performing work in confined spaces
 - interpreting and applying workplace procedures
 - applying tagging and lock out procedures
 - selecting, wearing and caring for personal protective equipment
 - using atmospheric monitoring devices prior to entering the confined space
 - entering the confined space
 - working in the confined space
 - using atmospheric monitoring devices during confined space activity
 - applying safe materials handling methods
 - exiting the confined space
 - removing tagging and lock out.

During the above, the candidate must:

- locate and apply relevant legislation, documentation, policies and procedures and confirm that the work activity is compliant
- implement the requirements, procedures and techniques for entering and working in confined spaces
- work effectively with others to enter and work in confined spaces in a way that meets all required outcomes

- communicate clearly and concisely with others to receive and clarify work instructions and to determine coordination requirements prior to commencing and during work activities.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key legislation relevant to enter and work in confined spaces
- key policies, procedures and documentation required to enter and work in confined spaces, including:
 - entry and exit procedures, risks and regulations
 - site and equipment safety requirements
 - site isolation and site control responsibilities and authorities
 - safety data sheets
 - incidents and emergency response documentation
- principles and techniques for identifying and responding to:
 - areas that constitute confined spaces
 - types of air contaminants and toxic gases
 - limitations of breathing apparatus
 - relevant hazards and emergencies
- equipment types, characteristics, technical capabilities and limitations
- principles and techniques for using confined space and industry terminology
- techniques for coordinating and communicating job activities with others.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
 - personal protective equipment
 - equipment related to entering and working in confined spaces
 - relevant documentation
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year
	2	2 years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert	

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
	experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

RIIWH204E Work safely at heights

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to work safely at heights in the resources and infrastructure industries.

It applies to those working in operational roles. They generally work under supervision to undertake a prescribed range of functions involving known routines and procedures and take responsibility for the quality of work outcomes.

Licensing, legislative and certification requirements that apply to this unit can vary between states, territories and industry sectors. Users must check requirements with relevant body before applying the unit.

Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify work requirements	1.1 Obtain, interpret and confirm work requirements 1.2 Access, interpret and apply documentation required to work safely at heights 1.3 Identify and address potential risks, hazards and environmental issues, and implement control measures according to workplace procedures 1.4 Inspect worksite to determine layout and physical condition, condition of structures and equipment requirements 1.5 Adhere to legislative requirements

ELEMENT	PERFORMANCE CRITERIA
	<p>1.6 Select appropriate plant, tools and equipment for the job, inspect them for serviceability and rectify or report any faults prior to commencement of work activities</p> <p>1.7 Select and wear personal protective equipment appropriate for work activities</p> <p>1.8 Obtain and interpret emergency procedures, and be prepared for emergency situations</p>
2. Identify work procedures and instructions	<p>2.1 Consult with relevant personnel to select materials, tools and equipment required for the work activities</p> <p>2.2 Inspect and install fall protection and perimeter protection equipment</p> <p>2.3 Identify methods of moving tools and equipment to the work area according to workplace procedures</p> <p>2.4 Ensure the safety system has been installed according to workplace procedures</p> <p>2.5 Select and install appropriate signs and barricades according to workplace procedures</p>
3. Access and install equipment	<p>3.1 Consult with relevant personnel to ensure anchor fall protection and associated equipment is fitted and adjusted according to workplace procedures</p> <p>3.2 Ensure all required equipment is installed according to workplace procedures</p> <p>3.3 Access work area for people, tools and equipment according to workplace procedures</p> <p>3.4 Locate tools and materials to eliminate or minimise the risk of items being knocked down</p>
4. Perform work at heights	<p>4.1 Check access from ground to work area and ensure it is safe according to workplace procedures</p> <p>4.2 Keep fall equipment in place and adjusted appropriately for movement during work</p> <p>4.3 Undertake manual handling of materials and equipment according to workplace procedures</p> <p>4.4 Locate materials and equipment ensuring that they are safely secured and distributed according to workplace procedures</p> <p>4.5 Check safety system periodically for compliance</p> <p>4.6 Monitor risk control measures to ensure that they are effective and appropriate according to workplace procedures</p> <p>4.7 Reassess risk control measures, as required, in accordance with workplace procedures and undertake alterations</p>
5. Clean up work area	<p>5.1 Consult with relevant personnel to ensure safety system is dismantled and removed according to workplace procedures</p> <p>5.2 Clear work area and dispose of materials</p>

ELEMENT	PERFORMANCE CRITERIA
	5.3 Clean and maintain the plant and equipment, inspect for ensure serviceability and rectify or report any faults or issues to relevant personnel 5.4 Process written maintenance records according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Identifies and interprets information from workplace procedures, documentation and regulations
Self-management	<ul style="list-style-type: none"> Monitors and minimises own exposure to worksite risks and hazards during activities
Oral communication	<ul style="list-style-type: none"> Uses a range of communication techniques and systems to communicate with others

Unit Mapping Information

Supersedes and is equivalent to RIIWH5204D Working safely at heights.

Companion Volume implementation guides is found on VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=88a61002-9a21-4386-aaf8-69c76e675272>

Assessment Requirements for RIIWHS204E Work safely at heights

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- work safely at heights on at least two occasions, including:
 - accessing, interpreting and applying technical and safety information for working at heights
 - assessing hazards and risks associated with working at heights and implementing control methods
 - selecting, wearing and caring for personal protective equipment
 - identifying required safety systems including fall protection and associated equipment
 - checking the correct fitting, adjusting and anchoring of fall protection and associated equipment
 - performing work safely at heights.

During the above, the candidate must:

- locate and apply relevant documentation, policies and procedures and confirm that the work activity is compliant
- implement the requirements, procedures and techniques for working safely at heights
- work effectively with others to work safely at heights in a way that meets all required outcomes
- communicate clearly and concisely with others to receive and clarify work instructions and to determine coordination requirements prior to commencing and during work activities.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key legislation required to work safely at heights

- key policies, procedures and documentation required to work safely at heights, including:
 - statutory and regulatory authority requirements
- principles and techniques for work safely at heights, including:
 - heights safety systems
 - safe work methods
- principles and techniques for identifying names and functions of equipment, components and materials
- principles and techniques for complying with equipment manufacturer instructions and specifications
- safe shifting and handling of tools and materials
- principles and techniques for identifying relevant hazards and emergencies
- techniques for coordinating and communicating job activities with others.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
 - personal protective equipment
 - equipment related to working safely at heights
 - relevant documentation
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment

- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year
	2	2 years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

RIIWH5205E Control traffic with stop-slow bat

Modification History

This unit replaces RIIWH5205D Control traffic with slow-stop bat. Significant endorseable amendments have been made to Elements, Performance Criteria, Foundation Skills, Performance Evidence and Knowledge Evidence to better reflect current industry practices and clarify training outcomes.

Application

This unit describes the skills and knowledge required to control vehicle and pedestrian traffic using stop-slow bats, hand signals and approved communication devices in the resources and infrastructure industries.

It applies to those working in operational roles. They generally work in teams in live traffic environments under some degree of supervision.

Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented registered training organisations are advised to contextualise the unit of competency by referring to the existing state/territory OHS legislative requirements

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to control traffic	1.1 Select and wear personal protective equipment required for work activities 1.2 Access, interpret and confirm work instructions and plan work 1.3 Access, interpret and apply required workplace policies, procedures, jurisdictional safety and environmental protection requirements 1.4 Obtain and interpret site emergency procedures and prepare for accidents and emergencies 1.5 Select tools and equipment, check for serviceability, and rectify faults and report according to workplace policies and procedures
2. Control traffic and operate	2.1 Adjust approved communication devices according to site

communication devices	<p>requirements</p> <p>2.2 Direct traffic using hand held stop-slow bat and visibly clear and unobstructed hand signals as required</p> <p>2.3 Monitor traffic, make adjustments for changing traffic conditions and position waiting vehicles as required</p> <p>2.4 Communicate messages to other personnel, confirm recipient understanding and clarify as required</p> <p>2.5 Check and perform maintenance on approved communication devices according to requirements</p> <p>2.6 Check communications contact after nominated period of non-contact</p> <p>2.7 Report traffic offenders according to workplace policies and procedures</p>
3. Conduct housekeeping activities	<p>3.1 Confirm and remove signs and devices in line with job requirements and cover as required</p> <p>3.2 Clean, check and store tools and equipment</p> <p>3.3 Report environmental damage and potential for future damage as required</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Applies basic mathematical problem solving processes, including simple addition, subtraction, multiplication and division
Oral communication	<ul style="list-style-type: none"> Listens to short, explicit instructions for work procedures and asks questions to clarify and confirm
Reading	<ul style="list-style-type: none"> Identifies and interprets information from workplace procedures, documentation, legislation and regulations
Technology	<ul style="list-style-type: none"> Identifies purposes, specific functions and key features of common digital systems and tools and operates them as required
Writing	<ul style="list-style-type: none"> Produces and completes workplace reports using appropriate vocabulary, grammatical structures and conventions

Unit Mapping Information

Supersedes and is equivalent to RIIWHS205D Control traffic with stop-slow bat.

Assessment Requirements for RIIWHS205E Control traffic with stop-slow bat

Modification History

This unit replaces RIIWHS205D Control traffic with slow-stop bat. Significant endorseable amendments have been made to Elements, Performance Criteria, Foundation Skills, Performance Evidence and Knowledge Evidence to better reflect current industry practices and clarify training outcomes.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- Control traffic with a stop-slow bat according to traffic guidance schemes in a manner that is safe and follows workplace policies and procedures on at least two occasions, including:
 - directing pedestrian traffic, including at least one of the following:
 - ~ pedestrians with mobility issues
 - ~ pedestrians with prams
 - ~ cyclists
 - using approved communication devices to transmit message and report traffic offenders, including the use of at least one of the following devices:
 - ~ hand held radios
 - ~ telephones.

During the above, the candidate must:

- coordinate operations with pilot vehicle in a shuttle flow work arrangement
- participate in risk assessment and management processes
- identify the type and scope of hazards and their impact and recommend risk control measures
- identify key environmental protection issues and describe required solutions
- locate and complete at least one incident report
- complete housekeeping requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- risk assessment processes and hierarchy of control
- work instructions and procedures for planning work
- jurisdictional safety requirements relevant to temporary traffic management

- environmental protection requirements
- site emergency procedures
- site and equipment safety requirements
- traffic control requirements and procedures for directing the following pedestrian traffic groups:
 - pedestrians with mobility issues
 - pedestrians with prams
 - cyclists
- traffic guidance scheme and traffic management plan compliance
- communication device operations, including:
 - hand held radios
 - telephones
- traffic control equipment types, characteristics, technical capabilities and limitations
- operational and maintenance procedures for equipment
- site isolation and traffic control responsibilities and authorities
- the effects of travel speed and vehicle mass on stopping distances.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
 - stop-slow bat
 - personal protective equipment
 - hand held radio or telephone
- be conducted in a safe environment; and
- be assessed in context of this sector's work environment on a real live road setting under supervision; and
- be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor Requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory competency standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing a high level of RII training product knowledge
- having an understanding and knowledge of legislations and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence as outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must hold the relevant vocational competencies and have current industry skills directly relevant to the training and assessment being provided and must work alongside a trainer and/or assessor to conduct the assessment. This means the industry subject matter expert should hold the unit being assessed (or an equivalent unit), and must also demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 year
	2	2 years
Drilling, Coal Mining and Extractive (Quarrying), Metalliferous Mining and Civil Construction	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any	

	relevant regulation.
--	----------------------

*Guidance on simulated environments has been stipulated in the RII Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

TLIF0008 Apply safety critical communications in the rail environment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply effective safety critical communications and is also considered best practice for general communications in the rail environment.

It includes communicating, providing timely and accurate rail operational information and responding to unplanned situations or events appropriately.

This unit is intended for rail safety workers who are required to identify and respond to operational information as part of their job role. They may be working within a rail operational or infrastructure environment.

Safety critical communications is any communication that, if not delivered or not delivered accurately or promptly, could result in death, serious injury or incur significant damage to property, infrastructure or the environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Rail sector

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

1 Provide timely and accurate operational information and coordination

- 1.1 Location information is clearly communicated and clarified as required
- 1.2 Communication hazards are identified, risks are assessed and control measures are implemented to ensure communication occurs from a safe place
- 1.3 Rail network condition advice is provided
- 1.4 Changes in operational status of communications facilities affecting network operations are provided
- 1.5 Safety critical information is exchanged clearly and in a timely manner in accordance with safety management system and regulatory requirements
- 1.6 Communication is received, confirmed, acknowledged and appropriate actions taken

2 Communicate accurate operational information

- 2.1 Communication is delivered clearly, in a timely manner and accurately
- 2.2 Standard phrases are used in accordance with communications protocols
- 2.3 Concise and unambiguous standard phrases are used
- 2.4 Active listening is maintained for all communication
- 2.5 Read backs are provided and obtained
- 2.6 Delivery of voice messages is adjusted to suit receiver
- 2.7 Communication protocols are followed
- 2.8 Most effective communications method is used
- 2.9 Handover or takeover is performed to achieve continuity of teamwork and service

3 Issue and coordinate rail operations information

- 3.1 Rail operations information is issued and recorded in accordance with the workplace procedures and regulatory requirements
- 3.2 Written authorities are issued, read back and acknowledged correct before actioning

- 3.3** Documented safety critical communications are recorded and retained in accordance with workplace procedures and regulatory requirements
- 4 Respond to unplanned situation**
- 4.1** Sufficient information is obtained from relevant sources to determine nature and implications of situation
- 4.2** Emergencies, potential emergencies or unplanned situations are identified, and needs are prioritised in accordance with emergency response plans and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This is a new unit. No equivalent unit.

Links

Companion Volume Implementation Guides are found in VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

Assessment Requirements for TLIF0008 Apply safety critical communications in the rail environment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- allocating attention according to priorities
- applying situational awareness through effective visual scans, use of communication systems, use of rail operation information and use of systems of safe working, in accordance with workplace procedures
- challenging communication errors including safety critical errors, incomplete, unclear or ambiguous information
- communicating in a team by exchanging information through assigning responsibility and acknowledging communication content
- communicating verbal and written safety critical information clearly and concisely
- comprehending and responding to incoming operational information
- formulating and issuing communications messages and questions
- identifying hazards and implementing risk control measures
- identifying specific location by actively communicating with relevant parties confirming specific location
- interpreting and following operational instructions
- interpreting and recording messages
- listening actively
- modifying communications dependent on workplace contingencies, situations and environments
- prioritising responses in accordance with operational procedures
- relaying safety critical communications with required attention to detail
- dealing with unplanned events or situations in accordance with operational procedures
- using communications facilities to maintain contact with rail safety worker/s
- using most appropriate form of communication for the operational context
- using standard terms/phrases, 24-hour clock and phonetic alphabet
- validating or acknowledging safety critical communication verbally or by action in accordance with operational protocols.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- barriers to communication
- common communication errors
- communication protocols
- communication standard terms/phrases, 24-hour clock and phonetic alphabet, abbreviations
- communication techniques
- communication types, coverage and channels
- communications associated with emergency and/or abnormal operations
- effects of fatigue on effective communication
- handover and takeover procedures
- principles of effective communication
- procedures to be followed in equipment/facility failure
- prompts and techniques used to assist and cue coordination and communications
- qualitative aspects of verbal communication including tone, emphasis, stress and frustration
- read back requirements
- relevant safety management system as it applies to workplace function
- relevant workplace procedures and regulatory requirements.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in rail workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in the rail industry
- applicable documentation including workplace procedures, safety management system, regulations, codes of practice and operation manuals.

Links

Companion Volume Implementation Guides are found in VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

TLIF0020 Safely access the rail corridor

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to enter the rail corridor.

It includes taking appropriate safety precautions to:

- access the danger zone
- access the rail corridor
- respond appropriately in an emergency.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rules and/or guidelines.

This unit involves the application of Rail Infrastructure Manager rules, procedures and protocols for rail safety.

This unit applies to all people accessing the rail corridor.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Rail sector.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

1 Take appropriate safety precautions to access the rail corridor

- 1.1 Authority to enter the rail corridor is obtained from Protection Officer/Possession Protection Officer
- 1.2 Appropriate personal protective equipment (PPE) is worn conforming to Rail Infrastructure Manager requirements
- 1.3 Hazards are identified, risks are assessed and control measures are implemented
- 1.4 Once rail corridor is entered, a visual assessment is maintained to monitor and respond appropriately to potential risks

2 Take appropriate safety precautions to access the danger zone

- 2.1 Direction of approaching trains and minimum sighting distance is recognised in accordance with directions from Protection Officer/Possession Protection Officer
- 2.2 Safe place is identified
- 2.3 Types of warning provided are recognised and confirmed
- 2.4 Changed local conditions are identified, impact on safety is determined and safety precautions are modified as required
- 2.5 Communications with other personnel are maintained in accordance with workplace procedures
- 2.6 Unsafe situations and/or emergencies are identified and appropriate action is taken in accordance with workplace procedures

3 Take appropriate action in an emergency

- 3.1 Emergencies and potential emergencies are identified
- 3.2 Range of appropriate responses for specific emergencies are outlined
- 3.3 'Emergency' or 'danger' response signal is given as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to TLIF2080 Safely access the rail corridor.

Links

Companion Volume Implementation Guides are found in VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

Assessment Requirements for TLIF0020 Safely access the rail corridor

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- applying relevant workplace rules and procedures
- communicating effectively with individuals and/or groups
- following workplace policies, procedures and protocols
- identifying the danger zone and safe places
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- using personal protective equipment (PPE) that conforms to Rail Infrastructure Manager requirements.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- rail corridor and relevant rail danger zones
- Rail Infrastructure Manager defined entry requirements and limitations
- Rail Infrastructure Manager rules and procedures for working around electrical infrastructure and/or power sources
- Rail Infrastructure Manager safety management systems
- rail terminology as defined by the applicable Rail Infrastructure Manager safeworking system.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so;

where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate a rail corridor.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate PPE, materials, tools and equipment currently used in the rail industry
- applicable documentation and terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, rules and codes of practice.

TLIF2010 Apply fatigue management strategies

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package.

- Minor changes to unit Application
- Minor changes to Assessment Conditions.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply fatigue management strategies within the transport and logistics industry.

It includes identifying and acting on signs of fatigue and implementing appropriate strategies to minimise fatigue during work activities, in particular when operating equipment, trains, vehicles, load shifting equipment, marine vessels and aircraft.

Work is undertaken in compliance with relevant legislation, regulations, codes and guidelines.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management.

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS PERFORMANCE CRITERIA

Elements describe the Performance criteria describe the performance needed to demonstrate

essential outcomes. achievement of the element.

- | | |
|---|---|
| 1 Identify and act on signs of fatigue | <p>1.1 Potential causes of fatigue are identified and actions taken to minimise their effects in accordance with workplace procedures</p> <p>1.2 Personal warning signs of fatigue are recognised, and necessary steps are taken in accordance with workplace procedures, to ensure that effective work capability and alertness are maintained</p> |
| 2 Implement strategies to minimise fatigue | <p>2.1 Workplace procedures are assessed to minimise fatigue</p> <p>2.2 Factors that increase the risk of fatigue-related accidents and incidents are minimised</p> <p>2.3 Fatigue management strategies are implemented in accordance with workplace policy and procedures</p> <p>2.4 Lifestyle choices are made that promote the effective long-term management of fatigue</p> <p>2.5 Effective practices in combating fatigue are adopted and applied</p> <p>2.6 Personal fatigue management strategies are communicated to relevant people</p> <p>2.7 Appropriate counter measures are planned to combat fatigue</p> |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the TLI Transport and Logistics Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIF2010A Apply fatigue management strategies.

Links

Companion Volume Implementation Guides are found in VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

Assessment Requirements for TLIF2010 Apply fatigue management strategies

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package.

- Minor changes to unit Application
- Minor changes to Assessment Conditions.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to changes in rosters and standard operating procedures (SOPs) as they relate to fatigue management
- adjusting lifestyle patterns to ensure effective fatigue management during work activities
- applying precautions and required actions to minimise and control the effects of fatigue when carrying out own work functions
- applying relevant legislation and workplace procedures
- communicating effectively with others when applying fatigue management strategies
- identifying and meeting own learning needs about fatigue management related matters
- modifying activities and taking appropriate initiatives to manage fatigue in the workplace depending on work contexts, risk situations and environments
- reading and interpreting instructions, procedures, regulations and signs related to fatigue management and applying them to work activities
- recognising symptoms of fatigue and taking appropriate actions in accordance with fatigue management regulations and workplace procedures
- working collaboratively with others to manage and minimise the effects of fatigue during work activities.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and include knowledge of:

- causes and effects of fatigue on workers
- factors that increase fatigue-related accidents
- how fatigue affects workplace performance

- how fatigue contributes to workplace accidents
- lifestyles that promote effective long-term fatigue management
- relevant fatigue management codes, regulations, permit and licence requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) regulations as they relate to fatigue
- risks and hazards created by workplace fatigue
- sources of information on fatigue
- strategies and ways of managing fatigue
- ways of recognising fatigue
- workplace policies and procedures related to fatigue management and the control of factors that can contribute to fatigue and fatigue-related accidents.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective (PPE) equipment currently used in industry
- applicable documentation, including legislation, regulations, codes of practice, workplace procedures and operation manuals.

Links

Companion Volume Implementation Guides are found in VETNet -

TLILIC0003 Licence to operate a forklift truck

Modification History

Release 1. This is a release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit specifies the skills and knowledge required to operate a forklift truck safely in accordance with all relevant legislative requirements. Competence in this unit, does not in itself result in a HRWL licence to operate this plant.

Forklift truck means a powered industrial truck equipped with lifting media made up of a mast and an elevating load carriage to which is attached a pair of fork arms or other attachments that can be raised 900 mm or more above the ground, but does not include a pedestrian-operated truck or a pallet truck.

A person performing this work is required to hold a forklift truck High Risk Work Licence (HRWL).

This unit requires a person operating a forklift truck to:

- plan for the work/task
- prepare for the work/task
- perform work/task
- pack up

Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit of competency.

This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations and meets Commonwealth, State and Territory HRWL requirements.

The National Assessment Instrument (NAI) is the mandated assessment for the HRWL to operate the relevant licencing class as detailed in this unit.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Plan work/task

- 1.1 Task requirements are identified from work orders or equivalent and confirmed with relevant people and site inspection is conducted in accordance with workplace procedures
- 1.2 Work area operating surface is assessed to determine suitability for operational use of forklift truck in accordance with workplace procedures
- 1.3 Suitability of forklift truck and attachment working load limit (WLL) is determined for the load/s and work/task requirements in accordance with manufacturer requirements and workplace procedures
- 1.4 Working area is inspected and appropriate paths for operating the forklift truck and moving and placing load/s in work area are assessed and managed in accordance with workplace procedures
- 1.5 Hazard and risk control measures are identified and reported to relevant person/s in accordance with workplace procedures
- 1.6 Traffic management plan implementation is confirmed in accordance with workplace procedures
- 1.7 Appropriate communication procedures are identified with relevant people in accordance with workplace procedures
- 1.8 All work is confirmed to ensure coverage of work/task requirements for the relevant work area is in accordance with workplace procedures

- 2 Prepare for work/task**
- 2.1** Consultation with workplace person/s is maintained to ensure workplan is clear and consistent with site requirements in accordance with safe work procedures
 - 2.2** Weather and work environmental conditions are assessed to determine any impact on forklift truck operations in accordance with manufacturer requirements and safe work procedures
 - 2.3** Risk control measures for hazards identified are checked for implementation in accordance with safe work procedures
 - 2.4** Forklift truck is accessed in a safe manner in accordance with manufacturer requirements and workplace procedures
 - 2.5** Forklift truck logbook is checked in accordance with manufacturer, regulatory requirements and safe work procedures
 - 2.6** Pre-start checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with safe work procedures and manufacturer requirements
 - 2.7** Forklift truck is set up correctly with any relevant attachments as per work plan in accordance with relevant manufacturer requirements including data plate and safe work procedures
 - 2.8** Operational checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer requirements and safe work procedures
 - 2.9** Hazard and risk control measures are checked for implementation and communicated to people in the work area in accordance with safe work procedures
- 3 Perform work/task**
- 3.1** Weight and positioning of load is assessed to ensure compliance with forklift truck data plate requirements and in accordance with safe work procedures

- 3.2 Forklift truck is operated safely in accordance with manufacturer requirements and safe work procedures
 - 3.3 Loads are monitored constantly when lifting, moving, lowering and placing to ensure stability of load and avoidance of hazards in accordance with safe work procedures
 - 3.4 Unplanned and unsafe situations are responded to in accordance with safe work procedures
 - 3.5 Loads are picked up, transported and placed using all forklift truck movements in accordance with safe work procedures
 - 3.6 Forklift truck is parked, switched off and isolated appropriately in accordance with manufacturer requirements and safe work procedures
- 4 Pack Up**
- 4.1 Forklift truck shutdown procedures are carried out in accordance with manufacturer requirements and safe work procedures
 - 4.2 Forklift truck is secured to prevent unauthorised access/use in accordance with safe work procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLILIC2001 Licence to operate a forklift truck

Links

Assessment Requirements for TLILIC0003 Licence to operate a forklift truck

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and include:

- applying safe operating procedures for a forklift truck including:
 - maintaining safe operating speed
 - travelling with load lowered to an appropriate height for the terrain, operating surface and visibility in relation to direction of travel
- applying relevant forklift truck manufacturer requirements and data plate information and approved modifications to attachments fitted are in accordance with manufacturer requirements
- carrying out pre-start checks, including visual inspection which must include:
 - battery charge as required by manufacturer requirements
 - checking and interpreting data plate/s are relevant to the attachment and the forklift truck
 - checking for signs of paint separation and stressed welds indicating potential structural weakness
 - document evidence of damage
 - engine / mechanical fluid level checks including fuel as required by manufacturer requirements
 - ensuring availability of correct forklift truck logbook and updating records as required
 - ensuring forklift truck tyres or other attachment/s are securely fitted
 - ensuring seat and mirrors are adjusted appropriately and seat belt is functional
 - fluid leaks
 - lights are working effectively
 - safety equipment checks
 - signage and labels to ensure they are visible and legible
 - wheels and tyres for damage/correct inflation if applicable
- conducting and applying risk and hazard assessment strategies including:
 - insufficient lighting
 - other specific hazards including dangerous goods
 - overhead hazards and fixed structures, roof beams and doorways
 - restricted and poorly ventilated areas

- surface suitability based on forklift truck and task requirements
- the risk of collision with people, moving plant and fixed structures
- weather conditions
- complying with Commonwealth, State and Territory Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety and Health (OSH) legislation, regulations safe work and workplace procedures
- conducting operational checks, which must ensure:
 - all controls are located, identified and tested for functionality
 - all hydraulic functions operated to maximum extension and ensuring attachment (if fitted) movements and control functions are smooth and comply with operating requirements
 - hazard warning systems (e.g. reversing beepers, lights and horns) are functional
 - recording and maintaining accurate information relating to forklift truck operations
 - safety devices as fitted
 - start-up is in accordance with manufacturer requirements
 - steering, transmission and brake functions comply with operating requirements
 - there are no unusual noises
- confirming and following traffic management plan procedures relevant to their role in the work area
- conducting relevant procedures for refuelling and isolating fuel/power source as per manufacturer requirements using appropriate PPE
- determining relevant lifting attachment to perform work/task
- determining lift requirements including:
 - positioning of unusually balanced/shaped loads
 - centre of gravity
 - dynamic nature of load
 - tyre/attachment positioning
 - weight
- ensuring risk control measures within the work area are effective as per workplace procedures
- identifying, isolating and tagging out defective equipment and reporting to authorised person/s
- interpreting and confirming relevant documentation, workplace instructions, safety information, emergency procedures for the work task and relevant area
- interpreting workplace procedures in relation to various environmental conditions
- maintaining communication with other workplace personnel through using worksite procedures including:
 - audible and visual warning devices
 - signage
 - two-way radio
 - verbal instructions
 - written instructions
- maintaining three points of contact whilst accessing and egressing forklift truck and ensuring

- rungs / steps are free of hazards
- operating and monitoring safe forklift truck operations using minimum 250kg dynamic and non-dynamic loads that include:
 - aligning tynes/attachment to load
 - carrying out a lift to 75% of the maximum height
 - conducting trial lift to ensure forklift truck and load are stable, and load is safe to move
 - correctly using horns and mirrors in workplace
 - correctly positioning and using an observer to assist when operating with a load that may restrict vision or be placed out of vision of the operator
 - driving applicable to conditions and moving loads safely
 - driving a forklift truck safely with load in forward and reverse, while maintaining visibility through an obstacle course including:
 - an 'S' bend with a minimum 90 degrees left and right turn
 - ensuring load/s remains stable through pick up, transport and placement
 - forklift truck speed is appropriate to load and surroundings
 - lowering dynamic and non-dynamic loads to appropriate height for travel in forward and reverse
 - picking up, driving, manoeuvring and placing dynamic and non-dynamic loads safely at various heights within a compliant racking system
 - picking up, driving, manoeuvring and placing dynamic and non-dynamic loads safely into/onto an elevated, flat, stable area
 - tilting mast (or forks if applicable) to ensure balance of load
 - using gluts/dunnage appropriately and lowering load safely
 - using tilt and side shift (where fitted) safely to manoeuvre dynamic and non-dynamic loads into allocated space
 - reporting to relevant person/s on site risk control measures that are not in place or are deficient
 - setting up an exclusion zone
 - securely parking forklift truck and isolating in appropriate position including:
 - minimising possible access by unauthorised person/s
 - tynes/attachment lowered to required position in accordance with manufacturer requirements
 - park brake applied
 - switching off, isolating fuel/power source and removing key according to workplace procedures
 - shutting down a forklift truck in accordance with manufacturer requirements and workplace procedures

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian and industry standards, codes of practice and guidelines to safely operate a forklift truck
- communication procedures including:
 - audible and visual warning devices
 - hand signals
 - questioning techniques
 - signage
 - traffic warning systems
 - two-way radio
 - written instructions
- forklift truck characteristics and capabilities, manufacturer requirements and instructions for any attachments
- impact of the following on the operation of the forklift truck including:
 - failure/loss of control including brakes and steering
 - failure of equipment during forklift truck operations
 - forklift truck instability causes including:
 - deterioration of ground condition
 - overloading
 - pick up and placement of load
 - irregular loads
 - operating on ramps and uneven surfaces and in restricted spaces
 - use of forklift truck data plate and attachment data plate and appropriate methodology to determine weight of a load is appropriate for forklift truck and any attachment if fitted including the estimation or determination from:
 - labels on the actual load
 - markings on the actual load
 - paperwork such as consignment notes, running sheets and weighbridge dockets
 - weighing a carton and calculating load
- manufacturer requirements, instructions and operator's manual
- problems, and appropriate response procedures to unplanned and/or unsafe environmental conditions including:
 - wind
 - lightning
 - water/ice impacted surface/ground
 - rain
 - extreme heat
 - Ultra violet (UV) exposure
- problems and equipment faults, and implementing appropriate response procedures to unplanned and/or unsafe situations including:
 - lock out and tag out procedures
- relevant procedures for refuelling and recharging forklift truck using appropriate PPE

including:

- gas bottle
- connecting battery to charger and disconnecting battery from charger and reconnecting to forklift truck
- refuelling
- procedures for recording, reporting and maintaining workplace records and information
- risk assessment process including hierarchy of control:
 - elimination
 - substitution
 - isolation
 - engineering controls
 - administrative controls
 - personal protective equipment (PPE)
- safe use and compliance of different types of attachments including:
 - bale clamps
 - carpet spike for carpet rolls
 - drum carrier
 - jib attachment
 - paper roll clamps
 - personnel work platforms
 - rotators
 - slippers/fork extensions on tynes
- suitability and lifting capability of the attachment to be used
- shut down procedures for a forklift truck in accordance with manufacturer requirements
- traffic management plan procedures and requirements
- typical routine problems encountered operating a forklift truck and associated equipment, and adjustments required for correction
- workplace procedures including work plan which may be verbal, documented/written, or electronically generated
- work area operating surface suitability including issues with:
 - backfilled ground
 - bitumen (damaged, cracked)
 - concrete (damaged, cracked)
 - hard compacted soil
 - potholes
 - railway tracks
 - rough uneven or difficult terrain including sloping surfaces, uneven surfaces, steel decks and grates
 - soft soils
 - trench covers
- Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety

and Health (OSH) requirements, safe work and workplace procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

- Simulators must not be used in the assessment of this unit of competency.

Resources for assessment must include access to:

- a suitable forklift truck that complies with AS 2359 Powered industrial trucks and is in a safe/serviceable condition in accordance with manufacturer requirements
- associated equipment for forklift truck operations
- suitable dynamic and non-dynamic loads
- suitable compliant racking system
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including:
 - approved codes of practice and relevant guidance material
 - relevant Australian technical standards
 - manufacturer guidelines (instructions, requirements or checklists), relevant industry standards and operating procedures (where applicable)

UEPOPS202 Apply quality systems to work

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to apply a quality assurance system to work.

Quality control is a process to ensure that significant variations in quality are kept to a minimum. Quality control in a power generation facility will focus on a set of procedures intended to ensure that personnel, plant and equipment operate smoothly and efficiently.

Competency in this unit requires the ability to plan and prepare quality procedures, conduct quality system practices and initiate changes to quality systems. Individuals will, in general, work as an operator in a power generation facility.

No licensing, legislative or certification requirements apply from this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Competency Field

Operations

Unit Sector

Electricity generation

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Plan and prepare to work with quality systems | <p>1.1 Quality procedures are identified from quality system and Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations, in accordance with workplace procedures</p> <p>1.2 Performance objectives are identified, in accordance with workplace procedures and Quality Management System (QMS)</p> <p>1.3 Work plan is structured, in accordance with workplace procedures and site requirements, to ensure quality standards are achieved</p> |
| 2 Conduct quality system practices | <p>2.1 Quality assurance processes and procedures are implemented, in accordance with workplace procedures and manufacturers' recommendations</p> <p>2.2 Work is monitored against quality standards and sustainable energy principles, and are clarified with appropriate personnel, in accordance with workplace procedures</p> <p>2.3 Allocated work tasks are completed, in accordance with workplace procedures and quality assurance requirements</p> |
| 3 Initiate changes to quality systems | <p>3.1 Improvements to quality assurance procedures are identified by analysis of system outcomes, in accordance with workplace procedures and quality assurance requirements</p> <p>3.2 Extent of proposed changes to quality procedures are investigated, in accordance with workplace procedures and quality assurance</p> <p>3.3 Proposed improvements are negotiated and confirmed with appropriate personnel, in accordance with workplace procedures and quality assurance requirements</p> |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS202B Apply quality systems to work.

Assessment Requirements for UEPOPS202 Apply quality systems to work

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying continuous improvement techniques
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) legislated requirements including:
 - emergency procedures
 - risk control measures
 - safe working practices
- communicating with personnel
- complying with legislation, industry standards, codes of practice and regulations
- contributing to quality control audits
- identifying quality procedural change requirements
- improving quality control procedures
- initiating changes to quality assurance processes and procedures
- planning and preparing for quality control
- using recording procedures for documenting
- utilising sustainable energy principles and practices
- working with quality assurance procedures, tools and techniques

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- continuous improvement
- continuous improvement techniques
- legislation, industry standards, codes of practice and regulations
- principles of sustainable energy practice
- procedural quality change requirements

- quality control
- quality control audits including improvement implementation
- Quality Management System (QMS) tools and techniques
- WHS/OHS including:
 - emergency procedures
 - risk control measures
 - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

UEPOPS337 Maintain quality systems within the team

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to oversee compliance of the maintenance quality system, using performance indicators, within a team environment.

Quality control is a process through which an organisation seeks to ensure that significant variations in quality are kept to a minimum. Quality control in power generation facilities will focus on a set of procedures intended to ensure that personnel, plant and equipment operate efficiently.

Competency in this unit requires the ability to formulate team aspects of the quality system and facilitate team quality systems. Individuals will, in general, work as an operator, in a power generation facility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

UEPOPS202 Apply quality systems to work

Competency Field

Operations

Unit Sector

Electricity generation

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Formulate team aspects of the quality system

- 1.1 Quality assurance requirements for team are identified or modified from an analysis of workplace needs, in accordance with workplace procedures
- 1.2 Team performance indicators, are referred to appropriate personnel for approval in accordance with workplace procedures
- 1.3 Quality system documentation is obtained, and modified, in accordance with workplace procedures and quality assurance standards

2 Facilitate team quality systems

- 2.1 Team discussion on quality system is undertaken, in accordance with workplace procedures
- 2.2 Quality system is monitored, in accordance with workplace procedures and quality assurance standards
- 2.3 Failure to satisfy Key Performance Indicators (KPIs) is recorded and investigated, in accordance with workplace procedures and quality assurance standards
- 2.4 Quality system is reviewed with the team to ensure currency and relevance, in accordance with workplace procedures and quality assurance standards
- 2.5 Quality system records for the team are maintained, in accordance with workplace procedures and quality assurance standards

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

UEPOPS416 Monitor implementation of quality control for production and maintenance

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to monitor the implementation of production and maintenance quality control procedures at a power generation facility.

Quality control is a process used to ensure variations in quality are kept to a minimum. Quality control in a power generation facility will focus on a set of processes and procedures intended to ensure that personnel, plant and equipment operate smoothly and efficiently.

Competency in this unit requires the ability to plan for quality control, monitor quality control and complete all documentation. Individuals will, in general, work as an operator, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

UEPOPS337 Maintain quality systems within the team

Competency Field

Operations

Unit Sector

Electricity generation

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Plan for quality control

- 1.1 Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) standards, legislative requirements, industry standards, codes of practice, manufacturers' specifications, environmental obligations and workplace procedures are identified, applied and monitored
- 1.2 Quality control parameters are established for power generation production and maintenance, in accordance with workplace procedures
- 1.3 Quality control process improvement techniques are used, in accordance with workplace procedures, in the identification and resolution of quality variances in power generation

2 Monitor quality control

- 2.1 Monitoring equipment is checked for correct calibration, and environmental conditions are confirmed, in accordance with workplace procedures, to ensure reliability and accuracy of test results
- 2.2 Quality control procedures for production and maintenance in power generation is monitored, in accordance with workplace procedures
- 2.3 Deviation and fault data is collected and reported, in accordance with workplace procedures

3 Complete documentation

- 3.1 Calibration records of test equipment is maintained, in accordance with workplace procedures
- 3.2 Documentation is completed, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work

environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for UEPOPS416 Monitor implementation of quality control for production and maintenance

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
 - emergency procedures
 - risk control measures
 - safe working practices
- communicating with personnel
- completing documentation
- conducting checks and inspections
- implementing legislation, industry standards, codes of practice and regulations
- interpreting manufacturers' specifications and manuals
- monitoring quality control processes and techniques
- planning quality control
- undertaking data analysis
- working with quality control procedures, processes and techniques

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- data analysis
- inspection techniques
- legislation, industry standards, codes of practice and regulations
- manufacturers' specifications and manuals
- power generation plant and equipment, its location and operating parameters
- quality control procedures, processes and techniques

- typical arrangements of power production plant
- WHS/OHS legislated requirements including:
 - emergency procedures
 - risk control measures
 - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

UETDRIS017 Perform high voltage field switching operation to a given schedule

Modification History

Release 3. Unit application 'qualification' spelling corrected and numeral '(2)' added in Performance Evidence for clarification.

Release 2. Unit application updated for clarification.

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

Application

This unit involves the skills and knowledge required to perform high voltage (HV) field switching operation to a given schedule in the electricity supply industry (ESI).

It includes the approval process, isolating, paralleling and restoring HV overhead and underground electricity networks using circuit breaking and isolating equipment, specialised tools, personal protective equipment (PPE) and testing equipment.

It also includes proving de-energised, short circuiting and earthing, preparing, issuing and cancelling work permits.

Note: Those holding an existing Certificate III ESI Distribution Overhead, Distribution Underground qualification or equivalent meets the prerequisite unit requirements.

Those holding an existing Diploma / Advanced Diploma of ESI Power Systems or Certificate III Electrotechnology Electrician qualification or equivalent partially meets the prerequisite unit requirements. They are still required to complete:

- UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus
- UETDREL005 Work safely in the vicinity of live electrical apparatus
- UETDRIS018 Perform low voltage field switching operation to a given schedule

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS018 Perform low voltage field switching operation to a given schedule

Competency Field

Industry Specific Cross Discipline

Unit Sector

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare for HV field switching

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2 Switching schedule is obtained and confirmed in accordance with workplace requirements
- 1.3 Plant, tools, equipment and PPE required for work are determined, obtained and confirmed in working order
- 1.4 Hazards are identified, risks assessed and control measures identified and applied
- 1.5 Work is prioritised and sequenced for completion in accordance with switching schedule and workplace requirements
- 1.6 Work permit/approval is organised in accordance with workplace requirements
- 1.7 Worksite is prepared in accordance with workplace requirements

2 Carry out HV field switching

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, climbing, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance with workplace requirements
- 2.4** Communication with switching controller is established and maintained during switching in accordance with workplace requirements
- 2.5** Approval is obtained to commence HV field switching in accordance with switching schedule and workplace requirements
- 2.6** HV field switching is performed in accordance with the switching schedule and workplace requirements
- 2.7** Work permit is written and issued in accordance with the switching schedule and workplace requirements
- 2.8** Work permit is cancelled or relinquished in accordance with workplace requirements
- 2.9** Approval is obtained to commence restoration of HV supply in accordance with switching schedule and workplace requirements
- 2.10** HV field switching is performed to restore network to normal in accordance with the switching schedule and workplace requirements
- 2.11** Switching controller is notified HV restoration has been completed in accordance with switching schedule and workplace requirements
- 2.12** Incidents or unplanned events are responded to in accordance with workplace requirements

3 Complete work and documentation

- 3.1** Incidents or unplanned events are reported in accordance with workplace requirements
- 3.2** Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements

- 3.3 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 3.4 Work records, reports and documentation are completed in accordance with workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETDRIS44 Perform HV field switching operation to a given schedule.

Links

Companion Volume Implementation Guides are found in VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

Assessment Requirements for UETDRIS017 Perform high voltage field switching operation to a given schedule

Modification History

Release 3. Unit application 'qualification' spelling corrected and numeral '(2)' added in Performance Evidence for clarification.

Release 2. Unit application updated for clarification.

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two (2) separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
 - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- verifying switching scheduling documents
- establishing and maintaining communications with the following:
 - switching controller
 - permit holders
 - other network stakeholders
- obtaining approval to perform high voltage (HV) field switching to a given schedule
- performing HV field switching operation to a given schedule completing at least two (2) of the following:
 - isolation
 - restoration
 - paralleling
- performing at least two (2) of the following tests:
 - proved de-energised*
 - voltage
 - phasing
 - (*must do)
- operating at least four (4) of the following HV electrical apparatus:
 - HV links/isolators/disconnectors

- air-break switches
- fuses
- ring main switch
- earth switches
- reclosers
- circuit breakers
- sectionalisers
- live line clamps
- load break elbows
- using at least two (2) of the following specialist tools and equipment:
 - HV phasing sticks
 - HV ground mounted equipment isolating handles
 - HV operating sticks
 - HV earths
- using tags and locks
- organising, issuing, cancelling or relinquishing relevant work permits/approvals in accordance with workplace requirements
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
 - WHS/OHS
 - safe approach distances
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of work permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- types, characteristics and capabilities of specialised tools and testing equipment, including:
 - insulated equipment
- purpose, layout and application of switching schedules
- HV field switching principles and procedures, including:
 - roles and responsibilities
 - procedures for coordination of operations
 - isolation, restoration and paralleling

- proving de-energised
- earthing
- pre- and post-switching checks
- fault finding
- alternate sources of supply and possible back-feed
- primary causes, effects and types of HV electrical faults
- emergency fault procedures
- operation of HV switchgear
- HV feeder auto-reclosing suppression
- distribution protection systems, including:
 - types, operation and applications
 - protection equipment
- HV switchgear, including:
 - types and categories (including live line clamps)
 - application, function and operating capabilities
- application and function of the single wire earth return (SWER) system components, including:
 - circuit arrangement
 - principle of operation
 - hazards and procedures associated with faulty SWER earth systems
 - procedure to isolate, energise and commission SWER transformer
- operation of HV distribution transformers, including:
 - principles governing factors for transformer ratings
 - operating limitations and the relationship between transformer and HV fuse rating
 - purpose and principle operation of HV distribution transformer tap changers
 - paralleling requirements
- functions of supervisory control and data acquisition (SCADA) (or any other relevant data acquisition and control) systems and its main components
- function of the main components of a local/remote control system.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for perform HV field switching operations to a given schedule
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETDRIS018 Perform low voltage field switching operation to a given schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

Application

This unit involves the skills and knowledge required to perform low voltage (LV) field switching operation to a given schedule in the electricity supply industry (ESI).

It includes isolating, paralleling and restoring LV overhead and underground electricity networks using circuit breaking and isolating equipment.

It also includes the approval process, using specialist tools, personal protective equipment (PPE), testing, short circuiting for switching and preparing, issuing and cancelling work permits.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare for LV field switching

- 1.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2 Switching schedule is obtained and confirmed in accordance with workplace requirements
- 1.3 Plant, tools, equipment and PPE required for work are determined, obtained and confirmed in working order
- 1.4 Hazards are identified, risks assessed and control measures identified and applied
- 1.5 Work is prioritised and sequenced for completion in accordance with switching schedule and workplace requirements
- 1.6 Work permit/approval is organised in accordance with workplace requirements
- 1.7 Worksite is prepared in accordance with workplace requirements

2 Carry out LV field switching

- 2.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2 Lifting, climbing, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3 Hazard control measures are monitored in accordance with workplace requirements
- 2.4 Communication with switching controller is established and maintained during switching in accordance with workplace requirements

- 2.5 Approval is obtained to commence LV field switching in accordance with switching schedule and workplace requirements
 - 2.6 LV field switching is performed to isolate supply in accordance with the switching schedule and workplace requirements
 - 2.7 Work permit is written and issued in accordance with the switching schedule and workplace requirements
 - 2.8 Work permit is cancelled or relinquished in accordance with workplace requirements
 - 2.9 Approval is obtained to commence restoration of LV supply in accordance with switching schedule and workplace requirements
 - 2.10 LV field switching is performed to restore supply in accordance with the switching schedule and workplace requirements
 - 2.11 Switching controller is notified LV restoration has been completed in accordance with switching schedule and workplace requirements
 - 2.12 Incidents or unplanned events are responded to in accordance with workplace requirements
- 3 Complete work and documentation**
- 3.1 Incidents or unplanned events are reported in accordance with workplace requirements
 - 3.2 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
 - 3.3 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
 - 3.4 Work records, reports and documentation are completed in accordance with workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETDRIS43 Perform low voltage field switching operation to a given schedule.

Assessment Requirements for UETDRIS018 Perform low voltage field switching operation to a given schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
 - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- verifying switching scheduling documents
- establishing and maintaining communications with the following:
 - switching controller
 - permit holders
 - other network stakeholders
- obtaining approval to perform low voltage (LV) field switching to a given schedule
- performing LV field switching operation to a given schedule completing at least two (2) of the following:
 - isolation
 - restoration
 - paralleling
- performing at least two (2) of the following tests:
 - proved de-energised*
 - voltage
 - current
 - phasing
 - (*must do)
- operating at least two (2) of the following:
 - LV links
 - LV fuses
 - LV circuit breakers
- using at least one (1) of the following:

- short circuiting equipment
- operating sticks
- using tags and locks
- organising, issuing, cancelling or relinquishing relevant work permits/approvals in accordance with workplace requirements
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
 - WHS/OHS
 - safe approach distances
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- types, characteristics and capabilities of specialised tools and testing equipment
- purpose, layout and application of switching schedules
- LV field switching principles and procedures, including:
 - roles and responsibilities
 - procedures for coordination of operations
 - isolation, restoration and paralleling
 - proving de-energised
 - short circuiting
 - pre- and post-switching checks
 - fault finding
 - alternate sources of supply and possible back-feed
 - emergency fault procedures
- electrical operating/LV network diagrams and characteristics
- communication procedures
- danger tag and lockout procedures
- types, characteristics and capabilities of electrical apparatus used as a LV isolation points.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for performing low voltage field switching operation to a given schedule
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETDRIS025 Diagnose and resolve faults in distribution systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 4.0.

Application

This unit includes the skills and knowledge required to diagnose and resolve faults in distribution systems in the electricity supply industry (ESI).

It includes interpreting diagrams and technical data, applying knowledge of energy supply and reticulation systems to logical fault-finding processes, and implementing fault rectification.

It also includes safe working practices, safety and functional testing, and reporting work activities and outcomes.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS026 Diagnose and resolve faults in electrical apparatus

UETDRIS032 Solve problems in network equipment

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to diagnose and resolve faults in distribution systems

2 Diagnose and resolve faults in distribution systems

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be done are reviewed and determined
- 1.2** Work plan is obtained, confirmed and communicated with relevant personnel in accordance with workplace requirements
- 1.3** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.4** Hazards are identified, risks assessed, and control measures identified and applied
- 1.5** Work permits are determined in accordance with workplace requirements
- 1.6** Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, working at heights, working in confined spaces and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Work permits are received and signed in accordance with workplace requirements
- 2.4** Faults in distribution systems are diagnosed and resolved in accordance with workplace requirements
- 2.5** Hazard control measures are monitored in accordance

- with workplace requirements
- 2.6 Incidents or unplanned events are responded to in accordance with workplace requirements
 - 2.7 Quality checks of work are undertaken in accordance with work plan and workplace requirements
- 3 Complete work and documentation**
- 3.1 Completed work is checked for compliance against the work plan and workplace requirements
 - 3.2 Incidents or unplanned events are reported in accordance with workplace requirements
 - 3.3 Plant, tools and equipment are cleaned, checked and returned to storage, and surplus resources and materials are managed in accordance with workplace requirements
 - 3.4 Work permits are signed off in accordance with workplace requirements
 - 3.5 Work records, reports and documentation are completed, and appropriate personnel notified in accordance with workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is not equivalent to UETDRIS70 Diagnose and rectify faults in electrical energy distribution systems.

Assessment Requirements for UETDRIS025 Diagnose and resolve faults in distribution systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 4.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two (2) separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements including:
 - work health and safety (WHS)/occupational health and safety (OHS) requirements
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- dealing with an unplanned event on at least one (1) occasion
- obtaining and signing work permits in accordance with workplace requirements
- completing relevant work records, reports and documentation
- diagnosing and resolving faults in distribution systems, including:
 - applying logical diagnostic methods
 - using fault scenarios to test the cause of system faults
 - identifying faults and competency needed to resolve them
 - resolving faults in system controls
 - verifying that the system operates within parameters
 - documenting fault rectification.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements including WHS/OHS requirements
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident

- procedures for responding to an unplanned event or incident
- workplace records, reports and documentation
- control of high voltage (HV) and low voltage (LV), including:
 - voltage control devices
 - conditions leading to voltage collapse and system black
 - voltage regulators applied to generators and synchronous phase modifiers
 - electromagnetic voltage regulators
 - series and parallel capacitors
 - on-load tap changer (OLTC) transformers
 - static VAR compensations (SVCs)
- range of devices covered by SVCs, including:
 - saturated reactor (SR) compensator
 - thyristor controlled reactor (TCR) compensator
 - combined TCR/TSC (thyristor switched capacitor)
 - production of waveform distorting harmonics and control devices
- importance of the location in the system of voltage control devices
- types of communication systems including:
 - telephone, power line carrier, dedicated cable, micro-wave links and fibre optics
 - quantities and signals to be communicated
 - advantages and disadvantages of various systems
 - equipment requirements
- transient over-voltages in power systems, including:
 - switching and lightning over-voltages and their effect on different plant items
 - transient over-voltage control and reduction using surge diverters, shield wires and circuit breaker control
 - insulation systems, insulation coordination, insulation grading in plant items, bushings and capacitor bushings
- operating parameters of circuit breakers and switches, including:
 - principles of operation
 - voltage and current range
 - breaking capacity
- types of isolators
- principles of circuit breaker auxiliary systems
- impact of natural disasters
- faults related to deteriorating equipment.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory

requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace requirements, equipment specifications, regulations, codes of practice and operation manuals.

Assessment Requirements for UETDRIS026 Diagnose and resolve faults in electrical apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 4.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two (2) separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements including:
 - work health and safety (WHS)/occupational health and safety (OHS) requirements
- identifying hazards, assessing risks, and identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- dealing with an unplanned event on at least one (1) occasion
- obtaining and signing work permits in accordance with workplace requirements
- completing relevant work records, reports and documentation
- diagnosing and resolving faults in electrical apparatus, including:
 - applying logical diagnostic methods
 - using fault scenarios to test the cause of system faults
 - identifying faults and competency needed to resolve them
 - resolving faults in system controls
 - verifying that the system operates correctly
 - documenting fault rectification.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements including WHS/OHS requirements
- hazard, risk assessment and risk control requirements
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits

- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- workplace records, reports and documentation
- control of high voltage (HV) and low voltage (LV), including:
 - voltage control devices
 - conditions leading to voltage collapse and system disintegration
 - voltage regulators applied to generators and synchronous phase modifiers
 - electromagnetic voltage regulators
 - series and parallel capacitors
 - on-load tap changer (OLTC) transformers
 - static var compensations (SVCs)
- range of devices covered by SVCs, including:
 - saturated reactor (SR) compensators
 - thyristor controlled reactor (TCR) compensators
 - combined TCR/thyristor-switched capacitor (TSC)
 - production of wave-form distorting harmonics and control devices
- importance of the location in the system of voltage control devices
- the use of graphical methods to calculate the size of var regulating plant
- control of power, including:
 - base load and spinning reserve
 - regulating machines
 - rapid start plant
 - phase shifting transformers and load shedding
 - principles and practices of automated control of individual machines
 - stations and transmission/tie-line elements
 - synchronising power
- the relationship between power and frequency, including:
 - limiting values
 - machine stabilising
 - steam by-pass, rapid valving, slip stabilisers and over-speed limiting
 - use of single pole generator circuit breakers (CB)
 - use of automatic voltage regulators (AVR) as angular stabilisers
 - damped and un-damped system oscillations
 - relationship between fault clearance times and system stability
 - calculation of critical clearance angles based on equal area criteria
- types of communication systems, including:
 - telephone, power line carrier, dedicated cable, microwave links and fibre optics
 - quantities and signals to be communicated
 - advantages and disadvantages of the various systems
 - equipment requirements

- transient over-voltages in power systems, including:
 - switching and lightning over-voltages and their effect on different plant items
 - transient over-voltage control and reduction using surge diverters, shield wires and CB control
 - insulation systems, insulation coordination, insulation grading in plant items, bushings and capacitor bushings
- factors leading to the generation of corona, including consequences, reduction, conductor bundling, grading rings and conductor surface treatment
- power system protection, including:
 - location of current transformer (CT) in major plant items
 - earthing principles and devices
 - fault current control/limitation using neutral earthing compensators (NEC), neutral point earth impedances, high conductivity shield wires and parallel feed interlocking
 - application of different types of protection.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETDRIS027 Diagnose and resolve faults in transmission systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 4.0.

Application

This unit includes the skills and knowledge required to diagnose and resolve faults in transmission systems in the electricity supply industry (ESI).

It includes interpreting diagrams and technical data, applying knowledge of energy supply and transmission systems to logical fault-finding and resolution.

It also includes transmission primary, secondary and communication systems, functional testing, and reporting work activities and outcomes.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS026 Diagnose and resolve faults in electrical apparatus

UETDRIS032 Solve problems in network equipment

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to diagnose and resolve faults in transmission systems

2 Diagnose and resolve faults in transmission systems

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|-----|--|
| 1.1 | Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be done are reviewed and determined |
| 1.2 | Work plan is developed and confirmed, permissions obtained, and these are communicated with relevant personnel in accordance with workplace requirements |
| 1.3 | Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements |
| 1.4 | Hazards are identified, risks assessed, and control measures identified and applied |
| 1.5 | Work permits are determined in accordance with workplace requirements |
| 1.6 | Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order |
| 2.1 | Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored |
| 2.2 | Lifting, working at heights, working in confined spaces and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements |
| 2.3 | Work permits are received and signed in accordance with workplace requirements |
| 2.4 | Faults in transmission systems are diagnosed and |

- resolved in accordance with workplace requirements
- 2.5** Hazard control measures are monitored in accordance with workplace requirements
- 2.6** Incidents or unplanned events are responded to in accordance with workplace requirements
- 3 Complete work and documentation**
- 3.1** Completed work is checked for compliance against the work plan and workplace requirements
- 3.2** Incidents or unplanned events are reported in accordance with workplace requirements
- 3.3** Plant, tools and equipment are cleaned, checked and returned to storage, and surplus resources and materials are managed in accordance with workplace requirements
- 3.4** Work permits are signed off in accordance with workplace requirements
- 3.5** Work records, reports and documentation are completed, and appropriate personnel notified in accordance with workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is not equivalent to UETDRIS71 Diagnose and rectify faults in electrical energy supply transmission systems.

Assessment Requirements for UETDRIS027 Diagnose and resolve faults in transmission systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 4.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two (2) separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements including:
 - work health and safety (WHS)/occupational health and safety (OHS) requirements
- identifying hazards, assessing risks, and identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- dealing with an unplanned event on at least one (1) occasion
- obtaining and signing work permits in accordance with workplace requirements
- completing relevant work records, reports and documentation
- diagnosing and resolving faults in transmission primary and secondary systems, including:
 - interpreting system alarms and protection operations
 - applying logical diagnostic methods
 - using fault scenarios to test the source of system faults
 - recording information from control room and relevant personnel
 - identifying faults and assigning personnel in accordance with individual skills and competencies
 - considering the impact of outages on the network
 - resolving system faults
 - verifying that the system operates within parameters
 - documenting fault rectification.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements including WHS/OHS requirements

- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- workplace records, reports and documentation
- manuals, diagrams and drawings
- overview of distribution networks
- overview of transmission primary system, including:
 - lines
 - buses
 - transformers
 - converters
 - cables
 - circuit breaker configurations
- operating parameters of circuit breakers and switches, including:
 - principles of operation
 - voltage and current range
 - breaking capacity
- protection schemes
- nomenclature and nameplates
- high pressure air systems, and air storage and handling processes
- direct current (d.c.) auxiliary systems
- SF6 conditioning, storage and handling system
- spring charging mechanisms
- generation types and fundamentals of operation
- generator connection to transmission and distribution networks.
- principles of high voltage (HV) alternating current (a.c.) and d.c. transmission, including:
 - tower types and configurations
 - insulator types
 - types of conductors
 - line ratings
 - conductor terminations
 - harmonic filters
 - protection
- types of isolators
- control of voltage
- voltage collapse and system black, including:
 - under frequency trip
 - automatic load shedding

- manual load shedding
- voltage control devices, including:
 - voltage regulators applied to generators and synchronous phase modifiers
 - electromagnetic voltage regulators
 - series and parallel capacitors
 - on-load tap changer (OLTC) transformers
 - static var compensation (SVC)
- overview of transmission secondary systems, including:
 - control and supervisory systems
 - protection schemes
- overview of the transmission communication systems, including:
 - telephone
 - power line carrier
 - dedicated cable
 - micro-wave links
 - fibre optics
- transient voltage levels in power systems, including:
 - switching
 - lightning
 - surge diverters
 - shield wires
 - insulation grading
 - corona discharge
- impact of natural disasters
- faults related to deteriorating components.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETDRIS031 Maintain insulating oil

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 4.0.

Application

This unit includes the skills and knowledge required to maintain insulating oil in the electricity supply industry (ESI).

It includes procedures to sample, test, filter and reinstate insulating oil.

It also includes safe handling and environmental practices for sampling and filtering oil.

Note: Entry into this unit is for users who:

- *hold the unit UETDREL005 Work safely in the vicinity of live electrical apparatus or equivalent,*

and

- *hold an Electrician licence or the equivalent issued in an Australian state or territory,*

or

- *hold an Electrician qualification or the equivalent issued in an Australian state or territory.*

This unit can be undertaken in conjunction with the qualification listed above, provided all requirements for completion of the Certificate III qualification are met prior to issuing this unit.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Refer to Application.

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare to maintain insulating oil

- 1.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be done are reviewed and determined
- 1.2 Work plan is obtained, confirmed and communicated with relevant personnel in accordance with workplace requirements
- 1.3 Hazards are identified, risks assessed, and control measures identified and applied
- 1.4 Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.5 Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.6 Work permits are determined in accordance with workplace requirements
- 1.7 Liaison and communication issues with authorised personnel, authorities and clients are resolved to facilitate work, as required
- 1.8 Worksite is prepared in accordance with the work plan and workplace requirements

2 Maintain insulating oil

- 2.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2 Work permits are received and signed in accordance with workplace requirements
- 2.3 Lifting, working at heights, working in confined spaces and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.4 Insulating oil is maintained in accordance with workplace requirements
- 2.5 Quality checks of work are undertaken in accordance

with work plan and workplace requirements

- 3 Complete work and documentation**
- 2.6** Incidents or unplanned events are responded to in accordance with workplace requirements
 - 3.1** Completed work is checked for compliance against the work plan and workplace requirements
 - 3.2** Incidents or unplanned events are reported in accordance with workplace requirements
 - 3.3** Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
 - 3.4** Plant, tools and equipment are cleaned, checked and returned to storage, and surplus resources and materials are managed in accordance with workplace requirements
 - 3.5** Work permits are signed off in accordance with workplace requirements
 - 3.6** Work records, reports and documentation are completed in accordance with workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is not equivalent to UETDRIS019 Sample, test, filter and reinstate insulating oil.

Assessment Requirements for UETDRIS031 Maintain insulating oil

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 4.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two (2) separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements including:
 - work health and safety (WHS)/occupational health and safety (OHS) requirements
- identifying hazards, assessing risks, and identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- dealing with an unplanned event on at least one (1) occasion
- obtaining and signing relevant work permits in accordance with workplace requirements
- completing relevant work records, reports and documentation
- maintain insulating oil on at least two (2) of the following types of equipment:
 - instrument and power transformers
 - switchgear
 - cable
 - reactor.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements including WHS/OHS requirements
- hazard, risk assessment and risk control requirements
- types and application of PPE
- hazard, risk assessment and risk control requirements, including potential hazards
- safe use of plant, tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident

- procedures for responding to an unplanned event or incident
- workplace records, reports and documentation
- manuals, diagrams and drawings
- procedures to sample, test, filter and reinstate insulating oil
- safe handling and environmental issues for sampling and filtering oil.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace requirements, equipment specifications, regulations, codes of practice and operation manuals.

UETDRIS032 Solve problems in network equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 4.0.

Application

This unit includes the skills and knowledge required to solve problems in network equipment in the electricity supply industry (ESI).

It includes fundamental knowledge of energy generation, transmission, distribution, substations, and overhead and underground systems.

It also includes voltage regulation, types of system faults and protection, and metering.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare to solve problems in network equipment

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be done are reviewed and determined
- 1.2** Work plan is obtained, confirmed and communicated with relevant personnel in accordance with workplace requirements
- 1.3** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.4** Hazards are identified, risks assessed, and control measures identified and applied
- 1.5** Work permits are determined in accordance with workplace requirements
- 1.6** Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order

2 Solve problems in network equipment

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, working at heights, working in confined spaces and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Work permits are received and signed in accordance with workplace requirements
- 2.4** Problems in network equipment are solved in accordance with workplace requirements
- 2.5** Hazard control measures are monitored in accordance with workplace requirements
- 2.6** Incidents or unplanned events are responded to in accordance with workplace requirements
- 2.7** Quality checks of work are undertaken in accordance with work plan and workplace requirements

3 Complete work and documentation

- 3.1** Completed work is checked for compliance against the work plan and workplace requirements
- 3.2** Incidents or unplanned events are reported in accordance with workplace requirements
- 3.3** Plant, tools and equipment are cleaned, checked and returned to storage, and surplus resources and materials are managed in accordance with workplace requirements
- 3.4** Work permits are signed off in accordance with workplace requirements
- 3.5** Work records, reports and documentation are completed, and appropriate personnel notified in accordance with workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is not equivalent to UETTDRIS67 Solve problems in energy supply network equipment.

Assessment Requirements for UETDRIS032 Solve problems in network equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 4.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two (2) separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements including:
 - work health and safety (WHS)/occupational health and safety (OHS) requirements
- identifying hazards, assessing risks, and identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- dealing with an unplanned event on at least one (1) occasion
- obtaining and signing work permits in accordance with workplace requirements
- completing relevant work records, reports and documentation
- solving problems in network equipment, including:
 - determining equipment operating parameters
 - determining scope of work and resource requirements
 - applying problem-solving techniques
 - applying manufacturer's settings to meet network requirements
 - conducting functional testing
- solving problems in network equipment on at least one (1) of the following network systems:
 - distribution overhead
 - distribution underground
 - transmission overhead
 - transmission underground
- using at least three (3) of the following distribution/transmission equipment types:
 - voltage regulation equipment
 - on-load tap changers (OLTCs)
 - energy metering
 - demand meters
 - load control
 - current transformers

- potential transformers.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements including WHS/OHS requirements
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- workplace records, reports and documentation
- principles of all of the following:
 - generation
 - transmission
 - distribution
 - substations
 - overhead and underground systems,
 - inductance, capacitance and resistance
 - voltage regulation
 - transformers and OLTCs
 - line drop compensation
 - types of system faults and protection
 - voltage surges
 - metering and metered quantities
 - load control.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETDRIS033 Solve problems in network protection

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 4.0.

Application

This unit includes the skills and knowledge required to solve problems in network protection in the electricity supply industry (ESI).

It includes the fundamental knowledge of primary network components, and protection schemes and related components.

It also includes the use of manufacturer's manuals and specifications, problem-solving techniques, and completing workplace records.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS032 Solve problems in network equipment

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to solve problems in network protection

2 Solve problems in network protection

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be done are reviewed and determined
- 1.2 Work plan is obtained, confirmed and communicated with relevant personnel in accordance with workplace requirements
- 1.3 Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.4 Hazards are identified, risks assessed, and control measures identified and applied
- 1.5 Work permits are determined in accordance with workplace requirements
- 1.6 Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 2.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2 Lifting, working at heights, working in confined spaces and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3 Work permits are received and signed in accordance with workplace requirements
- 2.4 Problems in network protection are solved in accordance with workplace requirements
- 2.5 Hazard control measures are monitored in accordance with workplace requirements

- 2.6 Incidents or unplanned events are responded to in accordance with workplace requirements
 - 2.7 Quality checks of work are undertaken in accordance with work plan and workplace requirements
- 3 Complete work and documentation
 - 3.1 Completed work is checked for compliance against the work plan and workplace requirements
 - 3.2 Incidents or unplanned events are reported in accordance with workplace requirements
 - 3.3 Plant, tools and equipment are cleaned, checked and returned to storage, and surplus resources and materials are managed in accordance with workplace requirements
 - 3.4 Work permits are signed off in accordance with workplace requirements
 - 3.5 Work records, reports and documentation are completed, and appropriate personnel notified in accordance with workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is not equivalent to UETDRIS68 Solve problems in energy supply network protection equipment and systems.

Assessment Requirements for UETDRIS033 Solve problems in network protection

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 4.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two (2) separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements including:
 - work health and safety (WHS)/occupational health and safety (OHS) requirements
- identifying hazards, assessing risks, and identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- dealing with an unplanned event on at least one (1) occasion
- obtaining and signing work permits in accordance with workplace requirements
- completing relevant work records, reports and documentation
- solving problems in network equipment, including:
 - determining equipment operating parameters
 - determining scope of work and resource requirements
 - applying problem-solving techniques
 - applying manufacturer's settings to meet network requirements
 - conducting functional testing
- solving problems in network systems including at least one (1) of the following:
 - distribution overhead
 - distribution underground
 - transmission overhead
 - transmission underground
- solving problems in protection equipment and systems including at least two (2) of the following:
 - over-current protection
 - earth fault protection
 - differential protection
 - oil and gas devices
 - busbar protection

- surge protection
- conventional relays
- electronic relays
- reclosers/sectionalisers.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements including WHS/OHS requirements
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- workplace records, reports and documentation
- use of manufacturer's instructions, diagrams and manuals
- fundamentals of primary components, including:
 - power transformers
 - generators
 - feeders
 - reclosers/sectionalisers
 - busbars
- fundamentals of protection schemes and components, including:
 - voltage transformers
 - current transformers
 - transducers
 - relays.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic

and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETDRMP007 Perform rescue from a live low voltage panel

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 4.0.

Application

This unit involves the skills and knowledge required to perform a rescue from live low voltage (LV) electrical apparatus in an electricity supply industry (ESI) environment. This does not include overhead lines and underground cables.

It includes the organisational workplace requirements for the inspection and use of live LV panel rescue equipment, and how it applies to ESI workers to meet work health and safety (WHS)/occupational health and safety (OHS), mobility and mutual aid requirements.

Note: Those holding an existing ESI or Electrotechnology qualification or equivalent meet the prerequisite unit requirements.

Refer to the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide for equivalency definition.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

HLTAID009 Provide cardiopulmonary resuscitation
and

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace
or

UETDREL006 Work safely in the vicinity of live electrical apparatus as a non-electrical worker

Competency Field

Mobility and Portability

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

| 1 Prepare to perform rescue procedures from live LV panel | 1.1 Workplace requirements for the rescue are identified and confirmed

1.2 Electricity isolation point is identified

1.3 Rescue equipment including personal protective equipment (PPE) is obtained and inspected in accordance with workplace requirements |
| 2 Carry out rescue from live LV panel | 2.1 Situation is assessed, and rescue response is activated in accordance with workplace requirements

2.2 Casualty is removed from the live LV panel in accordance with workplace requirements |
| 3 Complete the LV panel rescue procedure | 3.1 Casualty is assessed in accordance with workplace requirements

3.2 Incident site is secured and entry controlled in accordance with workplace requirements

3.3 Incident is reported in accordance with workplace requirements |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is not equivalent to UETDRRF004 Perform rescue from a live LV panel.

Assessment Requirements for UETDRMP007 Perform rescue from a live low voltage panel

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 4.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on one occasion and include:

- identifying organisational rescue requirements
- identifying hazards, assessing risks and applying control measures
- identifying the isolation point
- obtaining and inspecting rescue equipment
- fitting of rescue personal protective equipment (PPE)
- performing a rescue from a live low voltage (LV) panel in accordance with workplace requirements.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- organisational procedures for the rescue of a casualty from a live LV panel including:
 - inspection and placement of rescue equipment
 - types and application of rescue PPE
 - assessment and control hazards to rescuer, casualty and others
 - isolation identification procedures
 - safe approach distances (SAD) appropriate to rescue from a live LV panel
 - assessment of situation
 - activation of emergency response
 - electrical contact release
 - removal of casualty to safe location
 - assessment of casualty
 - incident site security
 - reporting requirements.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate equipment and PPE currently used in industry for performing rescues from a live LV panel
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications and operation manuals.

UETDRRF004 Perform rescue from a live LV panel

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

Application

This unit covers the performance of rescue procedures from live low voltage (LV) apparatus, not including overhead lines and underground cables in the workplace. It specifies the mandatory requirements of rescue from a live LV panel and how they apply in the context of transmission, distribution or rail work functions. It encompasses responsibilities for health, safety and risk management processes at all operative levels and adherence to safety practices as part of the normal way of doing work.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

HLTAID009 Provide cardiopulmonary resuscitation

Competency Field

Refresher Training

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to perform rescue procedures from live LV

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Instruction in hazards and risk control measures for specific work functions and work areas are identified

panel	and obtained
	<ul style="list-style-type: none"> 1.2 Electricity isolation point is identified and labelled, where appropriate 1.3 Tools and emergency equipment are checked for safety, functionality and placed in an accessible location to facilitate response and rescue according to established procedures
2 Carry out rescue from live LV panel	<ul style="list-style-type: none"> 2.1 Workplace procedures and work instructions for controlling risk are followed 2.2 Workplace procedures for accessing and isolating the LV panel and removing the victim, where necessary, from contact with live apparatus are followed 2.3 Workplace procedures for applying cardiopulmonary resuscitation (CPR), if required at the site, and gaining access to treatment by a medical professional, if necessary, are followed 2.4 The worksite is secured and entry controlled until appropriate authorities inspect and release the site
3 Complete the LV panel rescue procedure	<ul style="list-style-type: none"> 3.1 Processes for reporting accidents and/or incidents to authorised personnel are confirmed in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETDRRF06 Perform rescue from a live LV panel.

Assessment Requirements for UETDRRF004 Perform rescue from a live LV panel

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- inspecting and placing rescue equipment
- identifying and labelling the isolation point
- performing a rescue from a low voltage (LV) panel in accordance with workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency procedures for the rescue of a victim from a live LV panel encompassing:
 - inspection of rescue equipment
 - assessing hazards to rescuer, victim and others
 - isolation procedures, where appropriate
 - safe approach distances SAD appropriate to rescue from a live LV panel
 - involvement of external emergency services
- emergency procedures required for the rescue of a victim from a live LV panel encompassing:
 - placement of rescue equipment
 - controlling hazards to rescuer, victim and others
 - maintaining SAD appropriate to rescue from a live LV panel
 - removing victim to safe location/place of safety.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for performing rescues from a live LV panel
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETDRSB001 Perform substation switching operations to a given schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

Application

This unit involves the skills and knowledge required to perform substation switching operations to a given schedule in the electricity supply industry (ESI).

It includes switching operations in zone, traction or terminal substations in accordance with workplace requirements.

It also includes using specialised tools, personal protective equipment (PPE) and testing equipment.

Note: Entry requirement into the unit is for users that have successfully completed:

- *a UET Certificate III, IV, Diploma or Advanced Diploma qualification or the equivalent issued in an Australian state or territory*
- *or*
- *an Electrician or Electrical Fitter qualification or the equivalent issued in an Australian state or territory*
- *or*
- *in the final stages of completing an apprenticeship in the above qualifications.*

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Not applicable, refer to unit application.

Competency Field

Substation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare for substation switching

- 1.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2 Switching schedules are obtained and confirmed in accordance with workplace requirements
- 1.3 Plant, tools, equipment and PPE required for work are determined, obtained and confirmed in working order
- 1.4 Hazards are identified, risks are assessed and control measures identified and applied
- 1.5 Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.6 Work permit/approval is organised in accordance with workplace requirements
- 1.7 Worksite is prepared to in accordance with the work plan and workplace requirements

2 Carry out substation switching

- 2.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2 Lifting, working at heights and the use of plant, tools and equipment are carried out in accordance with workplace requirements
- 2.3 Hazard control measures are monitored in accordance with workplace requirements
- 2.4 Communication with switching control officer is established and maintained during switching operations in accordance with workplace requirements
- 2.5 Approval is obtained to commence substation switching

in accordance with workplace requirements

- 2.6 Substation switching is performed to isolate and/or transfer supply in accordance with switching schedule and workplace requirements
- 2.7 Work permit is written and issued in accordance with the switching schedule and workplace requirements
- 2.8 Work permit is cancelled or relinquished in accordance with workplace requirements
- 2.9 Approval is obtained to commence restoration of supply in accordance with workplace requirements
- 2.10 Substation switching is performed to restore supply in accordance with the switching schedule and workplace requirements
- 2.11 Switching controller is notified restoration has been completed in accordance with workplace requirements
- 2.12 Incidents or unplanned events are responded to in accordance with workplace requirements

3 Complete work and documentation

- 3.1 Incidents or unplanned events are reported in accordance with workplace requirements
- 3.2 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 3.3 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 3.4 Work records, reports and documentation are completed in accordance with workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRSB39 Perform power system substation switching operation to a given schedule.

Links

Companion Volume Implementation Guides are found in VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

Assessment Requirements for UETDRSB001 Perform substation switching operations to a given schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
 - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- establishing and maintaining communications with the following:
 - switching controller
 - permit holders
- obtaining approval to perform substation switching to a given schedule
- performing substation switching operations to a given schedule completing all of the following:
 - isolation
 - restoration
- using at least three (3) of the following specialist tools and equipment:
 - voltage detectors*
 - operating sticks
 - portable earths
 - phasing equipment
 - operating handles
 - (*must do)
- operating at least four (4) of the following electrical apparatus:
 - links
 - earth switches
 - air-break switches
 - circuit breakers
 - fuses
- operating the substation electrical equipment remotely via a panel/display

- dealing with an unplanned event on at least one (1) occasion
- organising, issuing, cancelling or relinquishing relevant work permits/approvals in accordance with workplace requirements
- completing relevant work records, reports and documentation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
 - WHS/OHS
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of work permits/approvals
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- substations, including:
 - types
 - layouts
 - bus bar configurations
 - types of electrical apparatus
 - types, function and operating characteristics of various switchgear
 - earthing systems
 - voltage regulation
- protection systems, including:
 - types, function and operating characteristics
 - protection equipment
 - interconnectors and possible sources of back-feed
- substation power supplies, including:
 - low voltage supply
 - batteries and battery charges
- substation switching principles, including:
 - manuals, system diagrams/plans and drawings
 - responsibilities of the switching operator
 - isolation, restoration, paralleling and transferring
 - earthing requirements and procedures
 - requirements and procedures of the operation of switchgear
 - safety requirements and procedures

- use and operation of specialised equipment and tools
- emergency/fault switching
- substation automation system, including:
 - supervisory control and data acquisition (SCADA) system security interlocks and access restrictions
 - function of the main components of a local/remote control system
 - operation procedure for switching from a local control station
 - functions of SCADA (or any other relevant data acquisition and control) systems and its main components
 - operation of a field devices using SCADA systems via a RAT, dial up annunciated system and local control station.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry performing substation switching operations to a given schedule
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETDRSB007 Install and maintain substation direct current systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 4.0.

Application

This unit includes the skills and knowledge required to install and maintain substation direct current (d.c) systems in the electricity supply industry (ESI).

It includes types, characteristics, maintenance requirements, installation procedures and common defects of batteries, chargers and associated control systems.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

Competency Field

Substation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare to install and maintain substation d.c. systems

- 1.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be done are reviewed and determined
- 1.2 Work plan is obtained, confirmed and communicated with relevant personnel in accordance with workplace requirements
- 1.3 Hazards are identified, risks assessed, and control measures identified and applied
- 1.4 Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.5 Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.6 Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.7 Liaison and communication issues with authorised personnel, authorities and clients are resolved to facilitate work, as required
- 1.8 Worksite is prepared in accordance with the work plan and workplace requirements

2 Install and maintain substation d.c. systems

- 2.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2 Hazard control measures are monitored in accordance with workplace requirements
- 2.3 Work permits are received and signed in accordance with workplace requirements
- 2.4 Lifting, working at heights, working in confined spaces and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements

- 2.5 Substation d.c. systems are installed in accordance with workplace requirements
 - 2.6 Substation d.c. systems are maintained in accordance with workplace requirements
 - 2.7 Incidents or unplanned events are responded to in accordance with workplace requirements
 - 2.8 Quality checks of work are undertaken in accordance with work plan and workplace requirements
- 3 Complete work and documentation**
- 3.1 Completed work is checked for compliance against the work plan and workplace requirements
 - 3.2 Work permits are signed off in accordance with workplace requirements
 - 3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
 - 3.4 Plant, tools and equipment are cleaned, checked and returned to storage, and surplus resources and materials are managed in accordance with workplace requirements
 - 3.5 Work records, reports and documentation are completed, and where relevant, appropriate personnel notified in accordance with workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is not equivalent to UETTDRSB23 Install and maintain substation direct

current systems.

Assessment Requirements for UETDRSB007 Install and maintain substation direct current systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 4.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two (2) separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements including:
 - work health and safety (WHS)/occupational health and safety (OHS) requirements
- identifying hazards, assessing risks, and identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- dealing with an unplanned event on at least one (1) occasion
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- completing relevant work records, reports and documentation
- installing and maintaining at least one (1) of the following types of batteries:
 - nickel cadmium
 - lead acid
 - gel cell
 - lithium ion
- installing and maintaining at least one (1) of the following battery systems:
 - main
 - communication
 - storage
- installing and maintaining battery chargers and direct current (d.c). control circuits
- performing at least two (2) of the following types of tests:
 - cell voltage test
 - hydrometer/specific gravity test
 - battery discharge and capacity tests
 - impedance testing.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria, and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including WHS/OHS requirements
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- workplace records, reports and documentation
- operational manuals and system diagrams
- batteries, including:
 - types
 - characteristics
 - maintenance requirements
 - installation procedures
 - common defects and rectification
- battery stands and enclosures, including:
 - types
 - characteristics
 - maintenance requirements
 - installation procedures
 - common defects and rectification
 - access requirements
- charging systems, including:
 - types
 - characteristics
 - maintenance requirements
 - installation procedures
 - common defects and rectification
- substation d.c. systems, including:
 - protection
 - switching
 - monitoring
 - common panel layouts
 - uninterrupted power supply (UPS)
- specialised tools, including:

- types, construction and function
- calibration
- care and maintenance.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace requirements, equipment specifications, regulations, codes of practice and operation manuals.

UETDRSB010 Maintain capacitor bank equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 4.0.

Application

This unit includes the skills and knowledge required to maintain capacitor bank equipment in the electricity supply industry (ESI).

It includes different capacitor bank types, characteristics, isolation and discharge, maintenance requirements, common defects and rectification.

It also includes ancillary components of capacitor banks, testing requirements and the use of specialised tools and equipment.

Note: Entry into this unit is for users who:

- *hold the unit UETDREL005 Work safely in the vicinity of live electrical apparatus or equivalent,*

and

- *hold an Electrician licence or the equivalent issued in an Australian state or territory,*

or

- *hold an Electrician qualification or the equivalent issued in an Australian state or territory.*

This unit can be undertaken in conjunction with the qualification listed above, provided all requirements for completion of the Certificate III qualification are met prior to issuing this unit.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Refer to Application.

Competency Field

Substation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare to maintain capacitor bank equipment

1.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are reviewed and determined

1.2 Work plan is obtained, confirmed and communicated with relevant personnel in accordance with workplace requirements

1.3 Hazards are identified, risks assessed, and control measures identified and applied

1.4 Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements

1.5 Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order

1.6 Liaison and communication issues with authorised personnel, authorities and clients are resolved to facilitate work, as required

1.7 Worksite is prepared in accordance with the work plan and workplace requirements

2 Maintain capacitor bank equipment

2.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored

2.2 Work permits are received and signed in accordance with workplace requirements

2.3 Lifting, working at heights, working in confined spaces and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements

2.4 Capacitor bank equipment is maintained in accordance

- with workplace requirements
- 2.5 Quality checks of work are undertaken in accordance with work plan and workplace requirements
 - 2.6 Incidents or unplanned events are responded to in accordance with workplace requirements
- 3 Complete work and documentation**
- 3.1 Completed work is checked for compliance against the work plan and workplace requirements
 - 3.2 Work permits are signed off in accordance with workplace requirements
 - 3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
 - 3.4 Plant, tools and equipment are cleaned, checked and returned to storage, and surplus resources and materials are managed in accordance with workplace requirements
 - 3.5 Work records, reports and documentation are completed, and where relevant, appropriate personnel notified in accordance with workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is not equivalent to UETDRSB29 Maintain capacitor bank equipment for voltage regulation.

Assessment Requirements for UETDRSB010 Maintain capacitor bank equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 4.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two (2) separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements including:
 - work health and safety (WHS)/occupational health and safety (OHS) requirements
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- dealing with an unplanned event on at least one (1) occasion
- obtaining and signing relevant work permits in accordance with workplace requirements
- completing relevant work records, reports and documentation
- maintaining at least two (2) of the following types of capacitor bank systems:
 - double star neutral current unbalance
 - voltage unbalance
 - floating star
 - earthed star
 - harmonic filter
 - series
- maintaining at least two (2) of the following components:
 - internal discharge resistor cans
 - external resistor type
 - switching reactors
 - neutral unbalance current transformer
- performing at least three (3) of the following types of tests:
 - insulation resistance
 - capacitance
 - unbalance current/voltage
 - primary injection
 - high voltage (HV) direct current d.c. withstand.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including WHS/OHS requirements
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- workplace records, reports and documentation
- operational manuals and system diagrams
- capacitor banks, including:
 - types
 - characteristics
 - isolation and discharge
 - maintenance requirements
 - common defects and rectification
- testing, including:
 - insulation resistance
 - capacitance
 - unbalance current/voltage
 - primary injection
 - HV direct current d.c. withstand
- ancillary components, including:
 - internal discharge resistor cans
 - external resistor type
 - switching reactors
 - neutral unbalance current transformer
- specialised tools, including:
 - types, construction and function
 - calibration
 - care and maintenance.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory

requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace requirements, equipment specifications, regulations, codes of practice and operation manuals.

UEESS00131 Data Communications - ACMA 'Open' Cabling Provider Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00048 Data Communications - ACMA 'Open' Cabling Provider.

Description

This Skill Set is for persons who are required to undertake Australian Communications and Media Authority (ACMA) 'Open' Cabling Provider Registration.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

The following **units** of competency must be attained.

UEEDV0005	Install and maintain cabling for multiple access to telecommunication services
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace
UEECD0019	Fabricate, assemble and dismantle utilities industry components
UEECD0020	Fix and secure electrotechnology equipment
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications

AND

UEECD0043 Solve problems in direct current circuits

OR

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

Target Group

This Skill Set is available to persons wishing to undertake work in telecommunication cabling requiring ACMA 'Open' cabling provider registration.

This Skill Set meets the minimum ACMA 'prescribed level of knowledge and skill that safeguards matters of health, safety, network integrity and addresses matters of interoperability where customer equipment and standard telephone service are involved' for ACMA 'Open' Cabling Provider Registration.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for ACMA 'Open' Cabling Provider Registration.

Custom Content Section

Not applicable.

UEESS00132 Data Communications - ACMA 'Restricted' Telecommunications Cabling Registration Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00049 Data Communications - ACMA 'Restricted' Telecommunications Cabling Registration.

Description

This Skill Set is for persons who are required to undertake Australian Communications and Media Authority (ACMA) Restricted Telecommunications Cabling Registration.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate II, Certificate III and Certificate IV, qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set already hold the following unit:

- UEEDV0013 Solve problems in voice and data communications circuits

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **5 units** of competency must be attained.

UEECD0007	Apply work health and safety regulations, codes and practices in the workplace
UEECD0019	Fabricate, assemble and dismantle utilities industry components
UEECD0020	Fix and secure electrotechnology equipment
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications

UEEDV0003 Install and connect cabling for direct access to telecommunications service

Target Group

This Skill Set meets the minimum ACMA 'prescribed level of knowledge and skill that safeguards matters of health, safety, network integrity and addresses matters of interoperability where customer equipment and standard telephone service are involved' for ACMA 'Restricted' Telecommunications Cabling Registration.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for ACMA 'Restricted' Telecommunications Cabling Registration.

Custom Content Section

Not applicable.

UEESS00133 Restricted - Disconnection/Reconnection of Fixed Wired Low Voltage Electrical Equipment

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

Description

This Skill Set is for persons wishing to disconnect and reconnect low voltage (LV) fixed wired electrical equipment which is incidental or a primary and regular function of work related to a principle work function.

It includes working safely on electrical equipment, isolating LV electrical supplies, selecting and using testing and measuring devices, disconnecting and reconnecting electrical equipment, terminating and connecting cables and conductors in accordance with Australian Standards, and completing required reporting.

This excludes disconnecting or reconnecting circuits at a switchboard or to general electrical accessories (including switches, socket outlets, light etc); or installation of or alteration to any part of the fixed electrical wiring system (defined as electrical installing work).

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III and Certificate IV qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units** of competency must be attained.

UEECD0007	Apply work health and safety regulations, codes and practices in the workplace
UEERL0004	Disconnect - reconnect electrical equipment connected to low voltage (LV) installation wiring

Target Group

The units of competency in this Skill Set are for persons who already hold a relevant Certificate III or equivalent and the work is incidental or a primary and regular function of work related to a principle work function.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for a Restricted Electrical Licence - disconnection/reconnection of fixed wired low voltage electrical equipment.

Custom Content Section

Not applicable.

UEESS00134 Data Communications - Install Aerial Communication Cables Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00050 Data Communications - Install Aerial Communication Cables.

Description

This Skill Set is for persons who are required to install aerial communication cables.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

The following **units** of competency must be attained.

UEECD0019	Fabricate, assemble and dismantle utilities industry components
UEECD0020	Fix and secure electrotechnology equipment
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications
UEEDV0002	Install aerial telecommunication cables
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services

AND

UEECD0043	Solve problems in direct current circuits
-----------	---

OR

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

Target Group

This Skill Set is available to persons wishing to undertake work in telecommunication cabling requiring Australian Communications and Media Authority (ACMA) 'Open' Cabling Provider Registration with aerial endorsement.

Note:

This Skill Set meets the minimum ACMA 'prescribed level of knowledge and skill that safeguards matters of health, safety, network integrity and addresses matters of interoperability where customer equipment and standard telephone service are involved' for ACMA 'Open' Cabling Provider Registration with aerial endorsement.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for installing aerial communication cables.

Custom Content Section

Not applicable.

UEESS00135 Instrumentation - Programmable Control Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00124 Instrumentation - Programmable control systems.

Description

This Skill Set covers development, installation and testing of programs for programmable logic controllers (PLC) for a system requiring discrete control functions and industrial system requiring advanced control functions.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirement

It is essential that persons undertaking this Skill Set already hold the following unit:

- UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units** of competency must be attained.

UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers
UEEIC0015	Develop, enter and verify word and analogue control programs for programmable logic controllers

Target Group

This Skill Set is intended for persons who are required to develop, install and test programs for programmable control systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for Instrumentation – Programmable control systems.

Custom Content Section

Not applicable.

UEESS00137 Data Communications - Install Below Ground Communication Cables Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00053 Data Communications - Install Below Ground Communication Cables.

Description

This Skill Set is for persons who are required to install below ground communication cables.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

The following **units** of competency must be attained.

UEECD0007	Apply work health and safety regulations, codes and practices in the workplace
UEECD0019	Fabricate, assemble and dismantle utilities industry components
UEECD0020	Fix and secure electrotechnology equipment
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services
UEEDV0007	Install underground communication cables

AND

UEECD0043 Solve problems in direct current circuits

OR

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

Target Group

This Skill Set is available to persons wishing to undertake work in telecommunication cabling requiring Australian Communications and Media Authority (ACMA) 'Open' Cabling Provider Registration with underground endorsement.

Note:

This Skill Set meets the minimum ACMA 'prescribed level of knowledge and skill that safeguards matters of health, safety, network integrity and addresses matters of interoperability where customer equipment and standard telephone service are involved' for ACMA 'Open' Cabling Provider Registration with underground endorsement.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for installing below ground communication cables.

Custom Content Section

Not applicable.

UEESS00138 Data Communications - Test, Report and Rectify Faults in Data and Voice Installations Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00119 Data Communications – Test, report and rectify faults in data and voice installations.

Description

This Skill Set covers testing for certification, and finding and repairing faults in telecommunication installations and local area networks (LANs).

The Skill Set encompasses working safely, reading cabling diagrams, performance testing, applying logical fault-finding procedures, testing functionality of the network, conducting repairs and completing the necessary documentation.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set must already hold:

- ACMA 'Open' Cabling Registration and nationally recognised endorsements for structured cable and optical fibre.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **1 unit** of competency must be attained.

UEEDV0014 Test, report and rectify faults in data and voice installations

Target Group

This Skill Set is intended for persons who are required to test, report and rectify faults in data and voice installations.

This Skill Set meets the ACMA industry recognised endorsement for testing.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for testing, reporting and rectifying faults in data and voice installations.

Custom Content Section

Not applicable.

UEESS00139 Data Communications - Restricted Telecommunications Cabler Registration - ACMA Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00054 Data Communications - Restricted Telecommunications Cabler Registration - ACMA.

Description

This Skill Set is for persons who are required to undertake restricted telecommunications cabler registration.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate II, Certificate III and Certificate IV, qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set already hold the unit:

- UEECD0042 Solve problems in ELV single path circuits

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

The following **units** of competency must be attained.

UEECD0019	Fabricate, assemble and dismantle utilities industry components
UEECD0020	Fix and secure electrotechnology equipment
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications
UEEDV0003	Install and connect cabling for direct access to telecommunications service

and

UEECD0043 Solve problems in direct current circuits

or

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

Target Group

This Skill Set meets the minimum Australian Communications and Media Authority (ACMA) 'prescribed level of knowledge and skill that safeguards matters of health, safety, network integrity and addresses matters of interoperability where customer equipment and standard telephone service are involved' for ACMA 'Restricted' Cabling Provider Registration.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for restricted telecommunications cabler registration - ACMA.

Custom Content Section

Not applicable.

UEESS00140 Data Communications - Premises Cabling for NBN Rollout Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00116 Data Communications – Premises Cabling for NBN Rollout.

Description

This Skill Set covers the installation and modification of high-performance data communication cabling in buildings and premises and intended for connecting a telecommunications network.

The Skill Set encompasses working safely and to industry standards and specifications, installing multiple data lines and backbones using structured twisted pair cabling and optical fibre cabling, terminating at distributors, termination modules and in socket outlets, testing and compliance checks, preparing and filling trenches, placing conduits and ducts, drawing cables, installing catenary cable, fixing communication cables, terminating at distributors, splices and on socket outlets, testing and compliance checks and completing necessary documentation.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this skill set must already hold the following:

- Australian Communications and Media Authority (ACMA) 'Open' Cabling Registration.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **4 units** of competency must be attained.

UEEDV0002 Install aerial telecommunication cables

UEEDV0006	Install and modify optical fibre performance data communication cabling
UEEDV0007	Install underground communication cables
UEEDV0008	Install, modify and verify coaxial and structured communication copper cabling

Target Group

This Skill Set is intended for persons who are required to undertake premises cabling for NBN rollout.

Note:

This Skill Set meets the ACMA industry recognised endorsements for optical fibre, structured cable, underground cabling and overhead cabling.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for premises cabling for NBN rollout.

Custom Content Section

Not applicable.

UEESS00141 Electrical - Providing Advice on Lighting Products Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00057 Electrical - Providing advice on lighting products.

Description

This Skill Set is for persons who are required to provide advice on lighting products.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units** of competency must be attained.

UEEEL0016	Provide advice on effective and energy efficient lighting products
UEEEL0022	Supply effective and efficient lighting products for domestic and small commercial applications

Target Group

This Skill Set is intended for persons who are required to undertake work in the electrical and/or retail industry where customers will seek advice on effective and energy efficient lighting products.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for electrical – providing advice on lighting products.

Custom Content Section

Not applicable.

UEESS00142 Data Communications - Plan an Integrated Cabling Installation System Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00118 Data Communications – Plan an integrated cabling installation system.

Description

This Skill Set covers planning of cable routes for intelligent power and lighting, information and communications, entertainment systems, distributed video and audio; energy management and control; security and safety; digital home health; and age and assisted living.

This unit encompasses determining immediate and future cabling needs of an installation and their origins and termination points, planning cable routes, specifying cable types, sizes, fixing/support methods and cable identification systems and documenting cabling plans based on calculated and/or deemed-to-comply solutions as well as the planning of the wiring hub, as required.

The Skill Set encompasses working safely and to industry standards and specifications and completing necessary documentation.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set must already hold:

- Australian Communications and Media Authority (ACMA) 'Open' Cabling Registration.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units** of competency must be attained.

-
- UEECD0025 Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits
- UEECD0028 Plan an integrated cabling installation system

Target Group

This Skill Set is intended for persons who are required to plan an integrated cabling installation system.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for planning an integrated cabling installation system.

Custom Content Section

Not applicable.

UEESS00143 Instrumentation - Develop an Integrated System Interface for Access Through a Touch Screen Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00073 Instrumentation - Develop a integrated system interface for access through a touch screen.

Description

This Skill Set is for persons who are required to develop an integrated system interface for access through a touch screen.

Pathways Information

The unit of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirement

It is essential that persons undertaking this Skill Set already hold the following unit:

- UEEIC0011 Develop electrical integrated systems

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **1 unit** of competency must be attained.

UEEIC0009	Develop an electrical integrated system interface for access through a touch screen
-----------	---

Target Group

This Skill Set is intended for persons who are required to develop an integrated system interface for access through a touch screen.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for developing touch screen access in an integrated system.

Custom Content Section

Not applicable.

UEESS00144 Instrumentation - Develop Integrated Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00075 Instrumentation - Develop integrated systems.

Description

This Skill Set is for persons who are required to develop integrated systems.

Pathways Information

The unit of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirement

It is essential that persons undertaking this Skill Set already hold unit/s in electrical, electronic and data communication work and competency in the use of personal computers:

- UEECD0025 Lay wiring/cabbling and terminate accessories for extra-low voltage (ELV) circuits

OR

- UEEEL0023 Terminate cables, cords and accessories for low voltage circuits

AND

- ICTICT203 Operate application software packages

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **1 unit** of competency must be attained.

UEEIC0011 Develop electrical integrated systems

Target Group

This Skill Set is intended for persons who are required to develop integrated systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for developing integrated systems.

Custom Content Section

Not applicable.

UEESS00145 Instrumentation - Plan the Installation of Integrated Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00077 Instrumentation - Plan the installation of integrated systems.

Description

This Skill Set is for persons who are required to plan the installation of an integrated system.

Pathways Information

The unit of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirement

It is essential that persons undertaking this Skill Set already hold the following unit in electrical, electronic and data communication work:

- UEECD0025 Lay wiring/cablings and terminate accessories for extra-low voltage (ELV) circuits

OR

- UEEEL0023 Terminate cables, cords and accessories for low voltage circuits

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **1 unit** of competency must be attained.

UEEIC0024 Plan the electrical installation of integrated systems

Target Group

This Skill Set is intended for persons who are required to plan the installation of an integrated system.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for planning integrated systems.

Custom Content Section

Not applicable.

UEESS00146 RAC - Design Ammonia Refrigeration Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00078 Refrigeration-Air Conditioning - Design Ammonia Refrigeration Systems.

Description

This Skill Set is for persons who are required to design ammonia refrigeration system.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

It is essential that persons undertaking this Skill Set already hold the following unit:

- UEERA0034 Establish heat loads for commercial refrigeration and/or air conditioning applications

AND

- UEERA0042 Evaluate thermodynamic and fluid parameters of refrigeration systems

OR

- Diploma of Air Conditioning and Refrigeration Engineering

OR

- Advanced Diploma of Air Conditioning and Refrigeration Engineering

OR

- Advanced Diploma of Engineering Technology - Air Conditioning and Refrigeration

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **3 units** of competency must be attained.

UEERA0005	Apply safety awareness and legal requirements for ammonia refrigerant
UEERA0014	Design ammonia refrigerated systems
UEERA0016	Design commercial refrigeration systems and select components

Target Group

This Skill Set is intended for persons who are required to design ammonia refrigeration system.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for designing ammonia refrigeration systems.

Custom Content Section

Not applicable.

UEESS00147 RAC- Design Complex Carbon Dioxide Refrigeration Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00079 Refrigeration-Air Conditioning - Design Complex Carbon Dioxide Refrigeration Systems.

Description

This Skill Set is for persons who are required to design complex carbon dioxide refrigeration system.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this skill set already hold the following unit:

- UEERA0034 Establish heat loads for commercial refrigeration and/or air conditioning applications

AND

- UEERA0042 Evaluate thermodynamic and fluid parameters of refrigeration systems

OR

- Diploma of Air Conditioning and Refrigeration Engineering

OR

- Advanced Diploma of Air Conditioning and Refrigeration Engineering

OR

- Advanced Diploma of Engineering Technology - Air Conditioning and Refrigeration

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **3 units** of competency must be attained.

UEERA0006	Apply safety awareness and legal requirements for carbon dioxide refrigerant
UEERA0015	Design carbon dioxide refrigerated systems
UEERA0016	Design commercial refrigeration systems and select components

Target Group

This Skill Set is intended for persons who are required to design complex carbon dioxide refrigeration system.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for designing complex carbon dioxide refrigeration systems.

Custom Content Section

Not applicable.

UEESS00148 RAC - Design Hydrocarbon Refrigeration Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00080 Refrigeration-Air Conditioning - Design Hydrocarbon Refrigeration Systems.

Description

This Skill Set is for persons who are required to design hydrocarbon refrigeration system.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this skill set already hold the following unit:

- UEERA0034 Establish heat loads for commercial refrigeration and/or air conditioning applications

AND

- UEERA0042 Evaluate thermodynamic and fluid parameters of refrigeration systems

OR

- Diploma of Air Conditioning and Refrigeration Engineering

OR

- Advanced Diploma of Air Conditioning and Refrigeration Engineering

OR

- Advanced Diploma of Engineering Technology - Air Conditioning and Refrigeration

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **3 units** of competency must be attained.

UEERA0007	Apply safety awareness and legal requirements for flammable refrigerants
UEERA0016	Design commercial refrigeration systems and select components
UEERA0023	Design hydrocarbon refrigerated systems

Target Group

This Skill Set is intended for persons who are required to design hydrocarbon refrigeration system.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for designing hydrocarbon refrigeration systems.

Custom Content Section

Not applicable.

UEESS00149 RAC - Design Secondary Refrigeration Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00081 Refrigeration-Air Conditioning - Design Secondary Refrigeration Systems.

Description

This Skill Set is for persons who are required to design secondary refrigeration system.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set already hold the following unit:

- UEERA0034 Establish heat loads for commercial refrigeration and/or air conditioning applications

AND

- UEERA0042 Evaluate thermodynamic and fluid parameters of refrigeration systems

OR

- Diploma of Air Conditioning and Refrigeration Engineering

OR

- Advanced Diploma of Air Conditioning and Refrigeration Engineering

OR

- Advanced Diploma of Engineering Technology - Air Conditioning and Refrigeration

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units** of competency must be attained.

UEERA0016 Design commercial refrigeration systems and select components

UEERA0027 Design secondary refrigerant systems

Target Group

This Skill Set is intended for persons who are required to design secondary refrigeration system.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for designing secondary refrigeration systems.

Custom Content Section

Not applicable.

UEESS00150 RAC - Install and Commission Ammonia Refrigeration Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00082 Refrigeration-Air Conditioning - Install and Commission Ammonia Refrigeration Systems.

Description

This Skill Set is for persons who are required to install and commission ammonia refrigeration system.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set already hold the following units:

- UEERA0053 Install, commission, service and maintain medium temperature systems
- AND
- UEERA0051 Install, commission, service and maintain air conditioning systems
- OR
- Certificate III in Air Conditioning and Refrigeration

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **3 units** of competency must be attained.

UEERA0005 Apply safety awareness and legal requirements for ammonia refrigerant

UEERA0046 Install and commission ammonia refrigeration systems, components and associated equipment

UEERA0065 Repair and service ammonia refrigeration systems

Target Group

This Skill Set is intended for persons who are required to install and commission ammonia refrigeration system.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for installing and commissioning ammonia refrigeration systems.

Custom Content Section

Not applicable.

UEESS00151 RAC - Install and Commission Carbon Dioxide Refrigeration Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00083 Refrigeration-Air Conditioning - Install and Commission Carbon Dioxide Refrigeration Systems.

Description

This Skill Set is for persons who are required to install and commission carbon dioxide refrigeration system.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set already hold the following units:

- UEERA0053 Install, commission, service and maintain medium temperature systems
- AND
- UEERA0051 Install, commission, service and maintain air conditioning systems
- OR
- Certificate III in Air Conditioning and Refrigeration

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **3 units** of competency must be attained.

UEERA0006	Apply safety awareness and legal requirements for carbon dioxide refrigerant
-----------	--

UEERA0047 Install and commission carbon dioxide refrigeration systems, components and associated equipment

UEERA0066 Repair and service carbon dioxide refrigeration systems

Target Group

This Skill Set is intended for persons who are required to install and commission carbon dioxide refrigeration system.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for installing and commissioning carbon dioxide refrigeration systems.

Custom Content Section

Not applicable.

UEESS00152 RAC - Install and Commission Flammable Refrigerant Air Cond. and Refrigeration Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00084 Refrigeration-Air Conditioning - Install and Commission Hydrocarbon Refrigeration Systems, Major Components and Associated Equipment.

Description

This Skill Set is for persons who are required to install and commission hydrocarbon refrigeration systems, major components and associated equipment.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set already hold the following units:

- UEERA0053 Install, commission, service and maintain medium temperature systems
- AND
- UEERA0051 Install, commission, service and maintain air conditioning systems
- OR
- Certificate III in Air Conditioning and Refrigeration

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units** of competency must be attained.

UEERA0007 Apply safety awareness and legal requirements for flammable refrigerants

UEERA0048 Install and commission flammable refrigerant air conditioning and refrigeration systems

Target Group

This Skill Set is intended for persons who are required to install and commission hydrocarbon refrigeration systems, major components and associated equipment.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for installing and commissioning hydrocarbon refrigeration systems, major components and associated equipment.

Custom Content Section

Not applicable.

UEESS00153 RAC - Operate Ammonia Refrigeration Plant Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00085 Refrigeration-Air Conditioning - Operate Ammonia Refrigeration Plant.

Description

This Skill Set is for persons who are required to operate ammonia refrigeration plant.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units** of competency must be attained.

UEERA0005 Apply safety awareness and legal requirements for ammonia refrigerant

UEERA0057 Operate ammonia refrigeration plant

Target Group

This Skill Set is intended for persons who are required to operate ammonia refrigeration plant.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements to operate ammonia refrigeration systems.

Custom Content Section

Not applicable.

UEESS00154 RAC - Service and Repair Ammonia Refrigeration Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00086 Refrigeration-Air Conditioning - Service and Repair Ammonia Refrigeration Systems.

Description

This Skill Set is for persons who are required to service and repair ammonia refrigeration system.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set already hold the following units:

- UEERA0053 Install, commission, service and maintain medium temperature systems
- AND
- UEERA0051 Install, commission, service and maintain air conditioning systems
- OR
- Certificate III in Air Conditioning and Refrigeration

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units** of competency must be attained.

UEERA0005 Apply safety awareness and legal requirements for ammonia refrigerant

UEERA0065 Repair and service ammonia refrigeration systems

Target Group

This Skill Set is intended for persons who are required to service and repair ammonia refrigeration system.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for servicing and repairing ammonia refrigeration systems.

Custom Content Section

Not applicable.

UEESS00155 RAC - Service and Repair Carbon Dioxide Refrigeration and Heat Pump Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00087 Refrigeration-Air Conditioning - Service and Repair Carbon Dioxide Refrigeration and Heat Pump Systems.

Description

This Skill Set is for persons who are required to service and repair carbon dioxide refrigeration and heat pump systems.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set already hold the following unit:

- UEERA0051 Install, commission, service and maintain air conditioning systems
- OR
- UEERA0089 Service refrigeration appliances
- OR
- Certificate III in Air Conditioning and Refrigeration
- OR
- Certificate III in Appliance Service

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units** of competency must be attained.

UEERA0006	Apply safety awareness and legal requirements for carbon dioxide refrigerant
UEERA0068	Repair and service self-contained carbon dioxide refrigeration and heat pump systems

Target Group

This Skill Set is intended for persons who are required to service and repair carbon dioxide refrigeration and heat pump systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for servicing and repairing carbon dioxide refrigeration and heat pump systems.

Custom Content Section

Not applicable.

UEESS00156 RAC - Service and Repair Carbon Dioxide Refrigeration Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00088 Refrigeration-Air Conditioning - Service and Repair Carbon Dioxide Refrigeration Systems.

Description

This Skill Set is for persons who are required to service and repair carbon dioxide refrigeration systems.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set already hold the following units:

- UEERA0053 Install, commission, service and maintain medium temperature systems
- AND
- UEERA0051 Install, commission, service and maintain air conditioning systems
- OR
- Certificate III in Air Conditioning and Refrigeration

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units** of competency must be attained.

UEERA0006	Apply safety awareness and legal requirements for carbon dioxide refrigerant
-----------	--

UEERA0066 Repair and service carbon dioxide refrigeration systems

Target Group

This Skill Set is intended for persons who are required to service and repair carbon dioxide refrigeration systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for servicing and repairing carbon dioxide refrigeration systems.

Custom Content Section

Not applicable.

UEESS00157 RAC - Service and Repair Flammable Refrigerant Refrigeration and Air Conditioning Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00089 Refrigeration-Air Conditioning - Service and Repair Hydrocarbon Refrigeration and Air Conditioning Systems.

Description

This Skill Set is for persons who are required to service and repair hydrocarbon refrigeration and air conditioning systems.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set already hold the following unit:

- UEERA0053 Install, commission, service and maintain medium temperature systems
- OR
- UEERA0089 Service refrigeration appliances
- OR
- Certificate III in Air Conditioning and Refrigeration
- OR
- Certificate III in Appliance Service

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units** of competency must be attained.

UEERA0007	Apply safety awareness and legal requirements for flammable refrigerants
UEERA0084	Service and repair self-contained flammable refrigerants air conditioning and refrigeration systems

Target Group

This Skill Set is intended for persons who are required to service and repair hydrocarbon refrigeration and air conditioning systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for servicing and repairing hydrocarbon refrigeration and air conditioning systems.

Custom Content Section

Not applicable.

UEESS00158 RAC - Service and Repair Secondary Refrigeration Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00090 Refrigeration-Air Conditioning - Service and Repair Secondary Refrigeration Systems.

Description

This Skill Set is for persons who are required to service and repair secondary refrigeration systems.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set already hold the following units:

- UEERA0053 Install, commission, service and maintain medium temperature systems
- AND
- UEERA0051 Install, commission, service and maintain air conditioning systems
- OR
- Certificate III in Air Conditioning and Refrigeration

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **1 unit** of competency must be attained.

UEERA0067 Repair and service secondary refrigeration systems

Target Group

This Skill Set is intended for persons who are required to service and repair secondary refrigeration systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for servicing and repairing secondary refrigeration systems.

Custom Content Section

Not applicable.

UEESS00164 Sustainable - Energy Efficiency Auditor Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00105 Sustainable - Energy Efficiency Auditor.

Description

This Skill Set is for persons who are required to undertake energy efficiency audits.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

It is essential that persons undertaking this Skill Set already hold a Degree in Electrical Engineering, an Advanced Diploma or Diploma of Electrical Engineering or an electrical trade qualification from the UEE Electrotechnology Training Package or equivalent.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **4 units** of competency must be attained.

UEECD0010	Compile and produce an energy sector detailed report
UEECD0024	Implement and monitor energy sector WHS policies and procedures
UEERE0001	Apply environmentally and sustainable procedures in the energy sector
UEERE0015	Implement and monitor energy sector environmental and sustainable policies and procedures

Target Group

This Skill Set is intended for persons who are required to undertake energy efficiency audits.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for an energy efficiency auditor.

Custom Content Section

Not applicable.

UEESS00169 Data Communications - Install and Modify Performance Data Communication Structured Cabling Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00052 Data Communications - Install and Modify Performance Data Communication Structured Cabling.

Description

This Skill Set is for persons who are required to install and modify performance data communication structured cabling.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

The following **units** of competency must be attained.

UEECD0007	Apply work health and safety regulations, codes and practices in the workplace
UEECD0019	Fabricate, assemble and dismantle utilities industry components
UEECD0020	Fix and secure electrotechnology equipment
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services
UEEDV0008	Install, modify and verify coaxial and structured communication copper cabling

AND

UEECD0043 Solve problems in direct current circuits

OR

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

Target Group

This Skill Set is available to persons wishing to undertake work in telecommunication cabling requiring Australian Communications and Media Authority (ACMA) 'Open' Cabling Provider Registration with structured cabling endorsement.

Note:

This Skill Set meets the minimum ACMA 'prescribed level of knowledge and skill that safeguards matters of health, safety, network integrity and addresses matters of interoperability where customer equipment and standard telephone service are involved' for ACMA 'Open' Cabling Provider Registration with structured cabling endorsement.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for installing and modifying performance data communication structured cabling.

Custom Content Section

Not applicable.

UEESS00170 Install and Modify Performance Data Communication Optical Fibre Cabling Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00051 Data Communications - Install and Modify Performance Data Communication Optical Fibre Cabling.

Description

This Skill Set is for persons who are required to install and modify performance data communication optical fibre cabling.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

The following **units** of competency must be attained.

UEECD0007	Apply work health and safety regulations, codes and practices in the workplace
UEECD0019	Fabricate, assemble and dismantle utilities industry components
UEECD0020	Fix and secure electrotechnology equipment
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services
UEEDV0006	Install and modify optical fibre performance data communication cabling

AND

UEECD0043 Solve problems in direct current circuits

OR

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

Target Group

This Skill Set is available to persons wishing to undertake work in telecommunication cabling requiring Australian Communications and Media Authority (ACMA) 'Open' Cabling Provider Registration with Fibre Optic endorsement.

Note:

This Skill Set meets the minimum ACMA 'prescribed level of knowledge and skill that safeguards matters of health, safety, network integrity and addresses matters of interoperability where customer equipment and standard telephone service are involved' for ACMA 'Open' Cabling Provider Registration with fibre optic endorsement.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for installing and modifying performance data communication optical fibre cabling.

Custom Content Section

Not applicable.

UEESS00171 Fire Detection and Alarm Systems - Installation, Maintenance, Commissioning and Servicing Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00058 Electronic - Fire Detection and Alarm Systems - Installation, Maintenance, Commissioning and Servicing.

Description

This Skill Set is for persons who are required to install, maintain, commission and service electronic fire detection and alarm systems.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **9 units** of competency must be attained.

UEECD0007	Apply work health and safety regulations, codes and practices in the workplace
UEECD0019	Fabricate, assemble and dismantle utilities industry components
UEECD0020	Fix and secure electrotechnology equipment
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications
UEEEEC0008	Commission large fire protection systems
UEEEEC0026	Enter and verify programs for fire protection systems
UEEEEC0041	Install fire detection and warning system apparatus

UEEEEC0071 Troubleshoot fire protection systems

UEEEEC0076 Verify compliance and functionality of fire protection system installations

Target Group

This Skill Set is intended for persons who are required to install, maintain, commission and service electronic fire detection and alarm system.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for installing, maintaining, commissioning and servicing electronic fire detection and alarm systems.

Custom Content Section

Not applicable.

UEESS00172 Attachment of Cords and Plugs to Single Phase Low Voltage Electrical Equipment Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00091 Restricted - Attachment of cords and plugs to single phase low voltage electrical equipment.

Description

This Skill Set is designed for persons wishing to attach flexible cords and plugs for voltages operating to 250 volts (V). These competencies are in addition to competencies already gained in the relevant field to which the electrical work is incidental or a primary and regular function of the work.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate II, Certificate III and Certificate IV qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units** of competency must be attained.

UEECD0007	Apply work health and safety regulations, codes and practices in the workplace
UEERL0001	Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

Target Group

The units of competency in this Skill Set are for persons holding a relevant electrotechnology qualification at a Certificate II or higher and the work is incidental or a primary and regular

function of work related to a principle work function.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for Restricted Electrical Licence - Attachment of cords and plugs to single phase low voltage electrical equipment.

Custom Content Section

Not applicable.

UEESS00173 Attachment of Cords/Cables and Plugs to Low Voltage Three Phase Electrical Equipment Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00092 Restricted - Attachment of cords/cables and plugs to low voltage three phase electrical equipment.

Description

This Skill Set is designed for persons wishing to attach flexible cords/cables and plugs for voltages operating up to 1,000 volt (V) alternating current (a.c.). These competencies are in addition to competencies already gained in the relevant field to which the electrical work is incidental or a primary and regular function of the work.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate II, Certificate III and Certificate IV qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **3 units** of competency must be attained.

UEECD0007	Apply work health and safety regulations, codes and practices in the workplace
UEERL0001	Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply
UEERL0002	Attach cords, cables and plugs to electrical equipment for connection to 1000 V a.c. or 1500 V d.c.

Target Group

The units of competency in this Skill Set are for persons holding a relevant electrotechnology qualification at a Certificate II or higher and the work is incidental or a primary and regular function of work related to a principle work function.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for restricted electrical licence - attachment of cords/cables and plugs to low voltage three phase electrical equipment.

Custom Content Section

Not applicable.

UEESS00174 Electrical Safety Testing of Electrical Cord Connected Equipment and Cord Assemblies Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00098 Restricted - Electrical safety testing of electrical cord connected equipment and cord assemblies.

Description

This Skill Set is designed for persons wishing to undertake the testing, tagging and reporting of portable/handheld low voltage (LV) electrical equipment using a portable appliance tester (PAT). These competencies are in addition to competencies already gained in the relevant field to which the electrical work is incidental or a primary and regular function of the work.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate II, Certificate III and Certificate IV qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units** of competency must be attained.

UEECD0007	Apply work health and safety regulations, codes and practices in the workplace
UEERL0003	Conduct in-service safety testing of electrical cord connected equipment and cord assemblies

Target Group

The units of competency in this Skill Set are for persons required to ensure the safety of portable equipment and the work is incidental or a primary and a regular function of work related to a

principle work function.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for electrical safety testing of electrical cord connected equipment and cord assemblies.

Custom Content Section

Not applicable.

UEESS00175 Apply Compliance Requirements to all Aspects of Electrical Work Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

New Skill Set.

Description

This Skill Set covers the skills and knowledge required to apply work health and safety (WHS)/occupational health and safety (OHS) and electrical installation safety obligations of persons licensed to undertake electrical work.

It encompasses WHS/OHS requirements for identifying hazards, establishing levels of risk mitigation control, following safe working methods, determining whether an electrical installation is compliant, dealing with installation defects and documenting activities and outcomes.

Pathways Information

This Skill Set does not provide any articulation to any qualification or other unit of competency.

Licensing/Regulatory Information

This Skill Set has been designed to meet jurisdictional regulatory/licensing currency requirements for holders of an 'Unrestricted Electrical Licence'.

Skill Set Requirements

A total of **1 unit** of competency must be attained.

UEEEL0001 Apply compliance requirements to all aspects of electrical work

Target Group

This Skill Set is intended for electrical licence holders who, according to the regulatory authority, have exhibited recalcitrance in their licence and/or WHS/OHS obligations.

It may be called up by an electrical safety or WHS/OHS authority as a means of retraining of such licence holders. Incompetence in not meeting required obligation could result from:

- a competent person acting incompetently, or
- a previously competent person failing to keep abreast of changes and developments in the WHS/OHS requirements and practices, the Australian/New Zealand Wiring Rules and local service rules and related regulatory requirements.

As the purpose of this Skill Set is to address the deficiencies described above, the application of this unit requires that candidates shall not be afforded Recognition of Prior Learning (RPL) and must undertake training and assessment to demonstrate competency in all aspects of the work of the unit.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for compliance requirements to all aspects of electrical work.

Custom Content Section

Not applicable.

UEESS00176 Apply Currency of Safe Working Practices and Compliance Verification of Electrical Installations

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

New Skill Set.

Description

This Skill Set covers current practices in working safely and verifying compliance of electrical installations that affect the currency of competencies held. It encompasses working safely, procedures for rescue from contact with live parts and for applying emergency first aid.

It also encompasses current practices in visual inspections and mandatory compliance testing, identifying non-compliance defects and mandatory reporting requirements.

Pathways Information

This Skill Set does not provide any articulation to any qualification or other unit of competency.

Holders of an 'Unrestricted Electrical Licence' or a 'Qualified Electrical Contracting Licence' are required by regulation to periodically undertake the unit UEEEL0002 Apply currency of safe working practices and compliance verification of electrical installations, to demonstrate currency in safe working, electrical rescue practices and compliance verification of electrical installations.

A 'licensed electrician' applying for an 'electrical contractor's licence' may be required by regulation to undertake this unit to demonstrate their currency with verification of compliance requirements. In this case the candidate shall:

- hold a current 'Unrestricted Electrical Licence' issued in an Australian state or territory
- have recently been in permanent employment as a licensed electrician.

Licensing/Regulatory Information

This Skill Set has been designed to meet jurisdictional regulatory/licensing currency requirements for holders of an 'Unrestricted Electrical Licence'.

Skill Set Requirements

A total of **1 unit** of competency must be attained.

UEEEL0002 Apply currency of safe working practices and compliance verification of

electrical installations

Target Group

This Skill Set is intended for holders of an 'Unrestricted Electrical Licence' or 'Qualified Electrical Contracting Licence' required by regulation to periodically undertake the unit UEEEL0002 Apply currency of safe working practices and compliance verification of electrical installations, to demonstrate currency in safe working, electrical rescue practices and compliance verification of electrical installations.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for currency of safe working practices and compliance verification of electrical installations

Custom Content Section

Not applicable.

UEESS00177 Data Communications - Plan an Integrated Cabling Installation System - Electricians Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00120 Data Communications – Plan an integrated cabling installation system - Electricians Skill Set.

Description

This Skill Set covers planning of cable routes for intelligent power and lighting, information and communications, entertainment systems, distributed video and audio; energy management and control; security and safety; digital home health; age and assisted living.

This Skill Set encompasses determining immediate and future cabling needs of an installation and their origins and termination points, planning cable routes, specifying cable types, sizes, fixing/support methods and cable identification systems and documenting cabling plans based on calculated and/or deemed-to-comply solutions as well as the planning of the wiring hub if required.

The Skill Set encompasses working safely and to industry standards and specifications, and completing necessary documentation.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set must already hold the following:

- Australian Communications and Media Authority (ACMA) 'Open' Cabling Registration OR
- a current electrical licence issued in an Australian state or territory.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units** of competency must be attained.

- | | |
|-----------|---|
| UEECD0025 | Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits |
| UEECD0028 | Plan an integrated cabling installation system |

Target Group

This Skill Set is intended for persons who are required to plan an integrated cabling installation - electrical system.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for planning an integrated cabling installation system.

Custom Content Section

Not applicable.

UEESS00178 Electrical - Develop and Implement Maintenance Programs Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00126 Electrical - Develop and Implement Maintenance Programs Skill Set.

Description

This Skill Set covers skills, knowledge and work performance requirements to allow qualified electricians to develop and implement energy sector maintenance programs and compile and produce an energy sector detailed report.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set hold the following:

- UEEL0039 Design, install and verify compliance and functionality of general electrical installations

OR

- a current 'Unrestricted Electrical Licence' issued in an Australian state or territory.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units** of competency must be attained.

UEECD0010 Compile and produce an energy sector detailed report

UEECD0013 Develop and implement energy sector maintenance programs

Target Group

This Skill Set is intended for persons who are required to develop and implement maintenance electrical programs.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for developing and implementing maintenance programs.

Custom Content Section

Not applicable.

UEESS00180 Electrical - Plan, Manage and Report on Electrical Projects Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00125 Electrical - Plan, Manage and Report on Electrical Projects Skill Set.

Description

This Skill Set covers skills, knowledge and work performance requirements to allow qualified electricians to plan electrotechnology projects, apply work health and safety (WHS)/occupational health and safety (OHS) regulations, industry standards and codes of practices in the workplace, compile and produce an energy sector detailed report, and manage large electrical projects.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set already hold the following:

- UEEL0039 Design, install and verify compliance and functionality of general electrical installations

OR

- a current 'Unrestricted Electrical Licence' issued in an Australian state or territory.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **4 units** of competency must be attained.

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0010	Compile and produce an energy sector detailed report
UEECD0029	Plan electrotechnology projects
UEEEL0015	Manage large electrical projects

Target Group

This Skill Set is intended for persons who are required to plan, manage and report on electrical projects within the energy sector.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for planning, managing and reporting on electrical projects.

Custom Content Section

Not applicable.

UEESS00181 Electrical – Inspect, Test and Maintain Emergency Lighting and Alarm Systems and Equipment

Modification History

Release 1. This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

Description

This Skill Set is for persons who are required to inspect, test and maintain emergency lighting and alarm systems and equipment.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set already hold the following:

- UEEEL0039 Design, install and verify compliance and functionality of general electrical installations

OR

- Certificate III in Electrotechnology Electrician

Licensing/Regulatory Information

Competency development activities in this Skill Set are subject to regulations directly related to licensing.

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Skill Set Requirements

A total of 2 **units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with.

A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

UEEEL0075 Inspect, test and maintain emergency alarm systems and equipment*

UEEEL0076 Inspect, test and maintain emergency lighting systems*

Target Group

This Skill Set is intended for persons who are required to inspect, test and maintain emergency lighting and alarm systems and equipment.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for inspecting, testing and maintaining emergency lighting and alarm systems and equipment.

Custom Content Section

Not applicable.

UEESS00182 Identify and Isolate Multiple Supply Systems

Modification History

Release 1. This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

Description

This Skill Set is for individuals who are required to identify and isolate multiple supply systems in the electrotechnology industry.

Pathways Information

The unit of competency in this Skill Set will contribute to the completion of a relevant Certificate IV qualification from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

This Skill Set has been designed to meet jurisdictional regulatory and/or licensing currency requirements for holders of an 'Unrestricted Electrical Licence'.

Skill Set Requirements

A total of 1 **unit of competency** must be attained.

The unit of competency within this Skill Set contains pre-requisites. Refer directly to the unit of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

UEERE0050 Identify and isolate multiple supply systems*

Target Group

This Skill Set is intended for qualified electricians who are required to identify and isolate multiple supply systems at a premise with or without grid connection.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for individuals that are identifying and isolating multiple supply systems.

UEESS00184 RAC - Install, Commission, Service and Maintain Variable Refrigerant Flow Air Conditioning Systems

Modification History

Release 1. This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

Description

This Skill Set is for persons who are required to install, commission, service and maintain variable refrigerant flow air conditioning systems.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant refrigeration and air conditioning Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set already hold the following qualification:

- Certificate III in Air Conditioning and Refrigeration

Licensing/Regulatory Information

The skills and knowledge described in this unit require a current national Trainee or Full Refrigeration and Air Conditioning Refrigerant Handling Licence as it includes work on refrigeration and air conditioning equipment that carries the risk of a fluorocarbon refrigerant being emitted while decanting, manufacturing, installing, commissioning, servicing, maintaining or decommissioning activities are being carried out.

Skill Set Requirements

A total of 3 **units of competency** must be attained.

There are units of competency within this Skill Set that contain pre-requisites. Units of competency that have a pre-requisite requirement are identified by this symbol *. Refer directly to the units of competency to identify pre-requisite requirements to ensure all are complied with. A list of all pre-requisites is also provided in the UEE Pre-requisite Companion Volume.

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEERA0051 Install, commission, service and maintain air conditioning systems*

UEERA0097 Install, commission, service and maintain variable refrigerant flow air conditioning systems*

Target Group

This Skill Set is intended for persons who are required to install, commission, service and maintain variable refrigerant flow air conditioning systems

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for installing, commissioning, servicing and maintaining variable refrigerant flow air conditioning systems.
